Total	**1,45,556.94**	-

*Transaction Cost amounting to Rs. 1.18 Crore was not yet paid as at the end of reporting period to the Senior Lenders, however the same has been considered for the purpose of EIR in the forthcoming periods.

The Trust had availed loan cumulating to INR 1,480 Crore (sanctioned amount Rs. 2,000 Crore) from three banks at the rate of 7.20% p.a. via Facility Agreement dated 29.09.2021 for the purpose of investment of Trusts in Project SPV (NHIPPL).

The loan was disbursed on 14.12.2021 and is repayable on quarterly basis over 78 quarterly instalments of Principal and Interest up to 31st March 2041, and the next instalment due on 30th June 2022.

Security:

The loan is secured by,

- first pari passu charge on all immovable assets (if any), movable assets and receivables of the Trust including but not limited to, (i) the interest and principal repayments on the loans advanced by the Trust to Project SPV (ii) dividends to be paid by Project SPV to the Trust
- first pari passu Security Interest on Trust Escrow account and all sub-accounts thereunder, including DSRA.
- first pari Passu charge on the Senior Debt Service Account, Sub-Debt Servicing Account and Surplus/ Dividend Account or any other account of the Project SPV where free cash flows of the Project SPV are credited.
- pledge of 100% equity shares of Project SPV (NHIPPL) held by the Trust.
- assignment of loans advanced by the Trust to Project SPV (NHIPPL) and securities created by the Trust including the assignment of rights of submission, termination and invocation of provision of Escrow agreement in case of default.
- negative lien on immovable assets (including current assets and cash flows) of the Project SPV (NHIPPL) subject to sale of obsolete items or cars/ ambulances, old toll equipment etc., under normal business practice, subject to maximum cumulative value of INR 5 Crore in any financial year.

The senior lenders of the Trust have also been provided with a corporate guarantee from Project SPV (NHIPPL) to guarantee the repayment of senior debt by the Trust. The funds have been raised at Trust level by unitholders and domestic lenders, and the same have been lent to Project SPV (NHIPPL) for payment of concession fee by NHIPPL to NHAI. The cashflows viz., toll collections are lying in NHIPPL. Accordingly, corporate guarantee amounting to INR 2,000 Crore via Corporate Guarantee Deed dated 14.03.2022, valid across the tenure of the loan of the Trust i.e. up to 31.03.2041, has been provided by the Project SPV (NHIPPL) to the senior lenders of the Trust.

There have been no breaches in financial covenants with respect to the borrowings from Senior lenders.

Provision for Major Maintenance*

The Company has a contractual obligation to maintain the performance standards of the Project Highways in respect of riding quality and allied measures as per the performance parameters stipulated under the respective Concession Agreements. Cost of such obligation is measured at the best estimate of the expenditure required to settle the obligation at the balance sheet date and recognised over the period at the end of which the overlay is estimated to be carried out using Discounted Cash Flows method with the discount rate taken as the risk free interest rate i.e. GOI 30 yr. Bond Yield. The next major overlay for one of the Project Highways is expected to be carried out in FY 2024-25.

National Highways Infra Trust New Delhi

NATIONAL HIGHWAYS INFRA TRUST

NOTES FORMING PART OF CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEAR ENDED ON MARCH 31, 2022

1. GROUP INFORMATION AND NATURE OF OPERATIONS

The consolidated financial statements comprise financial statements of NHAI Infra Trust ("the Trust" or "InvIT") and its subsidiary (collectively, the Group).

The Trust is an irrevocable trust registered under the provisions of the Indian Trusts Act, 1882 on October 19, 2020. It is registered under the Securities and Exchange Board of India (Infrastructure Investment Trust) Regulations, 2014 on October 28, 2020 having registration number IN/InvIT 20-21/0014.

The Trust was setup by National Highways Authority of India ("NHAI" or the "Sponsor"), an infrastructure development Trust in India. The Trustee to the Trust is IDBI Trusteeship Services Limited (the "Trustee") and Investment Manager for the Trust is National Highways Infra Investment Managers Private Limited ("Investment Manager").

The Trust has been formed to invest in infrastructure assets primarily being in the road sector in India. The Trust's road projects are implemented and held through special purpose vehicles ("Project SPVs" "Subsidiaries"). The units of the Trust were listed in Bombay Stock Exchange and National Stock Exchange on November 10, 2021.

During the year ended March 31, 2022, the Trust acquired 100% equity control in National Highway Infra Projects Private Limited (the "Project SPV") from the Sponsor with effect from November 03, 2021. During the year ended 31.03.2021, the project SPV entered into five Concession Agreements for 30 years with the Sponsor (National Highways Authority of India – NHAI) on Toll, Operate and Transfer ('TOT') basis.

The registered office of the Investment Manager is G-5 & 6, Setor-10, Dwarka, Delhi - 110075.

The consolidated financial statements were authorised for issue in accordance with resolution passed by the board of directors of the Investment Manager on May 23, 2022.

2. SIGNIFICANT ACCOUNTING POLICIES

2.1 Basis of Preparation

The Consolidated financial statements of the Group have been prepared in accordance with Indian Accounting Standards as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended, prescribed under Section 133 of the Companies Act, 2013 ("Ind AS") read with Securities and Exchange Board of India (Infrastructure Investment Group) Regulations, 2014, as amended and the circulars issued thereunder ("SEBI InvIT Regulations") and other accounting principles generally accepted in India.

Accordingly, the Group has prepared these Consolidated Financial Statements comprising of the Balance Sheet as on March 31, 2022, the Statement of Profit and Loss for the year ended on March 31, 2022, the Statement of Cash Flows for the year ended on March 31, 2022, the Statement of Changes of Equity for the year ended on March 31, 2022 and Notes to Accounts (together hereinafter referred to as "Consolidated Financial Statements").

These Financial Statements have been prepared on accrual basis under the historical cost convention, except certain financial assets and liabilities which have been measured at Fair Value. Accounting policies have been consistently applied, except where a newly issued Accounting Standard is initially adopted or a revision to an existing Accounting Standard requires a change in the accounting policy hitherto in use. Further, these standalone financial statements have been prepared on a going concern basis.

The financial statements are presented in Indian Rupees (INR) which is the Group's functional and presentation currency and all amounts are rounded to the nearest Lakh (` 00,000) and two decimals thereof, except as otherwise stated.

2.2 Basis of Consolidation

The consolidated financial statements incorporate the financial statements of the Trust and it's subsidiary (Project SPV- NHIPPL) from date of acquisition i.e. November 3, 2021.

For the purpose of consolidation, an entity which is, directly or indirectly, controlled by the Group is treated as subsidiary. Control exists when the Group, directly or indirectly, has power over the investee, is exposed to variable returns from its involvement with the investee and has the ability to use its power to affect its returns.

Consolidation of a subsidiary begins when the Group, directly or indirectly, obtains control over the subsidiary and ceases when the Group, directly or indirectly, loses control of the subsidiary. Income and expenses of a subsidiary acquired or disposed of during the period are included in the consolidated statement of profit and loss from the date the Group, directly or indirectly, gains control until the date when the Group, directly or indirectly, ceases to control the subsidiary.

The consolidated financial statements of the Group combine financial statements of the Trust and its subsidiaries on line-by-line basis by adding together the like items of assets, liabilities, income and expenses. All intra-group assets, liabilities, income, expenses and unrealised profits/losses on intra-group transactions are eliminated on consolidation unless the transaction provides evidence of an impairment of transferred asset. The carrying amount of the Group's investment in each subsidiary and the Group's portion of equity of each subsidiary are offset with each other in the consolidated financial statements.

Ind AS 12 'Income Taxes' applies to temporary differences that arise from the elimination of profits and losses resulting from intragroup transactions.

The accounting policies of subsidiaries have been harmonised to ensure the consistency with the policies adopted by the Group. The consolidated financial statements have been presented to the extent possible, in the same manner as Group's standalone financial statements. Profit or loss and each component of other comprehensive income are attributed to the unit holders of the Group and to the non-controlling interests, even if this results in the non-controlling interests having a deficit balance.

Non-controlling interest (if any) represents that part of the total comprehensive income and net assets of subsidiaries attributable to interests which are not owned, directly or indirectly, by the Group and are excluded in the consolidated financial statements from the total comprehensive income and net assets.

2.3 Business Combination/ Goodwill on Acquisition

Business combinations are accounted for using the acquisition method. The cost of an acquisition is measured as the aggregate of the consideration transferred, measured at acquisition date fair value and the amount of any non-controlling interests in the acquiree. For each business combination, the Group elects whether to measure the non-controlling interests in the acquiree at fair value or at the proportionate share of the acquiree's identifiable net assets. Acquisition related costs are recognised in the statement of profit and loss as incurred.

The acquiree's identifiable assets, liabilities and contingent liabilities that meet the condition for recognition are recognised at their fair values at the acquisition date.

Goodwill is initially measured at cost, being the excess of the aggregate of the consideration transferred and the amount recognised for non-controlling interests, and any previous interest held, over the net identifiable assets acquired and liabilities assumed. If the fair value of the net assets acquired is in excess of the aggregate consideration transferred, the Group re-assesses whether it has correctly identified all of the assets acquired and all of the liabilities assumed and reviews the procedures used to measure the amounts to be recognised at the acquisition date. If the reassessment still results in an excess of the fair value of net assets acquired over the aggregate consideration transferred, then the gain is recognised in other comprehensive income and accumulated in equity as capital reserve. However, if there is no clear evidence of gain on bargain purchase, the entity recognises the gain directly in equity as capital reserve, without routing the same through other comprehensive income

Goodwill arising on consolidation is not amortised, however, it is tested for impairment annually. In the event of cessation of operations of a subsidiary, the unimpaired goodwill is written off fully. For the purpose of impairment testing, goodwill acquired in a business combination is, from the acquisition date, allocated to each of the Group's cash-generating units that are expected to benefit from the combination, irrespective of whether other assets or liabilities of the acquire are assigned to those units. A cash generating unit to which goodwill has been allocated is tested for impairment annually, or more frequently when there is an indication that the unit may be impaired. If the recoverable amount of the cash generating unit is less than it's carrying amount, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit pro-rata based on the carrying amount of each asset in the unit.

Any impairment loss for goodwill is recognised in the consolidated statement of profit or loss. An impairment loss recognised for goodwill is not reversed in subsequent periods. Where goodwill has been allocated to a cash generating unit and part of the operation within that unit is disposed of, the goodwill associated with the disposed operation is included in the carrying amount of the operation when determining the gain or loss on disposal.

Goodwill disposed in these circumstances is measured based on the relative values of the disposed operation and the portion of the cash-generating unit retained.

2.4 Use of Judgement and Estimates

The preparation of financial statements is in conformity with the generally accepted accounting principles in India, and requires the Investment Manager to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements and the results of operations during the reporting period end. Although these estimates are based upon Investment Manager's best knowledge of current events and actions, actual results could differ from these estimates.

Current versus non-current classification

Assets and Liabilities in the Consolidated Balance Sheet have been classified as either Current or Non-Current based upon the requirements of Schedule III notified under the Companies Act, 2013.

An asset has been classified as Current if,

(a) it is expected to be realized in, or is intended for sale or consumption in, the Group's normal operating cycle; or

(b) it is held primarily for the purpose of being traded; or

(c) it is expected to be realized within twelve months after the reporting date; or

(d) it is cash or cash equivalent unless it is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting date.

All other assets have been classified as Non-Current.

A liability has been classified as Current when,

(a) it is expected to be settled in the Group's normal operating cycle; or

(b) it is held primarily for the purpose of being traded; or

(c) it is due to be settled within twelve months after the reporting date; or

A. R. & CO FRN 002744 C TANTS

National Highways Infra Trust New Delhi

(d) the Group does not have an unconditional right to defer settlement of the liability for at least twelve months after the reporting date.
All other liabilities have been classified as Non-Current.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The group has identified twelve months as its operating cycle.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

2.5 **Revenue Recognition**

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Group and the revenue can be reliably measured, regardless of when the payment is being made. Revenue is measured at the fair value of the consideration received or receivable, taking into account contractually defined terms of payment and excluding taxes or duties collected on behalf of the government.
The specific recognition criteria described below must also be met before revenue is recognised:

Toll Revenue - Toll Revenue from users of toll roads held by subsidiary company is recognised in respect of toll revenue accrued for respective toll road projects.
Interest income - Interest is recognised on time proportion basis taking into account the amount outstanding and the rates applicable. For all Debt instruments measured either at Amortized Cost or Fair Value through Other Comprehensive Income, interest income is recorded using EIR method that is the rate that exactly discounts estimated future cash receipts through the expected life of the financial instrument to the net carrying amount of the financial asset.
Dividends - Dividend income is recognised when the Group's right to receive the payment is established, which is generally when shareholders approve the dividend.
Fair value gains on current investments carried at fair value are included in other income.
Claims with National Highways Authority of India ('NHAI') and other government authorities are accounted as and when the money is received from the respective authorities, in cases of monetary compensations.
Other items - Other items of income are recognised as and when the right to receive the income arises.

2.6 **Property, plant and equipment**

Property, Plant and Equipment (PPE) is recognised when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably.

PPE are stated at acquisition cost less accumulated depreciation and cumulative impairment. Such cost includes the cost of replacing part of the plant and equipment and borrowing costs for long-term construction projects if the recognition criteria are met.

Recognition:
The cost of an item of property, plant and equipment shall be recognised as an asset if, and only if:
(a) it is probable that future economic benefits associated with the item will flow to the entity; and
(b) the cost of the item can be measured reliably.

When significant parts of plant and equipment are required to be replaced at intervals, Group depreciates them separately based on their specific useful lives.

Gains or losses arising from de - recognition of Property, plant and equipment are measured as the difference between the net disposable proceeds and the carrying amount of the asset and are recognized in the Consolidated Statement of Profit and Loss when the asset is derecognized.

Depreciation on Property, plant and equipment

Depreciation on Property, plant and equipment ("PPE") is provided on straight line method, up to the cost of the asset (net of residual value), in accordance with the useful lives prescribed under Schedule II to the Companies Act, 2013.

Depreciation on additions is being provided on a pro-rata basis from the date of such additions. Similarly, depreciation on assets sold/disposed off during the year is being provided up to the dates on which such assets are sold/disposed off. Modification or extension to an existing asset, which is of capital nature and which becomes an integral part thereof is depreciated prospectively over the remaining useful life of that asset.

The estimated residual value of the PPE has been taken as 5% in line with the provisions of Schedule II to the Companies Act, 2013.

Fixed assets amounting up to INR 5,000 are recognised in Consolidated Statement of Profit and Loss in entirety in the first year of purchase.

The residual values, useful lives and methods of depreciation of property, plant and equipment are reviewed at each financial year end and adjusted prospectively, if appropriate.

Depreciation charge for impaired assets is adjusted in future periods in such a manner that the revised carrying amount of the asset is allocated over its remaining useful life.

2.7 Intangible assets

In accordance with Ind AS 38 "Intangible Assets", Intangible assets are recognised when it is probable that the future economic benefits that are attributable to the asset will flow to the Group and the cost of the asset can be measured reliably.

Pre-operative expenses including administrative and other general overhead expenses that are specifically attributable to the development or acquisition of intangible assets are allocated and capitalised as a part of the cost of the intangible assets.

Intangible assets not ready for the intended use on the date of the Consolidated Balance Sheet are disclosed as "intangible assets under development". Intangible assets are derecognised when no future economic benefits are expected from use or disposal.

The cost of intangible assets acquired in an amalgamation in the nature of purchase is their fair value as at the date of amalgamation. Following initial recognition, intangible assets are carried at cost less accumulated amortization and accumulated impairment losses, if any.

The useful lives of intangible assets are assessed as either finite or indefinite.

Rights under Service Concession Arrangements – Toll Collection Rights

The Group has acquired rights for Tolling, Operation, Maintenance and Transfer of five toll road projects for a period of 30 years basis Toll Concession agreements with NHAI, and the same have been recognised as Other Intangible Assets in the financial statements.

Extension of concession period by the Authority in compensation for claims made by the Group are capitalised as part of Toll Collection Rights on acceptance of the claim. Where the Group has a contractual right to an extension in the concession period as per the concession agreement, the same is capitalized when the right to extension in the concession period is established at the estimated amount of eligible claims.

Amortisation of Intangible Assets

Intangible assets with finite lives are amortised over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life are reviewed at least at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the Consolidated Statement of Profit and Loss unless such expenditure forms part of carrying value of another asset.

In accordance with Ind AS 38 "Intangible Assets", Intangible assets should be amortized by a method which reflects the pattern in which the asset's future economic benefits are expected to be consumed by the entity.

Toll Collection Rights shall be amortized basis a Consumption based model (using Passenger Car Unit (PCU) projections) over the tenure of the Concession Agreement i.e. 30 years.

Other intangible assets - Software purchased is amortized over a period of three to six years on straight line basis from the month in which the addition is made.

Gains or losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the statement of profit or loss when the asset is derecognised.

Amortisation on impaired assets is provided by adjusting the amortisation charge in the remaining periods so as to allocate the assets' revised carrying amount over its remaining useful life.

2.8 Employee benefits

Employee benefits include provident fund, gratuity, compensated absences, long service awards and medical benefits.

i. Short term employee benefits

Employee benefits such as salaries, short term compensated absences, expected cost of bonus, ex-gratia and performance linked rewards falling due wholly within twelve months of rendering the service are classified as short-term employee benefits and are expensed in the period in which the employee renders the related service.

ii. Post-Employment Benefits

Defined contribution plan: A defined contribution plan is a post-employment plan under which an entity pays fixed contributions and will have no legal or constructive obligations to pay further amounts. The Group contributes to provident fund and employees deposit linked insurance scheme, and have no further obligations beyond making its contributions. The Group's contribution to the above funds are charg[illegible]ent of Profit and Loss.

A.R.&CO. FRN 002744 C CHARTERED ACCOUNTANTS

National Highways Infra Trust New Delhi

Defined benefit plan: The Group has an un-funded benefit plan for post-employment benefits in the form of Gratuity. The value of obligation under the plan is determined by the group based on best estimate of the present value of the estimated future cash flows towards the gratuity obligation. Defined benefit costs comprising current service cost, past service cost and gains or losses on settlements are recognised in the Consolidated Statement of Profit and Loss as employee benefits expense. Gains or losses on the curtailment or settlement of any defined benefit plan are recognised when the curtailment or settlement occurs.

iii. **Termination benefits**

Termination benefits such as compensation under employee separation schemes (wherever applicable) are recognised as expense in the Consolidated Statement of Profit and Loss. Liability for the same is recognised at the earlier of when the group can no longer withdraw the offer of the termination benefit.

iv. **Other long-term employee benefits**

The present value of the obligation under long term employee benefit plans such as compensated absences is determined and is recognised in a similar manner as in the case of defined benefit plans.

Long term employee benefit costs comprising current service cost and gains or losses on curtailments and settlements, re-measurements are recognised in the Consolidated Statement of Profit and Loss as employee benefit expenses. Interest cost implicit in long term employee benefit cost is recognised in the Consolidated Statement of Profit and Loss under finance cost.

2.9 Leases

(i) The determination of whether an arrangement is or contains a lease is based on the substance of the arrangement at the inception of the lease.

i.i) Property, plant, and equipment acquired under leases with lease term more than 12 months is long term lease. The lease liability is recognised for the obligation to make the lease payments and a right of use of asset for the underlying property, plant and equipment for the lease term. The lease liability is measured at the present value of the lease payments to be made over the lease term. The right of use property, plant and equipment are initially measured at the amount of the lease liability, adjusted for lease prepayments, lease incentives received and the initial direct costs such as commissions and an estimate cost of restoration, removal and dismantling of property, plant and equipment. Lease liabilities are increased to reflect the interest cost and are reduced with lease payments.

i.ii) Property, plant, and equipment having lease term 12 months or less than 12 months are recognised on a straight-line basis.

(ii) Property, plant and equipment leased out under operating leases are continued to be capitalised by the Group. Rental income is recognised on a straight-line basis over the term of the relevant lease.

2.10 Borrowing costs

Borrowing Cost consist of interest and other ancillary costs incurred in connection with the arrangement of borrowings. Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalized as part of the cost of the respective asset.

All other borrowing costs are charged to the Consolidated Statement of Profit and Loss in the period they occur. In case of significant Long term loans, other costs incurred in connection with the borrowing of funds are amortized over the period of respective Loan. Borrowing cost also includes exchange differences to the extent regarded as an adjustment to the borrowing costs.

2.11 Financial Instruments

Financial assets and/or financial liabilities are recognised when the Group becomes party to a contract embodying the related financial instruments. A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity. A financial asset and a financial liability are offset and presented on net basis in the Consolidated Balance Sheet when there is a current legally enforceable right to set-off the recognised amounts and it is intended to either settle on net basis or to realise the asset and settle the liability simultaneously.

Financial assets

Initial recognition and measurement

All financial assets are recognised initially at fair value plus, in the case of financial assets not recorded at fair value through profit or loss, transaction costs that are attributable to the acquisition of the financial asset. Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Group commits to purchase or sell the asset. Trade receivables and trade payables that do not contain a significant financing component are initially measured at their transaction price.

Subsequent measurement

For purposes of subsequent measurement, financial assets are classified in following categories;

- at amortised cost
- at fair value through profit or loss (FVTPL)
- at fair value through other comprehensive income (FVOCI)

A. R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

National Highways Infra Trust

Financial Assets at amortised cost

A financial asset is classified and subsequently measured at the amortised cost if both the following conditions are met:

a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

This category is the most relevant to the Group. All the Loans and other receivables under financial assets (except Investments) are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market.

After initial measurement, such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The losses arising from impairment are recognised in the Consolidated Statement of Profit and Loss.

Investments in equity instruments of Subsidiaries are recognised at original cost in accordance with Ind AS 27. Impairment testing of Investment in subsidiary that are accounted for at cost as per Ind AS 27 are within scope of Ind AS 36 Impairment of Assets. Any impairment in value of investment in equity investments in Subsidiaries is recognised in the Consolidated Statement of Profit and Loss.

Financial Assets at Fair Value through Other Comprehensive Income (FVOCI)

A financial asset is classified and subsequently measured at FVTOCI if both of the following criteria are met:

a) The asset is held within a business model whose objective is achieved both by collecting contractual cash flows and selling the financial assets, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI).

Investment in Debt instruments included within the FVTOCI category are measured initially as well as at each reporting date at fair value. Fair value movements are recognized in the other comprehensive income (OCI). However, the Group recognizes interest income, impairment losses & reversals and foreign exchange gain or loss in the Consolidated Statement of Profit and Loss.

Interest earned whilst holding FVTOCI debt instrument is reported as interest income using the EIR method.

Financial Assets at Fair Value through Profit and Loss (FVTPL)

A financial asset which is not classified in any of the above categories are subsequently fair valued through profit or loss. Financial assets included within the FVTPL category are measured at fair value with all changes recognized in the Consolidated statement of profit and loss. The Group measures its investments which are classified as equity instruments (other than investment in shares of Subsidiaries, Joint Ventures and Associates) at fair value through profit and loss account.

Any debt instrument, which does not meet the criteria for categorization as at amortized cost or as FVTOCI, is classified as at FVTPL. In addition, the Group may elect to designate a debt instrument, which otherwise meets amortized cost or FVTOCI criteria, as at FVTPL. However, such election is allowed only if doing so reduces or eliminates a measurement or recognition inconsistency (referred to as 'accounting mismatch'). The Group has not designated any debt instrument as at FVTPL.

The Group has investment in debt oriented mutual funds which are held for trading, and the same are classified as at FVTPL. The Group makes such election on an instrument by instrument basis. The classification is made on initial recognition and is irrevocable. The gain/ loss on sale of investments are recognised in the Consolidated Statement of Profit and Loss.

Reclassification of Financial Assets

The Group determines classification of financial assets on initial recognition. After initial recognition, no reclassification is made for financial assets which are equity instruments and financial liabilities. For financial assets which are debt instruments, a reclassification is made only if there is a change in the business model for managing those assets. Changes to the business model are expected to be infrequent. The Investment Manager of the Group determines change in the business model as a result of external or internal changes which are significant to the Group's operations. Such changes are evident to external parties. A change in the business model occurs when the Group either begins or ceases to perform an activity that is significant to its operations.
If the Group reclassifies financial assets, it applies the reclassification prospectively from the reclassification date which is the first day of the immediately next reporting period following the change in business model. The Group does not restate any previously recognised gains, losses (including impairment gains or losses) or interest.

The following table shows various reclassification and how they are accounted for:

Original Classification	Revised Classification	Accounting Treatment
Amortized Cost	FVTPL	Fair value is measured at reclassification date. Difference between previous amortised cost and fair value is recognised in Consolidated statement of profit and loss.
FTVPL	Amortized Cost	Fair value at reclassification date becomes its new gross carrying amount.
Amortized Cost	FVOCI	Fair value is measured at reclassification date. Difference between previous amortised cost and fair value is recognised in other comprehensive income.

A. R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

National Highways Infra Trust New Delhi

		No Change in EIR due to reclassification.
FVOCI	Amortized Cost	Fair value at reclassification date becomes its new gross carrying amount. However cumulative gain or loss in other comprehensive income is adjusted against Fair value. Consequently, the asset is measured as if it had always been measured at amortised cost.
FTVPL	FVOCI	Fair value at reclassification date becomes its new carrying amount. No other adjustment is required.
FVOCI	FTVPL	Assets continue to be measured fair value. Cumulative gain or loss previously recognized in other comprehensive income is reclassified to Consolidated statement of profit and loss at the reclassification date.

Derecognition
A financial asset (or, where applicable, a part of a financial asset or part of Group's similar financial assets) is primarily derecognised (i.e. removed from the Consolidated Balance Sheet) when:

- The rights to receive cash flows from the asset have expired, or
- The group has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the group has transferred substantially all the risks and rewards of the asset, or (b) the group has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the group continues to recognise the transferred asset to the extent of the group's continuing involvement. In that case, the group also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the group has retained.
Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the group could be required to repay.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, payables, as appropriate.
All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.
The Group's financial liabilities include trade and other payables, loans and borrowings etc.

Subsequent measurement
Financial liabilities designated upon initial recognition at fair value through profit or loss are designated as such at the initial date of recognition, and only if the criteria in Ind AS 109 are satisfied. For liabilities designated as FVTPL, fair value gains/ losses attributable to changes in own credit risk are recognized in OCI. These gains/losses are not subsequently transferred to Consolidated statement of profit and loss. However, the Group may transfer the cumulative gain or loss within equity. All other changes in fair value of such liability are recognised in the Consolidated statement of profit and loss. The Group has not designated any financial liability as at fair value through profit and loss.

Loans and borrowings
This is the category most relevant to the Group. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in Statement of Profit or Loss when the liabilities are derecognised as well as through the EIR amortisation process. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the Consolidated Statement of Profit and Loss.
This category generally applies to borrowings and security deposits received.

Derecognition
A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit or loss.

Offsetting financial instrument

Financial assets and liabilities are offset and the net amount is reported in the Consolidated Balance Sheet where there is a legally enforceable right to offset the recognised amounts and there is an intention to settle financial asset and liability on a net basis or realise the asset and settle the liability simultaneously. The legally enforceable right must not be contingent on future events and must be enforceable in the normal course of business and in the event of default, insolvency or bankruptcy of the Company or the counterparty.

2.12 Fair Value measurement

The Group measures financial instruments at fair value at each financial statement date.
Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:
i) In the principal market for the asset or liability, or
ii) In the absence of a principal market, in the most advantageous market for the asset or liability

The principal or the most advantageous market must be accessible by the Group.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:
Level 1 — Quoted prices (unadjusted) in active markets for identical assets or liabilities
Level 2 — Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices)
Level 3 — Inputs for the assets or liabilities that are not based on observable market data (unobservable inputs).

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The Group determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.

At each reporting date, the Group analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Group's accounting policies. For this analysis, the Group verifies the major inputs applied in the latest valuation by agreeing the information in the valuation computation to contracts and other relevant documents.

The Group also compares the change in the fair value of each asset and liability with relevant external sources to determine whether the change is reasonable.
On an annual basis, the Board of Directors of the Investment Manager presents the valuation results to the Audit Committee and the Group's independent auditors. This includes a discussion of the major assumptions used in the valuations. For the purpose of fair value disclosures, the Group has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above. This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes.

2.13 Cash and Cash Equivalents

Cash and cash equivalents in the Consolidated Balance Sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value.
For the purpose of the Consolidated statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Group's cash management.

2.14 Impairment of Assets

Impairment of Financial Assets

All financial assets except for those designated at FVTPL are subject to review for impairment at least each reporting date to identify whether there is any objective evidence that a financial asset or group of financial assets is impaired. In accordance with Ind AS 109, the group applies expected credit loss (ECL) model for measurement and recognition of impairment loss for financial assets carried at amortized cost.

For recognition of impairment loss on other financial assets and risk exposure, the group determines that whether there has been a significant increase in the credit risk since initial recognition. If credit risk has not increased significantly, 12-month ECL is used to provide for impairment loss. However, if credit risk has increased significantly, lifetime ECL is used. If, in a subsequent period, credit quality of the instrument improves such that there is no longer a significant increase in credit risk since initial recognition, then the entity reverts to recognising impairment loss allowance based on 12-month ECL.

Lifetime ECL are the expected credit losses resulting from all possible default events over the expected life of a financial instrument. The 12-month ECL is a portion of the lifetime ECL which results from default events that are possible within 12 months after the reporting date.

ECL is the difference between all contractual cash flows that are due to the group in accordance with the contract and all the cash flows that the entity expects to receive (i.e., all cash shortfalls), discounted at the original EIR. When estimating the cash flows, an entity is required to consider:

- All contractual terms of the financial instrument (including prepayment, extension, call and similar options) over the expected life of the financial instrument. However, in rare cases when the expected life of the financial instrument cannot be estimated reliably, then the entity is required to use the remaining contractual term of the financial instrument
- Cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms

ECL impairment loss allowance (or reversal) recognized during the year is recognized as income/ expense in the Consolidated Statement of Profit and Loss (P&L). This amount is reflected under the head 'other expenses' in the P&L.

Impairment of Non- Financial Assets

The Group assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Group estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset unless the asset does not generate cash inflows that are largely independent of those from other assets or Group's assets. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre—tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining net selling price, recent market transactions are taken into account, if available. If no such transactions can be identified, an appropriate valuation model is used. Impairment losses of continuing operations are recognized in the Consolidated statement of profit and loss, except for previously revalued tangible fixed assets, where the revaluation was taken to revaluation reserve. In this case, the impairment is also recognized in the revaluation reserve up to the amount of any previous revaluation. After impairment, depreciation is provided on the revised carrying amount of the asset over its remaining useful life.

An assessment is made at each reporting date as to whether there is any indication that previously recognized impairment losses may no longer exist or may have decreased. If such indication exists, the group estimates the asset's CGU's recoverable amount. A previously recognized impairment loss is reversed only if there has been a change in the assumptions used to determine the assets recoverable amount since the last impairment loss was recognized. The reversal is limited so that the carrying amount of the asset does not exceed its recoverable amount, nor exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss been recognized for the asset in prior years. Such reversal is recognized in the Consolidated statement of profit and Loss unless the asset is carried at a revalued amount, in which case the reversal is treated as a revaluation increase.

2.15 Foreign currency transactions

The Group's financial statements are presented in INR, which is group's functional currency.

Foreign currency transactions are recorded at the exchange rate prevailing on the date of the respective transactions between the functional currency and the foreign currency.

Monetary foreign currency assets and liabilities remaining unsettled at the Financial Statement date are translated at the rates of exchange prevailing on that date.

Gains / losses arising on account of realisation / settlement of foreign currency transactions and on translation of foreign currency assets and liabilities are recognized in the Consolidated Statement of Profit and Loss.

Exchange differences arising on the settlement of monetary items at rates different from those at which they were initially recorded during the year, or reported in previous financial statements, are recognized as income or as expenses in the year in which they arise.

A. R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

National Highways Infra Trust

Non - Monetary items which are carried in terms of historical cost denominated in a foreign currency are reported using the exchange rate at the date of the transaction; and Non - Monetary items which are carried at fair value or other similar valuation denominated in a foreign currency, are reported using the exchange rates that existed when the values were determined.

The gain or loss arising on translation of Non-Monetary items measured at fair value is treated in line with the recognition of the gain or loss on the change in Fair value of the item (i.e., translation differences on items whose fair value gain or loss is recognised in OCI or profit or loss are also recognised in OCI or profit or loss, respectively).

2.16 Taxes on income

Tax expense comprises of Current and Deferred tax.
Current income tax is measured at the amount expected to be paid to the tax authorities in accordance with the Income Tax Act, 1961.

Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date.
Current income tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity).
Current tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity.
Investment Manager periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

Deferred tax is provided using the liability method on temporary differences between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes at the reporting date.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the year when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax assets are recognised for all deductible temporary differences, the carry forward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilised. The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity).

Deferred tax assets and deferred tax liabilities are offset if a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred taxes relate to the same taxable entity and the same taxation authority.

2.17 Provisions, Contingent Liabilities, Contingent Assets and Capital Commitments

Contingent Liabilities
A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non-occurrence of one or more uncertain future events beyond the control of the Group or a present obligation that is not recognized because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognized because it cannot be measured reliably. Contingent Liabilities are reviewed at each reporting date. The Group does not recognize a contingent liability but discloses its existence in the financial statements, however discloses its existence in the financial statements in the notes to accounts.

Contingent Assets
Contingent assets usually arise from unplanned or other unexpected events that give rise to the possibility of an inflow of economic benefits to the entity.
Contingent assets are recognized when the realisation of income is virtually certain, in which case the related asset is not a contingent asset and its recognition is appropriate.
Contingent assets are reviewed at each reporting date. A contingent asset is disclosed where an inflow of economic benefits is probable.

Provisions
Provisions are recognised when the Group has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. When the Group expects some or all of a provision to be reimbursed, for example, under an insurance contract, the reimbursement is recognised as a separate asset, but only when the reimbursement is virtually certain. The expense relating to a provision is presented in the Consolidated statement of profit and loss net of any reimbursement.

A. R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

National Highways Infra Trust

If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

Commitments

Commitments are future liabilities for contractual expenditure, classified and disclosed as follows:

- estimated amount of contracts remaining to be executed on capital account and not provided for;
- funding related commitment to subsidiary companies; and
- other non-cancellable commitments, if any, to the extent they are considered material and relevant in the opinion of management.

Other commitments related to services to be rendered / procurements made in the normal course of business are not disclosed to avoid excessive details.

2.18 Consolidated Statement of Cash Flows

Consolidated Statement of Cash Flows is prepared segregating the cash flows into operating, investing and financing activities. Cash flow from operating activities is reported using indirect method adjusting the net profit for the effects of:

- changes during the period in operating receivables and payables, transactions of a non-cash nature;
- non-cash items such as depreciation, provisions, deferred taxes, unrealised foreign currency gains and losses;
- all other items for which the cash effects are investing or financing cash flows.

Cash and cash equivalents (including bank balances) shown in the Consolidated Statement of Cash Flows exclude items which are not available for general use as at the date of Consolidated Balance Sheet.

2.19 Assets held for sale

Non-current assets or disposal groups comprising of assets and liabilities are classified as 'held for sale' when all of the following criteria's are met: (i) decision has been made to sell, (ii) the assets are available for immediate sale in its present condition, (iii) the assets are being actively marketed and (iv) sale has been agreed or is expected to be concluded within 12 months of the Consolidated Balance Sheet date.

Subsequently, such non-current assets and disposal groups classified as held for sale are measured at the lower of its carrying value and fair value less costs to sell. Non-current assets held for sale are not depreciated or amortised.

2.20 Unit Capital

Units are classified as equity. Incremental costs attributable to the issue of units are directly recorded in Other Equity, net of tax.

2.21 Distribution to unit holders

The Group recognises a liability to make cash distributions to unit holders when the distribution is authorised and a legal obligation has been created. As per the SEBI InvIT Regulations, a distribution is authorised when it is approved by the Board of Directors of the Investment Manager. A corresponding amount is recognised directly in equity.

2.22 Earnings per Unit (EPU)

Basic EPU amounts are calculated by dividing the profit for the period attributable to unitholders by the weighted average number of units outstanding during the period.

Diluted EPU amounts are calculated by dividing the profit/(loss) attributable to unitholders by the weighted average number of units outstanding during the period plus the weighted average number of units that would be issued on conversion of all the dilutive potential units into unit capital.

36 Capital Management

For the purpose of the Group's capital management, capital includes issued unit capital and all other reserves attributable to the unit holders of the Group.

The primary objective of the Group's capital management is to ensure that it maintains a strong credit rating and healthy capital ratios in order to support its business and maximise unit holder value.

The Group manages its capital structure and makes adjustments to it in light of changes in economic conditions and the requirements of the financial covenants. To maintain or adjust the capital structure, the Group may adjust the dividend payment / income distribution to unit holders (subject to the provisions of SEBI InvIT Regulations which require distribution of at least 90%of the net distributable cash flows of the Group to unit holders), return capital to unit holders or issue new units. The Group monitors capital using a gearing ratio, which is net debt divided by total capital plus net debt. The Group's policy is to keep the gearing ratio optimum.

(Amounts in ₹ lakh)

Particulars	As at March 31, 2022	As at March 31, 2021
Net Debt Components:		
Long Term Borrowings (Non-Current portion)	145,556.94	-
Current Maturities of Long-Term Borrowings	980.86	-
Less: Cash and Cash Equivalents	(5,389.79)	-
Less: Bank Balances other than cash and cash equivalents	(3,170.81)	-
Less: Current Investments	(992.16)	-
Net Debt (i)	**1,36,985.04**	-
Capital Components:		
Unit Capital	6,01,152.00	-
Initial Settlement Amount	0.10	-
Other Equity	5,059.25	-
Total Capital (ii)	**6,06,211.35**	-
Capital and Debt [(iii) = (i) + (ii)]	**7,46,363.55**	-
Gearing Ratio (i)/(iii)	**18.35%**	-

In order to achieve this overall objective, the Board of Directors of Investment Manager, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the lenders to call loans and borrowings. There have been no breaches in the financial covenants of any interest-bearing loans and borrowing in the current period.

No changes were made in the objectives, policies or processes for managing capital during the years ended March 31, 2022 and March 31, 2021.

37 Financial Risk Management Objectives and Policies

The Group is in the process of formulation of its risk management policies with an objective of identification and analysis of risks faced by the Group, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies shall be reviewed regularly to reflect changes in market conditions and the Group's activities.

FRN 002744 C
CHARTERED ACCOUNTANTS
New Delhi

The Board of Directors of Investment Manager has overall responsibility for the establishment and oversight of the Group's risk management framework.
In performing its operating, investing and financing activities, the Group is exposed to the Credit risk, Liquidity risk and Market risk.

Market Risk
Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk. Financial instruments affected by market risk include loans and borrowings, Receivable and Payables and Investments measured at FVTPL.
The sensitivity analyses in the following sections relate to the position as at March 31, 2022 and March 31, 2021.
The sensitivity analyses have been prepared on the basis that the amount of net debt, the ratio of fixed to floating interest rates of the debt are all constant.

The following assumptions have been made in calculating the sensitivity analyses:
The sensitivity of the relevant profit or loss item is the effect of the assumed changes in respective market risks. This is based on the financial assets and financial liabilities held at March 31, 2022 & March 31, 2021.

Foreign Currency Risk
Foreign currency risk is the risk that the fair value or future cash flows of an exposure will fluctuate because of changes in foreign exchange rates. The Group transacts business primarily in Indian Rupees only, and hence, the sensitivity of profit and loss of the Group to a possible change in foreign exchange rates is non-existent as on 31st March, 2022.

Interest Rate Risk
Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Exposure to risk of changes in market interest rates generally relates primarily to long-term debt obligations with floating interest rates.

The following table provides a break-up of the Company's fixed and floating rate borrowings:

(Amounts in ₹ lakh)

Particulars	As at March 31, 2022	As at March 31, 2021
Floating Rate Borrowings	1,46,537.80	-

The Group's exposure to interest rate risk due to variable interest rate borrowings is as follows:

(Amounts in ₹ lakh)

Particulars	As at March 31, 2022	As at March 31, 2021
Term Loan from Bank	11,201.41	-

Sensitivity analysis based on average outstanding Debt:

(Amounts in ₹ lakh)

Particulars	As at March 31, 2022	As at March 31, 2021
Increase or decrease in interest rate by 25 basis points	388.94	-

Price Risk

Price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk).
The Group is exposed to price risk due to investments in mutual funds and classified as fair value through profit and loss. The Group measures risk through sensitivity analysis.
The Group's risk management policy is to mitigate the risk by investments in mutual funds. The Group has investment in mutual funds amounting Rs 992.16 Lakh as at March 31, 2022 (March 31, 2021: Rs. Nil) and accordingly is expose to price risk.

Sensitivity analysis:

(Amounts in ₹ lakh)

National Highways Infra Trust New Delhi

Credit risk

Credit risk is the risk that counterparty will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. With respect to credit risk arising from other financial assets of the Group, which comprise Balances with banks, Trade Receivables, Loans and Advances and Investments. The Group's exposure to credit risk arises from default of the counterparty, with maximum exposure equal to the carrying amount of these instrument.

The carrying value of financial assets represents the maximum credit risk. The maximum exposure to credit risk was Rs. 10,158.59 Lakh and Rs. 0.10 Lakh as at March 31, 2022 and March 31, 2021 respectively, being the total carrying value of Loans and Advances, Trade receivables, Investments, Balances with bank, bank deposits and other financial assets.

Liquidity Risk

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial assets.

The Group is exposed to liquidity risk due to bank borrowings and trade and other payables.

The Group measures risk by forecasting cash flows.

The Group's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due without incurring unacceptable losses or risking damage to the Group's reputation. The Group ensures that it has sufficient funds to meet expected operational expenses, servicing of financial obligations.

In addition, processes and policies related to such risk are overseen by senior management. Management monitors the Group's net liquidity position through rolling forecast on the basis of expected cash flows.

The table below summarises the maturity profile of the group's financial liabilities based on contractual undiscounted payments.

(Amounts in ₹ lakh)

38 Disclosure pursuant to IND AS 36 "Impairment of Assets"

Based on management review on expected future cash flows and economic conditions of the assets of the Group, no indicators of impairment of assets exist as on the reporting date. In case of Goodwill, the recoverable amount is higher than the carrying amount as on reporting date. Hence no provision for impairment has been recognised in the books as on the reporting date.

Defaults and Breaches

There are no defaults during the year with respect to repayment of principal and payment of interest and no breaches of the terms and conditions of the borrowings.

There are no breaches during the year which permitted lender to demand accelerated payment.

40 Fair Values of Assets and Liabilities

The carrying amount of all financial assets and liabilities appearing in the financial statements is reasonable approximation of fair values. Fair value of the financial assets and liabilities is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The Group is required to present the Statement of total assets at fair value and Statement of total returns at fair value as per SEBI Circular No. CIR/IMD/DF/114/2016 dated October 20, 2016 as a part of these financial statements - Refer Statement of Net assets at fair value and Statement of Total Returns at fair value.

41 Fair Value Hierarchy

All financial instruments for which fair value is recognised or disclosed are categorised within the fair value hierarchy described as follows, based on the lowest level input that is significant to the fair value measurement as a whole.

Level 1 - Quoted prices (unadjusted) in active markets for identical assets or liabilities.

Level 2 – Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).

Level 3 - Inputs for the assets or liabilities that are not based on observable market data (unobservable inputs).

Class wise composition and comparison of carrying amounts and fair values of financial assets and liabilities that are recognised in the financial statements along with Fair Value Hierarchy details are given below:

(Amounts in ₹ lakh)

Particulars	Fair Value Hierarchy Level	Carrying Value		Fair Value	
		As at March 31, 2022	As at March 31, 2021	As at March 31, 2022	As at March 31, 2021
Financial Assets at Amortized Cost:					
Cash and Cash Equivalents	Level 3	5,389.78	-	5,389.78	-
Trade Receivables	Level 3	600.47	-	600.47	-
Other Financial Assets	Level 3	3,176.18	-	3,176.18	-
Financial Assets at FVTPL:					-
Investments in Mutual Funds	Level 1	992.16	-	992.16	-

Total		**10,158.59**	-	**10,158.59**	-
Financial Liabilities at Amortized Cost:					
Borrowings	Level 3	1,46,537.80	-	1,46,537.80	-
Trade Payables	Level 3	1,101.23	-	1,101.23	-
Other Financial Liabilities	Level 3	241.41	67.81	241.41	67.81
Total		**1,47,880.44**	**67.81**	**1,47,880.44**	**67.81**

There are no transfers between level 1 and level 2 during the year.
The policy of the Group is to recognise transfers into and transfer out of fair values hierarchy levels as at the end of the reporting period.

Valuation technique and inputs used to determine fair value

Financial assets and liabilities	Valuation method	Inputs
Financial assets		
Investment in Mutual Funds	Market Approach	NAV
Investments in equity shares of subsidiaries	Income	Cash Flow
Loans	Income	Effective Rate of Interest
Financial liabilities		
Term loans from Bank	Income	Effective Rate of Borrowings
Non-Convertible Debentures	Income	Effective Rate of Borrowings

42 Disclosure of segment information pursuant to IND AS 108 "Operating Segments"

The activities of the Group mainly include investing in infrastructure assets primarily in the SPVs operating in the road sector to generate cash flows for distribution to unit holders. Based on the guiding principles given in Ind AS - 108 "Operating Segments", this activity falls within a single operating segment. Further, the entire operations of the Group are only in India and hence, disclosure of secondary / geographical segment information does not arise. Accordingly, requirement of providing disclosures under Ind AS 108 does not arise.

43 Details of dues To Micro and Small Enterprises as per MSMED Act, 2006

There are no Micro and Small Enterprises as defined in the Micro and Small Enterprises Development Act, 2006 to whom the Group owes dues on account of principal amount together with interest and accordingly no additional disclosures have been made. The above information regarding Micro and Small Enterprises has been determined to the extent such parties has been identified on the basis of information available with the Group.

44 Disclosure pursuant to IND AS 19 "Employee Benefits"

Defined contribution plan:
Contributions to Provident Fund scheme and the Employee Deposit Linked Insurance scheme of the government of India, as a specified percentage of monthly payroll costs comprise the only obligations of the Group with respect to defined contribution plans for the employees.
An amount of Rs. 0.13 Lakh for the reporting period (March 31, 2021: Rs. Nil), being contribution made to these funds is recognised as expense under Employee Benefit expense (Note 26) in the Consolidated Statement of Profit and Loss.

Defined Benefit Plan:

Gratuity:
The benefit is governed by Payment of Gratuity Act, 1972, and is calculated as follows:

Components	Particulars
Benefits offered	15/ 26 × Salary × Duration of Service
Salary Definition	Basic Salary including Dearness Allowance (if any)
Vesting Conditions	5 years of continuous service (Not applicable in case of death/disability)
Benefit Eligibility	Upon Death or Resignation / Withdrawal or Retirement
Retirement Age	58 years

45 Disclosure pursuant to IND AS 23 "Borrowing Costs"

Borrowing cost capitalised during the year Rs. Nil [March 31, 2021: Rs. Nil]

46 Details of Project Management Fees and Investment Management Fees

Details of fees paid to project manager and investment manager as required pursuant to SEBI Circular No. CIR/IMD/DF/127/2016, dated November 29, 2016 are as under:

Project Management Fees

The Project Manager (NHIPMPL) for managing the initial portfolio of assets is entitled to a Project Management fee which is a percentage of the gross revenue earned by the project SPV (NHIPPL). The same is based on the Project Implementation and Management Agreement (PIMA) signed by both the parties dated 30th March, 2021.

The project SPV (NHIPPL) proposed a fees of Rs. 70.00 Lakh (Rupees Seventy Lakh Only) per month, as project manager's fees against the services offered by the project manager, for a period of 18 months starting from the date of the Concession agreement. The Project Manager's fees for the period after the expiry of 18 months shall be a percentage of gross revenue earned by the project SPV (NHIPPL), which is mutually agreed between the parties in the PIMA.

Investment Management Fees

i) The investment manager's fee will initially be Rs. 1.100 Lakh (Rupees Eleven Hundred Lakh) per annum, exclusive of applicable taxes as per agreement dated 21st October, 2020.

ii) The investment manager's fee set out in above shall be subject to escalation on an annual basis at the rate of 10% of the management fee for the previous year.

iii) Any applicable taxes, cess or charges shall be in addition to the investment manager's fee and shall be payable by National Highways Infra Trust (NHIT) to the Investment Manager (NHIIMPL).

iv) The payment of investment manager's fee shall be made by National Highways Infra Trust (NHIT) to the investment manager (NHIIMPL) in advance on a quarterly basis.

47 Significant accounting judgements, estimates and assumptions

The preparation of the Group's financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the accompanying disclosures, and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Judgements

In the process of applying the Group's accounting policies, management has made the following judgments, apart from those involving estimations, which have the most significant effect on the amounts recognised in the financial statements:

Classification of unit holders Funds

Under the provisions of the SEBI InvIT Regulations, the Group is required to distribute to its Unit holders not less than ninety percent of the net distributable cash flows of the Group for each financial year. Accordingly, a portion of the unit holders' funds contain a contractual obligation of the Group to pay to its Unit holders cash distributions.
The Unit holder's funds could therefore have been classified as compound financial instrument which contain both equity and debt components in accordance with Ind AS 32 'Financial Instruments: Presentation'. However, in accordance with SEBI Circulars (Circular no. CIR/IMD/DF/114/2016 dated October 20, 2016 and No. CIR/IMD/DF/127/2016 dated November 29, 2016) issued under the SEBI InvIT Regulations, the unit holders' funds have been classified as equity in order to comply with the mandatory requirements of Section H of Annexure A to
the SEBI Circular dated October 20, 2016 dealing with the minimum disclosures for key financial statements. In line with the above, the income distribution payable to unit holders is recognized as liability when the same is approved by Board of Directors of the Investment Manager.

Fair valuation and disclosures

SEBI Circulars issued under the SEBI InvIT Regulations requires disclosures relating to net assets at fair value and total returns at fair value. In estimating the fair value of investments in subsidiaries (which constitute substantial portion of the net assets), the Group engages independent qualified external valuers to perform the valuation. The Investment Manager works closely with the valuers to establish the appropriate valuation techniques and inputs to the model. The valuation report and findings are discussed at the meeting of the Board of Directors on yearly basis to understand the changes in the fair value of the subsidiaries. The inputs to the valuation models are taken from observable markets, where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as weighted average cost of capital, tax rates, inflation rates, etc. Changes in assumptions about these factors could affect the fair value.

Taxes

In accordance with section 10 (23FC) of the Income Tax Act, 1961, the income of business groups in the form of interest received or receivable from subsidiaries is exempt from tax. Accordingly, the Group is not required to provide any current tax liability. Further, deferred tax asset on carry forward losses is not created since there is no reasonable certainty of reversal of the same in the near future.

Major Maintenance Expenses / Resurfacing Expenses

As per industry practice, the company is required to carry out resurfacing of the roads under the Concession. For this purpose, a regular maintenance along with periodic maintenances is required to be performed. Normally, periodic maintenance includes resurface of pavements, repairs of structures and other equipment and maintenance of service roads. The maintenance cost / bituminous overlay may vary based on the actual usage during maintenance period. Accordingly, on the grounds of matching cost concept and based on technical estimates, a provision for major maintenance expenses is reviewed and is provided for in the accounts annually.

Expected Credit Loss on financial assets

As per Ind AS 109, Financial Assets that are measured at amortised cost are required to compute the Expected Credit Loss (ECL). As at the reporting period, Investment manager of the Group assessed the credit risk of the financial assets and concluded that no provision for ECL is required.

48 Contingent Liabilities

The Project SPV company (NHIPPL) has issued a Corporate Guarantee amounting to Rs. 2,000 Crore on 14.03.2022 in favour of lenders of the Trust as part of debt covenants of the loan received from the Trust, to secure the term loan of Rs. 2,000 Crore availed by the Trust from external lenders. The Corporate Guarantee is valid till the external loans to the Trust are satisfied.

49 Subsequent Events

On May 23, 2022, the Board of Directors of the Investment Manager approved distribution of Rs. 0.79 per unit (Return on capital of Rs. 0.71 per unit, return of capital of Rs. Nil per unit, Dividend of Rs. Nil per unit and other income on surplus funds at Group of Rs. 0.08 per unit) for the period October 01, 2021 to March 31, 2022 to be paid on or before 15 days from the date of declaration.

Earnings Per Unit (In Rs.) (A/B)	**1.15**	-
Face value per Unit (In Rs.)	**101**	-

55 Key sources of estimation

The preparation of financial statements in conformity with Ind AS requires the Group makes estimates and assumptions that affect the reported amounts of income and expenses of the period, the reported balances of assets and liabilities and the disclosures relating to contingent liabilities as of the date of the financial statements. The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates include allowance for doubtful loans /other receivables, fair value measurement etc. Difference, if any, between the actual results and estimates is recognised in the period in which the results are known.

INDEPENDENT AUDITOR'S REPORT

To the Unit Holders of National Highways Infra Trust

Report on the Audit of the Consolidated Financial Statements

OPINION

We have audited the accompanying consolidated financial statements of National Highways Infra Trust (hereinafter referred to as "the InvIT" or "the Trust") and its one subsidiary (hereinafter referred to as "National Highways Infra Projects Private Limited" or "NHIPPL") (the Trust and its subsidiary together referred to as "the Group"), which comprising of the consolidated Balance Sheet as at 31 March 2023, the consolidated Statement of Profit and Loss (including Other Comprehensive Income), the consolidated Statement of Changes in Unitholder's Equity and the consolidated Statement of Cash Flows for the year then ended, the consolidated Statement of Net Assets at fair value as at 31 March 2023, the consolidated Statement of Total Returns at fair value, the Statement of Net Distributable Cash Flows of the Trust and its subsidiary for the year then ended and notes to the consolidated financial statements including a summary of significant accounting policies and other explanatory information (hereinafter referred to as "the consolidated financial statements").

In our opinion and to the best of our information and according to the explanations given to us and based on the consideration of our report on financial statements of subsidiary and on the other financial information of the subsidiary, the aforesaid consolidated financial statements give the information required by the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended from time to time including any guidelines and circulars issued thereunder (together referred to as the "SEBI InvIT Regulations") in the manner so required and give a true and fair view in conformity with the Indian Accounting Standards as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended ("Ind AS") and other accounting principles generally accepted in India, to the extent not inconsistent with SEBI InvIT Regulations, of the consolidated state of affairs of the Group as at 31 March 2023, its consolidated profit including other comprehensive income, its consolidated cash flows, its consolidated statement of changes in Unitholders' equity for the year ended 31 March 2023, its consolidated net assets at fair value as at 31 March 2023, its consolidated total returns at fair value of the Group and

the net distributable cash flows of the Trust and its subsidiary for the year ended 31 March 2023.

BASIS FOR OPINION

We conducted our audit of the consolidated financial statements in accordance with the Standards on Auditing ("SAs") issued by the Institute of Chartered Accountants of India. Our responsibilities under those Standards are further described in the auditor's responsibilities for the audit of the consolidated financial statements section of our report. We are independent of the Group in accordance with the Code of Ethics issued by the Institute of Chartered Accountants of India together with the ethical requirements that are relevant to our audit of the consolidated financial statements under the provisions of the SEBI InvIT Regulations, and we have fulfilled our other ethical responsibilities in accordance with these requirements and the Code of Ethics. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion on the consolidated financial statements.

KEY AUDIT MATTERS

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the consolidated financial statements for the financial year ended 31 March 2023. These matters were addressed in the context of our audit of the consolidated financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters. We have determined the matters described below to be the key audit matters to be communicated in our report.

Sr. No.	Key Audit Matter	Auditor's Response
1.	**Assessment of Impairment of Intangible Assets in form of Toll Collection Rights** The Group operates toll assets which is constructed on Toll, Operate and Transfer (TOT) basis. The carrying value of the toll collection rights as at March 31, 2023 is Rs. 10,01,398.18 Lakhs. In accordance with its accounting policy and requirements under Ind AS 36 "Impairment of Assets", the Management has performed an impairment assessment by comparing the carrying value of the toll collection rights to their recoverable amount. For impairment testing, value in use has been determined by forecasting and discounting future cash flows. Further, the value in use is highly sensitive to changes in critical variable used for forecasting the	Our Audit Procedures included the following :- • Verified the appropriateness of the Group's accounting policy on impairment of Intangible Assets and Valuation Methodology applied in determining the recoverable amount. • Checked the Impairment Sheet provided by the Management. • Obtained the Management Representation on the assumptions around the key drivers of the revenue

	future cash flows including traffic projections and discounting rates. The determination of the recoverable amount of the toll collection right involves significant estimates and judgments and accordingly, the evaluation of impairment of toll collection rights has been determined as a key audit matter. (Refer Note No. 2.7 for accounting policy relating to Intangible Assets and Note No. 42 and 49 of Consolidated Financial Statements for the year ended 31.03.2023)	projections, future cash flow, discount rates / weighted average cost of capital that were used by them. • Tested the arithmetical accuracy of the Impairment sheet.
2.	**Assessment of Impairment of Goodwill on Consolidation** Goodwill on consolidation is tested for impairment as per Ind AS 36 on an annual basis by the Group using enterprise value of respective subsidiary company to which the goodwill relates to. Enterprise value calculation involves use of future cashflow projections, discounted to present value, terminal value and other variables. These use of management projections and estimates results in inherent risk of error with respect to the valuation of Goodwill and accuracy of impairment loss, if any. Goodwill amounting to Rs. 10,144.46 Lakhs as on March 31, 2023 (March 31, 2022: 10,144.46 Lakhs) arising out of business combination as per Ind AS 103 has been tested for impairment by the management. (Refer Note No. 2.3 for accounting policy relating to Goodwill on Consolidation, Note No. 42 and 49 of Consolidated Financial Statements for the year ended 31.03.2023) Therefore, Impairment of Goodwill has been considered as a Key Audit Matter.	Our Audit Procedures included the following :- • Verified the appropriateness of the Group's accounting policy on impairment of Goodwill and Valuation Methodology applied in determining the enterprise value. • Checked the Impairment Sheet provided by the Management. • Obtained the Management Representation on the assumptions around the key drivers of the revenue projections, future cash flow, discount rates / weighted average cost of capital that were used by them. • Tested the arithmetical accuracy of the Impairment sheet.
3.	**Provisioning of Major Maintenance/Periodic Maintenance/resurfacing expenses (Refer Note No. 16 and 61 of the Consolidated Financial Statements)** As per Concession Agreement, the Group is obligated to perform regular maintenance	Our Audit Procedures included the following :- • Understood the Group's Process associated with the estimation of resurfacing obligation.

	along with periodic maintenance of road assets during the entire concession period. The Periodic maintenance includes resurface of pavements, repairs of structures and other equipment and maintenance of service roads. The Group has estimated the provision required towards major maintenance in accordance with Ind AS 37 "Provisions, Contingent Liabilities and Contingent Assets". The Provision made by the Group over the Concession involves detailed Calculation and Judgement and accordingly, the major maintenance expense is considered to be the Key audit Matter.	• Verified the requirement under Concession agreement and Group's accounting policy. • Tested the assumption used in determining the major maintenance provision. • Tested the arithmetical accuracy and also verified the disclosure in the Consolidated Financial Statements.
4.	**Computation and disclosures as prescribed in the SEBI InvIT regulations relating to Consolidated Statement of Net Assets at Fair Value and Consolidated Total Returns at Fair Value** As per SEBI InvIT regulations, the Trust is required to disclose statement of net assets at fair value and statement of total returns at fair value. The fair value is determined by forecasting and discounting future cash flows from the operations of the investee entities which involves management estimates and judgements. These estimates and judgements include discounting rates, Tax rates and inflation rates which are considered for computing the fair value. There is an inherent risk in the computation of fair value due to the use of estimates and judgements mentioned above. Therefore, computation and disclosures of Consolidated statement of net assets at fair value and Consolidated statement of total returns at fair value is considered as a Key Audit Matter. Refer Note-49 Significant Accounting Assumptions – Fair Value and Disclosures and Statement of net assets at fair value and Statement of total returns at fair value in the Consolidated financial statements.	Our Audit Procedures included the following :- • Obtained the understanding of the requirements of SEBI InvIT regulations for disclosures relating to Consolidated Statement of Net Assets at Fair Value and Consolidated Statement of Total Returns at Fair Value. • Assessed the Valuation Report issued by the Independent Valuer engaged by the management. Also assessed the appropriateness of the Trust's valuation methodology applied in determining the fair values. • Obtained Management representation in this respect. • Tested the arithmetical accuracy of computation in the statement of net assets and total returns at fair value.

		• Ensured that disclosures is in compliance with SEBI InvIT regulations relating to the statement of net assets at fair value and the statement of total returns at fair value.

INFORMATION OTHER THAN THE CONSOLIDATED FINANCIAL STATEMENTS AND AUDITOR'S REPORT THEREON

The Board of Directors of the Investment Manager is responsible for the other information. The other information comprises the information included in the Management Discussion and Analysis, Report of Investment Manager including annexures to Investment Manager's Report and other information as required to be given by SEBI InvIT Regulations, but does not include the consolidated financial statements and our report thereon.

Our opinion on the consolidated financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.
In connection with our audit of the consolidated financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the consolidated financial statements or our knowledge obtained during the course of our audit or otherwise appears to be materially misstated.

If, based on the work we have performed on the other information that we obtained prior to the date of this auditor's report, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

RESPONSIBILITIES OF THE BOARD OF DIRECTORS OF INVESTMENT MANAGER FOR THE CONSOLIDATED FINANCIAL STATEMENTS

The Board of Directors of Investment Manager is responsible for the preparation of these consolidated financial statements that give a true and fair view of the consolidated Balance Sheet as at 31 March 2023, consolidated statement of Profit & Loss including other comprehensive income, consolidated cash flows and consolidated statement of changes in Unitholder's equity for the year ended 31 March 2023, the consolidated net assets at fair value as at 31 March 2023, the consolidated total returns at fair value of the Group and the net distributable cash flows of the Trust and its subsidiary for the year ended 31 March 2023 in accordance with the requirements of the SEBI InvIT Regulations, Indian Accounting Standards as defined in Rule 2(1) (a) of Companies (Indian Accounting Standards) Rules, 2015, as amended and other accounting principles generally accepted in India, to the extent not inconsistent with SEBI InvIT Regulations. The respective Board of Directors of the subsidiary company included in the Group are responsible for maintenance of adequate accounting records for safeguarding of the assets of the Group and for preventing and detecting frauds and other irregularities; selection and application of appropriate accounting policies;

making judgements and estimates that are reasonable and prudent; and design, implementation and maintenance of adequate internal financial controls for ensuring the accuracy and completeness of accounting records, relevant to the preparation and presentation of the consolidated financial statements that give a true and fair view and are free from material misstatement, whether due to fraud and error, which have been used for the purpose of preparation of the consolidated financial statements by the Board of Directors of Investment Manager, as aforesaid.

In preparing the consolidated financial statements, the Board of Directors of Investment Manager and respective Board of Directors of the company included in the Group are responsible for assessing the ability of the Group to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the respective Board of Directors either intends to liquidate the Group or to cease operations, or has no realistic alternative but to do so.

The Board of Directors of the Investment Manager and the respective Board of Directors of the subsidiary company included in the Group are also responsible for overseeing the financial reporting process of the Group.

AUDITOR'S RESPONSIBILITY FOR THE AUDIT OF THE CONSOLIDATED FINANCIAL STATEMENTS

Our objectives are to obtain reasonable assurance whether the consolidated financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with SAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with SAs, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the consolidated financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Group's internal controls.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Investment Manager.

- Conclude on the appropriateness of the Board of Directors of Investment Manager use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Group's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Group to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the consolidated financial statements, including the disclosures, and whether the consolidated financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the Group of which we are the independent auditors, to express an opinion on the consolidated financial statements. We are responsible for the direction, supervision and performance of the audit of financial statements of such entities included in the consolidated financial statements of which we are the independent auditors. We remain solely responsible for our audit opinion.

Materiality is the magnitude of misstatements in the consolidated financial statements that, individually or in aggregate, makes it probable that the economic decisions of a reasonably knowledgeable user of the financial statements may be influenced. We consider quantitative materiality and qualitative factors in (i) planning the scope of our audit work and in evaluating the results of our work; and (ii) to evaluate the effect of any identified misstatements in the financial statements.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

We also provide those charged with governance with a statement that we have complied with relevant ethical requirements regarding independence, and to communicate with them all relationships and other matters that may reasonably be thought to bear on our independence, and where applicable, related safeguards.

From the matters communicated with those charged with governance, we determine those matters that were of most significance in the audit of the consolidated financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor's report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

REPORT ON OTHER LEGAL AND REGULATORY REQUIREMENTS

Based on our audit and as required by SEBI InvIT Regulations, we report that:

a) We have sought and obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit of the aforesaid consolidated financial statements.

b) the consolidated Balance Sheet, the consolidated Statement of Profit and Loss, the consolidated Statement of Cash Flows, the consolidated Statement of Changes in Unitholders' Equity, the consolidated Statement of Net Assets at fair value, the consolidated Statement of Total Returns at fair value and the Statement of Net Distributable Cash Flows of the Trust and its subsidiary dealt with by this Report are in agreement with the books of account.

c) In our opinion, the aforesaid financial statements comply with the Indian Accounting Standards as defined in Rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended, to the extent not inconsistent with SEBI InvIT regulations.

NATIONAL HIGHWAYS INFRA TRUST

SIGNIFICANT ACCOUNTING POLICIES FORMING PART OF CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEAR ENDED ON MARCH 31, 2023

1. GROUP INFORMATION AND NATURE OF OPERATIONS

The consolidated financial statements comprise financial statements of National Highways Infra Trust ("the Trust" or "InvIT") and its subsidiary (Project SPV – National Highways Infra Projects Private Limited (NHIPPL)) (collectively, the Group).

The Trust is an irrevocable trust registered under the provisions of the Indian Trusts Act, 1882 on October 19, 2020. It is registered under the Securities and Exchange Board of India (Infrastructure Investment Trust) Regulations, 2014 on October 28, 2020 having registration number IN/InvIT/20-21/0014.

The Trust was setup by National Highways Authority of India ("NHAI" or the "Sponsor"), an Infrastructure Development Trust in India. The Trustee to the Trust is IDBI Trusteeship Services Limited (the "Trustee") and Investment Manager for the Trust is National Highways Infra Investment Managers Private Limited ("Investment Manager").

The Trust has been formed to invest in infrastructure assets primarily being in the road sector in India. The Trust's road projects are implemented and held through special purpose vehicles ("Project SPVs"/ "Subsidiaries"). The units of the Trust were listed in Bombay Stock Exchange and National Stock Exchange on November 10, 2021.

During the year ended March 31, 2022, the Trust acquired 100% equity control in National Highway Infra Projects Private Limited (the "Project SPV") from the Sponsor with effect from November 03, 2021. During the year ended 31.03.2021, the project SPV entered into five Concession Agreements for 30 years with the Sponsor (National Highways Authority of India – NHAI) on Toll, Operate and Transfer ('TOT') basis and in year ended 31.03.23 further signed three new Concession Agreements for 20 years with National Highways Authority of India on Toll, Operate and Transfer ('TOT') basis.

The registered office of the Investment Manager is G-5 & 6, Sector-10, Dwarka, Delhi - 110075.

The consolidated financial statements were authorised for issue in accordance with resolution passed by the board of directors of the Investment Manager on May 22, 2023.

2. SIGNIFICANT ACCOUNTING POLICIES

2.1 Basis of Preparation

The Consolidated financial statements of the Group have been prepared in accordance with Indian Accounting Standards as defined in Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended, prescribed under Section 133 of the Companies Act, 2013 ("Ind AS") read with Securities and Exchange Board of India (Infrastructure Investment Group) Regulations, 2014, as amended and the circulars issued thereunder ("SEBI InvIT Regulations") and other accounting principles generally accepted in India.

Accordingly, the Group has prepared these Consolidated Financial Statements comprising of the Balance Sheet as on March 31, 2023, the Statement of Profit and Loss for the year ended on March 31, 2023, the Statement of Cash Flows for the year ended on March 31, 2023, the Statement of Changes of Equity for the year ended on March 31, 2023 and Notes to Accounts (together hereinafter referred to as "Consolidated Financial Statements").

These Financial Statements have been prepared on accrual basis under the historical cost convention, except certain financial assets and liabilities which have been measured at Fair Value. Accounting policies have been consistently applied, except where a newly issued Accounting Standard is initially adopted or a revision to an existing Accounting Standard requires a change in the accounting policy hitherto in use. Further, these consolidated financial statements have been prepared on a going concern basis.

The financial statements are presented in Indian Rupees (INR) which is the Group's functional and presentation currency and all amounts are rounded to the nearest Lakh (`00,000) and two decimals thereof, except as otherwise stated.

2.2 Basis of Consolidation

The consolidated financial statements incorporate the financial statements of the Trust and it's subsidiary (Project SPV- NHIPPL) from date of acquisition i.e. November 3, 2021.

For the purpose of consolidation, an entity which is, directly or indirectly, controlled by the Group is treated as subsidiary. Control exists when the Group, directly or indirectly, has power over the investee, is exposed to variable returns from its involvement with the investee and has the ability to use its power to affect its returns.

Consolidation of a subsidiary begins when the Group, directly or indirectly, obtains control over the subsidiary and ceases when the Group, directly or indirectly, loses control of the subsidiary. Income and expenses of a subsidiary acquired or disposed of during the period are included in the consolidated statement of profit and loss from the date the Group, directly or indirectly, gains control until the date when the Group, directly or indirectly, ceases to control the subsidiary.

Consolidation procedure:

- Combine like items of assets, liabilities, equity, income, expenses and cash flows of the parent with those of its subsidiary. For this purpose, income and expenses of the Subsidiaries are based on the amounts of the assets and liabilities recognised in the Consolidated financial statements at the acquisition date.

- Offset (eliminate) the carrying amount of the parent's investment in each subsidiary and the parent's portion of equity of each subsidiary. Business combinations policy explains how to account for any related goodwill.

- Eliminate in full intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between entities of the group (profits or losses resulting from intragroup transactions that are recognised in assets, such as inventory and fixed assets, are eliminated in full. Intragroup losses may indicate an impairment that requires recognition in the consolidated financial statements.

- The carrying amount of the Group's investment in each subsidiary and the Group's portion of equity of each subsidiary are offset with each other in the consolidated financial statements.

Ind AS 12 - Income Taxes applies to temporary differences that arise from the elimination of profits from intragroup transactions.

The accounting policies of subsidiaries have been harmonised to ensure the consistency with the policies adopted by the Group. The consolidated financial statements have been presented to the extent possible, in the same manner as Group's standalone financial statements.

2.3 Business Combination/ Goodwill on Acquisition

Business combinations are accounted for using the acquisition method. The cost of an acquisition is measured as the aggregate of the consideration transferred, measured at acquisition date fair value and the amount of any non-controlling interests in the acquiree. For each business combination, the Group elects whether to measure the non-controlling interests in the acquiree at fair value or at the proportionate share of the acquiree's identifiable net assets. Acquisition related costs are recognised in the statement of profit and loss as incurred.
The acquiree's identifiable assets, liabilities and contingent liabilities that meet the condition for recognition are recognised at their fair values at the acquisition date.

At the acquisition date, the identifiable assets acquired and the liabilities assumed are recognised at their acquisition date fair values. For this purpose, the liabilities assumed include contingent liabilities representing present obligation and they are measured at their acquisition fair values irrespective of the fact that outflow of resources embodying economic benefits is not probable

Goodwill is initially measured at cost, being the excess of the aggregate of the consideration transferred and the amount recognised for non-controlling interests, and any previous interest held, over the net identifiable assets acquired and liabilities assumed. If the fair value of the net assets acquired is in excess of the aggregate consideration transferred, the Group re-assesses whether it has correctly identified all of the assets acquired and all of the liabilities assumed and reviews the procedures used to measure the amounts to be recognised at the acquisition date. If the reassessment still results in an excess of the fair value of net assets acquired over the aggregate consideration transferred, then the gain is recognised in other comprehensive income and accumulated in equity as capital reserve. However, if there is no clear evidence of gain on bargain purchase, the entity recognises the gain directly in equity as capital reserve, without routing the same through other comprehensive income.

Goodwill arising on consolidation is not amortised, however, it is tested for impairment annually. In the event of cessation of operations of a subsidiary, the unimpaired goodwill is written off fully. For the purpose of impairment testing, goodwill acquired in a business combination is, from the acquisition date, allocated to each of the Group's cash-generating units that are expected to benefit from the combination, irrespective of whether other assets or liabilities of the acquire are assigned to those units. A cash generating unit to which goodwill has been allocated is tested for impairment annually, or more frequently when there is an indication that the unit may be impaired. If the recoverable amount of the cash generating unit is less than it's carrying amount, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit pro-rata based on the carrying amount of each asset in the unit.

Any impairment loss for goodwill is recognised in the consolidated statement of profit or loss. An impairment loss recognised for goodwill is not reversed in subsequent periods. Where goodwill has been allocated to a cash generating unit and part of the operation within that unit is disposed of, the goodwill associated with the disposed operation is included in the carrying amount of the operation when determining the gain or loss on disposal.

Goodwill disposed in these circumstances is measured based on the relative values of the disposed operation and the portion of the cash-generating unit retained.

2.4 Use of Judgement and Estimates

The preparation of financial statements is in conformity with the generally accepted accounting principles in India, and requires the Investment Manager to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the financial statements and the results of operations during the reporting period end. Although these estimates are based upon Investment Manager's best knowledge of current events and actions, actual results could differ from these estimates.

Current versus non-current classification

Assets and Liabilities in the Consolidated Balance Sheet have been classified as either Current or Non–Current based upon the requirements of Schedule III notified under the Companies Act, 2013.

An asset has been classified as Current if,

(a) it is expected to be realized in, or is intended for sale or consumption in, the Group's normal operating cycle; or

(b) it is held primarily for the purpose of being traded; or

(c) it is expected to be realized within twelve months after the reporting date; or

(d) it is cash or cash equivalent unless it is restricted from being exchanged or used to settle a liability for at least twelve months after the reporting date.

All other assets have been classified as Non–Current.

A liability has been classified as Current when,

(a) it is expected to be settled in the Group's normal operating cycle; or

(b) it is held primarily for the purpose of being traded; or

(c) it is due to be settled within twelve months after the reporting date; or

(d) the Group does not have an unconditional right to defer settlement of the liability for at least twelve months after the reporting date.

All other liabilities have been classified as Non–Current.

The operating cycle is the time between the acquisition of assets for processing and their realisation in cash and cash equivalents. The group has identified twelve months as its operating cycle.

Deferred tax assets and liabilities are classified as non-current assets and liabilities.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

2.5 Revenue Recognition

Revenue is recognised to the extent that it is probable that the economic benefits will flow to the Group and the revenue can be reliably measured, regardless of when the payment is being made. Revenue is measured at the fair value of the consideration received or receivable, taking into account contractually defined terms of payment and excluding taxes or duties collected on behalf of the government.

The specific recognition criteria described below must also be met before revenue is recognised:

Toll Revenue - Toll Revenue from users of toll roads held by subsidiary company is recognised in respect of toll revenue accrued for respective toll road projects. Revenue from electronic toll collection is recognised on accrual basis.

Interest income - Interest is recognised on time proportion basis taking into account the amount outstanding and the rates applicable. For all Debt instruments measured either at Amortized Cost or Fair Value through Other Comprehensive Income, interest income is recorded using EIR method that is the rate that exactly discounts estimated future cash receipts through the expected life of the financial instrument to the net carrying amount of the financial asset.

Dividends - Dividend income is recognised when the Group's right to receive the payment is established, which is generally when shareholders approve the dividend.

Fair value gains on current investments carried at fair value are included in other income.

Claims with National Highways Authority of India ('NHAI') and other government authorities are accounted as and when the money is received from the respective authorities, in cases of monetary compensations.

Other items - Other items of income are recognised as and when the right to receive the income arises.

2.6 Property, plant and equipment

Property, Plant and Equipment (PPE) is recognised when it is probable that future economic benefits associated with the item will flow to the Group and the cost of the item can be measured reliably.

PPE are stated at acquisition cost less accumulated depreciation and cumulative impairment. Such cost includes the cost of replacing part of the plant and equipment and borrowing costs for long-term construction projects if the recognition criteria are met.

Recognition:

The cost of an item of property, plant and equipment shall be recognised as an asset if, and only if:

(a) it is probable that future economic benefits associated with the item will flow to the entity; and

(b) the cost of the item can be measured reliably.

When significant parts of plant and equipment are required to be replaced at intervals, Group depreciates them separately based on their specific useful lives.

Gains or losses arising from de - recognition of Property, plant and equipment are measured as the difference between the net disposable proceeds and the carrying amount of the asset and are recognized in the Consolidated Statement of Profit and Loss when the asset is derecognized.

The Group has estimated following useful

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Asset Class	Useful Life
Office Equipments	5 Years
Computers	3 Years
Furniture & Fixtures	10 Years

Depreciation on Property, plant and equipment

Depreciation on Property, plant and equipment ("PPE") is provided on straight line method, up to the cost of the asset (net of residual value), in accordance with the useful lives prescribed under Schedule II to the Companies Act, 2013.

Depreciation on additions is being provided on a pro-rata basis from the date of such additions. Similarly, depreciation on assets sold/disposed off during the year is being provided up to the dates on which such assets are sold/disposed off. Modification or extension to an existing asset, which is of capital nature and which becomes an integral part thereof is depreciated prospectively over the remaining useful life of that asset.

The estimated residual value of the PPE has been taken as 5% in line with the provisions of Schedule II to the Companies Act, 2013.

Fixed assets amounting up to INR 5,000 are recognised in Consolidated Statement of Profit and Loss in entirety in the first year of purchase.

The residual values, useful lives and methods of depreciation of property, plant and equipment are reviewed at each financial year end and adjusted prospectively, if appropriate.

Depreciation charge for impaired assets is adjusted in future periods in such a manner that the revised carrying amount of the asset is allocated over its remaining useful life.

2.7 Intangible assets

In accordance with Ind AS 38 "Intangible Assets", Intangible assets are recognised when it is probable that the future economic benefits that are attributable to the asset will flow to the Group and the cost of the asset can be measured reliably.

Pre-operative expenses including administrative and other general overhead expenses that are specifically attributable to the development or acquisition of intangible assets are allocated and capitalised as a part of the cost of the intangible assets.

Intangible assets not ready for the intended use on the date of the Consolidated Balance Sheet are disclosed as "intangible assets under development". Intangible assets are derecognised when no future economic benefits are expected from use or disposal.

The cost of intangible assets acquired in an amalgamation in the nature of purchase is their fair value as at the date of amalgamation. Following initial recognition, intangible assets are carried at cost less accumulated amortization and accumulated impairment losses, if any.

The useful lives of intangible assets are assessed as either finite or indefinite.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Rights under Service Concession Arrangements – Toll Collection Rights
The Group has acquired rights for Tolling, Operation, Maintenance and Transfer of five toll road projects for a period of 30 years basis Toll Concession agreements with NHAI, group further acquired rights during the current financial year for Tolling, Operation, Maintenance and Transfer of three additional toll road projects for a period of 20 years basis Toll Concession agreements with NHAI, and the same have been recognised as Other Intangible Assets in the financial statements.

Extension of concession period by the Authority in compensation for claims made by the Group are capitalised as part of Toll Collection Rights on acceptance of the claim. Where the Group has a contractual right to an extension in the concession period as per the concession agreement, the same is capitalized when the right to extension in the concession period is established at the estimated amount of eligible claims.

Amortisation of Intangible Assets
Intangible assets with finite lives are amortised over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life are reviewed at least at the end of each reporting period. Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the asset are considered to modify the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the Consolidated Statement of Profit and Loss unless such expenditure forms part of carrying value of another asset.

In accordance with Ind AS 38 "Intangible Assets", Intangible assets should be amortized by a method which reflects the pattern in which the asset's future economic benefits are expected to be consumed by the entity.

Toll Collection Rights shall be amortized basis a Consumption based model (using Passenger Car Unit (PCU) projections) over the tenure of the Concession Agreement.

Other intangible assets - Software purchased is amortized over a period of three to six years on straight line basis from the month in which the addition is made.

Gains or losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in the statement of profit or loss when the asset is derecognised.

Amortisation on impaired assets is provided by adjusting the amortisation charge in the remaining periods so as to allocate the assets' revised carrying amount over its remaining useful life.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

2.8 Employee benefits

Employee benefits include provident fund, gratuity, compensated absences, long service awards and medical benefits.

i. **Short term employee benefits**

Employee benefits such as salaries, short term compensated absences, expected cost of bonus, ex-gratia and performance linked rewards falling due wholly within twelve months of rendering the service are classified as short-term employee benefits and are expensed in the period in which the employee renders the related service.

ii. **Post-Employment Benefits**

Defined contribution plan: A defined contribution plan is a post-employment plan under which an entity pays fixed contributions and will have no legal or constructive obligations to pay further amounts. The Group contributes to provident fund and employees deposit linked insurance scheme, and have no further obligations beyond making its contributions. The Group's contribution to the above funds are charged to the Consolidated Statement of Profit and Loss.

Defined benefit plan: The Group has an un-funded benefit plan for post-employment benefits in the form of Gratuity. The value of obligation under the plan is determined by the group based on best estimate of the present value of the estimated future cash flows towards the gratuity obligation. Defined benefit costs comprising current service cost, past service cost and gains or losses on settlements are recognised in the Consolidated Statement of Profit and Loss as employee benefits expense. Gains or losses on the curtailment or settlement of any defined benefit plan are recognised when the curtailment or settlement occurs.

iii. **Termination benefits**

Termination benefits such as compensation under employee separation schemes (wherever applicable) are recognised as expense in the Consolidated Statement of Profit and Loss. Liability for the same is recognised at the earlier of when the group can no longer withdraw the offer of the termination benefit.

iv. **Other long-term employee benefits**

The present value of the obligation under long term employee benefit plans such as compensated absences is determined and is recognised in a similar manner as in the case of defined benefit plans.

Long term employee benefit costs comprising current service cost and gains or losses on curtailments and settlements, re-measurements are recognised in the Consolidated Statement of Profit and Loss as employee benefit expenses. Interest cost implicit in long term employee benefit cost is recognised in the Consolidated Statement of Profit and Loss under finance cost.

2.9 Leases

(i) The determination of whether an arrangement is or contains a lease is based on the substance of the arrangement at the inception of the lease.

i.i) Property, plant, and equipment acquired under leases with lease term more than 12 months is long term lease. The lease liability is recognised for the obligation to make the lease

payments and a right of use of asset for the underlying property, plant and equipment for the lease term. The lease liability is measured at the present value of the lease payments to be made over the lease term. The right of use property, plant and equipment are initially measured at the amount of the lease liability, adjusted for lease prepayments, lease incentives received and the initial direct costs such as commissions and an estimate cost of restoration, removal and dismantling of property, plant and equipment. Lease liabilities are increased to reflect the interest cost and are reduced with lease payments.

i.ii) Property, plant, and equipment having lease term 12 months or less than 12 months are recognised on a straight-line basis.

(ii) Property, plant and equipment leased out under operating leases are continued to be capitalised by the Group. Rental income is recognised on a straight-line basis over the term of the relevant lease.

2.10 Borrowing costs

Borrowing Cost consist of interest and other ancillary costs incurred in connection with the arrangement of borrowings. Borrowing costs directly attributable to the acquisition, construction or production of an asset that necessarily takes a substantial period of time to get ready for its intended use or sale are capitalized as part of the cost of the respective asset.

All other borrowing costs are charged to the Consolidated Statement of Profit and Loss in the period they occur. In case of significant Long term loans, other costs incurred in connection with the borrowing of funds are amortized over the period of respective Loan. Borrowing cost also includes exchange differences to the extent regarded as an adjustment to the borrowing costs.

2.11 Financial Instruments

Financial assets and/or financial liabilities are recognised when the Group becomes party to a contract embodying the related financial instruments. A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity. A financial asset and a financial liability are offset and presented on net basis in the Consolidated Balance Sheet when there is a current legally enforceable right to set-off the recognised amounts and it is intended to either settle on net basis or to realise the asset and settle the liability simultaneously.

Financial assets

Initial recognition and measurement

All financial assets are recognised initially at fair value plus, in the case of financial assets not recorded at fair value through profit or loss, transaction costs that are attributable to the acquisition of the financial asset. Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that the Group commits to purchase or sell the asset. Trade receivables and trade payables that do not contain a significant financing component are initially measured at their transaction price.

Subsequent measurement

For purposes of subsequent measurement, financial assets are classified in following categories;

- at amortised cost
- at fair value through profit or loss (FVTPL)
- at fair value through other comprehensive income (FVOCI)

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Financial Assets at amortised cost

A financial asset is classified and subsequently measured at the amortised cost if both the following conditions are met:

a) The asset is held within a business model whose objective is to hold assets for collecting contractual cash flows, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI) on the principal amount outstanding.

This category is the most relevant to the Group. All the Loans and other receivables under financial assets (except Investments) are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market.

After initial measurement, such financial assets are subsequently measured at amortised cost using the effective interest rate (EIR) method. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The losses arising from impairment are recognised in the Consolidated Statement of Profit and Loss.

Investments in equity instruments of Subsidiaries are recognised at original cost in accordance with Ind AS 27. Impairment testing of Investment in subsidiary that are accounted for at cost as per Ind AS 27 are within scope of Ind AS 36 Impairment of Assets. Any impairment in value of investment in equity investments in Subsidiaries is recognised in the Consolidated Statement of Profit and Loss.

Financial Assets at Fair Value through Other Comprehensive Income (FVOCI)

A financial asset is classified and subsequently measured at FVTOCI if both of the following criteria are met:

a) The asset is held within a business model whose objective is achieved both by collecting contractual cash flows and selling the financial assets, and
b) Contractual terms of the asset give rise on specified dates to cash flows that are solely payments of principal and interest (SPPI).

Investment in Debt instruments included within the FVTOCI category are measured initially as well as at each reporting date at fair value. Fair value movements are recognized in the other comprehensive income (OCI). However, the Group recognizes interest income, impairment losses & reversals and foreign exchange gain or loss in the Consolidated Statement of Profit and Loss.

Interest earned whilst holding FVTOCI debt instrument is reported as interest income using the EIR method.

Financial Assets at Fair Value through Profit and Loss (FVTPL)

A financial asset which is not classified in any of the above categories are subsequently fair valued through profit or loss. Financial assets included within the FVTPL category are measured at fair value with all changes recognized in the Consolidated statement of profit and loss. The Group measures its investments which are classified as equity instruments (other than investment in shares of Subsidiaries, Joint Ventures and Associates) at fair value through profit and loss account.

Any debt instrument, which does not meet the criteria for categorization as at amortized cost or as FVTOCI, is classified as at FVTPL. In addition, the Group may elect to designate a debt instrument, which otherwise meets amortized cost or FVTOCI criteria, as at FVTPL. However, such election is allowed only if doing so reduces or eliminates a measurement or recognition

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

inconsistency (referred to as 'accounting mismatch'). The Group has not designated any debt instrument as at FVTPL.

The Group has investment in debt oriented mutual funds which are held for trading, and the same are classified as at FVTPL. The Group makes such election on an instrument by instrument basis. The classification is made on initial recognition and is irrevocable. The gain/ loss on sale of investments are recognised in the Consolidated Statement of Profit and Loss.

Reclassification of Financial Assets

The Group determines classification of financial assets on initial recognition. After initial recognition, no reclassification is made for financial assets which are equity instruments and financial liabilities. For financial assets which are debt instruments, a reclassification is made only if there is a change in the business model for managing those assets. Changes to the business model are expected to be infrequent. The Investment Manager of the Group determines change in the business model as a result of external or internal changes which are significant to the Group's operations. Such changes are evident to external parties. A change in the business model occurs when the Group either begins or ceases to perform an activity that is significant to its operations. If the Group reclassifies financial assets, it applies the reclassification prospectively from the reclassification date which is the first day of the immediately next reporting period following the change in business model. The Group does not restate any previously recognised gains, losses (including impairment gains or losses) or interest.

The following table shows various reclassification and how they are accounted for:

Original Classification	Revised Classification	Accounting Treatment
Amortized Cost	FVTPL	Fair value is measured at reclassification date. Difference between previous amortised cost and fair value is recognised in Consolidated statement of profit and loss.
FTVPL	Amortized Cost	Fair value at reclassification date becomes its new gross carrying amount.
Amortized Cost	FVOCI	Fair value is measured at reclassification date. Difference between previous amortised cost and fair value is recognised in other comprehensive income. No Change in EIR due to reclassification.
FVOCI	Amortized Cost	Fair value at reclassification date becomes its new gross carrying amount. However cumulative gain or loss in other comprehensive income is adjusted against Fair value. Consequently, the asset is measured as if it had always been measured at amortised cost.
FTVPL	FVOCI	Fair value at reclassification date becomes its new carrying amount. No other adjustment is required.
FVOCI	FTVPL	Assets continue to be measured fair value. Cumulative gain or loss previously recognized in other comprehensive income is

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

		reclassified to Consolidated statement of profit and loss at the reclassification date.

Derecognition
A financial asset (or, where applicable, a part of a financial asset or part of Group's similar financial assets) is primarily derecognised (i.e. removed from the Consolidated Balance Sheet) when:

- The rights to receive cash flows from the asset have expired, or
- The group has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a 'pass-through' arrangement; and either (a) the group has transferred substantially all the risks and rewards of the asset, or (b) the group has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if and to what extent it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all of the risks and rewards of the asset, nor transferred control of the asset, the group continues to recognise the transferred asset to the extent of the group's continuing involvement. In that case, the group also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the group has retained.
Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the group could be required to repay.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, payables, as appropriate.
All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.
The Group's financial liabilities include trade and other payables, loans and borrowings etc.

Subsequent measurement
Financial liabilities designated upon initial recognition at fair value through profit or loss are designated as such at the initial date of recognition, and only if the criteria in Ind AS 109 are satisfied. For liabilities designated as FVTPL, fair value gains/ losses attributable to changes in own credit risk are recognized in OCI. These gains/losses are not subsequently transferred to Consolidated statement of profit and loss. However, the Group may transfer the cumulative gain or loss within equity. All other changes in fair value of such liability are recognised in the Consolidated statement of profit and loss. The Group has not designated any financial liability as at fair value through profit and loss.

Loans and borrowings
This is the category most relevant to the Group. After initial recognition, interest-bearing loans and borrowings are subsequently measured at amortised cost using the EIR method. Gains and

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

losses are recognised in Statement of Profit or Loss when the liabilities are derecognised as well as through the EIR amortisation process. Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the Consolidated Statement of Profit and Loss.
This category generally applies to borrowings and security deposits received.

Derecognition
A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability. The difference in the respective carrying amounts is recognised in the statement of profit or loss.

Offsetting financial instrument

Financial assets and liabilities are offset and the net amount is reported in the Consolidated Balance Sheet where there is a legally enforceable right to offset the recognised amounts and there is an intention to settle financial asset and liability on a net basis or realise the asset and settle the liability simultaneously. The legally enforceable right must not be contingent on future events and must be enforceable in the normal course of business and in the event of default, insolvency or bankruptcy of the Company or the counterparty.

2.12 Fair Value measurement
The Group measures financial instruments at fair value at each financial statement date.
Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:
i) In the principal market for the asset or liability, or
ii) In the absence of a principal market, in the most advantageous market for the asset or liability

The principal or the most advantageous market must be accessible by the Group.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:
Level 1 — Quoted prices (unadjusted) in active markets for identical assets or liabilities

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Level 2 — Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices)
Level 3 — Inputs for the assets or liabilities that are not based on observable market data (unobservable inputs).

For assets and liabilities that are recognised in the financial statements on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each reporting period.

The Group determines the policies and procedures for both recurring fair value measurement, such as derivative instruments and unquoted financial assets measured at fair value, and for non-recurring measurement, such as assets held for distribution in discontinued operations.

At each reporting date, the Group analyses the movements in the values of assets and liabilities which are required to be remeasured or re-assessed as per the Group's accounting policies. For this analysis, the Group verifies the major inputs applied in the latest valuation by agreeing the information in the valuation computation to contracts and other relevant documents.

The Group also compares the change in the fair value of each asset and liability with relevant external sources to determine whether the change is reasonable.
On an annual basis, the Board of Directors of the Investment Manager presents the valuation results to the Audit Committee and the Group's independent auditors. This includes a discussion of the major assumptions used in the valuations. For the purpose of fair value disclosures, the Group has determined classes of assets and liabilities on the basis of the nature, characteristics and risks of the asset or liability and the level of the fair value hierarchy as explained above. This note summarises accounting policy for fair value. Other fair value related disclosures are given in the relevant notes.

2.13 Cash and Cash Equivalents

Cash and cash equivalents in the Consolidated Balance Sheet comprise cash at banks and on hand and short-term deposits with an original maturity of three months or less, which are subject to an insignificant risk of changes in value.

For the purpose of the Consolidated statement of cash flows, cash and cash equivalents consist of cash and short-term deposits, as defined above, net of outstanding bank overdrafts as they are considered an integral part of the Group's cash management.

2.14 Impairment of Assets

Impairment of Financial Assets

All financial assets except for those designated at FVTPL are subject to review for impairment at least each reporting date to identify whether there is any objective evidence that a financial asset or group of financial assets is impaired. In accordance with Ind AS 109, the group applies expected credit loss (ECL) model for measurement and recognition of impairment loss for financial assets carried at amortized cost.

For recognition of impairment loss on other financial assets and risk exposure, the group determines that whether there has been a significant increase in the credit risk since initial

A.R & CO. FRN 002744 C CHARTERED ACCOUNTANTS

recognition. If credit risk has not increased significantly, 12-month ECL is used to provide for impairment loss. However, if credit risk has increased significantly, lifetime ECL is used. If, in a subsequent period, credit quality of the instrument improves such that there is no longer a significant increase in credit risk since initial recognition, then the entity reverts to recognising impairment loss allowance based on 12-month ECL.

Lifetime ECL are the expected credit losses resulting from all possible default events over the expected life of a financial instrument. The 12-month ECL is a portion of the lifetime ECL which results from default events that are possible within 12 months after the reporting date.
ECL is the difference between all contractual cash flows that are due to the group in accordance with the contract and all the cash flows that the entity expects to receive (i.e., all cash shortfalls), discounted at the original EIR. When estimating the cash flows, an entity is required to consider:

- All contractual terms of the financial instrument (including prepayment, extension, call and similar options) over the expected life of the financial instrument. However, in rare cases when the expected life of the financial instrument cannot be estimated reliably, then the entity is required to use the remaining contractual term of the financial instrument
- Cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms

ECL impairment loss allowance (or reversal) recognized during the year is recognized as income/ expense in the Consolidated Statement of Profit and Loss (P&L). This amount is reflected under the head 'other expenses' in the P&L.

Impairment of Non- Financial Assets
The Group assesses, at each reporting date, whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the Group estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or cash-generating unit's (CGU) fair value less costs of disposal and its value in use. Recoverable amount is determined for an individual asset unless the asset does not generate cash inflows that are largely independent of those from other assets or Group's assets. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining net selling price, recent market transactions are taken into account, if available. If no such transactions can be identified, an appropriate valuation model is used. Impairment losses of continuing operations are recognized in the Consolidated statement of profit and loss, except for previously revalued tangible fixed assets, where the revaluation was taken to revaluation reserve. In this case, the impairment is also recognized in the revaluation reserve up to the amount of any previous revaluation. After impairment, depreciation is provided on the revised carrying amount of the asset over its remaining useful life.

An assessment is made at each reporting date as to whether there is any indication that previously recognized impairment losses may no longer exist or may have decreased. If such indication exists, the group estimates the asset's CGU's recoverable amount. A previously recognized impairment loss is reversed only if there has been a change in the assumptions used to determine the assets recoverable amount since the last impairment loss was recognized. The reversal is limited so that the carrying amount of the asset does not exceed its recoverable amount, nor exceed the carrying amount that would have been determined, net of depreciation, had no impairment loss been

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

recognized for the asset in prior years. Such reversal is recognized in the Consolidated statement of profit and Loss unless the asset is carried at a revalued amount, in which case the reversal is treated as a revaluation increase.

2.15 Foreign currency transactions

The Group's financial statements are presented in INR, which is group's functional currency.
Foreign currency transactions are recorded at the exchange rate prevailing on the date of the respective transactions between the functional currency and the foreign currency.

Monetary foreign currency assets and liabilities remaining unsettled at the Financial Statement date are translated at the rates of exchange prevailing on that date.

Gains / losses arising on account of realisation / settlement of foreign currency transactions and on translation of foreign currency assets and liabilities are recognized in the Consolidated Statement of Profit and Loss.

Exchange differences arising on the settlement of monetary items at rates different from those at which they were initially recorded during the year, or reported in previous financial statements, are recognized as income or as expenses in the year in which they arise.

Non - Monetary items which are carried in terms of historical cost denominated in a foreign currency are reported using the exchange rate at the date of the transaction; and Non - Monetary items which are carried at fair value or other similar valuation denominated in a foreign currency, are reported using the exchange rates that existed when the values were determined.

The gain or loss arising on translation of Non-Monetary items measured at fair value is treated in line with the recognition of the gain or loss on the change in Fair value of the item (i.e., translation differences on items whose fair value gain or loss is recognised in OCI or profit or loss are also recognised in OCI or profit or loss, respectively).

2.16 Taxes on income

Tax expense comprises of Current and Deferred tax.
Current income tax is measured at the amount expected to be paid to the tax authorities in accordance with the Income Tax Act, 1961.

Current income tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date. The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted, at the reporting date.
Current income tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity).
Current tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity.
Investment Manager periodically evaluates positions ith respect to situations in which applicable tax regulations are establishes provisions where appropriate.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Deferred tax is provided using the liability method on temporary differences between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes at the reporting date.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the year when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the reporting date.

Deferred tax assets are recognised for all deductible temporary differences, the carry forward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilised. The carrying amount of deferred tax assets is reviewed at each reporting date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss (either in other comprehensive income or in equity).

Deferred tax assets and deferred tax liabilities are offset if a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred taxes relate to the same taxable entity and the same taxation authority.

2.17 Provisions, Contingent Liabilities, Contingent Assets and Capital Commitments

Contingent Liabilities
A contingent liability is a possible obligation that arises from past events whose existence will be confirmed by the occurrence or non–occurrence of one or more uncertain future events beyond the control of the Group or a present obligation that is not recognized because it is not probable that an outflow of resources will be required to settle the obligation. A contingent liability also arises in extremely rare cases where there is a liability that cannot be recognized because it cannot be measured reliably. Contingent Liabilities are reviewed at each reporting date. The Group does not recognize a contingent liability but discloses its existence in the financial statements, however discloses its existence in the financial statements in the notes to accounts.

Contingent Assets
Contingent assets usually arise from unplanned or other unexpected events that give rise to the possibility of an inflow of economic benefits to the entity.
Contingent assets are recognized when the realisation of income is virtually certain, in which case the related asset is not a contingent asset and its recognition is appropriate.
Contingent assets are reviewed at each reporting date. A contingent asset is disclosed where an inflow of economic benefits is probable.

Provisions
Provisions are recognised when the Group has ...structive) as a result of a past event, it is probable that an out... benefits will be required to settle the obligation and a re...nt of the obligation. When the Group expects some or ...xample, under an insurance contract, the reimbursemei... a separate asset, ...nly when

the reimbursement is virtually certain. The expense relating to a provision is presented in the Consolidated statement of profit and loss net of any reimbursement.
If the effect of the time value of money is material, provisions are discounted using a current pre-tax rate that reflects, when appropriate, the risks specific to the liability. When discounting is used, the increase in the provision due to the passage of time is recognised as a finance cost.

Commitments
Commitments are future liabilities for contractual expenditure, classified and disclosed as follows:
- estimated amount of contracts remaining to be executed on capital account and not provided for;
- funding related commitment to subsidiary companies; and
- other non-cancellable commitments, if any, to the extent they are considered material and relevant in the opinion of management.

Other commitments related to services to be rendered / procurements made in the normal course of business are not disclosed to avoid excessive details.

2.18 Consolidated Statement of Cash Flows

Consolidated Statement of Cash Flows is prepared segregating the cash flows into operating, investing and financing activities.
Cash flow from operating activities is reported using indirect method adjusting the net profit for the effects of:
- changes during the period in operating receivables and payables, transactions of a non-cash nature;
- non-cash items such as depreciation, provisions, deferred taxes, unrealised foreign currency gains and losses;
- all other items for which the cash effects are investing or financing cash flows.

Cash and cash equivalents (including bank balances) shown in the Consolidated Statement of Cash Flows exclude items which are not available for general use as at the date of Consolidated Balance Sheet.

2.19 Assets held for sale

Non-current assets or disposal groups comprising of assets and liabilities are classified as 'held for sale' when all of the following criteria's are met: (i) decision has been made to sell. (ii) the assets are available for immediate sale in its present condition. (iii) the assets are being actively marketed and (iv) sale has been agreed or is expected to be concluded within 12 months of the Consolidated Balance Sheet date.
Subsequently, such non-current assets and disposal groups classified as held for sale are measured at the lower of its carrying value and fair value less costs to sell. Non-current assets held for sale are not depreciated or amortised.

2.20 Unit Capital

Units are classified as equity. Incremental costs attributable to the issue of units are directly reduced from equity as per requirements of Ind AS 32.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

2.21 Distribution to unit holders

The Group recognises a liability to make cash distributions to unit holders when the distribution is authorised and a legal obligation has been created. As per the SEBI InvIT Regulations, a distribution is authorised when it is approved by the Board of Directors of the Investment Manager. A corresponding amount is recognised directly in other equity.

2.22 Earnings per Unit (EPU)

Basic EPU amounts are calculated by dividing the profit for the period attributable to unitholders by the weighted average number of units outstanding during the period.

Diluted EPU amounts are calculated by dividing the profit/(loss) attributable to unitholders by the weighted average number of units outstanding during the period plus the weighted average number of units that would be issued on conversion of all the dilutive potential units into unit capital.

2.23 Recent Pronouncements

Ministry of Corporate Affairs ("MCA") notifies new standards or amendments to the existing standards under Companies (Indian Accounting Standards) Rules as issued from time to time. On March 31, 2023, MCA amended the Companies (Indian Accounting Standards) Amendment Rules, 2023, as below:

Ind AS 1 - Presentation of Financial Statements - This amendment requires the entities to disclose their material accounting policies rather than their significant accounting policies. The effective date for adoption of this amendment is annual periods beginning on or after April I, 2023. The Group has evaluated the amendment and the impact of the amendment is insignificant in the Group's financial statements.

Ind AS 8 - Accounting Policies, Changes in Accounting Estimates and Errors_- This amendment has introduced a definition of 'accounting estimates' and included amendments to Ind AS 8 to help entities distinguish changes in accounting policies from changes in accounting estimates. The effective date for adoption of this amendment is annual periods beginning on or after April I, 2023. The Group has evaluated the amendment and there is no impact on its consolidated financial statements.

Ind AS 12 - Income Taxes - This amendment has narrowed the scope of the initial recognition exemption so that it does not apply to transactions that give rise to differences. The effective date for adoption of this amendment is annual periods beginning on or after April 1, 2023. The Group has evaluated the amendment and there is no impact on its consolidated financial statement.

NATIONAL HIGHWAYS INFRA TRUST

Notes to Consolidated Financial Statements for the year ended March 31, 2023

4. Goodwill arising on Consolidation

(All amounts in ₹ lakh unless otherwise stated)

PARTICULARS	As At March 31, 2023	As At March 31, 2022
Gross Carrying Amount		
Balance at the beginning of the year	10,144.46	-
Additions*	-	10,144.46
Less: Disposals	-	-
Less: Impairment	-	-
Balance at the closing of the year	**10,144.46**	**10,144.46**

The carrying amount relates to goodwill arising on acquisition of Project SPV (NHIPPL) by the Trust and has been tested for impairment against the respective cash generating unit (CGU). The calculation uses cash flow forecast based on financial models which cover remaining future periods of respective concession periods of toll assets.

Based on a review of the future discounted cash flows of the intangible assets (Toll Collection Rights) held by the subsidiary (NHIPPL), the recoverable amount is higher than the carrying amount of the assets, and accordingly no impairment loss has been recognised in the statement of profit and loss for the year ended March 31, 2023.

Balance	**72,64,05,200**	**7,41,604.32**	**59,52,00,000**	**5,99,442.82**

* 13,12,05,200 unit issued at Rs 109 per unit and 59,52,00,000 unit issued at Rs 101 per unit.

The Trust offered an issue of 13,12,05,200 units of National Highways Infra Trust ("NHIT") during the current financial year and such units, the "units"), for cash at a price of 109.00 per unit (the "issue price"), aggregating to ` Rs 1,43,013.67 lacs through Institutional and preferential placement in accordance with the Securities and Exchange Board of India (Infrastructure Investment Trust) Regulations, 2014 including the rules, circulars and guidelines issued thereunder. The issue opened on September 30, 2022 and closed on October 03, 2022. The Board of Directors of National Highways Infra Investment Managers Private Limited considered and approved allotment of 13,12,05,200 units to the eligible unitholders of Trust on October 12, 2022.

Issue expenses of Rs 852.17 lakhs (previous year Rs 1,709.18) incurred in connection with issue of units have been reduced from the Unit holders capital in accordance with Ind AS 32 Financial Instruments: Presentation

Rights/ preferences and restrictions attached to Unit Capital

Subject to the provisions of the InvIT Regulations, the indenture of funds, and applicable rules, regulations and guidelines, the rights of the unit holders include:

a) The beneficial interest of each unitholder shall be equal and limited to the proportion of the number of the units held by that unitholder to the total number of units.

b) Right to receive income or distributions with respect to the units held.
c) Right to attend the annual general meeting and other meetings of unit holders of the Trust.
d) Right to vote upon any matters/resolutions proposed in relation to the Trust.
e) Right to receive periodic information having a bearing on the operation or performance of the Trust in accordance with the InvIT
f) Right to apply to the Trust to take up certain issues at meetings for unit holders approval.
g) Right to receive additional information, if any, in accordance with InvIT documents filed with Placement Memorandum.
h) The non-sponsor unit holders ("Eligible Persons") of the Trust are entitled to representation on the Board of Directors of the Investment Manager through appointment of up to two (2) directors ("Non-Sponsor Directors"), provided that no Eligible Person shall have the right to nominate more than one Director at a time for appointment on the Board of Directors.

In accordance with the InvIT Regulations, no unit holders shall enjoy superior voting or any other rights over any other unit holders, and there shall not be multiple classes of units. There shall be only one denomination of units. Not withstanding the above, subordinate units may be issued only to the Sponsor and its Associates, where such subordinate units shall carry only inferior voting or any other rights compare to the other units.

Under the provisions of the InvIT Regulations, not less than ninety percent of the net distributable cash flows of the Trust is required to be distributed to the unitholders, and in accordance with such statutory obligation the Trust has formulated a distribution policy to declare and distribute the distributable cash flows to its unitholders atleast once every financial year as approved by the Board of Directors of the Investment Manager. The distributions made by Trust to its unitholders are based on the Net Distributable Cash Flows (NDCF) of the Trust under the InvIT Regulations and represent repayment of proportionate capital and share of profit. The distribution in proportion to the number of units held by the unitholders. The Trust declares and pays distributions in INR.

Limitation to the Liability of the unit holders

The liability of each unit holders towards the payment of any amount (that may arise in relation to the Trust including any taxes, duties, fines, levies, liabilities, costs or expenses) shall be limited only to the extent of the capital contribution of such unit holders and after such capital contribution shall have been paid in full by the unit holders, the unit holders shall not be obligated to make any further payments.
The unit holders shall not have any personal liability or obligation with respect to the Trust.

Details of Unitholders Holding More Than 5% Units In The Trust

Name of Unitholders	As at March 31, 2023		As at March 31, 2022	
	No of Units	%	No of Units	%
Ontario Limited	18,16,01,300	25.00%	14,88,00,000	25.00%
CPP Investment Board Private Holdings Inc	18,16,01,300	25.00%	14,88,00,000	25.00%
SBI Balanced Advantage Trust	6,31,60,260	8.69%	5,68,00,000	9.54%
National Highways Authority of India (NHAI)	11,52,02,600	15.86%	9,56,00,000	16.06%

As per records of the Trust, including its register of unitholders and other declaration received from unitholders regarding beneficial interest, the above unitholding represent both legal and beneficial ownership of units.
The Trust has not allotted any fully paid-up units by way of bonus units nor has it bought back any class of units from the date of incorporation till the balance sheet date. Further the Trust has not issued any units for consideration other than cash during the year.

Reconciliation of number of units outstanding is set out below:

Particulars	As at March 31, 2023		As at March 31, 2022	
	No of Units	Amount (amounts in ₹ lakh)*	No of Units	Amount (amounts in ₹ lakh)*
Number of Units at the beginning of the year	59,52,00,000	6,01,152.00	-	-

Security for Term Loans :
The loan is secured by,
- first pari passu charge on all immovable assets (if any), movable assets and receivables of the Trust including but not limited to,
(i) the interest and principal repayments on the loans advanced by the Trust to Project SPV
(ii) dividends to be paid by Project SPV to the Trust
- first pari passu Security Interest on Trust Escrow account and all sub-accounts thereunder, including DSRA.
- pledge of 100% equity shares of Project SPV (NHIPPL) in dematerialized form held by the Trust
- assignment of loans advanced by the Trust to Project SPV (NHIPPL) and securities created by the Trust including the assignment of rights of submission, termination and invocation of provision of Escrow agreement in case of default.
- negative lien on immovable assets (including current assets and cash flows) of the Project SPV (NHIPPL) subject to sale of obsolete items or cars/ ambulances, old toll equipment etc., under normal business practice, subject to maximum cumulative value of INR 5 Crore in any financial year.

The senior lenders of the Trust have also been provided with a corporate guarantee from Project SPV (NHIPPL) to guarantee upto the secured obligations of the Trust. The funds have been raised at Trust level from unitholders and domestic lenders, and the same have been lent to Project SPV (NHIPPL) for payment of concession fee by NHIPPL to NHAI. The cashflows viz., toll collections are lying in NHIPPL. Accordingly, corporate guarantee amounting upto the secured obligations of the Trust via Corporate Guarantee Deed dated 14.03.2022, valid across the tenure of the loan of the Trust i.e. up to 31.03.2041, has been provided by the Project SPV (NHIPPL) to the senior lenders of the Trust.

A.R. & CO. FRN 002744 C CHARTERED ACCO

Nature of Security for Non Convertible debentures:

The debenture holders are secured by :

a) a first ranking pari passu Security Interest over the immovable assets (if any) both present and future. There are no immovable properties at the present time. In the event, the group acquires any immovable property in future, the group shall mortgage said property within 180 (one hundred eighty) days from the date of acquisition of such immovable assets. The Debenture Trustee shall be authorised to do all acts, deeds, and enter into necessary documents, agreement, amendments and/or modifications, as may be required to give effect the same, including carrying out the due diligence as may be required by Debenture Trustee;

b) a first ranking pari passu Security Interest over the Hypothecated Assets (including Receivables), both present and future; and

c) Negative Lien Undertaking;

d) corporate guarantee executed by the Project SPV in favour of the Debenture Trustee for guaranteeing the due repayment of the secured obligations in accordance with the terms in the Debenture Trust Deed.

The non convertible debenture holders of the Trust acting through debenture trustee have also been provided with a corporate guarantee from Project SPV (NHIPPL) to guarantee the repayment of amount raised from non convertible debenture holders by the Trust. The funds have been raised at Trust level from debentureholders, have been lent to Project SPV (NHIPPL) for payment of concession fee by NHIPPL to NHAI. Accordingly, corporate guarantee amounting upto the secured obligations via Corporate Guarantee Deed dated 21.10.2022 is valid till all outstanding principal and accrued interest payable by the Trust are satisfied to the non convertible debenture holders of the Trust.

There have been no breaches in financial covenants with respect to the borrowings from Senior lenders.

16 Provisions: Non Current

(All amounts in ₹ lakh unless otherwise stated)

Particulars	As At March 31, 2023	As At March 31, 2022
Provision for employees benefits		
Gratuity (unfunded)	4.41	0.05
Leave Encashment (unfunded)	6.96	0.03
Provision for major maintenance*	6,307.44	403.29
Total	**6,318.81**	**403.37**

Provision for Major Maintenance*

The group is required to operate and maintain the project tollway during the entire concession period and hand over the project back to NHAI as per the maintenance standards prescribed in concession agreements. For this purpose, a regular maintenance along with periodic maintenance is required to be performed. Normally, periodic maintenance includes resurface of pavements, repairs of structures and other equipment and maintenance of service roads. As per industry practice, the periodic maintenance is expected to occur once in five to seven years. The provisions for MMR has been made based on the first cycle of of overlay expected to occur in five to seven years and not based on the total MMR cost over entire concession period as per industry practice. The discounting rate used for arriving at the present value for MMR provisions is government bond rate of 30 years for projects acquired in first phase and 20 years for projects acquired in second phase. The maintenance cost - bituminous overlay may vary based on the actual usage during maintenance period. Accordingly, on the grounds of matching cost concept and based on technical estimates, a provision for major maintenance expense is reviewed and is provided for in the financial statements in each reporting period. Considering that the expense to be incurred is depended on various factors including the usage, wear and tear of the toll road, bituminous overlay, etc., it is not possible to estimate the exact timing and the quantum of the cashflow.

Note:-

Details of dues to micro and small enterprises as per MSMED Act, 2006.

The group has certain dues to suppliers registered under Micro, Small and Medium Enterprises Development Act, 2006 ('MSMED Act'). The disclosures pursuant to the said MSMED Act are as follows:

	As At March 31, 2023	As At March 31, 2022
a) The principal amount remaining unpaid to any supplier at the end of the year	137.23	-
b) Interest accrued and due thereon to suppliers under MSMED Act on the above amount remaining unpaid to any supplier at the end of year.	-	-
c) The amount of interest paid by the buyer in terms of section 16 of the MSMED Act, 2006, along with the amount of the payment made to the supplier beyond the appointed day during the year	-	-
d) The amount of interest due and payable for the period of delay in making payment (which have been paid but beyond the appointed day during the year) but without adding the interest specified under the MSMED Act, 2006	-	-
e) The amount of interest accrued and remaining unpaid at the end of each accounting year	-	-
f) The amount of further interest remaining due and payable even in the succeeding years, until such date when the interest dues above are actually paid to the small enterprises, for the purpose of disallowance of a deductible expenditure under section 23 of the MSMED Act, 2006	-	-

Disclosure of payable to vendors as defined under the "Micro, Small and Medium Enterprise Development Act, 2006" is based on the information available with the group regarding the status of registration of such vendors under the said Act, as per the intimation received from them on requests made by the group.

40 Capital Management

For the purpose of the Group's capital management, capital includes issued unit capital and all other reserves attributable to the unit holders of the Group.

The primary objective of the Group's capital management is to ensure that it maintains a strong credit rating and healthy capital ratios in order to support its business and maximise unit holder value.

The Group manages its capital structure and makes adjustments to it in light of changes in economic conditions and the requirements of the financial covenants. To maintain or adjust the capital structure, the Group may adjust the dividend payment / income distribution to unit holders (subject to the provisions of SEBI InvIT Regulations which require distribution of at least 90%of the net distributable cash flows of the Group to unit holders), return capital to unit holders or issue new units. The Group monitors capital using a gearing ratio, which is net debt divided by total capital plus net debt. The Group's policy is to keep the gearing ratio optimum.

(All amounts in ₹ lakh unless otherwise stated)

Particulars	As at March 31, 2023	As at March 31, 2022

Gearing Ratio (i)/(iii)	**27.31%**	**18.58%**

In order to achieve this overall objective, the Board of Directors of Investment Manager, amongst other things, aims to ensure that it meets financial covenants attached to the interest-bearing loans and borrowings that define capital structure requirements. Breaches in meeting the financial covenants would permit the lenders to call loans and borrowings. There have been no breaches in the financial covenants of any interest-bearing loans and borrowing in the current year. No changes were made in the objectives, policies or processes for managing capital during the years ended March 31, 2023 and March 31, 2022.

41 Financial Risk Management Objectives and Policies

The Group is in the process of formulation of its risk management policies with an objective of identification and analysis of risks faced by the Group, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies shall be reviewed regularly to reflect changes in market conditions and the Group's activities.

The Board of Directors of Investment Manager has overall responsibility for the establishment and oversight of the Group's risk management framework.

In performing its operating, investing and financing activities, the Group is exposed to the Credit risk, Liquidity risk and Market risk.

Market Risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market risk comprises three types of risk: interest rate risk, currency risk and other price risk. Financial instruments affected by market risk include loans and borrowings, Receivable and Payables and Investments measured at FVTPL.

The sensitivity analyses in the following sections relate to the position as at March 31, 2023 and March 31, 2022.

The sensitivity analyses have been prepared on the basis that the amount of net debt, the ratio of fixed to floating interest rates of the debt are all constant.

The following assumptions have been made in calculating the sensitivity analyses:

The sensitivity of the relevant profit or loss item is the effect of the assumed changes in respective market risks. This is based on the financial assets and financial liabilities held at March 31, 2023 & March 31, 2022.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Foreign Currency Risk

Foreign currency risk is the risk that the fair value or future cash flows of an exposure will fluctuate because of changes in foreign exchange rates. The Group transacts business primarily in Indian Rupees only, and hence, the sensitivity of profit and loss of the Group to a possible change in foreign exchange rates is non-existent as on 31st March, 2023 and 31st March, 2022.

Interest Rate Risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Exposure to risk of changes in market interest rates generally relates primarily to long-term debt obligations with floating interest rates.

The following table provides a break-up of the group fixed and floating rate borrowings:

(All amounts in ₹ lakh unless otherwise stated)

Particulars	As at March 31, 2023	As at March 31, 2022
Floating Rate Borrowings	1,43,570.13	1,46,537.80

The Group's exposure to interest rate risk due to variable interest rate borrowings is as follows:

Sensitivity analysis based on average outstanding Debt: (All amounts in ₹ lakh unless otherwise stated)

Particulars	As at March 31, 2023	As at March 31, 2022
Increase or decrease in interest rate by 25 basis points	358.93	388.94

Price Risk

Price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market prices (other than those arising from interest rate risk or currency risk).

Credit risk

Credit risk is the risk that counterparty will not meet its obligations under a financial instrument or customer contract, leading to a financial loss. With respect to credit risk arising from other financial assets of the Group, which comprise Balances with banks, Trade Receivables, Loans and Advances and Investments. The Group's exposure to credit risk arises from default of the counterparty, with maximum exposure equal to the carrying amount of these instrument.

The carrying value of financial assets represents the maximum credit risk. The maximum exposure to credit risk was Rs. 31,444.75 Lakh and Rs. 10,158.59 Lakh as at March 31, 2022 respectively, being the total carrying value of Loans and Advances, Trade receivables, Investments, Balances with bank, bank deposits and other financial assets.

Liquidity Risk

Liquidity risk is the risk that an entity will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial assets.

The Group is exposed to liquidity risk due to bank borrowings and trade and other payables.

The Group measures risk by forecasting cash flows.

The Group's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due without incurring unacceptable losses or risking damage to the Group's reputation. The Group ensures that it has sufficient funds to meet expected operational expenses, servicing of financial obligations.

In addition, processes and policies related to such risk are overseen by senior management. Management monitors the Group's net liquidity position through rolling forecast on the basis of expected cash flows.

The table below summarises the maturity profile of the group's financial liabilities based on contractual undiscounted payments.

(All amounts in ₹ lakh unless otherwise stated)

As at 31-03-2023	Carrying Am	<1 Yr.	1-3 Yrs.	>3 Yrs.
Borrowings	2,94,158.33	2,000.00	6,000.00	2,86,158.33

42 Disclosure pursuant to IND AS 36 "Impairment of Assets"

Based on impairment testing done which involves review of the future discounted cash flows of the subsidiary, the recoverable amount is higher than the carrying amount of the investment made in the subsidiary and accordingly, no provision for impairment is required to be recognised in the books as on the reporting date. In case of goodwill based on impairment testing recoverable amount is higher then the carrying value as on the reporting date, hence no provision for impairment is required to be recognised in the books as on reporting date.

43 Disclosure of Financial Instruments by Category

(All amounts in ₹ lakh unless otherwise stated)

Particulars	As at March 31, 2023			As at March 31, 2022

Total	3,03,451.68	-	-	1,47,880.44	-	-

Defaults and Breaches

There are no defaults during the year with respect to repayment of principal and payment of interest and no breaches of the terms and conditions of the borrowings.

There are no breaches during the year which permitted lender to demand accelerated payment

44 Fair Values of Assets and Liabilities

The carrying amount of all financial assets and liabilities appearing in the financial statements is reasonable approximation of fair values. Fair value of the financial assets and liabilities is the amount at which the instrument could be exchanged in a current transaction between willing parties, other than in a forced or liquidation sale.

The Group is required to present the Statement of total assets at fair value and Statement of total returns at fair value as per SEBI Circular No. CIR/IMD/DF/114/2016 dated October 20, 2016 as a part of these financial statements - Refer Statement of Net assets at fair value and Statement of Total Returns at fair value.

45 Fair Value Hierarchy

All financial instruments for which fair value is recognised or disclosed are categorised within the fair value hierarchy described as follows, based on the lowest level input that is significant to the fair value measurement as a whole.

Level 1 - Quoted prices (unadjusted) in active markets for identical assets or liabilities.

Level 2 – Inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).

Level 3 - Inputs for the assets or liabilities that are not based on observable market data (unobservable inputs).

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

Class wise composition and comparison of carrying amounts and fair values of financial assets and liabilities that are recognised in the financial statements along with Fair Value Hierarchy details are given below:

(All amounts in ₹ lakh unless otherwise stated)

Particulars	Fair Value Hierarchy Level	Carrying Value		Fair Value	
		As at March 31, 2023	As at March 31, 2022	As at March 31, 2023	As at March 31, 2022
Financial Assets at Amortized Cost:					
Cash and Cash Equivalents	Level 3	21,124.08	6,381.94	21,124.08	6,381.94
Trade Receivables	Level 3	350.87	600.47	350.87	600.47
Other Financial Assets	Level 3	9,969.80	3,176.18	9,969.80	3,176.18
Total		**31,444.75**	**10,158.59**	**31,444.75**	**10,158.59**
Financial Liabilities at Amortized Cost:					
Borrowings	Level 3	2,94,158.33	1,46,537.80	2,94,158.33	1,46,537.80
Trade Payables	Level 3	4,008.41	1,244.79	4,008.41	1,244.79
Other Financial Liabilities	Level 3	5,284.95	97.85	5,284.95	97.85
Total		**3,03,451.68**	**1,47,880.44**	**3,03,451.68**	**1,47,880.44**

There is one transfer during the year from Level 1 to Level 3 for Investment in Mutual Funds as these have been been grouped into cash and cash equivalents

The policy of the Group is to recognise transfers into and transfer out of fair values hierarchy levels as at the end of the reporting period.

Valuation technique and inputs used to determine fair value

Financial assets and liabilities	Valuation method	Inputs
Financial assets		
Investments in equity shares of subsidiaries	Income	Cash Flow
Loans	Income	Effective Rate of Interest
Financial liabilities		
Term loans from Bank	Income	Effective Rate of Borrowings
Non-Convertible Debentures	Income	Effective Rate of Borrowings

46 Disclosure of segment information pursuant to IND AS 108 "Operating Segments"

The activities of the Group mainly include investing in infrastructure assets primarily in the SPVs operating in the road sector to generate cash flows for distribution to unit holders. Based on the guiding principles given in Ind AS - 108 "Operating Segments", this activity falls within a single operating segment. Further, the entire operations of the Group are only in India and hence, disclosure of secondary / geographical segment information does not arise. Accordingly, requirement of providing disclosures under Ind AS 108 does not arise.

47 Disclosure pursuant to IND AS 23 "Borrowing Costs"

Borrowing cost capitalised during the year Rs. Nil [March 31, 2022: Rs. Nil]

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

48 Details of Project Management Fees and Investment Management Fees

Details of fees paid to project manager and investment manager as required pursuant to SEBI Circular No. CIR/MD/DF/127/2016. dated November 29, 2016 are as under:

Project Management Fees

The project manager National Highways InVIT Project Managers Private Limited ('NHIPMPL') for initial portolio of assets and assets acquired in current financial year is entitled to fixed fees of Rs 991.20 lakh per annum (Previous year Rs 290.43 lakh) inclusive of taxes.The same is based on the Project Implementation and Management Agreement (PIMA) signed by both the parties dated 30th March, 2021.

Investment Management Fees

i) The investment manager's fee will initially be Rs. 1,100 Lakh (Rupees Eleven Hundred Lakh) per annum, exclusive of applicable taxes as per agreement dated 21st October, 2020.

ii) The investment manager's fee set out in above shall be subject to escalation on an annual basis at the rate of 10% of the management fee for the previous year.

iii) Any applicable taxes, cess or charges shall be in addition to the investment manager's fee and shall be payable by National Highways Infra Trust (NHIT) to the Investment Manager (NHIIMPL).

iv) The payment of investment manager's fee shall be made by National Highways Infra Trust (NHIT) to the investment manager (NHIIMPL) in advance on a quarterly basis.

49 Significant accounting judgements, estimates and assumptions

The preparation of the Group's financial statements requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the accompanying disclosures, and the disclosure of contingent liabilities. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Judgements

In the process of applying the Group's accounting policies, management has made the following judgments, apart from those involving estimations, which have the most significant effect on the amounts recognised in the financial statements:

Classification of unit holders Funds

Under the provisions of the SEBI InvIT Regulations, the Trust is required to distribute to its Unit holders not less than ninety percent of the net distributable cash flows of the Trust for each financial year. Accordingly, a portion of the unit holders' funds contain a contractual obligation of the Trust to pay to its Unit holders cash distributions.

The Unit holder's funds could therefore have been classified as compound financial instrument which contain both equity and debt components in accordance with Ind AS 32 'Financial Instruments: Presentation'. However, in accordance with SEBI Circulars (Circular no. CIR/IMD/DF/114/2016 dated October 20, 2016 and No. CIR/IMD/ DF/127/2016 dated November 29, 2016) issued under the SEBI InvIT Regulations, the unit holders' funds have been classified as equity in order to comply with the mandatory requirements of Section II of Annexure A to the SEBI Circular dated October 20, 2016 dealing with the minimum disclosures for key financial statements. In line with the above, the income distribution payable to unit holders is recognized as liability when the same is approved by Board of Directors of the Investment Manager.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNT

Fair valuation and disclosures

SEBI Circulars issued under the SEBI InvIT Regulations requires disclosures relating to net assets at fair value and total returns at fair value. In estimating the fair value of investments in subsidiaries (which constitute substantial portion of the net assets), the Group engages independent qualified external valuers to perform the valuation. The Investment Manager works closely with the valuers to establish the appropriate valuation techniques and inputs to the model. The valuation report and findings are discussed at the meeting of the Board of Directors on yearly basis to understand the changes in the fair value of the subsidiaries. The inputs to the valuation models are taken from observable markets, where possible, but where this is not feasible, a degree of judgement is required in establishing fair values. Judgements include considerations of inputs such as weighted average cost of capital, tax rates, inflation rates etc. Changes in assumptions about these factors could affect the fair value.

Taxes

In accordance with section 10 (23FC) of the Income Tax Act, 1961, the income of business groups in the form of interest received or receivable from subsidiaries is exempt from tax. Accordingly, the Group is not required to provide any current tax liability. Further, deferred tax asset on carry forward losses is not created since there is no reasonable certainty of reversal of the same in the near future.

Defined benefit plans (gratuity benefits)

A liability in respect of defined benefit plans is recognised in the balance sheet and is measured as the present value of the defined benefit obligation at the reporting date. The present value of the defined benefit obligation is based on expected future payments at the reporting date, calculated annually by independent actuaries. Consideration is given to expected future salary levels, experience of employee departures and periods of service.

Impairment of intangible assets

Impairment exists when the carrying value of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The recoverable amounts for the intangible assets are based on value in use of the underlying projects. The value in use calculation is based on a DCF model. The cash flows are derived from budgets/ forecasts over the life of the projects.

Major Maintenance Expenses / Resurfacing Expenses

As per industry practice, the Project SPV (NHIPPL) is required to carry out resurfacing of the roads under the Concession. For this purpose, a regular maintenance along with periodic maintenances is required to be performed. Normally, periodic maintenance includes resurface of pavements, repairs of structures and other equipment and maintenance of service roads. The maintenance cost / bituminous overlay may vary based on the actual usage during maintenance period. Accordingly, on the grounds of matching cost concept and based on technical estimates, a provision for major maintenance expenses is reviewed and is provided for in the accounts annually.

The provisions for MMR as per industry practice has been made based on the first cycle of of overlay expected to occur in five to seven years and not based on the total MMR cost over entire concession period. The discounting rate used for arriving at the present value for MMR provisions is government bond rate of 30 years for projects acquired in first phase and 20 years for projects acquired in second phase.

Expected Credit Loss on financial assets

As per Ind AS 109, Financial Assets that are measured at amortised cost are required to compute the Expected Credit Loss (ECL). As at the reporting period, Investment manager of the Group assessed the credit risk of the financial assets and concluded that no provision for ECL is required.

50 Other Statutory information

i) The Group have not traded or invested in Crypto currency or Virtual Currency during the financial year.

ii) The Group does not hold benami property and no proceedings under benami transaction (Prohibition) Act 1988 have been initiated against the Group.

iii) The Group do not have any transactions with companies struck off.

iv) The Group have not any such transaction which is not recorded in the books of accounts that has been surrendered or disclosed as income during the year in the tax assessments under the Income Tax Act, 1961 (such as search or surveyor any other relevant provisions of the Income Tax Act, 1961).

v) The Group have not received any fund from any person(s) or entity(ies), including foreign entities (Funding Party) with the understanding (whether recorded in writing or otherwise) that the Group shall:

(a) directly or indirectly lend or invest in other persons or entities identified in any manner whatsoever by or on behalf of the Funding Party (Ultimate Beneficiaries) or

(b) provide any guarantee, security or the like on behalf of the Ultimate Beneficiaries.

vi) The Group have not advance or loaned or invested (either from borrowed fund or share premium or any other source or kind of fund) by the company to or in any person(s) or entity(ies), including foreign entities (Funding Party) with the understanding (whether recorded in writing or otherwise) that the Group shall:

(a) directly or indirectly lend or invest in other persons or entities identified in any manner whatsoever by or on behalf of the Group (Ultimate Beneficiaries) or

(b) provide any guarantee, security or the like on behalf of the Ultimate Beneficiaries.

vii) The Group did not have any long-term contracts including derivative contract for which there were any material foreseeable losses.

viii) The Group has not declared a willful defaulter by any bank financial institution or any other lender during the year.

51 Subsequent Events

The Board of Directors of the Investment Manager has declared distribution for Quarter ERY 22 23 of Rs. 1.6035 per unit was made which comprised of Rs. 1.5778 per unit as interest and Rs 0.0257 per unit as other income on surplus funds at Trust level in their meeting held on 22nd May 2023 to be paid on or before 15 days from the date of declaration.

57 The Code on Social Security, 2020 ('Code') relating to employee benefits during employment and post-employment benefits received Presidential assent in September 2020. The Code has been published in the Gazette of India. However, the date on which the Code will come into effect has not been notified The Group will assess the impact of the Code when it comes into effect and will record any related impact in the period the Code becomes effective.

58 Financial Information of Investment Manager

The summary financials of Investment Manager are not disclosed alongwith these financials as its networth is not materially eroded.

59 Withholding Tax liability for interest accrued but not due on non convertible debentures

The Trust has issued publicly listed non convertible debentures ("NCDs") with interest payable on semi-annual basis. Interest on these NCDs was due for payment on 25 April 2023 and for the purpose of payment of interest, record date was 10 April 2023 and debenture-holders existing as on 10 April 2023 are entitled to the coupon interest. Trust has recorded liability of interest accrued till 31st March 2023 and there is no credit in favour of any payee at the time of creating such provision as entitled payee will be identifiable as on record date i.e., on 10 April 2023.

As on the year end March 2023, there is uncertainty with respect to the ultimate recipient of interest income, and such uncertainty would only become clear on the record date i.e., 10 April 2023 when the obligation of payment of interest by NHIT arises and therefore Trust has not withheld any taxes at the time of creating these provisions.

60 Salient aspects of the Tolling Concession Arrangement

The Project SPV (NHIPPL) has entered into five concession agreements with National Highway Authority of India ("NHAI") on March 30, 2021 for Tolling, Management, Maintenance and Transfer of five toll road projects for a period of 30 years from the Appointed Date. The Appointed Date has commenced on 16.12.2021. The toll roads covered under the concession agreement as follows:

- Palanpur/ Khemana – Abu Road Project on NH-27 with total length of 45 kms, connecting the states of Gujrat and Rajasthan
- Abu Road- Swaroopganj Project on NH-27 with total length of 31 kms, in the state of Rajasthan
- Maharashtra Karnataka Border (Kagal) – Belgaum Project on NH-48 with a length of 77.7 Kms, connecting the states of Karnataka and Maharashtra
- Chitorgarh- Kota & Chittorgarh Project on NH-27 with total length of 160.5 Kms, in the state of Rajasthan
- Kothakota Bypass- Kurnool Highway Project on NH-44 with total length of 74.6 Kms, connecting the states of Telangana and Andhra Pradesh

The project SPV (NHIPPL) acquired rights for Tolling, Management and Maintenance of the five toll roads under the concession agreement for consideration of INR 7,350.40 Crore, and the rights have been recognized in the financial statements as Intangible Assets.

In current financial year, the project SPV (NHIPPL) entered into three new concession agreements with National Highway Authority of India ("NHAI") on September 26, 2022 for Tolling, Management, Maintenance and Transfer of three toll road projects for a period of 20 years from the Appointed Date. The Appointed Date has commenced on 29.10.2022. The toll roads covered under the concession agreement as follows:

- Agra bypass Section (from km 0.000 to km 32.800) of NH-19 in the state of Uttar Pradesh
- Borkhedi-Wadner-Deodhari-Kelapur Section (from km 36.600 to km 175.000) of NH-44 in the state of Maharashtra
- Shivpuri – Jhansi Section (from km 1305.087 to km 1380.387) of NH-27 in the states of Madhya Pradesh and Uttar Pradesh.

The project SPV (NHIPPL) has acquired rights for Tolling, Management and Maintenance of these three toll roads at a consideration of INR 2,849.66 Crore, and the rights have been recognized in the financial statements as Intangible Assets.

The project SPV (NHIPPL) is required to operate and maintain the Project/ Project Facilities in accordance with the provision of the Agreement, Applicable Laws and Applicable permits.

A.R. & CO. FRN 002744 C CHARTERED ACCOUNTANTS

61 Disclosures as per Ind AS 37 "Provisions, Contingent Liabilities and Contingent assets"

a) Nature of provisions

The project SPV (NHIPPL)is required to operate and maintain the project tollway during the entire concession period and hand over the project back to NHAI as per the maintenance standards prescribed in concession agreements. For this purpose, a regular maintenance along with periodic maintenance is required to be performed. Normally, periodic maintenance includes resurface of pavements, repairs of structures and other equipment and maintenance of service roads. As per industry practice, the periodic maintenance is expected to occur once in five to seven years. The provisions for MMR as per industry practice has been made based on the first cycle of of overlay expected to occur in five to seven years and not based on the total MMR cost over entire concession period. The discounting rate used for arriving at the present value for MMR provisions is government bond rate of 30 years for projects acquired in first phase and 20 years for projects acquired in second phase. The maintenance cost / bituminous overlay may vary based on the actual usage during maintenance period. Accordingly, on the grounds of matching cost concept and based on technical estimates, a provision for major maintenance expense is reviewed and is provided for in the financial statements in each reporting period. Considering that the expense to be incurred is depended on various factors including the usage, wear and tear of the toll road, bituminous overlay, etc., it is not possible to estimate the exact timing and the quantum of the cashflow.

62 Assets pledged as security

Under security provisions for external lenders, the shares of project SPV i.e. NHIPPL held by NHIT (Trust) are pledged to external lenders to Trust. Whereas the loans provided by Trust to NHIPPL is assigned to the external lenders. Also it may be noted that the shares are not pledged to debenture holders. The carrying amounts of assets pledged as security for current and non current borrowings are :

(All amounts in ₹ lakh unless otherwise stated)

Particulars	As At March 31, 2023	As At March 31, 2022
Current		
Financial assets		
First Charge		
Trade receivables	350.87	600.47
Cash and cash equivalents	21,124.08	6,381.94
Other financial assets	297.36	5.38
Non Financial assets	-	-
First Charge	-	-
Other current assets	1,343.35	347.29
Total current assets pledged as	**23,115.65**	**7,335.07**
Non Current		
Other financial assets	9,672.44	3,170.81
Non -current tax assets (Net)	12.06	-
Total non current assets	9,684.50	3,170.81
Total assets pledged as security	**32,800.16**	**10,505.88**

63 Key sources of estimation

The preparation of financial statements in conformity with Ind AS requires the Group makes estimates and assumptions that affect the reported amounts of income and expenses of the period, the reported balances of assets and liabilities and the disclosures relating to contingent liabilities as of the date of the financial statements. The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates include allowance for doubtful loans /other receivables, fair value measurement etc. Difference, if any, between the actual results and estimates is recognised in the period in which the results are known.

64 Previous Year Figures

Previous year's numbers have been regrouped / reclassified, wherever necessary to conform to current year's classification.

Re: Report on Valuation of the Specified Asset for National Highways Infra Trust as at 28 February 2025 as per Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014, as amended ("SEBI InvIT Regulations")

Dear Sir/Madam,

In accordance with instructions of National Highways Infra Investment Managers Private Limited ("Client" or "you" or "NHIIMPL" or "Investment Manager") on behalf of National Highways Infra Trust ("NHIT" or "InvIT" or the "Trust"), Ernst & Young Merchant Banking Services LLP ("EYMBSLLP") have performed the work set out in our Letter of Award dated 09 August 2024 ("Engagement Agreement"). We are pleased to present the following report ("Report") in connection with the Enterprise Valuation of the Specified Asset (defined later on page 5) ("Specified Asset" or "InvIT Asset" or "SPV") as at 28 February 2025 ("Valuation Date").

It may be noted that for carrying out the valuation, we have relied upon information provided by the management of NHIIMPL and NHIT (the "Management"). We have been given to understand that the information provided is correct and accurate and that the Management was duly authorized to provide us the same.

Purpose of our Report and restrictions on its use

EYMBSLLP has been appointed by National Highways Infra Investment Managers Private Limited as an independent valuer as per Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014, as amended and the circulars, notifications and guidelines issued thereunder ("SEBI InvIT Regulations"), to undertake an independent Enterprise Valuation of the Specified Asset for NHIT (defined later on page 5) ("Specified Asset" or "InvIT Asset" or "SPV") as on 28 February 2025 for their internal management analysis, disclosure to unit holders and regulatory filings under Chapter V Regulation 21(4) and Regulation 21(5) of the SEBI InvIT Regulations ("Purpose"). This Report was prepared solely for the above Purpose and should not be used or relied upon for any other purpose.

We accept no responsibility or liability to any person other than to the Client, or to such party to whom we have agreed in writing to accept a duty of care in respect of the Report, and accordingly if such other persons choose to rely upon any of the contents of the Report, they do so at their own risk.

Nature and scope of the services

The nature and scope of the services, including the basis and limitations, are detailed in the Engagement Agreement. The contents of our Report have been reviewed by the Client, who have confirmed to us the factual accuracy of the Report.

Whilst each part of our Report may address various aspects of the work we have agreed to perform, the

entire Report should be read for a full understanding of our findings and advice.

Please note that the Report must be read in conjunction with the Statement of limiting conditions contained in Section 4 of this Report. This letter, the Report and the summary of valuation included herein can be provided to the Trust's advisors and may be made available for the inspection to the public and with the SEBI, the stock exchanges and any other regulatory and supervisory authority, as may be required in connection with the specified Purpose. The valuation analysis should not be construed as an investment advice; specifically, EYMBSLLP does not express any opinion on the suitability or otherwise of entering into any financial or other transaction with the Trust.

The valuation conclusion included here-in, and the Report complies with the SEBI InvIT Regulations and guidelines, circular or notification issued by Securities and Exchange Board of India ("SEBI") thereunder.

This letter should be read in conjunction with the attached Report.

Yours faithfully,

Nilesh Jain

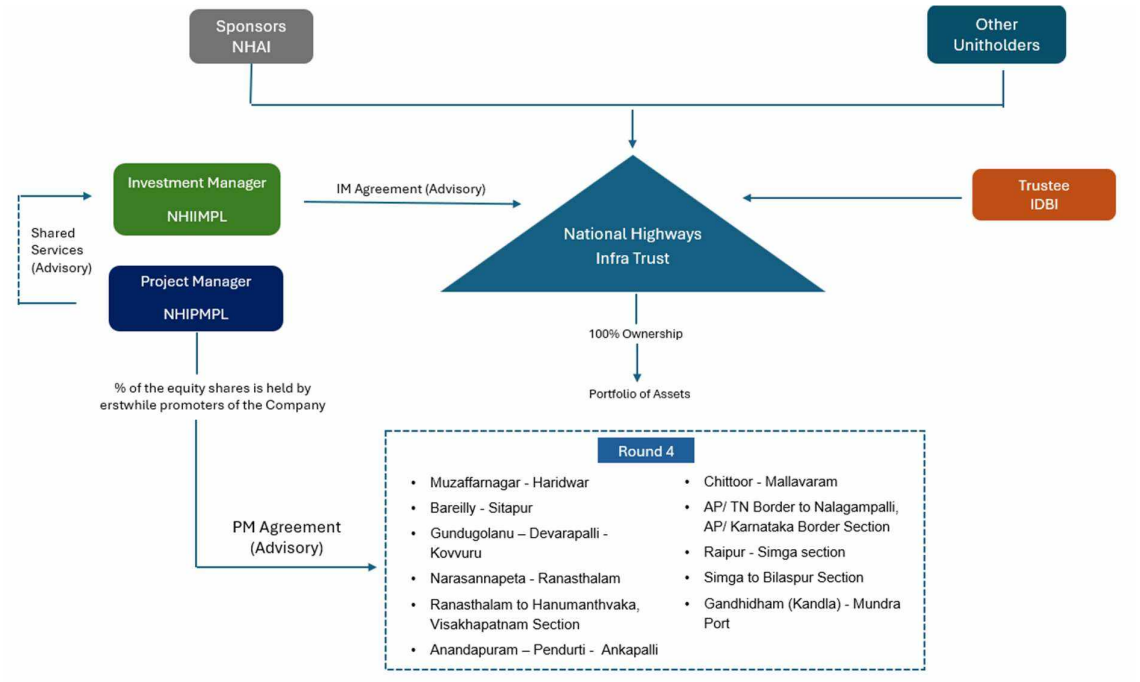
I. Executive Summary

National Highways Infra Trust ("NHIT" or "InvIT" or the "Trust") is registered as an infrastructure investment trust with Securities and Exchange Board of India ("SEBI") pursuant to the SEBI (Infrastructure Investment Trusts) Regulations, 2014, as amended ("the SEBI InvIT Regulations"). It was registered on October 28, 2020 [Registration No.: IN/InvIT/20-21/0014].



National Highways Infra Investment Managers Private Limited ("NHIIMPL" or "Investment Manager") acts as the investment manager to the Trust. NHIIMPL is a private limited company incorporated on 25 July 2020 under the Companies Act, 2013 and is a wholly owned subsidiary of the Government of India acting through the Ministry of Road Transport & Highways (MoRTH).

National Highways Authority of India ("NHAI" or "Sponsor") acts as the sponsor to the Trust. NHAI was set up by an act of the Parliament, NHAI Act, 1988 "An Act to provide for the constitution of an Authority for the development, maintenance and management of national highways and for matter connected therewith or incidental thereto".

IDBI Trustee Services Limited ("IDBI" or "Trustee") acts as the trustee to the Trust. IDBI holds registration under SEBI regulations as a debenture trustee. IDBI was jointly established by IDBI Bank, LIC, and GIC to provide corporate and other trusteeship services and is located in Mumbai, India.

National Highways Infra Project Managers Private Limited ("NHIPMPL" or "Project Manager") was incorporated as a private limited company on 9 March 2021 under the Companies Act 2013. The Project Manager is a wholly owned subsidiary of NHAI and undertakes operations and maintenance of the Specified Assets, including making arrangements for maintenance of the assets held by the Trust.

The following chart represents the structure of the Trust:

Source: About us - National Highways Infra Trust

We understand that NHIT is proposing to acquire Round 4 Assets ("R4" or "InvIT Asset" or "SPV" or "Specified Asset") have an aggregate length of ~819 kms (5,444 lane kms) spread across 5 states from NHAI in a related party transaction ("Proposed Transaction"). In this regard, valuation of the Specified Assets is required as at Valuation Date for internal management analysis, disclosures to unit holders if required, any corporate action and/or regulatory filings as per SEBI InvIT Regulations ("Purpose").

R4 has entered into concession agreements with NHAI to operate, maintain and transfer seven toll road projects, under the Toll, Operate and Transfer ("TOT") model (together referred to as the "R4 Projects" and individually referred to as the "Project").

The following is the list of the R4 Projects:

1. Muzaffarnagar- Haridwar
2. Bareilly- Sitapur
3. Gundugolanu- Devarapalli-Kovvuru
4. AP Corridor 1, which includes 3 road projects:
    a. Narasannapeta- Ranasthalam
    b. Ranasthalam to Hanumanthvaka, Visakhapatnam Section
    c. Anandapuram- Pendurthi- Anakapalle
5. AP Corridor 2, which includes 2 road projects:
    a. Chittoor- Mallavaram
    b. AP/ TN Border to Nalagampalli, AP/ Karnataka Border Section
6. Chhattisgarh Corridor, which includes 2 road projects:
    a. Raipur- Simga section
    b. Simga to Bilaspur Section
7. Gandhidham (Kandla)- Mundra Port

EYMBSLLP has been appointed as an independent valuer to undertake Enterprise Valuation of the InvIT Asset as on 28 February 2025, in accordance with Regulation 21(4) and Regulation 21(5) of the SEBI InvIT Regulations.

EYMBSLLP is appointed to undertake financial valuation only. We are placing reliance on other consultants appointed by the Client for traffic and other technical inputs. This report is our deliverable for the aforementioned Purpose.

EYMBSLLP is duly registered, as a Limited Liability Partnership under the Limited Liability Partnership Act, 2008, with the Ministry of Corporate Affairs (identified with a unique LLPIN: AAO-2287) and as a Registered Valuer with Insolvency and Bankruptcy Board of India ("IBBI") for securities or financial assets under Section 247 of the Companies Act, 2013 bearing registration number IBBI/RV-E/05/2021/155.

Identity of the Valuer

Name of entity registered	Ernst & Young Merchant Banking Services LLP
LLPIN	AAO-2287
Registration Number (for Registered Valuer)	IBBI/RV-E/05/2021/155
Registration (for Registered Valuer) valid from	01 November 2021

Disclosure of Valuer's Interest or Conflict

EYMBSLLP, Nilesh Jain and the team working on the valuation of the InvIT Asset do not have any present or planned future interest in the Trust, the InvIT Asset or the Investment Manager. EYMBSLLP is neither associated with nor carrying out any relationship with the Client, except carrying out valuation service.

Accordingly, there is no conflict of interest for carrying out the valuation.
The information provided by the Management have been appropriately reviewed in carrying out the valuation. Sufficient time and information were provided to us to carry out the valuation.

Declaration

- We hereby confirm on behalf of EYMBSLLP that EYMBSLLP is competent to undertake this valuation in terms of SEBI InvIT Regulations.
- We further confirm that EYMBSLLP is independent in terms of the SEBI InvIT Regulations and that this report has been prepared on a fair and unbiased basis in compliance with Regulation 13(1) and Regulation 21 of the SEBI InvIT Regulations.
- We have at least two partners having experience of 5 years each in the valuation of infrastructure assets.

This Report covers all the disclosures required as per the SEBI InvIT Regulations and the valuation of the InvIT Asset is impartial, true and fair and in compliance with the SEBI InvIT Regulations.

II. Valuation Analysis

Income approach, specifically Discounted Cash Flow ("DCF") method has been considered for arriving at the fair enterprise value of the InvIT Asset as on 28 February 2025. The valuation exercise has been carried out basis the financial projections of the InvIT Asset provided to us by the Management. Free Cash Flow to Firm approach under DCF method has been considered to determine the Enterprise Value of the InvIT Asset. The Enterprise Value has been computed by discounting the free cash flows to the firm from 01 March 2025 until the end of the concession period, using an appropriate Weighted Average Cost of Capital ("WACC"). The WACC parameters are based as on 31 December 2024 which is in line with the existing assets of NHIT, that is, NHIT Western Projects Private Limited ("NWPPL") and NHIT Eastern Projects Private Limited ("NEPPL").

The Investment Manager has appointed independent consultants to carry out traffic study for estimation of toll revenue and technical study for estimation of operating and maintenance expenses and major maintenance expenses, for the InvIT Asset over the concession period. The traffic study reports have been provided to us in final form. These reports presented an update of the traffic and revenue forecasts based on primary surveys undertaken in 2024, with actual traffic data up to November 2024 and other macro-economic assumptions. We have relied upon financial projections, traffic study reports, technical reports provided by independent consultants and other information provided to us for carrying out the valuation of the InvIT Asset.

The valuation is based on various assumptions with respect to the InvIT Asset, including their respective present and future financial condition, business strategies and the environment in which they will operate in the future. These assumptions are based on the information that we have been provided with and our discussions with the Management, and reflect current expectations and views regarding future events, and therefore necessarily involve known and unknown risks and uncertainties.

The summary of valuation of the InvIT Asset is presented below:

SPV Currency: INR mn	Enterprise Value Feb'25
R4	176,405

Source: Calculation

Our views are based on the current economic, market, industry, regulatory, monetary and other conditions and on the information made available to us, as of the date of this Report. Such conditions may change significantly over a relatively brief period of time and we assume no responsibility and are not required to update, revise or reaffirm our conclusion set out in this Report to reflect events or developments subsequent to the date of the Report.

III. Sources of Information

The following sources of information have been utilized in conducting the valuation exercise:

- **SPV specific information** – The following information, as provided by the Management, have inter-alia been used in the Enterprise Valuation of the InvIT Asset:
  - Financial projections of the InvIT Asset from 01 March 2025 till the end of concession period including underlying assumptions (It includes forecasts of profit and loss statements, major maintenance expenditures, working capital requirements and respective underlying assumptions)
  - Concession Agreements entered into between the InvIT Asset and NHAI.
  - Traffic assessment reports and technical assessment reports by independent consultants for the InvIT Asset.
  - Background information regarding the InvIT Assets provided through emails or during discussions

- Besides the above listing, there may be other information provided by the Management which may not have been perused by EYMBSLLP in any detail, if not considered relevant for the defined scope.

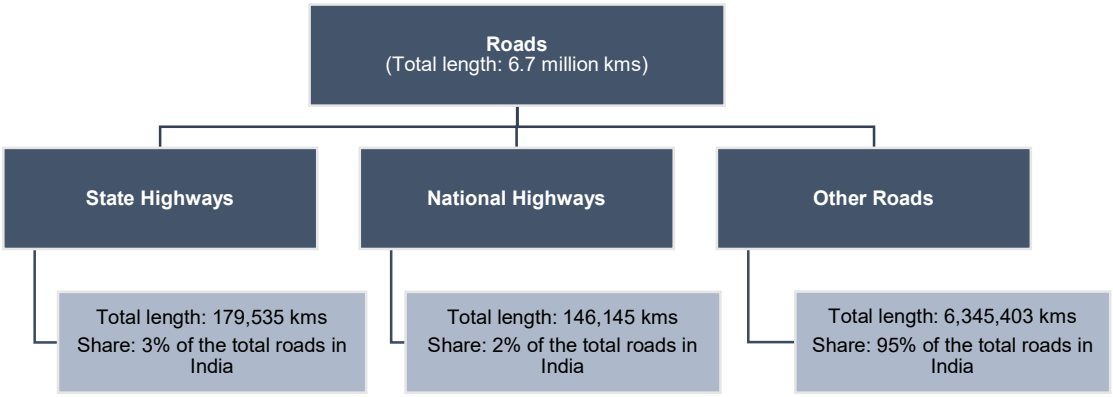
- **Industry and economy information**: EYMBSLLP has relied on publicly available information, proprietary databases subscribed to by EYMBSLLP or its member firms, and discussions with the Management for analysing the industry and the competitors.

- In addition to the above, EYMBSLLP has also obtained such other information and explanations from the Management as were considered relevant for the purpose of the valuation.

It may be mentioned that the Client has been provided an opportunity to review factual information in our draft report as part of our standard practice to make sure that factual inaccuracies/omissions/etc. are avoided in our final report.

IV. Statement of Limiting Conditions

- Provision of valuation opinions and consideration of the issues described herein are areas of our regular valuation practice. The services do not represent accounting, assurance, accounting / tax due diligence, consulting or tax related services that may otherwise be provided by us or our affiliates.
- The estimate of value contained herein are not intended to represent value of the InvIT Asset at any time other than the dates specifically mentioned for each valuation result, as per the agreed scope of our engagement and as required under the SEBI InvIT Regulations. Changes in market/industry conditions could result in opinions of value substantially different than those presented.
- The valuation report was prepared for the purpose of internal management analysis, disclosure to unitholders, any corporate action and/or regulatory filings as required under Regulation 21(4) and Regulation 21(5) of the SEBI InvIT Regulations. Its suitability and applicability of any other use has not been checked by us.
- The user to which this valuation is addressed should read the basis upon which the valuation has been done and be aware of the potential for later variations in value due to factors that are unforeseen at the valuation date. Due to possible changes in market forces and circumstances, this valuation report can only be regarded as relevant as at the Valuation Date.
- This Report has been prepared for the purposes stated herein and should not be relied upon for any other purpose. Our Client is the only authorized user of this report and is restricted for the purpose indicated in the engagement letter. This restriction does not preclude the Client from providing a copy of the report to third-party advisors whose review would be consistent with the intended use. We do not take any responsibility for the unauthorized use of this report.
- While our work has involved an analysis of financial information and accounting records, our engagement does not include an audit in accordance with generally accepted auditing standards of the client existing business records. Accordingly, we express no audit opinion or any other form of assurance on this information.
- In no event shall we be liable for any loss, damages, cost or expenses arising in any way from fraudulent acts, misrepresentations or wilful default on part of the client or companies, their directors, employees or agents.
- The Client and its Management/representatives warranted to us that the information they supplied was complete, accurate, true and correct to the best of their knowledge. We have relied upon the representations of the clients, their Management and other third parties, if any, concerning the financial data, operational data and other information, except as specifically stated to the contrary in the report. We shall not be liable for any loss, damages, cost or expenses arising from fraudulent acts, misrepresentations, or wilful default on part of the companies, their directors, employee or agents.
- EYMBSLLP is not aware of any contingency, commitment or material issue which could materially affect the economic environment and future performance of the InvIT Asset and therefore, the fair value of the InvIT Asset.
- We do not provide assurance on the achievability of the results forecast by the Management as events and circumstances do not occur as expected; differences between actual and expected results may be material. We express no opinion as to how closely the actual results will correspond to those projected/forecast as the achievement of the forecast results is dependent on actions, plans and assumptions of Management.
- The Report assumes that the InvIT Asset complies fully with relevant laws and regulations applicable in its area of operations and usage unless otherwise stated, and that the InvIT Asset will be managed in a competent and responsible manner. Further, as specifically stated to the contrary, this report has given no consideration to matters of a legal nature, including issues of



legal title and compliance with local laws, and litigations and other contingent liabilities that are not recorded/reflected in the balance sheet/fixed assets register provided to us.

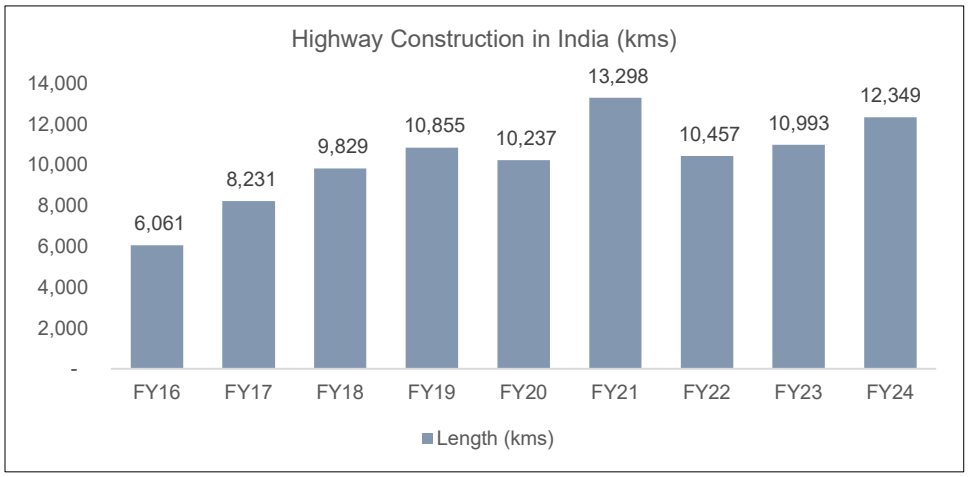
- The valuation analysis and result are governed by concept of materiality.
- It has been assumed that the required and relevant policies and practices have been adopted by Company and would be continued in the future.
- The fee for the Report is not contingent upon the results reported.
- The figures in the tables in this report may not sum or cross cast, due to rounding differences.
- We owe responsibility to only to the client that has appointed us under the terms of the engagement letters. We will not be liable for any losses, claims, damages or liabilities arising out of the actions taken, omissions or advice given by any other person.
- The actual transacted value achieved may be higher or lower than our estimate of value (or value range of value) depending upon the circumstances of the transaction (for example the competitive bidding environment), the nature of the business (for example the purchaser's perception of potential synergies). The knowledge, negotiating ability and motivation of the buyers and sellers will also affect the transaction value achieved.
- We have also relied on data from external sources to conclude the valuation. These sources are believed to be reliable and therefore, we assume no liability for the truth or accuracy of any data, opinions or estimates furnished by others that have been used in this analysis. Where we have relied on data, opinions or estimates from external sources, reasonable care has been taken to ensure that such data has been correctly extracted from those sources and /or reproduced in its proper form and context.

V. Industry Overview

1. Road Network in India

The Roads sector in India is a crucial component of the country's infrastructure, facilitating transportation, connectivity, and economic growth. India has the second-largest road network in the world, spanning a total of 6.7 million kilometres (kms). This road network plays a pivotal role in India's road infrastructure as it facilitates the transportation of 64.5% of all goods within the country, while 90% of India's total passenger traffic relies on roads for commuting. The road network is sub-divided into three categories:

Source: IBEF Roads Report, November 2024



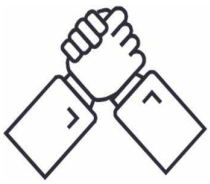
2. Key Statistics

Highway construction in India increased at a CAGR of 9.30% between FY16-FY24 and the roads sector is expected to account for 18% capital expenditure over FY 2019-25. The Government aims to construct 65,000 kms of national highways under Bharatmala Pariyojana Project at a cost of INR 5.35 lakh crore (USD 64.17 billion) and twenty-three new national highways by 2025.

India's road network has expanded significantly, growing by 59% in the last nine years to become the second largest in the world. Under the Union Budget 2024-25, the Government of India has allocated a substantial sum of INR 2.70 lakh crore (USD 32.68 billion) to the Ministry of Road Transport and Highways, highlighting the prioritization of infrastructure development.

In November 2024, the Government of India allocated INR 111 lakh crore (USD 13.14 billion) under the National Infrastructure Pipeline for the period FY19-FY25, indicating a long-term commitment to infrastructure development across various sectors.

The private sector invested INR 15,164 crore (USD 1.98 billion) in road infrastructure development in FY22, indicating continued interest and participation in the sector. Additionally, NHAI raised the highest-ever amount of over INR 15,624 crore (USD 1.88 billion) through Infrastructure Investment Trust (InvIT) mode, reflecting investor confidence in NHAI projects.



Source: IBEF Roads Report, November 2024

3. Growth Drivers

Growing Vehicular Demand

Growing domestic trade flows have led to rise in commercial vehicles and freight movement; supported by rise in production of commercial vehicles. This increase in commercial and freight vehicles will lead to strong tourist and trade flows between states, increasing the traffic and revenue.

Government Initiatives

During FY23-24 Budget, INR 276 crore (USD 34.04 million) has been announced to be designated for the Pradhan Mantri Gram Sadak Yojana (PMGSY).

Under Phase-I of Bharatmala Pariyojana, the Ministry has sanctioned the development of 34,800 km of national highways over a period of 5 years, with a budget allocation of INR 5,35,000 crore (US$ 76.55 billion).

Central Road and Infrastructure Fund (CRF): In the Union Budget 2022-23, government has planned for an increase in allocation for the central road fund by 19%, the total fund was INR 2.95 lakh crores (US$ 38.86 million).

Growth in Private Participation

As of July 2024, there were 826 roads projects PPP out of 1883 total projects in India.

The government has successfully rolled out over 60 road projects in India worth over USD 10 billion based on the Hybrid Annuity Model (HAM).

100% Foreign Direct Investment (FDI) is allowed under the automatic route in the road and highways sector, subject to applicable laws and regulation.

Lower tax burdens

Companies enjoy 100% tax exemption in road projects for the first 5 years and 30% relief over the next 5 years.

Interest payment on external commercial borrowings for infrastructure are now subject to a lower withholding tax of 5% vis-a-vis 20% earlier.

The GST on construction equipment has been reduced to 18% from 28%, which is expected to boost infrastructure development in the country.

4. E-Initiatives

a. Land Acquisition

The primary hurdle facing the sector involves land acquisition issues, prompting MoRTH to introduce the Bhoomi Raashi initiative to address this concern. The Bhoomi Rashi portal is an online platform launched by the Ministry of Road Transport and Highways (MoRTH) in India. It serves as a centralized database for land acquisition-related information for highway projects across the country.

The portal provides various functionalities related to land acquisition, including land records, ownership details, compensation disbursement, and project status updates. It aims to streamline the land acquisition process, enhance transparency, and facilitate efficient decision-making for highway development projects. The Bhoomi Rashi portal plays a crucial role in ensuring smooth implementation of infrastructure projects while addressing land acquisition-related challenges and avoid parking of public funds with the Competent Authority for Land Acquisition (CALA).

Since the launch of the portal, a total of 8629 land acquisition notifications have been issued using the portal. Additionally, as on December 2023, the Bhoomi Rashi Portal had incorporated 1467 projects of the National Highways Authority of India (NHAI).

b. Toll collection and Revenue Leakages

Before the introduction of FASTag, toll collection processes typically involved manual cash payments at toll booths, which often resulted in long queues, delays, and traffic congestion, especially during peak hours and busy travel periods.

To ensure seamless movement of traffic through fee plazas and increase transparency in collection of user fee using FASTag, the National Electronic Toll Collection (NETC) programme, the flagship initiative of Ministry of Road Transport and Highways, has been implemented on pan-India basis.

With FASTag, vehicles are equipped with a prepaid RFID tag that is linked to the vehicle's registration and a prepaid account. As vehicles approach the toll plaza, the RFID tag is automatically scanned, and the toll amount is deducted from the prepaid account, allowing for seamless and hassle-free passage through toll booths. As of March 2024, a total of 8.81 crore FASTags have been issued by thirty-nine banks, resulting in a cumulative collection of INR 5,938.86 crores.

The constant growth and adoption of FASTag by highway users is very encouraging and has helped increase efficiency in toll operations as it not only addresses the challenge of long queues and delays but also promotes digital payments, transparency, and accountability in toll collection operations.

Further, the industry offers abundant prospects for expansion and advancement, especially with the advent of technologies such as smart transportation systems, intelligent traffic management, and sustainable construction methods. Efforts are also underway to tackle environmental and safety issues, with a heightened emphasis on enhancing road safety protocols, mitigating traffic congestion, and advocating for the adoption of eco-friendly materials in road infrastructure development.

5. Future Outlook

The Roads sector in India is continually expanding, driven by numerous factors including urbanization, population growth, and the escalating demand for efficient transportation infrastructure. The surge in domestic trade flows has led to an increase in commercial vehicles and freight movement, further bolstering the sector's prospects.

The government's unwavering support, coupled with strategic investments and the adoption of advanced technologies, is expected to propel the sector forward, contributing to India's economic development and global competitiveness.

- NHAI has been allocated INR 1.70 lakh crore (USD 20 billion) during FY 2025-26 Budget.
- To improve commuting experience, Wayside Amenities (WSA) are planned to be developed at more than six hundred locations on National Highways and Expressways by FY25, with amenities at every 40-60 km.
- NHAI is also working towards the development of around 10,000 km of Optic Fibre Cables (OFC) infrastructure across the country by FY25, with the implementation of integrated utility corridors along National Highways to develop OFC infrastructure through National Highways Logistics Management Limited (NHLML).
- The Government plans to install charging stations at every 40 to 60 kilometres on national highways, with approximately 700 e-vehicle charging stations expected to be installed, covering 35,000 to 40,000 kilometres of national highways.
- Gati Shakti-National Master Plan aims to create a digital platform that would enable sixteen ministries to collaborate on integrated planning and coordinated implementation of projects. The plan will also bring together departments such as railways, roads & highways and others and implementation will be done with the help of geo-satellite imaging and Big Data, land and logistics.
- The Government has engaged a consultant to provide guidance on the integration of innovative technologies such as GNSS for toll collection without barriers. A pilot program for GNSS-based Electronic Toll Collection will be conducted in conjunction with FASTag on specific National Highways.
- The Ministry of Environment, Forests, and Climate Change (MoEF & CC) has directed the National Highways Authority of India (NHAI) and other relevant agencies to utilize fly ash in road construction projects located within a 300-kilometer radius of coal or lignite-based thermal power plants. This directive aims to encourage sustainable practices in road construction.

With ongoing projects and initiatives aimed at transforming the infrastructure landscape, the future outlook for the roads sector in India appears promising, poised to meet the evolving needs of the nation's growing economy and population.

VI. Background of the SPVs

1.1. Muzaffarnagar – Haridwar

Muzaffarnagar – Haridwar is a four-lane road on NH-334 with a project length of 78.56 Kms. It starts near Muzaffarnagar in Uttar Pradesh at 130.56 Kms of the Haridwar- Bulandshahr highway of NH-334 and ends near Haridwar in Uttarakhand at 209.12 Kms of the Haridwar- Bulandshahr highway of NH-334. The Project has two toll plazas, that is, Chhapar and Bahadrabad at 138.55 Kms and 187.37 Kms, respectively.

The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh and Uttarakhand
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-334; four-lane
Toll Plaza	Chhapar and Bahadrabad
Length of the asset	78.56 Kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Muzaffarnagar – Haridwar route caters to the following type of strategic movements:

1. Meerut/Muzaffarnagar/Panipat and surroundings to Roorke/Dehradun and surroundings and to Haridwar/Rishikesh/West UP/Punjab and beyond
2. Delhi/Ghaziabad/Noida and surroundings to Roorke/Dehradun and surroundings and to Haridwar/Rishikesh/West UP/Punjab and beyond
3. East UP to Roorke/Dehradun and surroundings and to Haridwar/Rishikesh/West UP/Punjab and beyond
4. Rajasthan/Central/South India to Roorke/Dehradun and surroundings and to Haridwar/Rishikesh/West UP/Punjab and beyond

The forecast major maintenance expenses for the Project are shown in the tables below:

1.2. **Bareilly – Sitapur**

Bareilly – Sitapur is a four-lane road on NH-30 (Old NH-24) with a project length of 157.59 Kms. It starts at Bareilly at 262.00 Kms of NH-30 and ends at Sitapur in Uttar Pradesh at 419.59 Kms of NH-30. The Project has two toll plazas, that is, Faridpur and Maigalganj at 267.00 Kms and 372.10 Kms, respectively.

The following table presents a summary of the concession:

Particulars	Details
State	Uttar Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-30; four-lane
Toll Plaza	Faridpur and Maigalganj
Length of the asset	157.59 Kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Bareilly – Sitapur route caters to the following type of strategic movements:

1. Car trips originating from Uttrakhand and Delhi states
2. Truck traffic originating from Uttrakhand, Delhi, Haryana, Bihar, etc
3. Major origin-destination pairs such as Bareilly-Lucknow, Bareilly-Faridpur, Lucknow-Delhi, Bareilly-Shahjahanpur, Shahjahanpur-Lucknow, etc.

The forecast major maintenance expenses for the Project are shown in the tables below:

(INR mn)	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35
Bareilly - Sitapur	13	-	47	0	3,327	1,309	392	-	77	39

1.3. Gundugolanu – Devarapalli – Kovvuru

Gundugolanu – Devarapalli – Kovvuru is a six-lane road on NH-16 with a project length of 69.88 Kms. It starts at Gundugolanu at 15.32 Kms and ends at Kovvuru in Andhra Pradesh at 85.20 Kms. The Project has one toll plaza, that is, Veeravalli at 53.70 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-16; six-lane
Toll Plaza	Veeravalli
Length of the asset	69.88 Kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Gundugolanu – Devarapalli – Kovvuru route caters to the following type of strategic movements:

1. Eluru/Vijayawada & surroundings to Devarapalli/Rajamahendravaram & surroundings
2. travelling from/to Suryapet/Hyderabad and beyond to/from Devarapalli and beyond
3. travelling between Eluru/Vijayawada surroundings and Devarapalli/Rajamahendravaram & surroundings
4. from/to Bengaluru & surrounding-Devarapalli & beyond

The forecast major maintenance expenses for the Project are shown in the tables below:

1.4. AP Corridor 1

1.4.1. Narasannapeta- Ranasthalam

Narasannapeta- Ranasthalam is a six-lane road on NH-16 with a project length of 53.80 Kms. It starts at Narasannapeta at 580.67 Kms of NH-16 and ends at Ranasthalam at 634.47 Kms in Andhra Pradesh of NH-16. The Project has one toll plaza, that is, Madapam at 589.55 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-16; six-lane
Toll Plazas	Madapam
Length of the asset	53.80 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Narasannapeta- Ranasthalam route caters to the following type of strategic movements:

1. Majority of passenger traffic from Andhra Pradesh followed by Odisha
2. Majority of freight traffic from Andhra Pradesh followed by Odisha and West Bengal
3. Zones beyond Madapam toll plaza to Srikakulam, Vizianagaram, Sabbavaram/Anakapalle, Rajahmundry, Kakinada, Vijayawada/Hyderabad and surroundings
4. Rest of Andhra Pradesh/Bhubaneswar to Vizag City & port, Bangalore/Chennai and beyond

5. Kolkata/Jharkhand/East& North India to Vizag City & port, Bangalore/Chennai and beyond
6. Zones beyond Madapam toll plaza to Maharashtra/Gujarat & rest of Central/West India

The pictures of the asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 22 January 2025

1.4.2. **Ranasthalam to Hanumanthvaka, Visakhapatnam Section**

Ranasthalam to Hanumanthvaka, Visakhapatnam Section is a four/six-lane road on NH-16 with a project length of 66.54 Kms. It is six-lane from Ranasthalam to Anandapuram at 634.00 Kms at NH-16 and four-lane from Anandapuram to Hanumanthvaka (Visakhapatnam) at 700.54 Kms at NH-16 in state of Andhra Pradesh. The Project has one toll plaza, that is, Nathavalasa at 656.70 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-16; four/six-lane
Toll Plazas	Nathavalasa
Length of the asset	66.54 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Ranasthalam to Hanumanthvaka, Visakhapatnam Section route caters to the following type of strategic movements:

1. Majority of passenger traffic from Andhra Pradesh followed by Odisha
2. Majority of freight traffic from Andhra Pradesh followed by Odisha and West Bengal
3. Beyond Srikakulam – Vizianagaram, Sabbavaram/Anakapalle, Srikakulam – Rajahmundry, Kakinada, Srikakulam – Vijayawada/Hyderabad and surroundings
4. Srikakulam and surroundings to Vizag City & port, Bangalore/Chennai and beyond
5. Rest of Andhra Pradesh/Bhubaneswar to Vizag City & port, Bangalore/Chennai and beyond
6. Kolkata/Jharkhand/East& North India to Vizag City & port, Bangalore/Chennai and beyond
7. Srikakulam and surroundings to Maharashtra/Gujarat & rest of Central/West India

The pictures of the asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 22 January 2025

1.4.3. Anandapuram-Pendurthi-Anakapalle

Anandapuram-Pendurthi-Anakapalle is six-lane road on NH-16 with a project length of 48.60 Kms. It starts at Anandapuram at 682.98 Kms of NH-16 and ends at Ankapalli at 731.59 Kms in Andhra Pradesh of NH-16. The Project has two toll plazas, that is, Dukkavanipalem and Marripalem at 686.54 Kms and 722.17 Kms, respectively.

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-16; six-lane
Toll Plaza	Dukkavanipalem and Marripalem
Length of the asset	48.60 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Anandapuram-Pendurthi-Anakapalle route caters to the following type of strategic movements:

1. Majority of passenger traffic from Andhra Pradesh followed by Odisha and Telangana
2. Majority of freight traffic from Andhra Pradesh followed by Odisha, West Bengal and Tamil Nadu
3. Vizianagaram/Srikakulam & beyond to Sabbavaram/Anakapalle, Vizag City & port, Rajahmundry/Kakinada, Vijayawada/Hyderabad and surroundings
4. Vizianagaram/Srikakulam & beyond to Bangalore/Chennai & beyond and to Maharashtra/Gujarat & Rest of Central/West India
5. Kolkata/Jharkhand/East& North India to Vizag City & port and Bangalore/Chennai & beyond
6. Sabbavaram/Vishakhapatnam/Vizianagaram & beyond to Anakapalle, Rajahmundry/Kakinada, Vijayawada/Hyderabad and surroundings
7. Sabbavaram/Vishakhapatnam/Vizianagaram & beyond to Bangalore/Chennai & beyond and to Maharashtra/Gujarat & Rest of Central/West India

1.5. AP Corridor 2

1.5.1. Chittoor – Mallavaram

Chittoor – Mallavaram is a six-lane road on NH-140 with a project length of 61.13 Kms. It starts from Chittoor at 0.00 Kms of NH-140 and ends to Mallavaram at 61.13 Kms in Andhra Pradesh of NH-140. Further, it connects Bengaluru in the west via Kolar (NH-75) and to Nellore in the northeast via NH-71 and also connects to Coimbatore, Kerala via Vellore. The Project has one toll plaza, that is, Gadanki at 37.25 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-140; six-lane
Toll Plaza	Gadanki
Length of the asset	61.13 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Chittoor – Mallavaram route caters to the following type of strategic movements:

1. Connection to Bangalore in the west, passing through Kolar via NH-75
2. Connection to Nellore in the northeast via NH-71

3. Connection to Anantapur in the northwest via NH-42
4. Connection to Chennai in the southeast via NH-48
5. Connection to major cities such as Mangalore, Kochi, Vishakhapatnam, Hyderabad, Pune and Goa
6. Significant car and truck traffic generating from Karnataka and Tamil Nadu

The pictures of the asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 20 January 2025

1.5.2. **AP/ TN Border to Nalagampalli, AP/ Karnataka Border Section**

AP/ TN Border – Nalagampalli - AP/ Karnataka Border Section is a four-lane road on NH-4 with a project length of 84.80 Kms. It starts at TN/AP Border at 134.89 Kms of NH-4 and extends to Nalagampalli at 219.69 Kms of NH-4 to the Andhra Pradesh/ Karnataka border. Further, it connects to Bengaluru in the west via Kolar (NH-75), to Anantapur in the northwest via NH-42, and to Chennai in the southeast via NH-48. The Project has one toll plaza, that is, Mahasamudram at 164.10 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Andhra Pradesh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-4; four-lane
Toll Plaza	Mahasamudram
Length of the asset	84.80 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

TN/AP Border - Nalagampalli - AP/ Karnataka Border Section caters to the following type of strategic movements:

1. Connection to Bangalore in the west, passing through Kolar via NH-75
2. Connection to Nellore in the northeast via NH-71
3. Connection to Anantapur in the northwest via NH-42
4. Connection to Chennai in the southeast via NH-48
5. Connection to major cities such as Mangalore, Kochi, Vishakhapatnam, Hyderabad, Pune and Goa
6. Significant car and truck traffic generating from Karnataka and Tamil Nadu

1.6. Chhattisgarh Corridor

1.6.1. Raipur – Simga section

Raipur – Simga section is a four and six-lane road on NH-30 (Old NH-200) with a project length of 48.58 Kms. It starts at Raipur at 0.00 Kms of NH-30 and ends at Simga at 48.58 Kms of NH-30 in the state of Chhattisgarh. The Project has one toll plaza, that is, Tarpongi at 32.01 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Chhattisgarh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-30; four and six-lane
Toll Plaza	Tarpongi
Length of the asset	48.58 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Raipur – Simga section caters to the following type of strategic movements:

1. Connects Raipur to Jabalpur in the north while also passing through Jagdalpur, Sukma, Bhadrachalam, and Kothagudem before terminating in Vijayawada in the south
2. Significant car and truck traffic generating from Maharashtra and Madhya Pradesh

The pictures of the asset are shown below:

Note: Site visit conducted by EYMBSLLP personnel on 20 January 2025

1.6.2. Simga to Bilaspur Section

Simga to Bilaspur is a four-lane road on NH-130 (Old NH-200) and NH-49 including Bilaspur Bypass with a project length of 77.95 Kms. The Project has two toll plazas, that is, Bhojpuri and Mudipar at 97.52 Kms and 110.29 Kms, respectively.

The following table presents a summary of the concession:

Particulars	Details
State	Chhattisgarh
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-130 and NH-49; four lane
Toll Plaza	Bhojpuri and Mudipar
Length of the asset	77.95 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Simga to Bilaspur caters to the following type of strategic movements:

1. Connects Raipur with Bilaspur, Katghora, and Ambikapur.
2. Significant car traffic generating from Jharkhand, Maharashtra and Madhya Pradesh
3. Significant truck traffic generating from Jharkhand, Maharashtra, Odhisha and Madhya Pradesh

The pictures of the asset are shown below:

1.7. Gandhidham (Kandla) – Mundra Port

Gandhidham (Kandla) – Mundra Port is a four-lane road on NH-41 with a project length of 71.40 Kms. The Project has one toll plaza, that is, Mokha at 44.50 Kms.

The following table presents a summary of the concession:

Particulars	Details
State	Gujarat
Employer	NHAI
Project type	Toll, Operate and Transfer ("TOT")
Highway and lane configuration	NH-41; four lane
Toll Plaza	Mokha
Length of the asset	71.40 kms
Commencement of operations	01 April 2025
Concession period	20 years
Concession end	31 March 2045

Source: Management

Gandhidham (Kandla) – Mundra Port caters to the following type of strategic movements:

1. Traffic from Mundra port, Gandhidham and Anjar region due to the presence of warehouses storing agro products, plywood, FMCG, etc
2. Key areas which contribute to the Project's traffic is from Mundra, Gandhidham and Morbi
3. Other areas influencing the Project's traffic includes Rajasthan, North India, Ahmedabad and south Gujarat

The forecast major maintenance expenses for the Project are shown in the tables below:

VII. Procedures Adopted

We have carried out the Valuation of the InvIT Asset, in accordance with valuation standards as specified / applicable as per SEBI InvIT Regulations to the extent applicable.

In connection with this analysis, we have adopted the following procedures to carry out the valuation analysis:

- Discussed with the Investment Manager on background of the SPV– business and fundamental factors that affect its earning-generating capacity and historical and expected financial performance;
- Requested and received financial and qualitative information relating to the InvIT Asset;
- Considered the key terms of Concession Agreements;
- Considered the traffic study reports and technical reports;
- Analysis of the Management projections;
- Analysis of the key economic and industry factors which may affect the valuation of the SPV;
- Analysis of the information available in public domain/ subscribed databases in respect of the comparable companies/ comparable transactions, as considered relevant by us;
- Analysis of other publicly available information, as considered relevant by us;
- Conducted site visits to assess the operating condition of the InvIT Asset as per the requirements of SEBI InvIT Regulations;
- Selection of valuation approach and valuation methodology/(ies), in accordance with SEBI InvIT Regulations, as considered appropriate and relevant by us; and
- Determination of Enterprise Value of the InvIT Asset as on the Valuation date.

VIII. Valuation Methodology

To determine the value of enterprises, three traditional approaches can be considered:

A. Market approach

The market approach measures value based on what other purchasers in the market have paid for assets that can be considered reasonably similar to those being valued.

B. Income approach

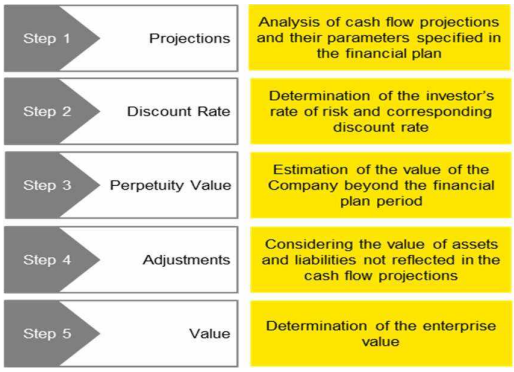
The income approach determines the value of a business based on its ability to generate desired economic benefit for the owners. The key objective of the income-based methods is to determine the business value as a function of the economic benefit.

C. Asset approach

The asset approach seeks to determine the business value based on the value of its assets.

Summary of various methods used / not used in this engagement is as given below:

Valuation Methodology	Used	Remarks
Income Approach		
Discounted Cash Flows method	Yes	DCF method is considered to be one of the most scientific methods of valuation. The individual InvIT Asset have definite concession periods and estimable cash flows for the entire length of the concession. We have therefore relied on the DCF method using the financial projections provided to us.
Market Approach		
Market Price method	No	Not applicable as the SPV is not publicly listed
Comparable Companies' multiples method	No	There are no listed companies comparable to the SPV in terms of concession period, type or region
Comparable Transactions' multiples method	No	There were no recent transactions in comparable assets where sufficient information was available in the public domain.
Cost approach		
Net Asset Value method	No	Does not capture the earning capacity of the business and hence, NAV would not be representative of the fair value



In the case of this SPV, the Discounted Cash Flow method was considered the most appropriate method for valuation based on the characteristics of the assets being valued (as mentioned above).

Discounted Cash Flow method

Income Based Approach

- Taking into consideration the specifics of the InvIT Asset and the business environment, we have used the discounted cash flow (DCF) method (specifically, the Free Cash Flow to Firm approach) to determine the Enterprise value of the InvIT Asset.
- The profit and loss account forecast covers the remaining concession period of individual InvIT Asset.

DCF Methodology

Calculation of Weighted Average Cost of Capital ("WACC")

Purpose of a discount rate

The application of the income approach requires the determination of an appropriate discount rate at which future cash flows are discounted to their present value as of the Valuation Date.

The discount rate reflects the time value of money and the risk associated with projected future cash flows. It is derived on the basis of the expected return on capital and the price of the best alternative investment. Therefore, the discount rate indicates the minimum required return from the asset being valued if the investor is not to be worse off than he would be if he had invested his money in the next best alternative. The return on this alternative investment must be comparable in terms of dimensions, timing and certainty, with the net cash flows expected to be derived from the subject asset.

To derive the discount rate, the weighted average cost of capital ("WACC"), which refers to the total capital invested (equity and debt), is used and adjusted for risk premiums or discounts, depending on the asset's specific risk compared to the risk of the overall enterprise. To determine the appropriate WACC, it is adequate to consider cost of equity and cost of debt separately.

The derivation of the WACC is based on a group of guideline companies (peer group) which are operating in the same industry/sector as the InvIT Asset (so called "potential acquirers"). To calculate the WACC, cost of equity, cost of debt and the capital structure have to be determined based on market data of the group of "potential acquirers." The WACC parameters used for the valuation of the InvIT Asset are based as at 31 December 2024, which is in line with the existing projects of NHIT, that is, NWPPL and NEPPL.

Formula for WACC Computation

Calculation for WACC

$$WACC = W_E * R_E + W_D * R_D$$

where:

W_E	=	Value of equity/value of total capital, E/E+D
K_E	=	Cost of equity
W_D	=	Value of interest-bearing debt/value of total capital, D/E+D
R_D	=	After-tax cost of interest-bearing debt

Calculation of Cost of equity

For the estimation of the cost of equity for the InvIT Asset, the capital asset pricing model ("CAPM") is applied. According to the CAPM, cost of equity consists of a risk-free interest rate and a risk premium. The risk premium is calculated by multiplying the market risk premium by the beta-factor, a company-specific measure of the systematic risk of an equity investment in a company.

To determine the cost of equity, its components, that is, risk-free rate and risk premium have to be analysed.

1. Risk-free rate

The starting point for the calculation of an appropriate equity rate of return is the calculation of the risk-free rate, which corresponds to the minimum return that an investor can expect from an investment "without" risk. This risk-free rate of return is therefore generally derived from the rate of return on a high-quality long-term government bond. The risk-free rate is based on current YTMs as on 31 December 2024 of Gilt Bonds with 10-year residual maturity (rounded).

2. Risk premium

i. Market risk premium

According to CAPM, long-term capital market studies have shown that historically investments in shares have yielded higher returns than investments in low-risk bonds. Market Risk Premium ("MRP") has been considered based on EYMBSLLP internal study on the prevailing MRP in India (Annexure 1)

ii. Beta coefficient

According to the CAPM in arriving at the appropriate risk premium, non-systematic risk, which attaches to the specific enterprise and can therefore generally be eliminated by diversifying, is distinguished from systematic risk. A risk premium will only be required to compensate for systematic risk, which cannot be eliminated by diversification. In practice, systematic risk is measured in terms of the beta coefficient and the market risk premium. The market risk premium is defined as the difference between the expected return on a market portfolio and the risk-free rate. The beta coefficient indicates the risk of the equity of the enterprise that is being valued relative to the average market risk (for stocks), which is represented by the market risk premium. A beta higher than one implies that the systematic risk of the company's stock is higher than the market risk. The risk premium is calculated by multiplying the market risk premium by the enterprise's beta coefficient.

Beta reported in public sources are "leveraged," which means that the additional risk to a stockholder due to the debt financing of the company is incorporated in the corresponding beta coefficient.

We have used the re-levered beta which means that the impact of the capital structure of the target company is incorporated in the beta coefficient. It is derived by adjusting the unlevered beta using the company's debt equity ratio and tax rate.

We have used the re-levered beta (based on a three-year data considering monthly returns) of listed Indian companies that are engaged in primarily in construction and operation of road assets in India.

In order to arrive at the comparable companies, we have carried out screening on S&P Capital IQ while applying the following selection criteria:

a. Indian companies listed on either Bombay Stock Exchange or National Stock Exchange (provides a set of 9,442 companies)
b. Industry classification as mentioned below (provides a set of 90 companies):
    i. Sector: Industrial; Sub-sector: Construction and Engineering; and Sub-sub-sector: Highways and Street Construction
    ii. Sector: Industrial; Sub-sector: Transportation Infrastructure; and Sub-sub-sector: Highways and Rail Tracks
c. The set of 90 companies were further shortlisted on the basis of the availability of their market capitalization (provides a set of 86 companies)
d. Basis the above list of 86 companies, we have further filtered the companies by applying a filter on the business description of the companies using the keywords "Road" or "Highway" or "Develop" (provides a set of 46 companies)
e. From the list of 46 companies, we have considered only those companies for which majority revenue contribution is from road assets and construction activities (provides a set of 32 companies)
f. On the set of 32 companies, we separately applied a filter on the business segment of the companies using the following keywords:
    i. "BOT" or "Road" to arrive at a set of 7 companies.
    ii. "Engineering" and "Construction" to arrive at set of additional 5 companies.
g. From these 12 companies, we analysed the segment reporting basis the information available in the annual report and ruled out 5 companies who were majorly engaged in EPC and/or revenue contribution from BOT/TOT was minimal

Accordingly, we arrived at a set of 7 companies. Further, we have also added one listed InvIT fund which has sufficient trading history and has toll road assets in its portfolio.

Based on above screening criteria, we shortlisted a total of 8 companies. Please refer Appendix 2.1.1 for the list of comparable companies used for computation of beta.

iii. Additional Risk Premium

An additional risk premium is generally applied to account for any non-systematic risk, that is, company/enterprise specific risk. Based on the fact that the InvIT Asset do not have traffic history, an additional risk premium has been applied appropriately.

Formula for Cost of Equity Computation

Calculation for COE

$$COE = R_f + B^* MRP + ARP$$

where:

R_f	=	Risk-free rate
B	=	Re-levered beta
MRP	=	Market risk premium
ARP	=	Additional Risk premium

Calculation of Cost of Debt

To determine the cost of debt, its components, that is, pre-tax cost of debt and tax rate have to be analysed.

1. Pre-tax cost of debt

The pre-tax cost of debt is the effective interest rate or the total amount of interest that a company or individual owes on any liabilities, such as bonds and loans. Pre-tax cost of debt of SPV has been considered basis discussions with the Management regarding the effective interest rate.

2. Tax Rate

Tax rate to be considered for computation of post-tax cost of debt should be the effective rate of the company. The effective tax rate represents the present value of the percentage of taxable income paid in taxes as at the Valuation Date. Tax rate of the SPV has been considered basis the effective tax rate of the SPV.

Calculation of Weighted Average Cost of Capital

The Summary of WACC computed for the InvIT Asset is presented below:

Particulars	Weights	R4
Weighted cost of debt (%)	50.0	3.29
Weighted cost of equity (%)	50.0	7.24
WACC (rounded) (%)		**10.55**

Source: Calculation

The computed WACC is 10.55% for R4. Detailed WACC Calculation has been provided in Appendix 2.

IX. Valuation Assumptions

Key underlying assumptions as provided by the Management are as follows:

- **Operating Revenue:** Operating revenue for the InvIT Asset is projected based on the traffic study reports of independent consultants appointed by the Management. The traffic study reports have been provided to us in final form. These reports presented an update of the traffic and revenue forecasts based on primary surveys undertaken in 2024, with actual traffic data up to November 2024 and other macro-economic assumptions. Operating revenue for Toll-Operate-Transfer ("TOT") assets have been projected by the Management basis these traffic study reports, dated January/February 2025.

  Further, the toll rates for each of these assets is in accordance with National Highway Fee (Determination of Rates and Collection) Rules, 2008 and amendment thereto. The toll rates have been estimated based on annual base rate increase (if applicable) and forecast of macro-economic factors such as Wholesale Price Index ("WPI") upto 40% on an overall basis over the concession period.

  WPI of 2.4% and 4.5% has been considered in FY26 and FY27-28 respectively which have been estimated on the basis of the analysis of WPI observed in FY22-24. Further, it has been assumed that WPI will subsequently converge to the long-term rate of 3.5% from FY28. The long term WPI has been employed based on the research conducted by the traffic consultants from various research articles and recent traffic due diligence studies. Based on our understanding of the market and data available on public sources, i.e., Oxford Economics, Trading Economics, etc., the long term WPI used by the Management seems to be within a reasonable range.

- **Operational Expenditure:** Operational expenditure includes base operating expenditure, admin expenses, insurance costs, PM expenses, one-time expenses, IM fees, SPV costs and other miscellaneous expenses. These expenses are estimated by the Management over the concession period and based on the Technical Due Diligence ("TDD") reports shared by independent technical consultants.

- **Routine Repair and Maintenance Expenses:** Routine repair and maintenance expenses are estimated by the Management over the projected period and based on the TDD reports shared by independent technical consultants.

- **Major Maintenance Expenses (MMR / Periodic maintenance):** Periodic maintenance expenses are incurred to bring the road asset back to an earlier condition or to keep the road asset operating at its present condition. MMR expenditures have been estimated based on TDD reports shared by independent technical consultants appointed by the Trust and internal estimates by the Management over the concession period.

- **Depreciation and Amortization:** In relation to the TOT Assets, the concession fee paid to NHAI has been capitalized in the books of the respective SPVs as an intangible asset. The said intangible asset has been amortized basis WDV depreciation method over the respective period of concession. Since depreciation and amortization is a non-cash expenditure, it has been added back to arrive at the net cash flows.

- **Taxes:** Income taxes are estimated considering, as appropriate, brought forward losses, unabsorbed depreciation, tax depreciation/ amortisation policy proposed to be followed by the InvIT

Assets and applicable corporate income tax rate of 25.17%.

Working Capital: Considering the nature of the business of operating toll road projects, incremental working capital requirement is expected to be zero for the projected period.

- **Capital expenditure:** Initial capital expenditure in relation to the InvIT Assets as shown below has been projected by the Management based on based on TDD reports shared by independent technical consultants appointed by the Trust and internal estimates by the Management over the concession period.

SPV (INR mn)	FY25 (1M)	FY26	FY27
R4	-	4,761	649

Building a better working world

X. Basis and Premise of Valuation

1. Basis of Valuation

Valuation Base means the indication of the type of value being used in an engagement. In the present case, we have determined the fair value of the SPV at the Enterprise level. Fair Value Bases defined as under:

Fair Value/Market Value

For this valuation, we have considered the International Valuation Standards ("IVS") and have adopted a definition of Market Value as given in IVS 104, "Market Value is the estimated amount for which an asset or liability should exchange on the Valuation Date between a willing buyer and a willing seller in an arm's length transaction, after proper marketing and where the parties had each acted knowledgeably, prudently and without compulsion". The Fair Value referred elsewhere in the Report is same as Market Value as defined above

2. Valuation Date

Valuation Date is the specific date at which the value of the assets to be valued gets estimated or measured. Valuation is time specific and can change with the passage of time inter-alia due to changes in the condition of the asset to be valued and market parameters. Accordingly, valuation of an asset as at a particular date can be different from other date(s).

The Valuation Date considered for the Enterprise Valuation of the InvIT Asset is 28 February 2025. Our Report does not take account of events or circumstances arising after Valuation Date and we have no responsibility to update the Report for such events or circumstances.

Premise of Value

Premise of Value refers to the conditions and circumstances of how an asset is deployed. In the present case, we have determined the Fair Enterprise Value of the SPV on a Going Concern Value defined as under:

Going concern value is the value of a business enterprise that is expected to continue to operate in the future. The intangible elements of going concern value result from factors such as having a trained workforce, an operational plant, the necessary licenses, systems, procedures in place, etc.

XI. Valuation Conclusion

The fair valuation of the InvIT Asset as on 28 February 2025 has been carried out basis the Discounted Cash Flow method of valuation. We have considered the financial projections of the InvIT Asset provided to us by the Management. Free Cash Flow to Firm approach under DCF method has been considered to determine the Enterprise Value of the InvIT Asset. The Enterprise Value has been computed by discounting the free cash flows to the firm from 01 March 2025 until the end of the concession period, using an appropriate WACC. The WACC parameters are based as on 31 December 2024 which is in line with the existing assets of NHIT, that is, NWPPL and NEPPL.

The Management has appointed independent consultants to carry out traffic study and estimation of toll revenue and technical study for estimation of operating and maintenance expenses and major maintenance expenses for the InvIT Asset over the concession period. We have relied upon the financial projections, traffic study reports, technical reports provided by independent consultants and other information provided to us for carrying out the valuation of the InvIT Asset.

The valuation is based on various assumptions with respect to the InvIT Asset, including their respective present and future financial condition, business strategies and the environment in which they will operate in the future. These assumptions are based on the information that we have been provided with and our discussions with the Management, and reflect current expectations and views regarding future events, and therefore necessarily involve known and unknown risks and uncertainties.

The summary of valuation of the InvIT Asset is presented below:

SPV Currency: INR mn	Enterprise Value Feb'25
R4	176,405

Source: Calculation

Our views are based on the current economic, market, industry, regulatory, monetary and other conditions and on the information made available to us, as of the date of this Report. Such conditions may change significantly over a relatively brief period of time and we assume no responsibility and are not required to update, revise or reaffirm our conclusion set out in this letter to reflect events or developments subsequent to the date of the Report.

XII. Project Wise Valuation Conclusion

The summary of project-wise valuation of R4 Assets is presented below:

Asset Currency: INR mn	Enterprise Value Feb'25
Muzaffarnagar- Haridwar	16,522
Bareilly- Sitapur	14,591

2. Detailed WACC Computation

2.1 Computation of Cost of Equity

Based on the parameters mentioned above, the cost of equity for the InvIT Asset is computed in the following table:

Particulars	Notes	R4
Risk-free rate (%)	a	7.00
Beta	b	1.00
Equity market risk premium (%)	c	7.00
Additional risk premium (%)	d	0.50
Cost of equity capital (%)		**14.48**

Source: Calculation

Notes:

a) Based on current YTMs of Gilt Bonds with 10-year residual maturity (rounded) as on 31 December 2024.

b) Please refer the table for Beta working below
c) Based on EYMBSLLP understanding of prevailing market risk premium in India
d) Based on the traffic risk of the InvIT Asset

2.1.1 Calculation of Beta

Currency: ₹ mn	Equity beta	Market capitalisation	Net debt	Enterprise value	Debt-EV ratio based on 3 year average	Effective tax rate (%)	Unlevered beta based on 3 year debt-equity	Re-levered beta
IRB Infrastructure Developers Limited	1.36	3,37,206	88,726	4,25,931	37.93	25.17	0.93	1.69
PNC Infratech Limited	1.04	83,698	61,969	1,45,667	38.51	25.17	0.71	1.28
Dilip Buildcon Limited	2.07	76,347	27,386	1,03,733	47.33	25.17	1.24	2.23
Bharat Road Network Limited	0.85	4,941	10,591	15,532	75.75	25.17	0.25	0.46
IRB InvIT Fund	0.05	35,013	27,929	62,942	38.10	25.17	0.04	0.06
Ashoka Buildcon Limited	0.81	87,628	45,131	1,32,760	58.08	25.17	0.40	0.71
Sadbhav Infrastructure Project Limited	1.37	2,397	32,169	34,566	95.27	25.17	0.09	0.15
KNR Constructions Limited	0.86	94,865	7,203	1,02,068	8.88	25.17	0.80	1.45
Average	**1.05**				**49.98**		**0.56**	**1.01**
Median	**0.95**				**42.92**		**0.55**	**1.00**

Source: Capital IQ

2.2 Computation of Cost of Debt

Based on the parameters mentioned above, the cost of debt for the InvIT Asset is computed in the following table:

Particulars	Notes	R4
Debt borrowing rate (%)	a	8.15
Expected income tax rate (%)	b	19.38
After-tax cost of debt (%)		**6.57**

Source: Calculation

Notes:
a) Based on cost of borrowing applicable to the SPV
b) Based on effective tax rate of the SPV

2.3 Calculation of WACC

Considering the finite life of the asset, the cashflows being prone to traffic and inflation risk and the current & expected debt to equity structure of the InvIT and comparable companies, we have considered a long-term debt-to-equity ratio of 50:50 for the SPV.

Particulars	Weights	R4
Weighted cost of debt (%)	50.0	3.29
Weighted cost of equity (%)	50.0	7.24
WACC (rounded) (%)		**10.55**

Source: Calculation

The computed WACC is 10.55% for the InvIT Asset.

3. Statement of Asset

Since NHIT is envisaging to acquire stake in the SPV, hence, as at the Valuation Date, the Statement of Asset for the SPV is shown in the table below:

Currency: INR mn	Net Tangible assets	Net Intangible assets	Non-Current Assets	Current Assets	Total
R4	-	-	-	-	-

Source: Management

4. Details of capex for the SPV

4.1 Forecast expenses relating to the initial capital expenditures:

The forecast expenses relating to the initial capital expenditures for the InvIT Asset are shown in the tables below:

SPV (INR mn)	FY25 (1M)	FY26	FY27
R4	-	4,761	649

Source: Management

5. Disclosures regarding list of one-time sanctions/approvals which are obtained or pending

The Management has informed that the disclosures regarding list of one-time sanctions/approvals which are obtained for the InvIT Asset are not available with the Trust.

6. Disclosures regarding list of up to date/overdue periodic clearances

The Management has informed that all other material permits, registrations, licenses, approvals, consents and other authorizations (collectively "Governmental Licenses") shall be obtained as per individual project requirement once the Management assumes the right and obligations. The new project SPV under the Trust would in due course and as required under applicable law procure all the Governmental Licenses issued by, and shall make all material declarations and filings with, the applicable Governmental Authority to own, lease, license, operate and use its properties and assets and to conduct the business by the Project SPV, as will be described in the placement documents. Further, no notice or proceedings have been received relating to the revocation or modification of any Government Licenses, which would have a Material Adverse Effect. The general list of Governmental Licenses are as below:

Sr. No.	Statutory Permission
1	Environmental Clearance
2	Forest Clearance
3	Tree Cutting permission
4	Borrow Area permission from state & local panchayat office
5	Boulder Extraction permission from state & local panchayat office
6	Quarry permission
7	Drilling & Blasting Explosive License & permissing
8	Permission from State to draw Ground Water from river/ reservoir
9	Factory License for Camp Setup
10	Shop & Establishment License for Setting up of Office other than Camp
11	Labour License
12	Inspector of Factories - For Setting up of Crusher, Batching Plant and HMP (CTE)
13	Inspector of Factories & Local Panchayat – For Consent to Operate - Crusher, Batching Plant and HMP (CTO)
14	CPCB permission for Batching plant, HMP and Crusher Setup
15	CPCB Permission/ State permission forusing DG sets in camp and Construction projects
16	Approval /permission from Utility Shifting Agency - Electricity, Gas, Water pipelines for Excavations & elevated structure erection
17	Approval of Railways for ROB/ RUB Construction
18	RTO permission to Operate and Run Construction equipment (movable) which does not have registration
19	Other any, as per local body/state

Source: Management

7. On-going material litigations including tax disputes and claims in relation to the assets

The Management has confirmed that there are no litigations pending against the Specified Asset, which may have a bearing on the operations of NHIT and the new SPV formed, in the respective Concession Agreement.

8. Other Disclosures

8.1 Details of revenue pendency including local authority rates associated with SPV and compounding charges

The Management has confirmed that there are no revenue pendencies including local authority taxes or compounding charges associated with the Specified Asset

8.2 Vulnerability to natural or induced hazards that may not have been covered in town planning/building control

The Management has confirmed that any natural or induced hazards would be adequately covered by insurance

8.3 Any other matters which may affect the project or its value

There are no other matters which may affect the project or its value

9. Forecast Profit and Loss Statement

The forecast profit and loss statement for the InvIT Asset is shown in the table below:

Currency: INR Mn	Mar25	Mar26	Mar27	Mar28	Mar29	Mar30	Mar31	Mar32	Mar33	Mar34	Mar35

India Equity Market Risk Premium: EY Study

Equity Market Risk Premium (EMRP or MRP) is the excess return earned by an investor over a risk free rate, when they invest in the stock market. This return compensates investors for taking on the higher risk of equity investing.

There are various approaches to estimating MRP like surveying investors, or calculating MRP implied in stock prices via forward forecasts. One of the most objective approach is to calculate MRP by analysing historical MRP earned over a long period of time. EY has used this approach. This has involved the following steps

Time period to be considered:

A relatively long time period is selected, as in the short term markets can be volatile leading to under/over-estimation of MRP depending upon near term market performance. stock market data is available from 1979 onwards. Further a period commencing from 1990 onwards is also suitable as it coincides with India's economic liberalization.

Rm: Market Return

Returns on BSE Sensex/BSE100 Index or NSE Nifty may be considered as a proxy for the market returns. Since data for NSE Nifty is available only from 1994, returns on BSE Sensex and BSE 100 have been considered for analysis of a longer period of data.

Rf: Risk Free Rate

Hypothetically, risk free rate is the return on security or portfolio securities that has no default risk and is completely uncorrelated with returns on anything else in the economy. In India, the yield on 10-year residual maturity government bond is considered as a reasonable proxy for the risk-free rate.

Adjustment for dividend yields

Return on equities is derived from a combination of dividend receipts and increase in share prices/ index. Since BSE Sensex and BSE100 Index are price return indices, the dividend yields for them are added to the average MRP to arrive at total return on equities.

Choice between Arithmetic and Geometric Mean

Geometric mean is preferred on the grounds that it takes compounding into account over the sample period.

Since the dividends are paid out in cash, it is assumed they are not re-invested, hence arithmetic mean of the dividend yield is added to the MRP.

Conclusion

Rf calculated for each of the year is deducted from Rm, which includes both returns on the stock index and the dividend yield of the index. The difference Rm- Rf is averaged over the period by using Geometric Mean.

The calculations of the study show that Market Risk Premium, while varying as per period and choice of index, converges around 7% (rounded). This is then considered a reasonable benchmark for India's Market Risk Premium.

Appendix 2.4: Toll Plaza wise commodity distribution

EXECUTIVE SUMMARY

Project Overview

The project highway, NH-16, runs parallel to the eastern coast of India envisaged under National Highway Development Program. The total length of NH-16 is roughly 1,764 km starting from Kolkata in West Bengal and ending at Chennai in Tamil Nadu while passing through the states of West Bengal, Odisha, Andhra Pradesh, and Tamil Nadu. NH–16 connects important tourist and industrial cities and towns like Kolkata, Bhubaneswar, Srikakulam, Vizianagaram, Visakhapatnam, Rajahmundry, Vijayawada, Bengaluru, and Chennai etc.

The Narsannapeta to Anakapalli road sections with an aggregate length of 170 kilometers of NH-16 (Old NH-5) in the state of Andhra Pradesh referred to as Project Road (PR), has been offered by NHAI to National Highways Infra Investment Managers Private Limited (NHIIMPL) for transfer to InvIT in the fourth round for a concession period of 20 years with maximum extension till 30 years.

Figure 0-1 shows the context and alignment of project road with major places along the highway.

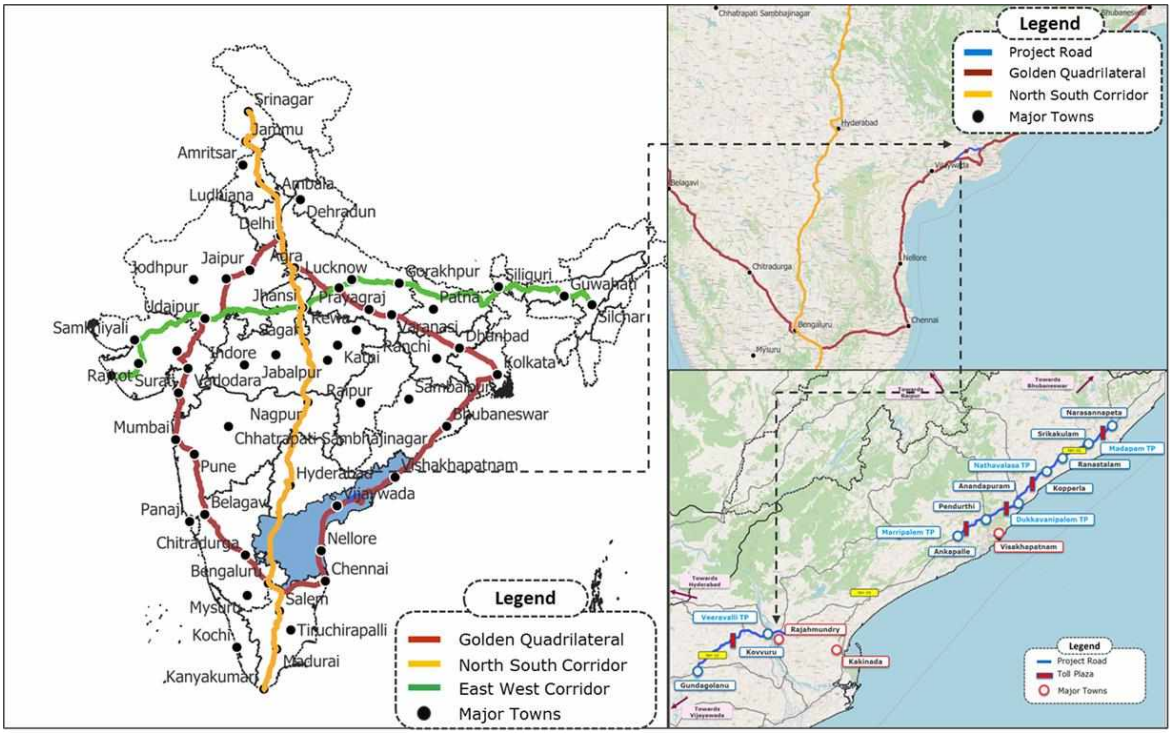

Figure 0-1: Alignment of Project Road and Location of Toll Plazas

Project Road Characteristics and Profile of Influencing Districts

The project road in wider context serves the long-distance traffic, which is majorly plying from/to Anakapalli and beyond (towards Bengaluru/Tirupati/Chennai/rest of Tamil Nadu) to/from Bhubaneshwar/Cuttack and beyond (towards Kolkata/Kharagpur). Apart from long distance traffic, it also serves the short-distance traffic between Nandigama/ Srikakulam/ Kopperia and Anadapuram/ Visakhapatnam/ Anakapalli areas.

The project road traverses a diverse industrial landscape, marked by strategically positioned clusters that drive regional economic activity. A significant hub of industrial operations is located in Visakhapatnam, particularly near the Gangavaram Port area, where a mixed cluster of coal plants and metal industries thrives. Prominent companies in this region include Venkatadri Metal Industries, Jindal Stainless Steel Ltd, and various other metal processing units.

Additionally, Gajuwaka is a center for glass and metal manufacturing, with industries like Matrix Glass Industries and Om Glass & Ply Industries. Stone quarrying is concentrated in Kothavalasa above TP03 and Mamidipalem near Anakapalli, supporting firms such as Sri Siva Stones Exports and Sairam Kadapa & Granite Slabs, which contribute to the region's construction sector.

The project road falls under the jurisdiction of three districts in the state of Andhra Pradesh *viz.* Srikakulam, Vizianagaram and Vishakhapatnam district.

- Srikakulam's economy is primarily agricultural, with rice, maize, and pulses as major crops, and cashew designated as its One District One Product (ODOP). The district also has a presence of small-scale industries and fishing activities.
- Vizianagaram, known for its rice production and mango-based ODOP products, has growing industrial and handloom sectors.
- Visakhapatnam serves as a key economic hub with Visakhapatnam Port, shipbuilding, steel, petrochemicals, and a strong tourism industry.

Annual Average Daily Traffic (AADT)

The estimation for FY25 AADT is done after annualising the behaviour of April 2024 - November 2024 traffic. For Madapam and Nathavalasa, SCF is derived from the months of April to Nov of FY23 and FY24 of respective toll plazas and the average of both years has been adopted. However, for MAVs at Nathavalasa, the SCF of Madapam TP has been considered due to the MAVs being abnormally high in few months of FY24.

The MOM traffic pattern at TP03 and TP04 show initial ramp up of traffic after opening of Vizag bypass in April 2022. Therefore, for Dukkavanipalem and Marripalem, the SCF is derived from the traffic data of adjacent toll plazas (Madapam and Vempadu). For this purpose, Average of FY23 and FY24 of Madapam TP and FY23 Vempadu TP is considered.

For TP02, TP03, and TP04, cash and exempt traffic from FY25 (Apr to Nov) have been added to the estimated ETC traffic of respective toll plaza. However, for TP01 cash and exempt traffic from Jan-2023 to Dec-2023 is used, considering the disruption in traffic since Jan 2024.

FY25 AADT derived from the ETC traffic data along with SCF, cash traffic, exempt traffic and ADT of April to November of FY25 is presented in **Table 0-1**.

	Traffic / Mode	CJV	LCV	2-Axle	3-Axle	MAV	OSV	PCU

Table 0-1: AADT for FY25

Travel Pattern

- Car traffic shows a strong local component across all toll plazas
- Freight traffic primarily exhibits the long-distance movement patterns with predominant movement between Kolkata/Jharkhand/East& North India and Bangalore/Chennai & beyond across all four toll plaza locations along the PR.
- The passenger traffic on the road were found to be for the purpose of work and business at the toll plaza locations.

Network Impacts

In context of the project road, three road network developments which may impact the traffic on the project road are:

1. *Impact of Raipur-Visakhapatnam (Vizag) Expressway & Sabbavaram to Sheela Nagar Port Connectivity Road*

The assessment for the traffic plying between Raipur/Salur & beyond and Vizag City/Port has been done to understand the impact of the completion of Raipur-Vizag Expressway coupled with Elevated Sabbavaram to Sheela Nagar port connectivity road.

The total diverted traffic estimated for FY25 after the operation of Raipur-Vizag Expressway and Elevated Sabbavaram to Sheela Nagar port connectivity under close tolling is presented in **Table 0-2**.

Modes	Car	LCV	2A	3A	MAV	PCU
Adduru to Pinagadi Ticket type	2,219	150	59	132	779	6,523

Table 0-2: Total Impact Due to Raipur-Vizag Expressway and Sabbavaram–Sheela Nagar Port Connectivity Road – FY25

This traffic has been grown and considered appropriately in the respective years of impact. In context of the timelines, the 100 percent of the considered diverted traffic is assumed to shift by FY30, following the implementation of close tolling and the completion of construction on the RVE and port connectivity road.

2. *Impact of Sabbavaram-Sheela Nagar Port connectivity road on Route Choice between Anandapuram/Anakapalli & beyond to Vizag port*

The impact of completion of port connectivity road has been studied for two streams of traffic:

- Traffic from/to Anandapuram & beyond to/from Vizag City/Port - Northern Approach
- Traffic from/to Anakapalli & beyond to/from Vizag City/Port – Southern Approach

Net divertible traffic (Resultant gain) estimated for FY25 due to completion of Sabbavaram-Sheela Nagar port connectivity road is presented in **Table 0-3**.

Resultant Upside	2A	3A	MAV	PCU
North Traffic			199	896
South Traffic	39	83	1,257	6,023

Table 0-3: Diversion Analysis for Anandapuram/Anakapalli & Beyond to Vizag Port Traffic - FY25

The Sabbavaram-Sheela Nagar Road is expected to add 199 MAVs (896 PCUs) for Dukkavanipalem to Pinagdi ticket type and 6,023 PCUs for Marripalem to Pinagadi ticket type for Vizag Port bound traffic from Northern and Sothern Approaches respectively. This traffic has been grown and considered appropriately in the respective years of impact.

In context of the timelines, the 100 percent of the considered diverted traffic is assumed to shift by FY30, following the implementation of close tolling and the completion of construction on port connectivity road.

3. Impact of Kharagpur – Vizag Expressway

The assessment for the route between Kharagpur and Vizag city/Port has been done for the two traffic streams:

- Traffic from/to Bhubaneswar & beyond to/from Vizag City/Port
- Traffic from/to Bhubaneswar & beyond to/from Anakapalli & beyond

The total diverted traffic estimated for FY25 after the operation of Kharagpur-Vizag Expressway at the two toll plazas is presented in **Table 0-4**.

Diverted Traffic As % AADT	Car	LCV	2A	3A	MAV	PCUs
Diverted Traffic % Based on Diversion Analysis						
Madapam (TP01)	4.3	23.3	36.0	38.7	41.1	31.4
Nathavalasa (TP02)	3.5	18.1	32.2	34.9	32.6	25.9
Adopted @ 50%						
Madapam (TP01)	2.1	11.6	18.0	19.4	20.6	15.7
Nathavalasa (TP02)	1.8	9.1	16.1	17.4	16.3	12.9

Table 0-4: Total Impact Due to Kharagpur-Vizag Expressway – FY25

This traffic has been grown and considered appropriately in the respective years of impact.

The project is a part of phase 2 of vision 2047, it is anticipated the whole process may take 10-15 years for completion. In view of this and pre-bid responses from NHAI, impact of this development has been considered from FY40 onwards. In addition, there would be some captive traffic of the PR due to distribution points along the route, familiarity of the existing route and roadside facilities. In view of this, 50 percent of this traffic is considered to shift to greenfield expressway. In terms of phasing for traffic shift, it is assumed that 50% of the diverted traffic will shift to the alternate route by FY40, 75% by FY41, and 100% by FY42.

Traffic Growth rates

The estimated traffic growth rates for the project road based on the elasticity approach applicable across all the three toll plazas have been presented till FY55 in line with the maximum extendable concession period of 30 years in **Table 0-5**.

Table 0-10: Projected Traffic (in PCUs)

Tolling Segmentation

The tolling stream distribution for each toll plaza location has been derived using the respective electronic toll collection (ETC) data of FY25 from April to November. The cash and exemption traffic data for FY25 (April–November) has been added into the ETC traffic distribution for Nathavalasa TP, Dukkavanipalem TP, and Marripalem TP. However, for Madapam TP, cash and exemption traffic data from January 2023 to December 2023 has been considered due to data disruptions since January 2024. The resultant tolling segmentation is presented in **Table 0-11**.

Ticket Type/Modes	Car	LCV	2A Truck	3A Truck	MAV	OSV
TP01 -Madapam

Table 0-19: Base Case Revenue in Rs Million

The project road revenues will have a CAGR of 8.4 percent for the period up to FY45 under the base case.

1. INTRODUCTION

1.1 General

National Highways Authority of India (NHAI) has setup NHAI InvIT to monetize its completed and operational national highways projects with the objective of mobilizing additional resources through capital markets. The Narsannapeta to Anakapalli road sections with an aggregate length of 170 kilometers of NH-16 (Old NH-5) in the state of Andhra Pradesh referred to as Project Road (PR), has been offered by NHAI to National Highways Infra Investment Managers Private Limited (NHIIMPL) for transfer to InvIT in the fourth round for a concession period of 20 years with maximum extension till 30 years.

NH-16 runs parallel to the eastern coast of India was developed under National Highway Development Program. The total length of NH-16 is roughly 1,764 km starting from Kolkata in West Bengal and ending at Chennai in Tamil Nadu while passing through the states of West Bengal, Odisha, Andhra Pradesh, and Tamil Nadu. NH–16 connects important tourist and industrial cities and towns like Kolkata, Bhubaneswar, Srikakulam, Vizianagaram, Visakhapatnam, Rajahmundry, Vijayawada, Bengaluru, and Chennai etc. **Figure 1-1** shows the alignment of NH-16 with major places along the highway.

Figure 1-1: Alignment of NH-16 With Major Places

National Highways Infra Investment Managers Private Limited, the Investment Manager to InvIT has appointed Ramboll India Private Ltd as the Traffic Consultant to carry out a study for assessing the present traffic levels, travel pattern and future traffic & revenue estimation till year FY55 duly considering the network characteristics, future economic perspective in the influence area of the project

1.2 Scope of Services

The scope of the study includes the following:

- Undertake Traffic Survey on the highway section as per the following:
  - Seven days 24 hours Videography Traffic Counts at or near the existing toll plaza locations on the project road to derive the Average Daily Traffic (ADT)
  - One day Origin-Destination survey at or near the existing toll plaza locations to assess the existing travel pattern of vehicles plying on the project road – origin and destination.
- Estimation of the base year AADT FY25
- Analysis of OD data to cover:
  - Regional distribution of traffic and influence factors for different zones contributing traffic on the corridor
  - Identification of Project Influence Area from analysis of travel pattern - regional distribution of traffic,
  - Main traffic generators (industrial areas, towns, ports etc.)
  - Commodity composition- Goods type distribution
  - Top OD pairs by vehicle types
- Review of past traffic studies, traffic/toll data and other relevant reports as may be available to determine category wise volume of traffic for past years as well as for current year
- To identify competing route and analyse the network conditions, traffic characteristics & level of toll charged and the advantage/ disadvantage of the competing road and their impact on the project traffic
- Carry out a study of past economic performance of influence area
- Diversion analysis, wherever needed – cost ratio-based diversion analysis using spreadsheets to be carried out for respective potential OD pairs.
- Preparation of traffic projections till year FY55 in three scenarios – low, most likely and high
- Capacity analysis of the road or any other requirements for potential capacity

augmentation

- Estimation of tollable traffic streams by toll category and estimation of toll revenue as per categories of traffic streams stipulated in the tolling schedule for the study period
- Review future road and transportation network developments in the area of influence of the project and identify those schemes that may impact positively or negatively traffic on the toll road
- Identify factors which may have a positive and / or negative impact on the traffic - all major developments like DFC, industrial corridors, economic corridors, ports, Bharatmala, Sagarmala
- Scenario Analysis of toll revenue – Critical parameters of diversion (if applicable) and three scenarios of traffic growth (most likely, low and high).

1.3 Report Structure

This report is divided into four chapters, including this introduction chapter. Chapter 2 details upon the project road characteristics and socio – economic profile of the districts in the project influence area including the estimation of AADT and travel characteristics in the Project Influence Area (PIA). Chapter 3 contains the details on the derivation of traffic growth rates used for traffic forecasting and presents traffic projections for the study period. Chapter 4 presents the details regarding tolling strategy, toll rates and the revenue projections for the duration of the concession.

2. TRAFFIC SURVEY AND ANALYSIS

2.1 General

In order to understand the traffic characteristics, the volume of traffic and travel pattern of vehicles plying on the project road were collected through primary surveys. This chapter presents the details of the project road characteristics, traffic surveys carried out, their analysis and the salient findings. The results of the analysis will be utilized in assessing the traffic growth and estimation of traffic and revenue forecast on the project road for the concession period.

2.2 Project Road Characteristics

The project road section, starts near Narsannapeta and ends at Anakapalli with a total length of about 170 km. It is divided into two sections with four operational toll plaza locations and falls under the jurisdiction of Srikakulam, Vizianagaram and Visakhapatnam districts. The corridor passes through major settlements such as Srikakulam, Ranasthalam, Anandapuram, and Anakapalli. The details of the project road sections with location, length, chainage of toll plazas and the districts in which the toll plazas are located are presented in **Table 2-1**.

Project Section	Toll Plaza Location	Length (km)	District under which TP falls
Nandigam – Srikakulam & Champavati – Visakhapatnam	Madapam (km 589.554)	120	Srikakulam
	Nathavalasa TP (km 656.704)		Vizianagaram
Anandapuram-Pendurti-Anakapalli	Dukkavanipalem TP (km 686.540)	50	Visakhapatnam
	Marripalem TP (km 722.170)		

Table 2-1: Detail of Project Sections and Toll Plazas

Dukkavanipalem and Marripalem toll plazas serve as key tolling points on the Visakhapatnam Bypass, facilitating smooth traffic movement along the corridor. The alignment of project road and toll plaza locations is shown in **Figure 2-1**.

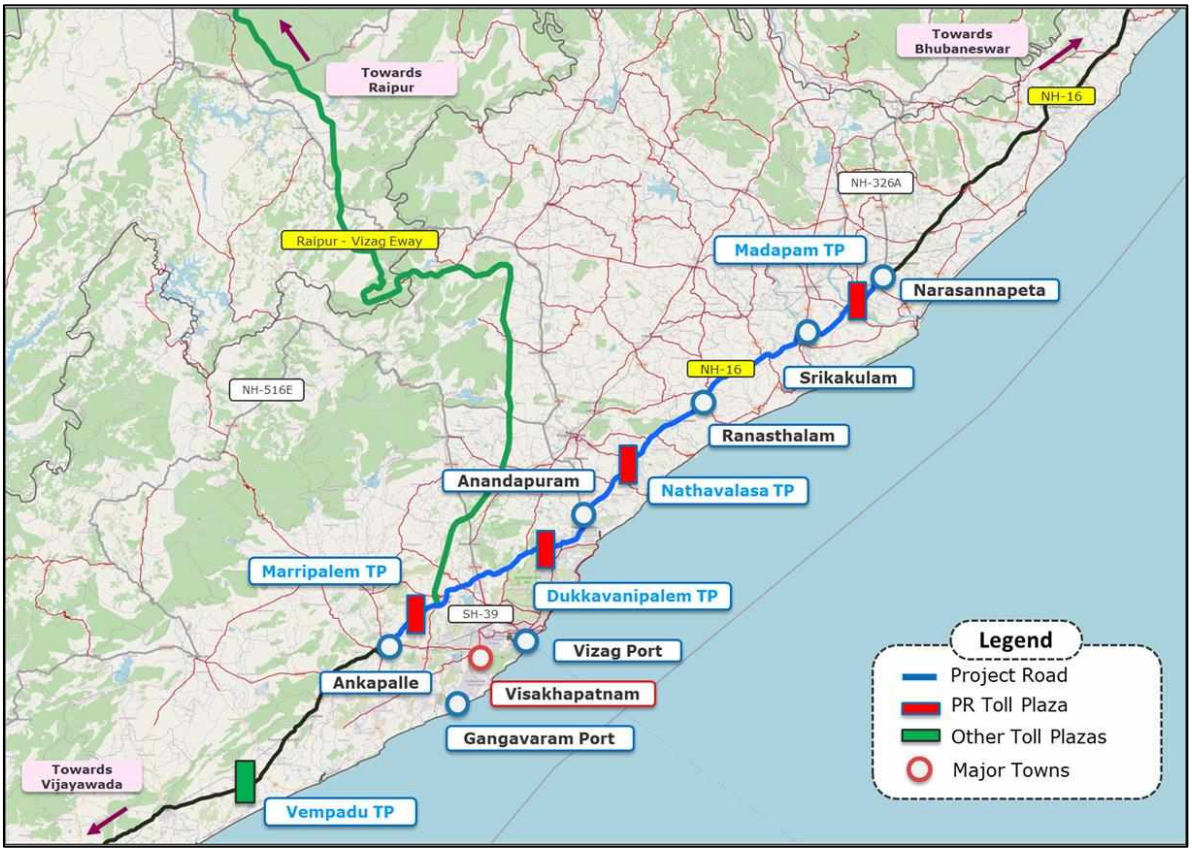

Figure 2-1: Project Road and Location of Toll Plazas

The project road in wider context serves the long-distance traffic, which is majorly plying from/to Anakapalli and beyond (towards Bengaluru/Tirupati/Chennai/rest of Tamil Nadu) to/from Bhubaneshwar/Cuttack and beyond (towards Kolkata/Kharagpur). Apart from long distance traffic, it also serves the short-distance traffic between Nandigama/ Srikakulam/ Kopperia and Anadapuram/ Visakhapatnam/ Anakapalli areas.

A four-lane service road runs parallel to the project section from Km 580.671 near Narsannapeta to Km 714.0 near Anakapalli, providing access for local traffic from surrounding settlements. At the Madapam and Nathavalasa toll plazas, the service road merges with the main highway, ensuring that traffic cannot bypass the toll plazas. However, existing median openings on Vizag Bypass allow vehicles to move between the service lanes and the main carriageway, enabling some traffic to bypass one or both Marripalem and Dukkavaniapalem toll plazas.

The alignment of project road and service lane along with tentative locations of proposed entry/exit toll plaza locations on Vizag Bypass is shown in **Figure 2-1**.

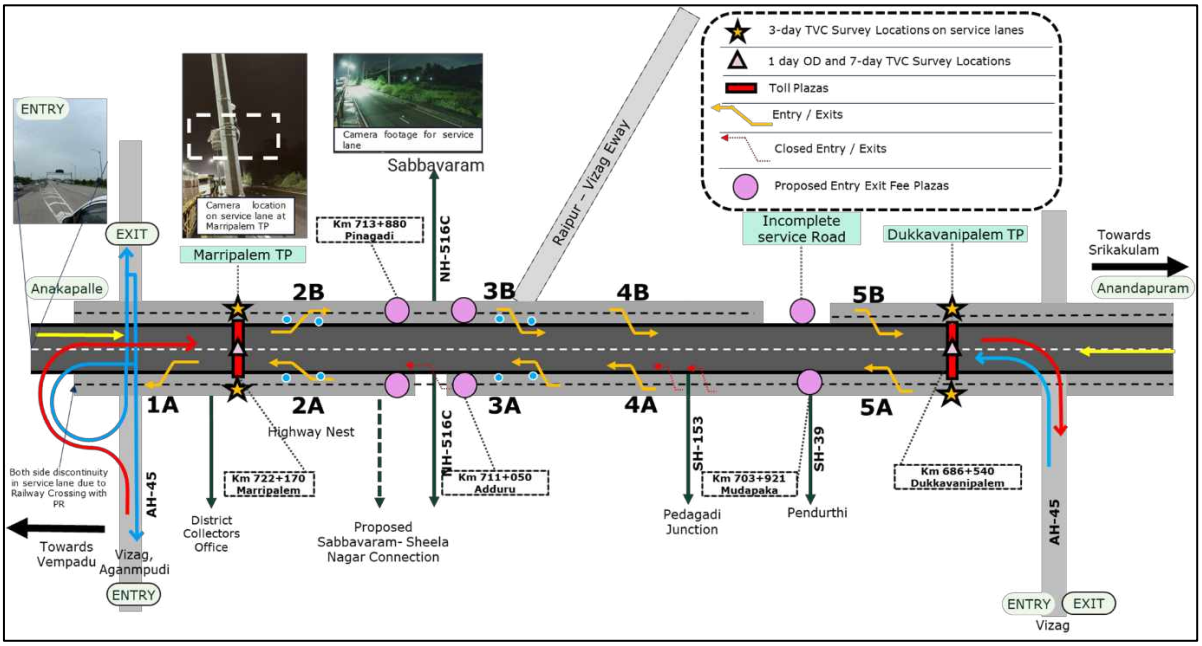

Figure 2-2: Anandapuram - Anakapalli Bypass Project Section and Location of Toll Plazas

At present, discontinuities in service lane at Anakapalli due to a railway crossing and due to interchange construction at Sabbavaram and Pendurthi the seamless movement of through traffic between Anakapalli and Anandapuram is restricted.

With the introduction of closed tolling, all these entries and exit points between the main carriageway and service roads may soon be closed by the Authority and access will be allowed only at interchanges - Km 703+921 (Mudapaka), Km 711+050 (Adduru), and Km 713+880 (Pinagadi).

It is worth mentioning here that, the project road traverses a diverse industrial landscape, marked by strategically positioned clusters that drive regional economic activity. A significant hub of industrial operations is located in Visakhapatnam, particularly near the Gangavaram Port area, where a mixed cluster of coal plants and metal industries thrive. Prominent companies in this region include Venkatadri Metal Industries, Jindal Stainless Steel Ltd, and various other metal processing units.

The corridor is further enhanced by two major chemical and pharmaceutical clusters: one at Pydibhimavaram and the other at Lankelapalem. These clusters are home to leading companies such as SNF India, Synergene Active Ingredients, Pharmazell India, Pfizer India Pvt Ltd, Mylan Laboratories Ltd, and Natco Pharma Limited.

In addition, the glass and metal manufacturing sector is a notable contributor in the Gajuwaka region of Visakhapatnam, hosting companies like Matrix Glass Industries, Gaap Tuff Glass LLP, and Om Glass & Ply Industries.

The stone quarrying sector is prominently represented in two key locations: the Kothavalasa area, above the Dukkavanipalem Toll Plaza, and near Anakapalli in Mamidipalem. These areas support numerous stone quarrying and processing operations, including Sri Siva Stones Exports, Sairam Kadapa & Granite Slabs, and several other

granite and marble units. The location of major industries located in the proximity of the project corridor is presented in the **Figure 2-3**.

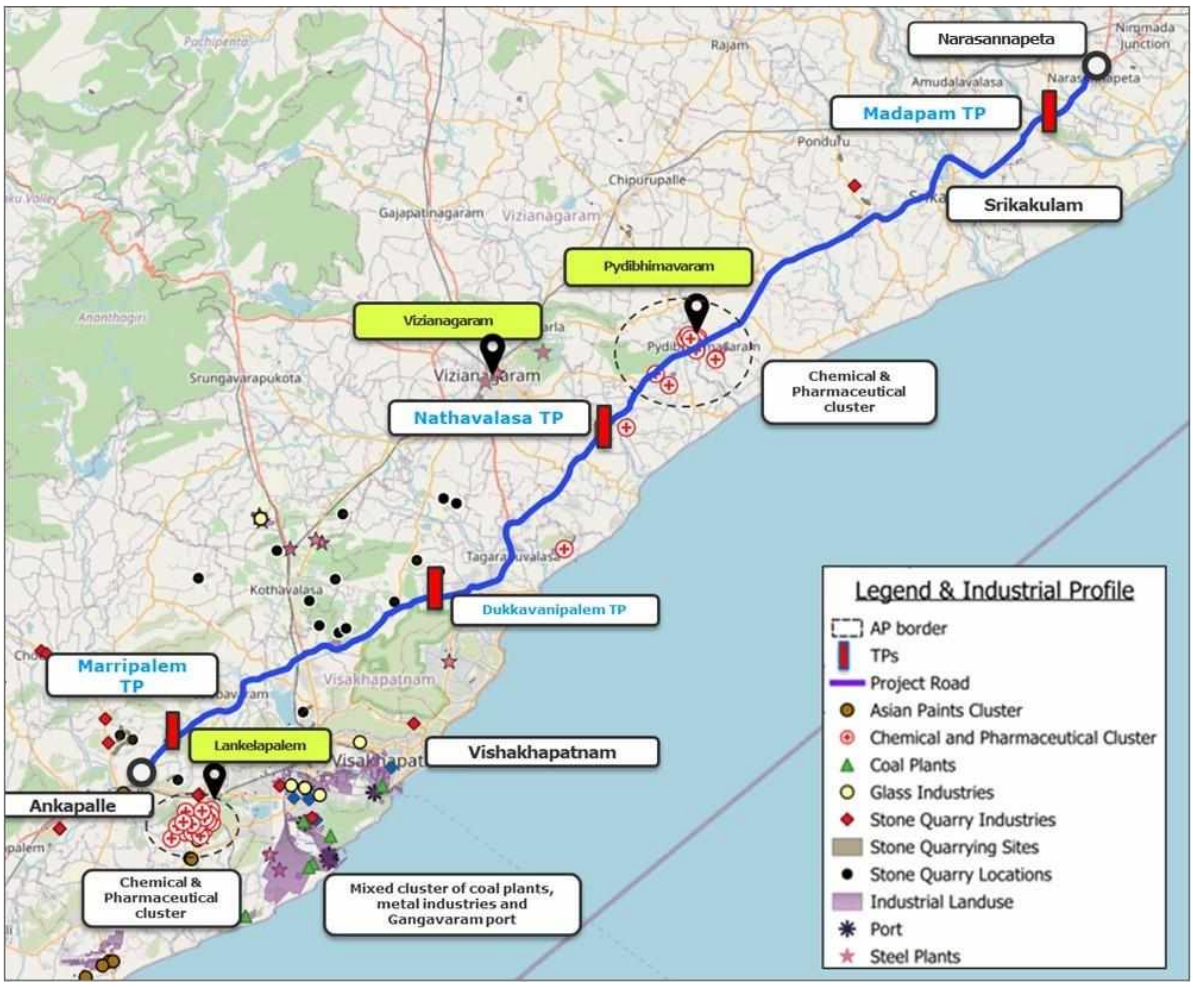

Figure 2-3: Industries Located in the Proximity of the Project Corridor

2.2.1 Profile of Project Influence Area District

The project section falls under the jurisdiction of Srikakulam, Vizianagaram and Visakhapatnam districts in the state of Andhra Pradesh. A brief description of the profile of these three districts is presented below.

Srikakulam District

Srikakulam district is in the northeastern part of Andhra Pradesh, India. It is bordered by the Bay of Bengal to the east, the districts of Vizianagaram and Visakhapatnam to the south, and the state of Odisha to the north. The district covers an area of approximately 5,837 sq.km.

According to the 2011 census, Srikakulam district had a population of about 2.6 million people, with a population density of around 445 persons per square kilometre.

Srikakulam's economy is largely driven by agriculture, with major crops including rice, jowar, maize, and various pulses. The district is known for its agricultural production and has significant paddy fields. Cashew nut products are designated as the One District One

Product (ODOP) for Srikakulam, emphasizing the region's focus on enhancing the production and marketing of various cashew-based items.

The district also has a presence of small-scale industries and traditional handicrafts. Coastal areas support fishing activities, contributing to the local economy. Srikakulam is well-connected by road and rail. The district's railway network includes key stations such as Srikakulam Road and Tilaru, which are part of the East Coast Railway zone. The district is served by a network of national (NH16) and state highways that facilitate transportation to neighbouring districts and states.

Vizianagaram District

Vizianagaram district is situated in the northeastern part of Andhra Pradesh, India. It is bordered by the districts of Srikakulam to the north, Visakhapatnam to the south, and the state of Odisha to the west. The district spans an area of approximately 6,539 sq.km.

As per the 2011 census, Vizianagaram district had a population of around 2.5 million people, with a population density of about 382 persons per square kilometre. The economy of Vizianagaram is primarily based on agriculture, with major crops including rice, sugarcane, and pulses. The district is known for its agricultural productivity and is often referred to as a significant rice bowl of the state. Mango-based products are recognized as the One District One Product (ODOP) for Vizianagaram. In addition to agriculture, the district has growing industrial activities, including small-scale industries and manufacturing. The city of Vizianagaram is also known for its traditional industries such as handloom weaving and handicrafts. The Vizianagaram Railway Station is an important railway hub on the Howrah-Chennai main line, facilitating both passenger and freight transportation. The district has a network of national and state highways that connect it to major cities and neighbouring districts.

Vizianagaram is rich in cultural heritage and historical significance. The district is known for its historic sites, temples, and traditional festivals. Notable attractions include the Vizianagaram Fort and several ancient temples. The district's cultural practices and festivals reflect its historical and traditional roots.

Vishakhapatnam District

Vishakhapatnam district is situated in the southeastern coastal region of Andhra Pradesh, India. It is bordered by the Bay of Bengal to the east, the districts of Srikakulam to the north, Vizianagaram to the west, and the district of East Godavari to the south.

The district covers an area of approximately 11,161 sq.km. As per the 2011 census, Vishakhapatnam district had a population of about 4.3 million people, with a population density of around 386 persons per square kilometre. Vishakhapatnam is a significant economic hub with a diverse economy. It is known for its major port, Visakhapatnam Port, which is one of the largest and busiest ports in India. The district has a thriving industrial sector, including shipbuilding, steel production, and petrochemicals.

The city is also renowned for its tourism, with attractions such as beaches, hills, and cultural sites. Vishakhapatnam is an important transportation node, with well-connected road, rail, and air infrastructure. The city is served by the Visakhapatnam Railway Station, which is a key junction on the Howrah-Chennai line, and it is connected to major cities via national highways (NH16, NH516C).

Vishakhapatnam is known for its vibrant culture and historical significance. The district hosts various cultural festivals and events, reflecting its rich heritage. Sugarcane is the One District One Product (ODOP) of Visakhapatnam district in Andhra Pradesh, with the state government promoting the production and marketing of sugarcane-based products like jaggery and jaggery-based sweets.

2.3 Traffic Surveys

In order to understand the characteristics and the volume of traffic using the project road, data on road network, traffic and travel pattern of vehicles plying on the project road were collected through primary traffic surveys. Traffic volume video graphic survey for seven days and origin-destination (OD) survey as roadside interview for one day at toll plaza locations were conducted on the project road. The schedule of the traffic surveys and locations on the project road are given in **Table 2-2**.

Location	Chainage	Duration	Date(s)
Classified Traffic Volume Counts			
TP01 – Madapam	589.554	7 Days	21st July 2024 to 28th July 2024
TP02 – Nathavalasa	656.704		
TP03 – Dukkavanipalem	686.540		
TP04 – Marripalem	722.170		
Origin and Destination Survey			
TP01 – Madapam	589.554	1 Day	25th July 2024
TP02 – Nathavalasa	656.704		
TP03 – Dukkavanipalem	686.540		24th July 2024
TP04 – Marripalem	722.170		

Table 2-2: Traffic Survey Locations and Schedule

Trained enumerators were engaged for conducting traffic surveys under the supervision of experienced transport planner. The vehicle classification as generally used in the traffic surveys of NHAI studies along with their PCU values, as suggested in IRC: 64 – 1990, are presented in **Table 2-3**.

Vehicle Type	PCU Factor
Motorized Vehicles	
Car, Jeep, Van &Taxi	1.0
Two –Wheeler	0.5
Three-Wheeler (Auto-Rickshaw)	1.0
Mini-Bus/ School Bus	1.5
Govt. Bus/ Private Bus	3.0
Mini LCV/Max Pick Up	1.0

Vehicle Type	PCU Factor
Light Commercial Vehicle (LCV)	1.5
2-Axle Truck	3.0
3-Axle Truck	3.0
Multi-Axle Vehicle (MAV 4-6 Axle)	4.5
HME	4.5
Agricultural Tractor	1.5
Agricultural Tractor with Trailer	4.5
Non – Motorised Vehicles	
Cycle	0.5
Cycle Rickshaw	2.0
Animal Drawn Cart	6.0

Table 2-3: Vehicle Classification and PCU Factors

2.4 Traffic Characteristics

The data collected from the traffic volume count survey was analysed in order to get the results with respect to existing traffic intensity, flow pattern, hourly variation and composition of traffic on the study road network. The various traffic characteristics have been analysed under the following heads:

- Average Daily Traffic (ADT)
- Daily variation, Hourly variation and Traffic composition
- Annual Average Daily Traffic (AADT)

2.4.1 Average Daily Traffic (ADT)

The traffic volume data collected at the toll plaza locations during the seven days survey has been analysed. The summary of ADT in terms of vehicles and PCUs is presented in **Table 2-4**.

Mode	TP01 – Madapam	TP02 – Nathavalasa	TP03 - Dukkavanipalem	TP04 - Marripalem
Tollable vehicles				
Car/Jeep/Van/Taxi	4,149	5,446	2,292	3,047
Mini Bus	91	75	24	28
Standard Bus	642	788	56	67
Mini LCV	845	772	556	548

Tollable PCU	25,368	32,000	22,229	22,835

Table 2-4: Average Daily Traffic Along the PR

- The observed total vehicles are around 25,403 at Madapam TP and around 21,467 at Nathavalasa TP, while about 10,000 – 11,000 vehicles are observed at Vizag bypass toll plaza location (10,484 at Dukkavanipalem TP & 11,518 at Marripalem TP. This is primarily due to the significantly lower share of non-tollable vehicle traffic on the Vizag Bypass.
- Share of car traffic is varying between 16 percent to 26 percent along the project corridor. TP01 and TP02 has an average share of car traffic of about 20 percent while about 24.8 percent of car traffic is observed along Vizag bypass.
- The Vizag Bypass carries a higher share of freight traffic, accounting for about 55 percent of the total vehicle flow, whereas Madapam TP and Nathavalasa TP observe a comparatively lower freight traffic share of around 25–30 (24.3 percent at Madapam TP, 34.4 percent at Nathavalasa TP).
- Vizag bypass toll plaza location recorded the highest share of tollable traffic, each accounting for about 80-81 percent followed by 63.5 percent at Nathavalasa TP and 43.2 percent at Madapam TP.
- Other motorised non-tollable vehicles (two-wheeler, auto rickshaw and tractor) account for about 56.8 percent at Madapam TP, about 36.5 percent at Nathavalasa TP, about 19-20 percent at each TP of Vizag Bypass.

2.4.2 Daily Variation, Hourly Variation, and Traffic Composition

The day wise variation, hourly variation and the traffic composition at the toll plaza locations is presented in **Figure 2-4**.

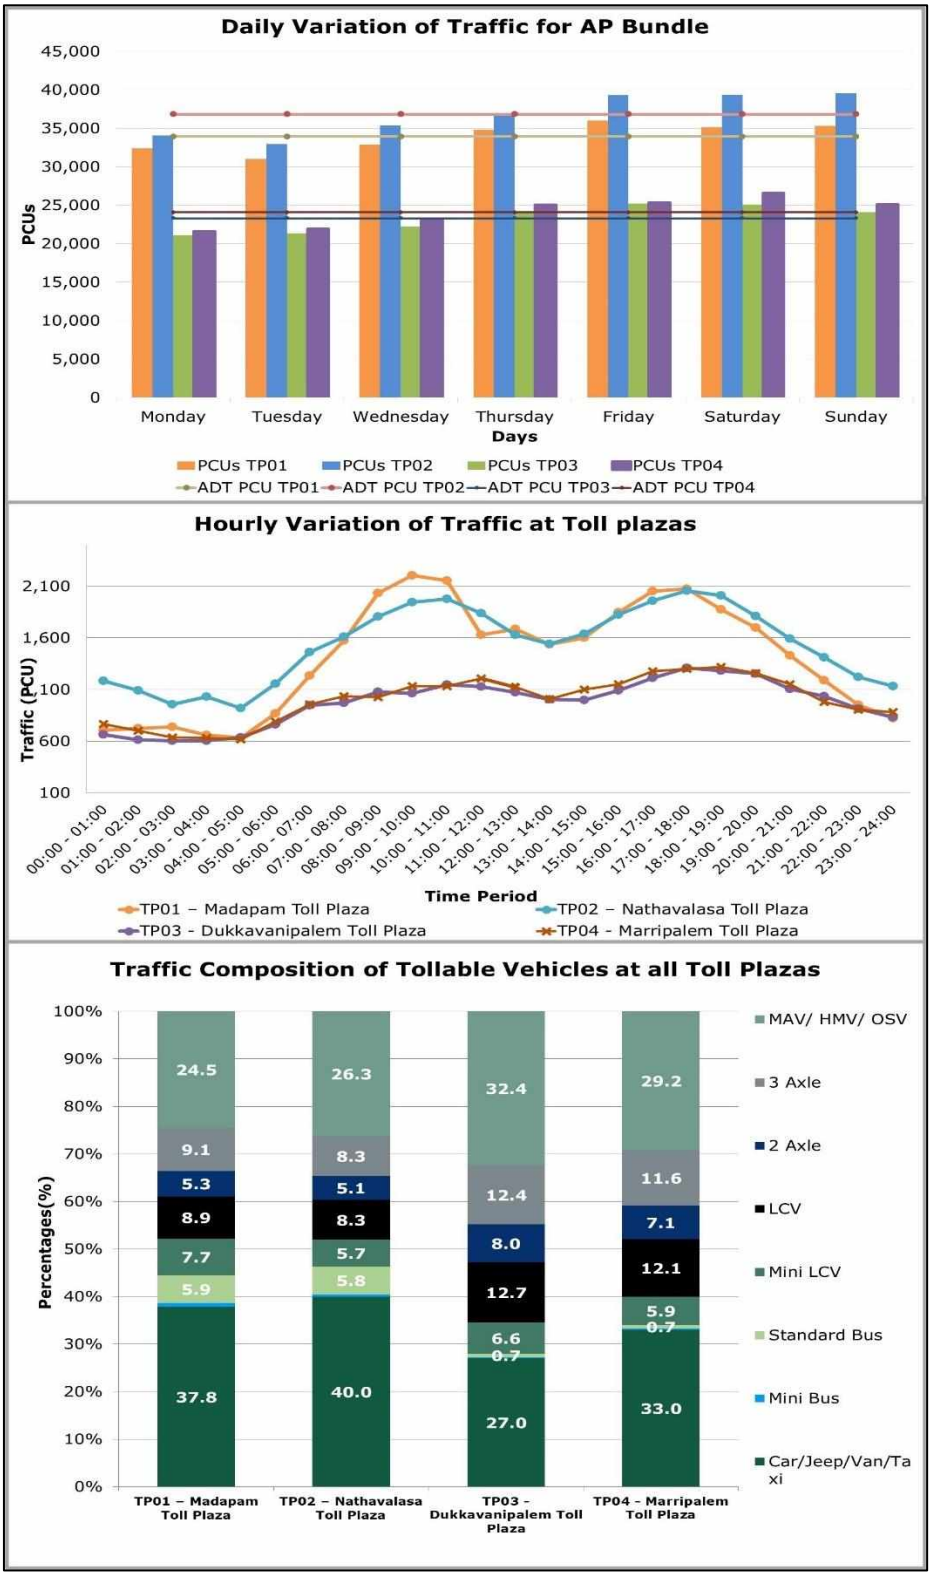

Figure 2-4: Daily & Hourly Variation and Traffic Composition

- It was observed that the traffic at the toll plazas is consistent with minor fluctuations during the days of volume count survey.
- The directional distribution at the toll plaza location is almost equal with Kolkata – Chennai having a directional distribution of about 49 percent at Madapam TP and Nathavalasa TP each and about 47 percent at each TP of Vizag bypass.

2.4.3 Comparison of Toll Data with TVC

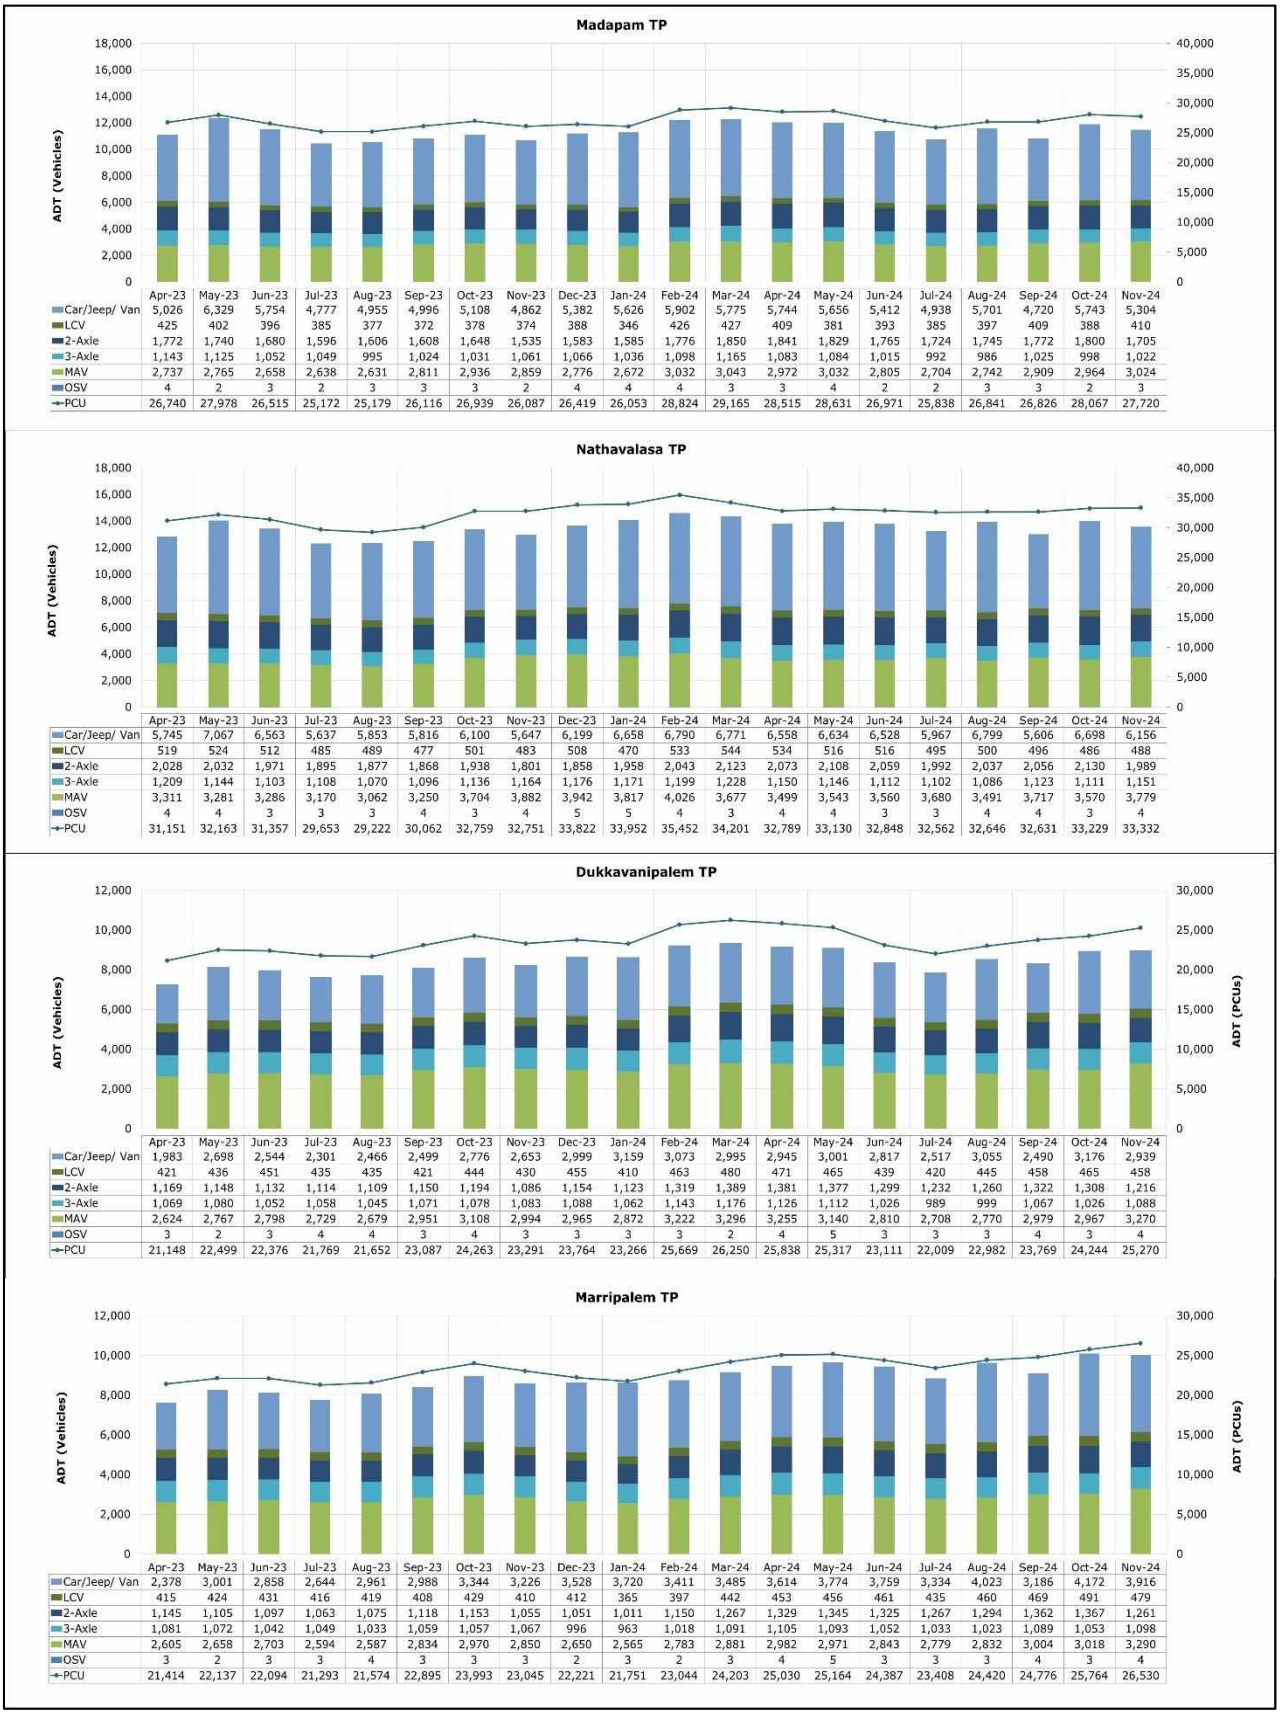
Toll Data vs TVC

The TVC survey was conducted from 21st July 2024 to 28th July 2024. A comparison between TVC and toll data for the days of the survey is presented in **Table 2-5.**

Day/Date	CJV	LCV	2-Axle	3-Axle	MAV/ OSV	Total	PCUs
TP01- Madapam							
ETC	4,842	391	1,725	1,010	2,721	10,688	25,875
TVC	4,995	1,067	1,226	996	2,690	10,974	25,368
ETC-TVC	-152	-677	498	14	31	-286	507
% Variation	-3.0%	-63.4%	40.6%	1.4%	1.1%	-2.6%	2.0%
TP02-Nathavalasa							
ETC	5,884	496	2,006	1,121	3,620	13,127	32,301
TVC	6,218	1,209	1,485	1,132	3,582	13,625	32,000
ETC-TVC	-334	-713	521	-10	38	-498	301
% Variation	-5.4%	-59.0%	35.1%	-0.9%	1.1%	-3.7%	0.9%
TP03-Dukkavanipalem							
ETC	2,419	406	1,204	1,000	2,613	7,641	21,397
TVC	2,848	1,100	734	1,052	2,749	8,484	22,229
ETC-TVC	-430	-694	469	-53	-136	-842	-831
% Variation	-15.1%	-63.1%	63.9%	-5.0%	-4.9%	-9.9%	-3.7%
TP04-Marripalem							
ETC	3,263	430	1,277	1,061	2,726	8,758	23,192
TVC	3,595	1,144	721	1,075	2,697	9,232	22,835
ETC-TVC	-331	-714	556	-14	29	-473	358
% Variation	-9.2%	-62.4%	77.2%	-1.3%	1.1%	-5.1%	1.6%

Table 2-5: Comparison Between TVC and Toll Data

The main observations from the comparison are:



- Across all toll plaza locations, TVC generally exceeds the Toll Data, particularly in the CJV and LCV categories.
- CJV toll data traffic is consistently lower than the TVC traffic with a variation of about 3-5 percent at TP01 & TP02 and 9-15 percent at TP03 &TP04. This variation could be due to the cash and exemptions data which is not recorded in ETC.
- LCVs and 2A trucks show high variation in the comparison which could be due to the cross-classification issue between these two categories of trucks.
- In case of MAVs, Dukkavanipalem TP has shown variation of about 5 percent, while Madapam TP, Nathavalasa TP and Marripalem TP each exhibit a minor variation of about 1 percent.

2.4.4 Annual Average Daily Traffic (AADT)

The traffic plying on any road generally varies over different periods of the year depending on the cycle of different socio-economic activities in the regions through which it passes. Therefore, in order to have a more realistic picture of the traffic on the project road, it is required to assess its seasonal variation to estimate the annual average daily traffic (AADT).

The past toll traffic data for all the toll plazas was made available by the client from April 2022 to November 2024 as presented in **Appendix 2.1**.

The month-on-month mode wise traffic for the period from April 2024 to November 2024 for all project road toll plaza locations is presented in **Figure 2-5**

Figure 2-5: Month on Month Traffic Data

The estimation for FY25 AADT is done after annualising the behaviour of April 2024 - November 2024 traffic. For Madapam and Nathavalasa, SCF is derived from the months

of April to Nov of FY23 and FY24 of respective toll plazas and the average of both years has been adopted. However, for MAVs at Nathavalasa TP, the SCF of Madapam TP has been considered due to the MAVs being abnormally high in few months of FY24.

The MOM traffic pattern at TP03 and TP04 show initial ramp up of traffic after opening of Vizag bypass in April 2022. Therefore, for Dukkavanipalem TP and Marripalem TP, the SCF is derived from the traffic data of adjacent toll plazas (Madapam and Vempadu). For this purpose, Average of FY23 and FY24 of Madapam TP and FY23 Vempadu TP is considered.

For Nathavalasa TP, Dukkavanipalem TP and Marripalem TP, cash and exempt traffic from FY25 (Apr to Nov) have been added to the estimated ETC traffic of respective toll plaza. However, for TP01 cash and exempt traffic from Jan-2023 to Dec-2023 is used, considering the disruption in traffic since Jan 2024.

FY25 AADT derived from the ETC traffic data along with SCF, cash traffic, exempt traffic and ADT of April to November of FY25 is presented in **Table 2-6**.

Table 2-6: AADT for FY25

2.5 Travel Characteristics

2.5.1 Survey Methodology

In order to understand the travel demand pattern in the region and tollable traffic streams, origin and destination (OD) surveys were carried out at the toll plaza locations. The OD survey was carried out for 24 hours, by roadside interview method as described in IRC: 102-1988. Both passenger and commercial vehicles plying on the project road were stopped on a random sampling basis and interviewed.

The travel characteristics obtained by OD survey facilitate the identification of:

1. Local and through traffic on the project road.
2. Potential divertible traffic to/from project road to various alternative routes.

Trained enumerators under the supervision of transport planners collected the trip characteristics using survey forms designed for this purpose. The OD survey elicited characteristics like origin, destination, purpose of trip for passenger vehicles and commodity being transported for goods vehicles. The information pertaining to origin and destination of trips collected during roadside interviews was analysed to obtain the trip distribution based on a zoning system suitably designed for the present study.

2.5.2 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed giving due consideration to the following factors:

- The road network catering to the traffic on the project road and its generating points
- Important towns, villages, factories and industrial centres around the project road area
- Administrative boundaries of districts and states.
- Configuration of the project road in the regional road network with respect to other roads

Two major types of areas were identified for analysis purpose: -

Immediate Influence Area (IIA): It includes the cities/towns/villages and districts along the project road and adjacent to it, which generate/attract trips to the project road. In this study, it consists of districts of Srikakulam, Vizianagaram and Visakhapatnam districts in the state of Andhra Pradesh.

Broad Influence Area (BIA): It includes the remaining districts of Andhra Pradesh and Odisha and other neighbouring states such as Telangana, Tamil Nadu and remaining states of India.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA. The zoning system adopted for data collection was based on 110 zones and is presented in **Appendix 2.2**.

2.5.3 Sample Size

The toll traffic data does not provide the individual traffic volume count of all categories of vehicles. The seven-day traffic volume video count at the existing toll plazas was analysed to get the individual volume count of all categories of vehicles along with the direction split.

The vehicles during the OD surveys were interviewed on a random sample basis. **Table 2-7** shows the AADT and the sample size (both in absolute numbers and in percentage terms) captured during the exercise.

Table 2-7: Sample Size Collected in OD Survey Along the PR

Based on the sample size of different categories of vehicles interviewed during the OD survey, direction-wise expansion factors were calculated based on FY25 AADT. The OD matrices for all vehicle categories were generated and analysis was done in terms of regional distribution, travel pattern and commodity distribution.

2.5.4 Regional Distribution

Based on the OD matrices, the regional distribution of tollable vehicles at the toll plaza locations has been calculated. **Table 2-8** gives the distribution indicating the attraction and generation zones for the traffic along the Madapam TP and Nathavalasa TP.

Region/Modes	Car	M Bus	Bus	MLCV	LCV	2A	3A	MAV
TP01-Madapam								
Andhra Pradesh	91.3	95.0	95.6	91.4	45.0	36.9	38.9	33.3

Table 2-8: Regional Distribution of Tollable Traffic (in %) - TP01 & TP02

Passenger traffic:

- Andhra Pradesh dominates car traffic across all toll plazas, contributing about 91.8 percent along both toll plazas. Odisha is the second-largest contributor, with about 4.6 percent across both toll plazas. Other states like Tamil Nadu, Karnataka, West Bengal, and Telangana contribute minimally, generally less than 2 percent each.
- In case of bus traffic, Andhra Pradesh still leads with about 93.8 percent followed by Odisha and Telangana with about 2.8 percent and 1.4 percent respectively.

Freight Traffic

- For LCV traffic, Andhra Pradesh shows the highest share, contributing about 50.8 percent across both toll plazas. Odisha follows with about 14 percent, while West Bengal and Tamil Nadu contributes significantly, ranging from 7–11 percent.

- In case of 2A trucks, Andhra Pradesh contributes about 42.8 percent of traffic, while West Bengal and Odisha contributes significantly with about 15 percent each. Tamil Nadu also has substantial contribution of about 10.6 percent.
- For 3A trucks and MAVs, Andhra Pradesh remains the primary contributor, with shares between 41–42 percent in each category. Odisha and West Bengal has a strong presence with contribution of about 12–17 percent each.

Table 2-9 gives the distribution indicating the attraction and generation zones for the traffic along the Vizag bypass toll plaza locations (TP03 and TP04).

Region/Modes	Car	M Bus	Bus	MLCV	LCV	2A	3A	MAV

Table 2-9: Regional Distribution of Tollable Traffic (in %) – TP03 & TP04

Passenger traffic:

- Andhra Pradesh accounts for the majority of car traffic at both Vizag bypass toll plaza locations, contributing about 90.7 percent traffic followed by neighbouring states, Odisha and Telangana which contribute around 3.1 and 2.5 percent respectively.

- In case of bus traffic, Andhra Pradesh still leads with about 64.3 percent followed by Odisha and Telangana with about 11.6 percent and 7.5 percent respectively.

Freight Traffic

- For LCV traffic, Andhra Pradesh shows the highest share, contributing 54.1 percent across Vizag bypass. West Bengal follows with 12.8 percent, while Odisha contributes significantly with about 10.2 percent.
- For 2A trucks, Andhra Pradesh's contributes about 43.4 percent, while West Bengal contributes significantly with about 14.7 percent. Tamil Nadu and Odisha also have substantial contributions of about 10 – 12 percent each.
- For 3A trucks and MAVs, Andhra Pradesh remains the primary contributor, with shares about 40-41 percent in each category followed by and West Bengal, which has a strong presence with a contribution of about 18.4 percent in 3A trucks and about 13.9 percent in MAVs

The mode wise top 20 OD pairs are given in **Appendix 2.3**.

2.5.5 Concise Travel Pattern

In order to simplify the travel pattern at PR section, the streams given above are divided into 2 major streams:

- Crossing Traffic – Trips originating/destined within the project corridor and crossing all four Toll Plazas.
- Local Traffic – Trips originating/destined between the project at all four Toll Plazas.

The summarised travel pattern on the project corridor is presented in **Table 2-10**

	Car	Mini bus	Bus	MLCV	LCV	2A	3A	MAV
TP01 – Madapam								
Through Traffic (%)	6.8	0.0	8.6	6.2	62.1	64.9	66.8	66.0

AADT	3,953	11	89	600	457	1,238	1,071	3,020

Table 2-10: Concise Travel Pattern on the Project Corridor

Madapam TP shows the highest through traffic in all major freight categories with about 66 percent in MAVs, 66.8 percent in 3A trucks and about 64.9 percent in 2A trucks, highlighting their role in long-distance freight traffic. For LCVs, through traffic ranges between 43 percent (Nathavalasa TP and Dukkavanipalem TP) and 62.1 percent (Madapam TP), indicating a mix of regional and long-distance freight movement.

In contrast, cars dominate the local traffic across all locations, with shares exceeding 90 percent across all TPs. Buses also display a high proportion of local traffic, ranging from 87–91 percent at Madapam TP and Nathavalasa TP to 61–65 percent at both the toll plaza locations of Vizag bypass. MLCVs, primarily used for regional goods transport, also show a strong inclination towards local traffic, with shares between 87.8 percent to 94.2 percent.

2.5.6 Detailed Travel Pattern

In order to assess the travel pattern of vehicles, the important streams of traffic plying on the project road are estimated. The list of the popular movements found at the toll plaza locations is presented in **Table 2-11, Table 2-12, Table 2-13 and Table 2-14**.

S. No	Crossing Plazas	Concise Traffic Stream	Car	Minibus	Bus	MLCV	LCV	2A	3A	MAV

Table 2-14: Traffic Streams at TP04-Marripalem (in %)

Passenger Traffic:

- Car traffic shows a strong local component across all toll plazas
- About 58 percent of car traffic travelling between zones beyond Madapam TP to Srikakulam & surroundings (stream 1) at TP01 followed by about 30 percent between Rest of AP/Bhubaneswar to Vizag City & port (stream 4)
- At Nathavalasa TP, highest share (about 37.2 percent) of car traffic were found to be travelling between Srikakulam & surroundings and Vizag City & port (stream 3)
- At Dukkavanipalem TP, about half of the total of car traffic (50 percent) were found to be moving between Vizianagaram/Srikakulam & beyond to Sabbavaram/ Anakapalli & surroundings (stream 1)
- At Marripalem TP, about 40.8 percent of the car traffic were found to be travelling between Sabbavaram/Vishakhapatnam/Vizianagaram & beyond to Anakapalli & surroundings (stream 1)

Freight Traffic:

- Freight traffic primarily exhibits the long-distance movement patterns with predominant movement between Kolkata/Jharkhand/East& North India and Bangalore/Chennai & beyond across all four toll plaza locations along the PR.
- At Madapam TP, about 22-23 percent of 3A/MAVs were found to be traveling between Kolkata/Jharkhand/East & North India and Bangalore/Chennai & beyond (stream 9) followed by about 18-20 percent between zones beyond Madapam TP and Vijayawada/Hyderabad & Surroundings (stream 7).
- At Nathavalasa TP, stream 7 and stream 9 shows relatively similar share in freight vehicles. About 17.9 of MAVs and about 18.6 percent of 3A trucks travel were found to be traveling between beyond Srikakulam to Vijayawada/Hyderabad & surroundings (stream 7) while about 17.2 percent of MAVs and 22 percent of 3A trucks are travelling between Kolkata/Jharkhand/East & North India to Bangalore/Chennai & beyond (stream 10).
- Similarly, at Dukkavanipalem TP, about 22-23 percent of 3A/MAVs were found to be traveling between Vizianagaram/Srikakulam & beyond to Vijayawada/Hyderabad & surroundings (stream 6) while about 20.8 percent of MAVs and 23.1 percent of 3A trucks undertake long-distance travel between Kolkata/Jharkhand/East& North India and Bangalore/Chennai & beyond (stream 9).
- At Marripalem TP, the dominant 3A/MAV traffic (24-26 percent) were found to be traveling between Kolkata/Jharkhand/East & North India to Bangalore/Chennai (stream 7) followed by about 20-21 percent travelling between Sabbavaram/ Vishakhapatnam/Vizianagaram & beyond to Vijayawada/Hyderabad & surroundings (stream 3).

2.5.7 Commodity Distribution

The location of major cement/thermal plants and sandstone source points located in and around the project road are presented in **Figure 2-6**.

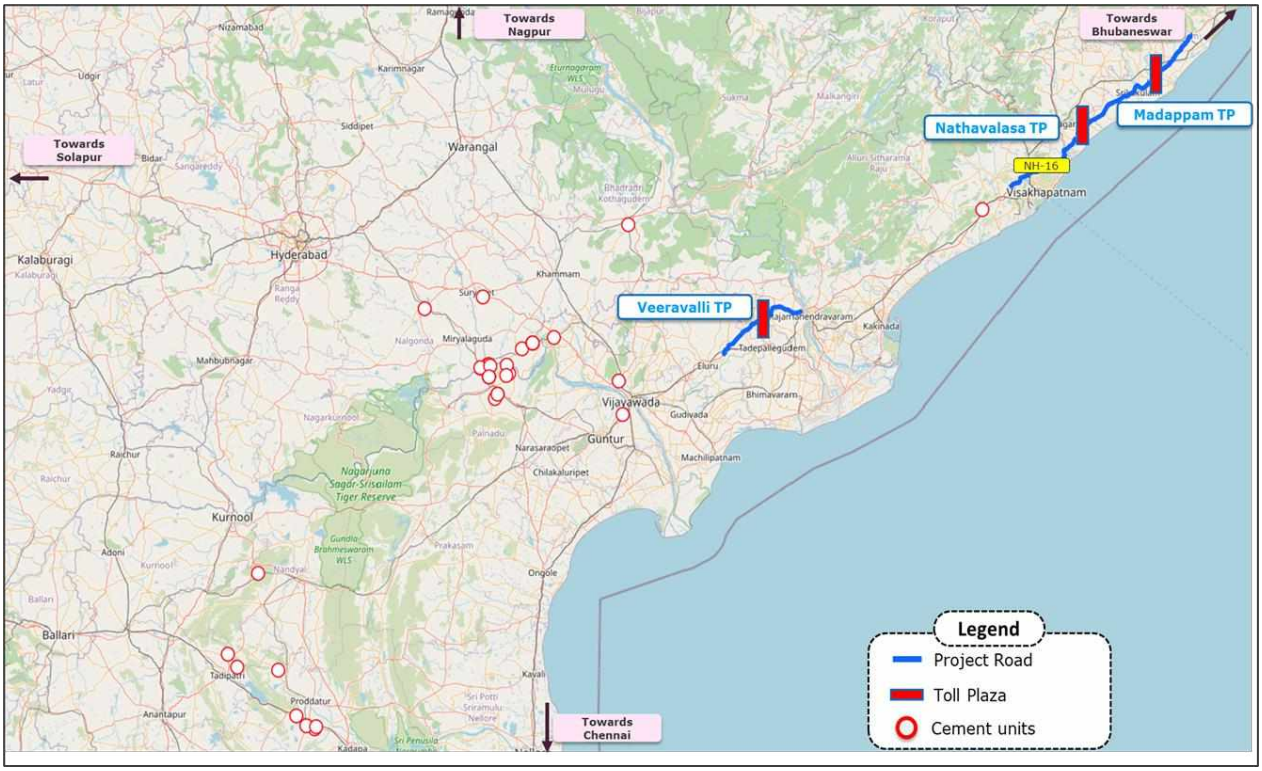

Figure 2-6: Cement Plants & Thermal Power Plants in the Vicinity of the Project Corridor

Analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. The direction wise commodity distribution is presented in **Appendix 2.4**.

The commodity-wise share of the total commercial traffic at each of the toll plazas on the project road are presented in **Table 2-15**.

Commodity Type	MLCV	LCV	2 Axle	3 Axle	MAV
TP01 – Madapam					
Food Grains and Cash Crops	3.4	3.8	4.4	8.7	4.3
Fruits & Vegetables	5.4	5.1	7.7	6.3	7.3
Building Materials	3.9	8.9	6.9	7.5	9.3

Table 2-15: Commodity Distribution on Project Road (in %)

TP01 – Madapam

- Around 6-10 percent of 2A/3A/MAV transporting petroleum, major OD pairs between Tekkali-Srikakulam, Visakhapatnam-Rest of Odisha, Chennai-Kolkata
- Around 5-13 percent of 2A/3A/MAV transporting iron & steel, major OD pairs between Visakhapatnam-Rest of Odisha and Chennai-Kolkata
- Around 4-8 percent of LCV/2A/3A/MAV transporting parcel, major OD pairs between Chennai-Kolkata
- Around 6-9 percent of 2A/3A/MAV transporting building materials, major OD pairs between Visakhapatnam-Rest of Odisha, Rest of Odisha-Chennai, Tekkali-Srikakulam
- Around 7 percent of 2A/3A/MAV transporting fruits and vegetables, major OD pairs between Tekkali-Visakhapatnam, Bengaluru-Kolkata, Chennai-Kolkata

TP02 – Nathavalasa

- Around 10 percent of 2A/3A/MAV transporting petroleum, major OD pairs between Srikakulam-Visakhapatnam
- Around 9-13 percent of 2A/3A/MAV transporting iron & steel, major OD pairs between Srikakulam-Visakhapatnam and Chennai-Kolkata
- Around 22-23 percent of 2A/3A transporting parcel, major OD pairs between Bengaluru-Kolkata, Chennai-Kolkata
- Around 4-6 percent of 2A/3A/MAV transporting building materials, major OD pairs between Srikakulam-Visakhapatnam, Srikakulam-Chennai
- Around 5-6 percent of LCV/2A/3A/MAV transporting fruits and vegetables, major OD pairs between Srikakulam-Visakhapatnam, Bengaluru-Kolkata

TP03 - Dukkavanipalem

- Around 8-11 percent of 2A/3A/MAV transporting petroleum, major OD pairs between Tekkali-Visakhapatnam, Mettamedapalem-Anakapalli, Srikakulam-Anakapalli
- Around 5-14 percent of 3A/MAV transporting iron & steel, major OD pairs between Rest of Odisha-Bengaluru, Rest of Odisha-Chennai, Bengaluru-Kolkata
- Around 7-11 percent of 2A/3A transporting parcel, major OD pairs between Bengaluru-Kolkata, Chennai-Kolkata
- Around 6-10 percent of 2A/3A/MAV transporting building materials, major OD pairs between Srikakulam-Chennai, Mettamedapalem-Visakhapatnam, Srikakulam-Hyderabad

- Around 4-10 percent of LCV/2A/3A/MAV transporting fruits and vegetables, major OD pairs between Bengaluru-Kolkata, Mettamedapalem-Anakapalli

TP04 - Marripalem

- Around 7-8 percent of 2A/3A/MAV transporting petroleum, major OD pairs between Vizianagaram-Anakapalli, Srikakulam-Anakapalli, Tekkali-Anakapalli
- Around 6-8 percent of 2A/3A/MAV transporting iron & steel, major OD pairs between Hyderabad-Rest of Odisha, Rest of Odisha-Chennai
- Around 6-10 percent of LCV/2A/3A/MAV transporting parcel, major OD pairs between Chennai-Kolkata, Bengaluru-Kolkata
- Around 10-12 percent of 3A/MAV transporting building materials, major OD pairs between Tekkali-Kakinada, Vizianagaram-Rest of Gujrat, Srikakulam- Rest of Tamil Nadu
- Around 7-14 percent of LCV/2A/3A/MAV transporting fruits and vegetables, major OD pairs between Bhubaneswar- Bengaluru, Bengaluru-Kolkata

2.6 Traffic and Travel Characteristics of Panchvati and Jonnada Toll Plaza Locations

To gain a comprehensive understanding of the traffic and travel characteristics, Traffic Volume Count (TVC) and Origin-Destination (OD) survey were conducted at the Panchvati and Jonnada toll plazas.

The completion of under construction Raipur-Vizag expressway is likely to impact travel pattern on PR. Currently, this traffic is not crossing any of the toll plazas of the project road as it is using NH26 and further using AH45 to reach Vizag port. In order to understand the travel pattern of the traffic between Raipur/Salur & beyond to Vizag City/port, the TVC and OD survey at Jonnada Toll plaza between Vizianagram and Thagarepuvalasa on NH26 was conducted.

In addition, Traffic Volume Count (TVC) and Origin-Destination (OD) survey were conducted at the Panchvati toll plaza to assess the traffic to Vizag port from Anandapuram & beyond (Northern side) and Anakapalli and beyond (Southern side)

Location of these two TPs along with the PR toll plazas on Vizag Bypass is presented in **Figure 2-7**.

Figure 2-7: Location of Panchvati TP and Jonnada TP

The Panchvati Toll Plaza is located on the existing port road where all the traffic to/from Vizag port is being tolled. Jonnada Toll Plaza is located on NH-26 which serves as a key gateway for traffic destined towards Raipur/Chhattisgarh. The schedule of surveys conducted at these two plazas is presented in **Table 2-16**.

Sections	Location	Duration	Date(s)
Classified Traffic Volume Counts			
Port Road	Panchvati TP	3 Day	15th Oct 2024
NH 26	Jonnada TP	3 Day	15th Oct 2024
Origin and Destination Survey			
Port Road	Panchvati TP	1 Day	15th Oct 2024
NH 26	Jonnada TP	1 Day	15th Oct 2024

Table 2-16: Survey Schedule for Panchvati TP and Jonnada TP

2.6.1 Average Daily Traffic at Panchvati TP and Jonnada TP

The traffic volume data collected at these two toll plaza locations during the three days survey has been analysed. The summary of ADT in terms of vehicles and PCUs is presented in **Table 2-17**.

Modes	Panchvati TP	Jonnada TP
Tollable vehicles		
Car/Jeep/Van/Taxi	8,673	9,861
Minibus	26	124
Standard Bus	31	958
Mini LCV	587	838
LCV	404	387
2 Axle	325	154
3 Axle	480	284
MAV (4-6 Axle)	4,612	1,352
HMV/MAV (=>7Axle)	8	5

Modes	Panchvati TP	Jonnada TP
Non Tollable vehicles		
Two- Wheeler	21,728	17,622
Auto-Rickshaw	2,708	2,942
Agri. Tractors	3	33
Total Non-Motorized	61	32
Total Vehicles/PCUs		
Total Tollable vehicles	15,146	13,963
Total Non Tollable vehicles	24,501	20,628
Total Vehicles	39,647	34,592
Total PCU	46,819	33,665
Tollable PCU	33,201	21,761

Table 2-17: ADT at Panchvati TP and Jonnada TP

The observed total vehicles are around 24,501 at Panchvati toll plaza and 34,592 at Jonnada toll plaza.

2.6.2 Travel Pattern: Concise Traffic Streams at Panchvati Toll Plaza

In order to assess the travel pattern of vehicles, the important streams of traffic plying on the Panchvati TP are estimated. The list of the popular movements found at the toll plaza location is presented **Table 2-18**.

Direction	Sr. No.	Traffic Streams	Car	Mbus	Bus	MLCV	LCV	2A	3A	MAV
South	1	Anakapalli & Surroundings - Vizag Port/ Coromandel & Surroundings	8.8	0.0	10.1	12.7	11.0	14.0	10.4	12.2
South	2	Kakinada/Rajahmundry - Vizag Port/ Coromandel & Surroundings	12.4	25.0	11.1	16.1	8.0	10.2	9.9	12.7
South	3	Hyderabad/Vijayawada- Vizag Port/ Coromandel & Surroundings	8.6	0.0	14.6	7.3	10.4	8.3	15.8	12.6
South	4	Chennai/Bangalore & Surroundings - Vizag Port/ Coromandel & Surroundings	1.7	0.0	0.0	4.7	0.8	4.2	3.8	2.5
South	5	Maharashtra/Gujarat and Rest of Central & West India- Vizag Port/Coromandel & Surroundings	0.3	0.0	0.0	0.0	1.5	1.9	1.7	3.2
North	6	Vizianagaram/Srikakulam & Rest of AP - Vizag Port/ Coromandel & Surroundings	0.9	0.0	0.0	2.8	4.0	4.6	4.3	4.4
North	7	Bhubaneswar/Kolkata/Chhattisgarh/ East & North India -Vizag Port/Coromandel & Surroundings	0.6	0.0	0.0	1.8	5.4	11.8	9.0	10.8
Sabbavaram	8	Sabbavaram & Surroundings - Vizag Port/ Coromandel & Surroundings	1.2	0.0	0.0	0.0	1.6	0.0	0.7	0.8
Pendurthi	9	Pendurthi & Surroundings - Vizag Port/ Coromandel & Surroundings	1.2	0.0	0.0	0.6	3.2	0.6	1.9	2.8
Local-South	10	Gajuwaka/Autonagar/Lankelapalem/Steel Plant & Surroundings-Vizag port/ Coromandel & Surroundings	39.6	25.0	46.0	42.7	43.8	35.5	30.0	28.8
Local-North	11	NAD/Airport/Gateway CFS/MVP Colony & Surroundings - Vizag Port/ Coromandel & Surroundings	24.7	50.0	18.2	11.3	10.3	8.9	12.5	9.1
Total			100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
AADT			6,439	5	21	241	137	328	436	4,212

Table 2-18: Traffic Streams at Panchvati TP (in %)

Passenger Traffic:

- The highest share of passenger traffic is found to be travelling between local zones in south direction connecting Gajuwaka/Autonagar/Lankelapalem/Steel Plant & surroundings and Vizag port/ Coromandel & surroundings (stream 10) having car traffic of about 40 percent.
- About 25 percent of car traffic is found to be travelling between local zones in north direction connecting NAD/Airport/Gateway CFS/MVP Colony & surroundings and Vizag Port/ Coromandel & surroundings (Stream 11)

Freight Traffic:

- About 29-30 percent of 3A/MAVs were found to be traveling between local zones in south direction connecting Gajuwaka/Autonagar/Lankelapalem/Steel Plant & surroundings and Vizag port/ Coromandel & surroundings (stream 10) followed by about 13- 16 percent between Hyderabad/Vijayawada and Vizag Port/ Coromandel & surroundings (stream 3).
- With the construction of Sabbavaram to Sheelanagar port connectivity road, the freight traffic under Streams 1 to 7 will have the option of using the Vizag bypass and reach the port faster via the proposed port connectivity road.

2.6.3 Travel Pattern: Concise Traffic Streams at Jonnada TP

In order to assess the travel pattern of vehicles, the important streams of traffic plying on the project road are estimated. The list of the popular movements found at the toll plaza location is presented **Table 2-19**.

S. No	Concise Traffic Stream	Car	Minibus	Bus	MLCV	LCV	2A	3A	MAV
1	Raipur & Beyond - Anakapalli & Beyond	0.8	0.0	0.5	1.9	4.3	5.3	5.8	5.6
2	Raipur & Beyond - Sabbavaram/Vizag City & Port	6.4	7.1	2.9	4.5	9.9	9.8	16.8	21.8
3	Raipur & Beyond - Pendurthi/Neelajundilu & Surroundings	0.4	0.0	0.0	0.4	0.0	3.6	1.0	0.2
4	Jagadalpur/Balangir - Anakapalli & Beyond	0.0	0.0	0.0	0.6	0.6	0.0	2.8	1.2
5	Jagadalpur/Balangir - Sabbavaram/Vizag City & Port	1.1	1.0	0.8	1.1	4.3	0.9	2.4	2.2
6	Jagadalpur/Balangir - Pendurthi/Neelajundilu & Surroundings	0.0	1.8	0.0	0.0	0.6	0.0	0.0	0.0
7	Salur & Surroundings - Anakapalli & Beyond	2.9	3.8	3.0	5.4	8.6	14.2	13.8	10.4
8	Salur & Surroundings - Sabbavaram/Vizag City & Port	21.3	20.2	23.9	17.5	18.5	24.6	26.9	33.9
9	Salur & Surroundings - Pendurthi/Neelajundilu & Surroundings	1.3	1.8	0.6	3.8	2.5	1.5	1.3	1.3
10	Vizianagaram & Surroundings - Anakapalli & Beyond	5.9	6.4	2.7	8.9	9.9	7.4	6.3	5.4
11	Vizianagaram & Surroundings - Sabbavaram/Vizag City & Port	48.7	35.7	61.6	36.1	29.6	21.0	15.7	14.4
12	Vizianagaram & beyond to Thagarupuvalasa/Nathavalasa & beyond	6.0	15.8	2.6	13.2	9.3	8.0	5.5	2.9

S. No	Concise Traffic Stream	Car	Minibus	Bus	MLCV	LCV	2A	3A	MAV
13	Vizianagaram - Pendurthi/Neelajundilu & Surroundings	5.3	6.4	1.4	6.4	1.9	3.8	1.7	0.6
Total		100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0
AADT		9,861	124	958	838	387	154	284	1,357

Table 2-19: Traffic Streams at Jonnada TP (in %)

Passenger Traffic:

- The highest share of passenger traffic is found to be travelling between Vizianagaram & surroundings - Sabbavaram/Vizag city & port (stream 11) having car traffic of about 49 percent.
- About 21 percent of car traffic is found to be travelling between Salur & surroundings - Sabbavaram/Vizag City & Port (stream 8)

Freight Traffic:

- The dominant share of major fright modes (2A/3A/MAVs) were found to be traveling between Salur & surroundings - Sabbavaram/Vizag city & port (stream 8) contributing about 25 percent 2A traffic, about 27 percent 3A traffic and about 34 percent MAV traffic.
- Streams No 2, 3, 8 & 9 represent the potential traffic which currently uses AH45 to reach city/port and in future, this traffic will use the Raipur Vizag Expressway and use a small section of the PR and exit at Pendurthi interchange to reach Vizag city or port.

2.7 Closed Tolling on Vizag Bypass

The Vizag bypass (Anandapuram-Anakapalli) section of NH16 was originally designed to operate under a closed tolling system, with restricted movement between the Project Road (PR) main carriageway and 2 lane service road that runs parallel to the PR on both sides, providing access for local traffic from surrounding settlements. However, due to delays in land acquisition for interchanges at Sabbavaram and Pendurthi, an open tolling system has been implemented since September 2021.

The existing median openings provides access between the service lanes and the main carriageway, allowing some traffic to bypass one or both Marripalem and Dukkavaniapalem toll plazas. However, the service lanes are discontinuous at three locations:

- Anakapalli, due to a railway crossing
- Sabbavaram & Pendurthi due to interchange construction related activities

While local traffic can use these service lanes, the discontinuities restrict the movement of through traffic from/to Anakapalli & beyond to/from Anandapuram & beyond.

To assess the quantum of traffic bypassing the both Marripalem and Dukkavaniapalem toll plazas, a 3-day volume count has been conducted at the service lane sections

adjoining the toll plaza locations. The TVC count at the service lanes is presented in **Table 2-20**.

Modes	Dukkavanipalem TP - Service Lane	Marripalem TP - Service Lane
Tollable vehicles		
Car/Jeep/Van/Taxi	898	1,694
Minibus	6	109
Standard Bus	93	58
Mini LCV	114	295
LCV	101	206
2 Axle	65	82
3 Axle	101	79
MAV (4-6 Axle)	102	195
HMV/MAV (=>7Axle)	0	0
Non Tollable vehicles		
Two- Wheeler	2,322	3,764
Auto-Rickshaw	565	776
Agri. Tractors	9	1
Total Non-Motorized	9	2
Total Vehicles/PCUs		
Total Tollable vehicles	1,481	2,718
Total Non Tollable vehicles	2,905	4,543
Total Vehicles	4,386	7,261
Total PCU	4,181	6,662
Tollable PCU	2,411	3,999

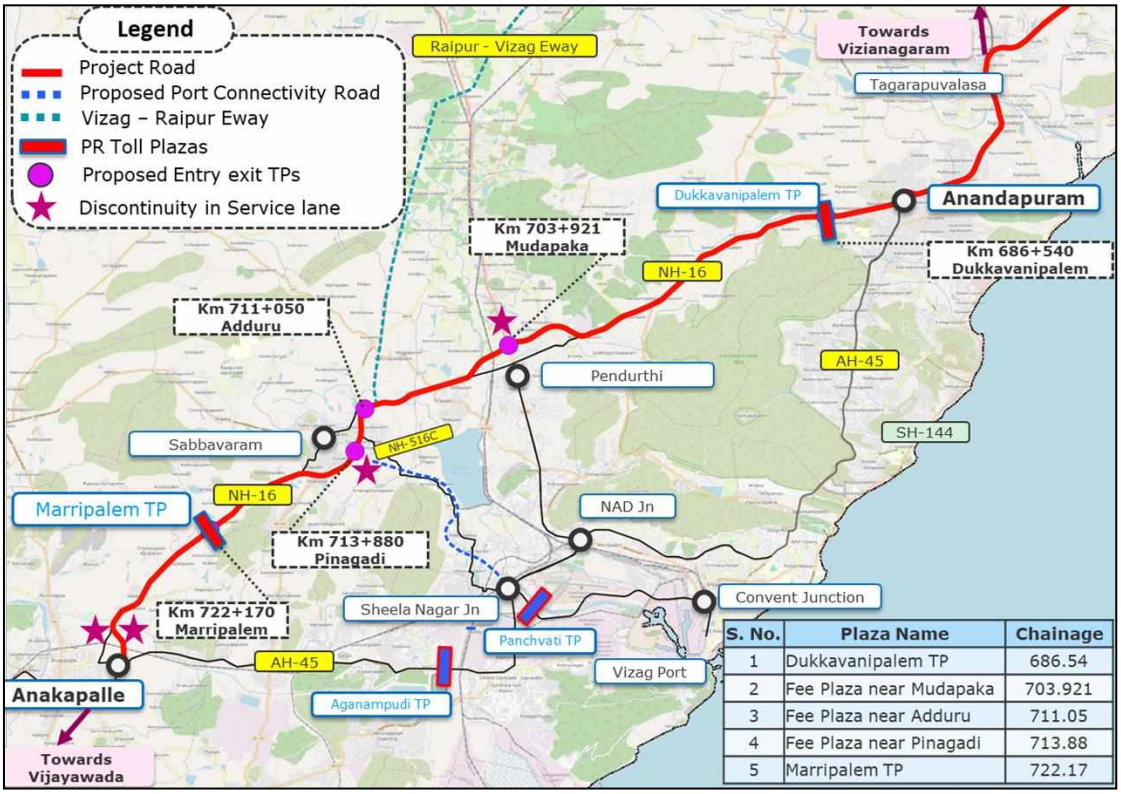

Table 2-20: ADT of Service Lanes at TP03 and TP04

The observed total vehicles are around 4,386 at Dukkavanipalem TP -Service Lane and 7,261 at Marripalem TP -Service Lane.

As the service road provides the connectivity to the towns of Sabbavaram and Pendurthi, these vehicles may be using the service road to cater to the local movement to these towns.

Once the close tolling is implemented, entry/exit may only be permitted at the interchange locations at Km 703+921 (Mudapaka), Km 711+050 (Adduru) and Km 713+880 (Pinagadi). All other entry/exit from main carriageway to service road may be closed by Authority.

Vizag Bypass Section of project road and the tentative locations of the proposed entry/exit TPs under close tolling and present discontinuities in service lane is presented in **Figure 2-8.**

S. No.	Plaza Name	Chainage
1	Dukkavanipalem TP	686.54
2	Fee Plaza near Mudapaka	703.921
3	Fee Plaza near Adduru	711.05
4	Fee Plaza near Pinagadi	713.88
5	Marripalem TP	722.17

Figure 2-8: Project Road and Tentative Location of Proposed Entry/Exit TPs Under Closed Tolling System

As per the Schedule-M notification, Vizag bypass section will operate under a closed tolling system and Schedule A mentions that closed tolling will be implemented within four years of being handed over to InvIT Concessionaire. Therefore, the implementation of closed tolling on Vizag Bypass is assumed from the year FY30.

3. TRAFFIC GROWTH RATE AND PROJECTIONS

3.1 General

The project road is a part of the NHAI InvIT Round 4 portfolio and the projections of traffic and revenue have been presented till FY55 in line with the maximum extendable concession period of 30 years. The estimation of the traffic using the tolled highway, and its future growth are important elements to assess the project's economics as these are generally the main/sole source of revenue for the project This chapter details various aspects of the current traffic of the project road and its growth potential as assessed by Ramboll.

3.2 Project Road Traffic

The traffic that is likely to use the project road was estimated on the basis of the traffic and travel characteristics gathered as part of the study. The traffic on the project road would normally consist of the following components:

- Normal Traffic
- Diverted Traffic
- Induced/Developmental Traffic

3.2.1 Normal Traffic

Normal traffic is the traffic which is already plying on the project road as assessed in section 2.4.3.

Diverted Traffic

Diverted traffic is generally dictated by the presence of an alternative route at a lower generalised cost, which is in-turn defined by the road configuration and its condition, the type of vehicle and its operating costs, the average riding speed, the route distance, and any tolling that may apply on a specific route. A detailed road network assessment along with site reconnaissance survey was conducted on the project road and vicinity to identify alternate routes.

The assessment of any likely traffic diversion from/to the Project Road (PR) has been done using the cost-ratio analysis as described below:

- Assessment of the potential divertible traffic sensitive to network improvements based on the observed travel pattern.
- Calculation of road user cost of travelling on the project road and the alternative route. The road user cost includes vehicle operating cost (VOC), travel time cost (TTC) and toll cost (TC), if any. VOC comprises of the cost of fuel, spare parts, maintenance labour, tyre, engine oil, grease, fixed cost, depreciation and crew wages.

- The toll rates for expressway have been considered as 1.5 times the normal NHAI per km toll rates (accounting for 1.25 times for normal length of expressway and increase for the likely equivalent structure length).

The road user cost is estimated based on vehicle operating cost equations presented in IRC SP-30,2019 which is based on updation of Road User Cost Study (RUCS) carried out by Central Road Research Institute in 2019 for Ministry of Road Transport and Highways. Using the likely traffic stream speeds and lane configuration, the vehicle operating, and travel time costs are estimated for each of the routes. Road user cost on the identified routes is calculated and diversion percentages are estimated using diversion curve method mainly for trucks. In this method, traffic likely to be diverted from/to the project road, was estimated using Logit model, which computes expected diversion percentage based on the ratio of perceived cost on the existing and proposed facilities. The perceived cost is the financial vehicle operating cost and the time saving cost including toll charges (if any). According to the model, a vehicle will shift if the perceived cost on an alternative route is lower in comparison to existing route. The diversion equations for estimating diversion have been adopted from Indian National Expressway Network Report, MORTH (2009) as mentioned in IRC 108:2015. These equations are presented in **Table 3-1**.

Vehicle	Cost Ratio (CR) Interval	Equations
Truck	<= 0.750	% Div. = 100 - ((CR/0.75) * 5)
	0.750 <= CR <= 1.250	% Div. = 95 - ((CR-0.75)/0.5) * 90
	1.250 <= CR <= 2.0	% Div. = ((2-CR)/0.75) * 5

Source: IRC 108-2015

Table 3-1: Diversion Equations Used for Analysis

In a broader context, few major network developments in the project road network are expected to influence travel patterns and provide additional route options for traffic currently using the project road. These network-level developments, along with the implementation of closed tolling, have been studied and analysed to assess their potential impact. The combined effect of these changes may result in a shift of traffic from PR to alternate route choices or with closed tolling in place a redistribution of traffic for certain ticket types might take place, leading to either a gain or loss to the existing traffic on PR. The proposed network developments are:

A. Raipur-Visakhapatnam (Vizag) Expressway

B. Sabbavaram to Sheela Nagar Port Connectivity Road

C. Kharagpur–Visakhapatnam (Vizag) Economic corridor

D. East Coast Dedicated Freight Corridor (ECDFC)

A. Impact of Raipur-Visakhapatnam (Vizag) Expressway & Sabbavaram to Sheela Nagar Port Connectivity Road

The completion of Raipur-Vizag Expressway coupled with elevated Sabbavaram to Sheela Nagar port connectivity road may provide an alternate route option for the long distance traffic particularly originating/destined from/to Raipur/Salur & beyond to/from Vizag City/Port.

The Raipur-Vizag Expressway is a key infrastructure project aimed at enhancing connectivity between Chhattisgarh and Andhra Pradesh. Spanning approximately 464 kilometres, the expressway will significantly reduce travel time between Raipur and Vizag by providing a high-speed, access-controlled corridor. The expressway starts near Abhanpur in Chhattisgarh and ends at Anakapalli in Andhra Pradesh, passing through Chhattisgarh, Odisha, and Andhra Pradesh.

Designed as a six-lane expressway, it has provisions for future expansion and will feature modern safety and traffic management systems. The project is part of the Bharatmala Pariyojana and aims to decongest existing highways while improving logistics efficiency for industries, ports, and economic hubs in the region. The expressway will also provide an alternative route to the NH-30 and NH-26 corridors.

As of January 2025, significant progress has been made on the expressway, with several sections under construction. The Raipur to Odisha border segment is expected to be completed by mid-2025, while the full corridor, including the stretch to Vizag, is targeted for completion by 2026. Upon completion, the expressway will serve as a vital trade and transport corridor, boosting economic development across central and eastern India.

The Sabbavaram to Sheela Nagar Elevated Port Road is a key infrastructure project aimed at enhancing connectivity between Vizag Port and National Highway 16 (PR). Spanning approximately 12.66 kilometers, this six-lane elevated corridor will provide a direct and efficient route between Sabbavaram and Sheela Nagar Junction.

Upon completion, the elevated road will provide a more efficient alternative for port-bound traffic usingthe PR and the new elevated route to bypass the congestion on AH45.

Currently, both freight and passenger traffic access the port and city via urban roads, using AH45 through Anandapuram and Anakapalli from the northern and southern approaches respectively. Upon the completion of Sheelanagar-Sabbavaram port connectivity road, the project will integrate with the existing four-lane port road from Sheelanagar Junction to Convent Junction (existing port road currently being expanded to eight lanes, with four lanes dedicated to freight movement)

Looking at the gestation period of the operational greenfield expressways, it is likely that the operation of Raipur Vizag expressway and elevated port road might get delayed and hence the completion of these two developments has been considered from FY30.

The route for port bound traffic via project road and AH45 along tentative alignment of the Raipur-Vizag expressway & Sabbavaram to Sheela Nagar port connectivity road is presented in **Figure 3-1**.

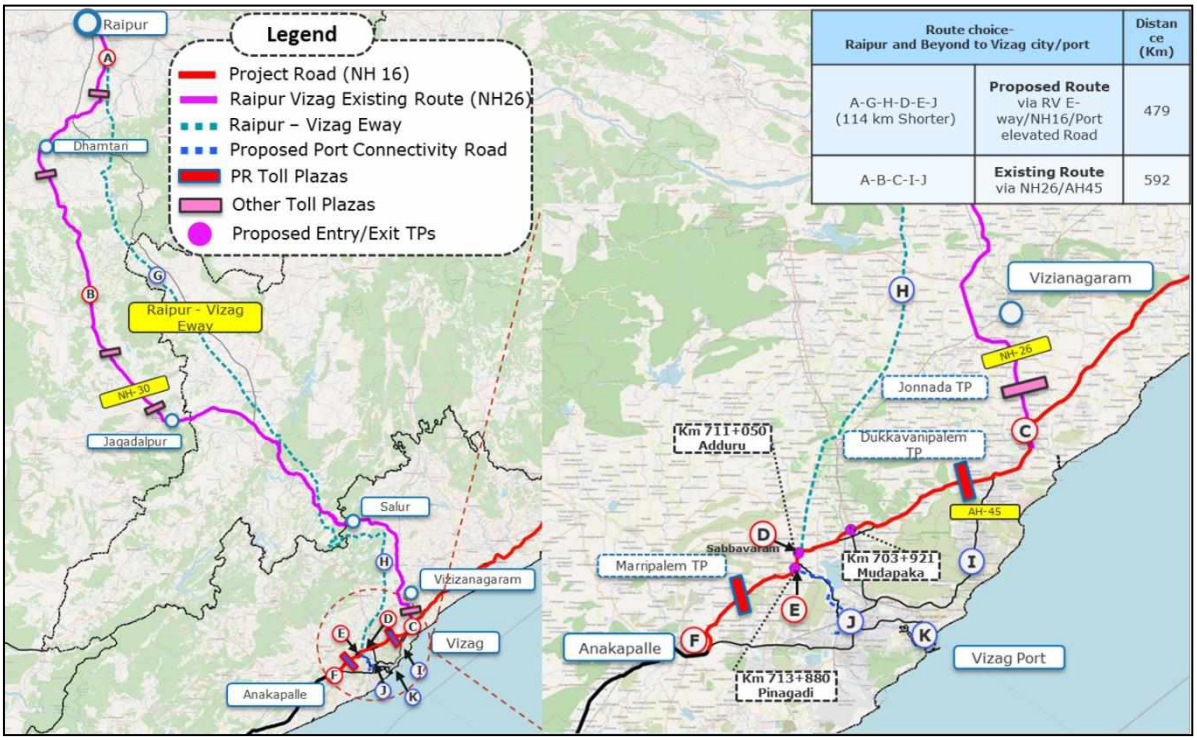

Figure 3-1: Project Road and Tentative Alignment of Raipur Vizag Exp. & Sabbavaram to Sheela Nagar Port Connectivity Road

At present the prominent route for Raipur-Vizag is via Jagadalpur-Salur-Vizianagaram, combination of NH30, NH26 & AH45 (A-B-C-I-J) which is about 592 km. The alternate route (A-G-H-D-E-J) via Raipur-Vizag Expressway (RVE) upon completion will be about 479 km for Vizag port bound traffic. Thus, making the existing route about 114 km longer than the route via RVE.

With the completion of the Raipur–Vizag Expressway up to Sabbavaram (A-G-H-D), along with the port connectivity road (E-J) and the implementation of a closed tolling system, the future route (A-G-H-D-E-J) will serve as an efficient alternate corridor to access Vizag Port and the city. Once the closed tolling system is in place, traffic using this route will primarily enter and exit through the Adduru (D) and Pinagadi (E) toll plazas, paying tolls based on the Adduru to Pinagadi ticket type for the project road.

The potential divertible traffic is the traffic plying between Raipur/Salur & beyond to Vizag City/port which has been estimated from the OD survey conducted during the present study at Jonnada Toll plaza between Vizianagram and Thagarepuvalasa on NH26. This traffic currently is not crossing any of the toll plazas of the project road as it is using NH26 and meets PR at Thagarepuvalasa further using AH45 to reach Vizag port.

The results of diversion analysis along with the potential divertible traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-2**.

Notations	Modes	Car	LCV	2A	3A	MAV	PCU
Potential for Raipur/Salur & Beyond to Vizag City & Port							
A	Jonnada TP	3,233	178	62	138	807	7,732
	Diversion % based on Cost Ratio						
B	Share of PR	68.6	84.0	95.9	95.8	96.5	
	Diverted Traffic to RVE						
C=A*B	Adduru to Pinagadi Ticket type	2,219	150	59	132	779	6,523

Table 3-2: Diversion Analysis for Raipur-Vizag Exp. & Sabbavaram-Sheela Nagar Port Connectivity Road – FY25

The proposed Raipur-Vizag Exp. & Sabbavaram-Sheela Nagar port connectivity road may result in a gain of around 6,523 PCUs in absolute terms for Adduru to Pinagadi ticket type for the Raipur/Salur & beyond traffic. This traffic has been grown and considered appropriately in the respective years of impact.

In context of the timelines, the 100 percent of the considered diverted traffic is assumed to shift by FY30, following the implementation of closed tolling and the completion of RVE and port connectivity road.

B. Impact of Sabbavaram-Sheela Nagar Port Connectivity Road on Route Choice between Anandapuram/Anakapalli & Beyond to Vizag Port

Traffic bound for Vizag Port primarily originates from Chennai and other parts of Tamil Nadu in the south, as well as from Kolkata, Bhubaneswar in the north. This movement, particularly from the eastern coastal regions of India, relies on NH-16 as the primary corridor for accessing the port. However, within Vizag city limits, traffic currently uses the congested AH45 city road from northern side to reach the port. Traffic originating/destined to/from Anakapalli and beyond uses AH45 from southern side to reach Vizag port.

Upon completion of the port connectivity road, port-bound traffic is expected to shift to this new corridor thus reducing congestion on AH45.

The impact of completion of Sabbavaram to Sheela Nagar port connectivity road has been studied under two streams of traffic:

- Traffic from/to Anandapuram & beyond to/from Vizag City/Port - Northern Approach
- Traffic from/to Anakapalli & beyond to/from Vizag City/Port – Southern Approach

B.I Route Choice between Anandapuram & beyond to Vizag Port – Northern Approach

The route via project road and the tentative alignment of the proposed port connectivity road is presented in **Figure 3-2**.

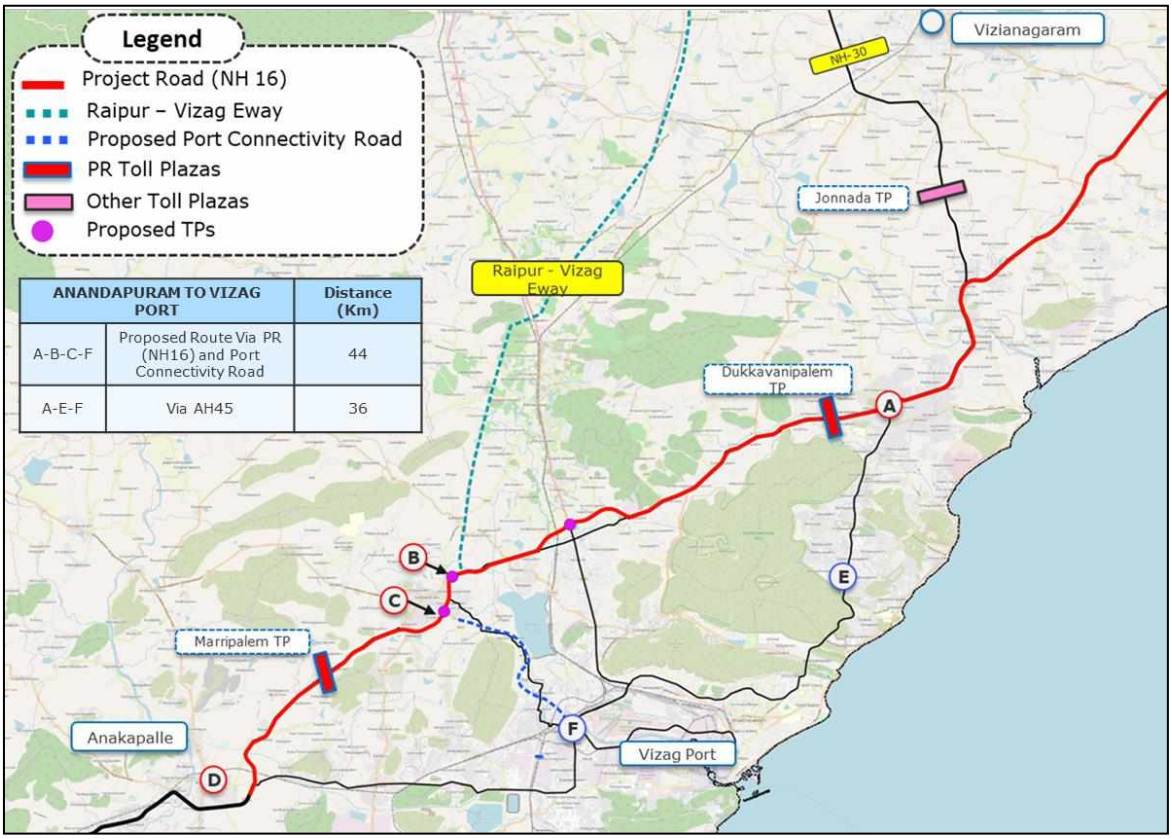

Figure 3-2: Route via Project Road and Tentative Port Connectivity Road – Anandapuram & Beyond Traffic

Currently, traffic from Anandapuram (A) and beyond can reach Vizag Port using AH45 (A-E-F), covering approximately 36 km. With competition of Sabbavaram - Sheelanagar port connectivity road, the port-bound traffic will use the route via project road (A-B-C-F), passing through, Dukkavanipalem TP and reach port by covering a distance of 44 km. This makes the proposed route approximately 8 km longer than the existing AH45 route but would provide a better six lane facility with reduced time of travel.

Despite being longer, Sabbavaram-Sheelanagar port connectivity road (C-F), once completed, is expected to attract most freight traffic currently using the congested city road via AH45 (A-E-F). While freight movement is permitted on AH45 throughout the day but due to high passenger traffic, it results in severe congestion in the peak hours. Consequently, most of the freight vehicles avoid AH45 during the day due to low operating speeds.

The potential divertible traffic for the route via Northern Approach is the traffic plying between Anandapuram & beyond to Vizag port which has been estimated from the OD surveys conducted at Panchvati toll plaza (operational plaza on the existing port road) and Dukkavanipalem toll plaza during the present study. The results of diversion analysis along with the potential divertible traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-3**.

Notations	Modes	MAV
Anandpuram and Beyond to Vizag Port		
A	At Panchavati TP	441
B	At Dukkavanipalem TP	90
C=B-A	Probable Gain	351
Diversion % based on Cost Ratio		
D	% Diversion to PR	95.6
Gain for Dukkavanipalem TP		
E=C*D	Dukkavanipalem to Pingadi Ticket type	336

Table 3-3: Diversion Analysis for Anandapuram & Beyond to Vizag Port Traffic – FY25

The proposed Sabbavaram-Sheela Nagar port connectivity road may induce a gain of around 336 MAVs (1,512 PCUs) for Dukkavanipalem to Pinagadi ticket type for the Anandapuram & beyond traffic as this traffic would exit at Pinagadi junction to use the port connectivity road till Vizag port. The impact is considered only for MAVs, as the impact estimated for other modes is negligible.

B.II Route Choice between Anakapalli & beyond and Vizag Port – Southern Approach

The route via project road and the tentative alignment of the proposed port connectivity road is presented in **Figure 3-3**.

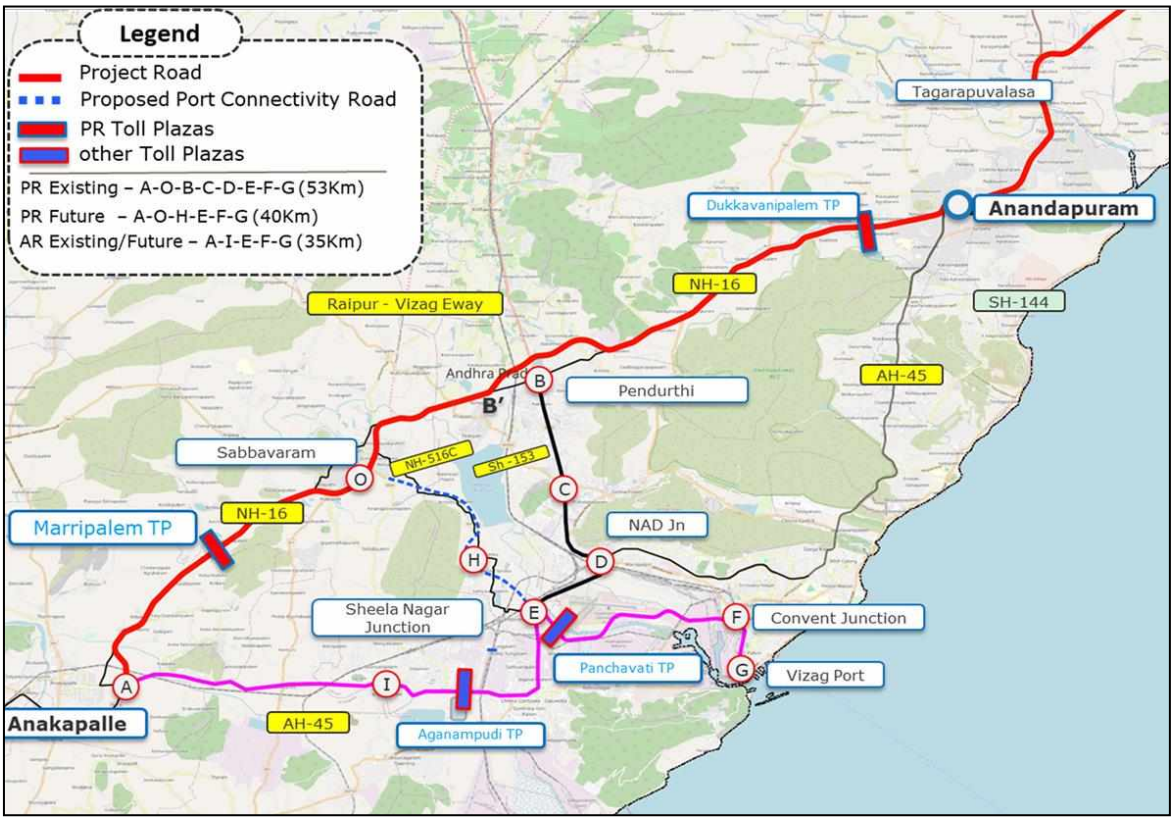

Figure 3-3: Route via Project Road and Tentative Port Connectivity Road – Anakapalli and Beyond Traffic

Currently, most freight traffic from Anakapalli and beyond can reach Vizag Port via AH45 (A-I-E-F-G), covering approximately 35 km. The current alternative route, which follows the project road through Anakapalli-Pendurthi-Sabbavaram (A-B'-B-C-D-E-F-G), is around 53 km in length for port-bound traffic. However, this route is not preferred due

to being longer in distance and the section between B-C-D despite being a four-lane road, has two central lanes designated for BRTS and intermediate service lanes on either side, making it difficult for freight movement.

After the completion of Sabbavaram-Sheela Nagar elevated section of port connectivity road, the future route via project road (A-O-H-E-F-G) will be about 40 km in length as against the route via the AH45 (A-I-E-F-G) of 35 km for the southern approach traffic. Hence, the proposed route via Sabbavaram-Sheela Nagar port Road will be about 5 km longer than the existing route via AH45. Currently, there is an existing toll plaza of Agnampudi on AH45 which has been vandalised by the public and not operational. However, as per the information collected locally it might reopen after some time.

The potential divertible traffic for the Southern Approach is the traffic plying between Anakapalli & beyond to Vizag port which has been estimated from the OD surveys conducted at Panchvati toll plaza (operational plaza on the existing port road) and Marripalem toll plaza during the present study. The results of diversion analysis along with the potential divertible traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-4**.

Notations	Modes	2A	3A	MAV	PCU
Anakapalli & Beyond - Vizag Port					
A	At Panchavati TP	127	181	1,822	9,125
B	At Maripalem TP	70	48	166	1,102
C=B-A	Probable Gain	57	133	1,656	8,023
Diversion % Based on Cost Ratio					
D	Proposed - Port Connectivity Road & Agnampudi Operational on AR	72.7	71.0	95.3	
Gain at Maripalem TP					
E=C*D	Marripalem To Pingadi Ticket type	42	94	1,579	7,512

Table 3-4: Diversion Analysis for Anakapalli & Beyond to Vizag Port Traffic – FY25

The proposed Sabbavaram-Sheela Nagar port connectivity road is expected to result in a gain of approximately 7,512 PCUs for freight traffic traveling from Anakapalli and beyond to Vizag port, for the Marriaplem to Pinagadi ticket type and this traffic would exit at Pinagadi to reach Vizag port. The impact is considered only for freight vehicles (2A, 3A, MAVs), as passenger traffic is unlikely to shift to this route.

B.III Total Diverted traffic from Northern and Southern Approach

Freight traffic approaching Vizag Port from the North and South primarily uses AH45, as there are no better alternate routes. The police check posts on minor roads restrict entry during the daytime. While freight movement is permitted on AH45 throughout the day but due to high passenger traffic, it results in severe congestion in the peak hours. Consequently, despite being allowed, most of the freight vehicles avoid AH45 during the day due to low operating speeds. However, at night, with minimal passenger traffic, AH45 functions more like a four-lane highway, offering higher speeds and becoming a more attractive route for port-bound freight.

To take account of these dynamics, a day-night distribution factor has been obtained from Panchavati Toll plaza TVC. In case of the Northern approach, night traffic is considered to continue to use the AH45 even after opening of port connectivity road whereas 100 percent of the day traffic (8 AM to 10 PM) might shift to the upcoming Sheelanagar-Sabbavaram port road.

In case of southern Approach, 100% of the day traffic (8 AM to 10 PM) is likely to shift to the port connectivity road whereas 50% of the night traffic percentage for southbound traffic is considered. These percentages have been applied to the total divertible traffic to estimate the likely shift.

The day and night traffic percentages from Panchavati toll plaza TVC along with the adopted factors applied to the total divertible traffic and resultant upside for Northern and Southern approach is presented in **Table 3-5**.

	2A	3A	MAV	PCU
Day Night Distribution from Panchvati TP TVC				
A. Day Traffic % from Panchvati toll plaza (8am to 10 pm)	85.00%	76.70%	59.20%	
B. Night Traffic % from Panchvati toll plaza	15.00%	23.30%	40.80%	
Resultant distribution				
C. For North Traffic - Day traffic % applied (A)			59.20%	
D. For South Traffic - Day traffic % +50% of Night Traffic % (A+B/2)	92.50%	88.40%	79.60%	
Gain as Result of Diversion Analysis				
E. Gain at Dukkavanipalem (North Traffic)			336	1,512
F. Gain at Maripalem (South Traffic)	42	94	1,579	7,512
Resultant Upside				
G. Gain at Dukkavanipalem (North Traffic) - C*E			199	896
H. Gain at Maripalem (South Traffic) - D*F	39	83	1,257	6,023

Table 3-5: Day Night Distribution Factors for Diversion Analysis for Anandapuram/ Anakapalli & Beyond to Vizag Port Traffic

The proposed Sabbavaram-Sheela Nagar port connectivity road is expected to create a resultant upside of approximately 199 MAVs (896 PCUs) for traffic from Anandapuram and beyond to Vizag city/ port, for the Dukkavanipalem to Pinagadi ticket type.

Additionally, an upside of about 6,023 PCUs is anticipated for freight traffic traveling from Anakapalli and beyond to Vizag city/ port, for the Marripalem to Pinagadi ticket type.

This traffic has been grown and considered appropriately in the respective years of impact. In context of the timelines, the 100 percent of the considered diverted traffic is assumed to shift by FY30, following the implementation of closed tolling and the completion of construction on port connectivity road, along with the remaining interchanges.

C. Impact of Kharagpur – Vizag Expressway

The Kharagpur–Vizag Expressway is a proposed 783 km-long, four / six-lane greenfield access-controlled expressway connecting Kharagpur in West Bengal to Vizag in Andhra Pradesh via Odisha. The project aims to significantly reduce travel time between Kharagpur and Vizag from 14 hours to approximately 8 hours, enhancing logistics, trade, and regional connectivity.

The expressway is likely to be developed under two packages:

- Package 1: Kharagpur – Chandikhol – Cuttack – Khordha – Tangi (390 km)
- Package 2: Tangi – Brahmapur – Vizag (393 km)

In November 2024, the Ministry of Road Transport and Highways (MoRTH) received a total of 18 bids for the preparation of the Detailed Project Report (DPR), with 10 bids for Package 1 and 8 bids for Package 2. If contracts are awarded in the first half of 2025, the DPR is expected to be finalized by the end of 2026. The project is currently in the planning stage, with land acquisition yet to commence.

The route via project road and the tentative alignment of the Kharagpur- Vizag Expressway is presented in **Figure 3-4**.

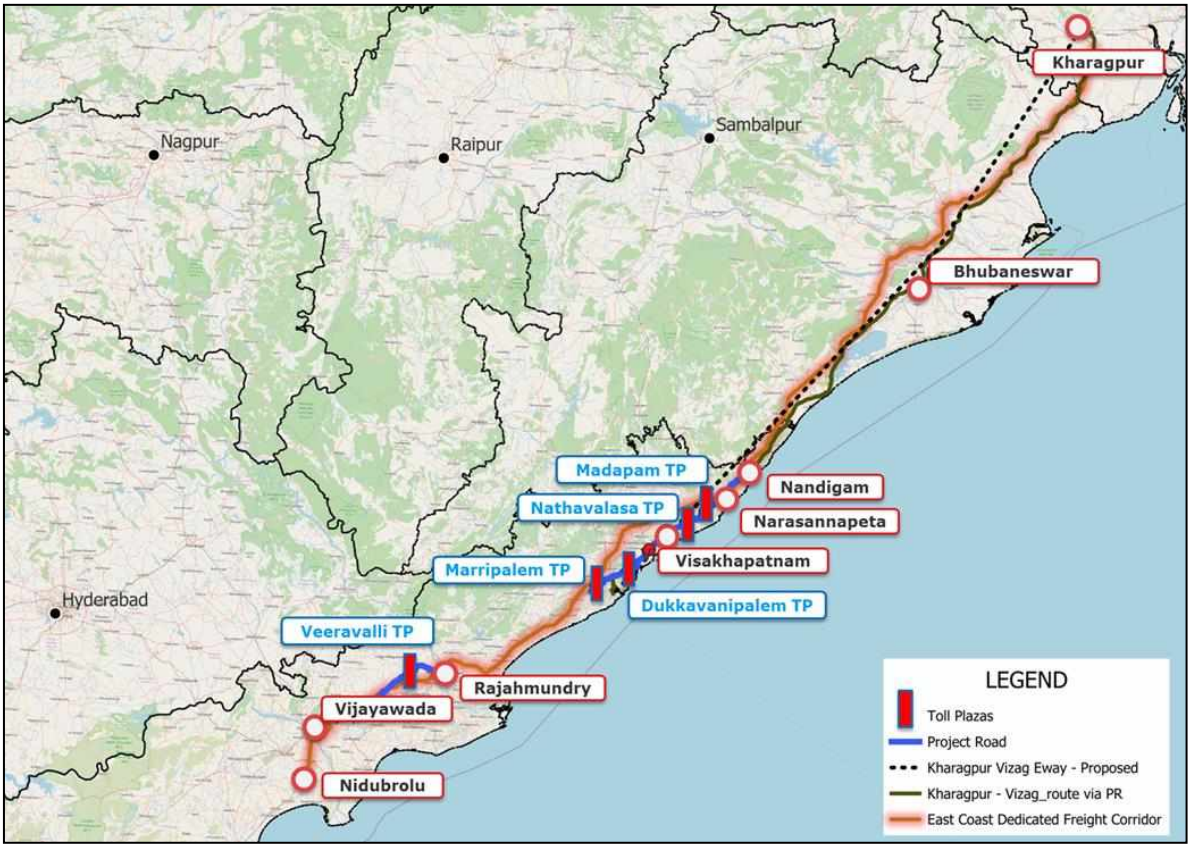

Figure 3-4: Project Road and Tentative Alignment of Kharagpur– Vizag Expressway

The current route for Kharagpur- Vizag traffic is via project road which is about 752 km and the alternate route via proposed Kharagpur – Vizag expressway is about 783 km for Vizag bound traffic and is ending near Anandpuram. Thus, the route via expressway will be about 31 km longer than the route via PR. As the expressway will be ending near

Anandpuram, Madapam TP and Nathavalasa TP will be impacted after this expressway becomes operational.

This corridor once completed may attract some of the freight vehicles which are currently using the project road. The potential divertible traffic is the traffic plying between Bhubaneswar & beyond to Vizag City & Port/Anakapalli & beyond which has been estimated from the OD survey conducted during the present study. The results of diversion analysis along with the potential divertible traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-6**.

TP/Modes	Car	LCV	2A	3A	MAV	PCUs
Bhubaneswar & Beyond to Vizag City & Port/Anakapalli and Beyond						
Madapam (TP01)	9.3%	60.4%	69.9%	75.5%	82.2%	62.8%
Nathavalasa (TP02)	7.7%	47.1%	62.6%	68.0%	65.1%	51.7%
Average Potential at TP01 & TP02	554	247	760	790	2,421	16,469
Diversion % based on Cost Ratio						
AR share	46.0	38.6	51.5	51.3	50.0	
Diverted Traffic to AR future (% AADT)						
Madapam (TP01)	4.3	23.3	36.0	38.7	41.1	31.4
Nathavalasa (TP02)	3.5	18.1	32.2	34.9	32.6	25.9
Adopted @ 50%						
Madapam (TP01)	2.1	11.6	18.0	19.4	20.6	15.7
Nathavalasa (TP02)	1.8	9.1	16.1	17.4	16.3	12.9

Table 3-6: Diversion Analysis for Kharagpur-Vizag Expressway – FY25

This impact is resulting in a loss of approximately 8,238 PCUs. Thus, the proposed expressway may take away around 30 percent of the PCUs from Madapam TP and 26 percent of PCUs at Nathavalasa TP for the Bhubaneswar and beyond traffic. This traffic has been grown and considered appropriately in the respective years of impact.

There is no information available on completion timelines as of now, however as this project is a part of phase 2 of vision 2047, it is anticipated the whole process may take 10-15 years for completion. In view of this and pre-bid responses from NHAI, impact of this development has been considered from FY40 onwards. In addition, there would be some captive traffic of the PR due to distribution points along the route, familiarity of the existing route and roadside facilities. In view of this, 50 percent of this traffic is considered to shift to greenfield expressway. In terms of phasing for traffic shift, it is assumed that 50 percent of the diverted traffic will shift to the alternate route by FY40, 70 percent by FY41, and 100 percent by FY42.

D. Impact of East Coast Dedicated Freight Corridor

The East Coast Dedicated Freight Corridor (ECDFC) is a proposed double-line, electrified freight corridor under the Indian Railways' Dedicated Freight Corridor Corporation of India (DFCCIL). Spanning approximately 1,100 km, it will connect Kharagpur in West

Bengal to Tenali in Andhra Pradesh, passing through the mineral-rich regions of Odisha and Bengal.

Designed to run parallel to the existing Kharagpur-Vijayawada coastal railway line, ECDFC will link major industrial hubs and port cities, including Visakhapatnam Port. It aims to enhance the transportation of bulk commodities such as coal, fertilizers, and iron ore, boosting economic activity along India's eastern seaboard.

Project Status: DFCCIL has submitted Detailed Project Reports (DPRs) for the ECDFC, along with two other proposed corridors: the East-West and North-South DFCs. However, recent reports suggest that the government is reconsidering these plans. Due to concerns over the estimated combined cost of ₹2 trillion and the current low-capacity utilization of existing corridors, the government is contemplating abandoning the ECDFC project in favour of developing commodity-specific rail networks.

The alignment of project Road with respect to ECDFC is presented in **Figure 3-5**.

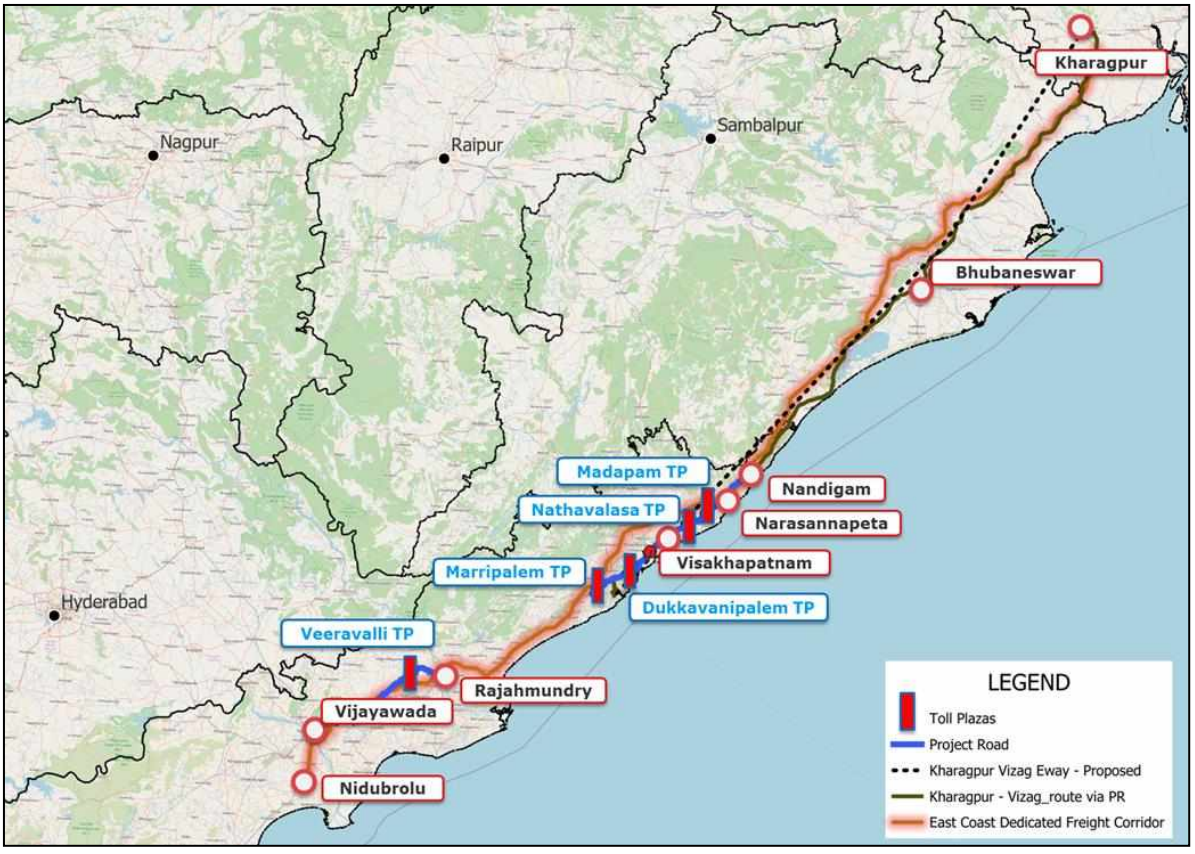

Figure 3-5: Project Road and Alignment of ECDFC

An analysis of the present traffic of the PR sections amenable to shift to ECDFC has been carried out for the traffic between from/to Bhubaneswar & beyond to Vizag City/Port/Anakapalli &beyond. The estimation process of the diverted traffic to DFC covers:

- Identification of traffic stream likely to shift to DFC

- Share of ECDFC commodities (coal, iron & steel, and containers) in the identified potential streams of traffic
- Applying the share of DFC commodities for estimation of the potential divertible traffic

Bulk commodities such as food grains, containers, iron & steel, and ores & minerals are likely to shift to the ECDFC. The corridor is primarily intended to ease congestion on existing railway lines by diverting freight traffic, thereby reducing passenger train delays. Since the DFC is expected to draw a significant share of freight from the current rail network, it is assumed that only 25% of road freight traffic will shift to the DFC.

For TP01 and TP02, the potential long-distance freight traffic expected to use ECDFC has already been factored into the diversion estimates for the Kharagpur-Vizag Expressway. Therefore, the analysis has been conducted only for TP03 and TP04. The mode wise total diverted traffic estimated for FY25 due to ECDFC is presented in **Table 3-7**.

Modes	2A	3A	MAV	PCU
Diverted Traffic As % of AADT				
Dukkavanipalem (TP03)	1.0	1.5	3.5	142
Marripalem (TP04)	1.5	1.4	1.9	88

Table 3-7: Estimated Diverted Traffic to East Coast Dedicated Freight Corridor – FY25

Since, the impact of ECDFC on TP03 and TP04 traffic is negligible and implementation of the ECDFC being uncertain, it has not been considered for further analysis.

3.2.3 Induced/ Development Traffic

Developmental /new generated traffic is the one which would be generated, over and above normal growth, because of lowering of transport costs or new developments in the immediate influence area of the project road. In case of the project road, there is no development envisaged in the vicinity of the project road.

Bharatmala Pariyojana is the second largest highways construction project in the country since NHDP, under which almost 50,000 km or highway roads were targeted across the country. It will look to improve connectivity particularly on economic corridors, border areas and far-flung areas with an aim of quicker movement of cargo and boosting exports.

It will connect 550 district headquarters to minimum 4-lane highway by raising the number of corridors to 50 (from current 6) and move 80 percent freight traffic (currently 40 percent) to national highways by connecting 24 logistics parks and 7 north east multimodal waterway ports.

The Phase-I includes economic corridors of around 9,000 km; inter-corridor and feeder routes of around 6,000 km; 5,000 km roads under the National Corridors Efficiency Program, border and international connectivity roads of around 2,000 km; coastal and

port connectivity roads of around 2,000 km; expressways of around 800 km and 10,000 km of NHDP roads. The total length in phase 1 comes to around 34,800 km.

In the context of the project road, there are a few economic corridors and inter corridors listed in the state of Andhra Pradesh. The important economic corridors/inter corridors planned in the state of project road are Raipur- Visakhapatnam, Chennai – Kurnool, Bangalore – Nellore, Pune – Vijayawada, Kadappa – Nellore (inter corridor) and Hyderabad – Ongole (inter corridor) with an aim to provide quicker movement of cargo.

As the project road caters to the long/ short distance traffic, this project section will continue to remain as an important highway and cater to the industrial needs along the corridor and may see sustained growth in the future.

3.3 Methodology for Traffic Growth Rate Estimation

Traffic growth for both passenger and freight vehicles has been estimated using the econometric approach as described in IRC-108, 1996. For freight traffic, due consideration has been given to the total tonnage transported and the shift in types of vehicles used for moving goods.

The econometric model applied, relates traffic growth to changes in state (or district) domestic product via an elasticity factor. According to IRC guidelines, elasticity based econometric model for highway projects should be derived in the following form:

$Log_e(P) = A0 + A1\ Log_e\ (EI)$, where:

P - Traffic Volume

EI - Economic Indicator

A0 - Regression Constant

A1 - Regression Co-efficient (Elasticity Index)

In order to estimate traffic on the project road, the methodology described below has been followed:

- Identify the influence area - From the analysis of OD survey data, the project influencing states and districts, which are likely to impact the traffic growth on the project road, were identified.
- Review Past traffic Data – Based on toll data available for the project road and other sections of project corridor, a review of past traffic is carried out.
- Analysis of economic growth of the Project Influencing Area (PIA) - For each PIA state, an economic profile describing past performance and outlook was prepared. This also considers India’s past economic performance and its outlook.
- Estimation of traffic elasticity to income – in order to translate economic growth into traffic growth, an elasticity factor was estimated.

- Derivation of traffic growth rates – On the basis of the weighted (based on OD shares) PIA outlook and related traffic elasticity, traffic growth rates were estimated.

The methodology thus adopted incorporates, as basic data inputs, the perspective growth envisaged in the influence area and the changes in transport demand elasticities over a period of time. The traffic growth rates by vehicle type for the project road have been determined till FY55 in line with the maximum extendable concession period of 30 years.

3.4 Identification of PIA States

The travel pattern of the project road shows that the project road traffic is primarily influenced by the states of Andhra Pradesh and Odisha along with the states of West Bengal, Tamil Nadu, Karnataka, Telangana and Jharkhand. These states have been considered as PIA states for both passenger vehicles and freight traffic. Since the regional distribution is observed to be similar in case of TP01 & TP02 and TP03 & TP04, these toll plazas have been respectively combined for further analysis.

The mode wise normalized regional distribution shares are presented in **Figure 3-6**.

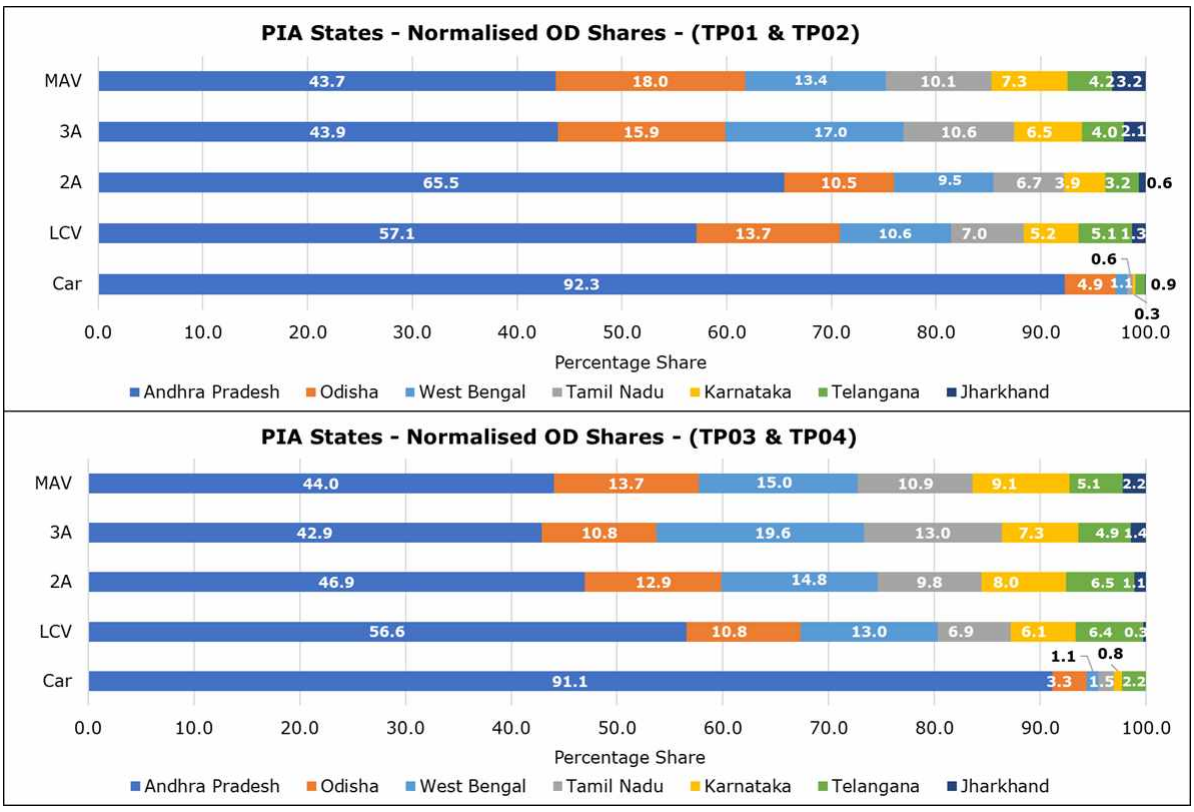

Figure 3-6: Normalised Regional Distribution (%) for the PR

In case of cars, more than 90 percent of traffic is contributed by the state of Andhra Pradesh followed by 5 percent from the state of Odisha along the project corridor.

Similarly, in case of freight modes, state of Andhra Pradesh has shown the predominance with about 40-65 percent share in each freight mode at the four toll plazas along the project road. The states of Odisha and West Bengal contribute about 10-20 percent each followed by the share of Tamil Nadu being about 7-13 percent. The states of Karnataka and Telangana also have a significant traffic contribution with about 3-9 percent of share

in each freight mode across the four toll plazas along the project road. While the state of Jharkhand contributes less than 4 percent in each freight mode along the project road.

3.5 Past Economic Growth of PIA

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. A number of economic indicators for the PIA states, as published by Central Statistical Organisation (2011-12 prices), have been studied to assess their past performance.

Andhra Pradesh

Past economic performance of the state has been as follows:

- Andhra Pradesh's Gross State Domestic Product (GSDP) stood at Rs 8,208.9 billion in FY24 and has been growing at a trendline growth rate of 7.0 percent since FY12.
- The tertiary sector is the largest contributor to GSDP of Andhra Pradesh, about 39.7 percent. Primary sector stood at 32.5 percent and secondary sector at 27.8 percent of the GSDP in FY24.

The change of sectoral composition of GSDP over the years is presented in **Figure 3-7**.

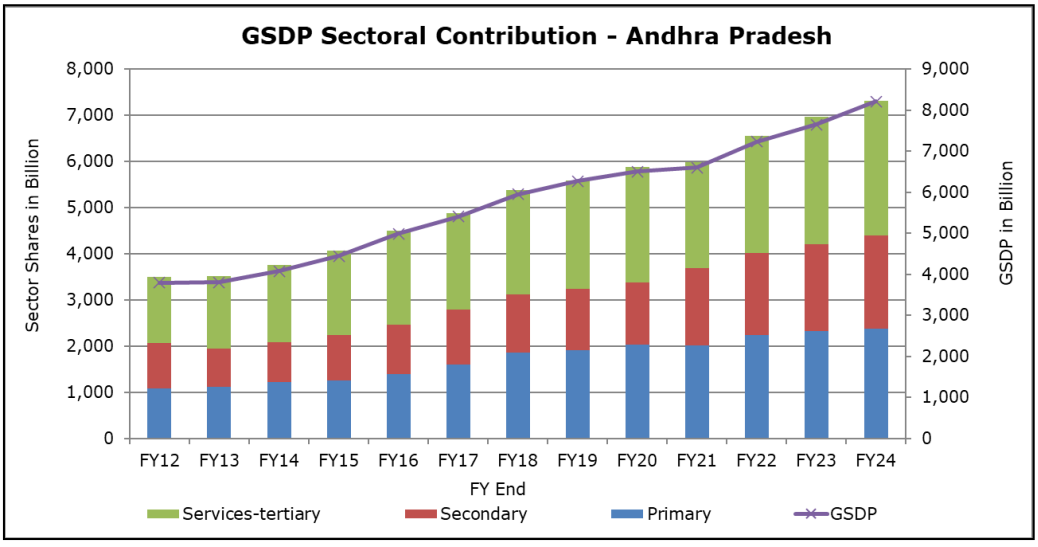

Figure 3-7: GSDP (in Rs Billion) and its Sectoral Composition for Andhra Pradesh

The performance of the state economy and its different sectors has been studied using time trend analysis. The average annual growth rates as obtained using regression analysis are presented in **Table 3-8**.

Particulars	FY12 to FY24	FY15 to FY24
GSDP	7.0	6.5
Agriculture and Allied	7.5	7.1
Industry	7.7	8.4
Services	5.6	4.5
Construction	4.5	5.1
Per Capita Income	6.3	5.7

Table 3-8 : Average Annual Growth Rates (%) of State Income for Andhra Pradesh

Andhra Pradesh is a predominant exporter of drugs, pharmaceuticals, allied chemicals, and plastics, agriculture and agro-based products, engineering products, mineral products, handicrafts and carpets, textiles, leather, animal, and marine products.

Currently, the state has 47 Special Economic Zones (SEZs). Moreover, 10 have been formally approved, 32 have been notified and five SEZs with in-principle approval. These SEZs are dispersed over a manifold range of sectors, including textiles and apparel, food processing, footwear and leather products, multi-product, pharma, IT SEZs, etc.

Under the Andhra Pradesh Petroleum, Chemicals & Petrochemicals Investment Region (AP PCPIR), the construction of 40 kilometres of national highways, 42 kilometres of state highways, and approximately 75 kilometres of major district roads is planned. These infrastructure projects are projected to be completed within the next five years.

The State Government is undertaking the construction of the Nadikudi-Srikalahasti railway line, spanning 308 kilometres. The primary objective of this project is to develop the underdeveloped areas of the Guntur, Prakasam, Nellore, and Chittoor districts, enhancing their connectivity with other states. Additionally, this project will facilitate the export of raw materials used in the cement and granite industries.

Groundwork for the Vizag Metro project, featuring a 140-kilometer mass rapid transit system, commenced in October 2020. The project, estimated to cost Rs. 22,000 crore (US$ 2.98 billion) is expected to be completed by 2028.

The upcoming international airport at Bhogapuram is being developed by the state government under the Public-Private Partnership (PPP) model and is estimated to be completed by December 2025. The project will cover 2,621.63 acres and is estimated to cost US$ 276.8 million. Moreover, the government has proposed establishing new airports in Kuppam (Chittoor), Dagadarthi (Nellore), Mulapet (Srikakulam), and Nagarjuna Sagar (Guntur).

The state of Andhra Pradesh has the second longest coastline of around 974 km in India. The state has 1 major port: Vishakhapatnam, and about 14 other non-major ports.

A new port at Ramayapatnam is being developed to address the rising cargo requirements. The port will be built using the land-lord model and will feature an artificial deep harbour. The projected cost for the initial phase is estimated at US$ 530 million.

According to the Department for Promotion of Industry and Internal Trade (DPIIT), the state has enticed the Foreign Direct Investment (FDI) equity inflows worth US$ 966.66 million during the period October 2019 to June 2024.

The state houses many pharma manufacturing units belonging to eminent global and national players. Exports of pharmaceuticals from the state stood at US$ 2.2 billion in FY24.

The state has the major share in the export of seafood products from India with export of worth US$ 3.04 billion in FY23. Andhra Pradesh contributes 36 percent of the total value of sea food exports from the country.

The per capita income of Andhra Pradesh is Rs. 154,121 in the year FY24. During FY12 to FY24, a growth of about 6.3 percent is seen in the state Andhra Pradesh. The growth in per capita income of Andhra Pradesh since FY12 is presented in **Figure 3-8**.

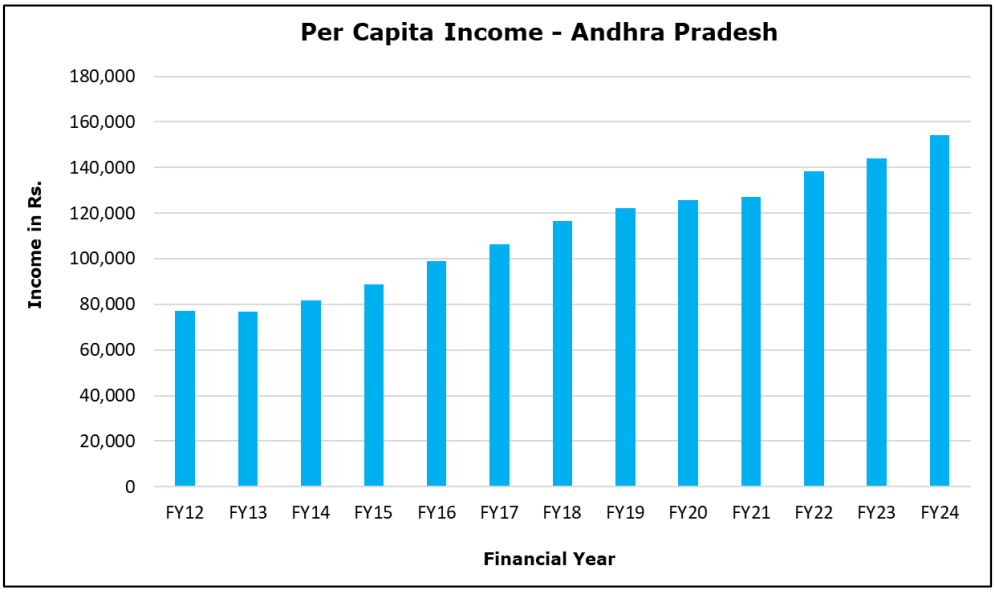

Figure 3-8: Per Capita Income of Andhra Pradesh from FY12 to FY24

Coastal Economic Zone (CEZ), Sagarmala

The Coastal Economic Zone (CEZ) is a concept introduced under Sagarmala as the focal point for development along India's coastline. The CEZs could be spatial economic regions comprising a group of coastal districts or districts with a strong port linkage. These are bounded land parcels that could actually house industrial units and requisite infrastructure. Each CEZ could be in the immediate hinterland of ports (existing and new proposed ports), within a radius of 100 km with a sizeable domestic market and export potential.

Fourteen coastal economic zones have been identified along the Indian coastline, with each coastal state having one or more CEZ. Each CEZ will consist of multiple industrial clusters categorised under energy, material and discrete industries. Competitive locations for these industries have also been shortlisted to reduce overall logistic costs.

The Sagarmala National Perspective Plan identified two coastal economic zones in Andhra Pradesh — VCIC north CEZ and VCIC central CEZ. The project road is falling under VCIC north CEZ. The VCIC north CEZ could cover seven districts of Andhra Pradesh: Srikakulam, Vizianagaram, Visakhapatnam, East Godavari, West Godavari, Krishna and Guntur. These districts constitute around 35 per cent of state population and around 30 per cent of state GDP. The location of VCIC north CEZ is presented in **Figure 3-9**.

Figure 3-9: VCIC North Coastal Economic Zone

The VCIC CEZ also covers three operational ports: Visakhapatnam port, Gangavaram port and Kakinada port (deep water and anchorage).

Industrial activity in the CEZ is unevenly distributed, with agrarian districts like Srikakulam and Vizianagaram together contributing only 6 per cent to the state's industrial GDP. Visakhapatnam alone, on the other hand, contributes about 20 per cent to the state industrial GDP.

Industrial activity in the Northern Andhra Pradesh CEZ is relatively evenly distributed, with Guntur, Krishna and West Godavari. VCIC, being developed with technical assistance from ADB, has four discrete manufacturing nodes of which two, Visakhapatnam and Kakinada, fall within VCIC north CEZ.

Visakhapatnam Port

In terms of volumes, Visakhapatnam is one of the largest major ports in the country with a capacity of handling approximately 139 MMTPA of cargo. Visakhapatnam is located on the northern coast of Andhra Pradesh and serves the Central and Eastern hinterlands of the country like Telangana, Chhattisgarh, Madhya Pradesh and Southern Odisha.

The year-on-year cargo handled since FY10, and its growth is presented in the **Table 3-9**.

Year	Cargo Traffic Handled (in million Tonnes)	YoY Growth (%)
FY10	65.5	-
FY11	68.0	3.9
FY12	67.4	-0.9
FY13	59.0	-12.4
FY14	58.5	-0.9
FY15	58.0	-0.9
FY16	57.0	-1.7
FY17	61.0	7.0
FY18	63.5	4.1
FY19	65.3	2.8
FY20	72.7	11.4
FY21	69.8	-4.0
FY22	69.0	-1.2
FY23	73.7	6.9
FY24	81.1	10.0

Source: Annual reports of Ministry of Ports, Shipping & Waterways

Table 3-9: Traffic Handled at Visakhapatnam Port

Visakhapatnam Port handled about 69-70 MT of cargo in FY21 and FY22, however in FY24 about 81 MT of cargo was handled. In FY21, about 12 MTPA of thermal and coking coal and about 16 MTPA of POL (crude and products) was handled. Other major commodities include containers, fertilizers, and iron-ore.

Time series analysis of past cargo traffic data has shown an end point growth of about 4.6 percent during FY15 to FY20. However, the growth of cargo handled is 3.8 percent during FY15 to FY23. This growth slowed down in FY21 and FY22 due to the impact of Covid-19. While a recovery in cargo traffic is observed during FY22 to FY24 with growth of about 8.4 percent.

The port is well connected to the Chennai – Kolkata railway line as well as to the national highway network via NH-16. Rail traffic share is about 52 percent of the total cargo handled by the port.

Expansion Initiatives by Visakhapatnam Port Authority (VPA)

Visakhapatnam Port Authority (VPA) is implementing a series of strategic expansion projects to address the growing demands of cargo handling and passenger traffic. These initiatives are designed to enhance the region's trade capabilities and foster tourism, contributing to India’s economic growth.

One of the significant developments is the International Cruise Terminal, which has recently opened to serve as a key gateway for domestic and international cruise tourism on India’s eastern coast. The terminal spans 4,580.46 square meters and offers world-class facilities aimed at providing a transformative experience for travellers. It operates primarily as a cruise terminal from November to March, catering to international passengers, while from April to October, the berth is repurposed for coastal cargo operations. This dual utilization ensures optimal year-round functionality and supports both tourism and trade.

Another major project is the Mulapeta Port, a greenfield development located in the Srikakulam district. VPA has acquired a 49% equity stake in the project, and while the Andhra Pradesh Government is considering VPA's operational involvement, construction is progressing on a landlord model. The project was launched in April 2023, and the initial phase, which includes four berths, is now scheduled for completion by April 2026, revised from its earlier deadline of October 2025. This development aims to significantly enhance VPA's cargo handling capacity and address regional trade demands.

Additionally, VPA has explored the feasibility of developing a satellite port at Mulakedu, near Bheemunipatnam, on its own land. This initiative demonstrates VPA's proactive approach to expanding its operational footprint and meeting the growing requirements of India's maritime sector.

These expansion initiatives reflect VPA's commitment to strengthening India's port infrastructure, promoting trade, and boosting tourism. The development of the International Cruise Terminal and Mulapeta Port is poised to drive economic growth in the region, improve logistics efficiency, and position VPA as a critical player in India's maritime advancement.

Gangavaram Port

Gangavaram Port is located about 10 km south of Vishakhapatnam Port. It is a private port operated by Gangavaram Port Ltd. established under concession from Government of Andhra Pradesh (GoAP) and started operations in 2008. It has a concession period of 30 years and extendable for another 20 years. It is an all-weather, deep water (max berth depth of 19.5m), multi-purpose port capable of handling fully laden super cape size vessels of up to 200,000 DWT. It has state of the art mechanized handling systems, facilitating fast and efficient operations with minimum loss of cargo. Currently GPL operates 9 berths and has a capacity of 64 MMTPA. The hinterland for the port spreads over 8 states across eastern, southern and central India. The year-on-year cargo handled by the port is presented in **Table 3-10** .

Year	Cargo Handled (In million Tonnes)
FY14	15.8
FY15	20.7
FY16	19.4
FY17	18.0
FY18	25.8
FY19	30.4
FY20	34.5
FY21	32.8
FY22	30.0
FY23	32.0
FY24	37.2
CAGR FY14 vs FY20	13.9%
CAGR FY14 vs FY24	8.9%

Source: Annual reports of Ministry of Ports, Shipping & Waterways

Table 3-10: Cargo Handled at Gangavaram Port

Gangavaram port handled about 34.5 MMT in FY20 registering a CAGR of around 14 percent between FY14 and FY20. The cumulative impact of the spread of Covid-19 and the disruptions in supply chain operations have resulted in slight drop in cargo handled in FY21 and FY22 registering a decline of about 6.7 percent CAGR between FY20 and FY22. However, in FY24, the port has handled about 37 MMT registering about 16.4 percent growth over FY23. Major commodities handled by the port include coal, iron ore, fertilizer, limestone, bauxite, sugar, alumina, and steel.

The port is well-connected by road and rail. A 4-lane road provides connectivity to NH-16 while direct rail connectivity is present with Chennai - Howrah rail line. Out of the 30 MMT cargo volume handled in FY22, about 18 MMT cargo was rail-bound.

The port has free hold land of about 1,800 acres. As per the master plan for the port, it has planned capacity of 250 MMTPA with 31 berths. APSEZ has acquired 100 percent shareholding of GPL recently and will integrate the port with APSEZ's portfolio.

Kakinada Port

Kakinada port complex is located at Kakinada, around 170 km south of Vishakhapatnam. It consists of the Kakinada anchorage port, Kakinada deep water port, Kakinada fishing harbour and ship-breaking unit. Kakinada anchorage port is under the control of state government and has a capacity of handling about 4 MMTPA which primarily handles rice exports.

Kakinada deep water port (depth of 15 m) is a medium sized port which was commissioned by GoAP in November 1997 having a quay length of 610 m. The port was privatized in 1999 and the operations are now handled by Kakinada Seaports Ltd. The port was expanded to 2,500 m of quay length for multi-product handling and stand-alone facility for offshore supplies for deep sea exploration. The port has modernized and fully mechanized cargo handling facilities with a capacity of 20 MMTPA and vessels up to 210,000 DWT. Kakinada Container Terminal has an annual capacity of handling about 0.2 million TEUs per annum.

In terms of annual volume of cargo handled, the Kakinada deep water port handled total cargo traffic of 18 MMT in FY21and it handles commodities like iron ore and steel, coal, sugar, clinker, fertilisers, feldspar, bentonite, ball clay, forest products, LPG, liquid bulk and crude. Bulk carriers (44%), oil/chemical tankers (20%), general cargo (5%), offshore supply ships (4%), etc. are the major types of vessels regularly anchoring at the port. The annual cargo handled since FY11 is presented in **Table 3-11**.

Year	Cargo Handled (in million Tonnes)
FY11	12.0
FY12	13.0
FY13	16.3
FY14	16.1
FY15	20.7
FY16	17.0
FY17	14.5
FY18	14.3
FY19	17.8
FY20	16.5
FY21	18.0
CAGR FY19 vs FY11	5.1%
CAGR FY21 vs FY11	4.2%

Table 3-11: Cargo Handled at Kakinada Port

VK-PCPIR at Visakhapatnam & East Godavari Districts

The Visakhapatnam-Kakinada Petroleum, Chemicals, and Petrochemicals Investment Region (VK-PCPIR) is a strategic initiative aimed at fostering industrial development in the coastal districts of Andhra Pradesh, India. This ambitious project aims to attract significant investments in the petroleum, chemicals, and petrochemical sectors, positioning India as a global manufacturing hub.

Key features:

Strategic Location: The VK-PCPIR is strategically located between Visakhapatnam and Kakinada on the east coast of India, offering easy access to both domestic and international markets. It is also part of the Visakhapatnam-Chennai Industrial Corridor (VCIC), further enhancing its connectivity and attractiveness to investors.

Industry Focus: The VK-PCPIR is targeted towards petroleum, petrochemical, metals, fertilizers, and other related downstream industries. It will house various industrial clusters and Special Economic Zones (SEZs), including JNPC Pharma City, Duppituru, Krishnapalem, Parawada Phase-I, Parawada Phase-II, Pudi, Thammavaram, Vakalpudi, , BARC, Divis Laboratories.

SEZs: APSEZ at Atchutapuram, Brandix SEZ, Pharma SEZ (JNPC), Hetero Drugs Pharma SEZ, Kakinada SEZ, Deccan Chemical SEZ

Other Major Industries: The VK-PCPIR will also accommodate existing major industries such as: Visakhapatnam Steel Plant (RINL), NTPC, Coromandel Industries Limited, Spectrum Power Plant (SPGL), BARC, Divis Labs

Economic Impact: The VK-PCPIR is expected to create approximately 1.2 million jobs, contributing significantly to the region's economic growth and development.

The estimated capital investment for the VK-PCPIR project by 2031 is Rs. 19,159 Crores.

Environmental Considerations: The project emphasizes sustainable development and environmental protection. Green spaces will serve as buffers for industrial activities, and mitigation measures will be implemented to minimize the project's ecological impact.

The VK-PCPIR is a transformative project that holds the potential to revolutionize the industrial landscape of Andhra Pradesh. By attracting significant investments, creating jobs, and fostering economic growth, the VK-PCPIR will solidify India's position as a global manufacturing powerhouse.

Other PIA States

The other PIA states contributing to the traffic on the project road are Odisha, West Bengal, Tamil Nadu, Karnataka, Telangana, and Jharkhand. Economic indicators of PIA states are as follows.

- Gross State Domestic Product (GSDP) of Odisha stood at Rs 5,209.1 billion in FY24 and has been growing at a compounded annual growth rate of 7.0 percent since FY12.
- Gross State Domestic Product (GSDP) of West Bengal stood at Rs 9,040.9 billion in FY24 and has been growing at a compounded annual growth rate of 4.5 percent since FY12.
- Tamil Nadu's Gross State Domestic Product (GSDP) stood at Rs 15,713.0 billion in FY24 and has been growing at a compounded annual growth rate of 6.2 percent since FY12.
- Karnataka's Gross State Domestic Product (GSDP) for FY23 stands at Rs 14,232.3 billion, reflecting a compounded annual growth rate (CAGR) of 7.4% since FY12.
- Telangana's Gross State Domestic Product (GSDP) stood at Rs 7,929.4 billion in FY24 and has been growing at a compounded annual growth rate of 6.9 percent since FY12.
- Jharkhand's Gross State Domestic Product (GSDP) stood at Rs 2,850.7 billion in FY24 and has been growing at a compounded annual growth rate of 5.1 percent since FY12.

  The service sector is the largest contributor to GSDP in FY24 for the PIA states of Tamil Nadu with 51.7 percent, Karnataka with 65.2 percent, West Bengal with 52.0 percent and Telangana and Jharkhand with 63.1 and 44.4 percent respectively. While the share of secondary sector is prominent in the state of Odisha with 38.4 percent followed by 35.2 percent share in service sector.

The average annual growth rates as obtained using regression analysis till the last available year are presented in **Table 3-12**.

Particular/ States	Andhra Pradesh	Odisha	West Bengal	Tamil Nadu	Karnataka	Telangana	Jharkhand
	FY12 to FY24						
GSDP	7.0	7.0	4.5	6.2	7.4	6.9	5.1
Primary	7.5	4.9	2.5	5.4	5.7	5.9	1.6

Particular/ States	Andhra Pradesh	Odisha	West Bengal	Tamil Nadu	Karnataka	Telangana	Jharkhand
	FY12 to FY24						
Secondary	7.7	9.1	6.8	6.2	5.8	4.8	5.8
Tertiary	5.6	5.1	4.8	5.7	8.1	7.6	6.3
Construction	4.5	4.9	4.9	5.0	3.7	5.3	4.5
Per Capita Income	6.3	6.1	3.9	5.6	6.6	6.4	3.5

Table 3-12: Average Annual Growth Rates (%) of State Income for Other PIA States

The GSDP over the years for all the PIA states are presented in **Figure 3-10**.

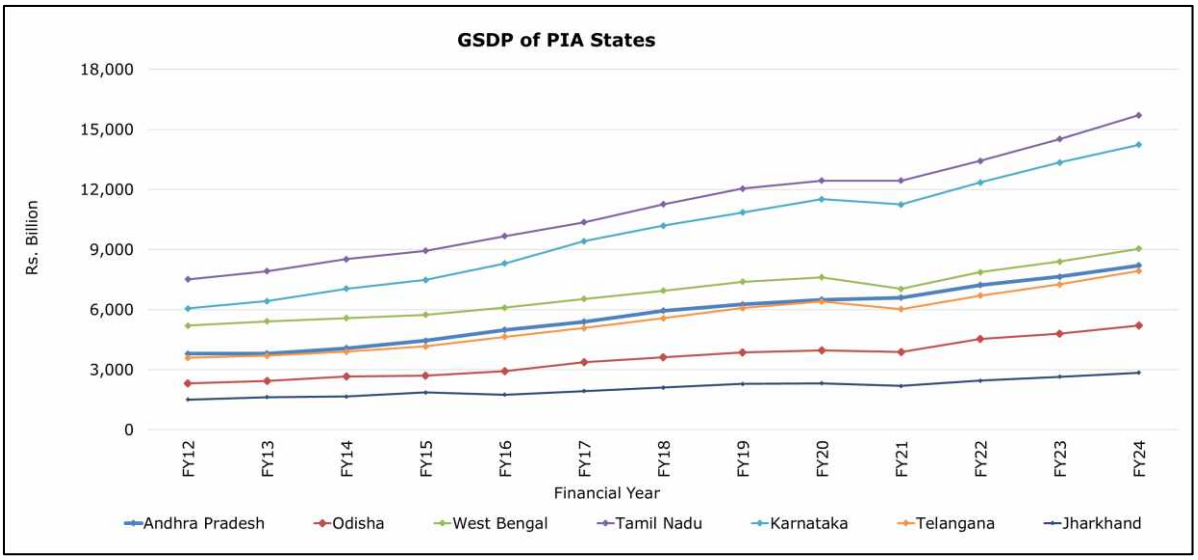

Figure 3-10: GSDP (in Rs Billion) for PIA States

3.6 India and PIA Outlook

3.6.1 India's Past Performance and Outlook for Future

India's growth trend during the recent years has been presented in **Figure 3-11**.

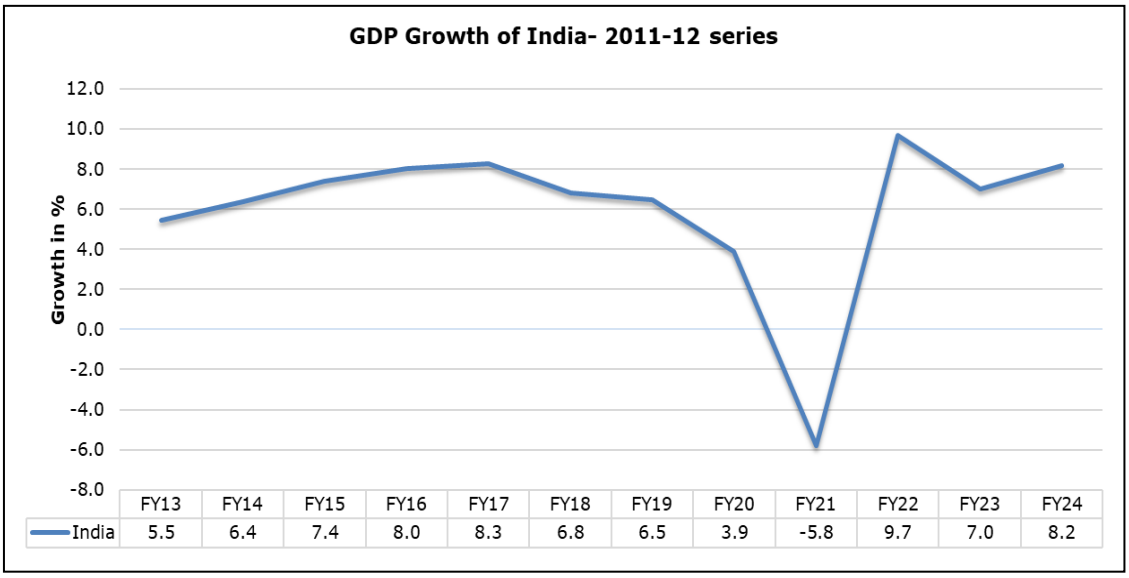

Figure 3-11: GDP Growth in India

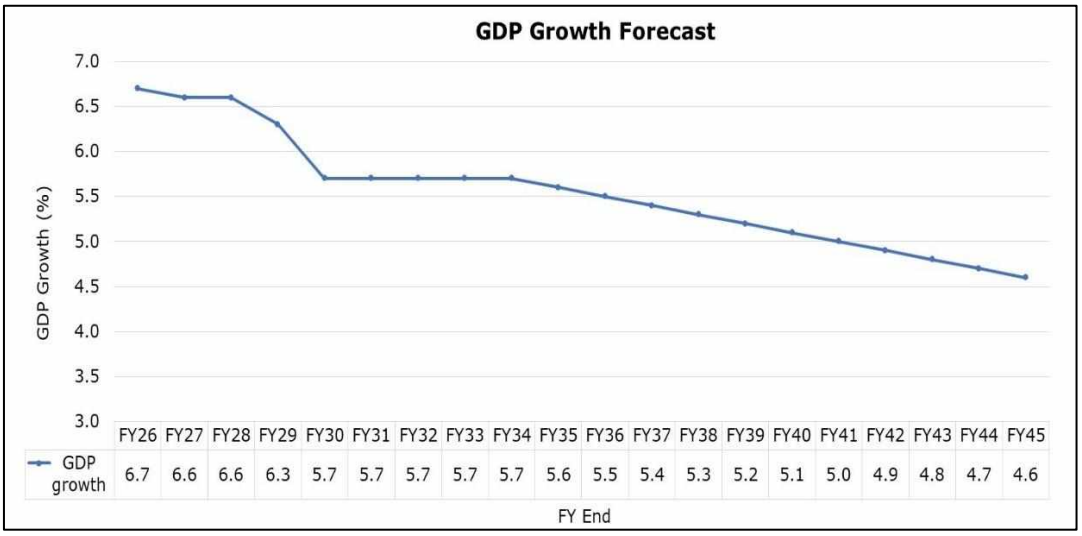
India's economy has navigated through a series of fluctuations since FY12, from a slowdown to a sharp contraction due to the pandemic, followed by a strong recovery.



Structural reforms and global dynamics continue to play crucial roles in shaping India's economic future.

India’s economic growth has generally followed an accelerating trajectory until FY18, positioning it as one of the fastest-growing major economies in the world over the medium term. The real GDP growth rates were 8.3 percent in FY17, 6.8 percent in FY18, and 6.5 percent in FY19, reflecting a solid performance. Over the period from FY12 to FY19, the long-term average growth rate stood at 7.2 percent.

However, in FY20, the economy slowed down due to a combination of structural challenges and global economic headwinds, leading to a more modest growth rate of 3.9 percent. The outbreak of COVID-19 further exacerbated the situation, triggering a global recession and imposing significant economic disruptions. The Indian government's lockdown measures severely impacted the economy, contributing to a contraction of 5.8 percent in FY21.

India’s GDP grew by 9.7 percent in FY22 and continued its recovery with a growth of 7.0 percent in FY23 and 8.2 percent in FY24. The recent forecast by Reserve Bank of India (RBI) indicates a growth rate of 6.4 percent for FY25.

In light of the outlook being predicted by various agencies for the current and future years, the year-on-year growth for Indian economy based on the forecast of Consensus Economics (October 2024 Publication), provided by the client for FY26 and beyond as used in the analysis are presented in **Figure 3-12**.

	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45
GDP growth	6.7	6.6	6.6	6.3	5.7	5.7	5.7	5.7	5.7	5.6	5.5	5.4	5.3	5.2	5.1	5.0	4.9	4.8	4.7	4.6

Figure 3-12: GDP Forecast of India

3.6.2 PIA States Outlook

A snapshot of the main economic indicators in the past for the PIA states is presented in **Table 3-13**.

Indicators	Andhra Pradesh	Odisha	West Bengal	Tamil Nadu	Karnataka	Telangana	Jharkhand
GSDP in Rs Billion (FY24)	8,208.9	5,209.1	9,040.9	15,713.7	14,232.3	7,929.4	2,850.7
GSDP growth (FY12 to FY24)	7.0%	7.0%	4.5%	6.2%	7.4%	6.9%	5.1%
Per capita Income in Rs. (FY24)	1,54,121	1,12,154	90,988	2,04,092	2,09,486	2,07,679	71,705
Sector Share in %, FY24							
Agriculture and allied	32.5	26.3	18.6	11.2	10.8	17.1	20.1
Industry	27.8	38.4	29.3	37.2	24.0	19.8	35.4
Services	39.7	35.2	52.0	51.7	65.2	63.1	44.4

Table 3-13: Main Economic Indicators of PIA States

To forecast the PIA states' performance, the past growth of State GDPs relative to India's GDP has been analyzed, and both short-term and long-term multipliers have been derived. In determining future multipliers, year-on-year variations and the size of the state's economy have been carefully considered. The past and adopted multipliers for PIA states to Indian economy are presented in **Table 3-14**.

Period	India	Andhra Pradesh	Odisha	West Bengal	Tamil Nadu	Karnataka	Telangana	Jharkhand
Past growth (%)								
FY12 to FY24	5.9	6.6	7.0	4.7	6.3	7.4	6.8	5.4
FY15 to FY24	5.7	7.1	7.5	5.2	6.5	7.4	7.4	4.8
Past Multipliers - Average of Years								
FY13 to FY24		0.9	1.0	0.9	0.9	1.1	1.1	0.9
FY15 to FY24		1.0	1.0	0.9	0.9	1.1	1.2	0.9
Multipliers Adopted for Future								
Adopted Multipliers		1.0	1.0	0.90	0.90	1.10	1.20	0.90

Table 3-14: Past and Future Multipliers of PIA States

3.7 Review of Past Traffic Data on Project Road

ETC traffic data has been made available for all the four toll plaza locations from March 2022 to November 2024. The yearly average of FY23 and FY24 along with annualised average of FY25 with YOY and end point growth rates has been presented in **Table 3-15**.

FY/Mode	CJV	LCV	2A Truck	3A Truck	MAV/OSV	PCU
TP01- Madapam						
FY23	4,748	381	1,550	1,120	2,646	25,234
FY24	5,374	391	1,665	1,070	2,800	26,766
FY25	5,561	399	1,791	1,033	2,929	27,810
YOY Growth (in %)						
FY23 vs FY24	13.2	2.6	7.4	-4.4	5.8	6.1
FY24 vs FY25	3.5	1.9	7.5	-3.5	4.6	3.9
End Point Growth (in %)						
FY23 vs FY25	8.2	2.2	7.5	-3.9	5.2	5.0
TP02-Nathavalasa						
FY23	5,647	475	1,845	1,170	3,099	29,350

FY/Mode	CJV	LCV	2A Truck	3A Truck	MAV/OSV	PCU
FY24	6,237	504	1,949	1,150	3,538	32,212
FY25	6,555	508	2,076	1,139	3,714	33,674
YoY Growth (in %)						
FY23 vs FY24	10.4	6.1	5.7	-1.7	14.2	9.8
FY24 vs FY25	5.1	0.9	6.5	-1.0	5.0	4.5
End Point Growth (in %)						
FY23 vs FY25	7.7	3.4	6.1	-1.3	9.5	7.1
TP03 - Dukkavanipalem						
FY23	1,638	335	887	1,009	2,364	18,465
FY24	2,679	440	1,174	1,084	2,920	23,253
FY25	2,937	452	1,303	1,050	3,040	24,355
YoY Growth (in %)						
FY23 vs FY24	63.6	31.3	32.4	7.4	23.5	25.9
FY24 vs FY25	9.7	2.6	11.0	-3.1	4.1	4.7
End Point Growth (in %)						
FY23 vs FY25	33.9	16.1	21.2	2.0	13.4	14.8
TP04 - Marripalem						
FY23	1,928	329	859	1,006	2,291	18,328
FY24	3,129	414	1,108	1,044	2,726	22,472
FY25	3,813	462	1,323	1,064	3,017	25,241
YoY Growth (in %)						
FY23 vs FY24	62.3	26.0	28.9	3.8	19.0	22.6
FY24 vs FY25	21.9	11.5	19.5	1.9	10.7	12.3
End Point Growth (in %)						
FY23 vs FY25	40.6	18.5	24.1	2.8	14.7	17.4

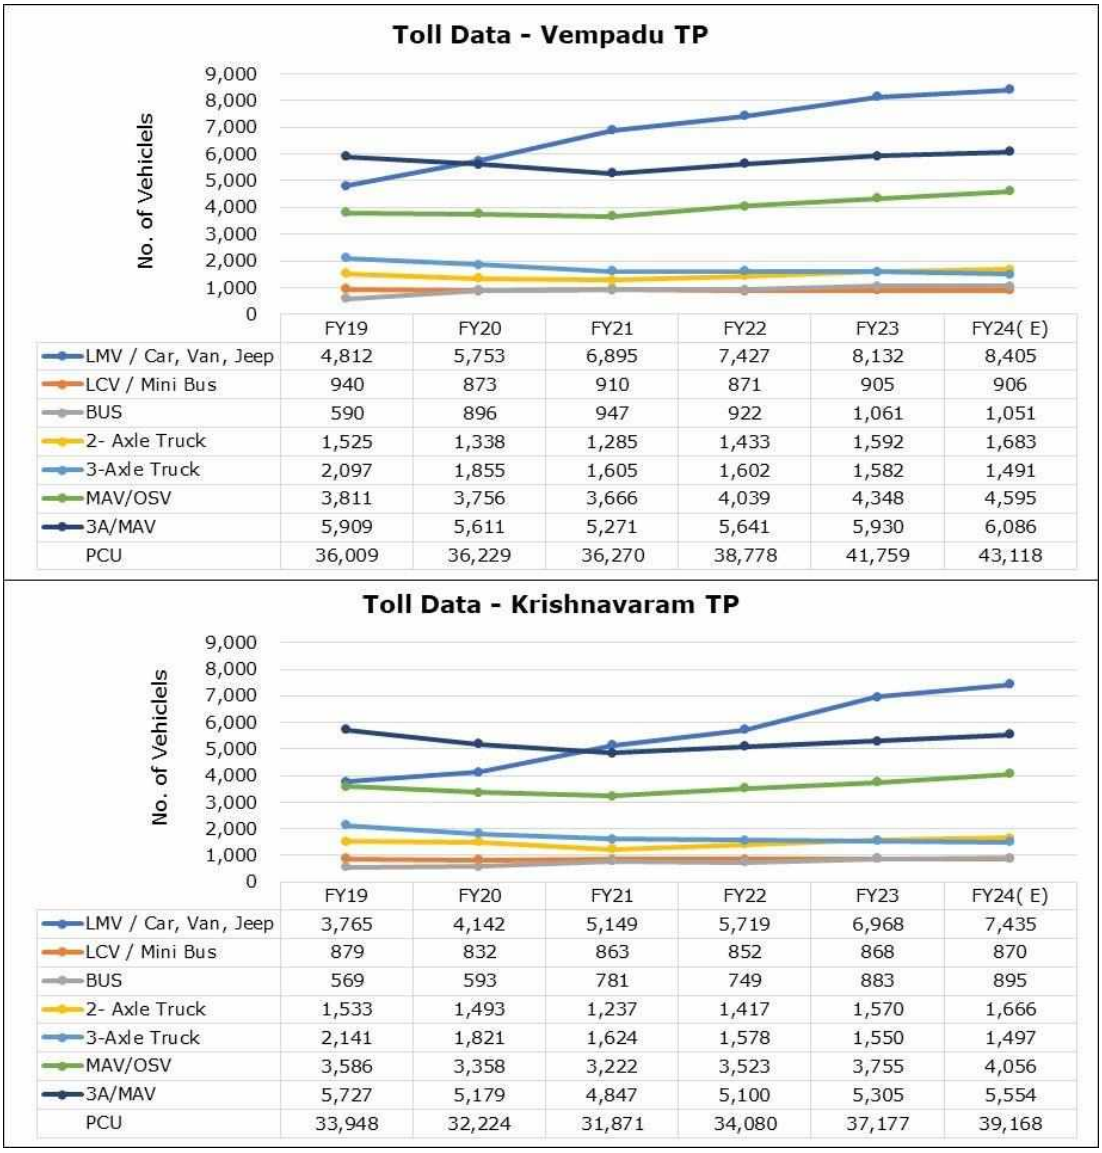
Table 3-15: Past Traffic and Growth Analysis

Madapam TP and Nathavalasa TP has shown moderate traffic growth while an exorbitant traffic growth has been observed at Dukkavanipalem and Marripalem toll plaza locations which could be due to the initial ramp up of traffic after opening of Vizag bypass in April 2022.

At Madapam TP and Nathavalasa TP, Car traffic has shown the highest growth of about 10-13 percent during FY23 to FY24 while the growth between FY24 and FY25 is estimated to be around 3.5 and 5.0 percent. The end point growth between FY23 and FY25 is likely to be 7-8 percent. Similarly, in case of 2A trucks an average growth of 6-7 percent is observed during FY23 and FY25.

At Dukkavanipalem TP and Marripalem TP, a comparison of car traffic shows robust growth of about 62-64 percent during FY23 to FY24 followed by 33-40 percent during FY23 to FY25. As mentioned above this could be the initial ramp up growth which any greenfield facility observes after opening to traffic. However, the growth in FY24 vs FY25 is observed at a lower rate.

MAVs have shown a 4-9 percent growth across TP01 to TP03 with TP04 showing highest growth of about 14 percent during FY23 to FY25.



3.7.1 Past Toll Data from Adjacent Sections

In addition to the project road traffic data, past traffic of adjacent road sections awarded under TOT-1 which are in proximity to the PR has also been analysed to understand the traffic growth trends on NH-16. The consultant had access to historical traffic trends for the four TP locations from previous studies. The toll data of following four toll plaza locations has been analysed:

- TOT- 1 toll plazas below Anakapalli: Vempadu TP and Krishnavaram TP
- TOT -1 toll plazas above Narasannapeta: Laxmipuram TP and Karapadu TP

3.7.1.1 Past Traffic at TOT- 1 Toll Plazas Below Anakapalli: Vempadu TP and Krishnavaram TP

The available year on year toll data of Vempadu TP and Krishnavaram TP is presented in **Figure 3-13**.

	FY19	FY20	FY21	FY22	FY23	FY24(E)
LMV / Car, Van, Jeep	4,812	5,753	6,895	7,427	8,132	8,405

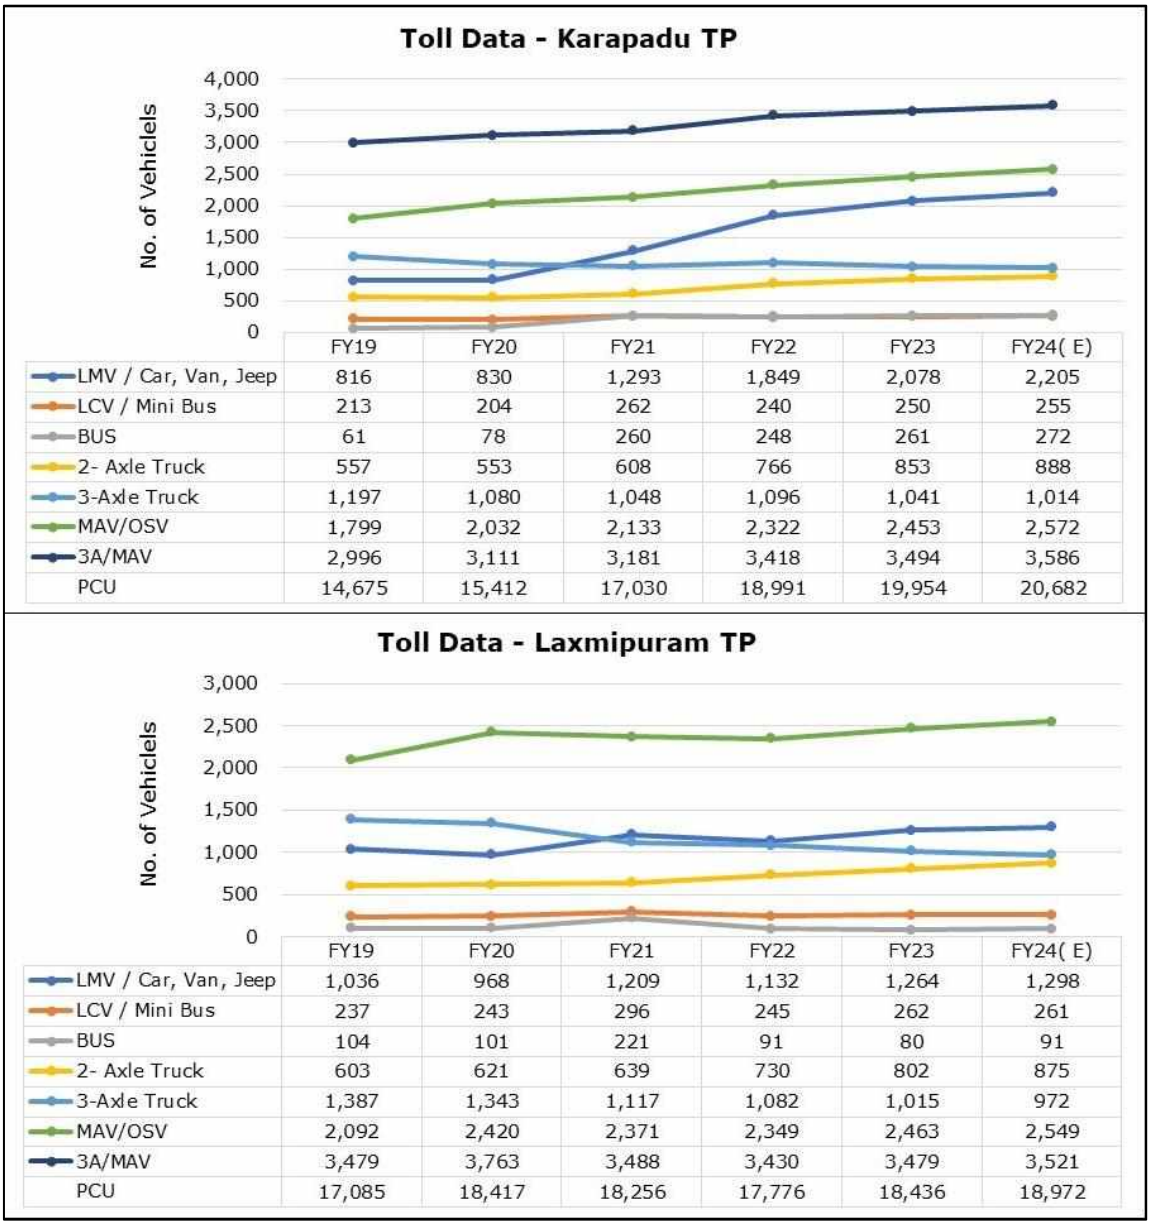
Table 3-16: Past Traffic at TOT- 1 TPs Below Anakapalli: Vempadu and Krishnavaram TP



Vempadu TP shows moderate growth, with LMV/CJV traffic increasing by 14 percent from FY19 to FY23, slowing to 3-5 percent in FY21 to FY24 representing the impact of Covid. MAVs and 2A trucks maintain steady growth of about 6-8 percent during FY21/FY22 to FY24, while 3A truck traffic consistently declines which could be attributed to tonnage shifts happening from 3A to MAV trucks. However, it is worth mentioning that after the tonnage shifts stabilise in 2A/3A trucks, they start showing a minimal positive growth.

At Krishnavaram TP, double-digit end point growth of about 12-17 percent in CJV/LMV traffic is observed in LMV/CJV traffic across all comparison years. MAVs and 2A trucks also show steady increases of about 8-10 percent during FY21/FY22 to FY24.

Overall, a PCU growth of 5-7 percent has been observed across these two toll plazas below Anakapalli.

3.7.1.2 Past Traffic at TOT -1 Toll Plazas Above Narasannapeta: Karapadu TP and Laxmipuram TP

The available year on year toll data of Karapadu TP and Laxmipuram TP is presented in **Figure 3-14**.

Table 3-17: Past Traffic at TOT -1 TPs Above Narasannapeta: Karapadu and Laxmipuram TP

The end point traffic growth at Karapadu TP shows a subdued growth in LMV/CJV traffic showing a growth of about 4 percent during FY22 to FY24, however the comparison

between FY19 to FY23 shows an overall growth of 26 percent whereas 5 percent is observed at Laxmipuram toll plaza. MAVs shows 8 percent growth during FY19 to FY23 while Laxmipuram TP shows a growth of 3.3 percent between FY22 and FY24.

3.8 Past and Future Transport Demand Elasticity

The econometric model applied for the project, relates traffic growth to changes in state domestic product via an elasticity factor according to IRC guidelines.

The best measure of deriving traffic elasticity to income is time series data of traffic on the road. The past traffic data for the project road section is available since March 2022. The YOY mode wise traffic elasticity has been derived using rate of growth in the traffic vis a vis the rate of growth in income. The elasticity estimates for different time periods have been done using regression analysis with mode wise traffic as dependent variable and weighted income as independent variable. The point to point and trend line actual elasticity between weighted income (GSDP) and traffic is presented in **Table 3-18**.

FY/Modes	CJV	LCV	2A	3 Axle	MAV/OSV
TP01 – Madapam					
FY24 vs FY23	1.8	0.3	1.0	-0.6	0.8
TP02 – Nathavalasa					
FY24 vs FY23	1.4	0.8	0.8	-0.2	1.9
TP03 – Dukkavanipalem					
FY24 vs FY23	8.6	4.1	4.2	1.0	3.1
TP04 - Marripalem					
FY24 vs FY23	8.4	3.4	3.8	0.5	2.5

Table 3-18: Actual Past Traffic Elasticity on PR

Cars

- The motorization rate for cars (per 1000 population) in India has gone up from 6.6 in 2001 to 25 in 2019. Although India's car fleet has been growing at 10 percent for nearly 25 years, its motorization rate is low compared to other countries of similar wealth and much lower than developed countries with motorization rate of around 450. The low motorization rate suggests that there is room for continued growth for many years to come. With the continual increase in motorization rate and improved road network, usage of cars for inter-urban travel is showing a growing trend.
- A regression between GSDP (as independent variable) and registered vehicles (as dependent variable) of PIA state was carried out for the state of Andhra Pradesh which showed an elasticity of 0.8 during the period between FY14 and FY24.
- The past elasticity of 1.8 and 1.4 is observed for the period between FY23 and FY24 along TP01 and TP02 respectively while TP03 & TP04 has shown higher elasticity value of 8.6 and 8.4 respectively. As mentioned above this high elasticity is an indicator of the ramp-up period which is observed at any greenfield facility in the first few years

of operation till the traffic stabilises. At Vempadu and Krishnavaram TPs of TOT 1 sections, an elasticity of 1.7 and 1.3 has been observed between FY20 and FY22 whereas an elasticity of 4.4 has been observed at Karapadu TP of TOT 1.

- The elasticities and the past growth levels for cars are a result of increasing income levels, increasing vehicle ownership, and higher propensity to travel on highways in India due to network level developments and higher levels of service. These levels of growth are likely to continue in the near to medium term since car ownership levels are still very low and the road network is undergoing continual development. For the PR toll plaza, car elasticity has been considered as 1.2 for the period up to FY30 and 1.1 till FY35 and tapered thereafter to 1.0 till the end of concession period.
- It is likely that this growth would slow down over time as the market becomes more mature and saturated, therefore elasticity to GSDP can be expected to decline over time. With the anticipated growth momentum in the coming years, higher elasticity values have been considered for initial slabs and tapering has been done thereafter.

LCV/Minibus

- Predominance of Mini LCV in the LCV category for short haul traffic is being witnessed across many national highways. The LCV segments are also witnessing a smart uptick in demand in the goods carrier segment, where the 2T mini-truck and 2-3.5T pickups dominate with 90 percent share of the total LCV goods segment.
- For project road, an elasticity of 0.5 has been adopted till the end of concession period

Trucks

- In India as a whole, the freight vehicle mix has been changing in the last decade favouring MAV to 2A/3A vehicles for long-distance traffic, given the operational efficiencies achievable with larger vehicles. Considering the ongoing technical advancements in automobile industry, some of the standard 2A/3A trucks would gradually be replaced by MAVs. Mature National Highways with tolling in operation for few years, have already witnessed the shift in 2A/3A trucks to MAV for long distance movement and the limited number of 2A trucks are being used for local movements.
- In case of the project road and some of the other National Highways, 2A trucks have started showing a decent growth for local uses. In case of project road, 2A trucks have shown a double-digit growth at TP03 & TP04 between all comparison years. Therefore, an elasticity of 0.8 has been adopted till FY30 for all the toll plazas and tapered to 0.6 thereafter for FY40 and beyond.
- For the project road, an elasticity of 0.4 has been considered for 3A trucks and 1.0 for MAVs till FY30 and has been tapered to 0.3 and 0.7 respectively till the end of concession period. At the toll plazas of TOT 1 sections, an elasticity of 0.7, 0.9 and

1.2 has been observed at Vampadu, Krishnavaram and Karapadu TPs between FY19 and FY24.

It has been assumed that transport demand elasticity, for both freight and passenger traffic, would gradually decline over time, despite growth in per capita income, as regions becomes more mature, self-sufficient and with alternative mode of transport available to users. Due consideration has been given to the tonnage shifts happening in the market with Mini LCV gaining importance for short distance movements over LCVs and MAVs being preferred over 2A/3A for long distance movements due to better operational efficiencies. As per the latest industry trends, there is a shift happening between various categories of MAVs also - 4A, 5A and 6A and above. 4A trucks are likely to see a replacement soon to 5A and above axle trucks which can carry more tonnage as compared to 4A trucks.

While assigning elasticities to different modes, freight travel pattern and over all elasticity of cargo tonnage with respect to weighted GSDP has been an important consideration. The recommended elasticity values adopted for all vehicle types in line with the traffic growth being observed on other national highways and changes in freight traffic pattern observed on the project road are presented in **Table 3-19**.

Period/Modes	Car	LCV	2A	3A	MAV
Up to FY30	1.2	0.5	0.8	0.4	1.0
FY31-FY35	1.1	0.5	0.7	0.4	0.9
FY36-FY40	1.0	0.5	0.6	0.3	0.8
Beyond FY40	1.0	0.5	0.6	0.3	0.7

Table 3-19: Recommended Elasticity for Project Road

3.9 Projected Traffic Growth Rates

Based on the moderated perspective elasticity values and the projected growth rates of the income for PIA states, the future average annual compound traffic growth rates by vehicle type have been estimated for the project road by using the following relationship:

Tgr = (GSDPgr) x E; where,

Tgr – Traffic growth rate for mode

GSDPgr – Growth rate of GSDP

E – Elasticity value for mode

Using the year-on-year mode wise weighted income for PIA and elasticity for different time periods, traffic growth rates have been estimated for each year till FY55 in line with the maximum extendable concession period of 30 years. The estimated traffic growth rates for the project road have been presented in **Table 3-20**.

FY/Modes	TP01 & TP02					TP03 & TP04

FY45 and beyond	4.6	2.3	2.7	1.4	3.2	4.6	2.3	2.7	1.3	3.2

Table 3-20: Projected Traffic Growth Rates (in %)

In derivation of above growth rates, the likely shift of buses to cars in case of passenger vehicles and the replacement/ tonnage shift of 2A/3A trucks to MAV for long distance in case of freight vehicles has been duly considered.

The above growth rates relate to the most likely Base Case. In addition, two sets of traffic growth rates under low and high cases have also been considered and impact on toll revenue evaluated for both these cases. Based on the risk analysis of key parameters like economic growth and elasticity of travel demand impacting traffic growth, two additional growth scenarios have been presented. Low growth scenario considers a 20 percent reduction in growth rates relating to about 10 percent decline each in elasticity and economic growth. The High growth scenario considers a 20 percent increase in growth rates signifying about 10 percent increase each in elasticity and economic parameters.

The implied traffic growth rates under the base case after considering the impact of completion of Raipur – Vizag expressway, Sheelanagar port connectivity road for the Vizag Bypass Toll Plazas, and diversion to Vizag – Kharagpur expressway for TP01 and TP02 under the base case have been presented in **Table 3-15** and **Table 3-16**.

Table 3-21: Projected Total Traffic (in PCUs) on the Project Road

Being a six laned highway, based on the projected traffic using the recommended Base Case growth rates, none of the toll plazas will reach the designed capacity of 1,20,000 during the tenure of concession period.

4. TOLL REVENUE PROJECTIONS

4.1 Tolling Strategy

The project road has an "Open System" of toll collection which enables the concessionaire to collect tolls from through traffic as well as from short distance one. As mentioned earlier, there are four toll plazas of project corridor which are presented in **Table 4-1**.

S.No	Toll Plaza Name	Chainage
1	TP01 (Madapam TP)	Km 722.170
2	TP02 (Nathavalasa TP)	km 656.704
3	TP03 (Dukkavanipalem TP)	km 686.54
4	TP04 (Marripalem TP)	km 722.17

Table 4-1: Toll Plaza on Project Road Sections

However, as per the Schedule-M notification, Vizag bypass section will operate under a closed tolling system and Schedule A mentions that closed tolling will be implemented within four years of being handed over to InvIT Concessionaire. For analysis purpose, the closed tolling is considered to become operational by FY30. The fee to be levied and collected shall be due and payable at the fee plazas as presented in **Table 4-2**.

S.no	Fee Plaza
1	Main Fee Plaza (Km 686+540 Fee Plaza at Dukkavanipalem Village, Dist. Visakhapatnam)
2	Km 703+921 Fee Plaza at Mudapaka Village, Dist. Visakhapatnam
3	Km 711+050 Fee Plaza at Adduru village, Dist. Visakhapatnam
4	Km 713+880 Fee Plaza at Pinagadi Village, Dist. Visakhapatnam
5	Main Fee Plaza (Km 722+170 Fee Plaza at Marripalem Village, Dist. Visakhapatnam)

Table 4-2: Toll Plaza Locations for Closed Tolling at Vizag Bypass

The vehicle entering from any Interchange Fee Plaza will be recorded at the Entry fee Plaza and user fee will be collected at Exit Interchange Fee Plaza for the road section used by the vehicle between Entry and Exit Fee Plazas.

4.2 Schedule of User Fee

As per Schedule of User Fee for the project, the per km toll rates applicable from 2007-08 for normal tolling length and permanent structures, the revision basis and concessions are provided.

The concessions to traffic have been given in the form of rates as below:

Local traffic

Car / Jeep / Vans - includes local users owning a vehicle registered for non-commercial purposes, residing within a distance of 20 km from the toll plaza and crossing the same for commuting purposes. The discounted fee for these users is currently a monthly pass of Rs. 340.0.

Commercial vehicles - includes local users owning a commercial vehicle (excluding vehicles under National Permit), registered with address on the Registration Certificate

of a particular district and uses such vehicle for commuting on a section of National Highway, permanent bridge, tunnel or bypass, as the case may be, which is located within that district, shall be levied user fee on all toll plazas which are located within that district at the rate of fifty per cent of the prescribed rate of fee (single journey rate). No such concession shall be provided, if a service road or alternative road is available for use by such commercial vehicles. Thus, local commercial traffic has to pay only 50 percent of the normal ticket.

Daily Pass

When the vehicle has to cross the tolled section more than once in a day, the user shall have the option to pay one and half times (1.5 times) of the fee for a single entry; this pass shall be valid for 2 entries within 24 hours of purchase.

Monthly Pass

A user, who makes use of the project road frequently during a month, may opt to purchase a monthly pass upon payment of a charge equal to two-thirds of the fee payable for 50 single journeys; this pass can be used for a maximum 50 one-way journeys over the month of validity.

Thus, the different categories of toll tickets are as follows:

(i) Traffic paying normal toll rates (single trip)
(ii) Traffic paying return journey rates
(iii) Traffic paying monthly pass rates
(iv) Traffic paying local personal rates
(v) Traffic paying local commercial rates

4.3 Tolling Streams

The tolling stream distribution for each toll plaza location has been derived using the respective electronic toll collection (ETC) data of FY25 from April to November. The cash and exemption traffic data for FY25 (April–November) has been added into the ETC traffic distribution for Nathavalasa TP, Dukkavanipalem TP, and Marripalem TP. However, for Madapam TP, cash and exemption traffic data from January 2023 to December 2023 has been considered due to noise in the data from January 2024. The resultant tolling segmentation is presented in **Table 4-3**.

Ticket Type/Modes	Car	LCV	2A Truck	3A Truck	MAV	OSV
TP01- Madapam

Table 4-3: Tolling Distribution Including Exemptions & Violations (in %)

In case of cars, the normal paying car traffic is observed to be highest at TP03 with share of about 51 percent followed by TP04 with about 49 percent and other two toll plaza locations having a share of about 22-36 percent each. While the share of return passenger traffic is higher with about 58 percent at TP01 and 62 percent at TP02.

In case of freight vehicles, about 80-82 percent of 2A trucks are opting for single tickets at TP03 and TP04. While the share of 2A trucks opting for return tickets at TP02 and TP01 is relatively higher with about 43 percent and 22 percent respectively. Local commercial traffic is found to be highest at TP01 which could be the local interactions between Srikakulam and Narsannapeta.

About 85-90 percent of 3A/MAVs are likely to opt for single tickets along the PR except at TP02. At TP02 (Nathavalasa TP), 3A/MAVs opting for single ticket are bit lower with about 82-83 percent and slightly more return traffic.

Trip rate for local pass users is considered as 1.0, for monthly pass it is 1.67 across all modes. For daily pass, trip rate of 2.0 has been considered for all the modes.

From FY30, it is likely that closed tolling will be implemented on Vizag Bypass. In order to arrive at the traffic falling under different interchanges, the relevant streams have been worked out from OD surveys conducted at the TP03 and TP04. The entry exit traffic

stream summary at Dukkavanipalem TP and Marripalem TP under closed tolling is presented in **Table 4-4**.

Stream/ Mode	Car	LCV	2-axle Truck	3-axle Truck	MAV	OSV
TP03 - Dukkavanipalem

Table 4-4: Entry Exit Traffic Stream Summary at TP03 & TP04

For tolling segmentation at these two plazas of Vizag bypass, the segmentation presented in **Table 4-3** after adjusting the local traffic in return ticket has been adopted since it less likely that users would opt for local concessions in case of closed tolling. The adopted closed tolling segmentation from FY30 onwards is presented in **Table 4-5**.

Ticket Type/Modes	Car	LCV	2A Truck	3A Truck	MAV	OSV

Table 4-5: Tolling Distribution for Closed Tolling

Additionally, after completion of Raipur Vizag Expressway, there will be some traffic which would use only Aduru to Pinagadi section for reaching Vizag Port and pay for only 4 km length. It is likely that this long-distance traffic traffic will opt for single tickets rather than return. The segmentation adopted for Aduru to Pinagadi ticket type is presented in **Table 4-6**.

Ticket Type/Modes	Car	LCV	2A Truck	3A Truck	MAV	OSV
Single	95.0	95.0	95.0	95.0	95.0	95.0

Table 4-6: Tolling Distribution for Aduru to Pinagadi

4.4 Toll Rates

This section presents details on the toll rates that are likely to be imposed on the users of the project road during the study period. The toll rates (Rs/km) for the base year 2007-08 for different vehicle categories as per toll fee rules are presented in **Table 4-7**.

Mode	Base rate per km (in Rs)
CJV	0.65
LCV	1.05
2A Truck	2.20
3ATruck	2.40
MAV	3.45
OSV	4.20
Local Passenger Traffic	150

Table 4-7: Toll Rates in Rs/km for Different Vehicle Categories

The toll notification states that the 2007 toll rates shall be increased without compounding by three per cent each year with effect from the 1st day of April 2008 and such increased rate shall be deemed to be the base rate for the subsequent years.

In addition to this, the rate of fee for use of bypass forming part of a section of a National Highway constructed with a cost of Rs 10 crore or more, for the base year 2007, shall be one and a half times of the per km base rates specified above and the length of such bypass shall be excluded from the length of such section of National Highway. Also, the fee levied and collected hereunder for permanent bridge/ structures, as the case may be, having a length of 60 m or more on the basis of the equivalent length for structure as specified shall be due and payable at the toll plaza.

The existing tolling lengths being charged at the toll plazas with details of normal tolling lengths, bypass length (at 1.5 times) and equivalent structure lengths in FY24 is presented in **Table 4-8**.

TP	TP01	TP02	TP03	TP04
Base Length

Table 4-11: Traffic Movements for User Fee Collection Under Closed Tolling on Vizag Bypass

The applicable base rates shall be revised annually with effect from April 1 each year to reflect the increase in wholesale price index for the month of December of the immediate preceding year in which such revision is undertaken but such revision shall be restricted for 40 percent of the increase in wholesale price index.

Actual WPI information for December 2024 of 155.4 under 2011-12 series converted into 1999-00 series (155.4*1.873*1.641=477.636) has been used. WPI increase of 4.5 is considered for December 2025 (for FY27) & December 2026 (for FY28), while WPI forecast for remaining years beyond December 2027 has been considered as 3.5 percent as provided by the client.

The stream of existing toll rates being charged at each of the toll plazas of the project road is presented in **Table 4-12**.

TP/Mode	Car	LCV	2A Truck	3A Truck	MAV	OSV
TP01- Madapam	100	160	330	360	520	635

**-FY25 toll rates revised on 3rd June*

Table 4-13: Toll Rates at Project Road Toll Plazas in Rs

The users purchasing return journey tickets will pay 1.5 times the above toll rates; the traffic opting for monthly passes will pay 33.3 times (two-thirds of 50 single journeys) the normal traffic toll rates. All passes have been rounded to the nearest 5 Rupees as per fee rules.

4.5 Toll Revenue Estimates

The total combined assured remittance amount for FY25 for the project road toll plazas is Rs. 3,267.7 million as against the modelled revenue of Rs 3,343.2 million making it 2.3 percent higher than the actual remittance as presented in **Table 4-14.**

	TP01 - Madapam	TP02- Nathavalasa	TP03 and TP04 (Vizag Bypass)	Total
Actual Remittance	977.8	1,422.0	867.9	3,267.7
FY25 Revenue (Model)	1,019.6	1,417.2	906.4	3,343.2
Variation	4.3%	-0.3%	4.4%	2.3%

Table 4-14: Remittance vs Estimated Revenue Comparison for FY25

The realised ETC revenue for FY24 is Rs. 2,996.9 million and Rs. 2,159.8 million has been achieved during FY25 (8 months) for the project road. The past revenue for each toll plaza location is presented in **Table 4-15**.

FY/TP	TP01 – Madapam	TP02 – Nathavalasa	TP03 – Dukkavanipalem	TP04 - Marripalem	Total
FY23 (9 months)	462.8	687.0	136.2	119.7	1,405.7
FY24	952.0	1,292.4	375.8	376.8	2,996.9
FY25 (8 months)	666.5	900.6	286.0	306.8	2,159.8

Table 4-15: Past ETC Revenue (in Rs. million)

As per the site findings, WIM is installed in all lanes at three out of the four toll plazas, except at Dukkavanipalem TP. However, a weighbridge is available at all toll plaza locations, and no overloading charges are currently being applied.

In view of this, 7- day axle load survey data has been provided by the technical consultants of the client which has been analysed to understand the extent of overloaded vehicles at four toll plaza locations. The analysis shows similar overloading trends across the seven days. The findings of the overloading analysis are presented in **Table 4-16**.

MAV	68.2%	8.2%	6.4%	7.6%	9.6%	100.0%	1.6%

Table 4-16: Overloaded Vehicles on the PR

As observed from the seven-day axle load analysis, around 14 percent of MAVs at TP01 and 8-10 percent of MAVs each at remaining three TPs are above 20 percent overloading limit. Additionally, around 0.3 percent 3A trucks at TP01 and around 0.6-0.8 percent 3A trucks each at other three TPs are exceeding this limit.

However, the commodities such as fruits and vegetables, petroleum products, chemicals and gas, heavy machinery and industrial equipment as well as OD pairs with lead greater than 500 km are less likely to be overloaded. The revised overloading percentage after excluding these commodities in the category of above 20 percent overloading comes out to be around 4 percent MAVs at TP01 and less than 2 percent MAVs at each toll plaza location and less than 1 percent of 3A trucks fall into the revised overloading category which has been adopted for the further analysis.

The overloading vehicles are liable to pay the overloading penalty as per the provisions of the concession agreement. The concession agreement of the latest TOT project states that overloading penalty should be charged as per the NHAI overloading circular. As per the amended National Highways Fee (Determination of Rates and Collection) Rules, 2018, "the driver or owner or person in charge of a mechanical vehicle shall be liable to pay fee, for entering the overloaded vehicle on the National Highway, to the user fee collecting agency, equal to fees as presented in **Table 4-17**.

Percentage of excess load over Maximum Permissible Gross Vehicular Weight	**Multiplying factor to base rate fees**	**Fees**
0% to 20%	Two	[(Fees applicable for such category of mechanical vehicle under sub-rule (2) of rule 4) X (Multiplying factor)]
>20% to 40%	Four	
>40% to 60%	Six	
>60% to 80%	Eight	
>80% and above	Ten	

Table 4-17: User Fee for Overloaded Vehicles

However, as per the operational overloading practices at the toll plazas where overloading penalty is being charged, it is either the next higher category toll or two times the normal fee which is usually being collected.

Continuing with the practice of two times toll, since MAVs are heavily overloaded, with WIM in place at the toll plaza locations, the practice of charging them for one-time extra payment can be put in place. Even if 20 percent of these 3A Trucks and MAVs pay one time extra, it will result in a substantial gain in revenue, but it might not be practically possible to stop each vehicle and collect extra toll.

Although the quantum of overloaded vehicles is high but after factoring in the practical number of vehicles from whom overloading can be charged, under a more pragmatic scenario, it is assumed that around 25 percent of the overloaded category is charged for one-time additional payment. This results in around less than 1 percent of 3A & MAV AADT of FY25 at each toll plaza location are paying one-time extra toll. With appointed date likely to be achieved in middle of FY26 and considering the time required for putting the systems in place for overloading revenue collection, this additional revenue from overloaded vehicles is considered from FY27. The estimated total revenue from overloading in FY27 is Rs 14.3 million (Rs 7.3 million at TP01, Rs 4.6 million at TP02, Rs 1.0 million at TP03 and Rs 1.4 million at TP04).

However, with strict overloading compliance in place in the future years, the overloading percentages are likely to decline over the years of concession - a decline of 1 percent every year has been considered starting from FY28 onwards.

The year-on-year revenue from overloading is presented in **Table 4-18**.

Financial Year (FY) ending March	TP01	TP02	Total
2027	7.3	4.6	11.2
2028	6.0	2.2	8.2
2029	4.2	0.0	4.2
2030	2.1	0.0	2.1
2031 and beyond	0.0	0.0	11.2

Table 4-18: Overloading Revenue in Rs Million

At present, since overloading is being collected at Laxmipuram TP and Karapadu TP (Safeway concessions of TOT Bundle 1) which are above Madapam TP, it may be possible to collect overloading charges at Madapam and Nathavalasa TPs. In case of Vizag Bypass plazas, it may not be plausible to collect overloading as truckers may choose to go through the city via AH-45 to avoid payment of overloading charges. Therefore, the overloading revenue has been considered for Madapam and Nathavalasa TPs and presented as a scenario in toll revenue estimation.

4.6 Toll Revenue Projections

Toll revenue streams have been calculated assuming that:

- Toll would be collected for all 365 days in a year and for 366 days in a leap year
- Toll revenues have been presented from FY25 to FY55 in line with the maximum extendable concession period of 30 years

The toll revenue for each of the toll plaza and total corridor for the base case is presented in **Table 4-19**.

FY	TP01	TP02	TP03 & TP04 (Vizag Bypass)	Total
FY25	1,019.6	1,417.6	912.2	3,349.3
FY26	1,120.6	1,555.1	998.8	3,674.5
FY27	1,244.0	1,721.4	1,114.0	4,079.4
FY28	1,457.2	1,918.7	1,240.0	4,615.9
FY29	1,680.1	2,107.7	1,354.8	5,142.6
FY30	1,841.4	2,309.1	1,520.4	5,670.9
FY31	2,004.4	2,519.3	1,655.8	6,179.5
FY32	2,188.5	2,749.9	1,810.6	6,749.0
FY33	2,385.3	2,988.1	1,961.5	7,334.9
FY34	2,596.9	3,264.1	2,142.7	8,003.7
FY35	2,831.6	3,570.6	2,340.7	8,743.0
FY36	3,075.4	3,875.5	2,531.1	9,482.0
FY37	3,313.0	4,178.3	2,730.1	10,221.4
FY38	3,589.9	4,530.0	2,955.6	11,075.5
FY39	3,877.3	4,903.5	3,186.9	11,967.7
FY40	3,860.1	4,960.3	3,463.4	12,283.8
FY41	3,992.3	5,175.5	3,710.8	12,878.6
FY42	4,066.1	5,328.4	3,990.6	13,385.1
FY43	4,368.1	5,739.5	4,299.6	14,407.2
FY44	4,714.9	6,203.0	4,622.2	15,540.0
FY45	5,054.2	6,654.4	4,959.6	16,668.2
FY46	5,431.2	7,152.3	5,321.4	17,904.9
FY47	5,835.5	7,689.5	5,714.6	19,239.5
FY48	6,293.2	8,296.2	6,156.1	20,745.6
FY49	6,742.8	8,906.2	6,589.3	22,238.4
FY50	7,252.9	9,582.3	7,085.5	23,920.7
FY51	7,813.2	10,308.4	7,592.4	25,714.0
FY52	8,403.8	11,127.2	8,210.4	27,741.5
FY53	9,020.0	11,945.6	8,781.7	29,747.3
FY54	9,726.5	12,852.0	9,427.8	32,006.3
FY55	10,455.1	13,826.9	10,137.5	34,419.5

Table 4-19: Toll Plaza wise Toll Revenue in Rs Million

Majority of the revenue is expected to come from TP02 with about 40.5 percent of the total revenue from all the combined four toll plazas. Amongst other toll plazas, TP01 represent a share of around 31.6 percent of total revenue, while TP03 and TP04 collectively contribute the remaining 27.9 percent.

On the total revenue, vehicles paying normal tolls are 78.3 percent of total toll revenues for the project road sections and 20.2 percent of the traffic may opt for daily pass category. Remaining 1.5 percent may fall in monthly pass and local concession category.

The toll revenue by mode in percentage for all the toll plazas and total corridor for the base case is presented in **Table 4-20**.

Toll Plaza	Car	LCV	2-axle Truck	3-axle Truck	MAV	OSV	Total
TP 01- Madapam	18.7	1.6	16.0	9.2	54.3	0.1	100.0
TP 02- Nathavalasa	21.0	1.7	14.9	8.2	54.0	0.1	100.0
TP 03-Dukkavanipalem	11.6	1.9	13.9	9.9	62.5	0.1	100.0
TP 04- Marripalem	12.4	1.6	11.8	8.7	65.4	0.1	100.0
Total Corridor	18.1	1.7	14.7	8.8	56.5	0.1	100.0

Table 4-20: Toll Revenue (in %) for the Project Road by Mode

Majority of the revenue is expected to come from MAVs for all the four toll plazas with about 56.6 percent for the project road as a whole. Amongst other categories, car represents a share of around 18.1 percent of total revenue followed by 14.7 percent by 2A Trucks, and about 8.8 percent by 3A Trucks. LCV/Mini-Bus category is likely to generate about 1.7 percent revenue.

4.7 Scenario Analysis

For toll road projects, revenue streams are generally based on the assessment of the traffic volume (base and future) crossing the toll plazas and the applicable toll imposed on the user of the road. There is an inherent element of uncertainty in any forecast and whilst is not possible to measure risk in a strictly statistical sense (as many of the risks are largely or partly unknown), in this section an attempt is made at quantifying the main risks that could have an impact on this forecast.

The econometric approach used to derive traffic growth, is based on the estimation of GSDP growth rates for the influence area economies and traffic demand elasticity by mode; the estimation of both variables contains a certain degree of uncertainty which can be represented in the scenario analysis. Scenario analysis has been done in the following subheadings for the base case:

High Case

The high case is based on a more optimistic economic outlook for future years and higher elasticity values as compared to the base case. Therefore, traffic growth rates of 20 percent higher than the base case for every year and for all the mode are considered.

Low Case

A growth rate of 20 percent lower than base case for all types of vehicles has been considered in the present analysis to reflect uncertainty with regard to economic performance of PIA states and lower elasticity values.

With Overloading Revenue at Madapam and Nathavalasa

As mentioned above, this scenario includes the overloading revenue from Madapam and Nathavalasa TPs.

The results of different scenarios are presented in **Table 4-21**. A comparison versus base case has been presented for the Present Value of the project (at 12 percent discount rate) and the compounded annual growth rate (CAGR) from FY25 to FY45/FY55.

FY End	Base without overloading- Closed tolling from FY30	High Growth (+20%)	Low Growth (-20%)	With Overloading at Madapam and Nathavalasa
2025	3,349.3	3,349.3	3,349.3	3,349.3

2055	34,419.5	43,911.3	26,995.9	34,419.5
PV12 FY25 till FY45	50,480.0	55,080.3	46,369.1	50,496.6
PV12 till FY45 vs base		9.1%	-8.1%	0.03%
CAGR FY25 to FY45	8.4%	9.3%	7.4%	8.4%
PV12 FY25 till FY55	62,884.1	70,393.8	56,422.0	62,900.7
PV12 till FY55 vs base		11.9%	-10.3%	0.03%
CAGR FY25 to FY55	8.1%	9.0%	7.2%	8.1%

Table 4-21: Comparison of Base Revenues to Alternate Traffic Growth Assumptions for the Total Corridor (in Rs. million)

The high case scenario has a positive increase on revenue PV of about 9.1 percent versus base case (till FY45) whereas low case may result in a lower PV than base case by 8.1 percent. The revenue from overloading scenario is marginally higher than the base case by 0.03 percent.

The project road revenues will have a CAGR of 8.4 percent for the period up to FY45 under the base case.

EXECUTIVE SUMMARY

Project Overview

The project highway, NH-16, is the major highway in India that runs along the eastern coast, connecting Dankuni, West Bengal with Chennai, Tamil Nadu and is a crucial part of the Golden Quadrilateral project aimed at enhancing connectivity between major cities in India. The NH 16 highway covers 1,764 kilometres and passes through the states of West Bengal, Odisha, Andhra Pradesh and Tamil Nadu.

The project road section, Gundugolanu-Devarapalli-Kovvuru starts at km 15.320 near Gundugolanu and ends at km 85.204 at Kovvuru with a length of about 70 km. The project road falls under the jurisdiction of Eluru and East Godavari districts passing through settlements of Kovvuru, Pangidi, Devarapalli, Veerampalem, Pullalapadu, Avapadu, Hanumanlagudem, and Gundugolanu. There is one operational toll plaza on the project road near Veeravalli (km 53.700) as part of the concession. This project has been offered by NHAI to National Highways Infra Investment Managers Private Limited (NHIIMPL) for transfer to InvIT in the fourth round for a concession period of 20 years with maximum extension till 30 years.

Figure 0-1 shows the context and alignment of project road with major places along the highway.

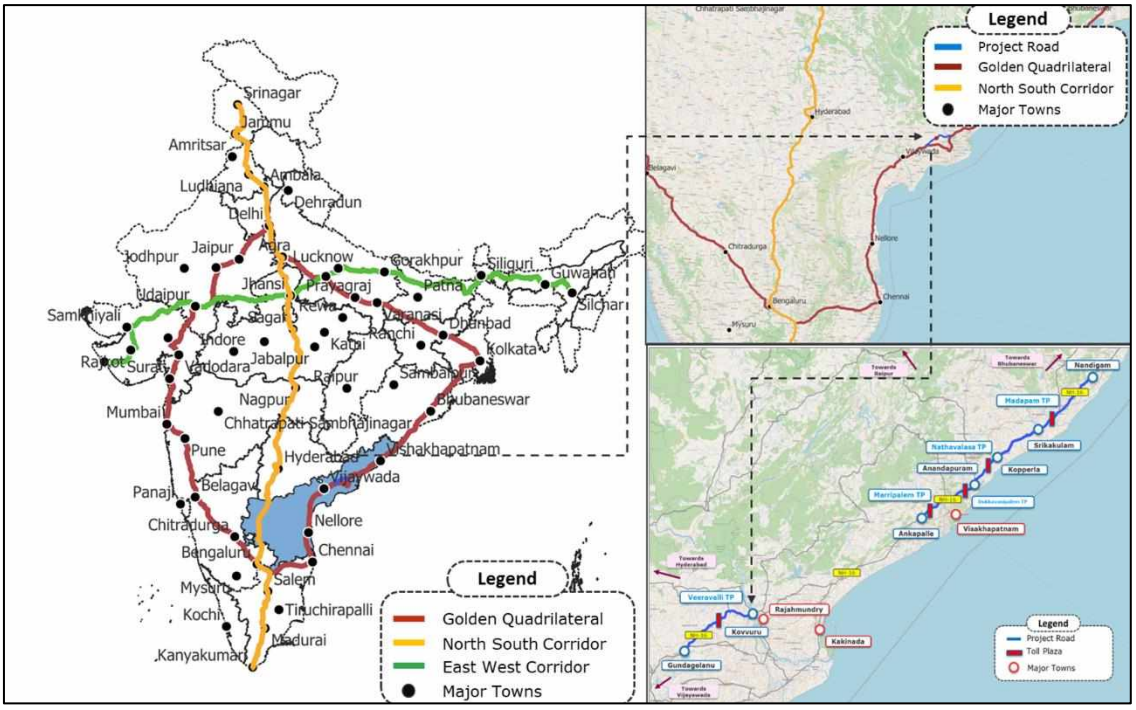

Figure 0-1: Gundugolanu-Kovvuru Section and Location of Toll Plaza

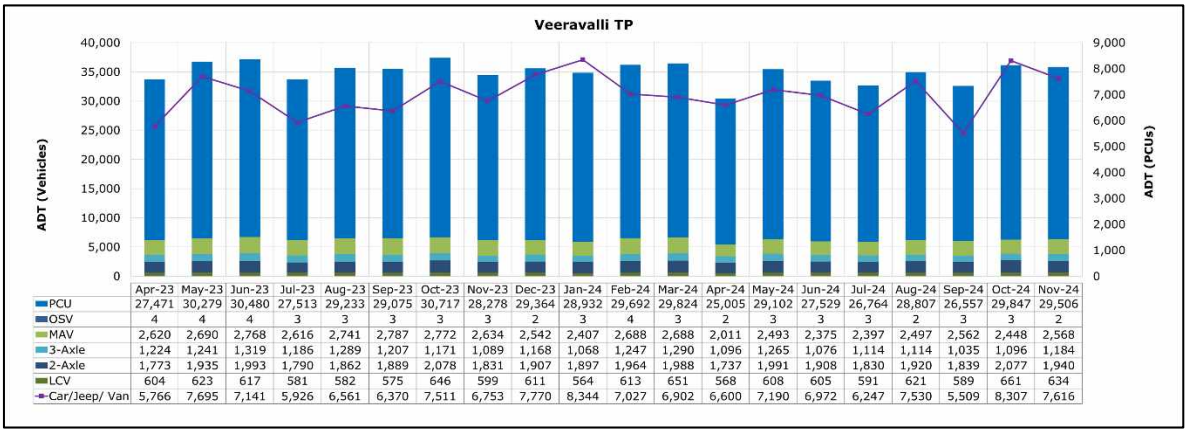

Project Road Characteristics and Profile of Influencing Districts

The project road serves for long-distance traffic, which is primarily plying between Kolkata/Bhubaneswar/Visakhapatnam/northern region and Vijayawada/Bengaluru/Chennai/southern region. Apart from long-distance traffic, it also

serves the short-distance traffic, which is mainly generated between Kovvuru/Rajahmundry/Tuni/Ankapalle/Visakhapatnam located on the north of the toll plaza and Gundugolanu/Eluru/Vijayawada located on the south of the toll plaza. The project road section falls under the jurisdiction of Eluru and East Godavari districts in the state of Andhra Pradesh.

Traffic Volume and Vehicle Composition - AADT for FY25

The past toll traffic data for the toll plaza was made available by the client from April 2023 to November 2024 is presented in **Figure 0-2**.

Figure 0-2: Month on Month Traffic Data for Veeravalli TP

AADT for FY25

Due to the maintenance work on the Kovvur bridge, heavy trucks were not allowed to use the bridge from 30th March 2024 to 8th May 2024. Therefore, data from May 9, 2024, to November 2024 has been considered for freight modes. For cars, complete data from April to November (including data for the months of April and May) has been considered.

The AADT for FY25 is estimated by annualizing the ETC data from April/May 2024 to November 2024. A seasonal correction factor (SCF), based on an average of 7/8–12-month factors derived for FY23 from the toll data of the adjacent toll plazas of Krishnavaram and Vempadu under Safeway Concessions, has been adopted. Additionally, cash and exempt traffic for FY25 (Apr to Nov) have been added to the estimated ETC ADT of Veeravalli toll plaza.

FY25 AADT along with ADT, 7/8–12-month SCF, cash and exempt traffic is presented in in **Table 0-1**.

Particulars	CJV	LCV	2A	3A	MAV	OSV	PCUs
Veeravalli TP							
A. ETC (Apr-Nov)	6,996	615	1,929	1,126	2,477	3	28,244
B. SCF	1.02	1.00	1.00	1.00	1.02	1.02	
C. ETC AADT = A*B	7,164	614	1,925	1,126	2,526	3	28,619
D. Cash (Apr 24 - Nov 24)	70	2	3	2	2	2	106
E. Exempt (Apr 24 - Nov 24)	202	5		2	3	1	234
F. AADT FY25 (Estimated) = C+D+E	7,436	621	1,928	1,130	2,530	5	28,949

Table 0-1: AADT-FY25

Travel Pattern

Passenger Traffic:

- About 58.2 percent of cars and 46.9 percent of buses are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Devarapalli/Rajamahendravaram and surroundings. The traffic in this region reflects the heavy commuter movement within these prominent towns, likely driven by daily business and social interactions.
- In addition, around 11.7 percent of cars and 15.3 percent of buses are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Vishakapatnam and surroundings.
- Also, about 10.8 percent of cars and 27.0 percent of buses are found to be travelling from/to Suryapet/Hyderabad and beyond to/from Devarapalli and beyond.

Freight Traffic:

- About 59.3 percent of MLCVs and 28.1 percent of LCVs are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Devarapalli/Rajamahendravaram and surroundings.
- In case of heavy freight vehicles, about 23-27 percent of 2A & 3A trucks and around 13.4 percent of MAVs are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Devarapalli/Rajamahendravaram and surroundings.
- Additionally, around 16 percent of 2A & 3A trucks and around 12 percent of MAVs are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Vishakapatnam and surroundings.

Network Impacts

Impact of Khammam - Devarapalli Expressway

The total diverted traffic estimated for FY25 after the operation of Khammam - Devarapalli Expressway at Veeravalli TP is presented in **Table 0-2**.

Modes	Car	LCV	2A	3A	MAV
Veeravalli TP	0.0	0.7	2.2	3.8	4.1

Table 0-2: Total Impact (%) Due to Khammam - Devarapalli Expressway – FY25

This traffic has been grown and considered appropriately in the respective years of impact. The proposed expressway will be a greenfield alignment and considering gradual build-up of traffic on the alternate routes, the diversion impact is considered from FY27 onwards under Base Case. Owing to the gradual shift of traffic away from the project road, the traffic impacts have been assumed to take place in phases with about 50 percent in FY27, 75 percent in FY28 and 100 percent from FY29 onwards.

Traffic Growth Rates

The estimated traffic growth rates for the project road based on the elasticity approach along with the implied growth rates after considering the impact of diversions have been presented till FY55 in line with the maximum extendable concession period of 30 years in **Table 0-3**.

FY/Modes	Cars	LCV	Bus/ 2A	3A	MAV/ OSV	Cars	LCV	Bus/ 2A	3A	MAV/ OSV
	Normal Growth Rates					Implied Growth Rates				
FY26	7.4	3.3	3.4	2.7	6.7	7.4	3.3	3.4	2.7	6.7
FY27	7.3	3.3	3.3	2.7	6.6	7.3	3.3	2.2	0.7	4.4

2051	83,718	81,824
2052	86,620	84,671
2053	89,630	87,624
2054	92,753	90,690
2055	95,995	93,871
CAGR (%) (FY25 to FY45)	4.4	4.3

Table 0-5: Projected Traffic at PR in PCUs

As per the traffic projections estimated above, the six-laning of the PR section is anticipated to take place in FY35 and FY36.

It is to be noted, the majority of the distinct structures on the PR section are already six-laned, and the required land for the expansion to a six-lane carriageway is available. Thus, disruptions during the construction process are expected to be minimal. Cost ratio analysis suggests a minimal change in share of PR when compared in existing 4 lane configuration (during construction with a lower speed) with 6 lane configurations. Hence, no significant impact on traffic is expected during expansion of PR.

Tolling Segmentation

The tolling stream distribution for the project road has been derived from the average of ETC toll data of FY25 from April 2024 to November 2024. The cash and exemption traffic (April – November 2024) have been added to the ETC traffic distribution and the resultant tolling segmentation is presented in **Table 0-6**.

Type	Car	LCV	Bus/2A Trucks	3A Trucks	MAV	OSV
Single	48.2	67.4	54.4	61.8	91.2	100.0
Return	45.5	30.1	36.9	23.0	8.2	
Monthly	0.0	0.0	1.3	0.0	0.0	
Local personal	3.0					
Local commercial	0.5	1.8	7.4	15.0	0.4	
Exemptions and Violations	2.9	0.7	0.0	0.2	0.1	
Total	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

Table 0-6: Tolling Distribution Based on Toll Data of FY25

Tollable Length and Toll Rates

In case of the project road, the details of normal tolling lengths, bypass length (at 1.5 times) and equivalent structure lengths being charged at Veeravalli toll plaza are presented in **Table 0-7**.

Veeravalli TP at km 53.700	FY25 onwards
A. Normal	24.3590
B. Bypass	43.6930
C. Eq. structure	1.8320
Base Length	69.8840
Tolling Length = A+(B*1.5) + (C*10)	108.2185

Table 0-7: Tolling Lengths (in km) for the Project Road

The stream of toll rates likely to be charged basis schedule -M lengths and adopted WPI assumptions at the toll plaza of the project road in cardinal years till FY55 is presented in **Table 0-8**.

FY	Car	LCV	Bus/ 2-axle Truck	3-axle Truck	MAV	O/size/ HME	Car Local
Veeravalli TP							
2025	160	255	535	585	840	1,025	340
2030	195	315	660	720	1,035	1,260	415
2035	240	385	805	880	1,265	1,540	510

2051	13,496.9
2052	14,554.0
2053	15,640.8
2054	16,828.6
2055	18,102.8
PV12 FY25 to FY45	24,441.3
CAGR FY25 to FY45	8.5%
PV12 FY25 to FY55	30,946.1
CAGR FY25 to FY55	8.2%

Table 0-9: Base Case Revenue (in Rs million)

The project road will have a CAGR of 8.5 percent for the period between FY25 to FY45.

1. INTRODUCTION

1.1 General

National Highways Authority of India (NHAI) has setup NHAI InvIT to monetize its completed and operational National Highway projects with the objective of mobilizing additional resources through capital markets. The project road section with an aggregate length of 70 kilometers viz., Gundugolanu-Kovvuru of NH-16 (Old NH-4) in the state of Andhra Pradesh referred to as Project Road (PR), has been offered by NHAI to National Highways Infra Investment Managers Private Limited (NHIIMPL) for transfer to InvIT in the fourth round for a concession period of 20 years with maximum extension till 30 years.

The project highway, NH-16, is a major highway in India connecting Kolkata with Chennai and is part of the East-West corridor envisaged under the National Highway Development Program (Phase – II). NH-16 passes through the cities of Bhubaneswar, Visakhapatnam, Vijayawada, Guntur, Ongole, and Nellore, serving as a critical link between the eastern coastal regions of the country. This highway plays a vital role in facilitating trade and transportation along the eastern coast of India, contributing to regional development and connectivity. **Figure 1-1** shows the alignment of project road along NH-16.

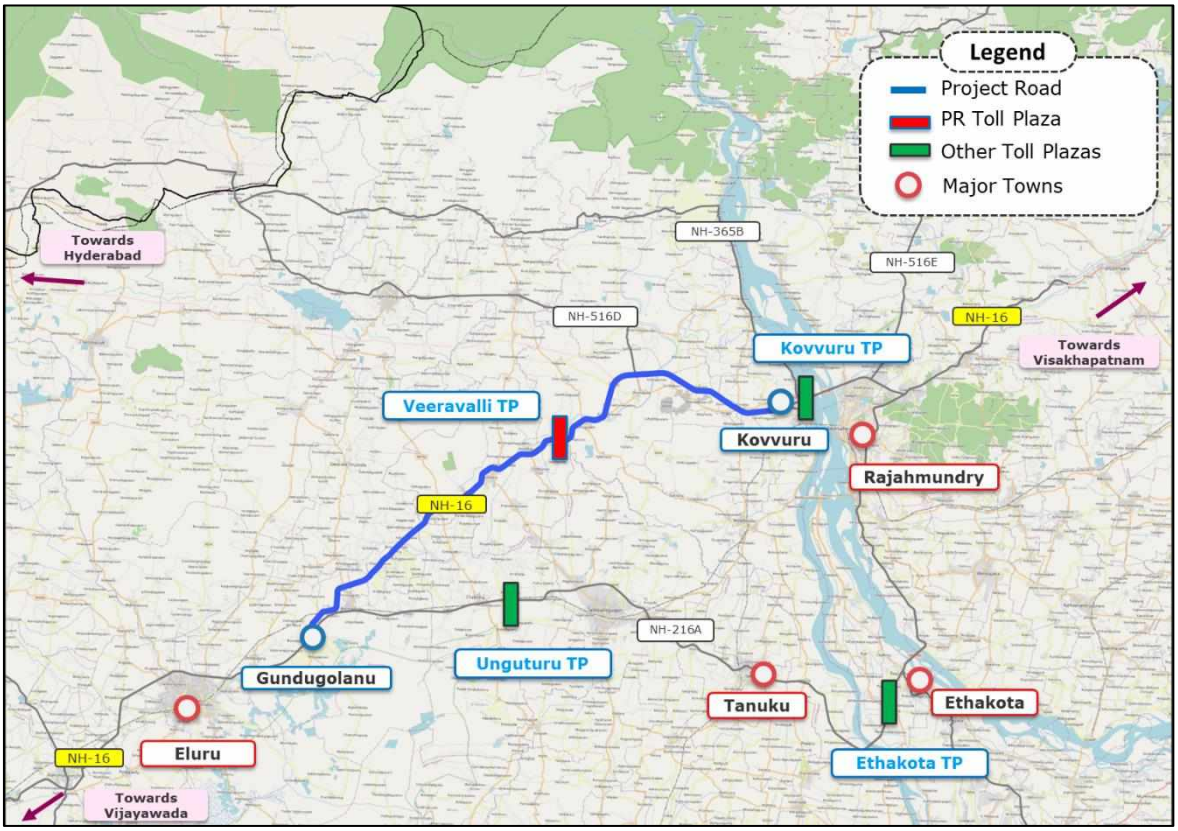

Figure 1-1: Alignment of Project Road

National Highways Infra Investment Managers Private Limited, the Investment Manager to InvIT has appointed Ramboll India Private Ltd as the traffic consultant to carry out a study for assessing the present traffic levels, travel pattern and future traffic & revenue

estimation till FY55 duly considering the network characteristics, future economic perspective in the influence area of the project.

1.2 Scope of Services

The scope of the study includes the following:

- Undertake Traffic Survey on the highway section as per the following:
  - Seven days 24 hours Videography Traffic Counts at or near the existing toll plaza locations on the project road to derive the Average Daily Traffic (ADT)
  - One day Origin-Destination survey at or near the existing toll plaza locations to assess the existing travel pattern of vehicles plying on the project road – origin and destination.
- Estimation of the base year AADT FY25
- Analysis of OD data to cover:
  - Regional distribution of traffic and influence factors for different zones contributing traffic on the corridor
  - Identification of Project Influence Area from analysis of travel pattern - regional distribution of traffic,
  - Main traffic generators (industrial areas, towns, ports etc.)
  - Commodity composition- Goods type distribution
  - Top OD pairs by vehicle types
- Review of past traffic studies, traffic/toll data and other relevant reports as may be available to determine category wise volume of traffic for past years as well as for current year
- To identify competing route and analyse the network conditions, traffic characteristics & level of toll charged and the advantage/ disadvantage of the competing road and their impact on the project traffic
- Carry out a study of past economic performance of influence area
- Diversion analysis, wherever needed – cost ratio-based diversion analysis using spreadsheets to be carried out for respective potential OD pairs.
- Preparation of traffic projections till year FY55 in three scenarios – low, most likely and high
- Capacity analysis of the road or any other requirements for potential capacity augmentation
- Estimation of tollable traffic streams by toll category and estimation of toll

revenue as per categories of traffic streams stipulated in the tolling schedule for the study period

- Review future road and transportation network developments in the area of influence of the project and identify those schemes that may impact positively or negatively traffic on the toll road
- Identify factors which may have a positive and / or negative impact on the traffic - all major developments like DFC, industrial corridors, economic corridors, ports, Bharatmala, Sagarmala
- Scenario Analysis of toll revenue – Critical parameters of diversion (if applicable) and three scenarios of traffic growth (most likely, low and high).

1.3 Structure of Report

This report is divided into four chapters, including this introduction chapter. Chapter 2 details upon the project road characteristics and socio – economic profile of the districts in the project influence area including the estimation of AADT and travel characteristics in the Project Influence Area (PIA). Chapter 3 contains the details on the derivation of traffic growth rates used for traffic forecasting and presents traffic projections for the study period. Chapter 4 presents the details regarding tolling strategy, toll rates and the revenue projections for the duration of the concession.

2. TRAFFIC SURVEY AND ANALYSIS

2.1 General

In order to understand the traffic characteristics, the volume of traffic and travel pattern of vehicles plying on the project road were collected through primary surveys. This chapter presents the details of the project road characteristics, traffic surveys carried out, their analysis and the salient findings. The results of the analysis will be utilized in assessing the traffic growth and estimation of traffic and revenue forecast on the project road for the concession period.

2.2 Project Road Characteristics

The project road section, Gundugolanu – Devarapalli - Kovvuru, a part of the NH-16 in the state of Andhra Pradesh, starts at km 15.320 near Gundugolanu and ends at km 85.204 at Kovvuru with a length of about 69.8 km. The project road falls under the jurisdiction of Eluru and East Godavari districts passing through settlements of Kovvuru, Pangidi, Devarapalli, Veerampalem, Pullalapadu, Avapadu, Hanumanlagudem, and Gundugolanu. There is one operational toll plaza on the project road near Veeravalli (km 53.700) as part of the concession. PR serves the long-distance traffic majorly plying between Chennai/Bangalore and Bhubaneswar/Kolkata.

The PR also serves the short distance traffic for both passenger and freight which is mainly generated between Eluru/Vijayawada/ Hyderabad/ to Rajahmundry/ Kakinada/ Vishakhapatnam.

There are 8 tolling lanes in each direction out of which four lanes are operational including dedicated lane for OSVs at the toll plaza location. The toll plaza is currently operated by M/s Riddhi Siddhi Associates. Moreover, a WIM (weigh in motion) is installed in tolling lanes, but currently no overloading is charged.

The alignment of project road and toll plaza location is shown in **Figure 2-1**.

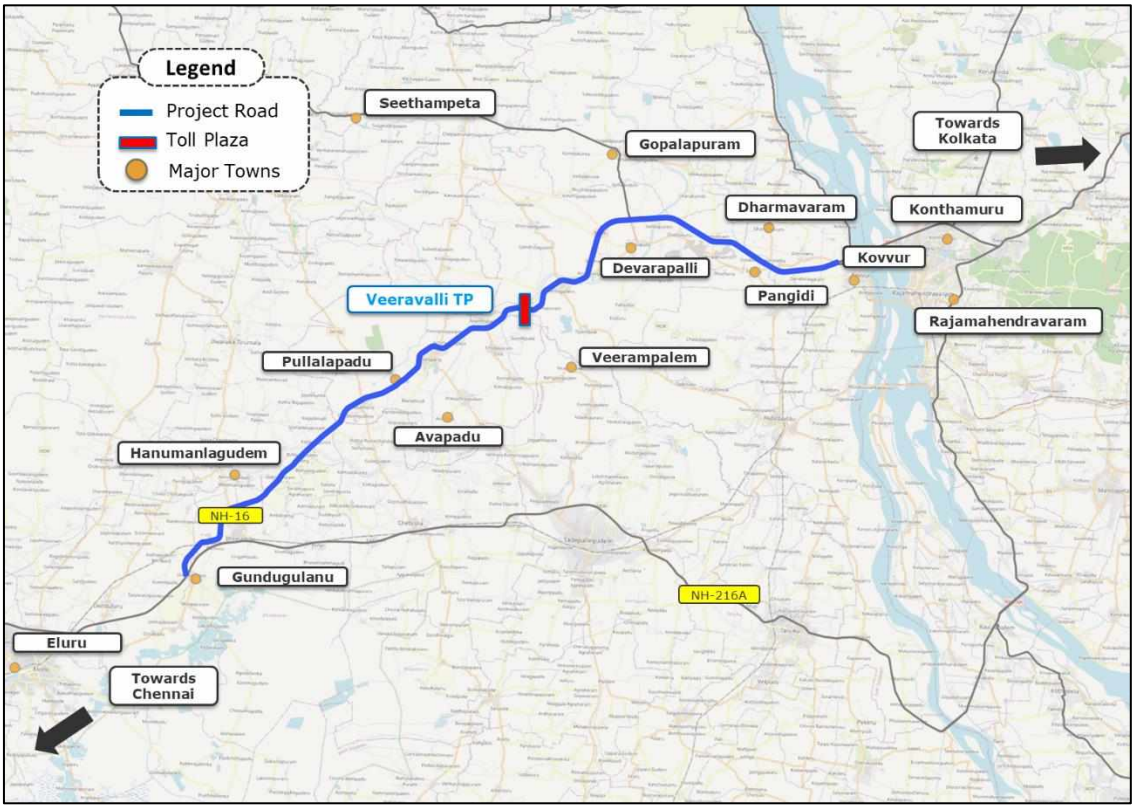

Figure 2-1: Project Road and Location of Toll Plaza

The project road provides the shorter link (by about 40 km) between Gundugolanu and Rajahmundry as compared to route via NH-216A and in wider context, serves long distance traffic originating/destined South of Gundugolanu and travelling to regions on the North of Rajahmundry and vice versa.

2.2.1 Profile of Project Influence Area Districts

The project road section passes through the districts of East Godavari and Eluru in the state of Andhra Pradesh. A brief description of the profile of the districts is presented below.

East Godavari District

East Godavari district is situated in the northeastern region of Andhra Pradesh. The district covers an area of about 12,807 square kilometers, making it one of the largest districts in the state.

Agriculture plays a crucial role in East Godavari's economy, with the fertile delta formed by the Godavari River enabling extensive paddy cultivation. The district is also known for its coconut and oil palm plantations, with oil palm covering 29,408 hectares out of a potential 51,309 hectares. There is room for expansion, particularly with government support under the Oil Palm Development Programme.

Under the Prime Minister Formalisation of Micro Food Processing Enterprises (PMFME) Scheme, banana has been selected as the One District One Product (ODOP) for East Godavari district.

Rajahmundry, the district's largest city, is a key cultural and commercial hub, with industries including paper manufacturing, textiles and food processing. Moreover, sand mining activities are prominent along the Godavari river, particularly in areas like Pithapuram and Alamuru, contributing to the district's construction industry.

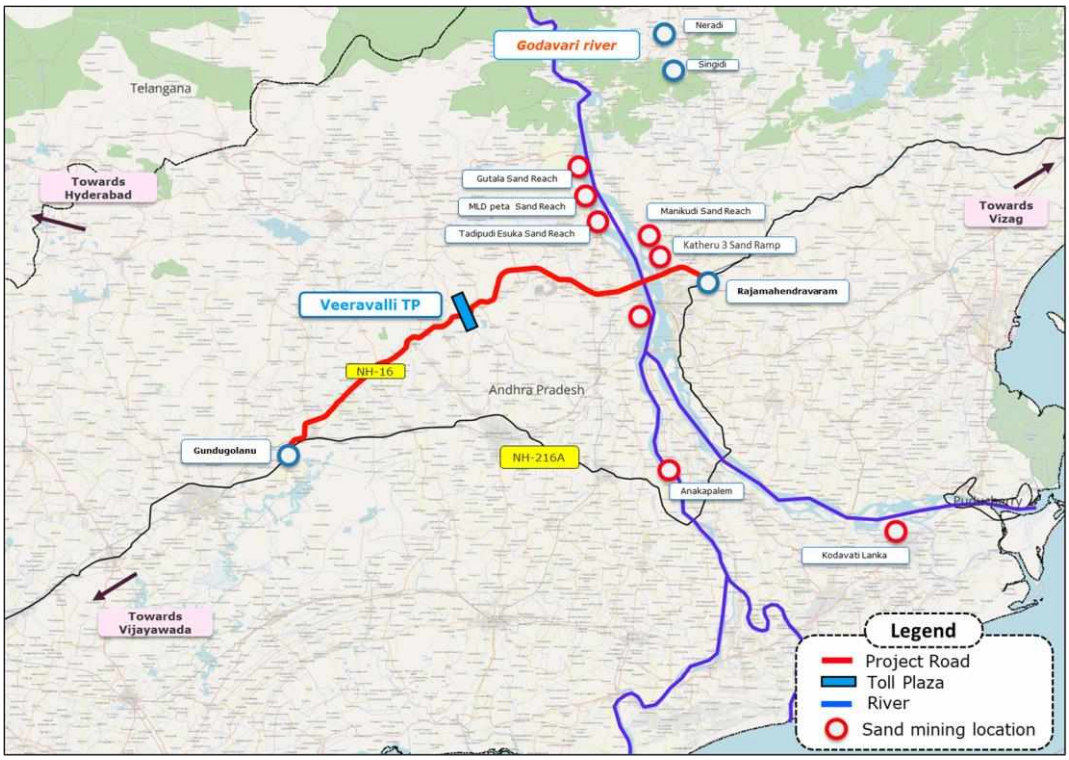

Figure 2-2: Location of Sand Mining Areas in Vicinity of PR

East Godavari district is rich in natural resources including bauxite, limestone, and natural gas, which fuel industrial development in sectors such as cement production, ceramics and chemicals. Prominent industrial estates are located in Rajahmundry, Kakinada, and Peddapuram with companies like Coromandel International and Andhra Paper leading the industrial sector.

As per the 2011 census, the district's population is approximately 5.1 million, with around 38 percent residing in urban centers like Rajahmundry, Kakinada, and Amalapuram. The working population makes up about 43 percent of the total, reflecting the district's growing urbanization and diversified economic base.

Eluru District

Eluru district is located in the western region of Andhra Pradesh. The district spans an area of approximately 6,679 square kilometers. The city of Eluru serves as the district's administrative and commercial centre, housing industries related to oil processing, textiles, and manufacturing.

Eluru is an agriculturally rich region, with fertile lands supporting the cultivation of paddy, sugarcane and coconut. Aquaculture, particularly prawn and fish farming, is a major economic activity in the coastal and deltaic areas. The district is also known for its extensive oil palm plantations, covering an area of about 2.15 lakh hectares, out of a

potential 4.77 lakh hectares. There is significant potential for further expansion of oil palm plantations. Under the PMFME Scheme, pulses i.e. black gram and green gram have been approved as the One District One Product (ODOP) for Eluru district.

Eluru district has significant mineral resources, particularly limestone, which supports cement production. Some of the major cement factories are Ambuja Cements Limited, The Ramco Cements Ltd., Zuari Cement Ltd., Shree Chakra Cement Ltd., Chettinad Cement, Andhra Cements Ltd., UltraTech Balaji Cement Works, and Dalmia Cement Factory.

Figure 2-3: Location of Cement Factories Areas in Vicinity of PR

The major industrial estates are situated in Eluru, Bhimadole and Denduluru, where industries like food processing, oil palm refineries and textiles operate. Oil palm seed gardens are under development at Muthanaveedu and Gopannapalem in Eluru, further boosting the district's prominence in palm oil production.

According to the 2011 census, Eluru district has a population of approximately 2.4 million, with around 30 percent living in urban areas.

The overall industrial profile in the surrounding areas of the project section is presented in **Figure 2-4**.

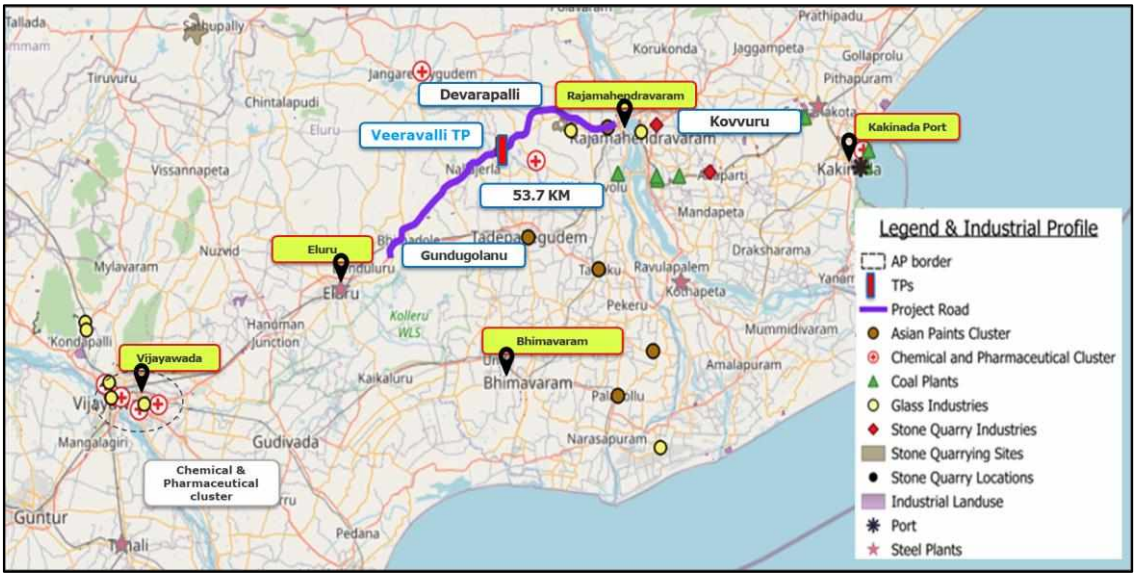

Figure 2-4: Industrial Profile of PR Section

2.3 Traffic Surveys

In order to understand the characteristics and the volume of traffic using the project road, data on road network, traffic and travel pattern of vehicles plying on the project road were collected through primary traffic surveys. Traffic volume video graphic survey for seven days and origin-destination (OD) survey as roadside interview for one day at toll plaza location was conducted on the project road. The schedule of the traffic surveys and location on the project road are given in **Table 2-1**.

Location	Chainage	Duration	Date(s)
Veeravalli TP	**Classified Traffic Volume Counts**		
	km 53.700	7 Days	22nd July 2024 – 28th July 2024
	Origin and Destination Survey		
	km 53.700	1 Day	23rd July 2024

Table 2-1: Traffic Survey Locations and Schedule

Trained enumerators were engaged for conducting traffic surveys under the supervision of experienced transport planner. The vehicle classification as generally used in the traffic surveys of NHAI studies along with their PCU values, as suggested in IRC: 64 – 1990, are presented in **Table 2-2**.

Vehicle Type	PCU Factor
Motorized Vehicles	
Car, Jeep, Van &Taxi	1.0
Two –Wheeler	0.5
Three-Wheeler (Auto-Rickshaw)	1.0
Mini-Bus/ School Bus	1.5
Govt. Bus/ Private Bus	3.0
Mini LCV/Max Pick Up	1.0
Light Commercial Vehicle (LCV)	1.5
2-Axle Truck	3.0
3-Axle Truck	3.0
Multi-Axle Vehicle (MAV 4-6 Axle)	4.5
HME	4.5
Agricultural Tractor	1.5
Agricultural Tractor with Trailer	4.5
Non – Motorised Vehicles	
Cycle	0.5
Cycle Rickshaw	2.0
Animal Drawn Cart	6.0

Table 2-2: Vehicle Classification and PCU Factors

2.4 Traffic Characteristics

The data collected from the traffic volume count survey was analysed in order to get the results with respect to existing traffic intensity, flow pattern, hourly variation, and composition of traffic on the study road network. The various traffic characteristics have been analysed under the following heads:

- Average Daily Traffic (ADT)
- Daily variation, Hourly variation, and Traffic composition
- Annual Average Daily Traffic (AADT)

2.4.1 Average Daily Traffic (ADT)

The traffic volume data collected at the toll plaza location during the seven days survey has been analysed. The summary of ADT in terms of vehicles and PCUs is presented in **Table 2-3**.

Mode	Veeravalli Toll Plaza
Tollable vehicles	
Car/Jeep/Van/Taxi	5,448
Minibus	68
Standard Bus	705
Mini LCV	875
LCV	1,168
2 Axle	689
3 Axle	1,151
MAV (4-6 Axle)	2,387
HMV/ MAV (=>7 Axle)	4
Non Tollable vehicles	
Two Wheeler	4,463
Auto Rickshaw	391
Agri. Tractors	130
Total Non-Motorised	28
Total Vehicles/PCUs	
Total Tollable Vehicles	12,494
Total Non Tollable Vehicles	5,012
Total Vehicles	17,506
Total PCU	29,763
Tollable PCU	26,567

Table 2-3: Average Daily Traffic at Veeravalli Toll Plaza

- Total vehicles of about 17,506 were observed on an average crossing Veeravalli Toll Plaza across the seven days.
- The share of passenger and freight vehicles in total traffic is 63.4 percent (11,103 vehicles) and 36.6 percent (6,403 vehicles), respectively.
- Considering the passenger vehicle categories, car traffic has a share of around 31.0 percent (5,448 vehicles) while buses have a share of around 4.0 percent (705 vehicles) of total traffic.
- In freight traffic, MAV traffic has a share of about 13.7 percent (2,387 vehicles), 3A trucks have a share of about 6.6 percent (1,151 vehicles) and 2A trucks account for 3.9 percent (689 vehicles) of total traffic.

2.4.2 Daily Variation, Hourly Variation and Traffic Composition

The day wise variation, hourly variation and the traffic composition at the toll plaza location is presented in **Figure 2-5**.

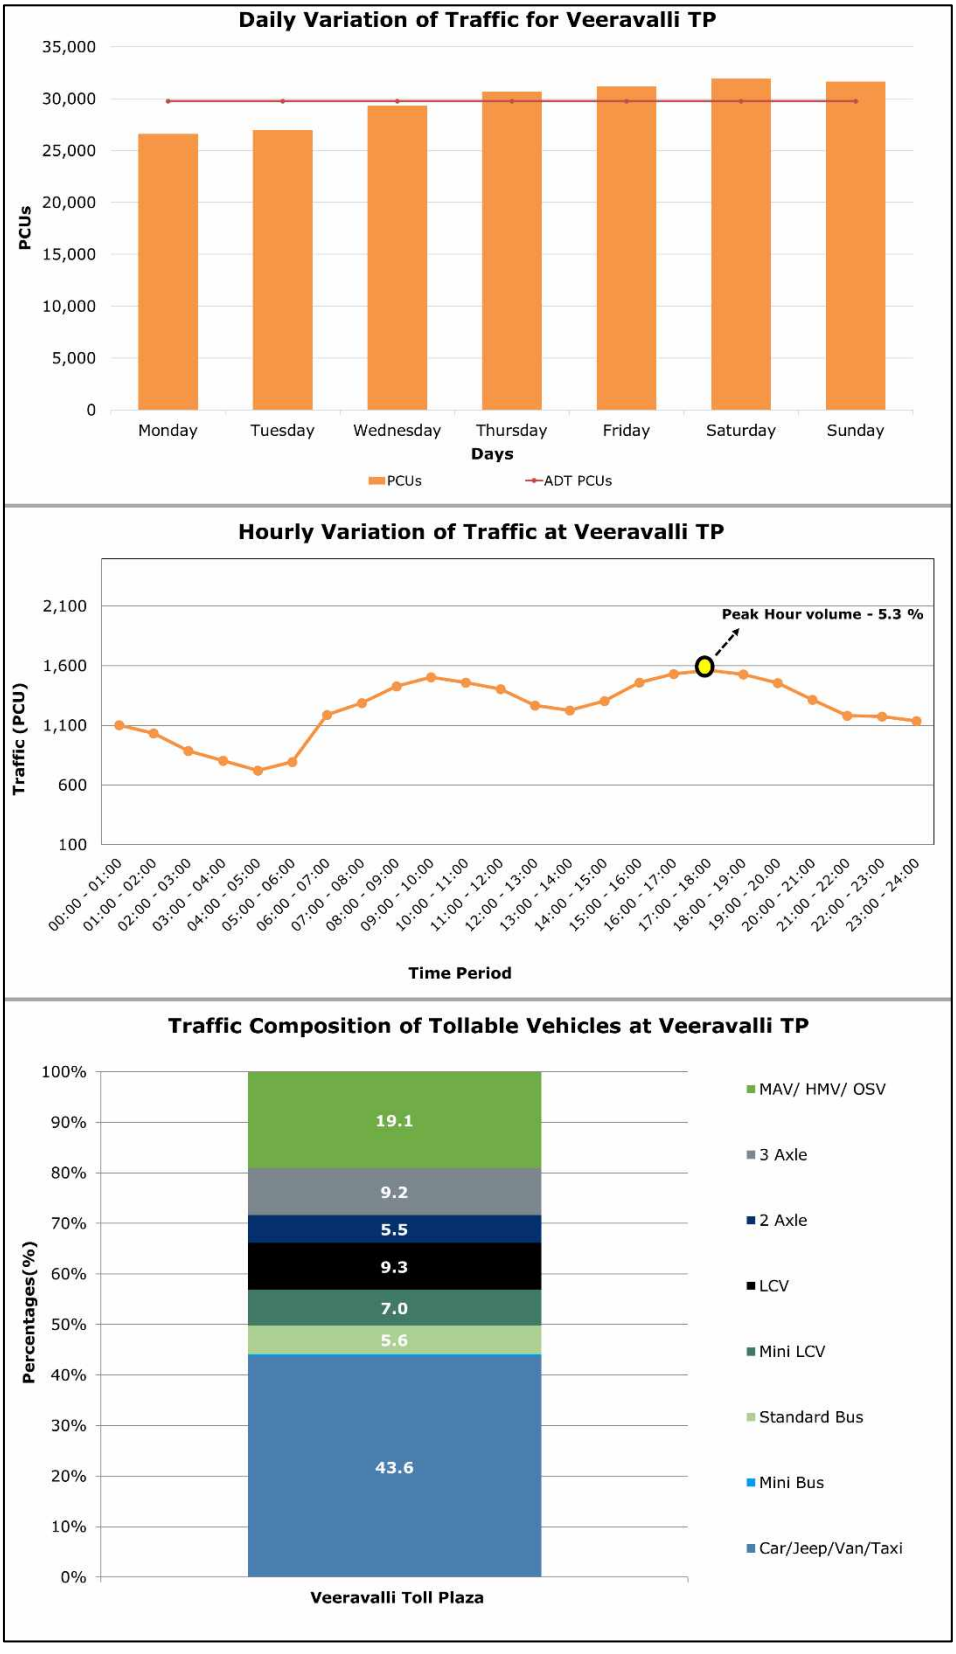

Figure 2-5: Daily Variation, Hourly Variation and Traffic Composition

- Traffic is usually lower on Mondays due to closure of markets/factories on Sundays in Vijayawada, Guntur, and nearby areas. With markets/factories opening up from Monday, traffic usually picks up from Tuesday onwards and remains consistent over the rest of the days.

- The directional distribution at the toll plaza location is almost equal with Kolkata - Chennai having a directional share of around 48.9 percent.

2.4.3 Comparison of Toll Data with TVC

ETC vs TVC Excluding Cash and Exemptions Traffic

The TVC survey was conducted from 22nd July 2024 to 28th July 2024. A comparison between TVC and ETC data (7-day average) for the days of survey is presented in **Table 2-4**.

Day/Date	CJV	LCV	2-Axle	3-Axle	MAV/ OSV	LCV/ 2A	Total	PCUs
Toll Data (ETC)	6,071	596	1,841	1,199	2,436	2,437	12,143	27,048
TVC	6,323	1,236	1,393	1,151	2,390	2,629	12,494	26,567
Variation (Toll data minus TVC)	-252	-640	447	48	46	-192	-351	481
Variation (%)	-4.0	-51.8	32.1	4.2	1.9	-7.3	-2.8	1.8

Table 2-4: Comparison Between TVC and ETC Data Excluding Cash & Exempted Traffic

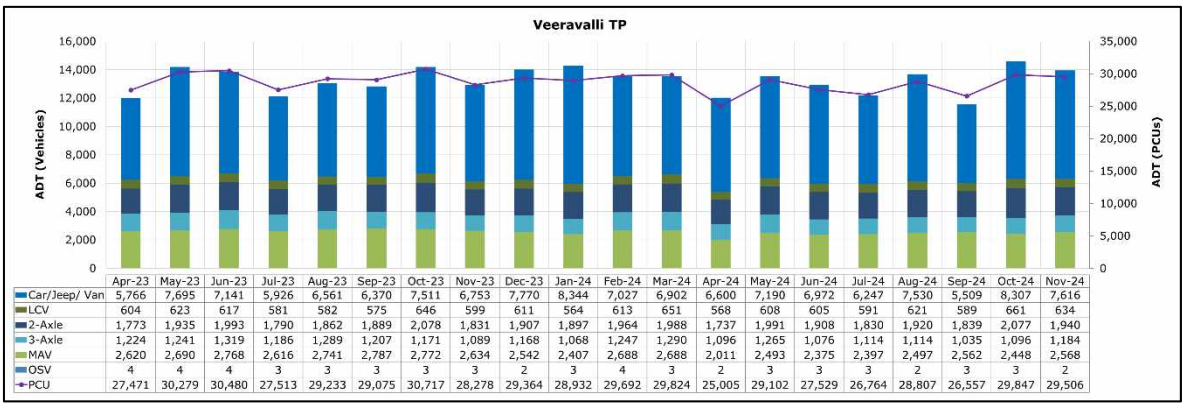
The variation in total traffic is minimal (about 2.8 percent on an average per day) between the toll plaza count and videography; however, there are mode wise variations as ETC data does not include traffic under exemptions and violations. The variation between LCV and trucks could be attributed due to cross classifications between these categories of vehicles.

ETC vs TVC Including Cash and Exemptions Traffic

A comparison between TVC and ETC data (7-day average) including cash and exempted traffic for the days of survey is presented in **Table 2-5**.

Day/Date	CJV	LCV	2-Axle	3-Axle	MAV/ OSV	LCV/ 2A	Total	PCUs
Toll Data (ETC)	6,305	599	1,845	1,201	2,438	2,444	12,388	27,312
TVC	6,323	1,236	1,393	1,151	2,390	2,629	12,494	26,567
Variation (Toll data minus TVC)	-18	-637	451	49	48	-186	-107	745
Variation (%)	-0.3	-51.5	32.4	4.3	2.0	-7.1	-0.9	2.8

Table 2-5: Comparison Between TVC and ETC Data Including Cash & Exempted Traffic



The variation in total traffic after adding cash and exempted traffic shows even lesser variation, which is about 0.9 percent on an average per day between the toll plaza count and videography.

2.4.4 Annual Average Daily Traffic (AADT)

The traffic plying on any road generally varies over different periods of the year depending on the cycle of different socio-economic activities in the regions through which it passes. Therefore, in order to have a more realistic picture of the traffic on the project road, it is required to assess its seasonal variation to estimate the annual average daily traffic (AADT).

The past toll traffic data for the toll plaza was made available by the client from December 2021 to November 2024 as presented in **Appendix 2.1**.

The month-on-month mode-wise traffic for the period from April 2023 to November 2024 is presented in **Figure 2-6**.

	Apr-23	May-23	Jun-23	Jul-23	Aug-23	Sep-23	Oct-23	Nov-23	Dec-23	Jan-24	Feb-24	Mar-24	Apr-24	May-24	Jun-24	Jul-24	Aug-24	Sep-24	Oct-24	Nov-24
Car/Jeep/ Van	5,766	7,695	7,141	5,926	6,561	6,370	7,511	6,753	7,770	8,344	7,027	6,902	6,600	7,190	6,972	6,247	7,530	5,509	8,307	7,616

Figure 2-6: Month-on-Month Traffic Data for Veeravalli TP

Due to the maintenance work on the Kovvur bridge, heavy trucks were not allowed to use the bridge from 30th March 2024 to 8th May 2024. Therefore, data from May 9, 2024, to November 2024 has been considered for freight modes. For cars, complete data from April to November (including data for the months of April and May) has been considered.

The AADT for FY25 is estimated by annualizing the ETC data from April/May 2024 to November 2024. A seasonal correction factor (SCF), based on an average of 7/8–12-month factors derived for FY23 from the toll data of the adjacent toll plazas of Krishnavaram and Vempadu under Safeway Concessions, has been adopted. Additionally, cash and exempt traffic for FY25 (Apr to Nov) have been added to the estimated ETC ADT of Veeravalli toll plaza.

FY25 AADT along with ADT, 7/8–12-month SCF, cash and exempt traffic is presented in **Table 2-6**.

Particulars	CJV	LCV	2-Axle	3-Axle	MAV	OSV	PCUs
Veeravalli TP							
A. ETC (Apr/May-Nov)	6,996	615	1,929	1,126	2,477	3	28,244
B. SCF	1.02	1.00	1.00	1.00	1.02	1.02	
C. ETC AADT = A*B	7,164	614	1,925	1,126	2,526	3	28,619

E. Exempt (Apr 24 - Nov 24)	202	5		2	3	1	234
F. AADT FY25 (Estimated) = C+D+E	7,436	621	1,928	1,130	2,530	5	28,949

Table 2-6: AADT - FY25

2.5 Travel Characteristics

2.5.1 Survey Methodology

In order to understand the travel demand pattern in the region and tollable traffic streams, origin and destination (OD) surveys were carried out at the toll plaza locations. The OD survey was carried out for 24 hours, by roadside interview method as described in IRC: 102-1988. Both passenger and commercial vehicles plying on the project road were stopped on a random sampling basis and interviewed.

The travel characteristics obtained by OD survey facilitate the identification of:

1. Local and through traffic on the project road.
2. Potential divertible traffic to/from project road to various alternative routes.

Trained enumerators under the supervision of transport planners collected the trip characteristics using survey forms designed for this purpose. The OD survey elicited characteristics like origin, destination, frequency, purpose of trip for passenger vehicles and commodity being transported for goods vehicles. The information pertaining to origin and destination of trips collected during roadside interviews was analysed to obtain the trip distribution based on a zoning system suitably designed for the present study.

2.5.2 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed giving due consideration to the following factors:

- The road network catering to the traffic on the project road and its generating points
- Important towns, villages, factories, and industrial centres around the project road area
- Administrative boundaries of districts and states.
- Configuration of the project road in the regional road network with respect to other roads

Two major types of areas were identified for analysis purpose: -

Immediate Influence Area (IIA): It includes the cities/towns/villages and districts along the project road and adjacent to it, which generate/attract trips to the project road. In this study, it consists of districts of Eluru, East Godavari, West Godavari, Krishna, Visakhapatnam, Kakinada, and Guntur in the state of Andhra Pradesh.

Broad Influence Area (BIA): It includes the remaining districts of Andhra Pradesh and the remaining states of India.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA. The zoning system adopted for data collection was based on 107 zones and is presented in **Appendix 2.2**.

The zoning system adopted for data collection is presented in **Figure 2-7**.

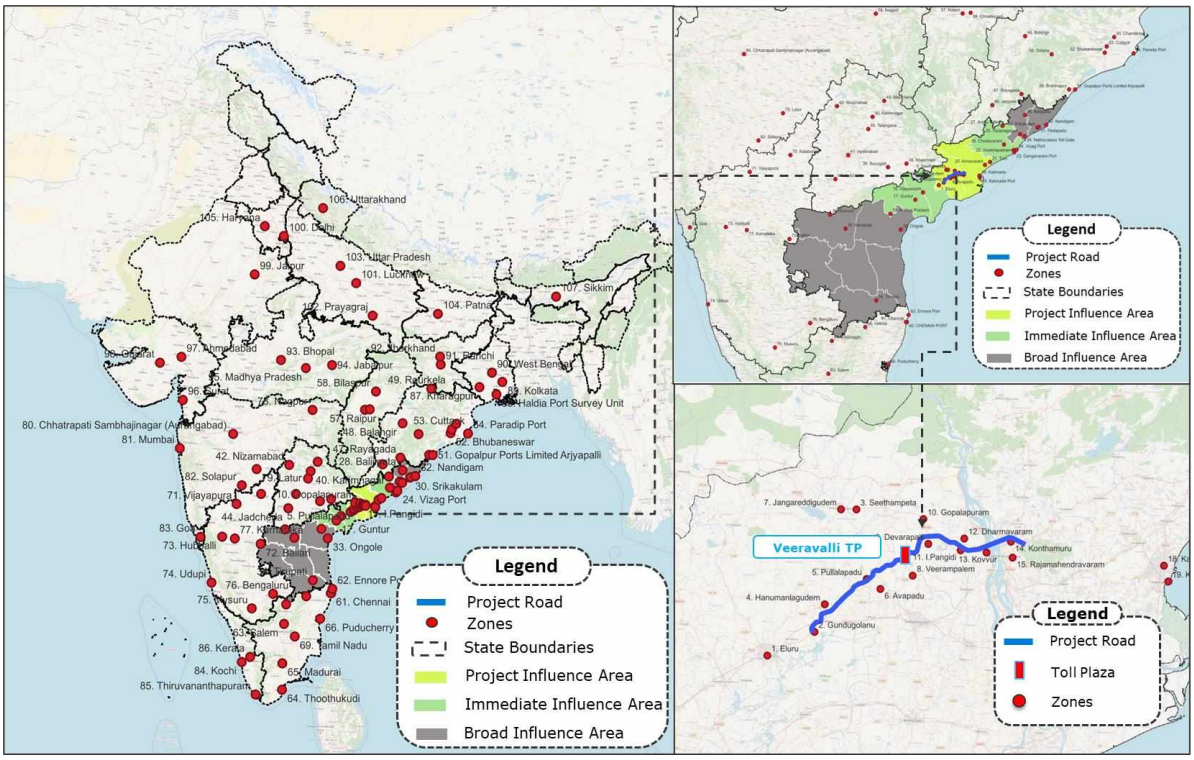

Figure 2-7: Zoning System Adopted for OD Surveys

2.5.3 Sample Size

The vehicles during the OD surveys were interviewed on a random sample basis. **Table 2-7** shows the AADT and the sample size (both in absolute numbers and in percentage terms) captured during the exercise. The individual traffic volume count of all categories of vehicles has been derived using split from seven-day traffic volume video count.

Modes	Car	Mini-Bus	Bus	MLCV	LCV	2-Axle	3-Axle	MAV
Sample	2,233	13	456	318	536	514	774	1,353
AADT	6,595	25	676	842	596	1,252	1,130	2,536
Percentage (%)	33.9	51.9	67.5	37.8	89.9	41.0	68.5	53.4

Table 2-7: Sample Size Collected in OD Survey at TP

Based on the sample size of different categories of vehicles interviewed during the OD survey, direction-wise expansion factors were calculated based on FY25 AADT. The OD matrices for all vehicle categories were generated and analysis was done in terms of regional distribution, travel pattern and commodity distribution.

2.5.4 Regional Distribution

Based on the OD matrices, the regional distribution of tollable vehicles at the toll plaza location has been calculated. **Table 2-8** gives the distribution indicating the attraction and generation zones for the traffic on the project road.

Region/Modes	Car	M Bus	Bus	MLCV	LCV	2A	3A	MAV
Andhra Pradesh	92.6	100.0	85.7	98.2	71.5	69.0	66.9	57.5
Telangana	5.2	0.0	13.5	1.3	3.8	2.4	2.6	2.8
Tamil Nadu	0.9	0.0	0.3	0.5	7.9	7.9	9.6	11.6
Karnataka	0.4	0.0	0.2	0.0	7.4	6.2	5.0	8.6
West Bengal	0.3	0.0	0.3	0.0	5.1	8.9	9.7	9.3
Odisha	0.3	0.0	0.0	0.0	2.4	2.0	3.1	4.7
Maharashtra	0.2	0.0	0.0	0.0	0.1	0.6	0.2	0.7
Rest of India	0.1	0.0	0.0	0.0	1.8	3.0	2.9	4.8
Total	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

Table 2-8: Regional Distribution of Tollable Traffic (in %) on Project Road

The traffic on the project corridor is generated primarily from the states of Andhra Pradesh, Telangana, Tamil Nadu, Karnataka, West Bengal, Odisha, and Maharashtra. A brief description of the contribution of these states to passenger and freight traffic is presented below.

Passenger traffic:

- In case of passenger traffic, Andhra Pradesh is the major contributor on the project road. More than 93 percent of cars and about 86 percent of buses are being generated from Andhra Pradesh.
- Telangana contributes about 5-13 percent each in cars and buses while the remaining states contribute minimal in passenger traffic.

Freight Traffic

- In case of MLCVs, Andhra Pradesh is the dominant contributor, accounting for about 98.2 percent.
- For LCVs, Andhra Pradesh contributes significantly with 71.5 percent. Tamil Nadu follows with about 7.9 percent, and Karnataka contributes around 7.4 percent.
- For 2A Trucks, Andhra Pradesh contributes around 69.0 percent, West Bengal contributes about 8.9 percent, and Tamil Nadu follows with about 7.9 percent.
- In case of 3A Trucks, Andhra Pradesh has a share of about 66.9 percent, Tamil Nadu and West Bengal have a share of around 9-10 percent each.
- In case of MAVs, Andhra Pradesh leads with a contribution of about 57.5 percent followed by Tamil Nadu with about 11.6 percent, West Bengal accounts for about 9.3 percent and Karnataka contributes around 8.6 percent.

The mode wise top 20 OD pairs are given in **Appendix 2.3**.

2.5.5 Travel Pattern

In order to assess the travel pattern of vehicles, the important streams of traffic plying on the project road are estimated. The list of the popular movements found at the toll plaza location is presented in **Table 2-9**.

Sr. No.	Traffic Streams	Car	Mbus	Bus	MLCV	LCV	2A	3A	MAV
1	Eluru/Vijayawada & surroundings-Devarapalli/Rajamahendravaram & surroundings	58.2	94.4	46.9	59.3	28.1	26.7	23.3	13.4
2	Eluru/Vijayawada & surroundings-Kakinada & surroundings	8.7	5.6	5.9	9.7	5.0	5.9	4.8	4.1
3	Eluru/Vijayawada & surroundings-Visakhapatnam & surroundings	11.7	0.0	15.3	24.1	16.6	15.6	16.1	11.7
4	Eluru/Vijayawada & surroundings-Bhubaneswar / Cuttack & beyond	0.3	0.0	0.0	0.0	1.3	1.2	1.5	2.3
5	Eluru/Vijayawada & surroundings-Kolkata & surroundings	0.4	0.0	0.0	0.0	1.9	5.1	6.5	4.3
6	Eluru/Vijayawada & surroundings-Chhattisgarh / Jharkhand & beyond	0.0	0.0	0.0	0.0	0.8	1.4	1.4	2.5
7	Ongole/Nandyala & surrounding-Devarapalli & beyond	3.4	0.0	3.5	2.8	5.4	5.8	7.3	10.2
8	Chennai / Tirupati / Vellore & beyond-Devarapalli/Rajamahendravaram surroundings	3.5	0.0	0.3	1.2	4.5	4.6	5.3	3.9
9	Chennai / Tirupati / Vellore & beyond -Kakinada/Visakhapatnam surroundings	2.2	0.0	0.8	0.3	9.5	7.4	8.2	10.6
10	Chennai / Tirupati / Vellore & beyond-Beyond Visakhapatnam	0.3	0.0	0.0	0.0	4.9	8.0	10.4	13.7
11	Bengaluru & surrounding-Devarapalli & beyond	0.5	0.0	0.4	0.0	14.1	11.9	9.3	16.0
12	Suryapet/Hyderabad & beyond-Devarapalli & beyond	10.8	0.0	27.0	2.6	7.8	6.1	5.5	6.9
13	Western & Central India-Devarapalli & beyond	0.0	0.0	0.0	0.0	0.2	0.4	0.4	0.5
Total		**6,595**	**25**	**676**	**842**	**596**	**1,252**	**1,130**	**2,536**

Table 2-9: Traffic Streams (%) at Veeravalli Toll Plaza

Passenger Traffic:

- About 58.2 percent of cars and 46.9 percent of buses are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Devarapalli/Rajamahendravaram and surroundings (stream 1). The traffic in this region reflects the heavy commuter movement within these prominent towns, likely driven by daily business and social interactions.
- In addition, around 11.7 percent of cars and 15.3 percent of buses are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Vishakapatnam and surroundings (stream 3).
- Also, about 10.8 percent of cars and 27.0 percent of buses are found to be travelling from/to Suryapet/Hyderabad and beyond to/from Devarapalli and beyond (stream 12).

Freight Traffic:

- About 59.3 percent of MLCVs and 28.1 percent of LCVs are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Devarapalli/Rajamahendravaram and surroundings (stream 1).
- In addition, around 24.1 percent of MLCVs and 16.6 percent of LCVs are found to be travelling from/to Eluru/Vijayawada and surroundings from/to Vishakapatnam and surroundings (stream 3).
- In case of heavy freight vehicles, about 23-27 percent of 2A & 3A trucks and around 13.4 percent of MAVs are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Devarapalli/Rajamahendravaram and surroundings (stream 1).
- Additionally, around 16 percent of 2A & 3A trucks and around 11.7 percent of MAVs are found to be travelling from/to Eluru/Vijayawada and surroundings to/from Vishakapatnam and surroundings (stream 3).
- Around 6-7 percent each of 2A & 3A trucks and 10 percent of MAVs are found to be travelling from/to Ongole/Nandyala and surroundings to/from Devarapalli & beyond (stream 7).
- Moreover, about 9-12 percent of 2A & 3A trucks and around 16.0 percent of MAVs are found to be travelling from/to Bengaluru & surrounding to/from Devarapalli and beyond (stream 11).

2.5.6 Commodity Distribution

Analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. The direction wise commodity distribution is presented in **Appendix 2.4**.

Figure 2-8 presents the commodity-wise share of the total commercial traffic at the toll plaza on the project road.

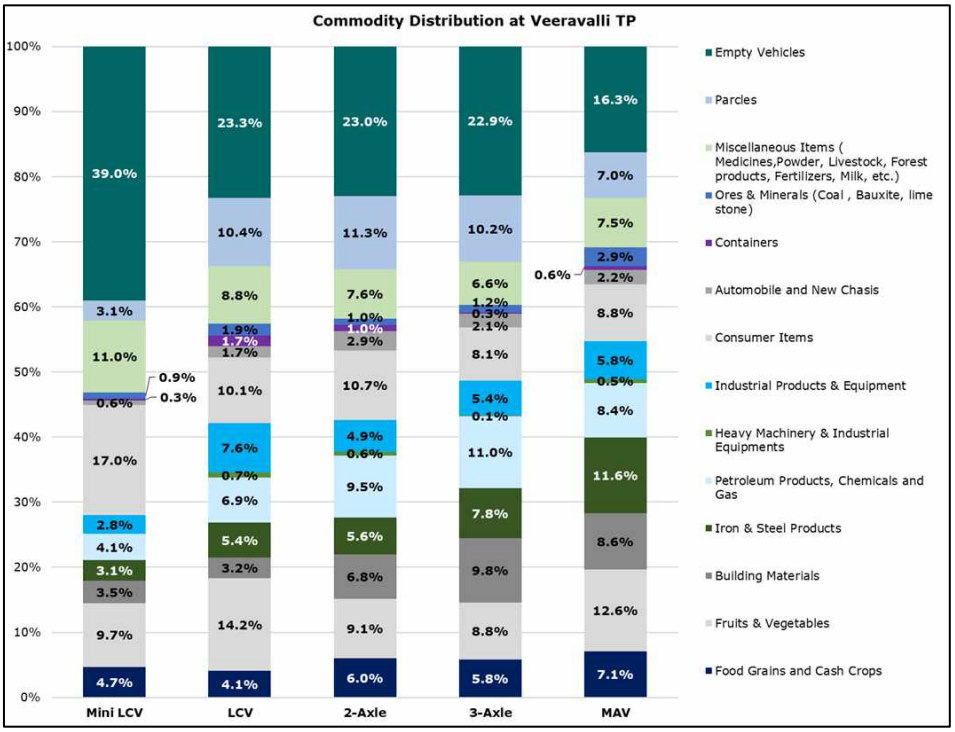

Figure 2-8: Commodity Distribution for Project Corridor

- All the freight modes are transporting fruits and vegetables, accounting for about 8 to 14 percent of the traffic. The major OD pairs are found to be between Bangalore & Kolkata/ Visakhapatnam.
- Heavy freight vehicles i.e. 2A/3A/MAVs are being widely used for transportation of petroleum products, chemical and gas, accounting for 10-12 percent of the traffic in Kolkata to Vijayawada direction whereas, in Vijayawada to Kolkata direction these trucks can be observed to account for about 7-10 percent of the traffic. The major OD pairs are found between Visakhapatnam/Kolkata/Kovvuru and Chennai/Vijayawada.
- Around 12 percent of MAVs are found to be transporting iron & steel products. The major OD pairs are between Vijayawada/Chennai and Visakhapatnam/Kolkata.
- Around 7-11 percent of 2A/3A/MAVs are transporting parcels and the major OD pairs are Vijayawada/Chennai/Bangalore to/from Visakhapatnam/Kolkata.
- In case of building materials, 3-Axle trucks and MAVs are being used to transport building materials with a share of around 9-10 percent each in both directions. The major OD pairs are Avapadu/Vijayawada to/from Devarapalli/Rajahmundry.
- About 30-60 percent of all freight modes transporting building materials, are carrying cement/fly ash between Vijayawada/Hyderabad/Southern AP and Rajahmundry/Vizag city/Northern AP. There are cement factories located in the southern part of the state between Guntur and Suryapet, and also near Kadapa.
- About 26-40 percent of 3A/MAVs carrying building materials are transporting tiles & bricks from Kolkata/Visakhapatnam to Eluru/Vijayawada.

3. TRAFFIC GROWTH RATE AND PROJECTIONS

3.1 General

The project road is a part of the NHAI InvIT Round 4 portfolio and the projections of traffic and revenue have been presented till FY55 in line with the maximum extendable concession period of 30 years. The estimation of the traffic using the tolled highway, and its future growth are important elements to assess the project's economics as these are generally the main/sole source of revenue for the project This chapter details various aspects of the current traffic of the project road and its growth potential as assessed by Ramboll.

3.2 Project Road Traffic

The traffic that is likely to use the project road was estimated on the basis of the traffic and travel characteristics gathered as part of the study. The traffic on the project road would normally consist of the following components:

- Normal Traffic
- Diverted Traffic
- Induced/Developmental Traffic

3.2.1 Normal Traffic

Normal traffic is the traffic which is already plying on the project road as assessed in section 2.4.4.

3.2.2 Diverted Traffic

Diverted traffic is generally dictated by the presence of an alternative route at a lower generalised cost, which is in-turn defined by the road configuration and its condition, the type of vehicle and its operating costs, the average riding speed, the route distance, and any tolling that may apply on a specific route. A detailed road network assessment along with site reconnaissance survey was conducted on the project road and vicinity to identify alternate routes.

The assessment of any likely traffic diversion from/to the Project Road (PR) has been done using the cost-ratio analysis as described below:

- Assessment of the potential divertible traffic sensitive to network improvements based on the observed travel pattern.
- Calculation of road user cost of travelling on the project road and the alternative route. The road user cost includes vehicle operating cost (VOC), travel time cost (TTC) and toll cost (TC), if any. VOC comprises of the cost of fuel, spare parts, maintenance labour, tyre, engine oil, grease, fixed cost, depreciation, and crew wages.

- The toll rates for expressway have been considered as 1.5 times the normal NHAI per km toll rates (accounting for 1.25 times for normal length of expressway and increase for the likely equivalent structure length).

The road user cost is estimated based on vehicle operating cost equations presented in IRC SP-30,2019 which is based on updation of Road User Cost Study (RUCS) carried out by Central Road Research Institute in 2019 for Ministry of Road Transport and Highways. Using the likely traffic stream speeds and lane configuration, the vehicle operating, and travel time costs are estimated for each of the routes. Road user cost on the identified routes is calculated and diversion percentages are estimated using diversion curve method mainly for trucks. In this method, traffic likely to be diverted from/to the project road, was estimated using Logit model, which computes expected diversion percentage based on the ratio of perceived cost on the existing and proposed facilities. The perceived cost is the financial vehicle operating cost and the time saving cost including toll charges (if any). According to the model, a vehicle will shift if the perceived cost on an alternative route is lower in comparison to existing route. The diversion equations for estimating diversion have been adopted from Indian National Expressway Network Report, MORTH (2009) as mentioned in IRC 108:2015. These equations are presented in **Table 3-1**.

Vehicle	Cost Ratio (CR) Interval	Equations
Truck	<= 0.750	% Div. = 100 - ((CR/0.75) * 5)
	0.750 <= CR <= 1.250	% Div. = 95 - ((CR-0.75)/0.5) * 90
	1.250 <= CR <= 2.0	% Div. = ((2-CR)/0.75) * 5

Source: IRC 108-2015

Table 3-1: Diversion Equations Used for Analysis

In the context of the project road section, there are two short distance alternative routes available in the vicinity of PR section, which could be used to bypass the Veeravalli toll plaza. The details of which is as follows:

I. Route via Gundugolanu-Tanuku-Rajahmundry-Diwancheruvu
II. Route via Nallajerla-Pongaturu-Yernagudem

The alignment of above-mentioned alternate routes is presented in **Figure 3-1**.

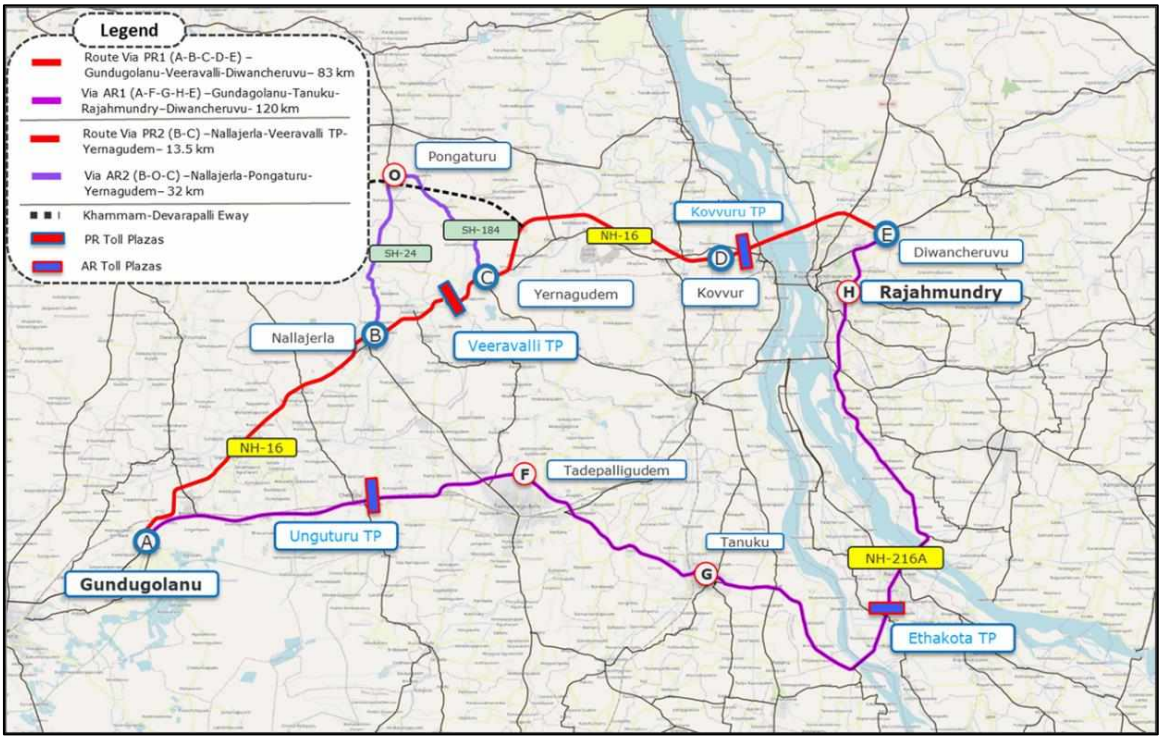

Figure 3-1: Alignment of Short Distance Alternate Route for PR Toll Plaza

I. Route via Gundugolanu-Rajahmundry-Diwancheruvu

The traffic destined to Rajahmundry and beyond has two route choice options between Gundugolanu to Rajahmundry. The first route option is to travel via project road section of NH-16 from Gundugolanu to Kovvuru i.e. route A-B-C-D-E. The alternate route choice for this stream of traffic is to use NH-216A route via Tanuku (A-F-G-H-E).

The route A-B-C-D-E is four laned around 83 km long which is about 37 km shorter than the alternate route A-F-G-H-E. The AR section A-F-G-H-E is also four laned and the user has to pay toll at the two toll plazas of Unguturu and Eethakota.

After the four laning upgradation of PR section, the traffic streams on alternate route are found to be using the shorter route via PR and the project road has observed an increase in traffic in the recent years.

The traffic playing on the alternate route has its own travel pattern with traffic and could be using this longer route due to the distributive nature and are continuing to pass through the towns of Unguturu, Tadepalligudem, Tanuku etc. to reach Rajahmundry. The route choice for cars is also dependent on factors such as stopovers in the small towns on the alternate route.

Based on the above, it is concluded that the travel pattern on these two routes has already been established and no further diversion of traffic from/to alternate route to/from the project road is envisaged.

II. Route via Nallajerla-Pongaturu-Yernagudem

This short distance alternate route is formed by two state highways i.e. SH-24 and SH-184, connecting Nallajerla to Yernagudem via Pongaturu (B-O-C). The alternate route B-

O-C is around 32 km long, whereas the route via PR (B-C) is about 13.5 km long. The route B-C is about 18.5 km shorter than the route B-O-C. As per site reconnaissance, the alternate route only caters to the traffic going towards nearby village areas, therefore it has not been considered for further analysis.

However, in wider context, there are some major developments in the project road network that could provide alternative route options for the traffic using the project road at present and may divert away to these routes once operational. These network level developments, have been studied in detail and analysed to work out the impact on the PR traffic. The details of which is given below:

Impact of Khammam-Devarapalli Expressway

The impact of Khammam-Devarapalli expressway has been done for the traffic streams travelling from/to Hyderabad/Suryapet & surroundings to/from Devarapalli & surroundings.

The tentative alignment of the alternate routes along with the route via project road is presented in **Figure 3-2**.

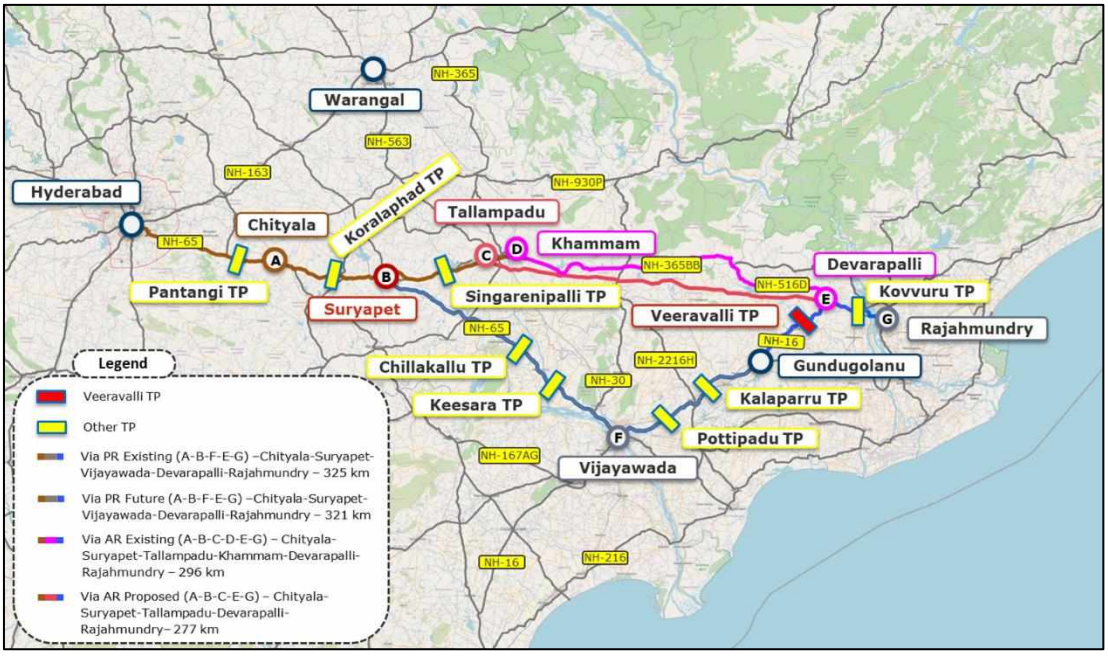

Figure 3-2: Alignment of Route Choices Between Suryapet and Devarapalli

Currently, traffic on the project road can travel via route A-B-F-E-G, which is a combination of NH-65 and NH-16 and has an existing length of about 325 km.

However, an alternative route via Suryapet Khammam (A-B-C-D-E-G), is available to which follows NH-365BB and NH-516D and is about 296 km long. The alternative route is around 29 km longer than the route via PR.

Under the Bharatmala Pariyojana project a six lane Vijayawada bypass is being developed. The bypass connects both NH-16 (Chennai-Kolkata) and NH-65 (Machilipatnam-Hyderabad) at Gollapudi and is divided into two stretches, the first between Chinna Avutapalli and Gollapudi (Western bypass) and the second is between

Gollapudi and China Kakani (Eastern bypass). The western bypass is expected to be completed in June 2025 and has been considered in the diversion analysis as it will be operational before the completion of Khammam-Devarapalli expressway. It is to be noted that on account of Western Vijayawada bypass the length of route via PR (A-B-F-E-G) will be 321 km making it 4 km shorter than the existing route via Vijayawada city.

Furthermore, there is a under construction greenfield expressway being developed, between Khammam and Devarapalli section i.e. route A-B-C-E-G which might impact the traffic from/to Hyderabad and beyond to/from Rajahmundry and beyond. The project is being developed under the Hybrid Annuity Model (HAM). The section from Suryapet to Khammam has been operational since October 2022 which has taken away some traffic plying to/from Hyderabad & beyond from/to Rajahmundry & beyond from the project road.

The stretch from Khammam to the Telangana border is expected to be completed in FY25. The section from the Telangana border to Devarapalli is anticipated to take an additional three years to be completed.

Once the expressway is operational, the remaining traffic plying to/from Hyderabad & beyond from/to Rajahmundry & beyond will also have a choice between PR and alternate route via Khammam-Devarapalli expressway. It is worth mentioning that the length of the expressway is about 162.1 km and after being operational the distance between Suryapet to Devarapalli will become around 277 km thus making route via PR longer by 44 km.

As per the information in public domain, the expressway will be operational by FY26; currently, the expressway construction is 65 percent complete.

This route is expected to become highly preferred due to an efficient and shorter route choice. The diversion results estimated for FY25 are presented in **Table 3-2**.

Alternate Routes / Modes	Car	LCV	2A	3A	MAV
Khammam - Devarapalli Expressway					
Potential Traffic	715	50	81	71	176
Potential Traffic as % of AADT	9.6	8.1	4.2	6.3	6.9
Diversion % based on Cost Ratio for PR existing	37.1	30.9	43.7	38.5	52.4
Diversion % based on Cost Ratio for PR future	37.0	28.3	21.1	15.2	21.3
Future AR Traffic Share (or % Loss of PR Traffic)	0.2	8.4	51.7	60.6	59.3
Diverted Traffic AR Future					
Total Diverted Traffic	0.0%	0.7%	2.2%	3.8%	4.1%
	1	4	42	43	104

Table 3-2: Impact of Khamam-Devarapalli Expressway – FY25

The completion of this expressways likely to take away approximately 0.7 percent of LCVs and around 2-4 percent of heavy freight vehicles, leading to an estimated traffic reduction of 731 PCUs. For the analysis going forward, only heavy freight vehicles have

been included. This traffic has been grown and considered appropriately in the respective years of impact.

To account for the gradual build-up of traffic on the alternate routes, the traffic shift is assumed to take place in phases with about 50 percent in FY27, 75 percent in FY28 and 100 percent from FY29 onwards.

3.2.3 Induced/ Development Traffic

Developmental /new generated traffic is the one which would be generated, over and above normal growth, because of lowering of transport costs or new developments in the immediate influence area of the project road. In case of the project road, there is no development envisaged in the vicinity of the project road.

This project section catering to the long-distance traffic of NH-16 will continue to remain an important highway for the movement along the east coast. Since, majority of the traffic is influenced by the cities of Vishakhapatnam and Vijayawada, upcoming development of Bharatmala projects providing better connectivity to cities like Pune, Hyderabad and Raipur will improve the traffic on this highway.

Vizag-Chennai Industrial Corridor (VCIC)

The East Coast Economic Corridor (ECEC) is India's first coastal corridor under the National Industrial Corridor Development Programme (NICDP). It includes four key corridors: Vizag-Chennai, Chennai-Kanyakumari, Odisha, and West Bengal.

The 800 km-long Vizag-Chennai Industrial Corridor (VCIC) is part of Phase I of the ECEC. It includes key port and industrial clusters and supports India's Act East Policy and Make in India Campaign. Based on the Conceptual Development Plan by ADB, four nodes are proposed for development: Vishakhapatnam, Kakinada, Gannavaram-Kankipadu, and Yerpedu-Srikalahasti.

The estimated investment for VCIC is $31.42 billion, including $14.73 billion for urban development, $15.08 billion for transport, and $1.61 billion for energy. As per the planned phase-wise estimated requirement for funds, urban infrastructure will need 69 percent of its planned investment between 2031-2045. For transport, 26 percent is needed in short term, 43 percent in medium term, and 31 percent in long term.

As per the information available in public domain, these developments are in the initial stages of conceptualisation and preparation of feasibility reports (preliminary engineering)/ master planning. After completion of master planning and preliminary engineering, projects are posed for consideration and approval from National Industrial Corridor Development and Implementation Trust (NICDIT) and Cabinet Committee on Economic Affairs (CCEA). No confirmed implementation plans or timelines are available yet. The future freight growth projections account for these developments.

3.3 Methodology for Traffic Growth Rate Estimation

Traffic growth for both passenger and freight vehicles has been estimated using the econometric approach as described in IRC-108, 2015. For freight traffic, due consideration has been given to the total tonnage transported and the shift in types of vehicles used for moving goods.

The econometric model applied, relates traffic growth to changes in state (or district) domestic product via an elasticity factor. According to IRC guidelines, elasticity based econometric model for highway projects should be derived in the following form:

$Log_e(P) = A0 + A1\ Log_e\ (EI)$, where:

P - Traffic Volume

EI - Economic Indicator

A0 - Regression Constant

A1 - Regression Co-efficient (Elasticity Index)

In order to estimate traffic on the project road, the methodology described below has been followed:

Identify the influence area - From the analysis of OD survey data, the project influencing states and districts, which are likely to impact the traffic growth on the project road, were identified.

Review Past traffic Data – Based on toll data available for the project, a review of past traffic and tonnage growth is carried out.

Analysis of economic growth of the Project Influencing Area (PIA) - For each PIA state, an economic profile describing past performance and future outlook was prepared. This also considers India's past economic performance and its future outlook.

Estimation of traffic elasticity to income – in order to translate economic growth into traffic growth, an elasticity factor was estimated.

Derivation of traffic growth rates – On the basis of the weighted (based on OD shares) PIA outlook and related traffic elasticity, traffic growth rates were estimated.

The methodology thus adopted incorporates, as basic data inputs, the perspective growth envisaged in the influence area and the changes in transport demand elasticities over a period of time. The traffic growth rates by vehicle type for the project road have been determined till FY55 in line with the maximum extendable concession period of 30 years.

3.4 Identification of PIA States

The regional distribution observed on the project road shows that Andhra Pradesh is the main contributor of traffic on the project road in case of passenger and freight vehicles,

however, states of Telangana, Odisha, Tamil Nadu, Karnataka, and West Bengal also contribute to the project road freight traffic.

The mode wise normalized regional distribution at the toll plaza is presented in **Figure 3-3**.

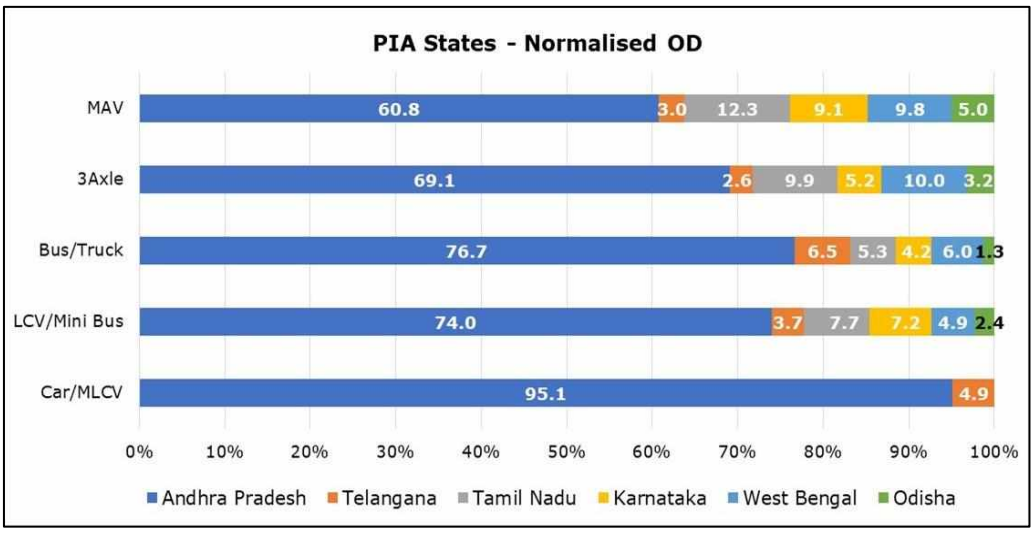

Figure 3-3: Normalised Regional Distribution (%) for the PR

The OD shares show that for passenger vehicles, around 95.1 percent of the car traffic is from the state of Andhra Pradesh and around 4.9 percent is from Telangana.

In case of LCVs, around 74 percent of traffic is being generated from the state of Andhra Pradesh and around 7-8 percent of traffic is from Tamil Nadu and Karnataka; about 2-5 percent traffic is contributed from Telangana, Odisha, and West Bengal.

The share of bus/truck traffic from Andhra Pradesh is around 76.7 percent; the states of Telangana and West Bengal contribute around 6-7 percent. In addition, the state of Odisha, Tamil Nadu and Karnataka has a share of around 1-5 percent.

In case of 3A truck category, Andhra Pradesh has a share of around 69.1 percent and around 10 percent each is from Tamil Nadu and West Bengal, followed by 3-5 percent traffic being generated from Telangana, Karnataka, and Odisha.

For MAVs, around 60.8 percent traffic is being generated from Andhra Pradesh whereas, around 9-12 percent traffic is coming from Tamil Nadu, Karnataka, and West Bengal and remaining 3-5 percent is from Telangana and Odisha.

Considering the predominance of Andhra Pradesh in the project road traffic, it has been considered as the primary PIA state for both passenger and freight traffic. In addition to Andhra Pradesh, the other PIA states which have been considered for freight traffic are Telangana, Tamil Nadu, Karnataka, West Bengal and Odisha.

3.5 Past Economic Growth of PIA

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. A number of economic indicators for the PIA states,

as published by Central Statistical Organisation (2011-12 prices), have been studied to assess their past performance.

PIA State - Andhra Pradesh

Past economic performance of the state has been as follows:

- Andhra Pradesh's Gross State Domestic Product (GSDP) stood at Rs 8,208.9 billion in FY24 and has been growing at a trendline growth rate of 7.0 percent since FY12.
- The tertiary sector is the largest contributor to GSDP of Andhra Pradesh, about 39.7 percent. Primary sector stood at 32.5 percent and secondary sector at 27.8 percent of the GSDP in FY24.

The change of sectoral composition of GSDP over the years is presented in **Figure 3-4**.

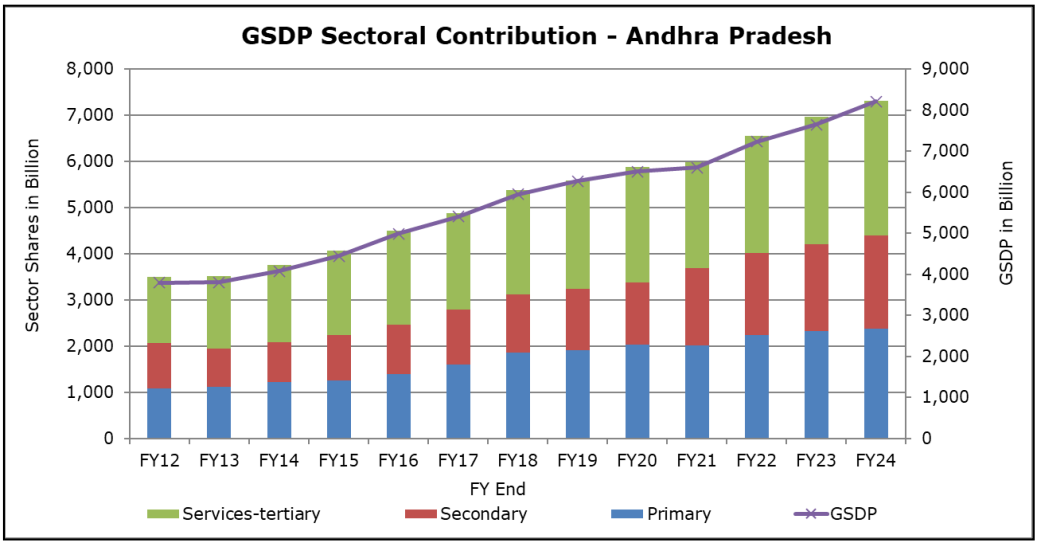

Figure 3-4: GSDP (in Rs Billion) and its Sectoral Composition for Andhra Pradesh

The performance of the state economy and its different sectors has been studied using time trend analysis. The average annual growth rates as obtained using regression analysis are presented in **Table 3-3**.

Particulars	FY12 to FY24	FY15 to FY24
GSDP	7.0	6.5
Agriculture and Allied	7.5	7.1
Industry	7.7	8.4
Services	5.6	4.5
Construction	4.5	5.1
Per Capita Income	6.3	5.7

Table 3-3 : Average Annual Growth Rates (%) of State Income for Andhra Pradesh

Andhra Pradesh is a predominant exporter of drugs, pharmaceuticals, allied chemicals, and plastics, agriculture and agro-based products, engineering products, mineral products, handicrafts and carpets, textiles, leather, animal, and marine products.

Currently, the state has 47 Special Economic Zones (SEZs). Moreover, 10 have been formally approved, 32 have been notified and five SEZs with in-principle approval. These

SEZs are dispersed over a manifold range of sectors, including textiles and apparel, food processing, footwear and leather products, multi-product, pharma, IT SEZs, etc.

Under the Andhra Pradesh Petroleum, Chemicals & Petrochemicals Investment Region (AP PCPIR), the construction of 40 kilometres of national highways, 42 kilometres of state highways, and approximately 75 kilometres of major district roads is planned. These infrastructure projects are projected to be completed within the next five years.

According to the Department for Promotion of Industry and Internal Trade (DPIIT), the state has enticed the Foreign Direct Investment (FDI) equity inflows worth US$ 888.13 million during the period October 2019 to March 2024.

The state houses many pharma manufacturing units belonging to eminent global and national players. Exports of pharmaceuticals from the state stood at US$ 863.72 million in FY22.

The state has the major share in the export of seafood products from India with export of worth US$ 7.38 billion in FY24. Andhra Pradesh contributes 32 percent of the total value of sea food exports from the country.

The per capita income of Andhra Pradesh is Rs. 154,121 in the year FY24. During FY12 to FY24, a growth of about 6.3 percent is seen in the state Andhra Pradesh. The growth in per capita income of Andhra Pradesh since FY12 is presented in **Figure 3-5**.

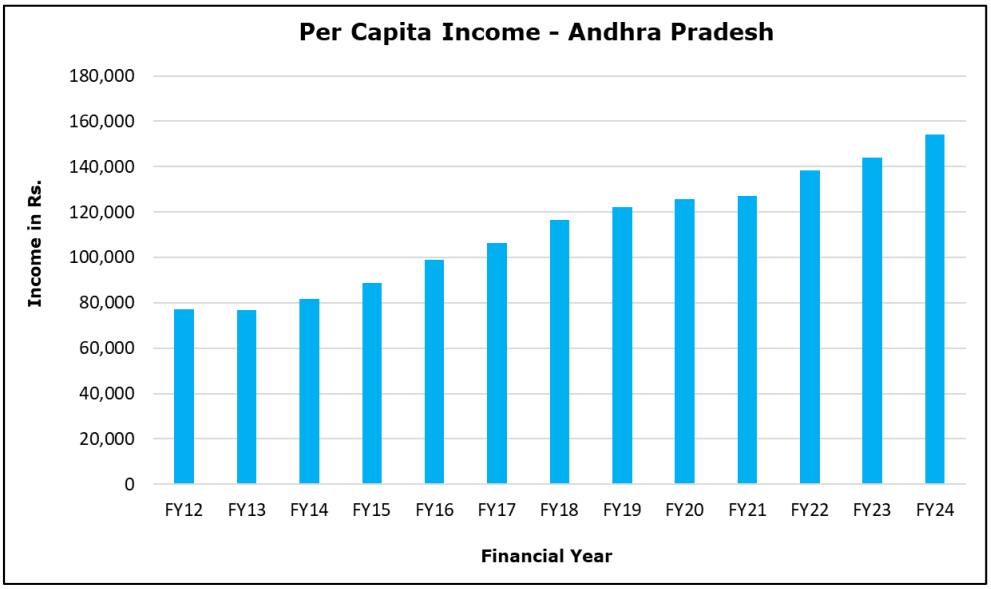

Figure 3-5: Per Capita Income of Andhra Pradesh from FY12 to FY24

Other PIA States

The other PIA states contributing to the traffic on the project road are Telangana, Tamil Nadu, Karnataka, West Bengal and Odisha. Economic indicators of PIA states are as follows.

- Telangana's Gross State Domestic Product (GSDP) stood at Rs 7,929.4 billion in FY24 and has been growing at a compounded annual growth rate of 6.9 percent since FY12.

- Tamil Nadu's Gross State Domestic Product (GSDP) stood at Rs 15,713.7 billion in FY24 and has been growing at a compounded annual growth rate of 6.2 percent since FY12.
- Karnataka's Gross State Domestic Product (GSDP) stood at Rs 14,232.3 billion in FY24 and has been growing at a compounded annual growth rate of 7.4 percent since FY12.
- Gross State Domestic Product (GSDP) of West Bengal stood at Rs 9,040.9 billion in FY24 and has been growing at a compounded annual growth rate of 4.5 percent since FY12.
- Gross State Domestic Product (GSDP) of Odisha stood at Rs 5,209.1 billion in FY24 and has been growing at a compounded annual growth rate of 7.0 percent since FY12.
- The service sector is the largest contributor to GSDP for the PIA states in FY24 – 63.1 percent in Telangana, 51.7 percent Tamil Nadu, 65.2 percent in Karnataka and 52.0 percent in West Bengal while in the state of Odisha secondary sector accounts for highest contribution (about 38.4 percent) in GSDP.

The average annual growth rates as obtained using regression analysis for the period FY12 to the latest available year are presented in **Table 3-4**.

Particular/States	Telangana	Tamil Nadu	Karnataka	West Bengal	Odisha
	FY12 to FY24				
GSDP	6.9	6.2	7.4	4.5	7.0
Primary	5.9	5.4	5.7	2.5	4.9
Secondary	4.8	6.2	5.8	6.8	9.1
Tertiary	7.6	5.7	8.1	4.8	5.1
Construction	5.3	5.0	3.7	4.9	4.9
Per Capita Income	6.4	5.6	6.6	3.9	6.1

Table 3-4: Average Annual Growth Rates (%) of State Income for Other PIA States

The GSDP over the years for the PIA states are presented in **Figure 3-6**.

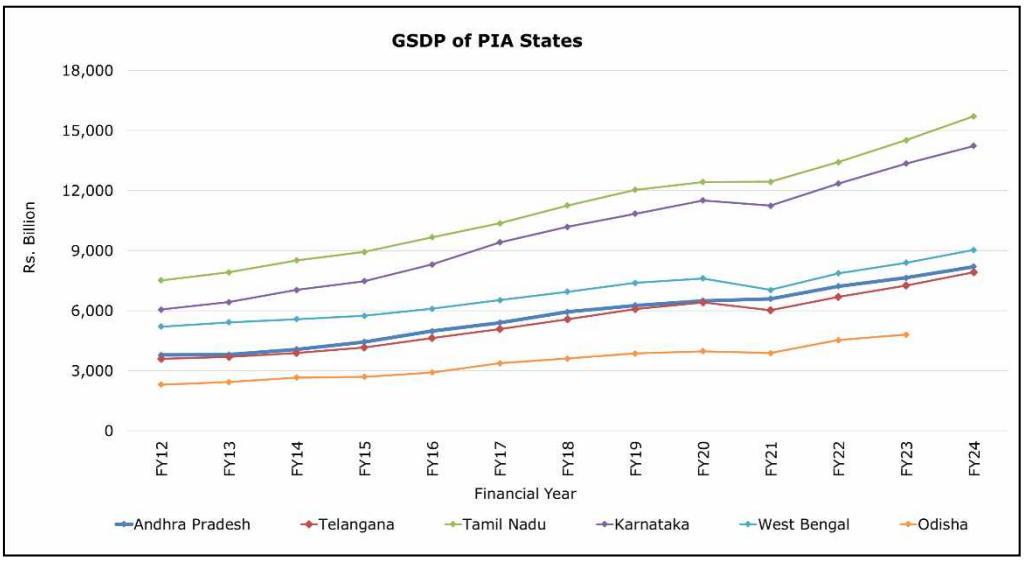

Figure 3-6: GSDP (in Rs billion) for PIA States

3.6 India and PIA Outlook

3.6.1 India's Past Performance and Outlook for Future

India's growth trend during the recent years has been presented in **Figure 3-7**.

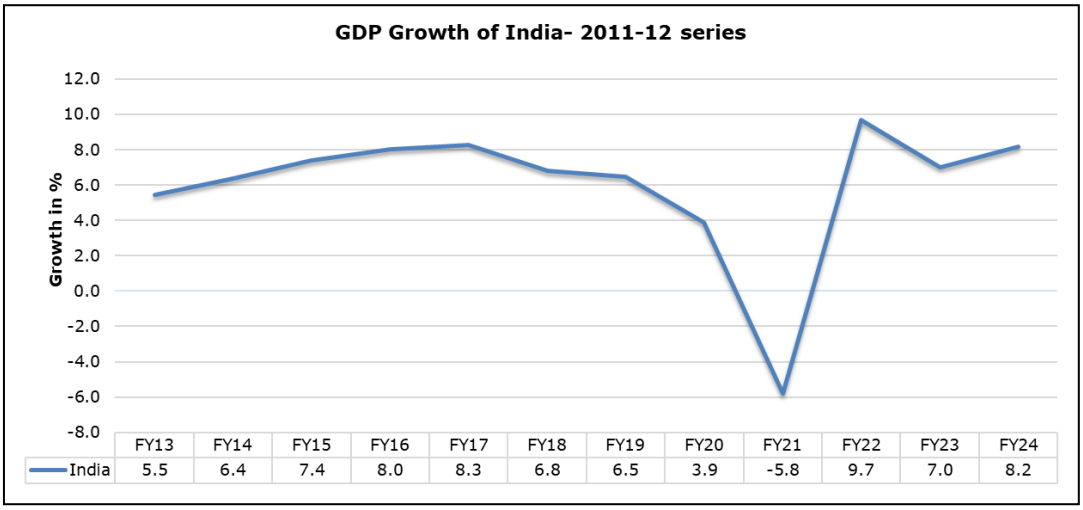

Figure 3-7: GDP Growth in India

India's economy has navigated through a series of fluctuations since FY12, from a slowdown to a sharp contraction due to the pandemic, followed by a strong recovery. Structural reforms and global dynamics continue to play crucial roles in shaping India's economic future.

India's economic growth has generally followed an accelerating trajectory until FY18, positioning it as one of the fastest-growing major economies in the world over the medium term. The real GDP growth rates were 8.3 percent in FY17, 6.8 percent in FY18, and 6.5 percent in FY19, reflecting a solid performance. Over the period from FY12 to FY19, the long-term average growth rate stood at 7.2 percent.

However, in FY20, the economy slowed down due to a combination of structural challenges and global economic headwinds, leading to a more modest growth rate of 3.9 percent. The outbreak of COVID-19 further exacerbated the situation, triggering a global recession and imposing significant economic disruptions. The Indian government's lockdown measures severely impacted the economy, contributing to a contraction of 5.8 percent in FY21.

India's GDP grew by 9.7 percent in FY22 and continued its recovery with a growth of 7.0 percent in FY23 and 8.2 percent in FY24. The recent forecast by Reserve Bank of India (RBI) indicates a growth rate of 6.4 percent for FY25.

In light of the outlook being predicted by various agencies for the current and future years, the year-on-year growth for Indian economy based on the forecast of Consensus Economics (October 2024 Publication), provided by the client for FY26 and beyond as used in the analysis are presented in **Figure 3-8**.

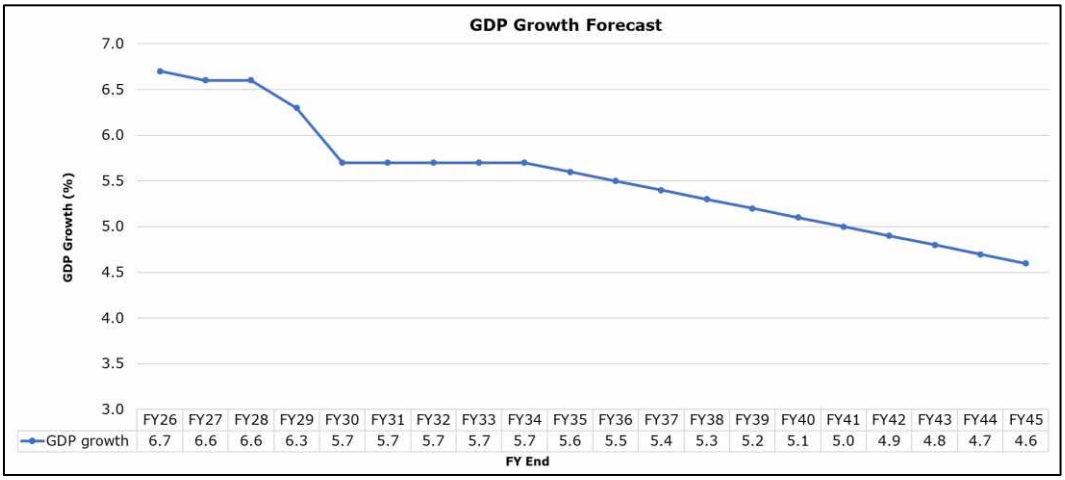

Figure 3-8: GDP Forecast of India

3.6.2 PIA States Outlook

A snapshot of the main economic indicators in the past years is based on data published by Central Statistical Organisation (CSO) for the PIA states and is presented in **Table 3-5**.

Indicators	Andhra Pradesh	Telangana	Tamil Nadu	Karnataka	West Bengal	Odisha
GSDP in Rs Billion (FY24)	8,208.9	7,929.4	15,713.7	14,232.3	9,040.9	5,209.1
GSDP growth (FY12 to FY24)	7.0%	6.9%	6.2%	7.4%	4.5%	7.0%
Per capita Income in Rs (FY24)	154,121	207,679	204,092	209,486	90,988	112,154
Sector Share (%) in FY24						
Agriculture and allied	32.5	17.1	11.2	10.8	18.6	26.3
Industry	27.8	19.8	37.2	24.0	29.3	38.4
Services	39.7	63.1	51.7	65.2	52.0	35.2

Table 3-5: Main Economic Indicators of PIA States

To forecast the PIA states' performance, the past growth of State GDPs relative to India's GDP has been analysed, and both short-term and long-term multipliers have been derived. In determining future multipliers, year-on-year variations and the size of the state's economy have been carefully considered.

The past and adopted multipliers for PIA states to Indian economy are presented in **Table 3-6**.

Period	India	Andhra Pradesh	Telangana	Tamil Nadu	Karnataka	West Bengal	Odisha
Past Growth (%)							
FY12 to FY24	5.7	7.0	6.9	6.2	7.4	4.5	7.0
FY15 to FY24	5.0	6.5	6.6	6.0	6.8	4.5	7.0
Past Multipliers - Average of Years							
FY13 to FY24		0.9	1.1	0.9	1.1	0.9	1.0
FY15 to FY24		1.0	1.2	0.9	1.1	0.9	1.0
Multipliers Adopted for Future							
States w.r.t. India		1.0	1.2	0.9	1.1	0.9	1.0

Table 3-6: Past and Future Multipliers of PIA States

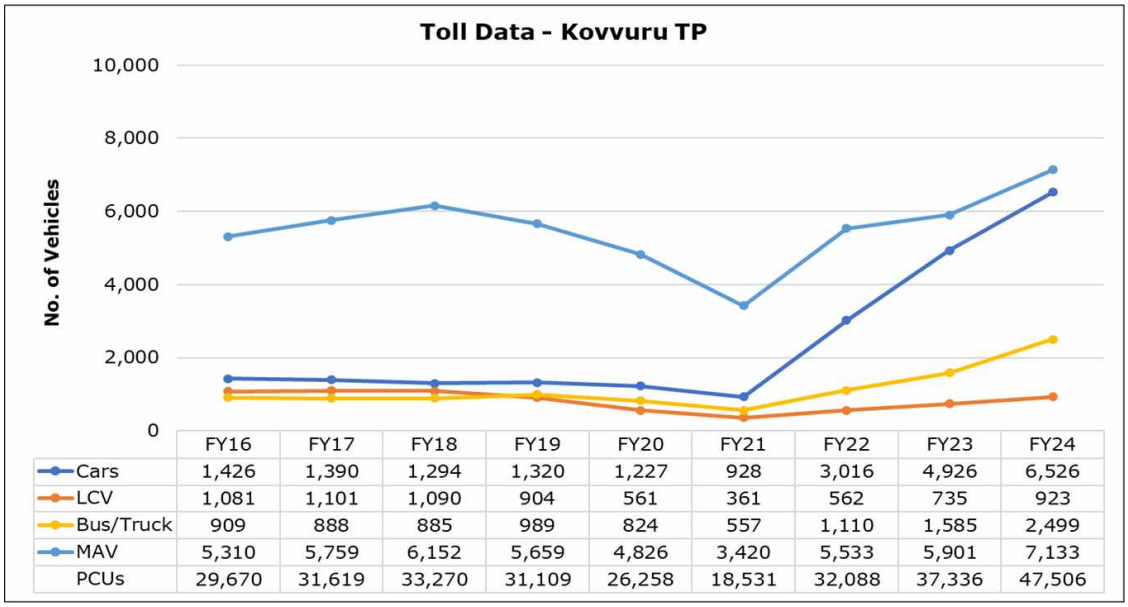
3.7 Past Traffic Data on Project Road

Past ETC traffic data is provided by the client from December 2021 to November 2024 for the toll plaza location. A comparison of the ETC data of FY23 and FY24 has been carried out with estimated AADT for FY25 without considering cash and exempt. Mode wise traffic data along with the end point growth is presented in **Table 3-7**.

FY/Mode	CJV	LCV/MBus	Bus/2A	3A	MAV/OSV	PCU
Past traffic						
FY23	6,329	633	1,864	1,327	2,971	30,222
FY24	6,981	605	1,909	1,208	2,666	29,238
FY25	7,164	614	1,925	1,126	2,529	28,618
YoY Growth (%)						
FY24 vs FY23	10.3	-4.4	2.4	-9.0	-10.3	-3.3
FY25 vs FY24	2.6	1.4	0.9	-6.8	-5.2	-2.1
End Point Growth (%)						
FY25 vs FY23	6.4	-1.5	1.6	-7.9	-7.7	-2.7

Table 3-7: Past Traffic Trend Analysis of ETC Data

Car growth has been varying year on year at the toll plaza and has shown a growth of about 6.4 percent while comparing FY23 with FY25 and for bus/2A trucks, a growth of about 1.6 percent is observed during the same period. In case of freight modes, the decline in growth is to be attributed to opening of Suryapet - Khamam section on alternate route (operational since Oct 2022) which has taken away some of the traffic plying between Hyderabad and Vishakhapatnam from project road section.



However, the travel pattern analysis from the present study OD and other ODs in the area suggest that most of the traffic from/to Hyderabad to/from Rajahmundry and beyond which was amenable to shift to Suryapet-Khammam highway has already shifted and as mentioned in the diversion analysis only 176 MAVs are remaining on PR of that potential stream of traffic. The diversion analysis suggests that out of this 104 MAVs are further likely to shift once Suryapet-Khammam Expressway is fully operational. Therefore, it is envisaged that there would not be any further diversion to AR and this traffic will grow at normal economy growth rate. Past Toll Data from adjacent sections

In addition to the project road traffic data, past traffic of adjacent road sections in proximity has also been analysed to understand the traffic growth trends on NH-16. The toll data of following road sections has been analysed:

I. Rajahmundry Bridge Across River Godavari (RGBL)
II. Gundugolanu to Rajahmundry section via Tanuku (TOT-1 assets of Andhra Pradesh)

3.7.1.1 Rajahmundry Bridge Across River Godavari (RGBL)

Past traffic data for the Kovvur toll plaza location as available with the consultant for the period from FY16 to FY24 is presented in **Figure 3-9**.

	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24
Cars	1,426	1,390	1,294	1,320	1,227	928	3,016	4,926	6,526
LCV	1,081	1,101	1,090	904	561	361	562	735	923
Bus/Truck	909	888	885	989	824	557	1,110	1,585	2,499
MAV	5,310	5,759	6,152	5,659	4,826	3,420	5,533	5,901	7,133
PCUs	29,670	31,619	33,270	31,109	26,258	18,531	32,088	37,336	47,506

Figure 3-9: Past Traffic at RGBL - Kovvur TP

A time series analysis of the past traffic data is presented in **Table 3-8**.

FY/Mode	CJV	LCV	Bus/Truck	MAV	PCU
Kovvur TP					
YOY Growth in %					
FY17 vs FY16	-2.5	1.8	-2.3	8.4	6.6
FY18 vs FY17	-6.9	-1.0	-0.3	6.8	5.2
FY19 vs FY18	2.0	-17.0	11.7	-8.0	-6.5
FY20 vs FY19	-7.0	-37.9	-16.7	-14.7	-15.6
FY21 vs FY20	-24.4	-35.7	-32.3	-29.1	-29.4
FY22 vs FY21	225.1	55.7	99.2	61.8	73.2
FY23 vs FY22	63.3	30.8	42.8	6.6	16.4
FY24 vs FY23	32.5	25.7	57.7	20.9	27.2
End Point Growth in %					
FY16 vs FY24	20.9	-1.9	13.5	3.8	6.1
FY19 vs FY24	37.7	0.4	20.4	4.7	8.8
FY16 vs FY23	19.4	-5.4	8.3	1.5	3.3
FY19 vs FY23	39.0	-5.1	12.5	1.0	4.7

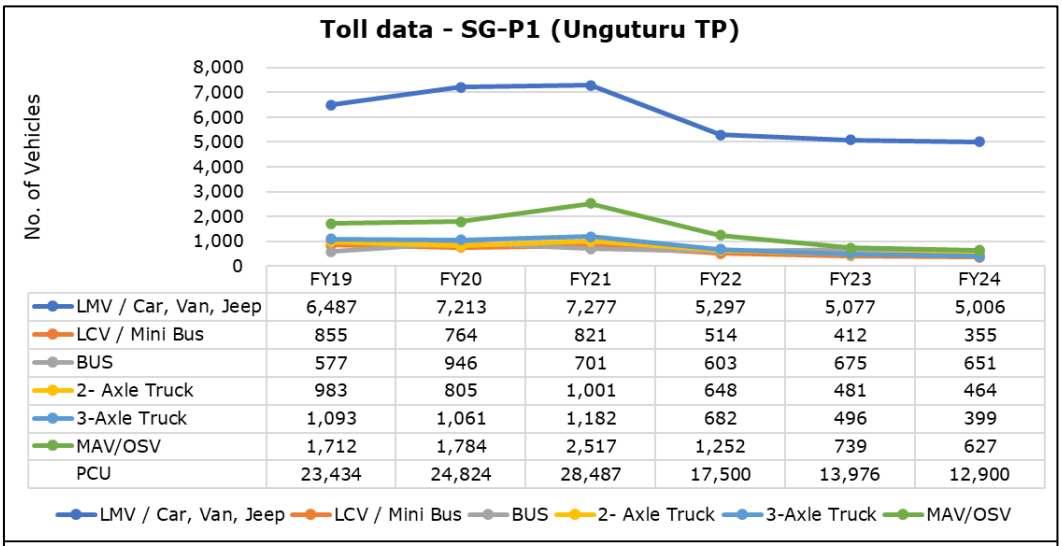


Table 3-8: Past Growth Analysis at RGBL - Kovvur TP

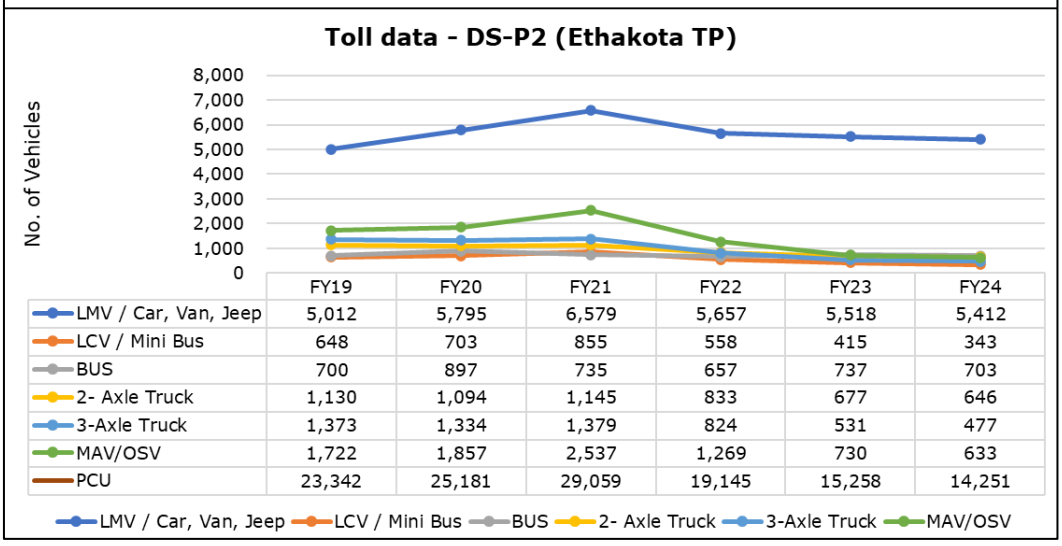
The section of RGBL has seen year-on-year variation in traffic which could be attributed to the freight traffic restrictions imposed in the year 2020 due to the construction activities on Gundugolanu to Kovvur section, which has been upgraded to a four-lane configuration in September 2021.RGBL section has seen a massive increase in traffic in



almost all the modes after opening of section from Gundugolanu to Veeravalli in September 2021 and completion of maintenance of Kovvuru Bridge in FY22. Also, opening of Suryapet-Khammam section in October 2022 has impacted the freight traffic on this section as the Hyderabad to Rajahmundry bound traffic started using the route via Khammam and as a result Kovvur Bridge witnessed an abnormal increase in traffic.

3.7.1.2 Gundugolanu to Rajahmundry section via Tanuku (TOT-1)

Past traffic data is available from FY16 to FY24 for Unguturu and Ethakota toll plazas with Ramboll from previous studies. The year-on-year traffic is presented in **Figure 3-10**.

	FY19	FY20	FY21	FY22	FY23	FY24

FY20 vs FY19	15.6	8.6	28.1	-3.2	-2.8	7.8	7.9
FY21 vs FY20	13.5	21.6	-18.0	4.6	3.4	36.6	15.4
FY22 vs FY21	-14.0	-34.8	-10.6	-27.3	-40.2	-50.0	-34.1
FY23 vs FY22	-2.4	-25.6	12.1	-18.7	-35.6	-42.5	-20.3
FY24 vs FY23	-1.9	-17.3	-4.6	-4.6	-10.1	-13.3	-6.6

Table 3-9: Past Traffic at TOT -1 Section

It is to be noted that the growth on this section was high during the widening of Gundugolanu to Veeravalli (PR) section in FY21, which had restricted the movement of freight vehicles on the Gundugolanu-Kovvur section, making this route a preferred choice. However, after the opening of section from Gundugolanu to Veeravalli in September 2021, the traffic on this route has declined till FY24.

3.8 Past and Future Transport Demand Elasticity

The econometric model applied for the project, relates traffic growth to changes in state domestic product via an elasticity factor according to IRC guidelines.

A regression between weighted GSDP (as independent variable) and weighted registered vehicles (as dependant variable) of PIA states was carried out. The registered vehicle elasticity in case of cars and all trucks is 0.7 for the state of Andhra Pradesh between FY12 and FY24.

Vehicle registration data is also used as a proxy wherein operational toll data is not available. Vehicle registration data represents all vehicles registered in the state, but does not indicate actual number of vehicles plying on the road as it does not account for factors such vehicles taken off the road due to lack road worthiness, those registered in a state but mostly used elsewhere, etc. Consequently, the elasticity values based on vehicle registration may not be representative of the traffic growth trends on the project road.

The point to point and trend line actual elasticity between weighted income (GSDP) and traffic for the project road section is presented in **Table 3-10**.

FY/Mode	CJV	LCV/M Bus	Bus/2A	3A	MAV/OSV
Veeravalli TP					
Point to Point Elasticity					
FY24 vs FY23	1.4	-0.6	0.3	-1.2	-1.4
FY25 vs FY24	0.3	0.2	0.1	-0.9	-0.7
Trend Line Elasticity					
FY25 vs FY23	0.8	-0.2	0.2	-1.1	-1.1

Table 3-10: Actual Past Traffic Elasticity on PR Based on Toll data

Cars

- The motorization rate for cars (per 1,000 population) in India has gone up from 6.6 in 2001 to 25 in 2019. Although India's car fleet has been growing at 10 percent for nearly 25 years, its motorization rate is low compared to other countries of similar wealth and much lower than developed countries with motorization rate of around 450. The low motorization rate suggests that there is room for continued growth for many years to come. With the continual increase in motorization rate and improved road network usage of cars for inter-urban travel is showing a growing trend.
- The past elasticity of 1.4 is observed for the period between FY23 and FY24 on the project road.
- It is likely that this growth would slow down over time as the market becomes more mature and saturated, therefore elasticity to GSDP can be expected to decline over time. With the anticipated growth momentum in the coming years, for the project road an elasticity value of 1.1 have been considered for the slab up to FY30 and further tapering to 1.0 has been done over different slabs in the remaining concession period.

LCV/Minibus

- Predominance of Mini LCV in the LCV category for short haul traffic is being witnessed across many national highways. The LCV segments are also witnessing a smart uptick in demand in the goods carrier segment, where the 2T mini-truck and 2-3.5T pickups dominate with 90 percent share of the total LCV goods segment.
- For project road, an elasticity of 0.5 has been adopted till the end of concession period.

Bus/Truck

- Over the years in India there has been a change in passenger's travel mode preferences with increasingly more people shifting from public transport systems towards personalised modes. This has resulted, in general, in elasticity of bus traffic/demand to GSDP lower than unity.
- The toll plaza data shows a past elasticity of 0.3 between FY23 and FY24 comparison in combined Bus/Truck category, whereas at the adjacent section of RGBL a higher

elasticity of 1.1 is observed for the period FY16 to FY23. For the project road, an elasticity of 0.5 has been considered for Bus/Truck category for the entire concession period.

3A Truck/MAV

- In India as a whole, the freight vehicle mix has been changing in the last decade favouring MAV to 2A/3A vehicles for long-distance traffic, given the operational efficiencies achievable with larger vehicles. Considering the ongoing technical advancements in automobile industry, some of the standard 2A/3A trucks would gradually be replaced by MAVs. Mature National Highways with tolling in operation for few years, have already witnessed the shift in 2A/3A trucks to MAV for long distance movement and the limited number of 2A/3A trucks are being used for local movements.
- For the project road, 0.4 has been considered for 3A trucks till FY35 and has been tapered to 0.3 till the end of concession period.
- In case of MAVs, an elasticity of 1.0 has been considered for MAVs till FY30 and has been tapered thereafter.

It has been assumed that transport demand elasticity, for both freight and passenger traffic, would gradually decline over time, despite growth in per capita income, as regions becomes more mature, self-sufficient and with alternative mode of transport available to users. Due consideration has been given to the tonnage shifts happening in the market with Mini LCV gaining importance for short distance movements over LCVs and MAVs being preferred over 2A/3A for long distance movements due to better operational efficiencies.

While assigning elasticities to different modes, freight travel pattern and over all elasticity of cargo tonnage with respect to weighted GSDP has been an important consideration. The recommended elasticity values adopted for all vehicle types in line with the traffic growth being observed on other national highways and changes in freight traffic pattern observed on the project road are presented in **Table 3-11**.

Period/Modes	Cars	LCV	Bus/2A	3A	MAV/OSV
Up to FY30	1.1	0.5	0.5	0.4	1.0
FY31- FY35	1.0	0.5	0.5	0.4	0.9
FY36- FY40	1.0	0.5	0.5	0.3	0.8
FY40 & beyond	1.0	0.5	0.5	0.3	0.7

Table 3-11: Recommended Elasticity for Project Road

3.9 Projected Traffic Growth Rates

Based on the moderated perspective elasticity values and the projected growth rates of the income for PIA states, the future average annual compound traffic growth rates by vehicle type have been estimated for the project road by using the following relationship:

T_{gr} = ($GSDP_{gr}$) x E;

where,

T_{gr} – Traffic growth rate for mode

$GSDP_{gr}$ – Growth rate of GSDP

E – Elasticity value for mode

Using the year-on-year mode wise weighted income for PIA and elasticity for different time periods, traffic growth rates have been estimated for each year till FY55 in line with the maximum extendable concession period of 30 years. The estimated traffic growth rates for the project road along with the implied growth rates after considering the impact of diversions have been presented in **Table 3-12**.

FY/Modes	Cars	LCV	Bus/ 2A	3A	MAV/ OSV	Cars	LCV	Bus/ 2A	3A	MAV/ OSV
	Normal Growth Rates					Implied Growth Rates				
FY26	7.4	3.3	3.4	2.7	6.7	7.4	3.3	3.4	2.7	6.7

FY43	4.8	2.4	2.4	1.5	3.4	4.8	2.4	2.4	1.5	3.4
FY44	4.7	2.3	2.4	1.4	3.3	4.7	2.3	2.4	1.4	3.3
FY45 and beyond	4.6	2.3	2.3	1.4	3.2	4.6	2.3	2.3	1.4	3.2

Table 3-12: Projected Traffic Growth Rates for Project Road (%)

In derivation of above growth rates, the likely shift of buses to cars in case of passenger vehicles and the replacement/ tonnage shift of 2A/3A trucks to MAV for long distance in case of freight vehicles has been duly considered.

The above growth rates relate to the most likely Base Case. In addition, two sets of traffic growth rates under low and high cases have also been considered and impact on toll revenue evaluated for both these cases. Based on the risk analysis of key parameters like economic growth and elasticity of travel demand impacting traffic growth, two additional growth scenarios have been presented. Low growth scenario considers a 20 percent reduction in growth rates relating to about 10 percent decline each in elasticity and economic growth. The high growth scenario considers a 20 percent increase in growth rates signifying about 10 percent increase each in elasticity and economic parameters.

3.10 Projections Mode-Wise Traffic

Table 3-13 presents the projections of the mode-wise vehicles under the base case till FY55 after considering diversion impacts.

FY End	CJV	LCV	Bus/2A	3A	MAV	OSV	Total PCU
2025	7,436	621	1,928	1,130	2,530	5	7,436

3.11 Traffic Projections and Capacity Analysis

Table 3-14 presents the projections of the total vehicles based on the most likely growth rates till FY55 as assessed in this study.

FY	Total Traffic Before Diversion	Total Traffic After Diversion
2025	28,949	28,949
2026	30,585	30,585
2027	32,298	31,897
2028	34,118	33,483
2029	35,962	35,073
2030	37,730	36,799
2031	39,445	38,473
2032	41,244	40,230
2033	43,131	42,073
2034	45,111	44,007
2035	47,153	46,002
2036	49,122	47,927
2037	51,143	49,904
2038	53,216	51,931
2039	55,338	54,008
2040	57,510	56,133
2041	59,607	58,187
2042	61,744	60,281
2043	63,919	62,412
2044	66,131	64,579
2045	68,377	66,781
2046	70,707	69,064
2047	73,122	71,433
2048	75,628	73,889
2049	78,226	76,438
2050	80,922	79,081
2051	83,718	81,824
2052	86,620	84,671
2053	89,630	87,624
2054	92,753	90,690
2055	95,995	93,871
PCU CAGR – FY25 to FY45	4.4%	4.3%

Table 3-14: Projected Traffic in PCUs on the Project Road

With the considered diversion impacts, the project road traffic is likely to cross 60,000 PCUs in FY42.

As per the traffic projections estimated above, the six-laning of the PR section is anticipated to take place in FY35 and FY36.

It is to be noted, the majority of the distinct structures on the PR section are already six-laned, and the required land for the expansion to a six-lane carriageway is available. Thus, disruptions during the construction process are expected to be minimal. Cost ratio analysis suggests a minimal change in share of PR when compared in existing 4 lane configuration (during construction with a lower speed) with 6 lane configurations. Hence, no significant impact on traffic is expected during expansion of PR.

4. TOLL REVENUE PROJECTIONS

4.1 Tolling Strategy

The project road will continue to have an "Open System" of toll collection which enables the concessionaire to collect tolls from through traffic as well as from short distance one.

As mentioned earlier, there is one operational toll plaza on the project road, Veeravalli at km 53.700 with an effective tolling length of 108.2185 km.

4.2 Schedule of User Fee

As per Schedule of User Fee for the project, the per km toll rates applicable from 2007-08 for normal tolling length, bypasses and permanent structures, the revision basis and concessions are provided.

The concessions to traffic have been given in the form of rates as below:

Local traffic

Car / Jeep / Vans - includes local users owning a vehicle registered for non-commercial purposes, residing within a distance of 20 km from the toll plaza and crossing the same for commuting purposes.

Commercial vehicles - includes local users owning a commercial vehicle (excluding vehicles under National Permit), registered with address on the Registration Certificate of a particular district and uses such vehicle for commuting on a section of National Highway, permanent bridge, tunnel or bypass, as the case may be, which is located within that district, shall be levied user fee on all toll plazas which are located within that district at the rate of fifty per cent of the prescribed rate of fee (single journey rate). No such concession shall be provided, if a service road or alternative road is available for use by such commercial vehicles. Thus, local commercial traffic has to pay only 50 percent of the normal ticket.

Daily Pass

When the vehicle has to cross the tolled section more than once in a day, the user shall have the option to pay one and half times (1.5 times) of the fee for a single entry; this pass shall be valid for 2 entries within 24 hours of purchase.

Monthly Pass

A user, who makes use of the project road frequently during a month, may opt to purchase a monthly pass upon payment of a charge equal to two-thirds of the fee payable for 50 single journeys; this pass can be used for a maximum 50 one-way journeys over the month of validity.

Thus, the different categories of toll tickets are as follows:

(i) Traffic paying normal toll rates (single trip)

(ii) Traffic paying return journey rates

(iii) Traffic paying monthly pass rates

(iv) Traffic paying local personal rates

(v) Traffic paying local commercial rates

4.3 Tolling Segmentation

The tolling stream distribution has been estimated from the ETC data of April 2024 to November 2024 (excluding freight traffic from 30th March 2024 to 8th May 2024). The cash and exemption traffic data for FY25 (April–November) has been added into the ETC traffic distribution. The resultant ticket distribution is presented in **Table 4-1**.

Type	Car	LCV	Bus/2A Trucks	3A Trucks	MAV	OSV
Single	48.2	67.4	54.4	61.8	91.2	100.0
Return	45.5	30.1	36.9	23.0	8.2	0.0
Monthly	0.0	0.0	1.3	0.0	0.0	0.0
Local personal	3.0	0.0	0.0	0.0	0.0	0.0
Local commercial	0.5	1.8	7.4	15.0	0.4	0.0
Exemptions and Violations	2.9	0.7	0.0	0.2	0.1	0.0
Total	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

Table 4-1: Tolling Distribution

In case of cars, the normal toll paying traffic is likely to be about 48.2 percent at the toll plaza location. The share of return journey is around 45.5 percent due to the short lead of travel for cars on the project road. The exemptions for car traffic are about 2.9 percent.

In case of LCV and Bus/2A trucks, the level of normal paying traffic is likely to be around 67.4 percent and 54.4 percent respectively whereas, around 30-37 percent of traffic are opting for return journey. Additionally, around 7.4 percent of 2A trucks are falling under local commercial category.

For 3A trucks, the share of normal toll paying traffic is around 61.8 percent and the return journey category accounts for about 23 percent. Moreover, the share of local commercial traffic is high with about 15.0 percent as compared to other modes.

In case of MAVs, around 91.2 percent of traffic is opting for normal ticket due to their long lead of travel and around 8.2 percent of MAV falling under return journey category. As mentioned earlier, these trucks are making short distance trips from Eluru/Vijayawada/ Hyderabad to Rajahmundry/ Kakinada/ Vishakhapatnam. The MAV traffic falling under local commercial category is 0.4 percent.

Trip rate for local personal pass users for cars is 1.0 and for monthly pass it is considered as 1.67 across all the modes. For daily pass, trip rate of 2.0 has been considered for all the modes.

4.4 Toll Rates

This section presents details on the toll rates that are likely to be imposed on the users of the project road during the study period. The toll rates (Rs/km) for the base year 2007-08 for different vehicle categories as per toll fee rules are presented in **Table 4-2**.

Mode	Base rate per km (in Rs)
Car, Jeep, Van, LMV	0.65
LCV /M Bus	1.05
Bus/ 2 Axle Truck	2.20
3 Axle	2.40
MAV	3.45
Oversized	4.20
Local Passenger	150

Table 4-2: Toll Rates in Rs/km for Different Vehicle Categories

The toll notification states that the 2007 toll rates shall be increased without compounding by three per cent each year with effect from the 1st day of April 2008 and such increased rate shall be deemed to be the base rate for the subsequent years.

In addition to this, the rate of fee for use of bypass forming part of a section of a National Highway constructed with a cost of Rs 10 crore or more, for the base year 2007, shall be one and a half times of the per km base rates specified above and the length of such bypass shall be excluded from the length of such section of National Highway.

In addition to this, the fee levied and collected hereunder for permanent bridge/ structures, as the case may be, having a length of 60 m or more on the basis of the equivalent length for structure as specified shall be due and payable at the toll plaza.

The details of normal tolling lengths, bypass length (at 1.5 times) and equivalent structure lengths being charged at toll plaza as per the information in the Schedule M for the project are presented in **Table 4-3**.

Veeravalli TP at km 53.700	FY25 onwards
A. Normal	24.3590
B. Bypass	43.6930
C. Eq. structure	1.8320
Base Length	69.8840
Tolling Length = A+(B*1.5) + (C*10)	108.2185

Table 4-3: Tolling Length (in km) for the Project Road

The applicable base rates shall be revised annually with effect from April 1 each year to reflect the increase in wholesale price index for the month of December of the immediate preceding year in which such revision is undertaken but such revision shall be restricted for 40 per cent of the increase in wholesale price index.

Actual WPI information for December 2024 of 155.4 under 2011-12 series converted into 1999-00 series (155.4*1.873*1.641=477.636) has been used. WPI increase of 4.5 is

considered for FY27 & FY28, while WPI forecast for remaining years beyond December 2027 has been considered as 3.5 percent as provided by the client.

The stream of toll rates likely to be charged basis schedule -M lengths and adopted WPI assumptions at the toll plaza of the project road in cardinal years till FY55 is presented in **Table 4-4**. The toll fee has been rounded to nearest 5 Rupees as per toll fee rules.

FY	Car	LCV	Bus/ 2-axle Truck	3-axle Truck	MAV	O/size/ HME	Car Local
Veeravalli TP							
2025	160	255	535	585	840	1,025	340
2030	195	315	660	720	1,035	1,260	415
2035	240	385	805	880	1,265	1,540	510
2040	290	470	985	1,075	1,545	1,880	620
2045	355	575	1,205	1,310	1,885	2,295	760
2050	435	700	1,470	1,605	2,305	2,805	925
2055	530	855	1,795	1,960	2,815	3,430	1,130

Table 4-4: Toll Rates at Toll Plaza (in Rs)

The users purchasing return journey tickets will pay 1.5 times the above toll rates; the traffic opting for monthly pass will pay 33.3 times (two-thirds of 50 single journeys) the normal traffic toll rates.

4.5 Toll Revenue Estimates

Total Revenue collected at the toll plaza location during for FY23 and FY24 is Rs 1,664.4 million and Rs 1,702.3 million respectively. The mode wise past revenue for the project road toll plaza is presented in **Table 4-5**.

FY/TP	CJV	LCV	2-Axle	3-Axle	MAV	OSV	Total
FY23	290.6	49.6	288.7	222.0	812.9	0.6	1,664.4
FY24	336.5	50.5	316.2	218.6	779.9	0.7	1,702.3
FY25 (8 months)	231.3	34.5	214.3	137.5	481.6	0.3	1,099.6

Table 4-5: Mode-wise Past Revenue (In Millions)

The assured remittance amount for FY25 for the project road toll plaza is Rs. 1,648.0 whereas the estimated revenue from the model is 1,707.0 million which is 3.6 percent higher than the actual remittance amount.

As per the site findings, WIM is currently installed at the Veeravalli toll plaza lanes whereas no overloading is being charged currently.

In view of this, 7- day axle load survey data (as part of technical due diligence) has been provided by the technical consultants of the client which has been analysed to understand the extent of overloaded vehicles at Veeravalli toll plaza. The analysis shows similar overloading trends across the seven days. The findings of the overloading analysis are presented in **Table 4-6**.

Mode	Within Permissible Limit	Within Tolerance up to 5%	>5%-<10%	>10%-<20%	>20%	Total	Adopted %
LCV	100.0	0.0	0.0	0.0	0.0	100.0	
2A	99.1	0.4	0.3	0.1	0.04	100.0	
3A	66.1	6.9	5.4	12.4	9.2	100.0	7.08
MAV	41.1	8.5	8.3	14.3	27.8	100.0	7.18

Table 4-6: Overloaded Vehicles (%) on the PR

As observed from the seven-day axle load analysis, around 9 percent of 3A trucks and 28 percent of the MAVs are above 20 percent overloading limit at Veeravalli TP. However, the commodities such as fruits and vegetables, petroleum products, chemicals and gas, heavy machinery and industrial equipment as well as OD pairs with lead greater than 500 km are less likely to be overloaded. Hence, the revised overloading percentage after excluding these commodities in the category of above 20 percent overloading comes out to be around 7 percent in both 3A and MAV which has been adopted for the further analysis.

The overloading vehicles are liable to pay the overloading penalty as per the provisions of the concession agreement. The concession agreement of the latest TOT project states that overloading penalty should be charged as per the NHAI overloading circular. As per the amended National Highways Fee (Determination of Rates and Collection) Rules, 2018, "the driver or owner or person in charge of a mechanical vehicle shall be liable to pay fee, for entering the overloaded vehicle on the National Highway, to the user fee collecting agency, equal to fees as presented in **Table 4-7**.

Percentage of excess load over Maximum Permissible Gross Vehicular Weight	Multiplying factor to base rate fees	Fees
0% to 20%	Two	[(Fees applicable for such category of mechanical vehicle under sub-rule (2) of rule 4) X (Multiplying factor)]
>20% to 40%	Four	
>40% to 60%	Six	
>60% to 80%	Eight	
>80% and above	Ten	

Table 4-7: User Fee for Overloaded Vehicles

However, as per the operational overloading practices at the toll plazas where overloading penalty is being charged, it is either the next higher category toll or two times the normal fee which is usually being collected.

Continuing with the practice of two times toll, since MAVs are heavily overloaded, with WIM in place at Veeravalli, the practice of charging them for one-time extra payment can be put in place. Even if 20 percent of these 3A Trucks and MAVs pay one time extra, it will result in a substantial gain in revenue, but it might not be practically possible to stop each vehicle and collect extra toll.

Although the quantum of overloaded vehicles is high but after factoring in the practical number of vehicles from whom overloading can be charged, under a more pragmatic scenario, it is assumed that around 25 percent of this 7 percent overloaded category is

charged for one-time additional payment. This results in around 2 percent of 3A & MAV AADT of FY25 - paying one-time extra toll. However, with strict overloading compliance in place in the future years, this overloading percentage is likely to decline over the years of concession. At present, overloading is not being collected at Veeravalli TP and the proportion of the overloading revenue is not much, therefore, it has not been considered in the base case.

4.6 Toll Revenue Projections

Toll revenue streams have been calculated assuming that:

- Toll would be collected for all 365 days in a year and for 366 days in a leap year
- Toll revenues have been presented from FY25 to FY55 in line with the maximum extendable concession period of 30 years

The toll revenue for Veeravalli at the project road after considering the impacts of all diversions for the base case is presented in **Table 4-8**.

FY Ending March	Car	LCV	Bus/2A Truck	3A Truck	MAV	O/size /HME	Total
2025	359.4	52.6	326.6	209.1	757.4	1.9	1,707.0

2055	5,734.4	381.7	2,344.5	1,143.7	8,476.7	21.8	18,102.8

Table 4-8: Toll Revenue (in Rs Million) for the Project Road by Mode

Around 74.4 percent of total revenue is likely to be generated from freight vehicles only. Majority of the revenue is expected to come from MAV/OSV with about 47.2 percent of the total revenue. Amongst other categories, cars represent a share of around 25.6 percent of total revenue followed by Bus/2A Trucks having a share of about 15.7 percent and around 9.0 percent share is contributed by 3A Trucks. LCV is likely to generate about 2.6 percent of total revenue.

Vehicles paying normal tolls are around 77.2 percent of total toll revenue for the project road section and around 20.9 percent of the traffic may fall in return pass category, while the remaining 1.9 percent is generated from monthly and local concession passes.

4.7 Scenario Analysis

For toll road projects, revenue streams are generally based on the assessment of the traffic volume (base and future) crossing the toll plazas and the applicable toll imposed on the user of the road. There is an inherent element of uncertainty in any forecast and whilst is not possible to measure risk in a strictly statistical sense (as many of the risks are largely or partly unknown), in this section an attempt is made at quantifying the main risks that could have an impact on this forecast.

The econometric approach used to derive traffic growth, is based on the estimation of GSDP growth rates for the influence area economies and traffic demand elasticity by mode; the estimation of both variables contains a certain degree of uncertainty which can be represented in the scenario analysis. Scenario analysis has been done in the following subheadings for the base case:

High Case

The high case is based on a more optimistic economic outlook for future years and higher elasticity values as compared to the base case. Therefore, traffic growth rates of 20 percent higher than the base case for every year and for all the mode are considered.

Low Case

A growth rate of 20 percent lower than base case for all types of vehicles has been considered in the present analysis to reflect uncertainty with regard to economic performance of PIA states and lower elasticity values.

The result of base case and scenario is presented in **Table 4-9**. A comparison versus base case has been presented for the Present Value of the project (at 12 percent discount rate) and the compounded annual growth rate (CAGR) from FY25 to FY45/FY55.

FY Ending March	Base Case	High Growth (+20%)	Low Growth (-20%)
2025	1,707.0	1,707.0	1,707.0
2026	1,864.2	1,884.1	1,844.4
2027	2,030.2	2,073.6	1,987.3
2028	2,240.0	2,312.5	2,169.1
2029	2,429.2	2,533.9	2,328.1
2030	2,659.2	2,800.4	2,524.2
2031	2,897.5	3,078.5	2,726.2
2032	3,147.7	3,374.0	2,935.6
2033	3,425.9	3,705.3	3,166.4
2034	3,730.8	4,071.6	3,417.4
2035	4,053.3	4,463.1	3,680.0
2036	4,404.6	4,889.9	3,966.3
2037	4,759.0	5,326.6	4,250.9
2038	5,153.5	5,814.8	4,566.5
2039	5,570.4	6,335.3	4,897.2
2040	6,031.0	6,912.8	5,261.4
2041	6,493.9	7,498.0	5,624.4
2042	6,996.3	8,136.1	6,016.7
2043	7,525.9	8,814.1	6,427.2
2044	8,105.4	9,558.3	6,875.2
2045	8,709.0	10,341.2	7,337.0
2046	9,368.6	11,201.4	7,839.1
2047	10,071.9	12,125.4	8,370.6
2048	10,854.8	13,159.1	8,959.7
2049	11,647.3	14,218.6	9,548.1
2050	12,546.3	15,424.7	10,213.8
2051	13,496.9	16,710.4	10,912.0
2052	14,554.0	18,147.9	11,684.7
2053	15,640.8	19,642.6	12,469.5
2054	16,828.6	21,286.4	13,322.3
2055	18,102.8	23,062.8	14,230.7
PV12 FY25 to FY45	24,441.3	26,585.8	22,525.5
PV12 vs base (till FY45)		8.8%	-7.8%
CAGR FY25 to FY45	8.5%	9.4%	7.6%
PV12 FY25 to FY55	30,946.1	34,595.3	27,815.2
PV12 vs base (till FY55)		8.8%	-7.8%
CAGR FY25 to FY55	8.2%	9.1%	7.3%

Table 4-9: Comparison of Annual Revenues Forecasts in Rs Million (Base) to Alternate Traffic Growth Assumptions

The project road revenues will have a CAGR of 8.5 percent for the period FY25 to FY45. The high growth scenario would generate about 8.8 percent higher PV than the base case while low growth scenario may result in 7.8 percent lower PV than the base case.

ABBREVIATION

AADT	Annual Average Daily Traffic
ADT	Average Daily Traffic
AR	Alternate Road
BIA	Broad Influence Area
BKV	Banglore- Kodikonda-Vijayawada Expressway
BC	Banglore-Chennai Expressway
CA	Concession Agreement
CAGR	Compound Annual Growth Rate
COD	Commercial Operation Date
Cr.	Crore
DES	Directorate of Economics and Statistics
FY	Financial Year
GC	Generalized Cost
GDP	Gross Domestic Product
GSDP	Gross State Domestic Product
GQ	Golden Quadrilateral
IIA	Immediate Influence Area
INR	Indian Rupee
IRC	Indian Roads Congress
Kms	Kilometers
LCV	Light Commercial Vehicle
MAV	Multi-axle Vehicle
Mn.	Millions
NHAI	National Highways Authority of India
MSME	Ministry of Micro, Small and Medium Enterprises
MoSPI	Ministry of Statistics and Programme Implementation
NH	National Highway
PWD	Public Works Department
O-D	Origin – Destination
OEA	Office of Economic Advisor
OSV	Over Sized Vehicle
PCI	Per Capita Income
PIA	Project Influence Area
PPP	Public Private Partnership
PR	Project Road
Rs.	Indian Rupees
SCF	Seasonal Correction Factor
SEZ	Special Economic Zone

TP	Toll Plaza
VOC	Vehicle Operating Cost
VOT	Value of Time
WPI	Wholesale Price Index
YOY	Year on Year
ZIF	Zonal Influence Factor

CHAPTER 1

Executive Summary

1. Executive Summary

IBI Group India Private Ltd (Consultant) was appointed by National Highways Infra Investment Managers Pvt Ltd to carry out the traffic due diligence study for the Mallavaram-Chittoor-AP/KA Border section of NH-69. This study "Toll Traffic and Revenue Assessment for Mallavaram-Chittoor-AP/KA Border section of NH-69/NH-140 in the state of Andhra Pradesh" summarizes IBI's evaluation of the future traffic and toll revenues considering Risk factors and Growth drivers expected during the project concession period.

1.1 Project Overview

The project road is part of the major National Highway 69/140 in which section1 is starting from AP/TN Border to Nalagampalli Village Section from Existing km 133.360 to km 171.590 (Design Chainage from km 134.890 to km 172.000) (Package-I) & from Nalagampalli Village to AP/Karnataka Border Section from km 172.000 (existing chainage km 171.590) to km 219.687(existing chainage km 216.912) (Package-II) & section 2 is starting from Chittoor (Design Chainage Km 0.00/Existing Chainage Km 158.00) to Mallavaram (Design Chainage Km 61.128/Existing Chainage Km 41.800), Providing connectivity between states like Andhra Pradesh, Karnataka, Tamil Nadu etc. The project road has two toll plazas (TPs), Gadanki Toll Plaza and Mahasamudram Toll Plaza.

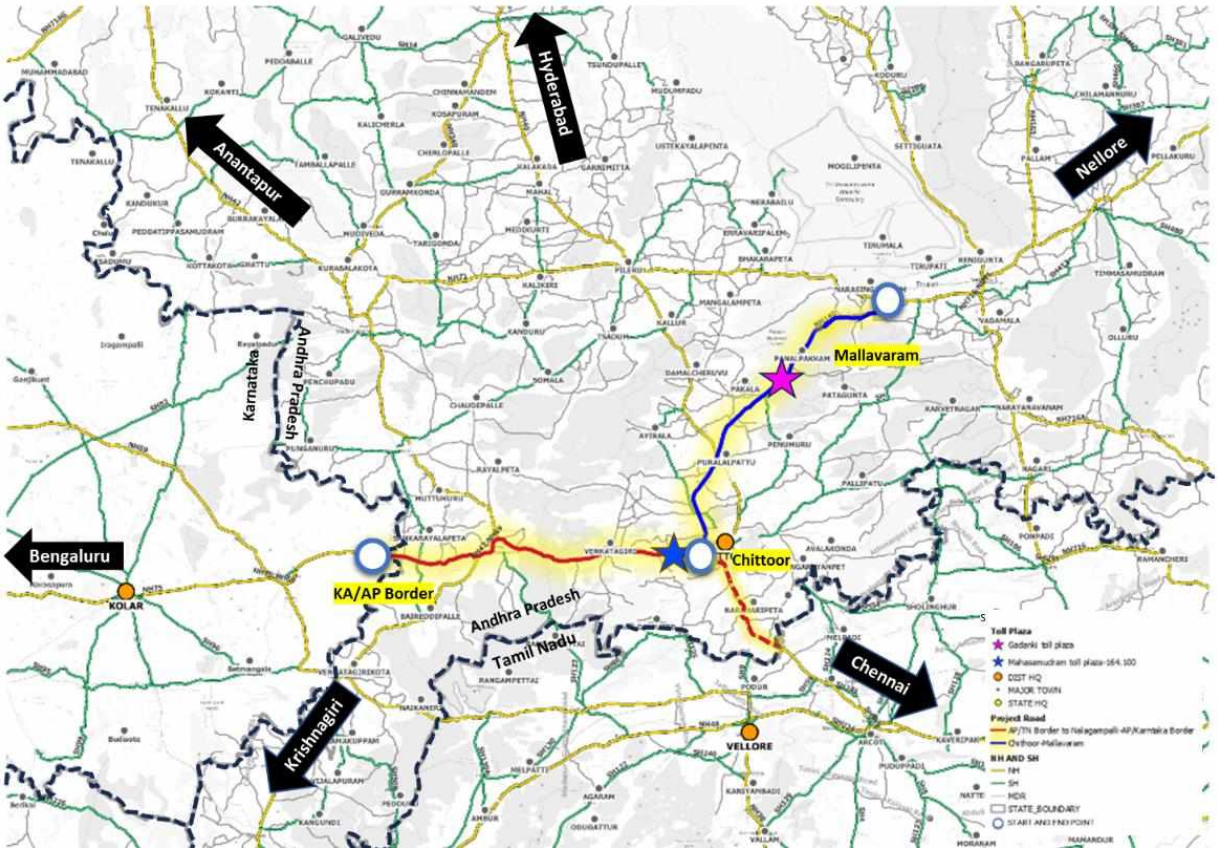

Figure 1-1: Corridor with existing toll plaza location

1.2 Salient growth features and traffic generators

The Chittoor-Mallavaram section is a vital economic corridor wherein Passenger traffic is mainly driven by tourism & Various temples and commercial traffic is influenced by multiple industries, playing a crucial role in regional and national logistics.

Tirumala is one of the most visited religious destinations in the world, attracting 60,000 to 80,000 pilgrims daily. In September 2023, the temple recorded an all-time high of 87,000 visitors in a single day, contributing to an annual footfall of approximately 30 to 40 million pilgrims. This massive influx of visitors plays a crucial role in driving regional economic activity, impacting tourism, transport, and local businesses.

Amara Raja Industries, a major player in the battery and power solutions sector, significantly contributes to regional industrial activity. Its large-scale manufacturing facility near Tirupati relies on an extensive logistics network for raw material procurement and finished product distribution. This industrial presence increases traffic at the Mahasamudram Toll Plaza, reinforcing its importance as a key growth driver in the region.

The Srikalahasti-Yerpedu node, located approximately 32 km from the project road, is part of the East Coast Industrial Corridor (ECIC), with Vizag-Chennai Industrial Corridor (VCIC) as its Phase 1. Key nodes along this corridor include Kopparthy Node, Visakhapatnam (Nakkapalli Cluster), and Chittoor Node in Andhra Pradesh. This corridor is expected to drive future industrial growth, enhancing economic connectivity across the state.

The Chennai-Bengaluru Industrial Corridor (CBIC) is designed to accelerate regional industrial development across Tamil Nadu, Karnataka, and Andhra Pradesh. A key component of this corridor is the Krishnapatnam Industrial Area in Andhra Pradesh, which is poised to become a major future growth driver by fostering industrial agglomeration and economic expansion.

This combination of religious tourism, industrial growth, and strategic corridor development makes Andhra Pradesh a crucial economic hub, contributing significantly to regional and national economic progress.

1.3 Traffic volume and composite of vehicles

Past data pertaining to the project corridor was sourced from the existing Concessionaire. This includes historic toll traffic and revenue data for the Gadanki, Mahasamudram toll plazas on the project road to study the past traffic and revenue trends, seasonal variations in traffic and other observations related to variations in the data. Past traffic trends in terms of year-on-year growth, month on month growth etc. were derived which will also help in understanding the travel pattern for both passenger and goods vehicles. The given traffic data includes the toll categories like single journey, local pass, and exempted traffic. Exempt category traffic falls under the list of vehicles where these types of vehicles are exempted from paying the user fee.

1.3.1 Historical traffic data

ETC daily-level data, segmented by ticket categories, was available for the following periods:

- Gadanki: Apr-2022 – Nov-2024
- Mahasamudram: Apr-2022 – Nov-2024

Gadanki Toll Plaza:

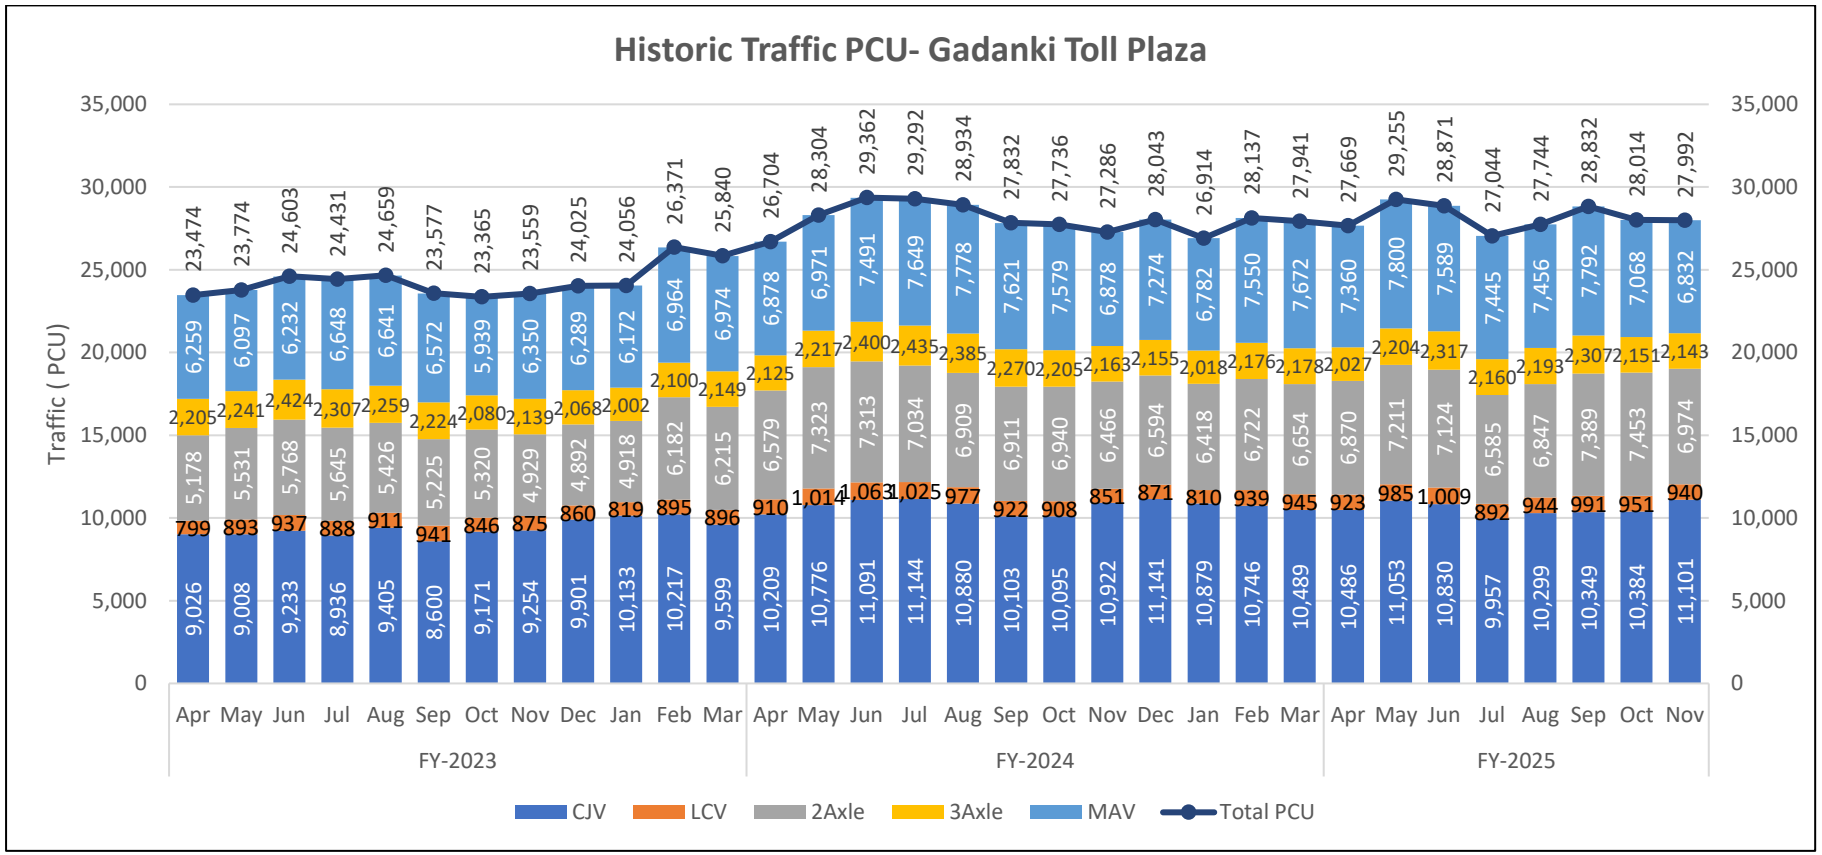

Figure 1-2: Historic Traffic PCU at Gadanki TP

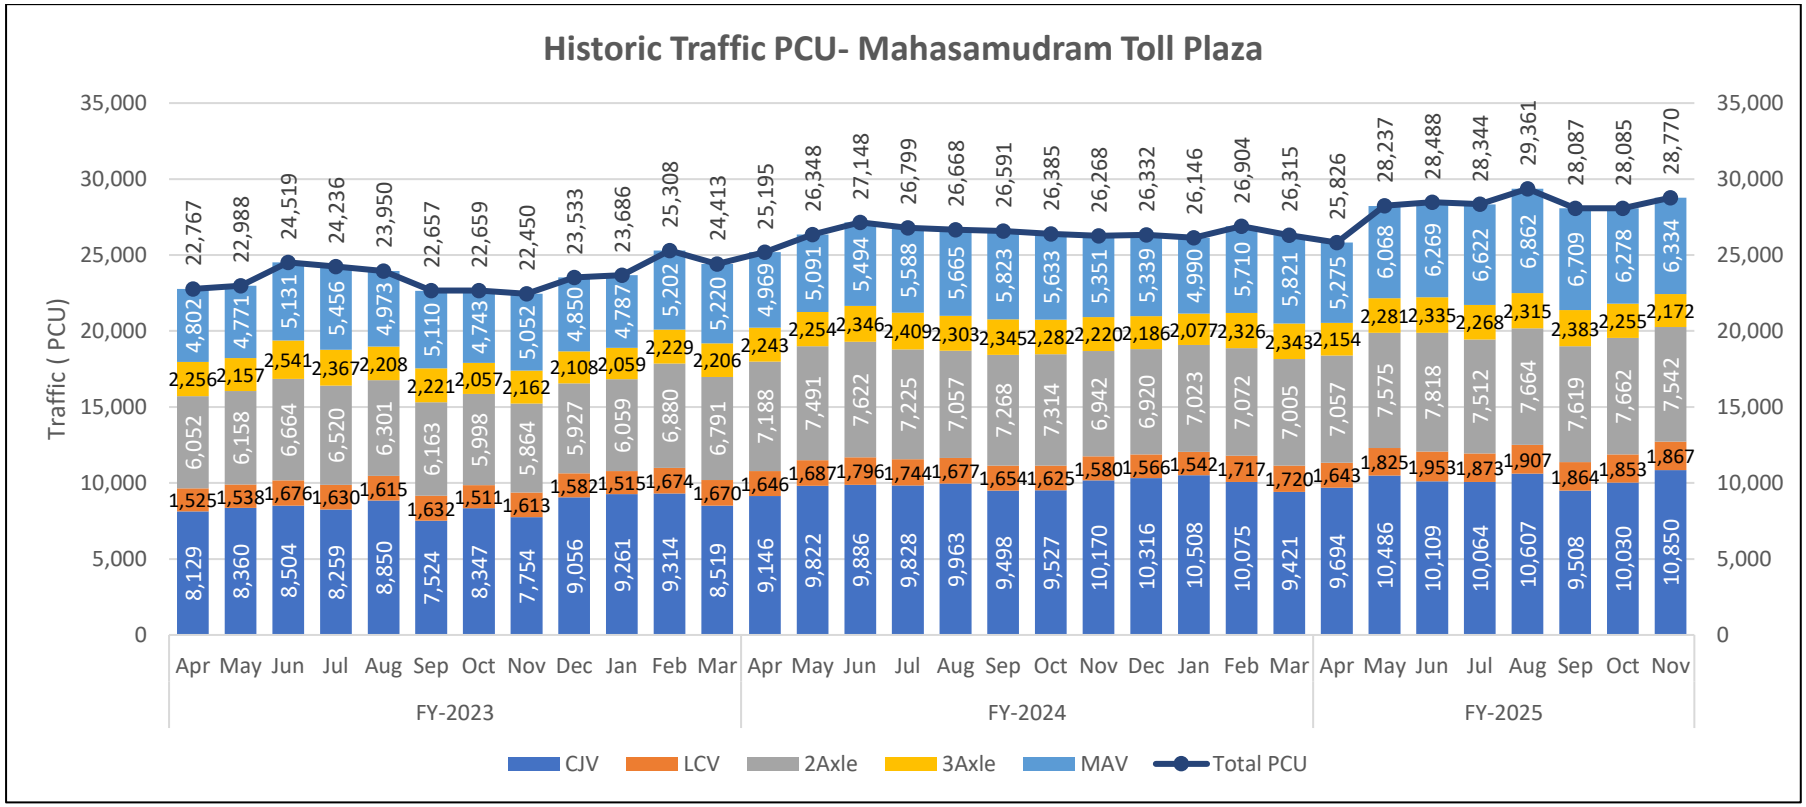
The daily traffic volume remains fairly consistent throughout the year, with a range between 26,000 to 28,000 PCUs per day in FY24 and similarly 26,000 to 29000 PCUs in FY25, indicating steady traffic at the toll plaza.

Mahasamudram Toll Plaza:



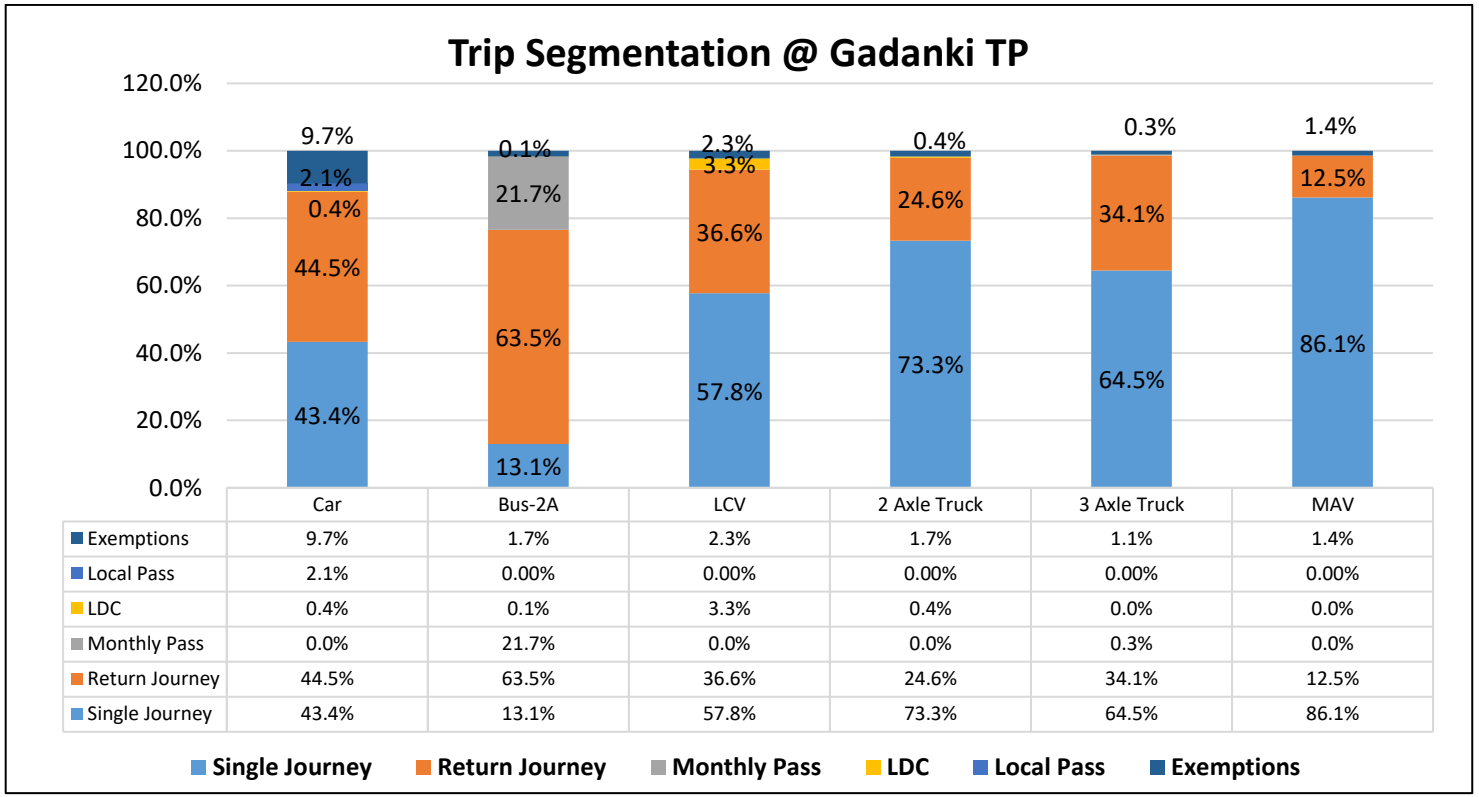


Figure 1-3: Historic Traffic PCU at Mahasamudram TP

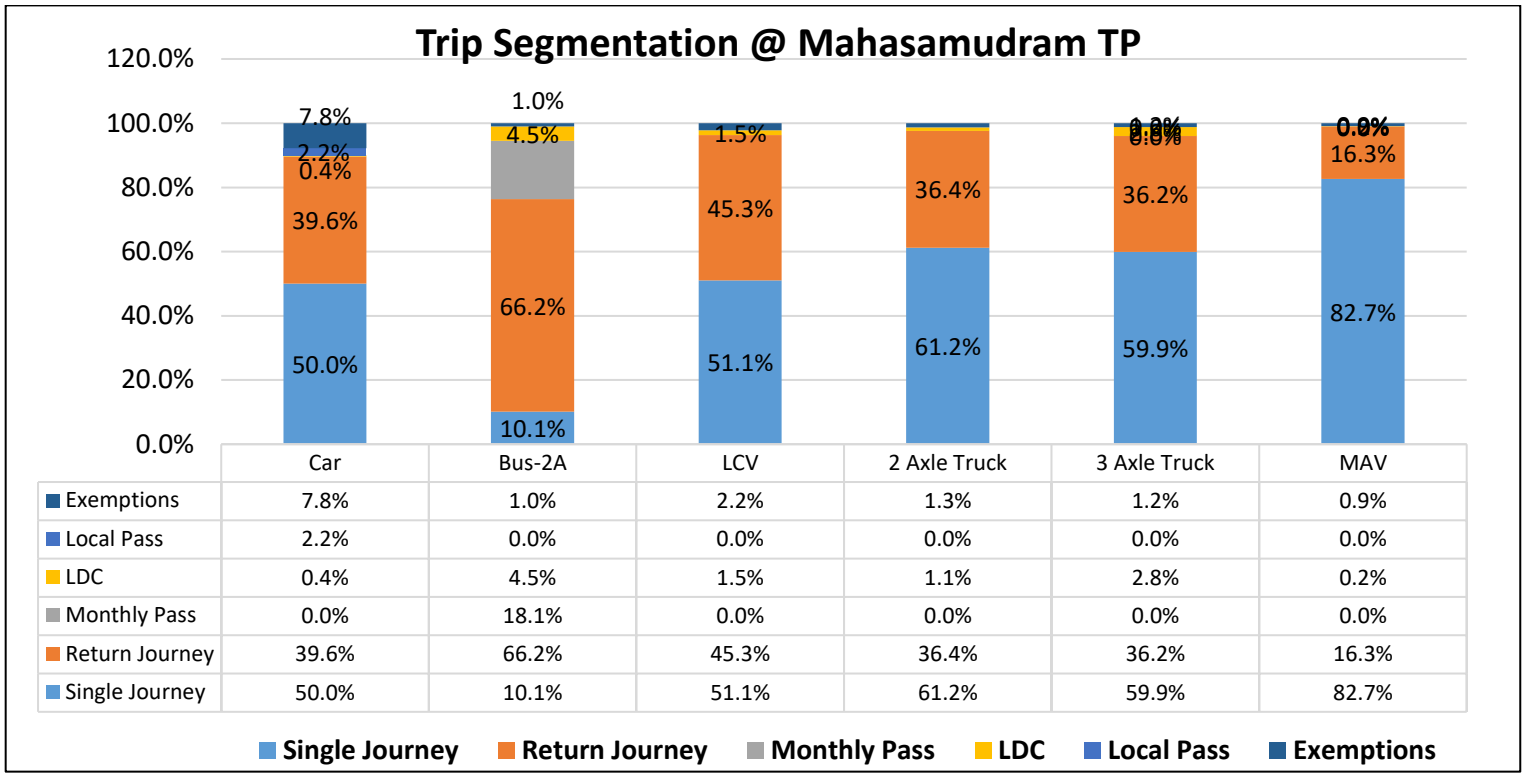
The daily traffic volume remains fairly consistent throughout the year, with a range between 23,000 to 26,000 PCUs per day, indicating steady traffic at the toll plaza in FY24 similarly 25,000 PCUs to 29,000 PCUs in FY25.

1.3.2 Toll segmentation

Based on detailed review of historic trends of trip segmentation, Consultant has recommended FY 25 (Apr-Nov 24) Trip Segmentation for the base year and future traffic and revenue projections.



Gadanki Toll Plaza:

	Car	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV
Exemptions	9.7%	1.7%	2.3%	1.7%	1.1%	1.4%
Local Pass	2.1%	0.00%	0.00%	0.00%	0.00%	0.00%
LDC	0.4%	0.1%	3.3%	0.4%	0.0%	0.0%
Monthly Pass	0.0%	21.7%	0.0%	0.0%	0.3%	0.0%
Return Journey	44.5%	63.5%	36.6%	24.6%	34.1%	12.5%
Single Journey	43.4%	13.1%	57.8%	73.3%	64.5%	86.1%

Figure 1-4: Trip Segmentation at Gadanki TP

Mahasamudram Toll Plaza:

	Car	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV
Exemptions	7.8%	1.0%	2.2%	1.3%	1.2%	0.9%
Local Pass	2.2%	0.0%	0.0%	0.0%	0.0%	0.0%
LDC	0.4%	4.5%	1.5%	1.1%	2.8%	0.2%
Monthly Pass	0.0%	18.1%	0.0%	0.0%	0.0%	0.0%
Return Journey	39.6%	66.2%	45.3%	36.4%	36.2%	16.3%
Single Journey	50.0%	10.1%	51.1%	61.2%	59.9%	82.7%

Figure 1-5: Trip Segmentation at Mahasamudram TP

1.3.3 Base year Traffic

- The Consultant recommends FY 25 (Apr to Nov 2024) ETC Toll plaza data for Base Year AADT, as it is based on the most recent data.
- ETC data of FY23 & FY24 are considered for SCF calculation. As it is presumed to be more suitable for SCF calculation for both the Toll Plaza's.
- Final AADT has arrived by adding adjusted ADT (with selected SCF) arrived from ETC data (April to Nov 2024, which excludes cash & exemption/violation traffic), cash & exempt traffic from non-ETC data (April to Nov 2024) and forced exemption/violation data obtained from traffic survey conducted on 26th July (for 24 hrs).
- Adopted AADT for both the toll plazas has been mentioned below.

Table 1-1: Base year (FY25) traffic at both the Toll Plazas

Mode	Gadanki Toll Plaza						Mahasamudram Toll Plaza					
	ADT(a)	SCF	AADT	Cash	Exempt	Final AADT	ADT(a)	SCF	AADT	Cash	Exempt	Final AADT
CJV	10,088	1.02	10,275	121	1,091	11,487	9,714	1.02	9,875	154	832	10,862
LCV	617	0.99	610	6	15	631	1,211	0.99	1,204	4	27	1,236
Bus	1,419	1.00	1,416	1	24	1,441	1,080	1.00	1,075	1	11	1,088
2Axle	891	1.00	889	1	15	905	1,410	1.00	1,403	1	15	1,420
3Axle	720	0.98	705	1	8	714	748	0.99	738	1	9	748
MAV	1,630	1.01	1,640	1	23	1,664	1,389	1.00	1,387	1	12	1,400
OSV	1	1.01	1	0	0	1	1	1.00	1	0	0	1
Total	**15,366**		**15,536**	**131**	**1,176**	**16,843**	**15,553**		**15,683**	**164**	**907**	**16,754**
PCU	**27,442**		**27,605**	**144**	**1,358**	**29,107**	**27,499**		**27,575**	**178**	**1,035**	**28,788**

1.3.4 Traffic Forecast

Traffic forecasting for project road traffic was done considering past trend in growth and analysing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

The network developments near the Asset's alignment, which are expected to impact traffic during the concession period, include the 4/8-lane access-controlled Bangalore–Chennai Expressway, the 4–6 lane partially access-controlled Bangalore–Vijayawada Expressway, and the 6-lane access-controlled Chittoor–Thatchur Expressway.

The Bangalore–Chennai Expressway is expected to have a negative impact on Mahasamudram TP, with a 50% impact in FY-27 and full impact by FY-28.

The Bangalore–Vijayawada Expressway is projected to negatively impact both TPs, with a 50% impact in FY-28 and full impact by FY-29.

The Chittoor–Thatchur Expressway is also expected to negatively affect Mahasamudram TP, with a 50% impact in FY-27 and full impact by FY-28.

All these network impacts are considered in the Traffic Projections.

The methodology used for the study included following steps:

- The influencing factors obtained from OD surveys are utilized in deriving the key socio-economic parameters of the Project Influence Area (PIA) for the historic trend.
- Through regression analysis for various combinations of dependent and independent parameters is conducted to evaluate the significance of the relation.
- Potential growth of various vehicle categories was separately assessed based on its probable market share in expected multi-modal development.
- The elasticity values for the selected relation are taken & used for the traffic growth rates estimation. However, there are several steps performed before obtaining the traffic growth rates which are explained in the chapter 6.

1.3.5 Traffic and Revenue Assumptions

Traffic Assumptions: -

- Future traffic forecasting was done using elasticity approach which considers the elasticity of transport demand and probable pattern of future growth of the economy.
- Elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend and AADT-tonnage with the growth of PCI, GSDP and Moderated elasticity values chosen for the analysis based on previous trends in socioeconomic variables.
- For Car, Bus and truck traffic, the adopted elasticity values are as follows –
    - Gadanki TP – 1.05, 0.60, 0.85
    - Mahasamudram TP – 1.05, 0.60, 0.80
- Based on the projected elasticity values for TP 1, TP2 the growth of PIA, the future average annual compound traffic growth rates by vehicle type have been estimated by using the following relationship:

- For freight vehicle, the tonnages on the corridors are projected. The existing market share of different category of goods vehicles are then adjusted for the future years based on the past tonnage trend observed.
- Normal traffic projections have arrived by applying the traffic growth on the base year traffic.

- The future traffic projections are presented for Effective case traffic projections & the Effective case has arrived by considering the future adjustments in the form of diversions and developments detailed in the chapter 5.

Revenue Assumptions: -

- Toll revenue projections or forecasting will be calculated based on the projected traffic and projected toll rates.
- Toll rates by vehicle and toll category depends on the tolling length, wholesale price index (WPI) and the base rates which are applicable by vehicle category are according to the NH fee notification for the project.
- Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the National highway fee rules 2008.
- Fee applicable shall be the rate multiplied by the length of the highway section for which toll is to be collected.
- The amount of fee and the revision thereof effective from 1st April every year shall be calculated as follows:

$$\text{Applicable rate of fee} = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPIA} - \text{WPI B}}{\text{WPI B}}\right\} * 0.40$$

Were
WPI-A means the Wholesale Price Index on December 31, 2023.
WPI-B means the Wholesale Price Index of week ending on 6th January 2007.i.e 208.7.
The actual fees to be charged shall be rounded off to the nearest Five rupees.

1.3.6 Traffic and Toll revenue projections

Gadanki Toll Plaza:

Table 1-2: Effective Future Traffic Projections at Gadanki TP

EFFECTIVE FUTURE TRAFFIC PROJECTIONS									
FINANCIAL YEAR	CAR	MINIBUS	BUS	LCV	2AT	3AT	MAV	TOTAL VEH	PCU
2025	11,487	168	1,441	462	905	714	1,665	16,843	29,107
2026	12,344	175	1,503	481	954	722	1,789	17,968	30,915
2027	13,264	183	1,566	500	1,006	729	1,918	19,167	32,824
2028	14,145	191	1,606	501	967	670	1,858	19,936	33,269

1.3.8 Traffic and Toll revenue projections

Toll revenue is projected based on the future traffic projections, toll fees by vehicle and toll category and trip rates. Traffic numbers are projected by fiscal year i.e., FY25, FY26 etc. and

toll rates are revised on 01st April every year. Toll revenues are projected by fiscal year till the end of concession period and considering maximum possible extension referring clauses related to Additional toll way, Capacity augmentation and modification of concession period.

(a) Toll would be collected for all the days in a year.
(b) Revenue projected from FY-2025 to FY-2056. (End of Concession period is 2046, How ever the same has been estimated till FY-2056 as long-term projections)

The toll revenue projections are done for the effective case which is basically the consideration of all network improvements and land developments as described in the chapter "Traffic Growth Rate Estimation". Like the effective traffic projections, the below table summarizes the projected annual toll revenue for all the toll plazas for Most Likely scenario.

Table 1-8:Estimated Annual Toll revenue (Effective case) in Rs. Crores – Most Likely

FY YEAR	Gadanki TP	Mahasamudram TP	Total Revenue
FY25	122	98	220
FY26	133	135	268
FY27	150	149	299
FY28	158	143	300
FY29	164	148	312
FY30	181	162	342
FY31	198	178	375
FY32	217	194	411
FY33	236	213	450
FY34	259	232	492
FY35	283	254	537
FY36	310	279	589

CHAPTER 2
Introduction

2. Introduction

2.1 General

IBI Group India Private Ltd (Consultant) was appointed by National Highways Infra Investment Managers Pvt Ltd to carry out the traffic due diligence study for the Mallavaram-Chittoor-AP/KA Border section of NH-69.

The project road is part of the major National Highway 69, providing connectivity between states like Andhra Pradesh, Karnataka. The project road has two toll plazas (TPs), Gadanki Toll Plaza and Mahasamudram Toll Plaza.

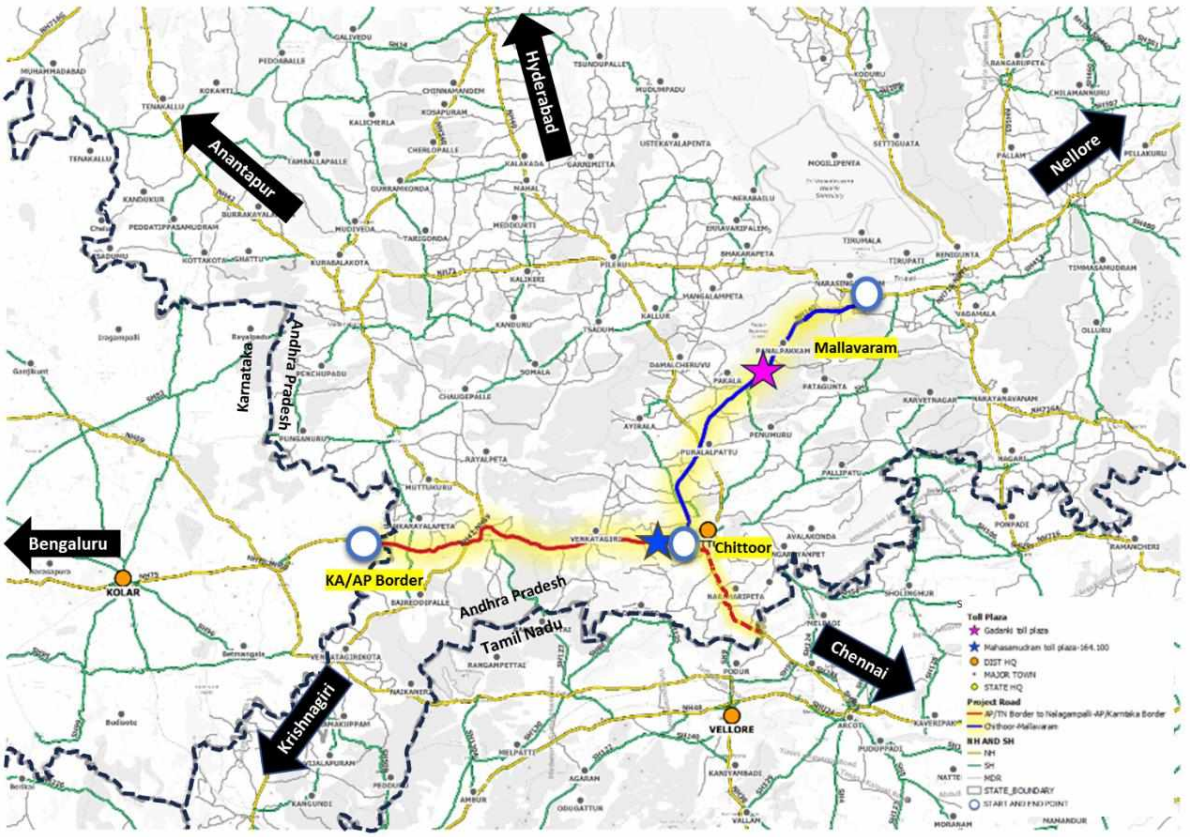

Figure 2-1: Project Corridor with existing toll plaza location

As part of this study, a systematic methodology has been followed to assess the characteristics of the existing traffic on the project road and traffic growth during the remaining period of the concession i.e., till (FY-2046), How ever the same has been estimated till FY-2056 as long-term projections considering the maximum extension in concession period. The details pertaining to the data collection, primary as well as secondary, and results from its analysis are presented in the subsequent chapters of this report.

The Traffic report presents the existing traffic characteristics, methodology used to derive traffic growth rates, details on adopted traffic growth rates, forecasted traffic, diverted, and generated traffic if any for the next Twenty (20) years. Based on these, future tollable traffic and toll revenues at the existing toll plaza locations are assessed and presented.

2.2 Objective and Scope of work

The main objective of the study is to carry out review of existing traffic & revenue data and forecasting the future traffic and revenues for the project road for the remaining concession period considering the potential risks and developments in view of the micro and macro characteristics related to demographics, economy, alternate routes, project road, regional network & peripheral development in the project influence area (PIA).

The scope of work is to assess the horizon year traffic & toll revenue at the toll plaza locations on the project road through:

- Review of Data and Documents:
    - Reviewing the Historical data on classified traffic volume & revenue data for the project highway's Toll Plazas.
    - Reviewing the Past traffic study reports.
    - Conducting gap analysis between actual and projected traffic & revenue for current/last year and ascertaining the reasons thereof.
    - ETC & Non ETC data for the historic period for the project road toll plazas.
    - Traffic volume/ revenue data collected from the concerned PIUs, and actual amount remitted by User Fee Collection Agencies to NHAI.
- Traffic Surveys:
    - 7 Days Traffic Volumes counts at both the toll plazas of project road using Videography method. The vehicle classification system as given in relevant IRC code may be followed.
    - All results shall be analyzed, and the annual average daily traffic (AADT) shall be worked out by applying seasonal correction / variation factors.
    - Triangulation of traffic forecasts shall be undertaken based on data from secondary sources and analysis of variations (if any), from the traffic as per TVC and as per data shared by NHIIMPL.
    - 1 Day Origin- Destination study at both the toll plazas of project road using roadside interview techniques.
    - The road-side interviews on random sample basis to cover all vehicles. The location of the O-D survey and commodity movement surveys shall normally be the same as for the classified traffic volume count.
    - Identification of Project Influence Area and traffic generators (industrial areas, towns, ports etc.) from analysis of travel pattern covering:
        a) Regional distribution of traffic – through/ bypassing traffic/ inter-state, intra-state/interdistrict, intra-district etc.
        b) Commodity composition- Goods type distribution.
        c) Top OD pairs by vehicle types.
        d) Travel frequency and trip purpose distribution leading to traffic segmentation by toll rate category.
    - Traffic diversion analysis, in case, there are existing routes, or new alternative routes are planned by relevant Authority.
    - Identification of and traffic analysis relating to Competing Routes ((including rail/DFC etc.), if any.
    - Assessment of impact of network improvements based on observed travel pattern.

- Traffic growth rate estimation based on the elasticity approach using econometric modelling

- Traffic & Revenue Estimates:
  - The values of elasticity of transport demand shall be based on the prevailing practices in the country. The Advisors shall give complete background including references for selecting the value of transport demand elasticity.
  - The demand estimates shall be done assuming three scenarios, namely, optimistic, pessimistic and most likely traffic growth. The growth factors shall be worked out for five- yearly intervals or as appropriate.
  - Above all will include formulation of future economic outlook based on recent economic performance, extent of impact of covid waves and expected economic recovery thereafter.
  - Key factors to be considered in forecasting traffic/ revenue:
    a) Seasonal Correction Factors
    b) Influence area of the project and its economic perspective
    c) Key traffic drivers of the project
    d) Present and future elasticity of transport demand by vehicle type
    e) Traffic growth rate trends observed
    f) Impact of upcoming developments and future development potential of the region
    g) Study of impact of competing routes in terms of diversion from/to the project road - Identification of competing routes and network condition, traffic characteristics & level of tolls charged, if any on the competing corridors
    h) Review of nearby toll plaza/past traffic & revenue data for accurate estimation of traffic growth and to study the past traffic growth trend.
    i) Scenario testing for toll revenue
    j) Any other competing transportation facility
    k) Distribution of traffic into different tolling streams (normal paying and concessions as applicable in line with CA)

2.3 Composition of the Report

This Report is further divided into seven chapters. Chapter 1 contains the executive summary of the report providing a brief outcome of the study. Chapter 2 provides a brief description of the project including the background and key objectives of the study. Chapter 3 contains details of the project road existing connectivity and its influence area. Chapter 4 contains details pertaining to various secondary and primary data and its analysis to understand the base year traffic and travel characteristics. Chapter 5 presents the traffic diversion analysis. This chapter details out the approach and methodology adopted for identification of the potential divertible traffic. It also, elaborately illustrates the approach and methodology adopted for the identification of alternate networks & routes and finally presents the Diverted traffic.

Chapter 6 illustrate the potential developments, growth drivers in the PIA and the potential developmental traffic generated out of the identified developments and, presents the estimation of the traffic growth rates used for traffic forecasting and Finally chapter 7 presents the traffic and revenue projections for the entire concession period.

CHAPTER 3

Characteristics of the Project Influence Region

3. Project Influence Area Characteristics

This chapter examines various areas which significantly influence the project road. Demographic, geographical, agricultural & industrial sector, and industrial profile of project influence area is discussed in this chapter.

3.1 Project Road

Key element of any traffic assessment is the understanding of the spread of regions around the project that influence the traffic on the highway and establish the relationship between them. This was achieved through extensive data collection from secondary sources/past reports.

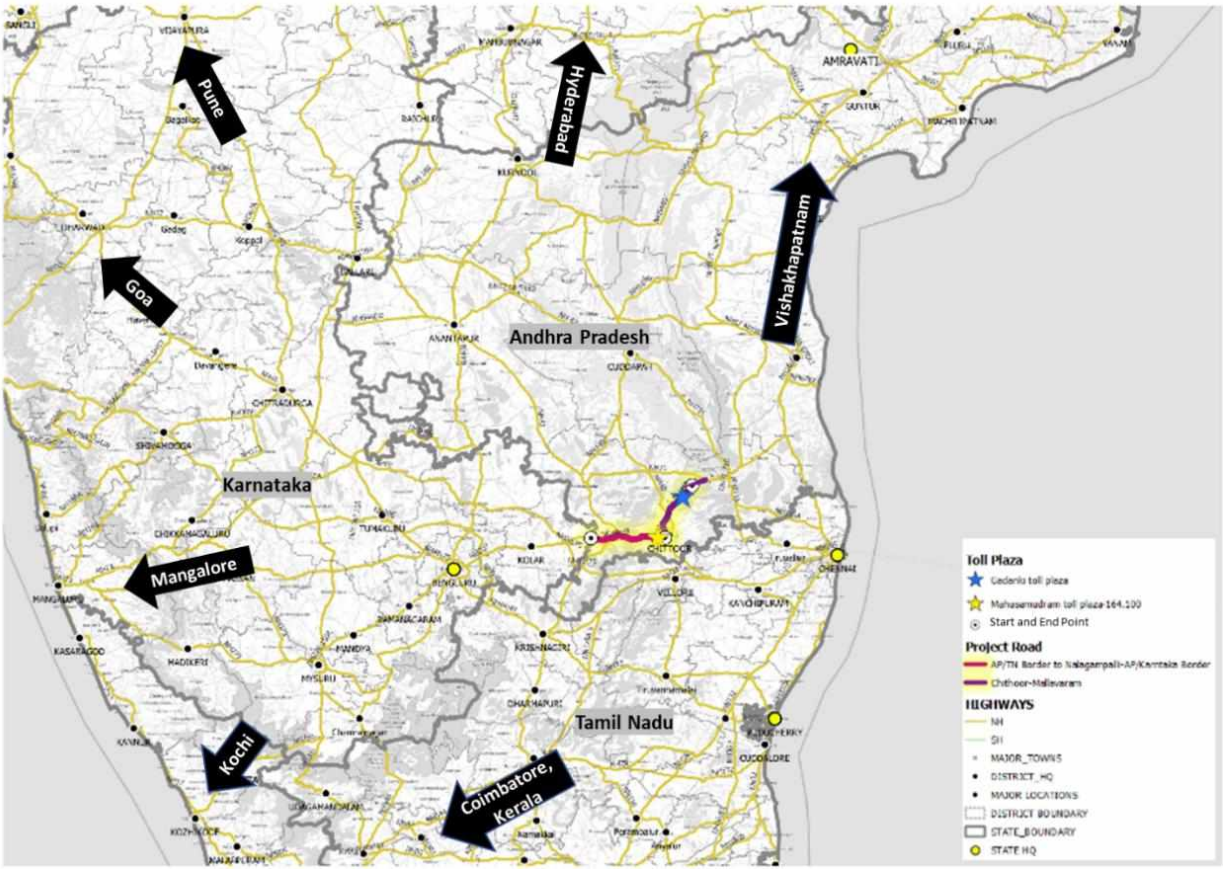

Figure 3-1: Project Road Network at Regional Level

Generally, the area which contributes to the total traffic plying on project road is called the project influence area (PIA). PIA is further classified into primary (immediate) and secondary (broad) influence area, depending on its distance from the project road. The immediate influence area of the project corridor comprises of region/districts of Andhra Pradesh, Karnataka which are in immediate proximity to the project road contributing above 80% of the project road traffic. Andhra Pradesh, Karnataka and Tamil Nadu are the other major contributors to the traffic on the project corridor.

Based on the study of the secondary information and past traffic data, the project influence area is divided into: Immediate Influence Area, which comprises of the traffic generators located along the project highway including the end points. Broad Influence Area, which comprises of long-distance destinations which are catered by project highway beyond immediate influence

area. The project road with its primary and secondary influence area is as presented in the table below.

Table 3-1: Major Traffic Generating Nodes for Project Road

SL. NO.	STATES	IMPORTANT CITIES
Immediate Influence Area		
A1	Andhra Pradesh	Tirupati, Chittoor, Vijayawada
A2	Karnataka	Bengaluru
Broad Influence Area		
B1	Tamil Nadu	
B2	West Bengal	
B3	Odisha	
B4	Kerala	

3.2 Andra Pradesh Profile

Andhra Pradesh (AP) is a southern coastal state in India, ranking 7th largest and 10th most populous. Its capital is Amaravati, and largest city is Visakhapatnam. AP borders Telangana, Orissa, Chhattisgarh, Karnataka, and Tamil Nadu, with a 974 km coastline along the Bay of Bengal.

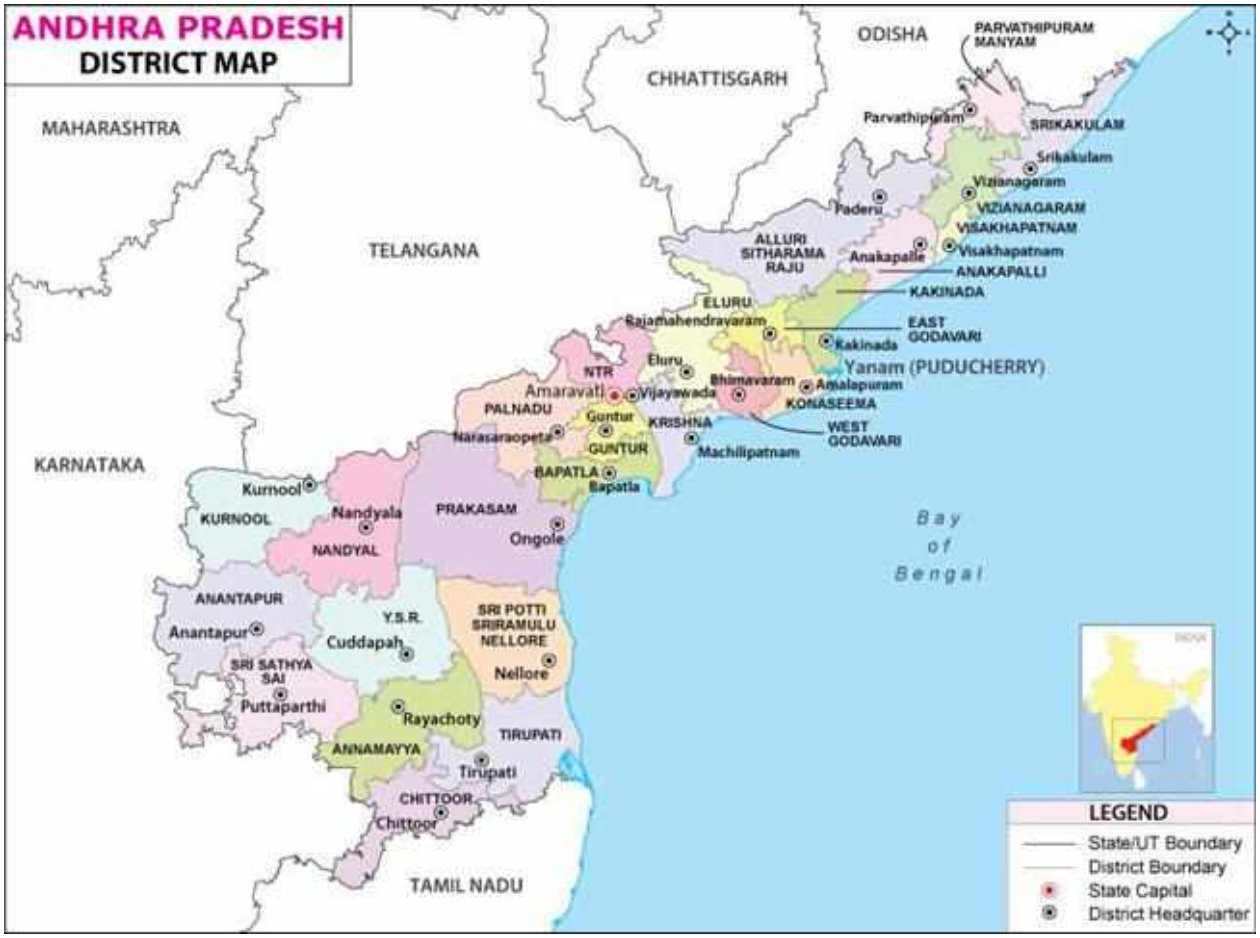

Figure 3-2: District Map of Andra Pradesh

The state has 26 districts across three regions: Coastal Andhra, Uttarandhra, and Rayalaseema, separated by the Eastern Ghats. Coastal plains are agriculturally productive,

while Rayalaseema's peneplains suit livestock grazing. 62% of the population depends on agriculture. Four cities - Amaravati, Kakinada, Tirupati, and Visakhapatnam - are designated as smart cities.

3.2.1 Economic & Industrial Profile

Andhra Pradesh is one of India's significant state economies, with a gross domestic product (GDP) of ₹11.50 lakh crore (approximately USD 140 billion) and a per capita GDP of ₹1,35,000 (around USD 1,600). The state's Gross State Domestic Product (GSDP) for the fiscal year 2023-24 is projected to be ₹17.5 lakh crore, reflecting a 12% increase from 2022-23. In 2021-22, the agriculture and allied sectors contributed 22.34% to Andhra Pradesh's Gross State Value Added (GSVA). The services sector is the largest contributor to the GSDP, accounting for about 50%, followed by industry at 28% and agriculture at 22%. Andhra Pradesh's top five export items include engineering goods, textiles, chemicals and pharmaceuticals, marine products, and agricultural products. In 2021-22, the state's total exports were ₹80,345 crore. Andhra Pradesh is a major producer of rice, and it also has a strong presence in the production of pharmaceuticals and electronics.

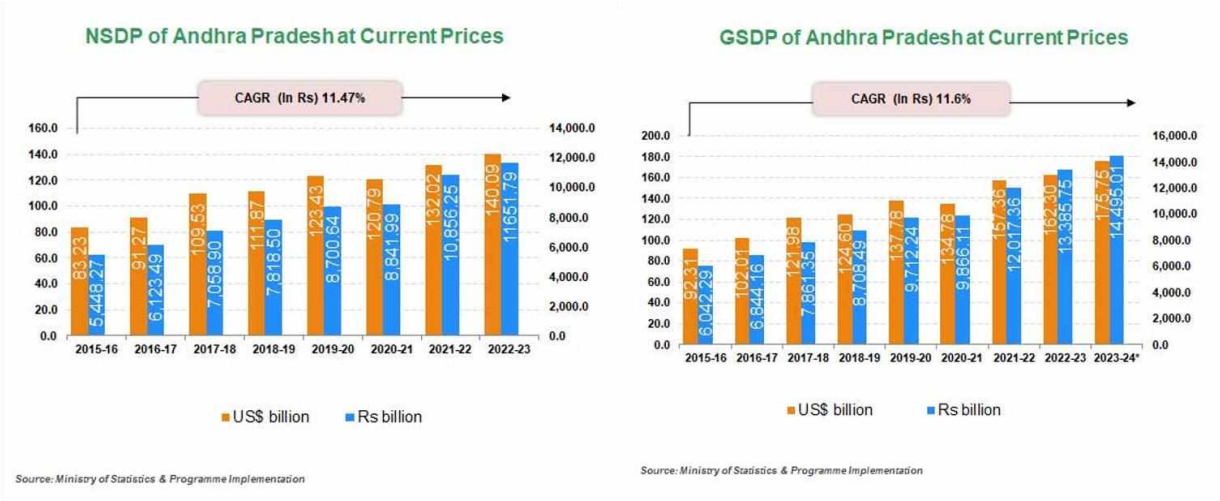

Figure 3-3: GSDP and NSDP of Andra Pradesh (Source: MoSPI)

Andhra Pradesh's foreign direct investment (FDI) inflows have averaged $320.145 million from December 2019 to September 2023. The data peaked at a record high of $1,245.678 million in December 2022, while it reached a record low of $58.227 million in March 2020.

Andhra Pradesh hosts a diverse industrial landscape with over 150 automotive and auto component manufacturing units. Key hubs in this sector include the cities of Visakhapatnam and Chittoor. Prominent companies operating in this sector include Hyundai, Kia, Ashok Leyland, and Mahindra & Mahindra.

3.2.2 Agriculture Profile

Andhra Pradesh, known as "the bejeweled rice bowl of India," plays a pivotal role in India's agriculture. About 63% of its population lives in villages and engages in agricultural practices, from which the state derives about 27% of its GDP. By and large, the cultivated area is about 12 million hectares, supplemented sufficiently by a vast irrigation network supplied with its water by rivers like Godavari, Krishna, Penna, and Tungabhadra.

Rice is the major crop, and Andhra Pradesh is one of the major producers of several crops like groundnuts, chilies, sugarcane, and cotton. The state also produces considerable quantities of

jowar, bajra, maize, minor millet, pulses, oilseeds, and tobacco. The agricultural economy of the state also encompasses livestock, poultry farming, and fisheries; its alone accounts for more than 70% of shrimp production in the country. The three main agricultural export zones in the state are: Chittoor, for mango pulp and vegetables; Krishna, for mangoes; and Guntur, for chillies. Interestingly, the Banaganapalle mango from the state got a geographical indication tag in 2017, showing its prominence in the agricultural scenario.

3.2.3 Infrastructure Profile

Andhra Pradesh has developed its infrastructure well, and it plays a vital role in its economic growth. The State is adequately connected with an excellent network of roads; major National Highways include NH-16. Further, the state has immense railway connectivity; it falls under the South Coast Railway zone with two major railway junctions in Vijayawada and Visakhapatnam. Its coastal line has major ports such as Visakhapatnam and Krishnapatnam.

Water infrastructures include large-scale irrigation projects like Polavaram, comprehensive water supply schemes for towns and villages. The state stands also very advanced in the sector of telecommunications, having wide coverage of mobile and broadband.

The smart city initiatives in cities like Vijayawada and Visakhapatnam support urban development, focusing on improved living standards and infrastructure. It has some of the finest educational institutions, such as IIT Tirupati and IIM Visakhapatnam. Similarly, it is supported by a network of healthcare facilities working on access and quality imperatives.

3.3 Karnataka Profile

Karnataka is the eighth-largest state by population, comprising 31 districts, the state capital Bangalore is the fourth-most populated city in India and is known as the Silicon Valley of India. It is bounded by Maharashtra, Goa and Andhra Pradesh on the northwest, north and east sides respectively. To its south are Kerala and Tamil Nadu. The state has a coastline along the Arabian Sea to its west. Karnataka spreads over an area of 191,791 sq km, making it the sixth largest Indian state in terms of geographical area. Bengaluru, Belagavi, Kalaburagi and Mysuru are four administrative divisions into which the state is divided into with thirty-one districts.

Figure 3-4: District Map of Karnataka

Karnataka has varied geography that includes Western Ghats aligned to the Arabian Sea as well as Deccan Plateau. This state is known for its landscapes which contain dense forests, fertile plains and dry areas. Krishna, Cauvery and Godavari rivers are major water resources for agriculture and drinking in this region.
Bengaluru is considered as a high-tech center among other technological cities such as Mysuru and Hubballi-Dharwad in India.

3.3.1 Economic & Industrial Profile

Karnataka is one of India's leading state economies, with a gross domestic product (GDP) of ₹22.40 lakh crore (approximately USD 273 billion) for 2022-23 (estimated). The state's Gross State Domestic Product (GSDP) for the fiscal year 2023-24 is projected to be ₹24.40 lakh crore, reflecting an 8.9% increase from 2022-23. Karnataka's economy has demonstrated strong growth, with a Compound Annual Growth Rate (CAGR) of 11.51% at current prices from 2015-16 to 2022-23. While sector-specific contributions aren't provided in the graphs, Karnataka is known for its robust services sector, particularly in IT and biotechnology, followed by industry and agriculture.
Karnataka's top export items include IT software, electronics, engineering goods, petroleum products, and ready-made garments. The state is a major IT hub of India, often referred to as the Silicon Valley of India, and it also has a strong presence in the production of aerospace components and biotechnology products.

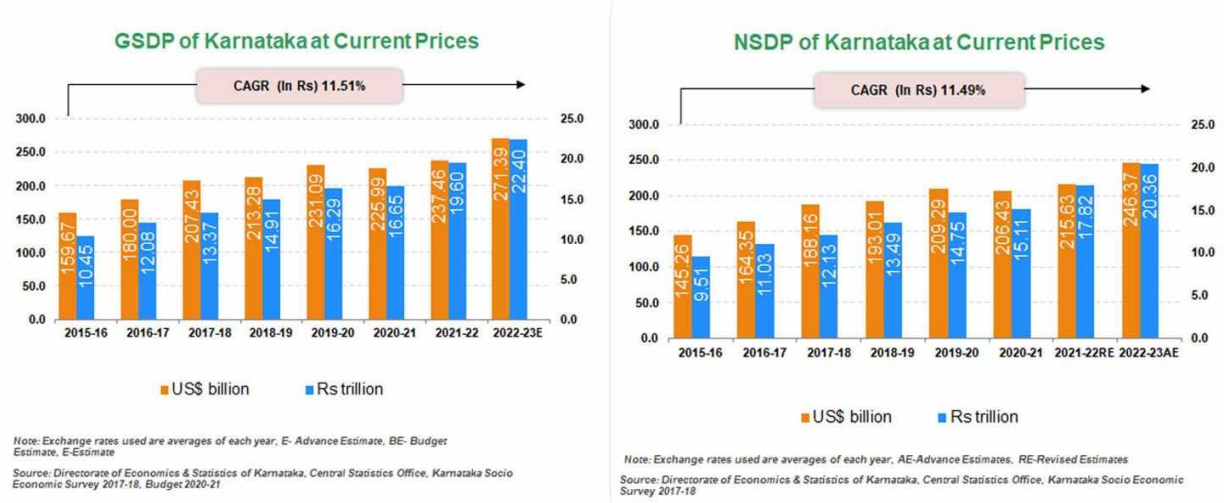

Figure 3-5: GSDP and NSDP of Karnataka (Source: DoES, Karnataka)

Karnataka's foreign direct investment (FDI) inflows have been significant, though specific figures are not provided in the graphs. The state has consistently been among the top recipients of FDI in India, attracting investments across various sectors.

Karnataka hosts a thriving industrial ecosystem, particularly in the IT and biotechnology sectors. Key hubs include Bengaluru, which is home to numerous global and Indian tech giants. Prominent companies operating in the state include Infosys, Wipro, and IBM in the IT sector, Biocon in biotechnology, and HAL (Hindustan Aeronautics Limited) in the aerospace industry. The state also has a growing presence in electric vehicle manufacturing and renewable energy sectors.

3.3.2 Agriculture Profile

Karnataka, often referred to as the "Silicon Valley of India," also boasts a rich agricultural heritage. Approximately 55% of its population resides in rural areas, with agriculture and allied sectors contributing about 13% to the state's GDP. The state has a cultivable area of around 12.3 million hectares, supported by major rivers like Cauvery, Krishna, and Tungabhadra.

Coffee is the state's signature crop, with Karnataka producing about 70% of India's coffee. The state is also a major producer of silk, accounting for nearly 65% of the country's raw silk production. Ragi (finger millet) is another key crop, with Karnataka being India's largest producer. Other significant crops include rice, jowar, maize, pulses, oilseeds, and various fruits and vegetables.

Karnataka's agricultural economy is diverse, encompassing horticulture, sericulture, animal husbandry, and fisheries. The state is India's second-largest milk producer and has a thriving poultry industry. In horticulture, Karnataka is a leading producer of pomegranates, grapes, and bananas.

The state has several agricultural export zones, including Bangalore Rural and Tumkur for roses and vegetables, Bijapur for grapes, and Malnad region for coffee. Notably, the Coorg Green Cardamom and Mysore Jasmine from Karnataka have received geographical indication tags, highlighting their unique qualities and regional significance.

Karnataka's agricultural sector is increasingly embracing technology, with the state being a hub for agri-tech startups and precision farming initiatives, blending its traditional agricultural strengths with its reputation for technological innovation.

3.3.3 Infrastructure Profile

Karnataka, as one of India's most progressive states, boasts a robust infrastructure network supporting its economic growth. The state's capital, Bengaluru, is a global tech hub, driving significant infrastructure development.

Transportation:

Karnataka has an extensive road network spanning about 2,37,000 km, including 13 National Highways. The state's rail network covers approximately 3,250 km, connecting major cities and industrial hubs. Karnataka is home to two major ports - New Mangalore Port and Karwar Port, facilitating international trade. The state has four operational airports, with Kempegowda International Airport in Bengaluru being one of India's busiest.

Power:

Karnataka has a total installed power generation capacity of around 30,000 MW, with a significant focus on renewable energy. The state is a leader in solar power generation, with Asia's largest solar park located in Pavagada.

Industrial Infrastructure:

The state has 185 industrial areas and 5 Special Economic Zones (SEZs). Major industrial corridors include the Chennai-Bengaluru Industrial Corridor and the Bengaluru-Mumbai Economic Corridor.

IT Infrastructure:

Bengaluru, known as India's Silicon Valley, hosts numerous IT parks and tech hubs. The city is home to over 4,000 active tech startups and hosts offices of global tech giants.

3.4 Tamil Nadu Profile

Tamil Nadu spans 130,058 sq km and is bordered by Kerala to the west, Karnataka to the northwest, Andhra Pradesh to the north, and the Indian Ocean to the east and south. The state capital, Chennai, is one of India's largest cities and a major economic and cultural hub, often referred to as the Detroit of India due to its extensive automotive industry. Tamil Nadu is divided into 38 districts, with major cities including Chennai, Coimbatore, Madurai, and Tiruchirappalli.

The state's geography is diverse, featuring the Eastern Ghats, fertile plains along the Kaveri River, and a long coastline with significant ports. Tamil Nadu's rivers, such as the Kaveri, Godavari, and Periyar, are crucial for agriculture and water supply. Known for its rich cultural heritage, Tamil Nadu boasts numerous temples, historic sites, and a vibrant arts scene.

Its economy is supported by sectors like manufacturing, information technology, and agriculture.

Figure 3-6: District Map of Tamil Nadu

3.4.1 Economic & Industrial Profile

Tamil Nadu is a leader in several industries, including engineering, automotive, pharmaceuticals, clothing, textiles, leather, chemicals, and plastics. The state's strong manufacturing environment is demonstrated by the fact that it has the most factories and industrial workers in all of India. The Gross State Domestic Product (GSDP) of Tamil Nadu increased at an impressive Compound Annual Growth Rate (CAGR) of 10.56% between 2015–16 and 2020–21, reaching roughly ₹19.43 trillion (US$ 265.49 billion). The Net State Domestic Product (NSDP) also experienced a CAGR of 10.60%, reaching ₹17.50 trillion (US$ 239.00 billion).

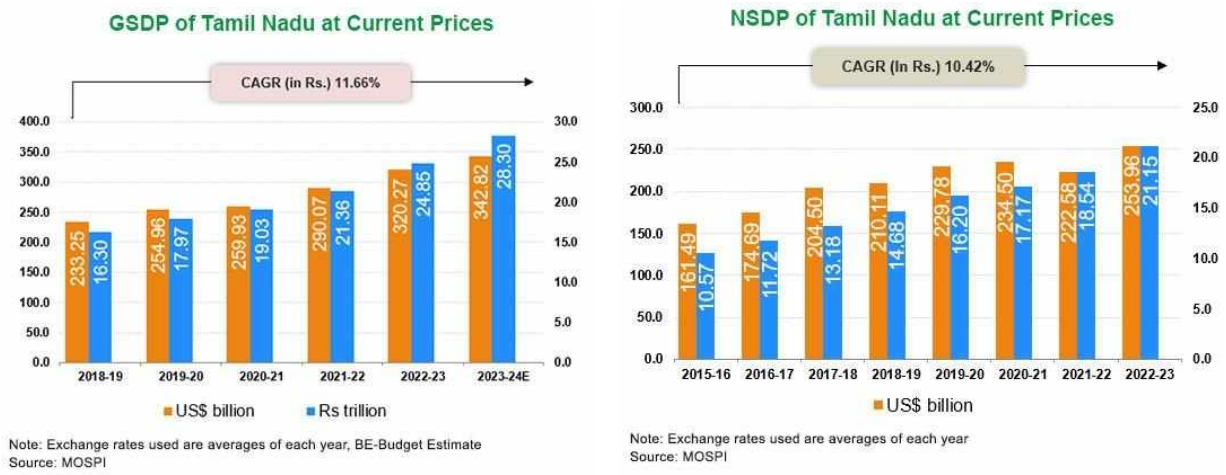

Figure 3-7: GSDP and NSDP of Tamil Nadu (Source: MOSPI)

Significantly driving the state's economic structure is the tertiary sector, which in 2020–21 accounted for 54.26% of the Gross State Value Added (GSVA), followed by the secondary sector at 32.39%. Tamil Nadu's considerable industrial operations are supported by its 33.71 GW installed power generation capacity as of May 2021. Additionally, the state has drawn a sizable amount of foreign direct investment (FDI); from November 2019 to March 2021, total inflows totaled US$ 3,329 million.

Because of the global economic issues, Tamil Nadu's overall merchandise exports dropped from US$ 30.02 billion in FY20 to US$ 26.16 billion in FY21. Additionally, the sector of IT and IT-enabled services has prospered, with exports reaching ₹1.39 lakh crore (US$ 19.9 billion)

The Tamil Nadu government has started several projects to improve its industrial framework and make the state a desirable place to invest. The "Industrial Policy 2021" seeks to create jobs for 2 million people by 2025, invest ₹10 lakh crore (US$137.8 billion), and increase the industrial sector at a rate of 15% per year. Proposals for significant investments totaling ₹52,257 crore (US$ 7.14 billion) have been authorized; these are anticipated to create over 93,000 employments in a variety of industries.

Furthermore, with significant financial support from organizations like the Asian Development Bank, Tamil Nadu is dedicated to infrastructure development through the Comprehensive Road Infrastructure Development Program (CRIDP) and the Tamil Nadu Urban Flagship Investment Program.

3.4.2 Agriculture Profile

Geographically, Tamil Nadu falls under the category of semi-dry sub-humid to dry humid tropics. It is the 11th largest state in India, covering an area of 130,058 sq km. The 2011 census showed that Tamil Nadu was the seventh most populous state, with a population of 72.1 million. The state occupies 4% of the total land area of India, holds 6% of its population, and is supplied by 3% of its total water resource base

3.4.3 Infrastructure Profile

A developed infrastructure network serves as the backbone for economic development in Tamil Nadu. It has a gigantic network of good roads, which include national highways and state highways in good condition. A strong railway system forms the link between major cities like Chennai, Coimbatore, and Madurai. Chennai International Airport serves domestic and

international flights. The state also has an extensive coastline with major ports like Chennai Port and Tuticorin Port through which a large volume of maritime trade is carried out.

In the case of energy, Tamil Nadu depends on thermal, hydro, and renewable sources; there have also been huge investments in wind and solar power. It has very well-developed water supply and sanitation systems that cover both urban and rural areas. Tamil Nadu is well covered in terms of telecommunications, with high-speed internet and mobile connectivity very common in its urban centers. The state is further developing its educational and healthcare facilities in line with its vision of playing a significant role as an economic and cultural leader for India

3.5 Tirupati District

Tirupati is a city and the administrative headquarters of the Tirupati district in Andhra Pradesh, India. It is located in the southeastern part of the state, approximately 150 kilometers northwest of Chennai.

3.5.1 Demographic & Geographical Profile

According to the 2011 census, Tirupati district has a population of 1,708,806, which constitutes about 1.8% of the state's population. The district experiences a tropical climate with three main seasons: summer, monsoon, and winter. It covers a geographical area of 15,310 square kilometers, representing 5.78% of Andhra Pradesh's total area. Tirupati has rich biodiversity and is surrounded by the Eastern Ghats, which contribute to its diverse landscape. The district is bordered by the Nellore district to the west, Chittoor district to the south, and Tamil Nadu to the east. Its population growth rate for the year 2011 was 12%. The district is renowned for the Tirumala Hills, which house the famous Tirumala Venkateswara Temple, a major pilgrimage site. The district's water resources include the Palar and Pennar rivers, which flow through its territory, and several reservoirs such as the Kandaleru Dam and the Srisailam Dam.

3.5.2 Economy

Andhra Pradesh is a significant commercial and Economic hub in the region, with a diversified economy based on agriculture, tourism, and small-scale industries. The district benefits from its strategic location and the influx of pilgrims, which supports various economic activities. Tirupati’s economy is also boosted by the presence of several industrial and service sectors. The district's textile and Agro-based industries contribute notably to its economic output.

Agricultural & Allied Sector

3.5.3 Agriculture & Allied Sector

Agriculture is a crucial component of Tirupati’s economy, supporting both income and employment for a significant portion of the population. The district benefits from its fertile soil and favourable climatic conditions, leading to a variety of crops being cultivated. The primary crops grown include rice, groundnut, sunflower, and various pulses. Here's a brief overview of the agriculture profile of Tirupati:

Main Crops:

- Kharif (monsoon) crops: Rice, groundnut, maize, and pulses (such as red gram and green gram).
- Rabi (winter) crops: Wheat, chickpea, sunflower, and oilseeds.
- Horticulture: The district also grows a range of fruits and vegetables, including bananas, mangoes, guavas, tomatoes, and chilies

3.5.4 Industrial Profile

Tirupati is an emerging industrial center with a growing focus on various sectors, including textiles, food processing, and small-scale industries.

- **Textiles**: The district has a developing textile industry, with several small and medium-sized units involved in the production of garments and fabrics. While not as prominent as other regions, the textile sector is gaining traction in Tirupati.
- **Argo-based Industries**: Tirupati has a substantial Agro-based industrial sector, including the processing of fruits and vegetables, and production of packaged foods. The district is known for its production of traditional sweets and snacks, which cater to both local and regional markets.
- **Tourism-Related Industries**: Given its status as a major pilgrimage destination, Tirupati has a range of industries related to tourism, including hospitality services, travel agencies, and souvenir shops. The influx of visitors supports a variety of small-scale enterprises.
- **Other Industries**: The district also hosts several small-scale manufacturing units involved in producing items such as pottery, handicrafts, and local cuisine specialties.

3.6 Chittoor District

Chittoor is a city and the administrative headquarters of the Chittoor district in Andhra Pradesh, India. Located in the southeastern part of the state, Chittoor lies approximately 200 kilometers northwest of Chennai.

3.6.1 Demographic & Geographical Profile

According to the 2011 census, Chittoor district has a population of 2,088,327, accounting for about 2.2% of Andhra Pradesh's population. The district experiences a tropical climate with three primary seasons: summer, monsoon, and winter. Chittoor spans an area of 15,359 square kilometers, making up 5.81% of the state's total area. It is geographically diverse, with parts of the Eastern Ghats running through the district, providing varied topography and rich biodiversity. The district is bordered by the Nallamala Hills to the west, the Tamil Nadu state to the south, the Anantapur district to the north, and the Nellore district to the east. The population density is 136 inhabitants per square kilometer. The population growth rate for the year 2011 was 16%. The labor force participation rate was 45.8% for the year 2017-2018. The district is well-watered by the Palar, Pennar, and Cheyyeru rivers, and is home to several important reservoirs, including the Chandragiri and Peddaganjam reservoirs.

3.6.2 Economy

Chittoor is a vibrant commercial and economic hub in Andhra Pradesh, characterized by a diverse economy encompassing agriculture, trade, and various industries. The district benefits from its agricultural productivity and its strategic location near major urban centers, fostering growth in multiple sectors.

3.6.3 Agricultural & Allied Sector

Agriculture is a key driver of Chittoor's economy, contributing significantly to both income and employment. The district's favorable climatic conditions and fertile soil support a wide range of crops. Major crops cultivated include rice, groundnut, and various fruits. Here's an overview of Chittoor's agriculture profile.

Main Crops:

- **Kharif (monsoon) crops**: Rice, groundnut, maize, and pulses (including red gram and green gram).
- **Rabi (winter) crops**: Wheat, chickpea, sunflower, and oilseeds.
- **Horticulture**: The district is renowned for its production of fruits such as mangoes, bananas, and guavas, as well as vegetables like tomatoes, onions, and chilies.

3.6.4 Industrial Profile

Chittoor is emerging as an industrial center with a focus on several sectors, including textiles, Agro-based industries, and manufacturing.

- **Textiles**: The district has a developing textile sector with numerous small and medium-sized units engaged in the production of garments and fabrics. The industry is growing and contributing to the local economy.
- **Agro-based Industries**: Chittoor hosts a range of Agro-based industries, including the processing of fruits and vegetables and the production of packaged foods. The district is particularly noted for its production of traditional sweets, snacks, and other food products.
- **Tourism-Related Industries**: The district, known for its historical and religious sites such as the Tirupati Temple and the Chandragiri Fort, has a well-established tourism sector. This includes hospitality services, travel agencies, and souvenir shops, driven by the influx of visitors.

CHAPTER 4

Primary & Secondary Data Collection & Analysis

4. Primary and Secondary Data Collection & Analysis

4.1 General

As part of the traffic study of Mallavaram-Chittoor-AP/KA border section of NH-69/ NH-140 spanning 120.295 km, in the state of Andhra Pradesh, extensive data collection & Analysis is conducted to develop base data. The main objective is to understand the present traffic situation based on primary traffic surveys and the historical toll operations data shared by the client, highlight the future threats (if any), and finally recommend a suitable growth rate for traffic forecast. The data collection included the primary surveys in the field and the secondary data collection from toll operations and the data available in public domain. This chapter presents the details of traffic surveys, the locations, schedule, and the findings of the primary surveys conducted.

4.2 Past Data from Secondary Sources and Primary Surveys

The findings from the data are summarized in the following subsequent sections.

4.2.1 Past traffic trend findings: Project Corridor

Past traffic trends were derived based on the past traffic data sourced from the Toll operations data. Past traffic AADT, (CAGR%) is presented in the following tables. Monthly traffic and Revenue numbers are mentioned in Annexures. Remittance collected at both the project road locations for FY24 is mentioned in below table.

Table 4-1: Remittance collected at both the Toll Plazas for FY24

Project Stretch	Plaza Name	Period	Contract Period	Total/Daily	Amount in) Rs.)
AP/TN Border to Nalagampalli, AP / Karnataka Border section	Mahasamudram	01.04.2023-31.03.2024	26.01.2023 - 26.01.2024	Total	74,54,88,999
Chittor - Mallavaram	Gadanki	01.04.2023-31.03.2024	12.10.2023 - 12.10.2024	Total	1,17,58,59,999

Table 4-2: Past Traffic Trend at Gadanki Toll Plaza (TP1)

Source	FY Year	CJV	LCV/Minibus	Bus/2Axle	3Axle	MAV	Total (Veh)	Total (PCU)	Growth
AVC	FY-2022	7,012	561	1,614	741	1,359	11,287	21,035	-
ETC	FY-2023	9,165	574	1,803	725	1,426	13,694	24,030	14.2%
ETC	FY-2024	10,153	591	2,208	730	1,605	15,288	27,077	12.7%
ETC	FY-2025*	10,275	610	2,305	705	1,641	15,536	27,605	1.9%
CAGR % (FY 23-25)		**5.9%**	**3.1%**	**13.1%**	**-1.4%**	**7.3%**	**6.5%**	**7.2%**	**-**
CAGR % (FY 22-25)		**13.6%**	**2.8%**	**12.6%**	**-1.6%**	**6.5%**	**11.2%**	**9.5%**	**-**

*FY-2025 * - Apr24-Nov24 Based AADT*

Toll Operational Data Outcomes: -

Between FY23 & FY25, the traffic in PCU terms has grown by 7.2%. In the same period, cars have witnessed growth at a rate of 5.9% whereas goods vehicles especially 3Axle have witnessed a negative growth of -1.4% respectively. In the same period MAVs have grown at 7.3% at Gadanki Toll Plaza.

Table 4-3: Past Traffic Trend at Mahasamudram Toll Plaza (TP2)

Source	FY Year	CJV	LCV/Minibus	Bus/2Axle	3Axle	MAV	Total (Veh)	Total (PCU)	Growth
AVC	FY-2021	6,259	1,041	1,904	699	982	10,886	20,051	-
AVC	FY-2022	6,044	967	1,852	600	1,047	10,512	19,567	-2.4%
ETC	FY-2023	8,166	1,047	2,058	729	1,099	13,098	23,042	14.9%
ETC	FY-2024	9,207	1,065	2,307	735	1,176	14,490	25,223	9.5%
ETC	FY-2025*	9,875	1,204	2,478	738	1,387	15,683	27,575	9.3%
CAGR % (FY 23-25)		**10.0%**	**7.3%**	**9.7%**	**0.6%**	**12.3%**	**9.4%**	**9.4%**	**-**
CAGR % (FY 21-25)		**12.1%**	**3.7%**	**6.8%**	**1.4%**	**9.0%**	**9.6%**	**8.3%**	**-**

*FY-2025 * - Apr24-Nov24 Based AADT*

Between FY23 & FY25, the traffic in PCU terms has grown by 9.4%. In the same period, cars have witnessed growth at a rate of 10.0% whereas goods vehicles 3Axle have witnessed least growth of 0.6% and Bus/2Axle have witnessed a growth at a rate of 9.7%. In the same period MAVs have grown at 12.3% at Mahasamudram Toll Plaza.

- Both the toll plaza locations have seen a consistent decline in 3Axle trucks and high growth in MAV traffic over the years. This is mostly due to preference of Higher axled trucks by the Transporters observed similarly across India.
- India general election & Andhra Pradesh legislative assembly elections were held in May-2024, which might have impacted the passenger traffic (recreational trips) in the current year FY25.

4.3 Traffic surveys

The traffic surveys are generally conducted to achieve the various project objectives. The Key outcomes of CTVC Survey are), to derive the average daily traffic by type of vehicle along the project corridor, Traffic composition and Vehicle composition.

Similarly, the key outcomes of the OD analysis include,

i) Origin zone & Destination zone of the vehicle type
ii) The frequency of travel i.e., daily, weekly, monthly, or occasionally and Toll Category.
iii) Trip purpose
iv) Commodity carried of goods vehicle.

For this Study, the Consultant has analyzed the survey data i.e., both the Classified Traffic Volume Count (Project Roads) and the Origin – Destination Survey (Project Roads) obtained through the Primary Surveys. Nevertheless, the Consultant before analyzing and utilizing the data for the project, has conducted a detailed and thorough review of the primary data and found the data to be accurate enough for achieving the objectives of the study. The subsequent sections would provide a more detailed analysis.

- Major traffic generators and routes
- Past traffic trend at each toll plaza location
- Travel pattern of the road users at the toll plaza locations
- Probable diversion routes

The various vehicle types having varied sizes and characteristics were converted into equivalent passenger car units (PCU). The Passenger Car Unit recommended by Indian Road Congress in “Guidelines for Capacity of Roads in Rural Areas” (IRC-64-1990) have been used for PCU conversion and are presented in below table.

Table 4-4 Vehicle Classification and PCU Factors

VEHICLE TYPE	PCU	VEHICLE TYPE	PCU
Car/Jeep/Taxi	1.0	Auto Rickshaw	1.0
Minibus/ LCV	1.5	Agricultural Tractor	1.5
Standard Bus	3.0	Agricultural Tractor & Trailer	4.5
2/3 Axle Truck	3.0	Animal Drawn Vehicle	6.0
MAV	4.5	Cycle	0.5
Two-Wheeler	0.5	Cycle Rickshaw	2.0

4.3.1 Average Daily Traffic

The traffic volume count data was collected for Seven days (24 Hrs) at the survey locations on the project route to arrive at the average daily traffic (ADT).

The summary of ADT in terms of vehicles and PCUs at each survey location along the Project routes are presented in below figure and table.

Table 4-5: ADT Summary from the surveys

	SECTION	NH-140	NH-69
S.NO	VEHICLE	GADANKI TP	MAHASAMUDRAM TP
1	Car	10,054	9,170
2	Mini LCV	899	1,414
3	Minibus	366	161
4	Bus	1,481	1,123
5	3-Ax Bus	110	120
6	LCV	516	1,206
7	Truck-2 Axle	994	1,467
8	Truck-3Axle	658	654
9	MAV	1,828	1,613
10	OSV	3	3
Traffic vehicles		**16,909**	**16,931**
Traffic PCU		**30,246**	**29,997**

The Consultant, for the purpose of the study has relied on the historic data for the computation of Base year Average Daily Traffic for Project Road locations. The Consultant considered toll operation data obtained from the months of April to November of Fiscal Year 2025 for the computation of the base year Average Daily Traffic. Final ADT arrived from ETC data (April to November 2024, which excludes cash & exemption/violation traffic). The table below illustrates the Recommended Average Daily Traffic adopted for the base year.

Table 4-6: Base Year Recommended ADT

S.NO	VEHICLE	GADANKI TP-1	MAHASAMUDRAM TP-2
1	CJV	10,088	9,714
2	LCV	617	1,211
3	Bus	1,419	1,080
4	2Axle	891	1,410
5	3Axle	720	748
6	MAV	1,630	1,389
7	OSV	1	1
Traffic vehicles		**15,366**	**15,553**
Traffic PCU		**27,442**	**27,499**

4.3.2 Vehicle Composition

Analysis was conducted to find the traffic composition by type of vehicles among the tollable traffic at Two Toll Plaza locations on the Project Road sections. Vehicular composition distribution in terms of cars, buses and trucks is summarized in below table and shown in below

figure and traffic composition by type of vehicle by location is shown in below figure. Salient findings from the analysis are presented below:

- It is observed that, car mode has highest share at both toll plaza locations. Approximately, 59% Car traffic observed at Gadanki TP, 54% at Mahasamudram TP.
- The 2nd highest traffic at both toll plaza locations is MAV traffic.

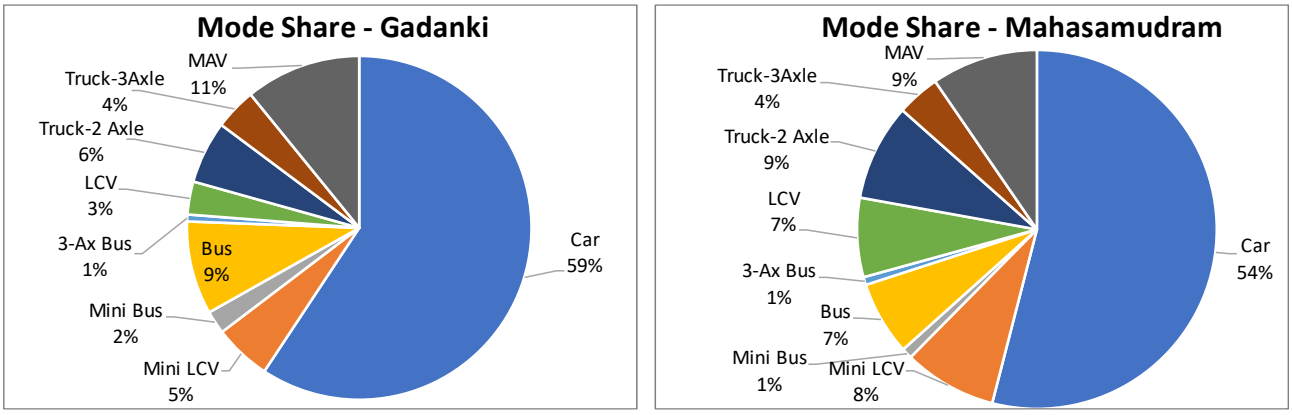

Figure 4-1: Traffic composition (Vehicles) for Gadanki & Mahasamudram Toll Plaza

4.3.3 Seasonal Correction Factors

Seasonal correction factors are used to normalize the Average Daily Traffic (ADT) which is measured for two-year period (FY-23 & FY-24). SCF values are used to normalize the ADT values to arrive at the Annual Average Daily Traffic (AADT). As the considered ADT values are based on 8 months traffic data from Apr-24 to Nov-24, seasonal correction factor is applied to arrive at Annual Average Daily Traffic (AADT). Hence the SCF is considered as average of FY-23 & FY-24 traffic data (from ETC Data) for all Modes of traffic.

4.3.4 Annual Average Daily Traffic (AADT)

- Annual Average Daily Traffic = Average Daily Traffic X Seasonal Correction Factor + Cash Traffic (Non ETC data) + Exemption/violation data obtained from traffic survey conducted on 26th July (for 24 hrs).
- As discussed in the earlier sections, owing to higher reliability, and based on the latest data, the consultant considered the toll operations data (ETC data) obtained for the months of April 2024 to November 2024 (FY-25) as base year ADT, cash traffic from Non ETC data (April 2024 to November 2024) and exemption/violation data obtained from traffic survey conducted on 26th July (for 24 hrs) and recommends the same for the computation of base year Average Annual Daily Traffic (AADT).

Table 4-7: Base Year Recommended AADT

S.NO	VEHICLE	GADANKI TP-1	MAHASAMUDRAM TP-2
1	Car	11,487	10,862
2	Minibus	168	93
3	Bus-2A	1,441	1,088

S.NO	VEHICLE	GADANKI TP-1	MAHASAMUDRAM TP-2
4	Bus 3A	0	0
5	LCV	462	1,143
6	Truck-2A	905	1,420
7	Truck-3A	714	748
8	MAV	1,665	1,401
9	OSV	1	1
Traffic vehicles		**16,843**	**16,754**
Traffic PCU		**29,107**	**28,788**

4.4 Travel Characteristics of the Road users

4.4.1 Survey Methodology

Origin Destination Survey helps in understanding the travel demand pattern of the traffic on the project road. The travel characteristics obtained by O-D survey facilitate the identification of:

- Local and through traffic on the project road.
- Major influence zones of both the passenger and commercial traffic.
- Major commodities carried by the truck traffic.

The O-D survey elicited characteristics like origin, destination, and frequency, purpose of trip for passenger vehicles and commodity type, the information pertaining to origin and destination of trips was analysed to obtain the trip distribution based on a zoning system provided.

4.4.2 Sample Size

The vehicles during the OD surveys were interviewed on a random sample basis and Table below shows the sample size distribution (in percentage terms) captured at the survey locations along the Project stretches.

Table 4-8 Sample Size Collected from Origin-Destination Survey

LOCATION	CAR/ MINI LCV	MINI BUS	Bus	LCV	2-AXLE TRUCK	3-AXLE TRUCK	MAV & ABOVE	GRAND TOTAL
Gadanki Toll Plaza	20%	61%	35%	56%	56%	76%	50%	**31%**
Mahasamudram Toll Plaza	29%	47%	38%	90%	56%	61%	63%	**41%**

4.4.3 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed considering the following factors:

- The road network catering to the traffic on the project road and its generating points.
- Important towns, villages, factories, and industrial centers around the project road area.
- Administrative boundaries of districts and states.

- Configuration of the project road in the regional road network with respect to other roads.

Two major types of areas were identified for analysis purposes.

Immediate Influence Area (IIA): Immediate Influence Area includes the cities/towns/villages and districts along the project road and adjacent to its which generates/attracts trips to the project road.

Broad Influence Area (BIA): Broad Influence Area includes other major traffic generating/attracting trips, but to a lesser degree when compared to IIA.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA.

The zoning system adopted for data collection was based on 183 zones for better understanding the zonal influence by vehicle category at each toll plaza location. Detailed TAZ list is presented in Annexures.

4.4.4 Travel Pattern and Zone Influence Factors

From the origin & Destination survey data, location wise base year OD matrices were developed for each type of vehicle. Sample OD matrix is expanded to AADT by applying the expansion factors. The O-D matrices describing the travel pattern of both goods and passenger vehicles are used for identification of major OD pairs on the project corridor and for further analysis of movement pattern and estimation of through traffic. It is observed that the major influencing States for the project Sections are Andhra Pradesh, Karnataka, Tamil Nadu, West Bengal, Odisha, Kerala, Jharkhand, Assam, Puducherry, and Maharashtra.

Different vehicles interact in different degrees with the different zones depending on their purpose, commodity transported, frequency of travel etc. Vehicle category-wise zone-wise influence factors are established for interpretation of OD patterns.
Section wise influence factors were derived from the average of Influence factors by category at survey locations in the respective project sections. Section wise influence factors for cars, buses and trucks are summarized and shown in Below tables.

Regional Distribution of traffic at Gadanki Toll Plaza: -

Table 4-9 Regional Distribution of traffic at Gadanki Toll Plaza

GADANKI TOLL PLAZA			
STATES	**CARS**	**BUSES**	**TRUCKS**
Andhra Pradesh	73.1%	76.9%	60.8%
Karnataka	17.5%	14.2%	19.3%

Total	**100%**	**100%**	**100%**

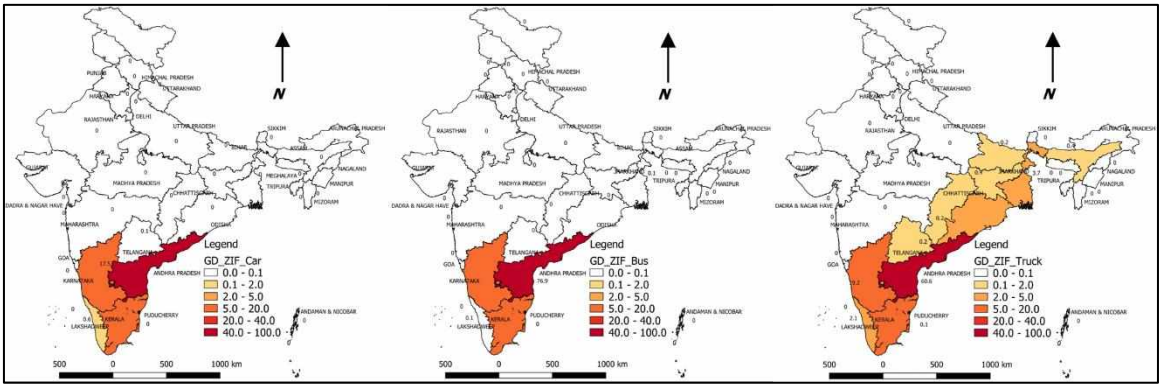

Figure 4-2: Regional distribution of Passenger & Goods traffic at Gadanki Toll Plaza

On detailed analysis of the Zonal influence factors, it was observed that,

- Approximately 73% of the Car passenger vehicle trips are happening within the state of Andhra Pradesh at Gadanki toll plaza, significant amount of the Car vehicle trips are origin-destined in Karnataka & Tamil Nadu.
- Approximately 61% of the truck traffic is plying within the state of Andhra Pradesh. Also, significant amount of truck traffic observed from Karnataka & Tamil Nadu states.

Regional Distribution of traffic at Mahasamudram Toll Plaza-

Table 4-10 Regional Distribution of traffic at Mahasamudram Toll Plaza

MAHASAMUDRAM TOLL PLAZA			
STATES	**CARS**	**BUSES**	**TRUCKS**
Andhra Pradesh	54.9%	67.2%	37.7%

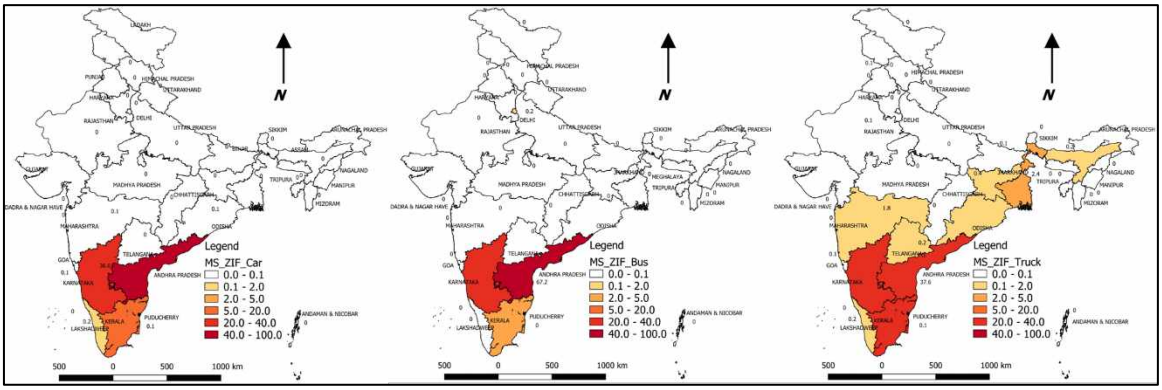

Figure 4-3: Regional distribution of Passenger & Goods traffic at Mahasamudram Toll Plaza

On detailed analysis of the Zonal influence factors, it was observed that,

- Approximately 55% of the Car passenger vehicle trips are happening within the state of Andhra Pradesh at Mahasamudram toll plaza, significant amount of the Car vehicle trips are origin-destined in Karnataka & Tamil Nadu.
- Approximately 38% of the truck traffic is plying in the state of Andhra Pradesh. Also, significant amount of truck traffic observed from Karnataka & Tamil Nadu states.

4.4.5 Commodity Distribution of Freight traffic

An analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. Table below presents the toll plaza wise commodity distribution.

Commodity pattern at Gadanki Toll Plaza: -

- The overall share of empty vehicle is observed to be around 20% at Gadanki Toll Plaza.
- The Major Commodities observed at Gadanki Toll Plaza are Food Items, Fruit & Vegetables, Parcel, Steel, Parchoon are contributing to almost 70% of overall Commodities when Empty trucks are also included.
- Major commodities transported by LCV and 2-Axles are Food Items, Fruits & Vegetables, Parcel, Steel, Parchoon, Automobile, Plastics & Livestock.
- Major Commodities transported by HGVs are Food Items, Parcel, Steel, Fruits & Vegetables, Parchoon, Automobile & Plastics.

Table 4-11 Commodity Pattern at Gadanki Toll Plaza (TP1)

GADANKI TOLL PLAZA					
COMMODITY	**LCV**	**2-AXLE TRUCK**	**3-AXLE TRUCK**	**MAV**	**TOTAL**
Empty	20.5%	21.3%	20.4%	17.7%	19.6%

GADANKI TOLL PLAZA					
COMMODITY	LCV	2-AXLE TRUCK	3-AXLE TRUCK	MAV	TOTAL
Food Items	18.1%	15.6%	22.2%	17.5%	18.0%
Fruits & Vegetables	16.8%	7.1%	4.8%	7.4%	9.6%
Parcel	12.5%	8.6%	10.8%	6.8%	9.4%
Steel	3.5%	6.1%	6.6%	10.4%	7.0%
Parchoon	5.6%	7.5%	7.5%	6.2%	6.5%
Automobile	3.3%	8.1%	3.7%	5.5%	5.1%
Plastic	3.6%	3.9%	4.8%	4.0%	4.0%
Livestock	5.1%	4.8%	2.2%	2.3%	3.6%
Cement	0.7%	1.9%	0.7%	6.3%	3.0%
POL	1.7%	6.0%	3.9%	1.7%	2.9%
Wood	1.8%	2.5%	2.6%	2.7%	2.4%
Chemicals	1.3%	1.3%	0.9%	2.0%	1.5%
Other Construction	0.4%	0.6%	3.1%	2.1%	1.5%
Boulders/Marble/Granite	0.6%	0.4%	2.0%	1.9%	1.3%
Others	4.5%	4.5%	3.9%	5.4%	4.7%
Grand Total	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**

Commodity pattern at Mahasamudram Toll Plaza: -

- The overall share of empty vehicle is observed to be around 31% at Mahasamudram toll plaza.
- The Major Commodities observed at Mahasamudram Toll Plaza are **Parcel, Fruits & Vegetables, Food Items & Automobiles** are contributing to almost **73%** of overall Commodities when Empty trucks are also included.
- The empty vehicles share observed at Mahasamudram Toll Plaza is more than 25% and it indicates the traffic at Mahasamudram Toll Plaza is more Local traffic.
- Major commodities transported by LCV and 2-Axles are Parcel, Fruits & Vegetables, Food Items, Automobile & Livestock.
- Major Commodities transported by HGVs are Parcel, Fruits & Vegetables, Food Items, Automobile, Parchoon, Steel & POL.

Table 4-12 Commodity Pattern at Mahasamudram toll plaza (TP2)

MAHASAMUDRAM TOLL PLAZA					
COMMODITY	LCV	2-AXLE TRUCK	3-AXLE TRUCK	MAV	TOTAL
Empty	33.3%	27.2%	27.5%	32.2%	31.1%
Parcel	12.4%	19.2%	17.2%	8.1%	13.5%
Fruits & Vegetables	18.6%	7.0%	5.5%	10.6%	12.9%
Food Items	7.0%	7.8%	12.0%	7.1%	7.8%
Automobile	4.1%	14.7%	11.8%	6.0%	7.7%
Livestock	8.8%	1.7%	0.9%	2.1%	4.9%
Wood	4.0%	4.9%	3.9%	2.3%	3.8%
Parchoon	2.4%	3.3%	5.4%	6.1%	3.8%
Steel	1.1%	3.0%	2.6%	8.0%	3.1%
POL	1.0%	3.0%	3.9%	5.3%	2.7%
Plastic	1.0%	1.9%	3.1%	1.8%	1.6%

MAHASAMUDRAM TOLL PLAZA					
COMMODITY	**LCV**	**2-AXLE TRUCK**	**3-AXLE TRUCK**	**MAV**	**TOTAL**

4.4.6 Trip length frequency Distribution

An analysis was carried out to understand the trip length frequency of the passenger and goods vehicles at all the toll plaza locations. Figures below presents the toll plaza wise trip length frequency distribution for goods and passenger vehicles.

Goods Vehicles

Trip length Frequency Distribution at Gadanki Toll Plaza

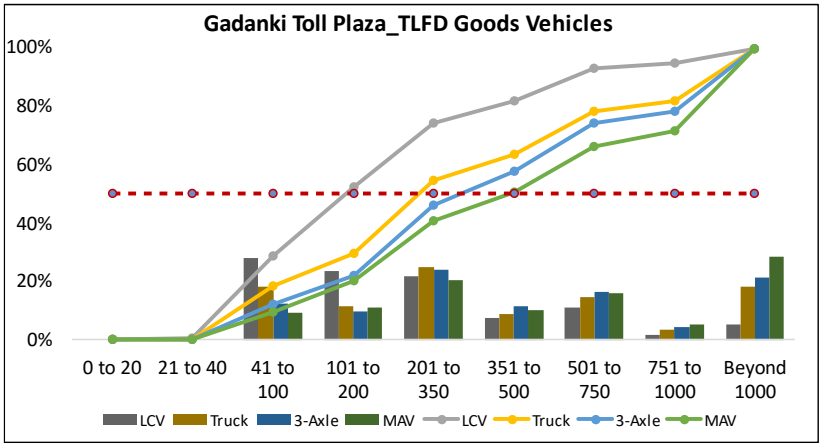

Figure 4-4: Trip length Frequency Distribution at Gadanki Toll Plaza – Goods

- Around 52.5% of LCVs, 29.8% of Trucks, 21.8% 3-Axle, 20.3% MAVs are having trip length less than 200 km.
- 40.6% of LCVs, 48.4% of 2-Axle trucks, 52.5% of 3-Axle trucks and 46.2% of MAV are having trip lengths more than 200 km and less than 750 km.
- Around 6.9% of LCVs, 21.8% of 2-Axle trucks, 25.7% of 3-Axle trucks and 33.5% of MAV are having trip lengths more than 750 km which refers there is significant medium and long-distance traffic through the Gadanki Toll plaza.
- Major OD pairs in goods traffic (3A & MAV) are Tirupati-Bengaluru, Tirupati-Chittoor, Vijayawada-Bengaluru & Bengaluru-Kolkata etc.

Trip length Frequency Distribution at Mahasamudram Toll Plaza

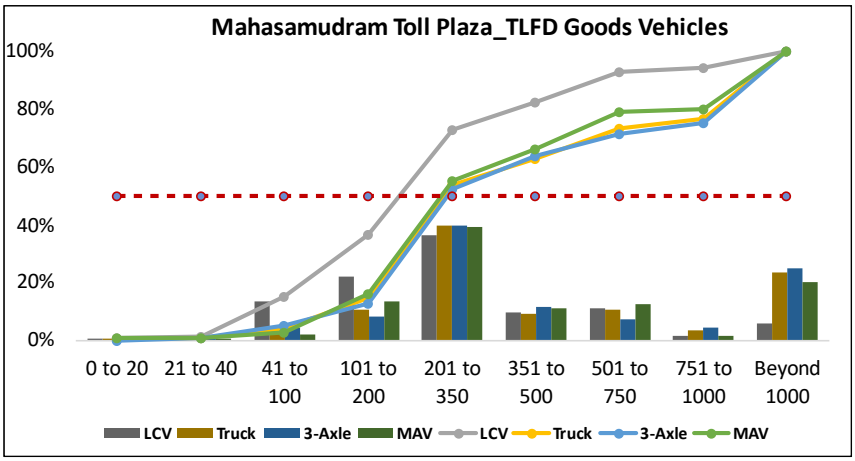

Figure 4-5: Trip length Frequency Distribution at Mahasamudram Toll Plaza – Goods

- Around 36.7% of LCVs, 14.4% of Trucks, 12.8% of 3-Axle, 16.2% MAVs are having trip lengths of less than 200 km.
- 56.3% of LCVs, 58.8% of 2-Axle trucks, 58.4% of 3-Axle trucks and 62.5% of MAV are having trip lengths more than 200 km and less than 750 km.
- Around 7.1% of LCVs, 26.9% of 2-Axle trucks, 28.8% of 3-Axle trucks and 21.2% of MAV are having trip lengths more than 750 km which refers there is significant medium and long-distance traffic through the Mahasamudram Toll plaza.
- Major OD pairs in goods traffic (3A & MAV) are Bengaluru-Chennai, Bengaluru-Kolkata, Chittoor-Bengaluru, Vijayawada-Bengaluru & Hindupuram-Chennai, etc.

Passenger Vehicles

Trip length Frequency Distribution at Gadanki Toll Plaza

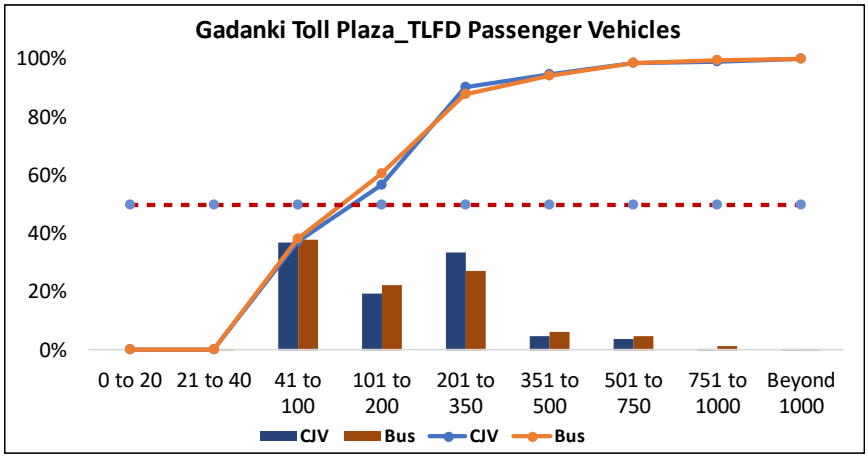

Figure 4-6: Trip length Frequency Distribution at Gadanki Toll Plaza - Passengers

- Around 37% of Cars and 38% Busses are having less than 100 km trip length.
- Approximately 57% of Cars and 61% of Busses are having less than 200 km trip length. 33.5% of Cars are observed to be having trip lengths more than 200 km and less than 350 km.
- 4.6% of cars trips are between 351 km to 500 km, 4.5% of the trips are between 500 km to 1000 km and 0.6% of the trips are beyond 1000 km.

- Tirupati-Bengaluru, Tirupati-Chittoor, Tirupati-Kanipakam & Tirupati-Vellore are the Major OD Pairs in passenger vehicles.

Trip length Frequency Distribution at Mahasamudram Toll Plaza

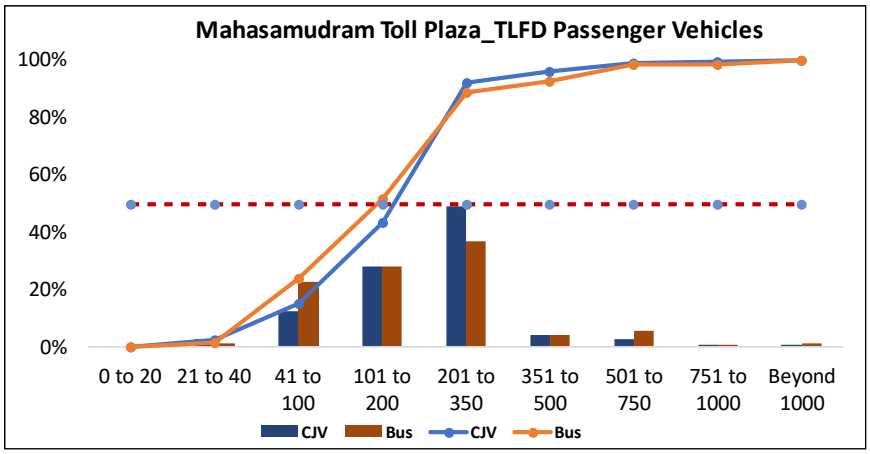

Figure 4-7: Trip length Frequency Distribution at Mahasamudram Toll Plaza-Passengers

- Around 15% of Cars and 24% of Busses are having less than 100 km trip length.
- Approximately 43% of Cars and 52% of Busses are having less than 200 km trip length. Around 49% of Cars are observed to be having trip lengths more than 200 km and less than 350 km.
- 4.3% of cars trips are between 351 km to 500 km, 3.1% of the trips are between 500 km to 1000 km and 0.6% of the trips are beyond 1000 km.
- Tirupati-Bengaluru, Chittoor-Bengaluru, Chittoor-Palamaner, & Bengaluru-Chennai are the Major OD Pairs in passenger vehicles.

4.4.7 Major Trip Generators

An analysis was carried out to identify the major trip generators. Table and figure below present the major trip generators of all passenger and goods vehicles at the toll plazas.

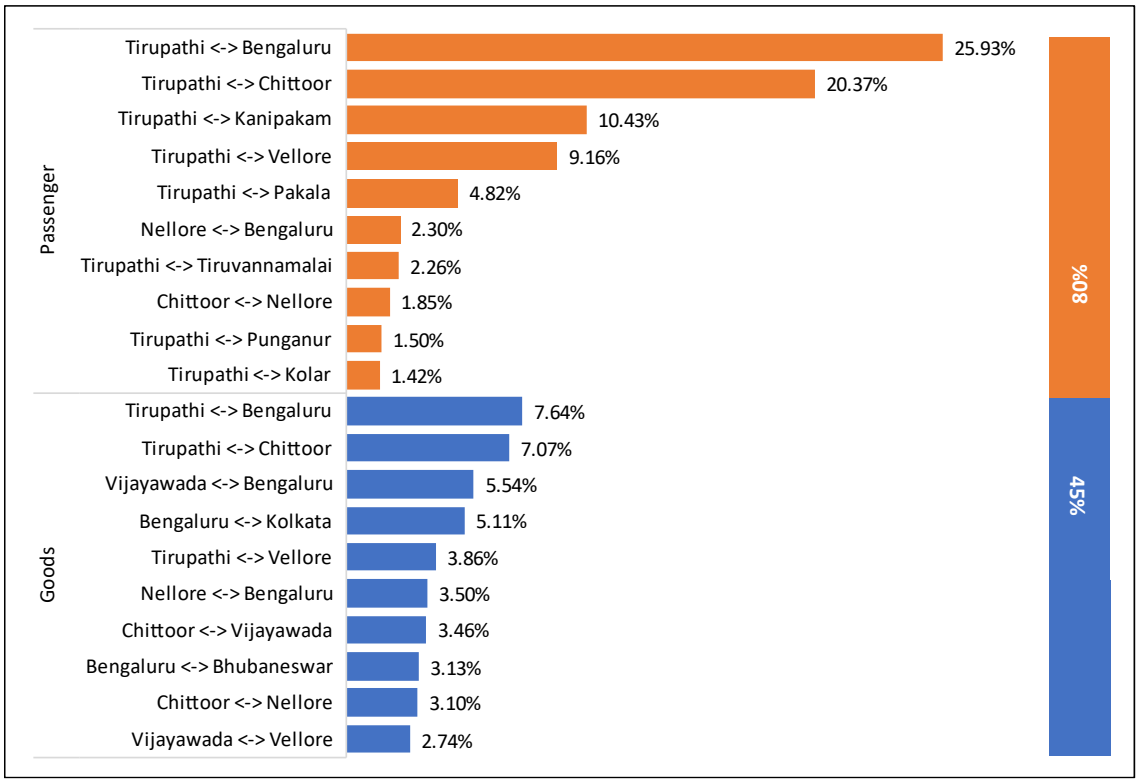

Figure 4-8: Major OD Pairs at Gadanki TP

From the Top Origin- Destination pair analysis of both passengers and Goods (3 Axle trucks & MAV), it is observed that the top ten OD Pairs comprises around 80% of total passenger traffic and 45% of goods traffic (3A & MAV only) at Gadanki Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

- Top five OD Pair from passenger mode share is of around 71%. Major OD pairs are generated from Tirupati, Bengaluru, Chittoor, Kanipakam, Vellore and Pakala.

Goods wise Major OD Pair at Toll Plaza:

- Top five OD Pair from goods mode share is of 29.2%. Major OD pairs are generated from Tirupati, Bengaluru, Chittoor, Vijayawada, Vellore and Kolkata. Major Goods traffic on the project stretch is of short to medium distance traffic.

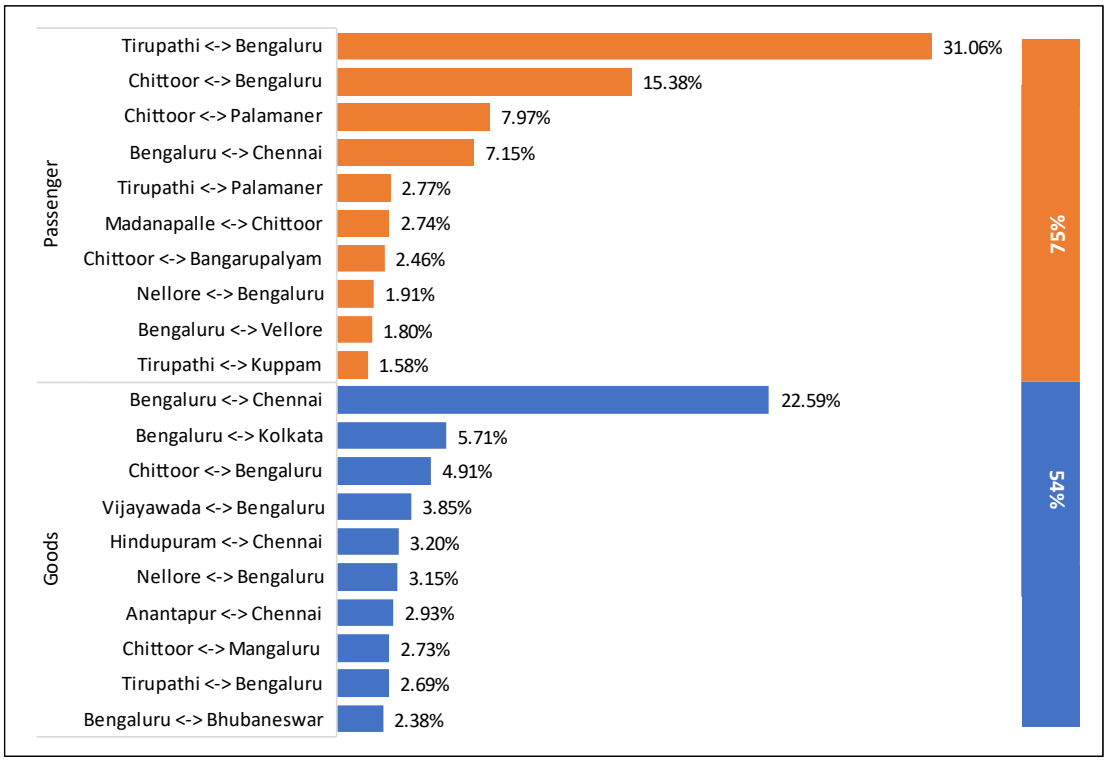

Figure 4-9: Major OD Pairs at Mahasamudram TP

From the Top Origin- Destination pair analysis of both passengers and Goods it is observed that the top ten OD Pairs comprises around 75% of total passenger traffic and 54% of total goods traffic at Mahasamudram Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

- Top five OD Pair from passenger mode share is of 64.4%. Major OD pairs are generated from Tirupati, Bengaluru, Chittoor, Palamaner, and Chennai.

Goods wise Major OD Pair at Toll Plaza:

- Top five OD Pair from goods mode share is of 40.3%. Major OD pairs are generated from Bengaluru, Chennai, Kolkata, Chittoor, Vijayawada, and Hindupuram. Major Goods traffic on the project stretch is of short to medium distance traffic.

CHAPTER 5

Diversion & Development Traffic Impact Assessment

5. Diversion & Development Traffic Impact Assessment

5.1 Introduction

This chapter presents the details of road network in the project influence area and the potential impact on the project road traffic during concession period. The traffic diversion section covers the comparison of the potential alternate routes with the project road.

Road network assessment and alternate modes were identified, and risk assessment has been done to determine traffic likely to be diverted to / from various routes by mode-wise based on generalized costs including toll fees on project road and alternate routes.

This chapter also presents the details of land development in the project influence area and the potential impact on the project road traffic. Growth rates obtained from elasticity method needs to be adjusted for diversions as some of the upcoming development near project area can significantly affect the traffic estimates. The diversion and development section cover the potential land use development near project area and their effect on the future traffic estimates.

5.2 Diversion Traffic to Project Road/Alternate Routes

5.2.1 Road network assessment

Road network in the project influence area (PIA) was studied in detail from the past reports, latest news articles for all the potential impact roads on the project road traffic. Based on the site appreciation and desktop research it has been observed that there are viable alternate road that exists for the project road the & table below illustrates the list of alternate road development.

Table 5-1: Alternative Roads /Development Impacts on Project Road

S.NO	ALTERNATIVE ROAD/ NETWORK/ LAND /IMPROVEMENTS	IMPACT TYPE	YEAR OF IMPACT
1	4/8 Lane access-controlled Bangalore-Chennai Expressway	Negative impact on Mahasamudram TP	FY27: 50% FY28:100%
2	4-6 Lane Partially access-controlled Bangalore-Vijayawada Expressway	Negative Impact on Both the TP's	FY28: 50% FY29:100%
3	6 Lane access-controlled Chittoor-Thatchur Expressway	Negative impact on Mahasamudram TP	FY27: 50% FY28:100%

5.2.2 Approach & Methodology

The Diversion Analysis process starts with the identification of potential alternate routes which was described in the earlier section. Post identification of the alternate routes, the next step involves quantification of the potential divertible traffic on the project road and the identified alternate routes.

The potential divertible traffic is the traffic which could shift from one road to the other road considering all the factors such as Vehicle operating cost, Travel time and Tolls. Subsequently a diversion analysis (binomial model) is performed to identify the quantum of the traffic that shift to the project road (positive diversion) or shift to the alternate road (negative diversion). The positive or the negative diversion is based on the generalized costs obtained from the diversion analysis model.

In this case, as seen in the earlier section there are potential alternate routes which are combination of greenfield & brownfield upgradations. With respect to the potential divertible traffic for the project road it has been quantified based on the O-D analysis. The potential divertible traffic for the proposed alternate for the base year is not available as it is not operational at present (base year). In the absence of potential divertible traffic on the alternate route, the potential divertible traffic on project road is considered as total potential divertible traffic (PR+AR) for the diversion analysis.

The subsequent sections provide further elaboration on the potential divertible traffic, generalized costs and the divertible traffic and future divertible traffic on the project road till the end of the concession period.

The estimation of Traffic diversion away from project road for various diversions mentioned above are explained below.

Diversion 1:

- Negative diversion due to proposed Bangalore-Chennai Expressway for the traffic plying between Bangalore & West of Bangalore towards Chennai & nearby regions.

Diversion 2:

- Negative diversion due to proposed Bangalore-Kodikonda-Vijayawada Expressway for the traffic plying between Bangalore & nearby regions towards Vijayawada & further North of it.

Diversion 3:

- Negative diversion due to proposed Chittoor-Thatchur Expressway for the traffic plying between Bangalore & West of Bangalore towards Ennore port & nearby regions.

5.2.3 Bangalore-Chennai Expressway

262.100 km Bengaluru – Chennai Expressway by NHAI is a proposed 4/8 lane access-controlled highway with a route alignment connecting Bengaluru in Karnataka and Chennai in Tamil Nadu. This greenfield expressway under Bharatmala Pariyojna (BMP) program will run parallel to National Highway NH-75/69 and link at Sriperumbudur (in Chennai) on NH-4 in Tamil Nadu.

The project has been divided up into 4 phases and 11 sections – all to be executed in parallel. Current status of Bangalore- Chennai Expressway is mentioned in the below table with Length, Lane configuration & Construction status as on date.

Table 5-2: Bangalore-Chennai Expressway Status

Section	Phase	Pkg	Chainage	Length (km)	Start Date	Current Progress (%)	Expected Completion Date	Contractor	Source (State)
Hoskote to Malur	1	1	0 to 26.4	26.4	September 15, 2021	99% Complete		Dilip Buildcon	NHAI PIU Kengeri (Karnataka)
Malur to Bangarpet		2	26.4 to 53.5	27.1	September 20, 2021			Dilip Buildcon	
Bangarpet to Bethamangala		3	53.5 to 71	17.5	January 18, 2022			KCC Buildcon	
Bethamangala to Baireddypalli	2	1	71 to 96	25	10 Nov 2022	58.3%	31 Nov 2025	Montecarlo	NHAI PIU Chittoor (Andhra Pradesh)
Baireddypalli to Bangarupalyam		2	96 to 127	31	08 June 2023	35.02%	17 June 2026	APCO Infratech	
Bangarupalyam to Gudipala		3	127 to 156	29	4 Nov 2022	77.02%	3 Nov 2024	Dilip Buildcon	
Gudipala to Walajahpet	3	1	156 to 180	24	30/05/2022	62.75%	31/12/2024	Montecarlo	NHAI PIU Kanchipuram (Tamil Nadu) Tamil Nadu
Walajapet to Arakkonam		2	180 to 204.5	24.5	16/07/2022	80.07%	30/11/2024	KCC Buildcon	
Arakkonam to Kancheepuram		3	204.5 to 230	25.5	08/08/2022	50.73%	31/03/2025	DP Jain Infra	
Kanchipuram to Sriperumbudur		4	230 to 261.705	31.705	11/7/2022	61.78%	28/02/2025	RCC	
Trumpet connecting BCE & Old Bglr Chennai Hwy near			261.705 to 262.8	1.095	26/02/2024	0%	23/08/2025	RCC	
Sriperumbudur to Maduravoyal (Elevated Corridor)	4	-	13+800 to 35+800	23	DPR stage – VAX consultancy working on it from last 2-3 yrs				NHAI PIU Chennai (Tamil Nadu)

5.2.4 Diversion-1(a) (Long Distance Traffic on Bangalore Chennai Expressway)

Traffic coming from the Bangalore & West of Bangalore towards Chennai & nearby regions will have two route options available once the Bangalore-Chennai expressway is completely operational. The common point for both the Project Road and alternate route will be Hoskote and Sriperumbudur and the route comparison between Hoskote to Sriperumbudur via Project Road vis a-vis alternate route is described below.

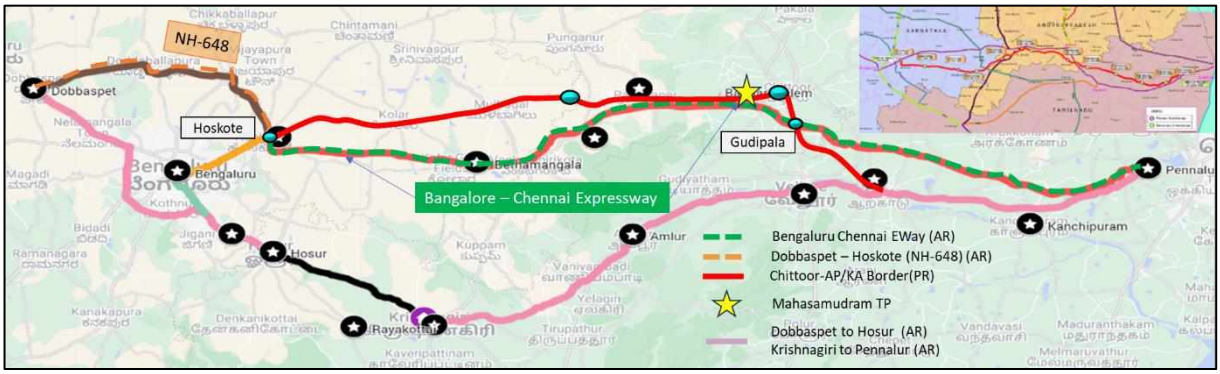

Figure 5-1: Bangalore-Chennai Route Comparison

Network Characteristics like Length, Road configuration etc. for both PR and AR are mentioned in the below table.

ROUTE COMPARISON					
YEAR	**ROAD (PR or AR)**	**SECTION**	**LENGTH (KM)**	**ROAD CONFIG**	**REMARKS**
FY25	PR	Hoskote to Chittoor (NH75, NH69, NH40)	147	4L	
	PR	Chittoor to AP/TN Border	24	4L	Current Status: Under Construction
	PR	AP/TN Border to Walajpet town	22	4L	Current Status: Under Construction
	PR	Walajpet town	5	2L	
	PR	Walajpet to Sriperumbudur	70	6L	
FY27	AR	Hoskote to Sriperumbudur	261.7	4L-E'Way	Current Status: Under Construction
Total Distance Via PR(Km)			**268**		
Total Distance Via AR(Km)			**261.7**		

Table 5-3: Hoskote-Sriperumbudur Route Comparison b/w PR & AR (Long Distance)

It is observed that Project Road is 6.3 kms longer than alternative route for Bangalore-Chennai route. Traffic zones which are considered for this part of diversion is shown below.

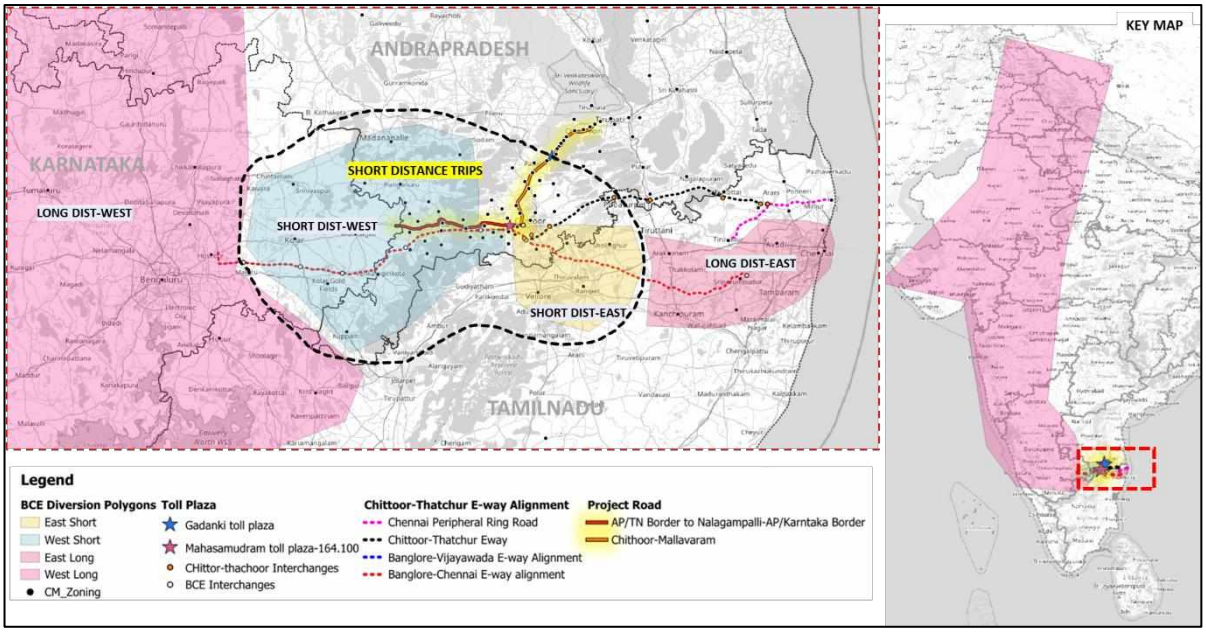

Figure 5-2: Bangalore-Chennai zoning Scheme

Zones that are considered by consultant on the West side are Western part of Mahasamudram in Hoskote, Bengaluru, regions to the North West of Bengaluru (like Tumkuru, Davanagare, Pune, Ahmedabad, Delhi, etc.) are highlighted on Figure 5-2 inside Pink polygon (Long-Dist-west). Similarly, zones considered on the eastern side are, Vellore, Ranipet, Kanchipuram, Chennai, Thiruvallur, etc. were considered for potential divertible traffic estimation. (Zones highlighted inside pink polygon (Long-Dist-East) in Figure 5-2).

Here for long distance traffic following combinations of PDT zones are considered:

1. Long-Dist-West & Short-Dist-West to Long-Dist-East.
2. Long-Dist-West to Short-Dist-East.

Both above mentioned combinations are considered for final long-distance PDT.

Table 5-4: Potential Divertible Traffic in Base year

Mode	Long Distance
Car	1,814
Minibus	2
Bus-2A	58
Bus-3A	0
LCV	552
2 Axle	675
3 Axle	341
MAV	592

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic

Evaluation of Highway Projects in India" and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

The consultant has considered that this diversion shall happen phase wise with 50% of the divertible traffic diverting in FY-27 and 100% of the divertible traffic diverting in FY-28. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

Table 5-5: Traffic diversion from Mahasamudram toll plaza to BCE-Diversion1(a) in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	1,814	(989)	-9.1%
Bus	58	(41)	-3.8%
LCV	552	(278)	-24.3%
2 Axle	675	(323)	-22.7%
3 Axle	341	(181)	-24.2%
MAV	592	(312)	-22.3%

5.2.5 Diversion-1(b) (Short Distance Traffic on Bangalore Chennai Expressway)

The diversion impact assessment for short distance traffic at Mahasamudram toll plaza can be estimated for zones after Kolar on west and before Vellore in the east side as shown in the Figure 5-5 & 5-6.

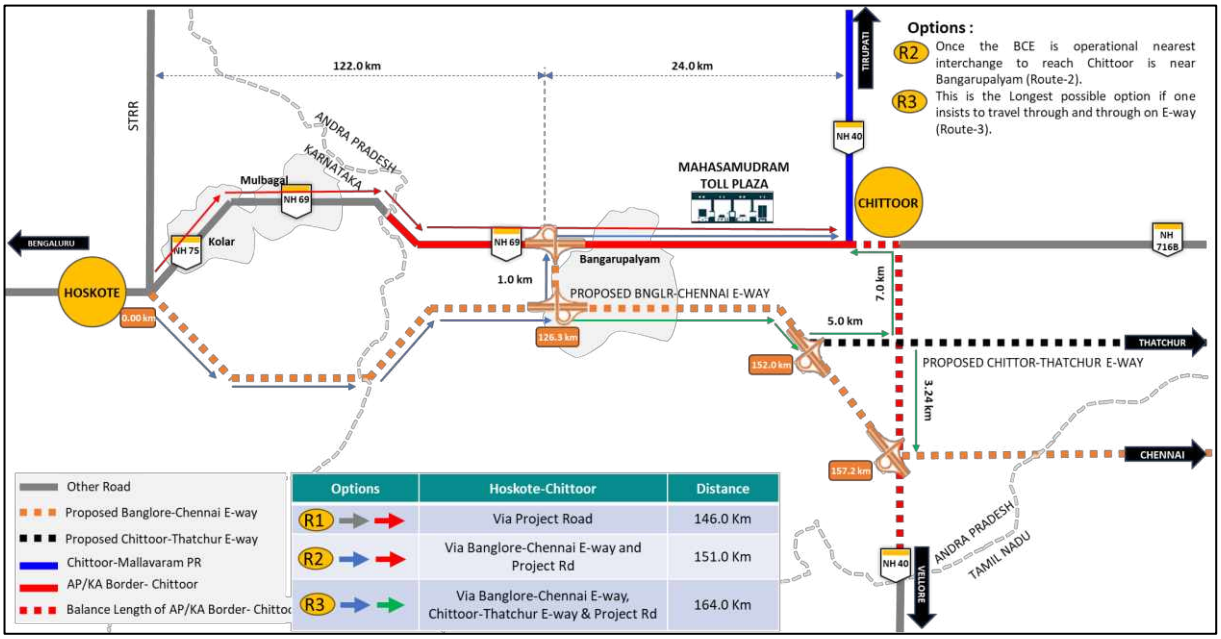

Figure 5-3 Line Diagram Showing Route Comparison for Short Distance Traffic on BCE

Network Characteristics like Length, Road configuration etc. for both PR and AR are mentioned in the below table.

Table 5-6 Hoskote-Sriperumbudur Route Comparison b/w PR & AR (Short Distance)

ROUTE COMPARISON						
YEAR	ROAD (PR or AR)	SECTION	LENGTH (KM)	Tollable Length (KM)	ROAD CONFIG	REMARKS
FY25	PR	Bangarupalyam Interchange to Chittoor to BCE/PR Interchange	34.2	84.8 (on Full Completion) Tolling length includes Normal, Bypass and Structures Actual length only	4L-Construction & 2L	
FY27	AR	Bangarupalyam (BCE) to BCE/PR Interchange	31.9	31.9	4L-E'Way	Current Status: Under Construction

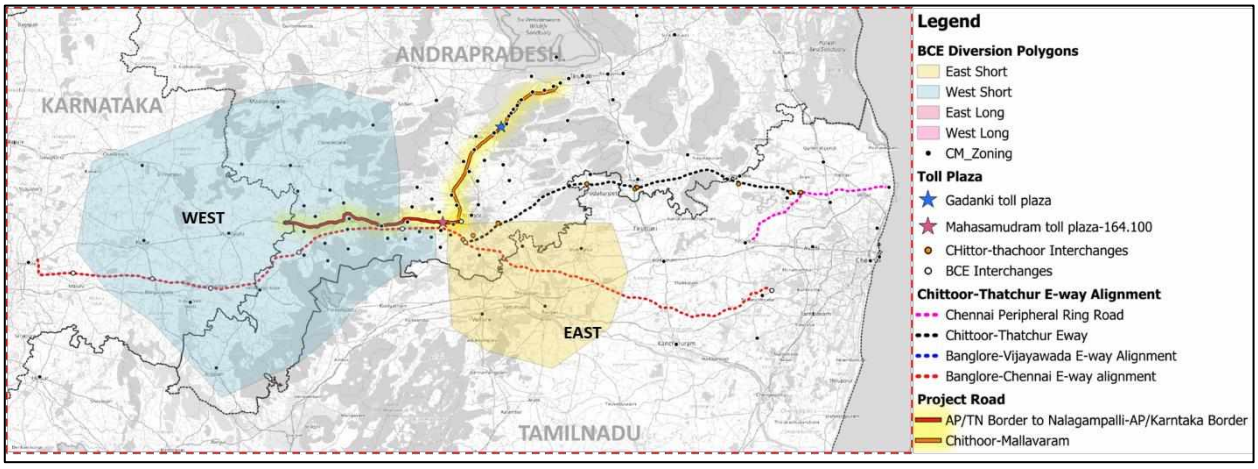

Figure 5-4 Bangalore Chennai Expressway Short Distance Traffic PDT Zones

All the Zones coming in the PIA of the proposed network development are considered and correspondingly travel demand is estimated from the potentially impacted zones. Potential Divertible traffic for the base year is mentioned below.

Table 5-7: Potential Divertible Traffic in Base year

Mode	Long Distance	Short Distance	Total
Car	1,814	151	1,965
Minibus	2	0	2
Bus-2A	58	3	60
Bus-3A	0	0	0
LCV	552	15	567
2 Axle	675	6	681
3 Axle	341	2	343
MAV	592	10	602

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

The consultant has considered that this diversion shall happen phase wise with 50% of the divertible traffic diverting in FY-27 and 100% of the divertible traffic diverting in FY-28. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

Table 5-8: Traffic diversion from Mahasamudram toll plaza to BCE-Diversion1(b) in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	151	(107)	-1.0%
Bus	3	(3)	-0.2%
LCV	15	(11)	-0.9%
2 Axle	6	(5)	-0.3%
3 Axle	2	(1)	-0.2%
MAV	10	(9)	-0.6%

Table 5-9: Traffic diversion from Mahasamudram toll plaza to BCE-Diversion1(a&b) in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	1,965	1,096	10.1%
Bus	60	44	4.0%
LCV	567	288	25.2%
2 Axle	681	327	23.1%
3 Axle	343	183	24.4%
MAV	602	321	22.9%

5.2.6 Diversion-2(a) (Bangalore & nearby regions towards Vijayawada & further North of it)

Traffic coming from the Bangalore & nearby regions going towards Vijayawada & further North of it will have two route options available once the Bangalore-Kodikonda-Vijayawada Expressway is completely operational. The common point for both the Project Road and alternate route will be Hoskote & Addanki and the route comparison between Hoskote to Addanki via Project Road vis a-vis alternate route is described below.

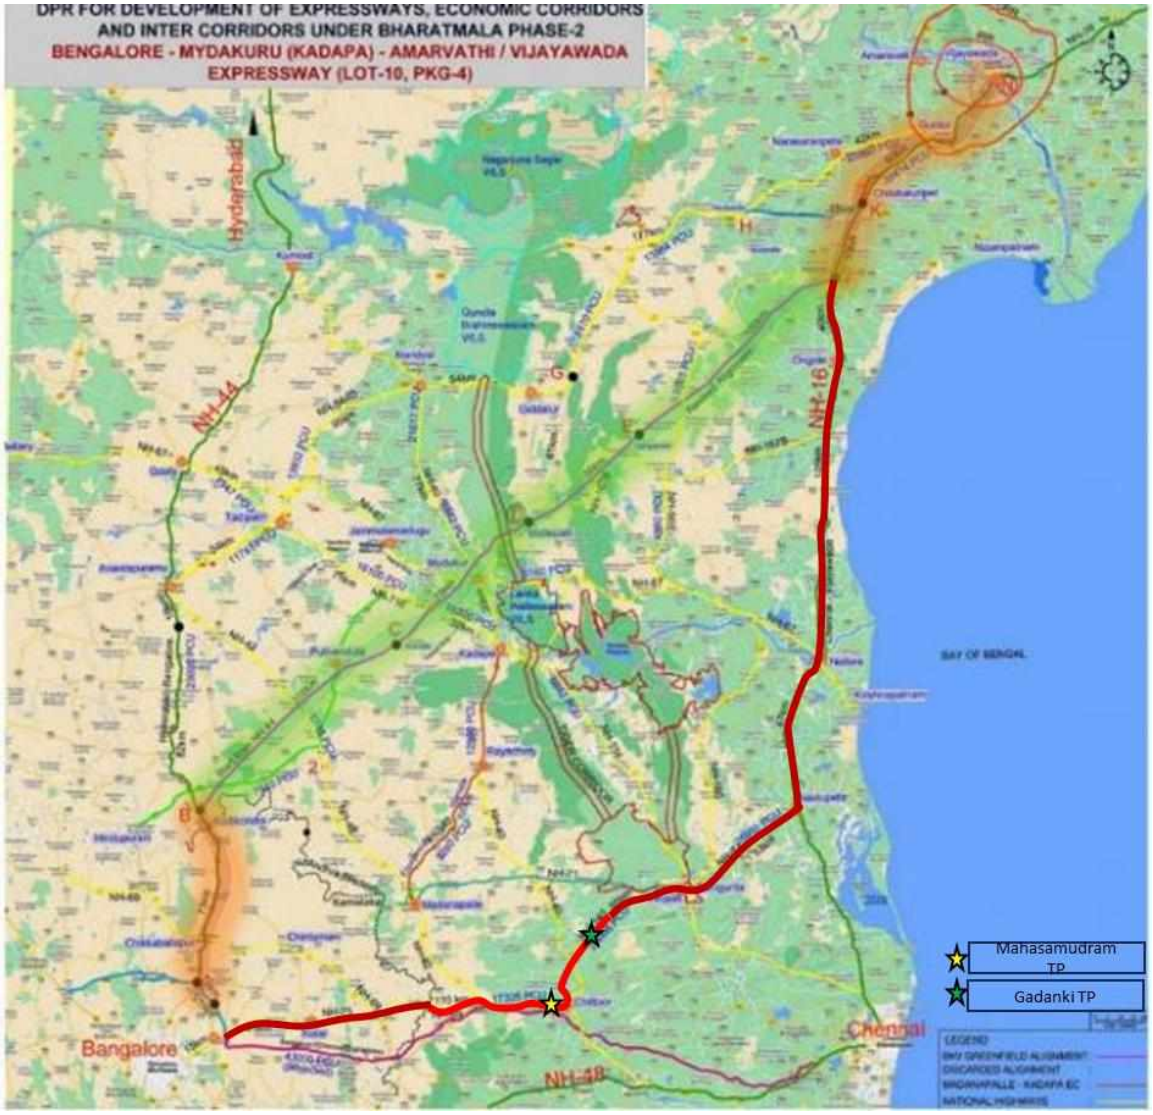

Figure 5-5: Bangalore-Vijayawada Route Comparison

Network Characteristics like Length, Road configuration etc for both PR and AR are mentioned in the below table.

Table 5-10: Hoskote-Addanki Route Comparison b/w PR & AR

ROUTE COMPARISON					
YEAR	**ROAD (PR or AR)**	**SECTION**	**LENGTH (KM)**	**ROAD CONFIG**	**REMARKS**
FY25	PR	Hoskote to Chittoor (NH75, NH69)	146	4L	
	PR	Chittoor to Tirupati (NH140)	61	6L	
	PR	Tirupati to Renigunta (Tirupati Bypass)	16	4L	
	PR	Renigunta to Naidupeta (NH71)	59	6L	Current Status: Under Construction
	PR	Naidupeta to Addanki (NH16)	238	4L	
FY28	AR	Hoskote to Addanki (BKV)	441	6L-E'Way	Current Status: Under Construction
Total Distance Via PR(Km)			**520**		
Total Distance Via AR(Km)			**441**		

It is observed that Project Road is 79 kms longer than alternative route for Hoskote-Addanki route. Traffic zones which are considered for this part of diversion is shown below.

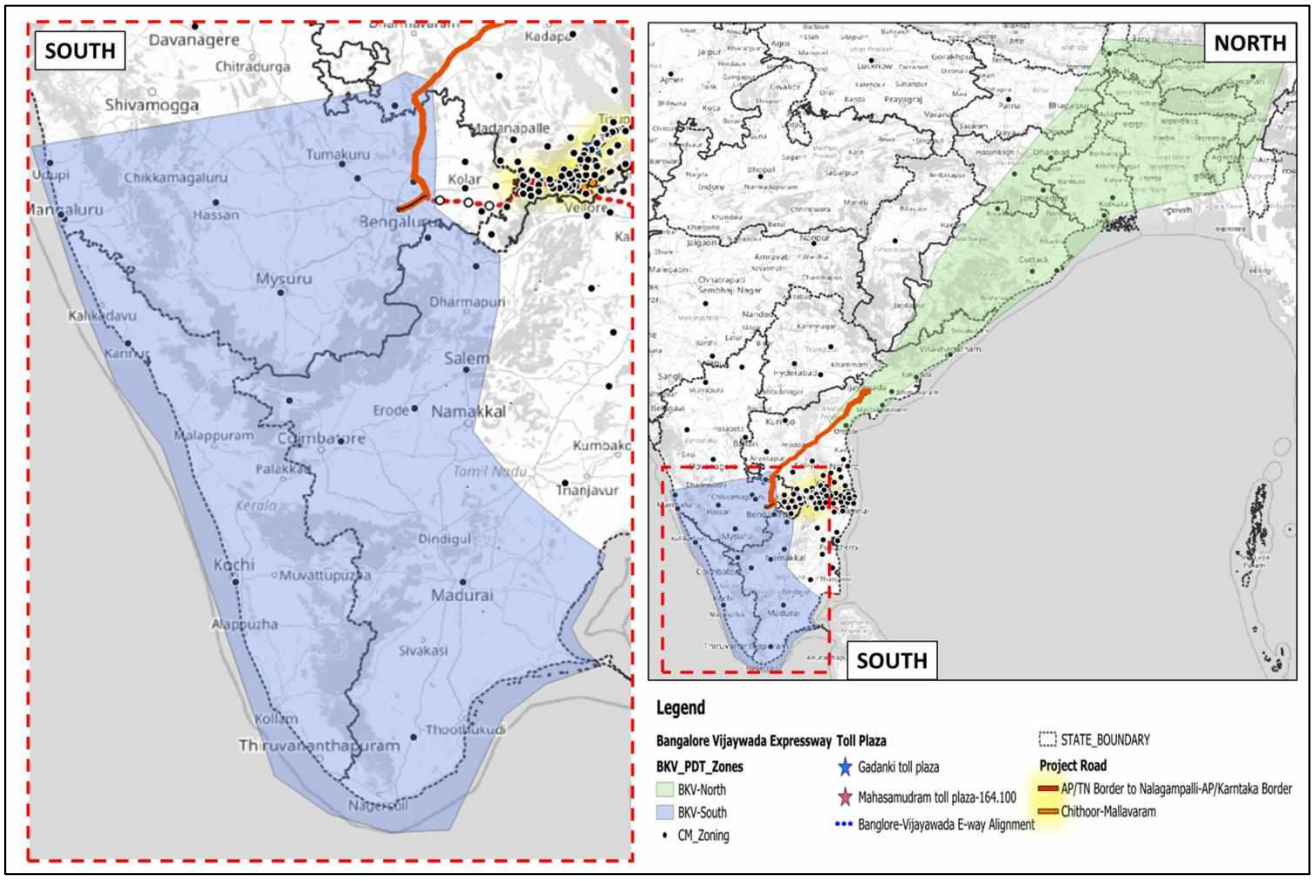

Figure 5-6: Bangalore Vijayawada zoning Scheme

Zones that are considered by consultant as North side are Ongole, Vijayawada, Visakhapatnam, Odisha, Jharkhand, West Bengal, etc., on the Figure 5-6 within pink polygon. Similarly on the southern side Hoskote, Bengaluru, Tumkuru, Mysuru, Mangalore, etc. were considered for potential divertible traffic estimation. (Zones highlighted within green polygon in Figure 5-6). All the Zones coming in the PIA of the proposed network development are considered and correspondingly travel demand is estimated from the potentially impacted zones. Potential Divertible traffic for the base year is mentioned below.

Table 5-11: Potential Divertible Traffic in Base Year (FY-25)

Mode	Gadanki TP	Mahasamudram TP
Car	253	254
Minibus	0	0
Bus-2A	48	67
Bus-3A	0	0
LCV	42	102
2 Axle	182	288
3 Axle	122	182
MAV	340	240

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

Table 5-12: Traffic Diversion from Gadanki TP to BKV (Diversion-2(a)) in FY 25

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	253	(170)	-1.5%
Bus	48	(46)	-3.2%

3 Axle	41
MAV	80

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

Table 5-15: Traffic Diversion from Gadanki TP to BKV (Diversion-2(a)) in FY 25

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	13	(6.07)	-0.1%
Bus	3	(1.49)	-0.1%
LCV	8	(3.50)	-0.8%
2 Axle	28	(12.44)	-1.4%
3 Axle	41	(21.57)	-3.0%
MAV	80	(37.34)	-2.2%

The consultant has considered that this diversion shall happen phase wise with only 50% of the divertible traffic diverting in FY-28 and 100% of the divertible traffic diverting in FY-29. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

5.2.8 Diversion-3 (Bangalore & West of Bangalore towards Thatchur & nearby regions)

Traffic coming from Bangalore & West of Bangalore towards Thatchur & nearby regions will have two route options available once the Chittoor-Thatchur expressway is completely operational. The common point for both the Project Road and alternate route will be Hoskote & Narigapalle and the route comparison between Hoskote to Narigapalle via Project Road vis a-vis alternate route is described below.

Figure 5-7: Bangalore-Thatchur Route Comparison

Network Characteristics like Length, Road configuration etc for both PR and AR are mentioned in the below table.

Table 5-16: Hoskote-Narigapalle Route Comparison b/w PR & AR

ROUTE COMPARISON					
YEAR	ROAD (PR or AR)	SECTION	LENGTH (KM)	ROAD CONFIG	REMARKS
FY25	PR	Hoskote to Narigapalle (NH75, NH69)	157	4L	
FY27	AR	Hoskote to CTE start point (BCE)	152	4L-E'Way	Current Status: Under Construction
	AR	CTE start point to Narigapalle (CTE)	5	6L-E'Way	
Total Distance Via PR (Km)			**157**		
Total Distance Via AR (Km)			**157**		

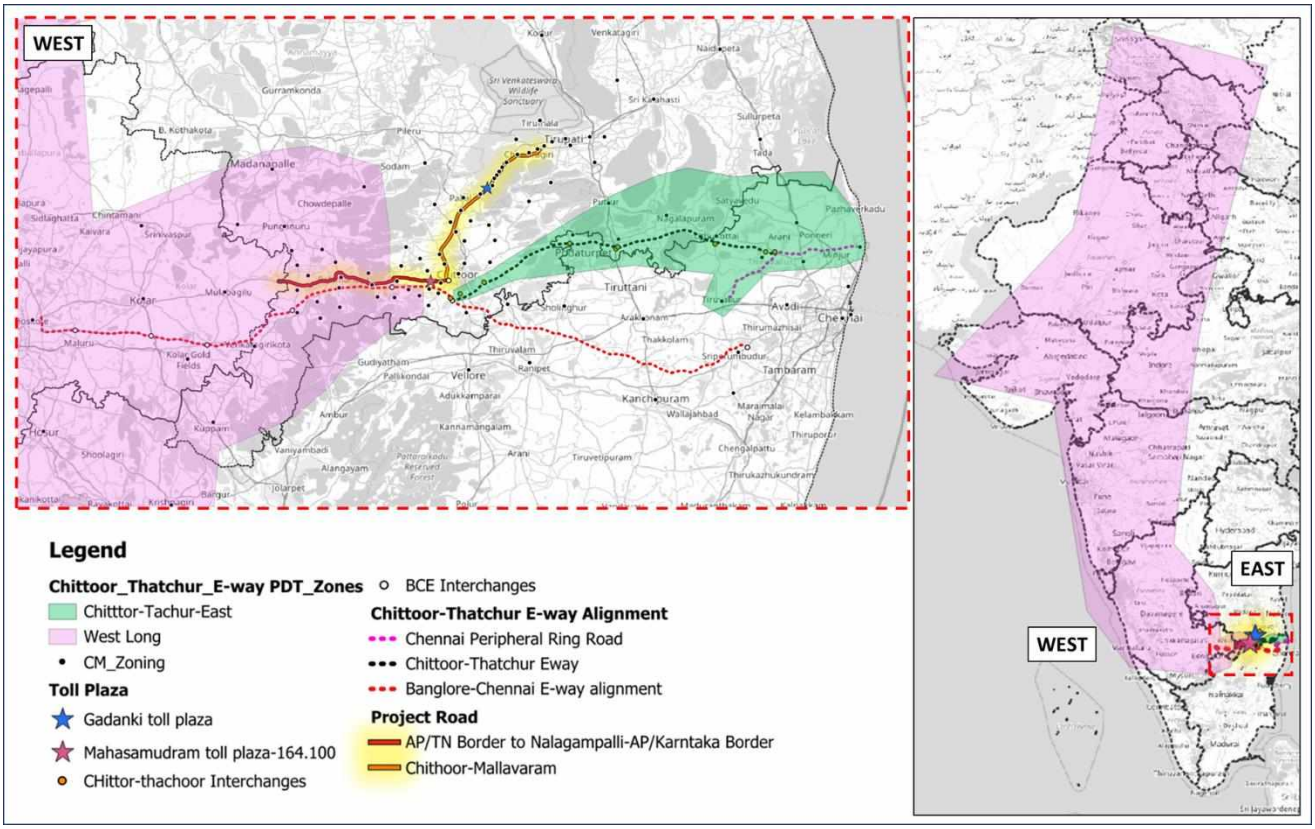

Figure 5-8: Bangalore-Thatchur zoning Scheme

It is observed that Project Road & alternative route for Bangalore to Thatchur route is almost same distance. Traffic zones which are considered for this part of diversion is shown below.

Zones that are considered by consultant on the West side are Western part of Mahasamudram in Chittoor, Kolar, Anantapur, Hindupuram, Hoskote, Bengaluru, regions to the North West of Bengaluru (like Tumkuru, Davanagare, Pune, Ahmedabad, Delhi, etc.,) are highlighted on Figure 5-7 inside green polygon. Similarly, zones considered on the eastern side are Puttur, Pichatur, Nagari, Ennore Port, Thiruvallur, etc., were considered for potential divertible traffic estimation. (Zones highlighted inside blue polygon in Figure 5-7).

CHAPTER 6

Traffic Growth rate estimation

6. Traffic Growth Rate Estimation

6.1 Background

Demand for transport is derived demand. Derived demand is an economic term which refers demand for a good in one sector occurring because of demand from another sector. Transport users are accessing services not because of its direct benefits but because they wish to access product. Transport demand is basically movement of goods and passengers. Passengers travel to satisfy the need (work, school, college, recreation, etc.) and nobody travel just for the sake of travelling and we transport good as a part of overall economic activity. Derived demand for transportation is often difficult to estimate for future just by analysing the traffic growth in past years as it has derived from demand from some other sectors which may or may not vary in future in the same way. To consider trend in other sector and effect of the same on transport demand factors such as GDP, Primary GDP, secondary GDP, tertiary GDP, states GDP, Per Capita Income and vehicle registrations data is considered. These data are readily available as published by various organizations and more representative of growth in economy and related sectors.

The investment priorities are governed by the traffic demand, assessed benefits, and cost of the project. Demand plays the significant role, which governs the type of facility / infrastructure to be created. This in turn determines likely benefits and costs to develop the same. Prediction of traffic demand becomes an important task and must be conducted near accurately. The accurate estimation of traffic has direct bearing on the viability of project. Recognizing this, efforts were made to carefully assess all the parameters that help in predicting the traffic demand in future which necessitates realistic estimation of traffic growth rates. This chapter explains the methodology and estimation of traffic growth rates for the project for the horizon years. Traffic growth on a road facility is generally estimated based on the historical trends, in the present case traffic growth rates are estimated using Elasticity method as per IRC-108-2015 - *Guidelines for Traffic Forecast on Highways*.

6.2 Methodology

Traffic growth rate estimation follows systematic approach which is based on econometric modelling. The detailed methodology to arrive at growth rate is explained in the following sections.

6.2.1 Governing Factors for Traffic Growth

Traffic growth is governed by number of factors such as Gross National Product (GNP) or Gross Domestic Product (GDP), Agricultural output, Industrial Output which are mainly economic indicators and Population, Rural/Urban mix of population which are demographic factors. Since these indicators vary widely across the country, traffic growth rate varies from state to state, and within state from region to region. So, it is necessary to identify project influence zones and giving consideration while arriving at above indicators.

6.2.2 Determination of Past Trends

Past trend of traffic growth is key parameter in determination of future trend. Past trend of traffic can be analysed from variety of indicators such as traffic flow from census, vehicle registration and fuel sales. Vehicle registrations data is readily available as published by trusted organization is used for this study. For establishing reliable growth rates data should be taken

for considerable for number of years. The ideal way to arrive at rate of growth is through regression analysis. Once we have analysed growth in traffic, we can arrive at traffic growth in project influence area by finding out weight of different project influence areas using surveys.

6.2.3 Goods Vehicle Forecasting

Goods vehicle forecasting is done based on growth in tonnage and splits among distinct categories of vehicles. Growth in tonnage is obtained like procedure explained above. For vehicular splits base year splits were considered as benchmark and future year splits were projected based on experience and past growth trends in the same category of vehicles. Once we have tonnage and splits projections number of goods based on vehicle category and corresponding growth rate is calculated.

Traffic forecasting for project road traffic was done considering past trend in growth and analysing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

6.3 Determination of Growth Trends

Past data pertaining to the project corridor was sourced from the client. This includes traffic data for all the two toll plazas Gadanki & Mahasamudram. The findings from the data are summarized in the following subsequent sections.

6.3.1 Past Traffic Trend at All Toll Plazas

Past traffic trends were derived based on the historic traffic data provided by the client. Separate analysis was carried out for toll plaza 01 at Gadanki and toll plazas 02 at Mahasamudram, respectively. Traffic count summary, travel pattern for both passenger and goods traffic from the historic traffic data is presented below.

Table 6-1: Past Traffic Trend at Gadanki Toll Plaza (TP1)

FY-2025 - Apr24-Nov24 Based AADT*

6.3.2 Project Influence Area

A study of the socio-economic profiles of the regions comprising the project influence area (PIA) provides an overview of the factors likely to influence the pattern of economic development and hence the flows and volumes of traffic on the proposed highway. The details include Population, Per-capita Income (PCI), GDP (India), GSDP (States), GDDP (Districts), Registered Vehicle population and targeted growth rates of the economy. The profiles help to generate basic inputs for the estimation of future growth in transport demand based on past scenarios, perspective changes in transport demand elasticity and economic growth rates.

The analysis of traffic pattern observed on the project road (at both the toll plaza locations) from traffic studies indicates that most of the traffic is generated from Andhra Pradesh, Karnataka, Tamil Nadu & West Bengal. Hence, the above-mentioned states have been considered as PIA zones in assessing traffic growth. Since drivers of growth for all the traffic streams would be different, these were analysed separately. In addition, truck traffic was analysed considering LCV, 2 Axle and 3 Axle, MAV separately to consider the expected changes in freight vehicle market share in future years.

Table 6-3:Project Influence Areas Impact on TP 01 – Gadanki

MODE	CAR	BUSES	TRUCKS
Andhra Pradesh	73.1%	76.9%	60.8%
Karnataka	17.5%	14.2%	19.3%

MODE	CAR	BUSES	TRUCKS
Puducherry	0.0%	0.0%	0.1%
Delhi	0.0%	0.2%	0.0%

6.3.3 Growth in Tonnage

To accommodate the dynamic change within the sale of goods vehicles of distinct categories in growth rate estimates, it is pragmatic to consider the overall growth of tonnage on project road at distinct locations. Once the growth of tonnage is established, tonnage share for distinct categories of trucks shall be assumed based on the past trend observed at the toll plaza locations and the potential market share of the individual truck categories with respect to the region (PIA). Using this growth in tonnage and assumed future tonnage share of distinct categories of goods vehicles the growth rate of each category will be back calculated.

To determine, growth of Historic traffic tonnage, PIA registered vehicles data was converted into total tonnage based on the historic vehicle split. The growth in payloads over the years is shown in the table below.

Table 6-5 Pay load for Different Categories

Mode	LCV	2A TRUCK	3 A TRUCK	MAV
FY-2018	5	9	16	25
FY-2019	5	11.1	17.1	28.5

6.3.4 Growth in Registered Vehicles

The growth in vehicle registrations in the project road influence region is generally a good indicator, as it is found to correlate reasonably well with traffic growth. Thus, it is possible to establish a definite trend and correlation between traffic growth and vehicle registration. To establish future traffic on the project corridor, the trend in vehicle registrations of the influencing areas, which are significantly contributing traffic to the corridor is also studied. Significant growth in registrations of car, buses and trucks has been observed in the project influence areas.

Growth in personal car is observed to be highest followed by Freight vehicles and Buses in the state of Andhra Pradesh. Compounded annual growth rate of cars, buses and trucks weighted for project area of Toll Plaza 1 at Gadanki is 9.28%, 6.08% & 5.47% respectively as shown in Table 8-4 in annexures. Similarly, for Mahasamudram TP 2 it is 9.11%, 6.43% & 4.82% respectively as shown in Table 8-5 in annexures.

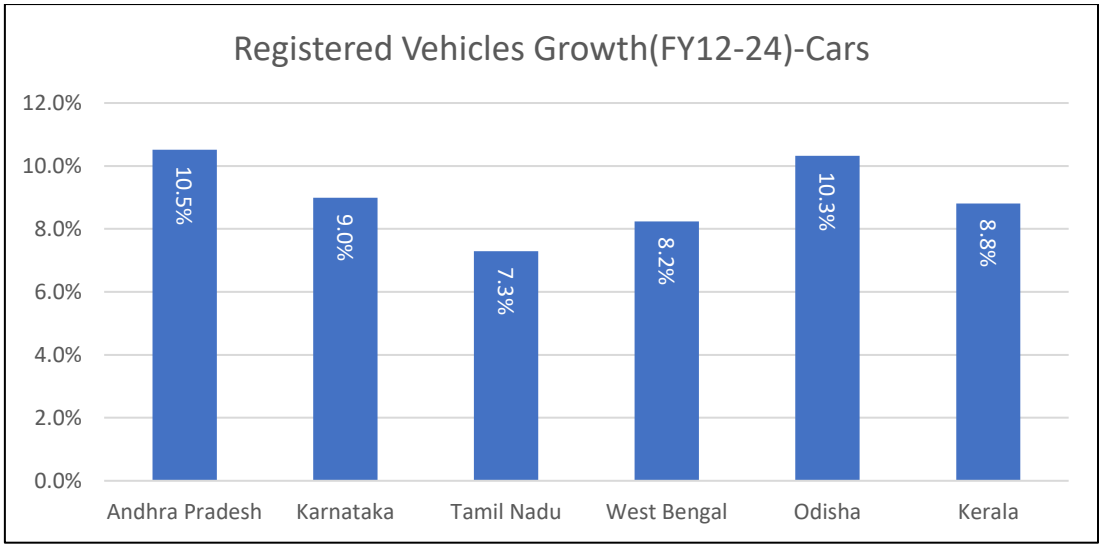

Figure 6-1: Long Term Growth Trends – Registered Cars in the PIA

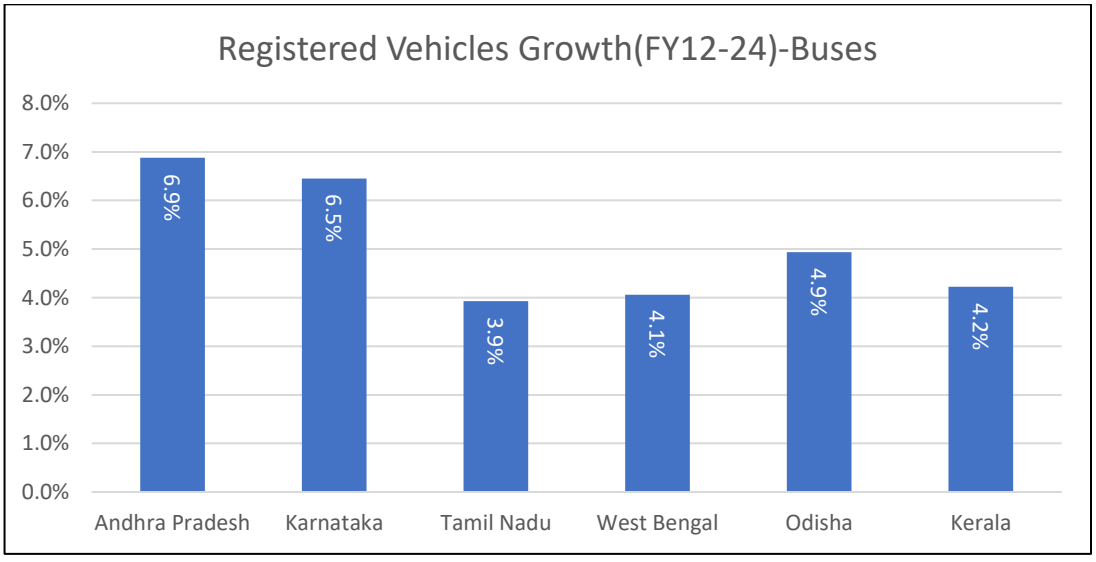

Figure 6-2: Long Term Growth Trends – Registered Buses in the PIA

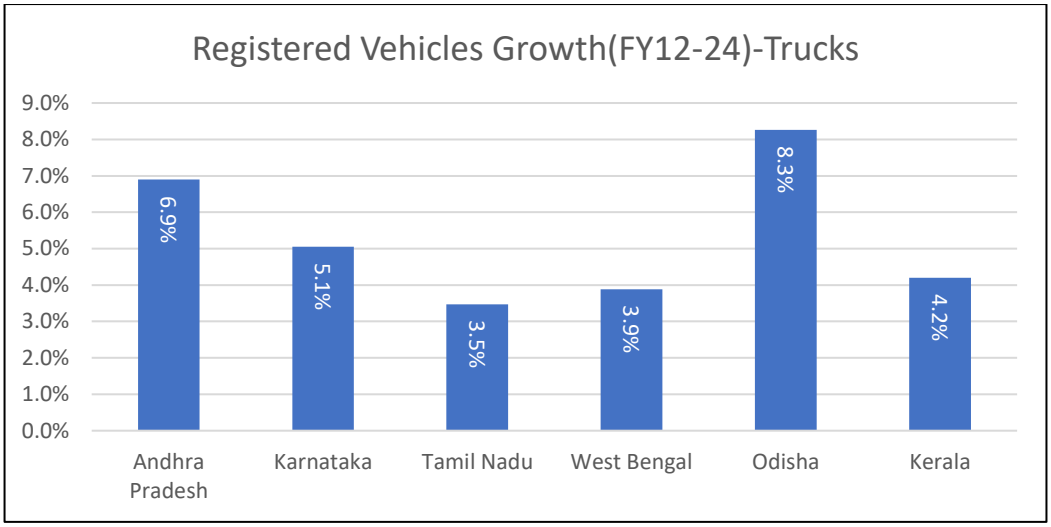

Figure 6-3 Long Term Growth Trends – Registered Trucks in the PIA

Source: MoRTH & VAHAN Database

6.3.5 Past Growth in Regional Economies

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. The time series data of economic indicators is one major economic variable followed in the econometric method of traffic forecasting through establishing a relationship between dependent (traffic / registered vehicles) and independent variable (GDP / GSDP / GDD) for project influence areas. Past economic growth for the PIA zones is sourced from the Central Statistical Organisation (CSO) and are presented below.

Table 6-6: GSDP for PIA zones

YEAR	Andhra Pradesh	Karnataka	Tamil Nadu	West Bengal	Odisha	Kerala
2012	3794	6060	7515	5205	2310	3640
2013	3806	6430	7918	5422	2434	3877
2014	4071	7045	8520	5585	2659	4028
2015	4446	7484	8939	5744	2707	4200
2016	4986	8313	9676	6095	2922	4512
2017	5402	9418	10368	6534	3373	4853
2018	5947	10197	11258	6950	3611	5162
2019	6266	10851	12047	7389	3867	5542
2020	6498	11514	12438	7618	3975	5592
2021	6597	11249	12447	7040	3891	5117
2022	7227	12354	13433	7874	4305	5781
2023	7647	13351	14533	8398	4646	6162
2024	8209	14232	15726	9041	5039	6464
CAGR (12-24)	**6.6%**	**7.4%**	**6.3%**	**4.7%**	**6.7%**	**4.9%**

6.3.6 Commercial Vehicles Sale Trend

Category wise commercial sales trend is presented in the below figure. From the figure it is observed that market share of 2 Axle truck and 3 Axle truck is declining from the previous Years whereas MAV market share is increasing. Due to improved road infrastructure and over

the years and due to technological advancements in commercial vehicle segments, there is a shift from 2 Axle /3 Axle trucks to MAVs.

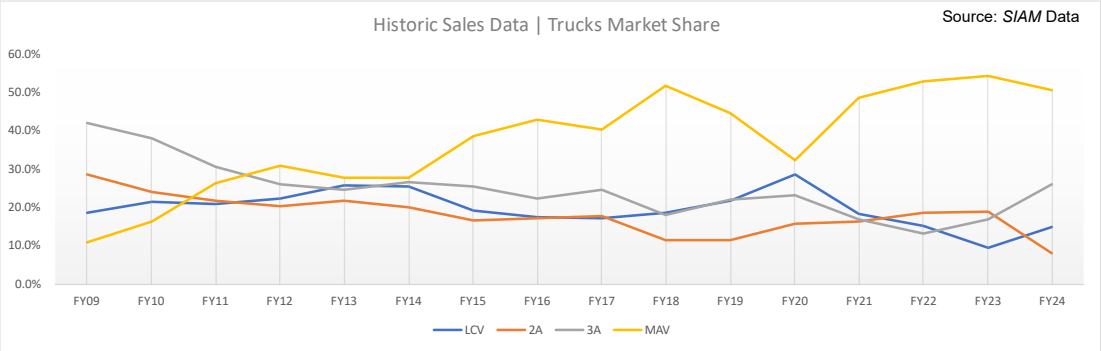

Figure 6-4: Market Share between Commercial Truck Categories

6.4 Traffic Growth Drivers

Before going to the traffic growth estimation through the established relation between economic variables and traffic variables, it is prudent to highlight the growth profile of the project corridor in terms of the geographic location and local economic growth potential. The table below summarises the major growth prospects for the traffic in the future on the project road.

Table 6-7: List of Developments in the PIA-Growth Driver

SL. NO	DEVELOPMENTS	DESCRIPTION	IMPACT TYPE
1	Tirumala - Tirupati	Tirumala typically receives more than **60,000** to **80,000** pilgrims per day. In September 2023, the temple saw a record number of over **87,000** pilgrims. The temple is one of the most visited religious sites in the world, with an annual footfall of around **30 to 40 million** visitors.	Growth Driver
2	Amara Raja Industries	Amara Raja Industries, particularly through its large-scale operations and facilities near Tirupati, plays a role in contributing to the traffic at the Mahasamudram Toll Plaza. The company's primary manufacturing plant in the region, focused on batteries and power solutions, relies on an extensive transportation network to bring in raw materials and distribute finished products.	Growth Driver
3	Vizag- Chennai Industrial Corridor (VCIC)	• Srikalahasti- Yerpedu node is situated at about 32km from project road • East Coast Industrial Corridor (ECIC) with Vizag- Chennai Industrial Corridor (VCIC) as Phase 1. a) Kopparthy Node in Andhra Pradesh	Future Growth Driver

SL. NO	DEVELOPMENTS	DESCRIPTION	IMPACT TYPE
		b) Visakhapatnam (Nakkapalli Cluster) in Andhra Pradesh c) **Chittoor Node in Andhra Pradesh**	
5	Chennai Bengaluru Industrial Corridor (CBIC)	Chennai Bengaluru Industrial Corridor (CBIC) is planned to achieve accelerated development and regional industry agglomeration in the states of Tamil Nadu, Karnataka and Andhra Pradesh. Krishnapatnam Industrial Area in Andhra Pradesh	Future Growth Driver

6.5 Transport Demand Elasticity

An Econometric method is proposed for forecasting future traffic trend based on elasticity which considers transport demand and most likely pattern of economic growth. The Elasticity Method relates traffic growth to changes in the related economic parameters. To calculate elasticity for various modes mode-wise impact of project influence area on project stretch is calculated which further useful in getting weighted GSDP values for project area. Based on individual state GDP and their mode-wise weight, weighted statistics for State GDP, registered number of vehicles, per capita income and other parameters were calculated for all the previous years. Elasticities were estimated based on regression analysis between registered vehicles & Historic AADT and all economic parameters. From the statistical significance and observations from major highways the elasticities are moderated for the base year. Base year elasticity serves as a base for moderating elasticities for the horizon years.

Plaza wise Elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend with the GSDP, PCI, Population and tonnage are shown in below table.

Table 6-8: Elasticity values – Complete statistical analysis

VEHICLE TYPE	DEPENDENT VARIABLE	INDEPENDENT VARIABLE	ELASTICITY	
			TP1 – Gadanki	TP 2- Mahasamudram
Car	Registered Vehicles	PCI	1.48	1.33
Car	Registered Vehicles	GSDP	1.28	1.19
Car	Registered Vehicles	GSDP Tertiary sector	1.37	1.16
Bus	Registered Vehicles	PCI	0.93	1.03
Bus	Registered Vehicles	GSDP	0.84	0.94
Bus	Registered Vehicles	Population	9.85	10.70
Trucks	Registered Vehicles	GSDP	0.81	0.69
Trucks	Registered Vehicles	Secondary Sector GSDP	0.79	0.75
Car	AADT	PCI	1.45	1.17
Car	AADT	GSDP	1.27	1.05

VEHICLE TYPE	DEPENDENT VARIABLE	INDEPENDENT VARIABLE	ELASTICITY	
			TP1 – Gadanki	TP 2- Mahasamudram
Car	AADT	GSDP Tertiary sector	1.47	1.13
Bus	AADT	PCI	0.20	-0.16
Bus	AADT	GSDP	0.17	-0.15
Bus	AADT	Population	1.29	-2.84
Trucks	AADT	GSDP	0.65	0.54
Trucks	AADT	Secondary Sector GSDP	0.59	0.53
Trucks	Tonnage	GSDP	1.06	1.04

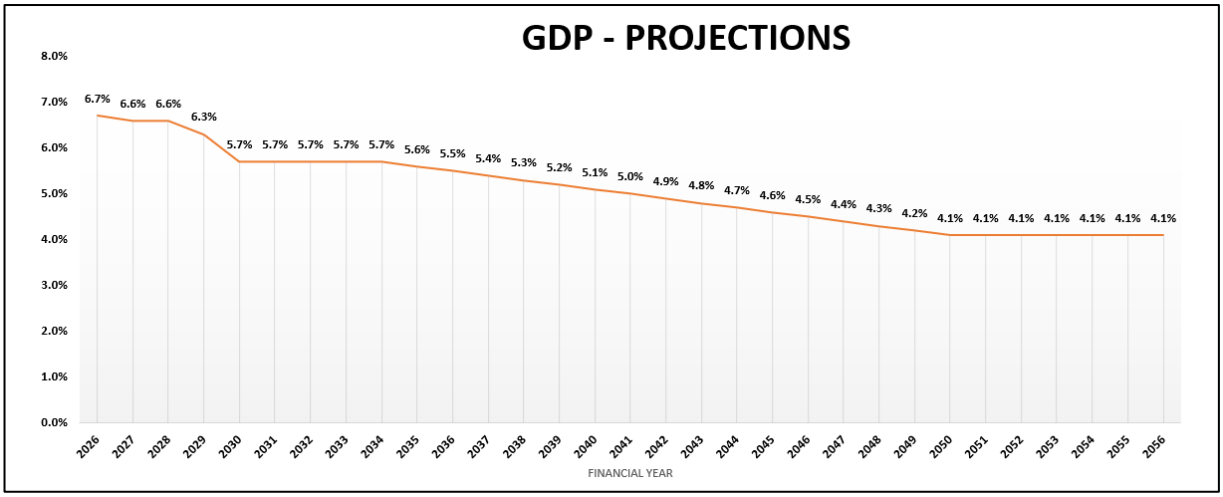
Elasticity values obtained from Reg vehicles are adopted for car & bus and trucks, average elasticity value obtained from the similar projects which is again moderated is considered for the traffic projections. Moderated elasticities are shown in below table.

Table 6-9: Moderated Elasticity Values for All TPs

VEHICLE TYPE	DEPENDENT VARIABLE	INDEPENDENT VARIABLE	TP1 - Gadanki	TP 2- Mahasamudram
Car	Registered Vehicles	PCI	1.05	1.05
Bus		GSDP	0.60	0.60
Trucks (Tonnage)		GSDP	0.85	0.80

Generally, the spread of economic development induces changes in the spatial distribution of activities and corresponding changes in transport demand elasticity. As regions become more self-sufficient, the need for long-distance transport diminishes. Accordingly, it was assumed that transport demand elasticity, for both freight and passenger traffic, would tend to decline over time, despite growth in per capita income.

Table 6-10: Moderated Future Elasticity Values for Car, Bus, and Trucks for All TPs



REGRESSION ANALYSIS - FUTURE ELASTICITIES			
VEHICLE TYPE	FY	Gadanki (TP 1)	Mahasamudram (TP 2)
Car	**FY 26 – FY 30**	1.05	1.05
	FY 31 – FY 35	1.00	1.00
	FY 36 – FY 40	1.00	1.00
	FY 41 – FY 45	1.00	1.00
	FY 46 – FY 50	1.00	1.00
	FY 51 – FY 55	1.00	1.00
Bus	**FY 26 – FY 30**	0.57	0.57
	FY 31 – FY 35	0.54	0.54
	FY 36 – FY 40	0.51	0.51
	FY 41 – FY 45	0.49	0.49
	FY 46 – FY 50	0.46	0.46
	FY 51 – FY 55	0.44	0.44
Trucks [GDP]	**FY 26 – FY 30**	0.85	0.80

REGRESSION ANALYSIS - FUTURE ELASTICITIES			
VEHICLE TYPE	FY	Gadanki (TP 1)	Mahasamudram (TP 2)
	FY 31 – FY 35	0.85	0.80
	FY 36 – FY 40	0.81	0.76
	FY 41 – FY 45	0.77	0.72
	FY 46 – FY 50	0.73	0.69
	FY 51 – FY 55	0.69	0.65

6.6 Future Growth of PIA

The economic impact of the 2020 coronavirus pandemic in India has been largely disruptive. The World Bank and other rating agencies had initially downgraded India's growth for fiscal year 2021 with the lowest figures India has seen in three decades since India's economic liberalization in the 1990s.

The consultant has adopted the consensus GDP provided by client for Future years. The Consultant has established a relationship between the GDP growth of India and the growth in GSDP of PIA. The same past relationship has moderated and applied to PIA states for the future GSDP Projections. The projected values of GDP of India and GSDP of PIA zones considered for the analysis is provided in the table below.

Source: Consensus GDP

Figure 6-5: GDP Projections of India – Scenario Wise

6.7 Projected Traffic Growth Rates – Normal

Based on the projected elasticity values for TP 01 and TP 02 the growth of PIA, the future average annual compound traffic growth rates by vehicle type have been estimated.

The traffic growth for the of most likely scenario is estimated and are presented in the following tables.

6.7.1 Traffic Growth Rates: TP 01 – Gadanki

The section illustrates the Normal traffic Growth rates for Gadanki Toll Plaza for Most Likely scenario.

Table 6-11: Normal Traffic Growth Rates for Toll Plaza 01 – Gadanki – Most Likely

YEAR	Car	Minibus	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV	Vehicles	PCU

6.8 Projected Traffic Growth Rates – Effective

There are some developments in road and land use pattern surrounding project stretch which were detailed in the “diversion & Development Traffic Impact Assessment” chapter. Effective traffic growth rates include the normal traffic projections and the impacts of diversions and developments in the PIA which are detailed in the chapter “Diversion and Development Traffic Impact Assessment”. Considering the significance of the effective growth rates, the future traffic projections and associated toll revenue estimations are provided in the next chapter “Traffic and Toll Revenue Forecast.”

6.8.1 Traffic Growth Rates: TP 01 – Gadanki

The section illustrates the Effective traffic Growth rates for Gadanki Toll Plaza for Most Likely scenario.

CHAPTER 7

Traffic and Toll Revenue Forecast

7. Traffic & Toll Revenue Forecast

7.1 General

This chapter presents estimates of total traffic for all the two toll plazas of project corridor with Most likely scenario as explained in previous chapter. Normal traffic projections have arrived by applying the traffic growth rates on the base year traffic. Effective traffic projection has arrived by considering the future adjustments in the form of diversions and developments detailed in the Chapter “Diversion and Development Traffic Impact assessment” in overall traffic growth estimate.

7.2 Effective Traffic Projections at Gadanki (TP 1)

Effective traffic projections include the impact of road network improvement and land developments (if any). Traffic beyond year FY 2025 is summaries based on effective traffic growth rates and base year AADT. Mode wise traffic projection for Most likely Scenario for all the horizon years for Gadanki (TP 1) are estimated and effective future traffic is as shown in below table.

Table 7-1: Effective Future Traffic (AADT): Gadanki (TP 1) – Most Likely

YEAR	Car	Minibus	Bus-2A	Bus-3A	LCV	2 Axle Truck	3 Axle Truck	MAV	TOTAL VEH	TOTAL PCU

7.3 Effective Traffic Projections at Mahasamudram (TP 2)

Effective traffic projections include the impact of road network improvement and land developments (if any). Traffic beyond year FY 2025 is summaries based on effective traffic growth rates and base year AADT. Scenario wise and Mode wise traffic projection for all the horizon years for Mahasamudram (TP 2) are estimated and effective future traffic is shown in below table.

Table 7-2: Effective Future Traffic (AADT): Mahasamudram (TP 2) – Most Likely

YEAR	Car	Minibus	Bus-2A	Bus-3A	LCV	2 Axle Truck	3 Axle Truck	MAV	TOTAL VEH	TOTAL PCU

FY2055	66,588	59,881	1,03,905	88,100
FY2056	68,958	62,044	1,07,246	90,989
CAGR (25-46)	**5.16%**	**4.61%**	**4.80%**	**3.96%**
CAGR (25-56)	**4.66%**	**4.30%**	**4.32%**	**3.76%**

Similarly, for the entire project the Normal Traffic PCU Growth (CAGR) observed between FY-25 and FY-46 is 4.80%. Effective traffic growth for the same period is 3.96%. The graph below illustrates the growth of effective traffic (PCU terms) for the project for Most Likely scenario.

Similarly, Normal Traffic (PCU) CAGR (FY 25-56) from AP/KA BORDER-CHITTOOR-MALLAVARAM is estimated to be 4.32% and the effective Traffic (PCU) observed CAGR of 3.76% over the concession period.

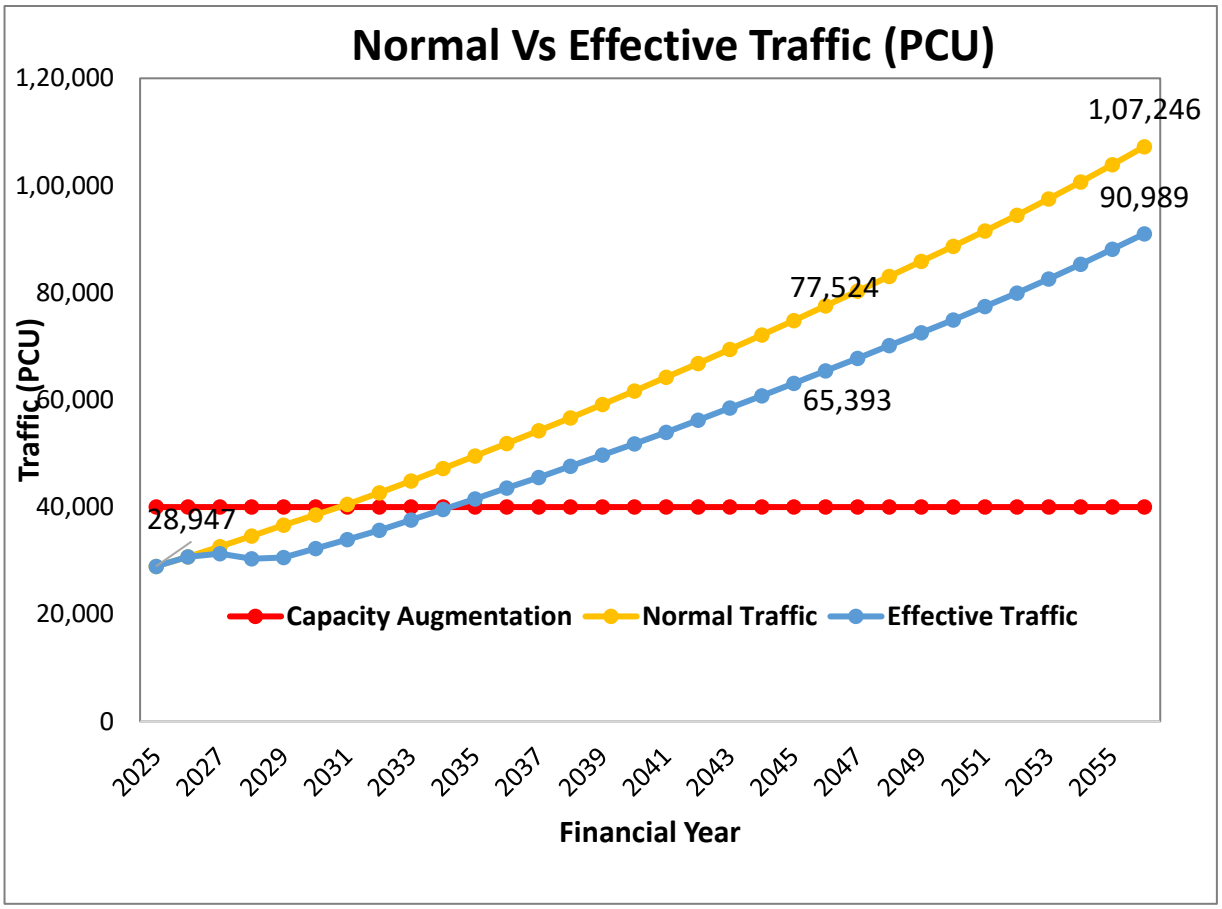

Figure 7-1: Future Traffic Projections in PCU

7.5 Toll Revenue Forecasting

Toll revenue projections or forecasting is calculated based on the projected traffic and projected toll rates. Toll rates by vehicle and toll category depends on the tolling length, wholesale price index (WPI) and the base rates which are applicable by vehicle category are according to the National Highway fee notification for the project.

7.5.1 Toll Plaza Control Length

Toll plaza control length for two plazas has been mentioned in the below table.

Table 7-6: Base rate fee by vehicle category for payable length for FY 25

TOLL PLAZA	Highway Length (Kms)	Net Bypass Length (Kms)	Structure Length (Kms)	Total Length (Kms)
Gadanki (TP1)	35.408	23.157	1.343	59.908
Mahasamudram (TP2)	47.227	13.09	0.07	60.387

7.5.2 Toll revenue estimation

Toll Fee Revision Methodology

Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the toll rules 2008.

a) Base Rate

As per the National Highway Fee Rules, 2008 and subsequent amendments till to date, the rate of fee for use of a section of national highway of four or more lanes for the base year 2007-08 are given as mentioned in below table. Fee applicable shall be the rate multiplied by the length of the highway section for which toll is to be collected.

Table 7-7: Base rate fee by vehicle category for payable length

TYPE OF VEHICLE	BASE RATE FEE PER KM (IN RUPEES)
Car	0.65
LCV	1.05
Bus or Truck	2.20
Truck 3A	2.40
HCM or EME or MAV (3-6 Axles)	3.45
Over Sized Vehicle (OSV)	4.20

b) Annual Revision of Rate of Fee

The amount of fee and the revision thereof effective from 1st April. The user fee shall be increased annually, without compounding by 3%. revision because of variation in WPI shall be restricted to 40%.

$$\text{Applicable rate of fee} = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPIA} - \text{WPI B}}{\text{WPI B}}\right\} * 0.40$$

Were
WPI-A means the Wholesale Price Index on December 31, 2023.
WPI-B means the Wholesale Price Index of week ending on 6th January 2007.i.e 208.7.
The actual fees to be charged shall be rounded off to the nearest Five rupees.

WPI Forecasts

WPI Inflation values for the future years have been provided by client and are presented in the below Figure.

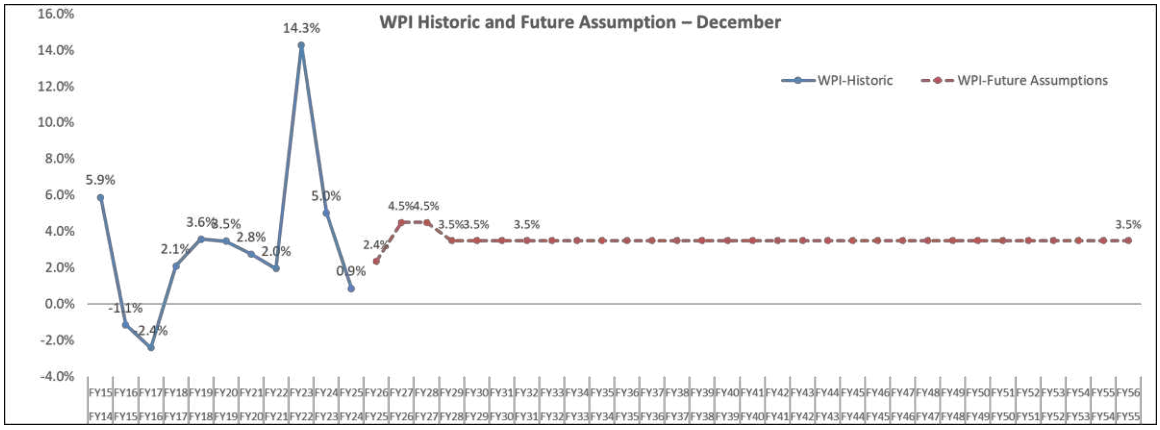

Figure 7-2: Past & Future Trend of Wholesale Price Index

The decrease in inflation in the recent years can be attributed to the lower commodity prices like oil, metals etc. along with the drop in the prices of the primary articles like food products etc.

Toll Fee Projections

a) Base Year (FY24)

As per the NH Fee rules 2007-08:

Toll fee for the fiscal year FY-2024 has been arrived by considering the toll plaza control length which were mentioned in the toll plaza control length table. From 01st April 2024 the toll fee rates for the Toll Plaza locations are presented in the Tables below.

Table 7-8: Toll Fees for the year FY-2025 from Apr'24 to March'25 for TP1 – Gadanki

VEHICLE TYPE	SINGLE	RETURN	MONTHLY PASS	DISTRICT REGISTERED	LOCAL PASS
Car, Jeep, Van	125	185	4,085	60	340
Light Commercial Vehicle or Minibus	200	295	6,600	100	-
Bus - 2 Axle	415	620	13,830	205	-
Truck - 2 Axle	415	620	13,830	205	-
3Axle	455	680	15,085	225	-
MAV (4-6) Axle	650	975	21,685	325	-
OSV	790	1,190	26,400	395	-

Table 7-9: Toll Fees for the year FY-2024 from Apr'24 to March'25 for TP2 – Mahasamudram

VEHICLE TYPE	SINGLE	RETURN	MONTHLY PASS	DISTRICT REGISTERED	LOCAL PASS
Car, Jeep, Van	100	150	3,305	50	340
Light Commercial Vehicle or Minibus	160	240	5,335	80	-
Bus - 2 Axle	335	505	11,180	170	-
Truck - 2 Axle	335	505	11,180	170	-

VEHICLE TYPE	SINGLE	RETURN	MONTHLY PASS	DISTRICT REGISTERED	LOCAL PASS
3Axle	365	550	12,195	185	-
MAV (4-6) Axle	525	790	17,530	265	-
OSV	640	960	21,340	320	-

7.5.3 Vehicle wise Trip Categories

Toll revenue is estimated by considering different concessions provided to the road users by vehicle category and eligible number of trips based on the toll category. The number of eligible trips in crossing toll plaza varies by the toll fee category i.e., Single (Full fare), Local passenger and Monthly Pass of both passenger and commercial vehicles are presented in the below tables. The estimation of the share of individual toll vehicle by type of toll ticket category is based on the recent toll traffic data of the period from Apr'2024 to Nov'2024.

Table 7-10: Vehicle wise Trip Categories at Gadanki (TP 1)

VEHICLE TYPE / TOLL CATEGORY	Single Journey	Return Journey	Monthly Pass	Local Comm	Local Pass	Exemptions	TOTAL (Excl. Penalties)
Car	43.35%	44.49%	0.00%	0.43%	2.06%	9.66%	100.00%
Minibus	57.76%	36.64%	0.00%	3.32%	0.00%	2.28%	100.00%
Bus-2A	13.05%	63.48%	21.73%	0.06%	0.00%	1.69%	100.00%
Bus-3A	64.48%	34.11%	0.28%	0.02%	0.00%	1.11%	100.00%
LCV	57.76%	36.64%	0.00%	3.32%	0.00%	2.28%	100.00%

3 Axle Truck	59.87%	36.16%	0.00%	2.79%	0.00%	1.17%	100.00%
MAV	82.69%	16.27%	0.00%	0.17%	0.00%	0.88%	100.00%

7.5.4 Capacity Augmentation

As per the IRC recommendations, the designed Target Traffic is to be determined for LOS B as per IRC Code – IRC: SP:84-2019 which is 40,000 PCU's.

The Capacity Augmentation for any homogenous/tollable section(s) of the Project Highway in case the average daily traffic of PCUs for that homogenous/tollable section(s), in any Accounting Year shall exceed the designed capacity Target Traffic for Project Highway and shall continue to exceed the designed capacity for 1 (One) consecutive Accounting Years following thereafter ("Capacity Augmentation").

Currently, the project's road traffic comprises two homogeneous sections for each toll plaza. A third homogeneous section will be introduced upon the completion of the pending stretch between Chittoor and the Andhra Pradesh/Tamil Nadu border. The Average PCU in FY-2037 is 41,037 PCU at Mahasamudram Toll plaza which is crossing the design capacity of the project highway. Hence, capacity augmentation is required within the concession period for section from AP/KA Border to Chittoor & the details reg the same has been mentioned below.

Table 7-12: Capacity Augmentation Assumptions

Homogeneous Section	Toll Plaza's	Capacity Breaching 40000 PCU (Years) – 1 Years	Planning (2 Year)	Construction Period (2 Years)
AP/KA Border to Chittoor	Mahasamudram	FY 37	FY 38, 39	FY 40, 41
Chittoor to Mallavaram	Gadanki	Not exceeding capacity before the end of the concession period		

During the conversion from 4-lane to 6-lane road infrastructure, road users experience discomfort while traveling, prompting some to shift to alternative routes. This phenomenon was observed in the consultant's previous traffic studies. Based on these observations, the consultant has assumed a higher diversion during the construction period, with reduced speeds & Toll rates on the project corridor.

7.5.5 Toll revenue projections

Toll revenue is projected based on the future traffic projections, toll fees by vehicle and toll category and trip rates. Traffic numbers are projected by fiscal year i.e., FY25, FY26 etc. and toll rates are revised on 01st April every year. Toll revenues are projected by fiscal year till the end of concession period and considering maximum possible extension referring clauses related to Additional toll way, Capacity augmentation and modification of concession period.

(c) Toll would be collected for all the days in a year.

(d) Revenue projected from FY-2025 to FY-2056.

The toll revenue projections are done for the effective case which is basically the consideration of all network improvements and land developments as described in the chapter "Traffic Growth Estimation". The below table summarizes the projected annual toll revenue at both the toll plazas and Overall project.

Table 7-13: Estimated Annual Toll revenue (Effective case) in Rs. Crores – Most Likely

FY YEAR	Gadanki TP	Mahasamudram TP	Total Revenue
FY2025	122	98	220
FY2026	133	135	268
FY2027	150	149	299
FY2028	158	143	300
FY2029	164	148	312
FY2030	181	162	342
FY2031	198	178	375
FY2032	217	194	411
FY2033	236	213	450
FY2034	259	232	492
FY2035	283	254	537
FY2036	310	279	589
FY2037	336	301	637
FY2038	365	327	692
FY2039	398	356	754
FY2040	433	387	820
FY2041	466	418	884
FY2042	505	453	958
FY2043	547	489	1,036
FY2044	595	532	1,127
FY2045	642	571	1,213
FY2046	691	615	1,306
FY2047	743	664	1,407
FY2048	804	718	1,522
FY2049	861	771	1,632
FY2050	927	826	1,752
FY2051	997	886	1,883
FY2052	1,075	958	2,033
FY2053	1,151	1,026	2,177
FY2054	1,237	1,100	2,337
FY2055	1,329	1,185	2,514
FY2056	1,434	1,277	2,711
CAGR (25-46)	**8.62%**	**9.15%**	**8.86%**
CAGR (25-56)	**8.28%**	**8.64%**	**8.45%**

The Revenue Growth (CAGR) at Gadanki Toll Plaza is observed to be 8.28% % for FY25-FY56. Similaraly at Mahasamudram Toll Plaza it is observed to be 8.64% for FY25-FY56.

Also, It is estimated that the toll revenues are expected to grow (FY 25-56) at 8.45% CAGR on overall AP/KA-Chittoor-Mallavaram project Corridor.

Consultant doesn't recommend Cash penalty going forward after few years due to FasTAG penetration is likely to be close to 100%. Also, Concessionaire needs to deposit Cash penalty revenue with Authority.

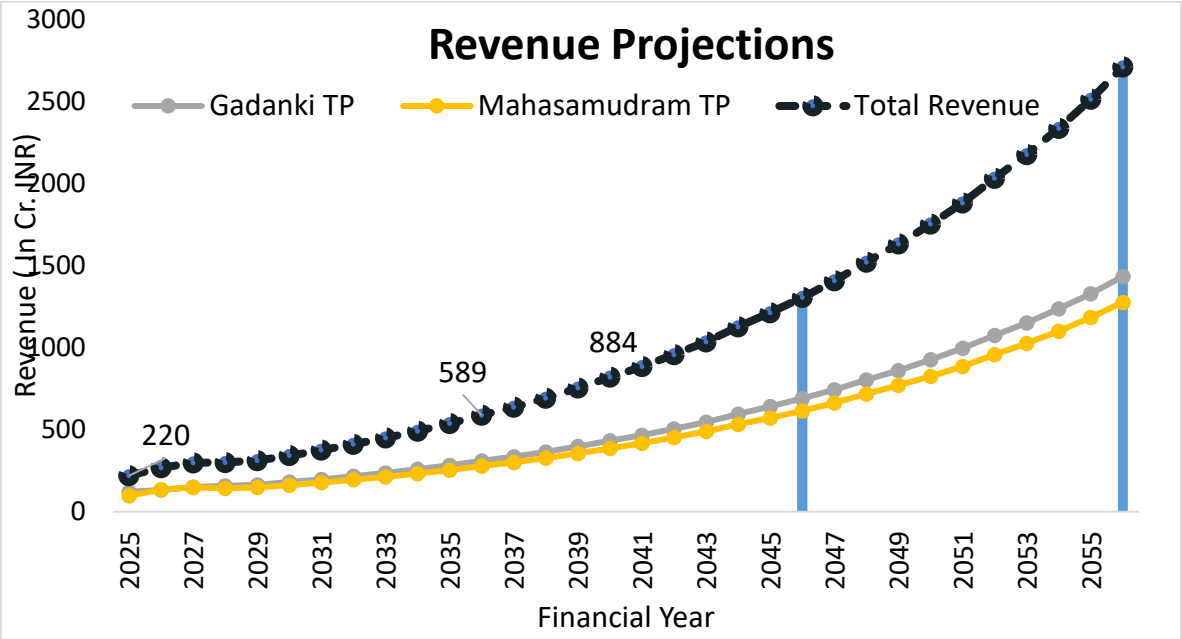

Figure 7-3 : Toll Revenue Projections

7.5.6 Overloading Analysis

7- day axle load survey data (as part of technical due diligence) has been provided by the technical consultant of the client which has been analysed to understand the extent of overloaded vehicles.

Table 7-14: Overloading Analysis for Project Road Toll Plazas

Mode	Sample-All Commodities (a)		Overloaded(>20%)-(b)		%ge Overloaded(>20%)-(b/a)		Final %ge Overloaded (>20%) after applying Factors	
	Gadanki	Mahasamudram	Gadanki	Mahasamudram	Gadanki	Mahasamudram	Gadanki	Mahasamudram
LCV	614	748	0	0	0.0%	0.0%	0.0%	0.0%
2AT	1379	1419	0	0	0.0%	0.0%	0.0%	0.0%
3AT	970	932	74	28	7.6%	3.0%	0.2%	0.1%
MAV	2998	2906	391	248	13.0%	8.5%	0.1%	0.1%

As observed from the seven-day axle load analysis, around 7.6% of 3A trucks and 13% of the MAVs are above 20% overloading limit at Gadanki TP. Similarly, around 3.0% of 3A trucks and 8.5% of the MAVs are above 20% overloading limit at Mahasamudram TP. However, after excluding the commodities such as fruits and vegetables, petroleum products, chemicals and gas, heavy machinery and industrial equipment since these are having stickiness to Project road as well as OD pairs with lead greater than 500 km & applying 25% factor to the final Overloading nos , the revised overloading percentage in the category of above 20% overloading comes out to be around 0.2% in 3A and 0.1% in MAV at Gadanki TP & 0.1% in 3A and 0.1% in MAV at Mahasamudram TP.

Based on the surveys done, potential for collecting overloading revenue found but presence of alternate routes necessitates no collection of overloading revenue.

Conclusion

Consultant recommended Net Traffic growth for the period FY-2025 to FY-2056 at 3.76% for the overall project after considering all the possible risks on the project and future growth opportunities which were detailed in previous chapters and in the Executive summary. The Toll revenue growth is projected at a CAGR% of 8.45% for the period between FY25 to FY56.

****

8. Annexures

Monthly traffic and Revenue for both the Toll plazas are mentioned below. Monthly ADT traffic includes Cash & Exempt traffic as well for both the toll plazas. Monthly ADR also includes Cash revenue for both the toll plazas.

WPI	Wholesale Price Index
YOY	Year on Year
ZIF	Zonal Influence Factor

CHAPTER 1

Executive Summary

1. Executive Summary

IBI Group India Private Ltd (Consultant) was appointed by National Highways Infra Investment Managers Pvt Ltd to carry out the traffic due diligence study for the Bareilly Sitapur stretch of NH30 in the state of Uttar Pradesh. This study "Toll Traffic and Revenue Assessment for Bareilly Sitapur stretch of NH30 in the state of Uttar Pradesh" summarizes IBI's evaluation of the future traffic and toll revenues considering Risk factors and Growth drivers expected during the project concession period.

1.1 Project Overview

The project road is part of the major National Highway 30 where the section starts at design kilometer 262.000 and ends at kilometer 419.590 (existing km 262.000 to km 413.200 of National Highway number 24 in the State of Uttar Pradesh). Two toll plazas are existing on this section where Faridpur toll plaza is located at Km 266.900 and Maigalganj toll plaza at Km 372.168.

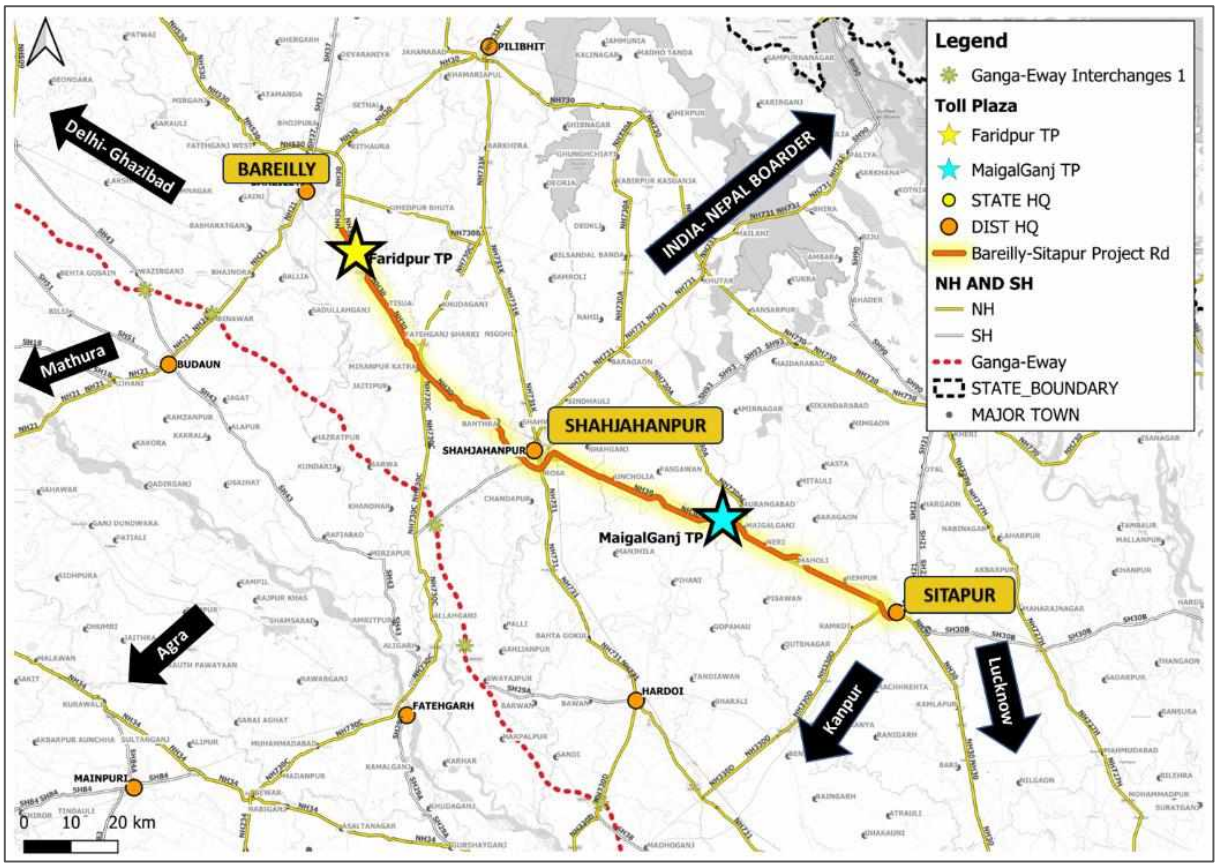

Figure 1-1: Corridor with existing toll plaza location

1.2 Salient growth features and traffic generators

Table 1-1: Growth Features and Traffic Generators

Sl. No	Developments	Description	Impact Type
1	Tourism – Agra, Vrindhavan,	The number of tourists visiting Uttar Pradesh has surged, growing from 16 crore in 2016 to over 48 crores	Current Growth Driver

Sl. No	Developments	Description	Impact Type
	Ayodhya, Varanasi	currently, with more than 32 crore tourists recorded between January and June 2024 alone[1]. The state experiences an annual footfall of 540 million across its four major religious cities—Varanasi, Ayodhya, Prayagraj, and Mathura-Vrindavan. The upcoming inauguration of the Ram Mandir in Ayodhya is expected to draw an additional 50 to 100 million tourists each year. Moreover, Prayagraj experiences a significant surge in visitors during the Kumbh Mela, which occurs once every six years. In 2017, the city saw a staggering 250 million visitors in less than two months. The Maha-Kumbh in Prayagraj, set to begin on January 13, 2025, is expected to attract an even greater crowd, with projections of 500 million visitors.	
2	Industries	The Bareilly-Sitapur stretch serves as a key industrial corridor, with sugar factories being the dominant industry, accounting for 62% of the region's industrial activity. Other notable sectors include food products (10%), flour mills (8%), chemicals, fertilizers, plywood, and agro products, among others. Major companies like Bajaj Hindustan Ltd., WIMCO, IFFCO, Reliance, Bharat Petroleum, Dalmia Bharat Limited and Ramaa Shyama play a significant role in driving economic growth in the area. This corridor stands out as a critical hub for agro-processing, logistics, and diverse industries, supporting regional development.	Current Growth Driver
3	State upcoming developments	The UP Global Investor Summit 2023 marked a significant milestone with 18,643 MoU's signed, amounting to a total investment of Rs 33.50 lakh crore. Key sectors driving these investments include renewable energy (12.41%), higher education (9%), industrial parks (11.35%), manufacturing, logistics, and warehousing. The real estate industry and IT-enabled services also contributed significantly to this growth.	Future Growth Driver
4	Mega Food Park in Baheri	A major project, the Mega Food Park in Baheri, is under development, featuring a Dairy Craft Cheesemaking plant across 12 acres with an investment of Rs 250 crore, expected to create 600 direct jobs and benefit local farmers.	Future Growth Driver
5	Industrial township	• A new industrial township near **Jhumka** intersection is underway, further bolstering	Future Growth Driver

[1] https://timesofindia.indiatimes.com/city/kanpur/tourism-boom-in-uttar-pradesh-visitor-numbers-triple-in-eight-years/articleshow/113748352.cms

Sl. No	Developments	Description	Impact Type
		economic and employment opportunities in the region. • The **Moradabad Special Economic Zone** (SEZ) spans 464.28 acres, offering robust infrastructure and sector-specific facilities for handicraft trade, textile, IT/ITES, and hardware manufacturing, making it a multi-product hub. Out of 137 allotted plots, 45 industrial units are already operational, with 377 plots still available for new investments. • The **Greater Bareilly Township**, which focuses on planned urban growth and housing solutions. Additionally, 35 villages have been integrated into the Bareilly Development Authority (BDA) jurisdiction, facilitating easier land acquisition and MSME township development. These initiatives mark significant progress in infrastructure, industrial growth, and urban expansion in Bareilly, Moradabad, and surrounding regions, paving the way for economic advancement and employment opportunities. • The development of "**Medi city**", a designated area focusing on health businesses and activities. This project aims to create a hub for healthcare-related infrastructure and services, with the proposed Medi City land included in the Master Plan 2021.	

1.3 Traffic volume and composite of vehicles

1.3.1 Historical traffic data

ETC daily-level data, segmented by ticket categories, was available for the following periods:

- Faridpur: Apr 2023– Nov-2024
- Maigalganj: Oct-2023 – Nov-2024

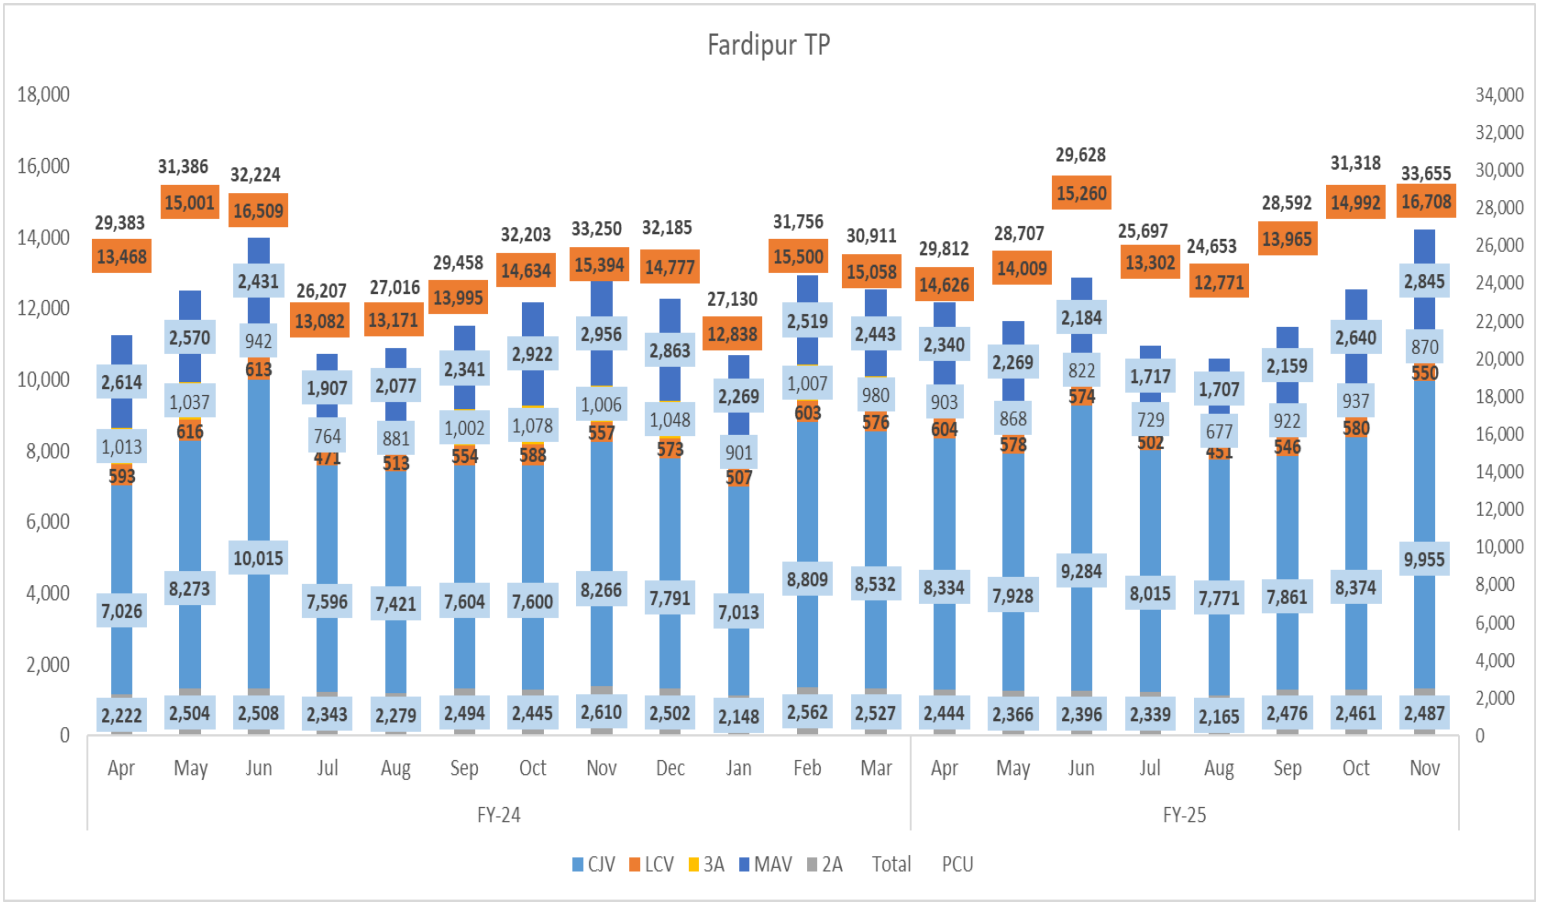

Figure 1-2: Historic Traffic Trend Mode Wise (Faridpur TP)

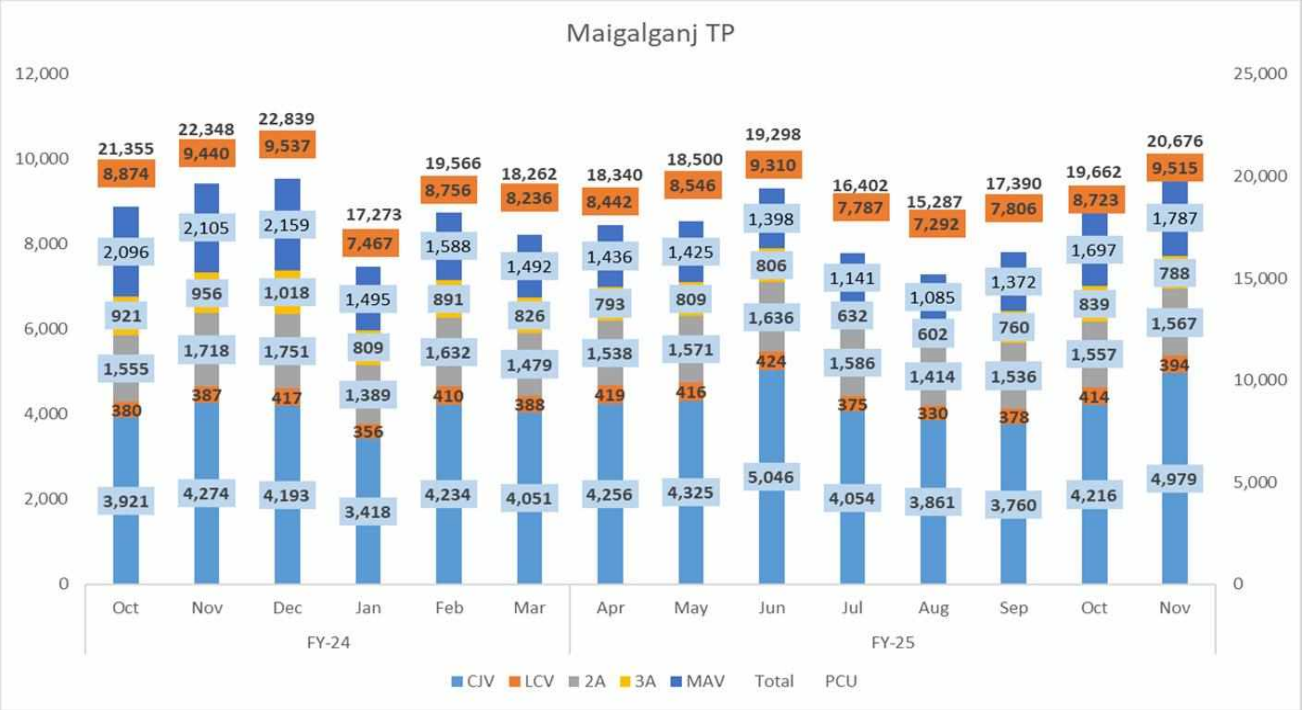
It was observed from historic data that FY24 (Apr-Nov) vs FY25 (Apr-Nov) shows an 4.1% growth in CJV, but a 9.4% decline in MAV. Overall traffic experienced a 3.8% drop in terms of PCUs.

Lower traffic was observed in July and August due to the monsoon season and restrictions during the Kanwar Yatra



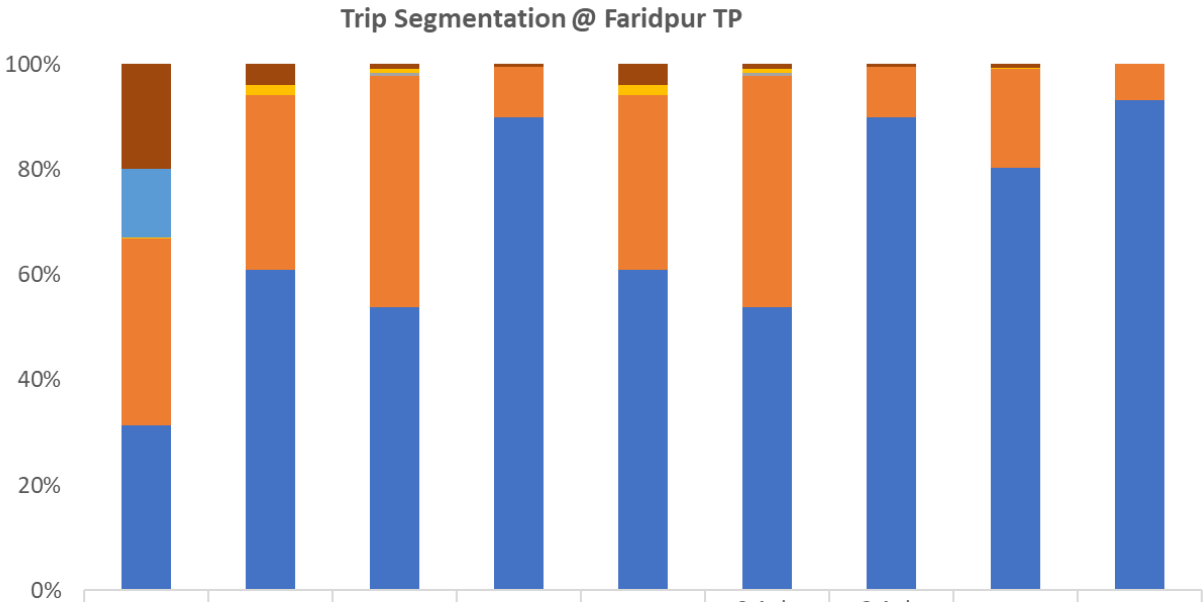


Figure 1-3: Historic Traffic Trend Mode Wise (Maigalganj TP)

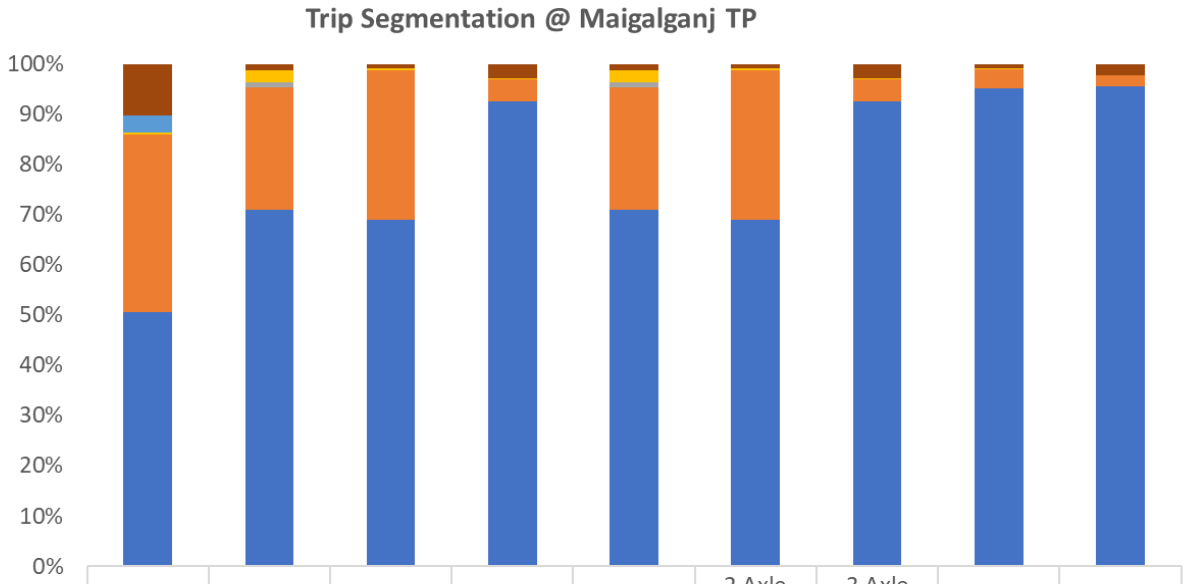
Lower traffic was observed in July and August due to the monsoon season and restrictions during the Kanwar Yatra. The overall traffic decline in traffic from Jan to Sep and slight growth observed in Nov and Oct months.

1.3.2 Toll segmentation



Based on detailed review of historic trends of trip segmentation, Consultant has recommended FY 25(Apr-Nov) Trip Segmentation for the base year and future traffic and revenue projections.

Trip categories and trip rates arrived based on the historic data of project road.

	Car	Mini Bus	Bus-2A	Bus-3A	LCV	2 Axle Truck	3 Axle Truck	MAV	Over Size

PCU	**17,492**	**85**	**606**	**0**		**18,446**

AADT Based on FY 25 (Apr-Nov) Toll Operational data.

Arrived AADT by adopting this formula (ETC X SCF + Cash + Exempt + Missing Trips)

1.3.4 Traffic Forecast

Traffic forecasting for project road traffic was done considering past trend in growth and analysing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

Table 1-4: Alternative Roads /Development Impacts on Project Road

S.NO	Alternative Road/ Network/ Land /Improvements	Impact Type	Year Of Impact
1	6 lane greenfield access-controlled highway with a route alignment connecting NH-334 Ganga Expressway	Negative impact on Both Faridpur & Maigalganj TP	FY27: 50% FY28:100%
2	Widening of Shahjahanpur-Hardoi-Lucknow to 4L	Negative Impact on Maigalganj TP	FY27: 50% FY28:100%
3	Ganga E-Way Phase-II (From Haridwar)	Negative Impact on Maigalganj TP	FY36: 50% FY37: 100%

All these network impacts are considered in the Traffic Projections.

The methodology used for the study included following steps:

- The influencing factors obtained from OD surveys are utilized in deriving the key socio-economic parameters of the Project Influence Area (PIA) for the historic trend.
- Through regression analysis for various combinations of dependent and independent parameters is conducted to evaluate the significance of the relation.
- Potential growth of various vehicle categories was separately assessed based on its probable market share in expected multi-modal development.
- The elasticity values for the selected relation are taken & used for the traffic growth rates estimation. However, there are several steps performed before obtaining the traffic growth rates which are explained in the chapter 6.

1.3.5 Traffic and Revenue Forecast

Traffic forecasting for project road traffic was done considering past trend in growth and analyzing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

The methodology used for the study included following steps:

- The influencing factors obtained from OD surveys are utilized in deriving the key socio-economic parameters of the Project Influence Area (PIA) for the historic trend.
- Through regression analysis for various combinations of dependent and independent parameters is conducted to evaluate the significance of the relation.
- Potential growth of various vehicle categories was separately assessed based on its probable market share in expected multi-modal development.
- The elasticity values for the selected relation are taken & used for the traffic growth rates estimation. However, there are several steps performed before obtaining the traffic growth rates which are explained in the chapter 6.

1.3.6 Traffic and Revenue Assumptions

Traffic Assumptions: -

- Future traffic forecasting was done using elasticity approach which considers the elasticity of transport demand and probable pattern of future growth of the economy.
- Elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend and AADT-tonnage with the growth of PCI, GSDP and Moderated elasticity values chosen for the analysis based on previous trends in socioeconomic variables.
- For Car, Bus and truck traffic, the adopted elasticity values are as follows –
    - Faridpur TP – 1.35, 0.50, 0.80
    - Maigalganj TP – 1.30, 0.50, 0.80
- Based on the projected elasticity values for TP 1 and TP2 the growth of PIA, the future average annual compound traffic growth rates by vehicle type have been estimated by using the following relationship:
    - For freight vehicle, the tonnages on the corridors are projected. The existing market share of different category of goods vehicles are then adjusted for the future years based on the past tonnage trend observed.
    - Normal traffic projections have arrived by applying the traffic growth on the base year traffic.
- The future traffic projections are presented for Effective case traffic projections & the Effective case has arrived by considering the future adjustments in the form of diversions and developments detailed in the chapter 5.

Revenue Assumptions: -

- Toll revenue projections or forecasting will be calculated based on the projected traffic and projected toll rates.
- Toll rates by vehicle and toll category depends on the tolling length, wholesale price index (WPI) and the base rates which are applicable by vehicle category are according to the NH fee notification for the project.
- Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the National highway fee rules 2008.
- Fee applicable shall be the rate multiplied by the length of the highway section for which toll is to be collected.
- The amount of fee and the revision thereof effective from 1st April every year shall be calculated as follows:

$$\text{Applicable rate of fee } = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPIA} - \text{WPI B}}{\text{WPI B}}\right\} * 0.40$$

Were
WPI-A means the Wholesale Price Index on December 31, 2023.
WPI-B means the Wholesale Price Index of week ending on 6th January 2007.i.e 208.7.
The actual fees to be charged shall be rounded off to the nearest Five rupees.

1.3.7 Traffic and Toll revenue projections

1.3.9 Toll revenue projections

Toll revenue is projected based on the future traffic projections, toll fees by vehicle and toll category and trip rates. Traffic numbers are projected by fiscal year i.e., FY25, FY26 etc. and toll rates are revised on 01st April every year. Toll revenues are projected by fiscal year till the end of concession period and considering maximum possible extension referring clauses related to Additional toll way, Capacity augmentation and modification of concession period.

(a) Toll would be collected for all the days in a year.

(b) Revenue projected from FY-2025 to FY-2056.

The toll revenue projections are done for the effective case which is basically the consideration of all network improvements and land developments as described in the chapter "Traffic Growth Rate Estimation". Like the effective traffic projections, the below table summarizes the projected annual toll revenue for all the toll plazas for Most Likely scenario.

Table 1-11: Estimated Annual Toll revenue (Effective case) in Rs. Crores – Most Likely

FY YEAR	Faridpur TP	Maigalganj TP	Total Revenue
FY25	131	91	223
FY26	145	102	246
FY27	145	97	242

FY YEAR	Faridpur TP	Maigalganj TP	Total Revenue
FY28	141	90	231
FY29	153	99	252
FY30	167	107	274
FY31	183	117	299
FY32	200	128	328
FY33	218	139	357
FY34	237	152	389
FY35	259	165	424
FY36	278	180	458
FY37	300	194	495
FY38	323	209	532
FY39	349	226	575
FY40	383	247	629
FY41	411	265	675
FY42	442	285	726
FY43	477	306	783
FY44	513	330	843
FY45	550	353	903
FY46	589	378	967
FY47	631	405	1,035
FY48	678	434	1,112
FY49	721	463	1,183
FY50	770	494	1,264
FY51	823	527	1,350
FY52	880	563	1,443
FY53	936	601	1,537
FY54	1,001	640	1,642
FY55	1,068	683	1,752
FY56	1,144	730	1,874
CAGR (25-46)	**7.41%**	**6.99%**	**7.24%**
CAGR (25-56)	**7.23%**	**6.94%**	**7.11%**

The Revenue Growth (CAGR) at Faridpur Toll Plaza is observed to be 7.23% for FY25-FY56. Similarly, at Maigalganj Toll Plaza it is observed to be 6.94% for FY25-FY56.

CHAPTER 2

Introduction

2. Introduction

2.1 General

IBI Group India Private Ltd (Consultant) was appointed by National Highways Infra Investment Managers Pvt Ltd to carry out the traffic due diligence study for the Bareilly to Sitapur section of NH-30.

The project road is part of the major National Highway 30. The road stretch starts from Bareilly to Sitapur in Uttar Pradesh, spanning 157.7 km passing through key towns and cities along the way. The project road has two toll plazas (TPs), Faridpur Toll Plaza and Maigalganj Toll plaza. The project road starts from Bareilly, the highway travels through Shahjahanpur and Hardoi, serving as a vital link between these hubs. The stretch is providing connectivity between states like Madhya Pradesh, Delhi, Haryana, Uttarakhand and Bihar.

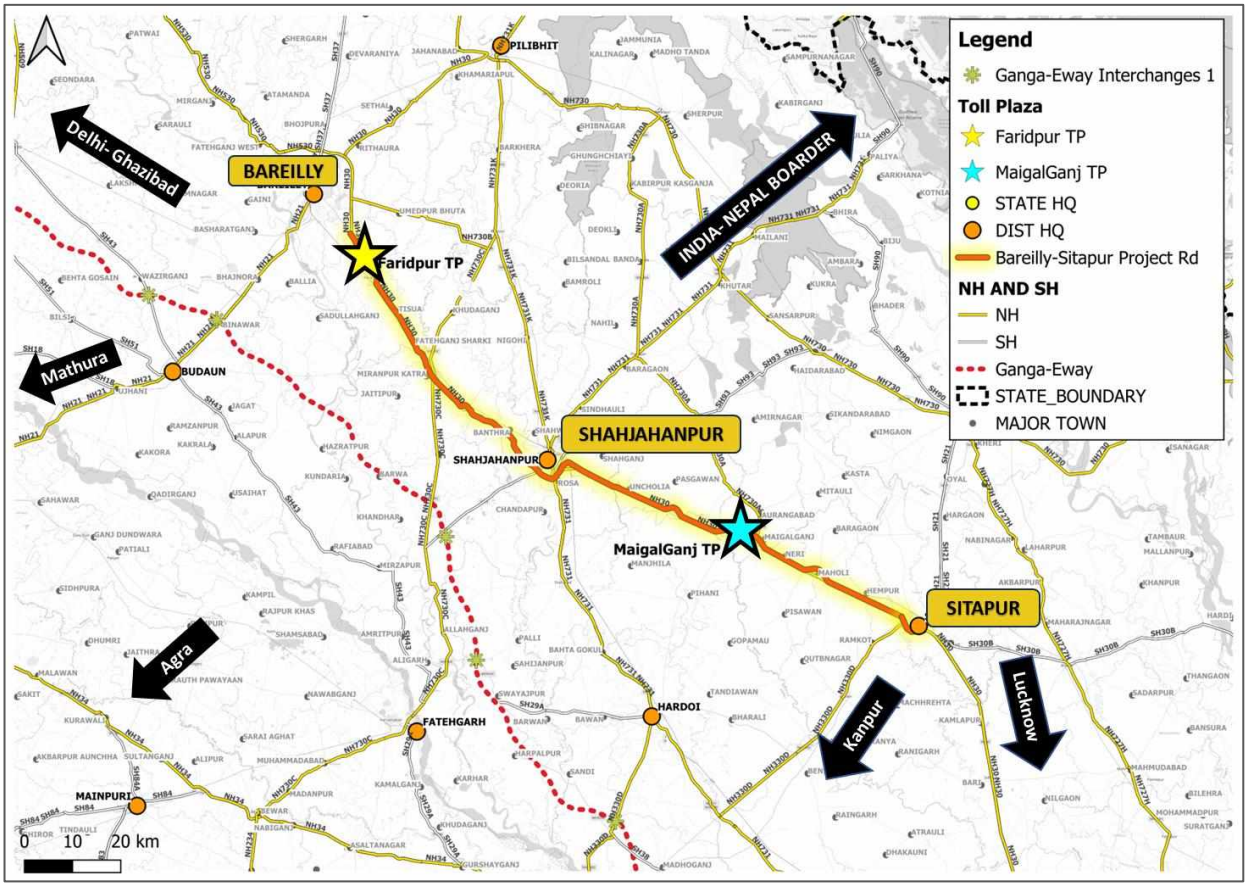

Figure 2-1 Project Corridor with existing toll plazas location

As part of this study, a systematic methodology has been followed to assess the characteristics of the existing traffic on the project road and traffic growth during the remaining period of the concession i.e., till (20 Years). How ever the same has been estimated till FY-2056 as long-term projections. The details pertaining to the data collection, primary as well as secondary, and results from its analysis are presented in the subsequent chapters of this report.

The Traffic report presents the existing traffic characteristics, methodology used to derive traffic growth rates, details on adopted traffic growth rates, forecasted traffic, diverted, and generated traffic if any for the next twenty (20) years. Based on these, future toll able traffic and toll revenues at the existing toll plaza locations are assessed and presented.

2.2 Objective and Scope of work

The main objective of the study is to carry out review of existing traffic & revenue data and forecasting the future traffic and revenues for the project road for the remaining concession period considering the potential risks and developments in view of the micro and macro characteristics related to demographics, economy, alternate routes, project road, regional network & peripheral development in the project influence area (PIA).

The scope of work is to assess the horizon year traffic & toll revenue at the toll plaza locations on the project road through:

- **Review of Data and Documents:**
    - Reviewing the Historical data on classified traffic volume & revenue data for the project highway's Toll Plazas.
    - Reviewing the Past traffic study reports.
    - Conducting gap analysis between actual and projected traffic & revenue for current/last year and ascertaining the reasons thereof.
    - Traffic volume/ revenue data collected from the concerned PIUs, and actual amount remitted by User Fee Collection Agencies to NHAI.

- **Traffic Surveys:**
    - 7 Days Traffic Volumes counts at both the toll plazas of project road using Videography method. The vehicle classification system as given in relevant IRC code may be followed.
    - All results shall be analyzed, and the annual average daily traffic (AADT) shall be worked out by applying seasonal correction / variation factors.
    - Triangulation of traffic forecasts shall be undertaken based on data from secondary sources and analysis of variations (if any), from the traffic as per TVC and as per data shared by NHIIMPL.
    - 1 Day Origin- Destination study at both the toll plazas of project road using roadside interview techniques.
    - The road-side interviews on random sample basis to cover all vehicles. The location of the O-D survey and commodity movement surveys shall normally be the same as for the classified traffic volume count.
    - Identification of Project Influence Area and traffic generators (industrial areas, towns, ports etc.) from analysis of travel pattern covering:
        a) Regional distribution of traffic – through/ bypassing traffic/ inter-state, intra-state/interdistrict, intra-district etc.
        b) Commodity composition- Goods type distribution.
        c) Top OD pairs by vehicle types.
        d) Travel frequency and trip purpose distribution leading to traffic segmentation by toll rate category.

- Traffic diversion analysis, in case, there are existing routes, or new alternative routes are planned by relevant Authority.
- Identification of and traffic analysis relating to Competing Routes ((including rail/DFC etc.), if any.
- Assessment of impact of network improvements based on observed travel pattern.
- Traffic growth rate estimation based on the elasticity approach using econometric modelling

- **Traffic & Revenue Estimates:**
  - The values of elasticity of transport demand shall be based on the prevailing practices in the country. The Advisors shall give complete background including references for selecting the value of transport demand elasticity.
  - The demand estimates shall be done assuming three scenarios, namely, optimistic, pessimistic and most likely traffic growth. The growth factors shall be worked out for five- yearly intervals or as appropriate.
  - Above all will include formulation of future economic outlook based on recent economic performance, extent of impact of covid waves and expected economic recovery thereafter.
  - Key factors to be considered in forecasting traffic/ revenue:
    a) Seasonal Correction Factors
    b) Influence area of the project and its economic perspective
    c) Key traffic drivers of the project
    d) Present and future elasticity of transport demand by vehicle type
    e) Traffic growth rate trends observed
    f) Impact of upcoming developments and future development potential of the region
    g) Study of impact of competing routes in terms of diversion from/to the project road - Identification of competing routes and network condition, traffic characteristics & level of tolls charged, if any on the competing corridors
    h) Review of nearby toll plaza/past traffic & revenue data for accurate estimation of traffic growth and to study the past traffic growth trend.
    i) Scenario testing for toll revenue
    j) Any other competing transportation facility
    k) Distribution of traffic into different tolling streams (normal paying and concessions as applicable in line with CA)

2.3 Composition of the Report

This Report is further divided into seven chapters. Chapter 1 contains the executive summary of the report providing a brief outcome of the study. Chapter 2 provides a brief description of the project including the background and key objectives of the study. Chapter 3 contains details of the project road existing connectivity and its influence area. Chapter 4 contains details pertaining to various secondary and primary data and its analysis to understand the base year traffic and travel characteristics. Chapter 5 presents the traffic diversion analysis. This chapter

details out the approach and methodology adopted for identification of the potential divertible traffic. It also, elaborately illustrates the approach and methodology adopted for the identification of alternate networks & routes presents the Diverted traffic.

Chapter 6 illustrate the potential developments, growth drivers in the PIA and the potential developmental traffic generated out of the identified developments and, presents the estimation of the traffic growth rates used for traffic forecasting and chapter 7 presents the traffic and revenue projections for the entire concession period.

CHAPTER 3

Characteristics of the Project Influence Region

3. Project Influence Area Characteristics

This chapter examines various areas which significantly influence the project road. Demographic, geographical, agricultural & industrial sector, and industrial profile of project influence area is discussed in this chapter.

3.1 Project Road

Key element of any traffic assessment is the understanding of the spread of regions around the project that influence the traffic on the highway and establish the relationship between them. This was achieved through extensive data collection from secondary sources/past reports.

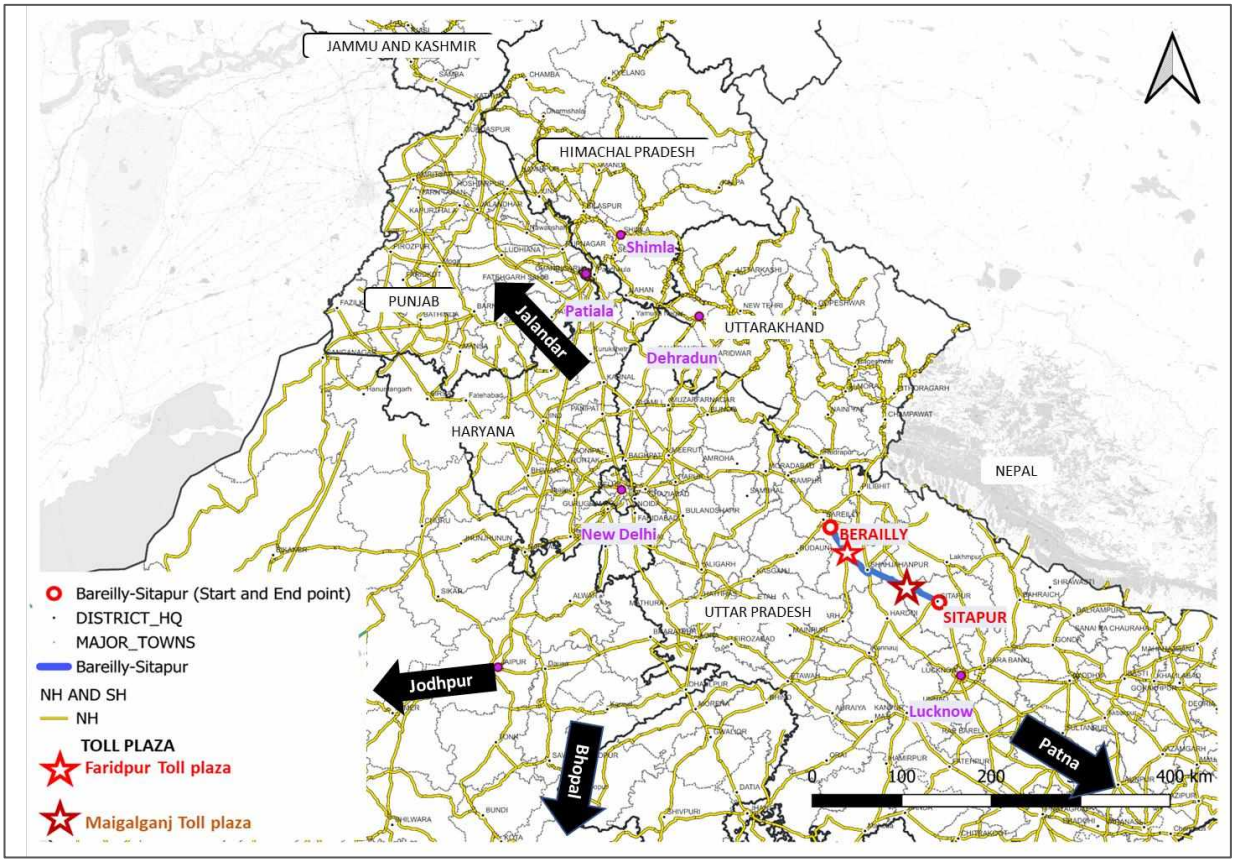

Figure 3-1 Project Road Network at Regional Level

Generally, the area which contributes to the total traffic plying on project road is called the project influence area (PIA). PIA is further classified into primary (immediate) and secondary (broad) influence area, depending on its distance from the project road. The immediate influence area of the project corridor comprises of region/districts of Uttar Pradesh, Bareilly, Shahjahanpur & Sitapur which are in immediate proximity to the project road contributing above 81% of the project road traffic. Uttar Pradesh, Haryana, Uttarakhand and Bihar are the other major contributors to the traffic on the project corridor.

Based on the study of the secondary information and past traffic data, the project influence area is divided into: Immediate Influence Area, which comprises of the traffic generators located along the project highway including the end points. Broad Influence Area, which comprises of long-distance destinations which are catered by project highway beyond immediate influence

area. The project road with its primary and secondary influence area is as presented in the table below.

Table 3-1 Major Traffic Generating Nodes for Project Road

SL. NO.	STATES	IMPORTANT CITIES
Immediate Influence Area		
A1	Uttar Pradesh	Bareilly, Shahjahanpur, Lucknow, Sitapur
A2	Uttarakhand	Rudrapur, Haldwani, Dehradun
Broad Influence Area		
B1	Punjab	
B2	Haryana	
B3	Bihar	
B4	West Bengal	

3.2 Uttar Pradesh Profile

Uttar Pradesh (UP) is a state in northern India, ranking 4th largest and 1st most populous. Its capital is Lucknow, and largest city is Lucknow. The state is bordered by Rajasthan to the west, Haryana, Himachal Pradesh and Delhi to the northwest, Uttarakhand and Nepal to the north, Bihar to the east, Madhya Pradesh, Chhattisgarh and Jharkhand to the south.

Figure 3-2 District Map of Uttar Pradesh

The state has 75 districts across four regions: Paschim Pradesh, Bundelkhand, Avadh Pradesh and Purvanchal. The state also has three distinct physical regions: the Shiwalik in the north, the Gangetic plains in the center, and the Vindhyan hills in the south. 65% of the population depends on agriculture. Central smart cities: Agra, Aligarh, Bareilly, Jhansi, Kanpur, Lucknow, Moradabad, Prayagraj, Saharanpur, and Varanasi and State smart cities: Ayodhya, Firozabad, Ghaziabad, Gorakhpur, Mathura, Meerut, and Shahjahanpur.

3.2.1 Economic & Industrial Profile

Uttar Pradesh is one of India's significant state economies, with a gross domestic product (GDP) of ₹20.48 lakh crore and per capita GDP of ₹84,125.775. The state's Gross State Domestic Product (GSDP) for the fiscal year 2023-24 is projected to be ₹24.39 lakh crore, reflecting a 19% increase from 2022-23. In 2022-23, the agriculture and allied sectors contributed 18.2% to Uttar Pradesh's Gross State Value Added (GSVA). The services sector is the largest contributor to the GSDP, accounting for about 54.3%, followed by industry at 23% and agriculture at 25.7%. Uttar Pradesh's top five export items include Telecom Products, Buffalo Meat, Cotton and Manmade Fibers, Footwear products. In 2021-22, the state's total exports were ₹1.74 Lakh Crore. Uttar Pradesh is a major producer of Sugarcane, and it also has It accounts for about 17.8% of the country's total food grain output.

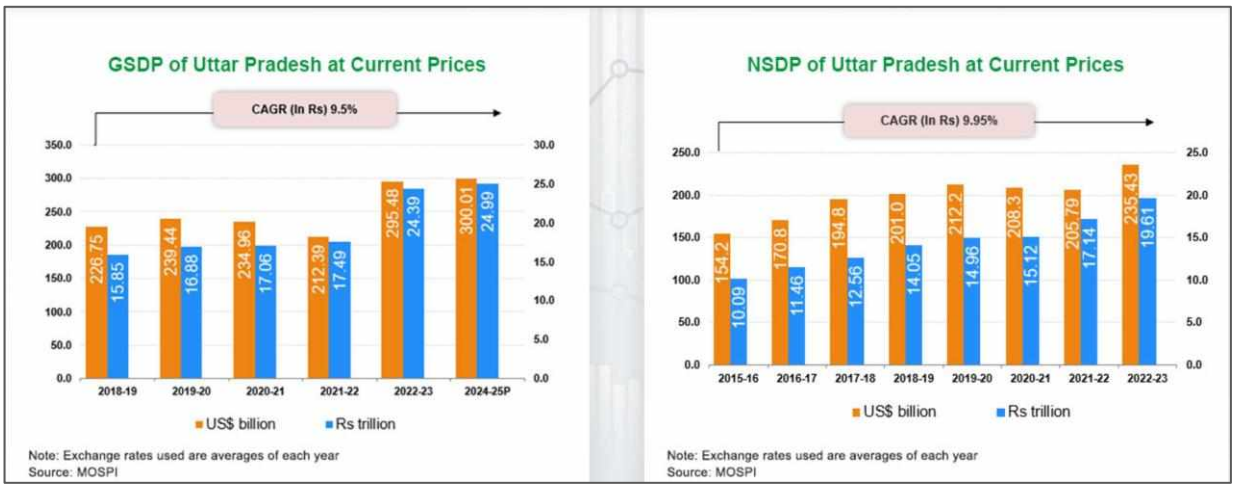

Figure 3-3 GSDP and NSDP of Uttar Pradesh (Source: MoSPI)

Uttar Pradesh's foreign direct investment (FDI) inflows have averaged $82.92 Billion from December 2019 to September 2023. The data peaked at a record high of $21.68 Billion in December 2022, while it reached a record low of $942 million in March 2020.

Uttar Pradesh hosts a diverse industrial landscape with over 1,000 automotive and auto component manufacturing units. Key hubs in this sector include the cities of Lucknow, Kanpur, Shahjahanpur, Aligarh, Prayagraj, Saharanpur, and Etawah. Prominent companies operating in this sector include Tata Motors, Honda, and Yamaha.

3.2.2 Agriculture Profile

Uttar Pradesh, known as "the Sugar bowl of India," plays a pivotal role in India's agriculture. About 78% of its population lives in villages and engages in agricultural practices, from which the state derives about 24.5% of its GDP. By and large, the cultivated area is about 26 million hectares, supplemented sufficiently by a vast irrigation network supplied with its water by rivers like Ganga, Yamuna, Saryu, Gomti, Rapti, Betwa and Chambal.

Sugarcane is the major crop, and Uttar Pradesh is one of the major producers of several crops like Wheat, Rice and Maize. The state also produces considerable quantities of Pulses, Oilseeds, Millets, Vegetables and Fruits. The three main agricultural export zones in the state are: Shahjahanpur, Pilibhit, Rampur, for Basmati Rice; Hardoi and Sitapur, for mangoes and Vegetables, showing its prominence in the agricultural scenario.

3.2.3 Infrastructure Profile

Uttar Pradesh has developed its infrastructure well, and it plays a vital role in its economic growth. The State is adequately connected with largest network of national highways in India, facilitating efficient road transport. Major expressways include the Yamuna Expressway, connecting Delhi to Agra, and the Agra-Lucknow Expressway, which significantly reduces travel time. The state is also developing the Ganga Expressway, a 594 km long greenfield project aimed at improving connectivity and promoting industrial growth along its route. extensive railway network that connects major cities and rural areas. The state is also set to benefit from dedicated freight corridors aimed at enhancing logistics and transportation efficiency.

The Lucknow Metro and Kanpur Metro have been operationalized, improving urban transportation and reducing congestion in these cities.

The establishment of the Inland Waterways Authority aims to enhance connectivity through rivers. A multi-modal terminal has been completed in Varanasi to facilitate cargo movement via waterways.

The government is focused on improving urban infrastructure through various initiatives, including the construction of roads, bridges, and public facilities to support growing urban populations. Significant investments are being made in developing smart cities and enhancing public welfare facilities ahead of major events like the Maha Kumbh in Prayagraj.

3.3 Uttarakhand Profile

Uttarakhand is the ranks 20th place in population wise, comprising 13 districts, the state capital Dehradun is part of a larger metropolitan area that includes surrounding towns and regions, which further influences its population dynamics. It is bounded by Himachal Pradesh to the northwest, Tibet to the north, Nepal to east, Uttar Pradesh to the south and southeast and Haryana on the west respectively. Uttarakhand spreads over an area of 53,483 sq km, making

it the 19th Indian state in terms of geographical area. Garhwal and Kumaon are two administrative divisions into which the state is divided into with 13 districts.

Uttarakhand features a highly varied geography characterized by its mountainous terrain, rich forests, and significant water bodies. The state is predominantly part of the Himalayas, including major peaks such as Nanda Devi, which is the highest point in Uttarakhand at 7,816 meters (25,643 feet). Other notable peaks include Kedarnath, Trishul, and Kamet. Major rivers originating from Uttarakhand include the Ganges and Yamuna, both of which are crucial to India's river system. These rivers are fed by numerous glacial melts and streams.

Figure 3-4 District Map of Uttarakhand

3.3.1 Economic & Industrial Profile

The Uttarakhand state is the second fastest growing state in India.[5] Its gross state domestic product (GSDP) (at constant prices) increased more than 13 times from ₹24,786 crore in FY 2005 to ₹3.33 lakh crore in FY23-24. The real GSDP grew at 13.7% (CAGR) during the FY 2005–FY2012 period. The contribution of the service sector to the GSDP of Uttarakhand was just over 50% during FY 2012. Per capita income in Uttarakhand is ₹2,61,173 (FY 2023) which is higher than the national average of ₹2.12 lakh (FY 2023).

Like most of India, agriculture is one of the most significant sectors of the economy of Uttarakhand. Basmati rice, wheat, soybeans, groundnuts, coarse cereals, pulses, and oil seeds are the most widely grown crops. Fruits like apples, oranges, pears, peaches, litchis, and plums

are widely grown and important to the large food processing industry. Agricultural export zones have been set up in the state for litchi, horticulture, herbs, medicinal plants, and basmati rice. During 2010, wheat production was 831 thousand tons and rice production was 610 thousand tons, while the main cash crop of the state, sugarcane, had a production of 5058 thousand tons. there key industries include tourism and hydropower, and there is prospective development in IT, ITES, biotechnology, pharmaceuticals and automobile industries.

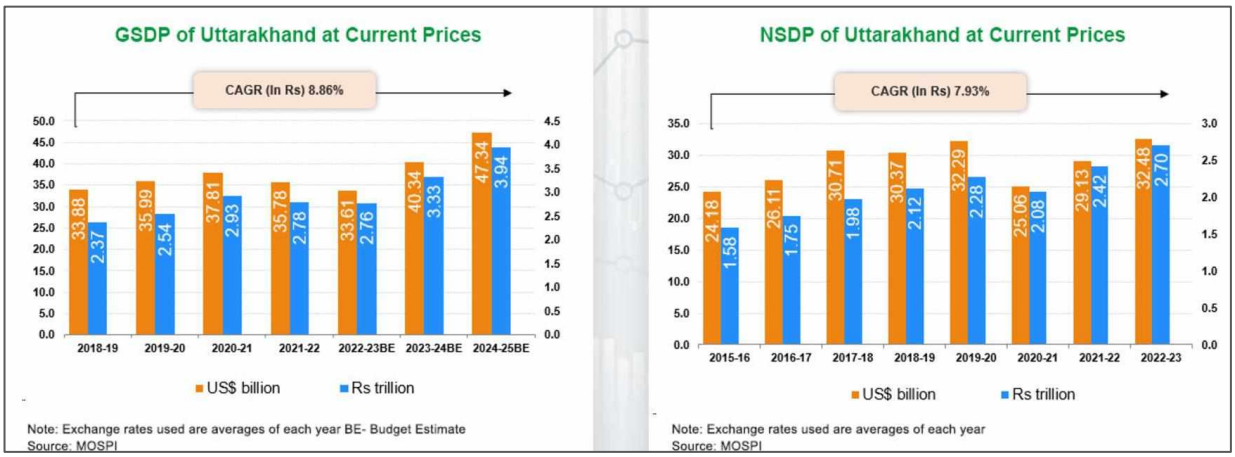

Figure 3-4 GSDP and NSDP of Uttarakhand (Source: MOSPI)

Uttarakhand's strategic location, combined with government support and a focus on key sectors like tourism, pharmaceuticals, and IT, makes it an attractive destination for foreign direct investment. The recent agreements and ongoing initiatives indicate a positive trend in investment inflows, which are crucial for the state's economic growth.

3.3.2 Agriculture Profile

Agriculture in Uttarakhand is highly dependent on the diverse climatic zones, making it suitable for a range of crops, especially fruits, vegetables, and medicinal plants. Despite its challenges, such as the rugged terrain and vulnerability to natural disasters, Uttarakhand has considerable agricultural potential. The government's focus on organic farming, irrigation, and infrastructure development aims to improve productivity and ensure sustainable agricultural growth in the region.

Uttarakhand's agriculture profile is characterized by its diverse climatic conditions, varied topography, and a mix of traditional and modern agricultural practices. Here's a detailed overview of the agricultural landscape in the state:

Area Under Cultivation: Approximately 7.23 lakh hectares (about 13% of the total reported area) is under cultivation, with a cropping intensity of 161.75%, indicating multiple cropping cycles in a year.

Irrigation: The net irrigated area stands at about 3.36 lakh hectares, with most irrigation facilities concentrated in the plains and valleys, as the hilly terrain limits irrigation options.

Food Crops:

- Cereals: Major food crops include:
- Wheat: A staple crop with significant production; wheat productivity has improved from 18.84 quintals per hectare in 2000-01 to 23.76 quintals per hectare in 2011-12.
- Rice: Another important crop, with production figures around 610 thousand tonnes.
- Maize and Pulses: Grown primarily in the hilly regions and contribute to food security.

Cash Crops:

- Sugarcane: The main cash crop, with production reaching around 5,058 thousand tonnes.
- Basmati Rice: Known for its aroma and quality, particularly grown in Udham Singh Nagar.

Horticulture: Uttarakhand is recognized for its fruit production, including apples, pears, peaches, litchis, and plums. The state has established agricultural export zones for various fruits and herbs.

Spices and Medicinal Plants: The state produces spices like ginger, turmeric, and garlic, which thrive due to favourable climatic conditions. Uttarakhand is home to approximately 175 species of medicinal herbs, supporting both local health practices and potential export markets.

Livestock and Dairy: The livestock sector is vital for rural livelihoods, with initiatives aimed at improving goat and sheep farming. Dairy farming is also significant, contributing to the state's economy and providing employment opportunities.

3.3.3 Infrastructure Profile

Uttarakhand’s infrastructure has seen significant improvements in recent years, with major developments in transport, energy, water supply, telecommunications, and health. However, challenges remain in remote and hilly regions, where accessibility and connectivity can still be difficult. Continued investment in infrastructure will be critical to sustaining economic growth, improving the quality of life for residents, and boosting tourism and industrial growth.

Tourism Infrastructure:

Uttarakhand's tourism industry is supported by a wide range of infrastructure, from hotels, resorts, and guesthouses to better transportation systems for pilgrims and tourists. The state is known for its pilgrimage sites, including the Char Dham (Yamunotri, Gangotri, Kedarnath, and Badrinath), and attracts eco-tourism and adventure tourism. The Uttarakhand Tourism Development Board (UTDB) promotes tourism, and efforts are underway to improve the tourism infrastructure, particularly in remote and high-altitude areas.

Industrial and Commercial Infrastructure: Industrial Zones: Uttarakhand has established industrial zones, particularly in Haridwar, Pantnagar, and Saharanpur, to promote industrialization, especially in sectors like pharmaceuticals, manufacturing, and food

processing. The Uttarakhand Industrial Investment Policy aims to attract investment in various sectors by providing incentives and developing necessary infrastructure for businesses.

Information Technology: Uttarakhand has promoted the development of IT parks, particularly in Dehradun and Haridwar, to foster IT-related services and industries. The state has also launched the Uttarakhand IT Policy to attract investments in the sector, encouraging software development and BPO industries.

3.4 Bareilly District

Bareilly is a city and the administrative headquarters of the Bareilly district in Uttar Pradesh, India. Bareilly lies in the Indo-Gangetic Plains, approximately 252 kilometers northwest of Lucknow and 265 kilometers east of New Delhi.

3.4.1 Demographic & Geographical Profile

According to the 2011 census, Bareilly district has a population of 4,448,359, which constitutes about 2.12% of the state's population. The district experiences a tropical climate with three main seasons: summer, monsoon, and winter. It covers a geographical area of 4,034 square kilometers, representing 1.5% of Uttar Pradesh's total area. Bareilly It is located on the bank of Ramganga River and is the site of the Ramganga Barrage built for canal irrigation. The district is bordered by the Udham Singh Nagar district to the north, Pilibhit district to the east, and Shahjahanpur to the South-East, Badaun to the South and Rampur to the west and Its population growth rate for the year 2011 was 23.4%. This district is a home to the archaeological site of Ahichhatra, which was the capital of Northern Panchala. The district's water resources include the Ramganga, Siddha, Dojora, Bahgul, Sankha, Deoranian, and Nakatia rivers, which flow through its territory, and several reservoirs such as the Nanak Sagar Dam and Sharda Canal.

3.4.2 Economy

Bareilly is a significant commercial and Economic hub in the region, with a diversified economy based on agriculture, tourism, and small-scale industries. The district benefits from its strategic location and which supports various economic activities. Bareilly economy is also boosted by the presence of several industrial and service sectors. The district's agricultural produce and handicrafts industries contribute notably to its economic output. Major companies like Hindustan Unilever have established operations in Bareilly, enhancing local economic activity.

3.4.3 Agriculture & Allied Sector

Agriculture is a crucial component of Bareilly economy, supporting both income and employment for a significant portion of the population. The district benefits from its fertile soil and favourable climatic conditions, leading to a variety of crops being cultivated. The primary crops grown

include rice, wheat, Sugarcane, Mustard, Pulses, Potato and Mint. Here's a brief overview of the agriculture profile of Bareilly:

Main Crops:

- Kharif (monsoon) crops: Rice, Maize, Millet, Sugarcane, Brinjal, Bottle Gourd and Bitter Gourd.
- Rabi (winter) crops: Wheat, Barley, Gram, Lentils, Potato, Onion.
- Horticulture: The district also grows a range of fruits and vegetables, including mangoes, guavas, tomatoes, and Cauliflower

3.4.4 Industrial Profile

Bareilly is an emerging industrial center with a growing focus on various sectors, including textiles, food processing, and small-scale industries.

- **Textiles**: The textile sector is significant, with local production of garments and accessories
- **Argo-based Industries**: Tirupati has a substantial Agro-based industrial sector, including the processing of fruits and vegetables, and production of packaged foods. This sector includes food processing industries such as fruit preservation, pickles, and snacks (namkeen).
- **Automobiles:** The district is developing a base for automobile manufacturing and related services.
- **Chemicals:** There is an increasing presence of chemical manufacturing, including pesticides and insecticides.
- **Leather and Leather Products:** Bareilly has a notable leather industry, producing various leather goods.
- **Metals and Mining:** The district has potential in metals processing and mining activities.

3.5 Shahjahanpur District

Shahjahanpur is a city and the administrative headquarters of the Shahjahanpur district in Uttar Pradesh, India. Shahjahanpur district is in the northern part of India lies approximately 175 kilometers northwest of Lucknow.

3.5.1 Demographic & Geographical Profile

According to the 2011 census, Shahjahanpur district has a population of 3,006,538, accounting for about 1.5% Uttar Pradesh population. The district experiences a tropical climate with three primary seasons: summer, monsoon, and winter. Shahjahanpur spans an area of 4,575 square kilometers, making up 1.88% of the state's total area. The district features predominantly flat terrain with fertile plains, which are conducive to agricultural activities. The soil is primarily Loamy Soil, enriched by the river systems that flow through the area. The district is bordered by the Bareilly and Rampur to the west, the Hardoi state to the south, the Lakhimpur Kheri district

to the north, and the Pilibhit district to the east. The population density is 673 inhabitants per square kilometer. The population growth rate for the year 2011 was 17.84%. The labor force participation rate was 49.8% for the year 2023-2024. The district is well-watered by the Ramganga, Garrah, Gomti, Khannaut and Suketa and Kai rivers, and important reservoirs, including the Kalagarh and Dabri reservoirs.

3.5.2 Economy

Shahjahanpur district characterized by a diverse economy encompassing agriculture, trade, and various small-scale industries. The district benefits from its agricultural productivity and its strategic location near major urban centers, fostering growth in multiple sectors.

3.5.3 Agricultural & Allied Sector

Agriculture is a key driver of Shahjahanpur economy, contributing significantly to both income and employment. The district's favorable climatic conditions and fertile soil support a wide range of crops. Major crops cultivated include rice, groundnut, Sugarcane, Pulses and paddy. Here's an overview of Shahjahanpur agriculture profile.

Main Crops:

- **Kharif (monsoon) crops**: maize, Maize, Millets, Jowar and Groundnuts
- **Rabi (winter) crops**: Wheat, Gram, Barley, Pulses and Oilseeds.
- **Horticulture**: The district is renowned for its production of fruits such as mangoes and guavas, as well as vegetables like tomatoes, onions, and chilies.

3.5.4 Industrial Profile

Shahjahanpur is emerging as an industrial center with a focus on several sectors, including textiles, agro-based industries, and manufacturing.

- **Agro-based Industries**: Agriculture remains the backbone of the district's economy, with about 80% of the area under agricultural use. Numerous food processing units exist, focusing on products like rice, sugar, and oilseeds. The district is recognized for its potential in developing an Agri Export Zone for basmati rice.
- **Handicrafts and Cottage Industries:** The district is known for its handicrafts, particularly carpets and durries, which are significant export items. Local artisans engage in various crafts, contributing to the cultural heritage and economy.
- **Chemical and Petrochemical Industries:** Several small-scale chemical manufacturing units produce fertilizers, pesticides, and other chemical products that support agriculture.
- **Service Sector:** Emerging areas within the service sector include organic farming, handicrafts, art and artisan products, and automotive repair services.
- **Manufacturing Sector:** The manufacturing sector plays a vital role in the local economy, encompassing various industries.

3.6 Sitapur District

Sitapur is a city and the administrative headquarters of the Sitapur district in Uttar Pradesh, India. Located in the Northern part of the state, Sitapur lies approximately 90 kilometers north of Lucknow.

3.6.1 Demographic & Geographical Profile

According to the 2011 census, Sitapur district has a population of 4,483,992, accounting for about 2.24% Uttar Pradesh population. The district experiences a tropical climate with three primary seasons: summer, monsoon, and winter. Shahjahanpur spans an area of 5,743 square kilometers, making up 2.36% of the state's total area. The district features predominantly flat terrain with fertile plains, which are conducive to agricultural activities. The soil is primarily Loamy Soil, enriched by the river systems that flow through the area. The district is bordered by the Hardoi to the west, the Barabanki state to the south, the Kheri district to the north, and the Bahraich district to the east. The population density is 781 inhabitants per square kilometer. The population growth rate for the year 2011 was 18%. The labor force participation rate was 78.8% for the year 2023-2024. The district is well-watered by the Kathana, Sarayan, Gomti, Ghaghra and Pirai rivers, and important reservoirs, including the iddhauliya, Ramgarh, Bakhira, Karela Jheel reservoirs.

3.6.2 Economy

Sitapur district characterized by a diverse economy encompassing agriculture, trade, and various small-scale industries. The district benefits from its agricultural productivity and its strategic location near major urban centers, fostering growth in multiple sectors.

3.6.3 Agricultural & Allied Sector

Agriculture is a key driver of Shahjahanpur economy, contributing significantly to both income and employment. The district's favorable climatic conditions and fertile soil support a wide range of crops. Major crops cultivated include rice, groundnut, Sugarcane, Pulses and paddy. Here's an overview of Sitapur agriculture profile.

Main Crops:

- **Kharif (monsoon) crops**: Paddy, Maize, Sesame, Pigeon Pea, Groundnut, Moong Bean etc.
- **Rabi (winter) crops**: Wheat, Sugarcane, Barley, Gram, Barley, Mustard, Lentil, Potato etc.
- **Horticulture**: The district is renowned for its production of fruits such as mangoes, Banana, Papaya and guavas, as well as vegetables like tomatoes, onions, and chilies.

3.6.4 Industrial Profile

The industrial profile of Sitapur district in Uttar Pradesh is characterized by a mix of traditional and agro-based industries, primarily driven by the region's agricultural output.

- **Sugar Industry:** Sitapur is home to several sugar mills, which are among the most significant industrial establishments in the district.
- **Agro-based Industries:** The district has various agro-based industries that process local agricultural products.
- **Textiles and Handicrafts:** Historically, Sitapur was known for its textile industry, particularly in the production of traditional fabrics and potteries. While the textile sector has diminished, there remains some production of cotton and woolen mats (Durries), especially in Laharpur and Khairabad.
- **Dairy Industry:** The dairy sector plays a crucial role in the local economy, providing livelihoods to many residents. There are initiatives aimed at enhancing dairy development through area development schemes.

3.7 Lucknow District

Lucknow is a city and the administrative headquarters of the Bareilly district in Uttar Pradesh, India. Bareilly lies in the Indo-Gangetic Plains, approximately 252 kilometers northwest of Lucknow and 265 kilometers east of New Delhi.

3.7.1 Demographic & Geographical Profile

According to the 2011 census, Bareilly district has a population of 4,448,359, which constitutes about 2.3% of the state's population. The district experiences a tropical climate with three main seasons: summer, monsoon, and winter. It covers a geographical area of 2,528 square kilometers, representing 1.0% of Uttar Pradesh's total area. Lucknow It is located on the bank of Gomati River. This district is bordered by Barabanki to the east, Unnao to the west, Raebareli to the south, and Sitapur and Hardoi to the north and Its population growth rate for the year 2011 was 25.79%. The district is known for its historical landmarks, educational institutions, and vibrant markets. The district's water resources include the Kukrail, Loni, and Beta are tributaries of Gomti river, and Sai rivers which flow through its territory, and several reservoirs such as the Chinhat Lake.

3.7.2 Economy

Lucknow Gross District Domestic Product: As of 2019-20, Lucknow's GDDP was approximately ₹60,364 crores, with a per capita GDP of around ₹111,373. This positions Lucknow as one of the key economic centers in Uttar Pradesh and northern India. The district hosts several large-scale industries, including Hindustan Aeronautics Limited, Tata Motors, and Scooters India Limited. The manufacturing sector includes textiles (notably Chikan embroidery), machine tools, chemicals, and furniture production. The service sector is robust, with significant contributions

from education, healthcare, IT, and finance. Major companies like Tata Consultancy Services and HCL Technologies operate in the area. Lucknow serves as a major wholesale market (mandi) for agricultural products like mangoes and food grains from surrounding areas. This sector plays a crucial role in the local economy. The handicrafts industry is significant, with products like Chikan embroidery and other traditional crafts contributing to exports and foreign exchange earnings. The real estate sector is booming, with numerous malls, residential complexes, and commercial spaces being developed by major players like Omaxe and Unitech.

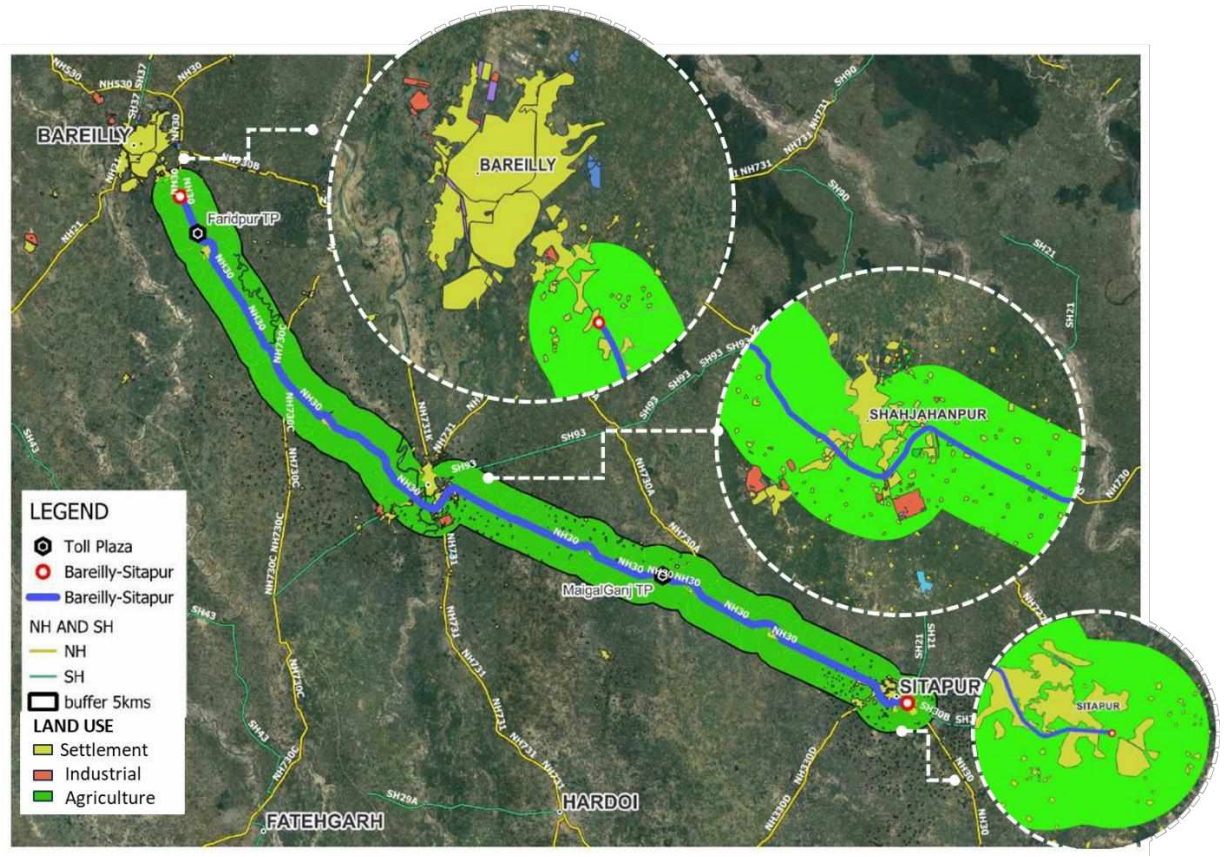
3.7.3 Agriculture & Allied Sector

Cultivable Area: Approximately 56% of the total land area in Lucknow is under active cultivation, with a net sown area of about 2,156.45 square kilometres.

Soil Types: The predominant soil types include Bhur, Matiyaar, and Dumat, which support diverse agricultural practices.

Main Crops:

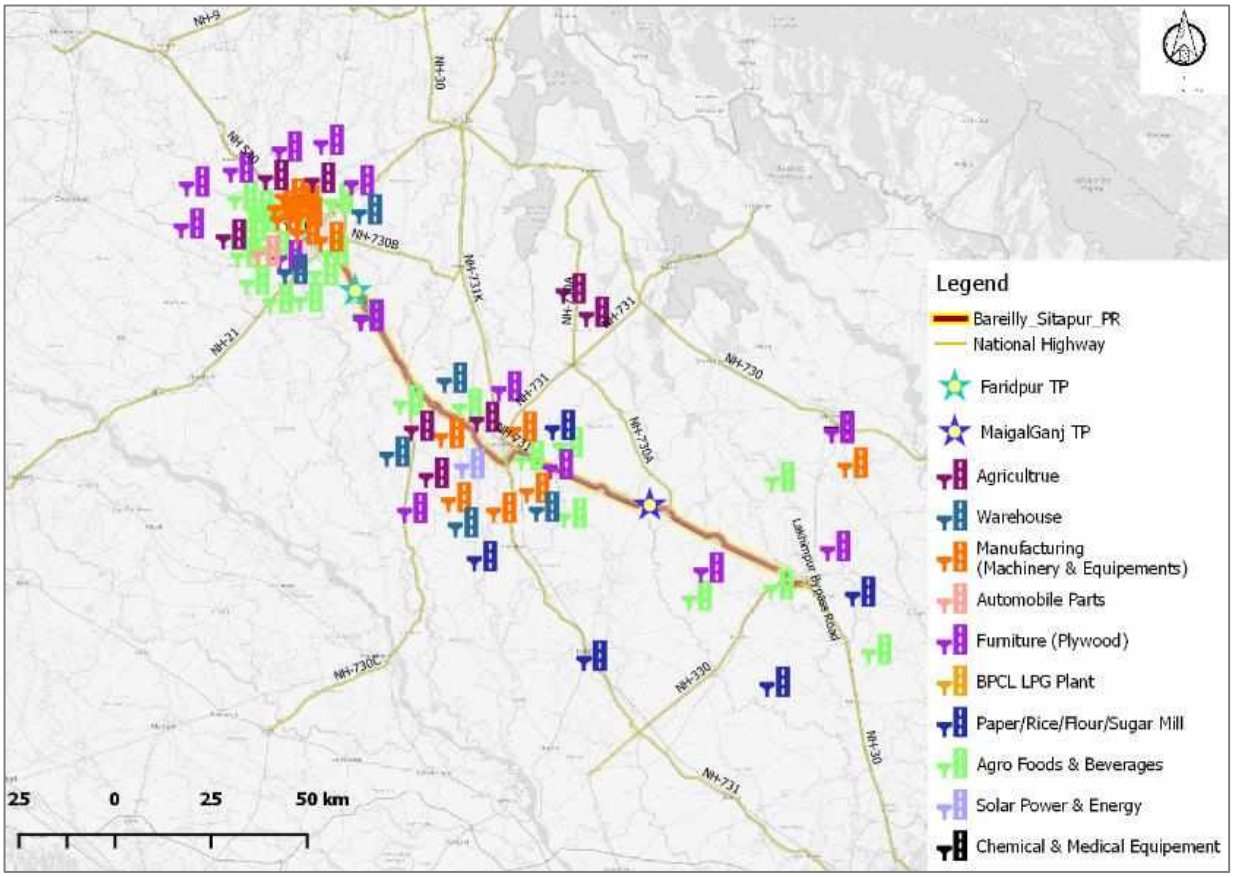
- Kharif (monsoon) crops: Paddy, Maize, Jowar, Bajra and groundnuts.
- Rabi (winter) crops: Wheat, Barley, Gram, Peas, Mustard and Lentils.
- Horticulture: The district also grows a range of melons, Dasheri mango, and Vegetables.
- The livestock sector includes dairy farming, poultry, and goat rearing, contributing to rural livelihoods.
- Aquaculture is practiced in some areas, although it is less prominent compared to other agricultural activities.



3.7.4 Industrial Profile

Lucknow district has a diverse industrial profile that reflects its evolving economic landscape. The city is transitioning from its historical roots in culture and handicrafts to a more modern industrial and technological hub. Here's an overview of the industrial profile of Lucknow district:

- Automotive: The automotive sector is significant, with Tata Motors operating a major plant for light commercial vehicles, producing around 640 vehicles per day. Other notable companies include Hindustan Aeronautics Limited, Scooter India Ltd., and Tata Marcopolo.
- **Food Processing:** Companies like PepsiCo, Nestlé, and Coca-Cola contribute to the food processing industry, capitalizing on the agricultural produce of the region.
- **Textiles and Handicrafts:** Lucknow is renowned for its traditional Chikan embroidery and other handicrafts, which account for a substantial portion of exports from Uttar Pradesh.
- **Information Technology (IT):** The IT sector is growing, with companies such as Tata Consultancy Services and HCL Technologies establishing operations in the city. Lucknow is becoming a hub for emerging startups and tech companies, particularly in the Gomti Nagar area.



- **Chemicals and Pharmaceuticals:** The district hosts various chemical manufacturing units, contributing to both local needs and exports.
- **Aerospace and Defense:** With the establishment of a defense industrial corridor, Lucknow aims to enhance its capabilities in aerospace and defense manufacturing.
- **Small Scale Industries (SSIs):** A significant number of small-scale industries operate in sectors like furniture production, metal fabrication, and various artisan crafts. These industries are crucial for local employment and economic stability.
- **Prospects:** Lucknow is increasingly becoming a hub for Information Technology (IT) and IT-enabled services (ITeS), with plans for establishing an IT Special Economic Zone (SEZ) to attract foreign direct investment (FDI). The government has also earmarked funds for developing textile business clusters in the region, indicating growth potential in this sector

3.8 Land-use profile of the project road

The stretch from Bareilly to Sitapur via Shahjahanpur is part of National Highway 30. The route passes through five districts in Uttar Pradesh: Bareilly, Shahjahanpur, Lakhimpur, Hardoi, and Sitapur. Within a 5 km buffer of the Bareilly to Sitapur road, 95.2% of the land is used for agriculture followed by Residential land comprises 4.1% of the land use in this buffer zone. Faridpur TP falls under Bareilly District and Maigalganj TP falls under Kheri district.

3.9 Current industry profile

The industrial profile between Bareilly and Sitapur is primarily characterized by small to medium-scale industries that are closely tied to the region's agricultural base. Here's an overview-

Agro-Based Industries:

- **Food Processing:** The region's rich agricultural output has led to the development of various food processing industries, particularly in areas like Bareilly and Shahjahanpur. These industries focus on processing crops such as wheat, rice, pulses, and sugarcane into consumable products.
- **Dairy Production:** Dairy farming is prominent, with several small-scale milk processing units scattered across the region. These units process milk into products like butter, cheese, and ghee, catering to local and regional markets.

Small-Scale Manufacturing:

- **Engineering and Auto Parts:** In Bareilly and Shahjahanpur, there are small industries focused on manufacturing auto parts, machinery, and engineering goods. These industries cater to both local demands and supply parts to larger industrial hubs.

Chemical and Fertilizer Industries:

- **Fertilizer Production:** Some areas along the route, particularly near Shahjahanpur and Hardoi, have small-scale chemical and fertilizer plants that support the agricultural sector. These industries produce fertilizers, pesticides, and other agricultural inputs.

- **Sugar Mills:** The fertile land in this region supports sugarcane cultivation, leading to the establishment of sugar mills, especially in Shahjahanpur. These mills are vital to the local economy, providing employment and contributing to the region's economic output.

CHAPTER 4

Primary and Secondary Data Collection & Analysis

4. Primary and Secondary Data Collection & Analysis

4.1 General

As part of the traffic study of Bareilly Sitapur section of NH-30 spanning 157.7 km, in the state of Uttar Pradesh, extensive data collection & analysis is conducted to develop base data. The main objective is to understand the present traffic situation based on primary traffic surveys and the historical toll operations data shared by the client, highlight the future threats (if any), and recommend a suitable growth rate for traffic forecast. The data collection included the primary surveys in the field and the secondary data collection from toll operations and the data available in public domain. This chapter presents the details of traffic surveys, the locations, schedule, and the findings of the primary surveys conducted.

4.2 Past Data from Secondary Sources and Primary Surveys

The findings from the data are summarized in the following subsequent sections.

4.2.1 Past traffic trend findings: Project Corridor

Past traffic trends were derived based on the past traffic data sourced from the Toll operations data. Past traffic AADT, (CAGR%) is presented in the following tables.

Table 4-1: Remittance collected at both the Toll Plazas for FY24

Project Stretch	Plaza Name	Period	Contract Period	Total/Daily	Amount in) Rs.)
Bareilly Sitapur Section	Faridpur	01.04.2023-31.03.2024	03.05.2023 - 03.08.2023	Daily	27,38,999
			03.08.2023 - 03.08.2024	Total	1,08,88,17,101
	Maigalganj	01.04.2023-31.03.2024	20.01.2024 - 20.01.2025	Total	1,18,35,99,999
			20.10.2023 - 20.01.2024	Daily	27,44,777

Table 4-2 Past Traffic Trend at Faridpur (TP1) and Maigalganj Toll Plazas (TP2) AADT based on ETC data

Toll Plaza	Source	FY Year	CJV	LCV/Minibus	Bus/2Axle	3Axle	MAV	Total (Veh)	Total (PCU)
Faridpur TP	ETC	FY-2024	7,088	539	2,415	966	2,474	13,481	29,175
	ETC	FY-2025*	7,580	526	2,369	837	2,216	13,527	27,957
	CAGR % (FY 24-25)		**6.94%**	**-2.41%**	**-1.90%**	**-13.35%**	**-10.43%**	**0.34%**	
Maigalganj TP	ETC	FY-2024	3,564	385	1,568	898	1,787	8,203	19,583
	ETC	FY-2025*	3,799	387	1,536	731	1,402	7,856	17,492
	CAGR % (FY 24-25*)		**6.59%**	**0.52%**	**-2.04%**	**-18.60%**	**-21.54%**	**-4.23%**	

*FY-2025 * - Apr24-Nov24 Toll operational data*

Between FY24 and FY25, vehicle traffic at Faridpur toll plaza (TP1) grew by 0.34%. During this period, car traffic grew by 6.9%, while goods vehicles, particularly 3-axle trucks, saw a decline of -13.4%. MAVs at TP1 also experienced a negative growth of -10.4%. Similarly, from FY24 to FY25, vehicle traffic at Maigalganj Toll Plaza (TP2) declined by -4.23%. While cars grew by 6.59%, goods vehicles, especially 3-axle trucks, experienced a significant drop of -18.6%. MAVs at TP2 saw a substantial negative growth of -21.54%.

Table 4-3 Past Traffic Trend at Faridpur (TP1) and Maigalganj Toll Plazas (TP2) AADT (Including Exempt and Cash from TMS Data)

Toll Plaza	Source	FY Year	CJV	LCV/Minibus	Bus/2Axle	3Axle	MAV	Total (Veh)	Total (PCU)
Faridpur TP	ETC	FY-2024	9,006	562	2,434	970	2,487	15,460	31,256
	ETC	FY-2025*	9,464	545	2,380	850	2,251	15,489	30,102
	CAGR % (FY 24-25)		**5.10%**	**-3.02%**	**-2.22%**	**-12.37%**	**-9.45%**	**0.2%0%**	
Maigalganj TP	ETC	FY-2024	4,038	390	1,571	843	1,648	8,491	19,286
	ETC	FY-2025*	4,369	399	1,552	760	1,454	8,534	18,446
	CAGR % (FY 24-25)		**8.20%**	**2.31%**	**-1.21%**	**-9.85%**	**-11.77%**	**0.51%**	

*FY-2025 * - Apr24- Nov24 Toll operational data*

According to TMS data, including exempt and cash traffic, between FY24 and FY25, vehicle traffic at Faridpur Toll Plaza (TP1) saw a growth of 0.2%. Similarly, at Maigalganj Toll Plaza (TP2), vehicle traffic increased by 0.51%. While car traffic showed positive growth at both plazas, goods v

ehicles, including 3-axle trucks and MAVs, experienced a significant decline at both locations. Both the toll plaza locations have seen a consistent decline in 3Axle trucks and in MAV traffic over the years. Both toll plazas were affected by the commissioning of a newly built flyover that was 3.5 km long and a two-lane to four-lane widening from Aligarh to Kanpur.

3

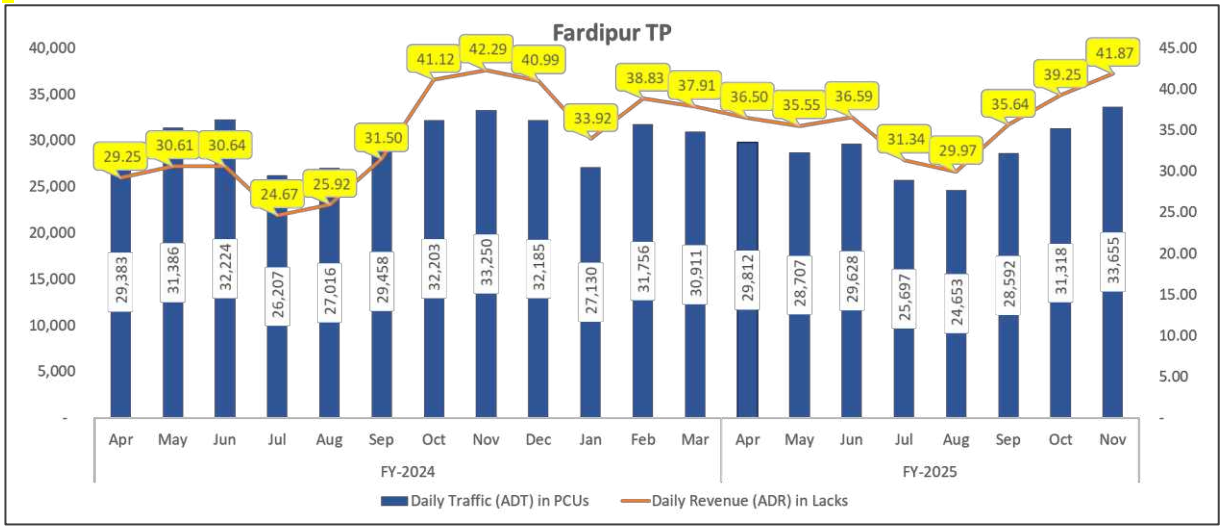


Figure 4-1 Historic traffic and revenue trend – Faridpur toll plaza (ETC+CASH+EXEMPT)

- It was observed from historic data that FY24 (Apr-Nov) vs FY25 (Apr-Nov) shows an 4.1% growth in CJV, but a 9.4% decline in MAV. Overall traffic experienced a 3.8% drop in terms of PCUs.
- Lower traffic was observed in July and August due to the monsoon season and restrictions during the Kanwar Yatra.

  The overall traffic decline in traffic from Jan to Sep and slight growth observed in Nov and Oct months.

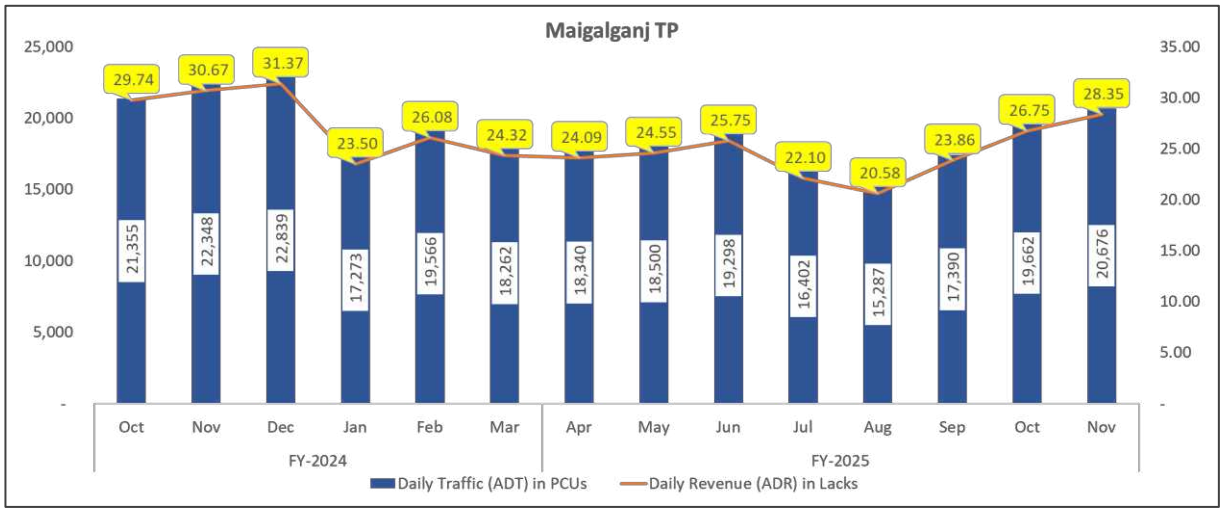

Figure 4-2 Historic traffic and revenue trend – Maigalganj toll plaza (ETC+CASH+EXEMPT)

- **Faridpur TP** handles significantly higher traffic volumes. Its total daily traffic is 65% higher than **Maigalganj TP**. This indicates Faridpur is a much busier toll plaza, likely situated on a more heavily traveled route.
- Both TPs show a similar pattern in vehicle types, with CJVs (Car, Jeep, Van) being most common, followed by 2-axle vehicles (2A) and Multi-Axle Vehicles (MAV). However, Faridpur consistently has higher numbers across all categories.

4.3 Traffic surveys

The traffic surveys are generally conducted to achieve the various project objectives. The Key outcomes of CTVC Survey are, to derive the average daily traffic by type of vehicles along the project corridor, traffic composition and vehicle composition. Similarly, the key outcomes of the OD analysis include,

i) Origin zone & Destination zone of the vehicle type

ii) The frequency of travel i.e., daily, weekly, monthly, or occasionally and Toll Category.

iii) Trip purpose

iv) Commodity carried of goods vehicle.

For this Study, the Consultant has analyzed the survey data i.e., both the Classified Traffic Volume Count (Project Roads) and the Origin – Destination Survey (Project Roads) obtained through the Primary Surveys. Nevertheless, the Consultant before analyzing and utilizing the data for the project, has conducted a detailed and thorough review of the primary data and found the data to be accurate enough for achieving the objectives of the study. The subsequent sections would provide a more detailed analysis.

- Major traffic generators and routes
- Past traffic trend at each toll plaza location
- Travel pattern of the road users at the toll plaza locations
- Probable diversion routes

The various vehicle types having varied sizes and characteristics were converted into equivalent passenger car units (PCU). The Passenger Car Unit recommended by Indian Road Congress in “Guidelines for Capacity of Roads in Rural Areas” (IRC-64-1990) have been used for PCU conversion and are presented in below table.

Table 4-4 Vehicle Classification and PCU Factors

VEHICLE TYPE	PCU	VEHICLE TYPE	PCU
Car/Jeep/Taxi	1.0	Auto Rickshaw	1.0
Minibus/ LCV	1.5	Agricultural Tractor	1.5
Standard Bus	3.0	Agricultural Tractor & Trailer	4.5

VEHICLE TYPE	PCU	VEHICLE TYPE	PCU
2/3 Axle Truck	3.0	Animal Drawn Vehicle	6.0
MAV	4.5	Cycle	0.5
Two-Wheeler	0.5	Cycle Rickshaw	2.0

4.3.1 Traffic survey locations and schedule

The primary data collection for the project involved a 7-day Traffic Volume Count (TVC) study conducted at two toll plaza (TP) locations, as well as a 3-day study on an alternate road. Additionally, an Origin-Destination (OD) and Local District Commercial (LDC) study was carried out at two TP locations over a 24-hour period, with a one-day OD survey also conducted on the alternate road. A network inventory survey was performed on key roads surrounding the project area to assess the condition and importance of these routes. Furthermore, valuable secondary information was gathered through interactions with stakeholders, residents, and truck drivers, providing further insight into the area's transportation dynamics.

A summary of traffic survey locations and schedule has been provided in the Table 4-5.

Table 4-5 Traffic survey locations and schedule

Type of survey	Location	Survey dates	Duration
Traffic Volume Counts (TVC)	Faridpur TP	21/08/2024 To 27/08/2024	7 Days
	Maigalganj TP	21/08/2024 To 27/08/2024	7 Days
	Alternate Road (Bisalpur)	24/08/2024 To 26/08/2024	3 Days
Origin – Destination (OD) & Local District Commercial (LDC) study	Faridpur TP	22/08/2024	24 Hrs.
	Maigalganj TP	22/08/2024	24 Hrs.
	Alternate Road (Bisalpur)	27/08/2024	24 Hrs.

4.3.2 Average Daily Traffic

The traffic volume count data was collected for One day (24 Hrs.) at the survey locations on the project road to arrive at the average daily traffic (ADT). The summary of ADT in terms of vehicles and PCUs at each survey location along the project road are presented in below Table 4-6.

Table 4-6 ADT summary from the traffic surveys

Mode	FARIDPUR TP	MAIGALGANJ TP	Alternate location
Car	7,845	3,256	2,834
Mini LCV	1,185	579	522
Minibus	52	23	17
Bus	1,105	553	211
3-Ax Bus	2	0	0
LCV	540	360	156
Truck-2 Axle	1,455	1,186	56
Truck-3Axle	776	693	47
MAV	1,879	1,236	236
OSV	9	4	4
Traffic Vehicles	**14,847**	**7,891**	**4,083**

Mode	FARIDPUR TP	MAIGALGANJ TP	Alternate location
Traffic PCUs	**28,424**	**17,286**	**5,639**

The daily traffic at Faridpur TP, Maigalganj TP, and an alternate road at Bisalpur location reveals significant differences in vehicle volumes across the three areas. Faridpur TP has the highest traffic volume, with 14,847 vehicles and 28,424 PCUs, indicating it is a major traffic point. In comparison, Maigalganj TP has 7,891 vehicles (17,286 PCUs), reflecting a lower traffic load. The alternate road, with 4,083 vehicles (5,639 PCUs), shows significantly lower traffic than both Faridpur and Maigalganj.

The vehicle distribution shows that cars are the most prevalent in all three locations, with Faridpur TP having 7,845 cars, Maigalganj TP having 3,256, and the alternate location having 2,834. Faridpur TP also leads in freight traffic, with 1,455 two-axle trucks and 776 three-axle trucks, whereas Maigalganj TP and the alternate location have significantly fewer trucks. The alternate location sees lower vehicle counts across all categories, including mini-LCVs, buses, and trucks, indicating it may be a less important route or serves a more localized function.

The Consultant, for the purpose of the study has relied on the historic data for the computation of base year annual average daily traffic for project road locations. The Consultant considered toll operation data obtained from the months of April to November of Fiscal Year 2025 for the computation of the base year Annual Average Daily Traffic. Final AADT arrived from ETC data (April to November 2024, which includes cash & exemption/violation traffic). The Table 4-7 below illustrates the recommended average daily traffic adopted for the base year.

Table 4-7 Base Year Recommended AADT (Including cash & exemption/violation traffic)

S.NO	Mode	FARIDPUR TP	MAIGALGANJ TP
1	CJV	9,464	4,369
2	LCV/Minibus	545	399
3	2 Axle	2,380	1,552
4	3 Axle	850	760
5	MAV	2,251	1,454
6	OSV	1	0
Traffic vehicles		**15,491**	**8,534**
Traffic PCU		**30,104**	**18,446**

4.3.3 Vehicle Composition

Analysis was conducted to find the traffic composition by type of vehicles among the toll-able traffic at two toll plaza locations on the project road sections. Vehicular traffic composition by type of vehicle by location are shown in below figure. Salient findings from the analysis are presented below.

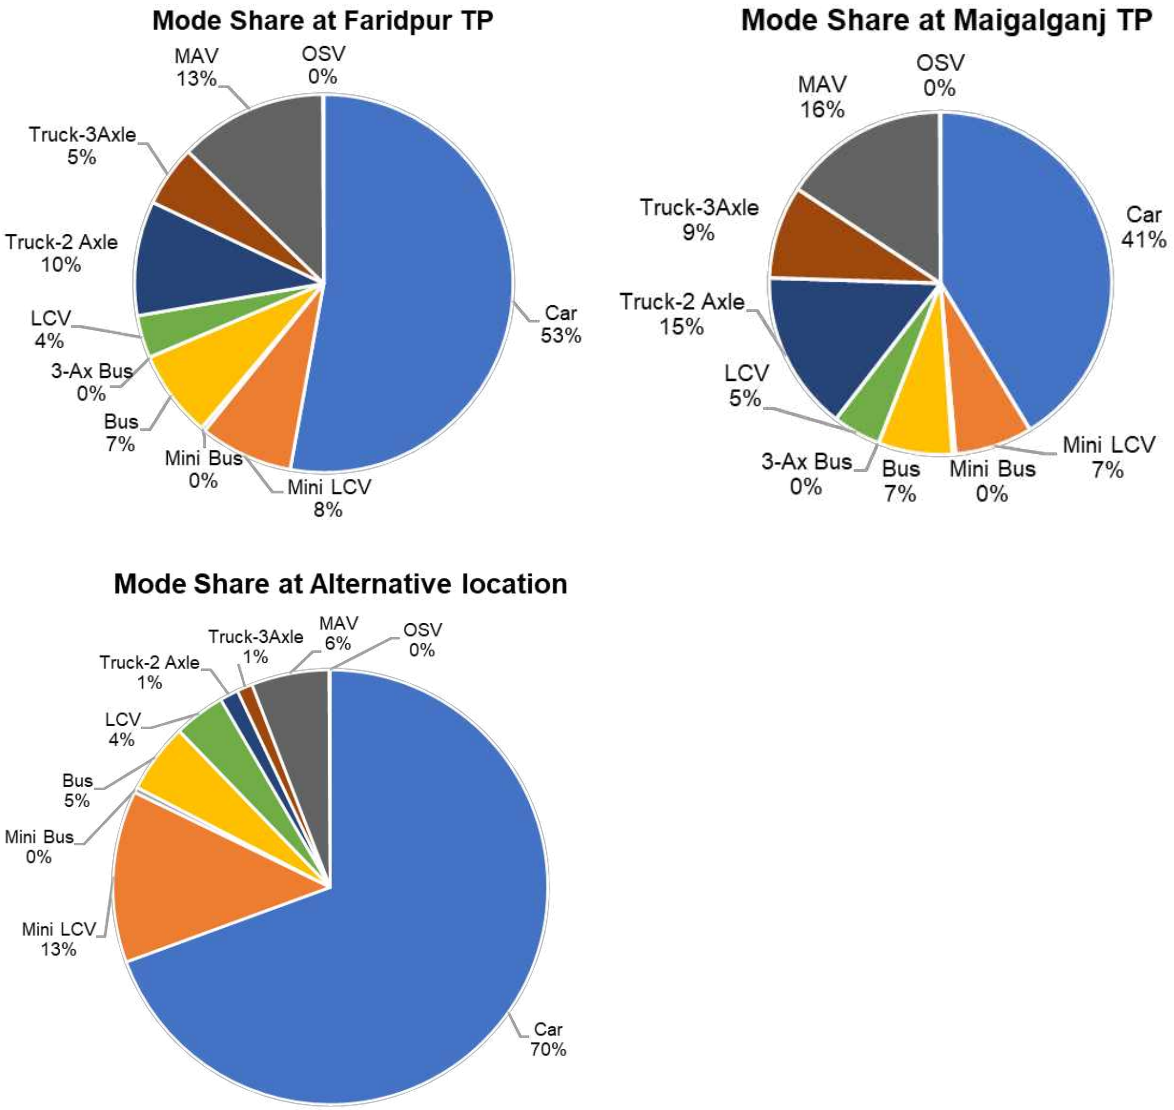

Figure 4-3 Traffic composition (Vehicles) by locations

- It is observed that, car mode has highest share at three locations. The 2nd highest traffic at three locations is freight traffic.
- **Faridpur TP** has the highest overall traffic volume, with a strong presence of both passenger vehicles (cars) and freight traffic (trucks, MAVs). **Maigalganj TP** shows a mix of passenger and freight vehicles, though the overall traffic is lower than Faridpur TP. Approximately, 53% Car traffic observed at Faridpur TP, 41% at Maigalganj TP.
- The **Alternate Location** has a predominant focus on passenger vehicles, particularly cars (70% car traffic observed), and shows a much lower overall traffic volume, indicating that it may be less critical for freight and more geared towards local or commuter traffic.

4.3.4 Seasonal Correction Factors

Seasonal correction factors are used to normalize the Average Daily Traffic (ADT).

Table 4-8: Mode Wise Recommended Years for Seasonal Correction Factors

Considered Data	CJV	LCV	BUS/2-Axle	3-Axle	MAV
Faridpur TP					
May-2023 to Apr-2024 (Project Corridor)	Yes	Yes	Yes	Yes	Yes
Adjacent Corridor					
FY 23 (Adjacent Corridor)	Yes	Yes	Yes	Yes	Yes
FY 24 (Adjacent Corridor)	Yes	Yes	Yes	Yes	Yes

COD started from mid of April FY 24, so consultant has considered from May (Faridpur Toll Plaza). COD Started from mid of October FY 24, so consultant Considered (Adjacent Corridor) FY 23, FY 24 and Faridpur data Average for Maigalganj Toll Plaza.

4.3.5 Annual Average Daily Traffic (AADT)

- Annual Average Daily Traffic = Average Daily Traffic X Seasonal Correction Factor + Cash Traffic + Exemption/violation data obtained from traffic survey conducted on 22nd August (for 24 hrs.)
- As discussed in the earlier sections, owing to higher reliability, and based on the latest data, the consultant considered the toll operations data (ETC data) obtained for the months of April 2024 to November 2024 (FY-25) as base year ADT, cash traffic from Schedule-M (April 2024 to November 2024) and exemption/violation data obtained from traffic survey conducted on 22nd August (for 24 hrs.) and recommends the same for the computation of base year Average Annual Daily Traffic (AADT), shown in below Table 4-9.

Table 4-9 Base Year Recommended AADT

S.NO	VEHICLE	Faridpur TP	Maigalganj TP
1	Car	9,464	4,369
2	LCV/Minibus	545	399
3	Truck-2A	2,380	1,552
4	Truck-3A	850	760
5	MAV	2,251	1,454
6	OSV	1	0
Total Traffic vehicles		**15,491**	**8,534**
Traffic PCU		**30,104**	**18,466**

4.4 Travel Characteristics of the Road users

4.4.1 Survey Methodology

Origin Destination Survey helps in understanding the travel demand pattern of the traffic on the project road. The travel characteristics obtained by O-D survey facilitate the identification of:

- Local and through traffic on the project road.
- Major influence zones of both the passenger and commercial traffic.
- Major commodities carried by the truck traffic.

The O-D survey elicited characteristics like origin, destination, and frequency, purpose of trip for passenger vehicles and commodity type, the information pertaining to origin and destination of trips was analyzed to obtain the trip distribution based on a zoning system provided.

4.4.2 Sample Size

The vehicles during the OD surveys were interviewed on a random sample basis and Table below shows the sample size distribution (in percentage terms) captured at the survey locations along the Project stretches shown in below Table 4-10.

Table 4-10 Sample Size Collected from Origin-Destination Survey

S.NO	VEHICLE	Faridpur TP	Maigalganj TP
1	Car	51.7%	48.5%
2	Minibus	85.4%	64.0%
3	Bus	42.9%	57.0%
4	LCV	41.5%	81.2%
5	2Axle Truck	58.6%	58.5%
6	3Axle Truck	65.3%	65.5%
7	MAV & above	52.2%	63.9%
Grand Total		**52.3%**	**54.8%**

4.4.3 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed considering the following factors:

- The road network catering to the traffic on the project road and its generating points.
- Important towns, villages, factories, and industrial centers around the project road area.
- Administrative boundaries of districts and states.
- Configuration of the project road in the regional road network with respect to other roads.

Two major types of areas were identified for analysis purposes.

Immediate Influence Area (IIA): Immediate Influence Area includes the cities/towns/villages and districts along the project road and adjacent to its which generates/attracts trips to the project road.

Broad Influence Area (BIA): Broad Influence Area includes other major traffic generating/attracting trips, but to a lesser degree when compared to IIA.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA.

The zoning system adopted for data collection was based on 183 zones for better understanding the zonal influence by vehicle category at each toll plaza location.

4.4.4 Travel Pattern and Zone Influence Factors

From the origin & Destination survey data, location wise base year OD matrices were developed for each type of vehicle. Sample OD matrix is expanded to AADT by applying the expansion factors. The O-D matrices describing the travel pattern of both goods and passenger vehicles are used for identification of major OD pairs on the project corridor and for further analysis of movement pattern and estimation of through traffic. It is observed that the major influencing States for the project Sections are Uttar Pradesh, Bihar, Delhi, Haryana, Uttarakhand, Punjab, Odisha, Jharkhand, West Bengal, Jammu & Kashmir, Himachal Pradesh, Union Territory of Chandigarh and Northeast India.

Different vehicles interact in different degrees with the different zones depending on their purpose, commodity transported, frequency of travel etc.
Section wise influence factors were derived from the average of Influence factors by category at survey locations in the respective project sections. Section wise influence factors for cars, buses and trucks are summarized and shown in below Table 4-11.

Regional Distribution of traffic at Faridpur Toll Plaza: -

Table 4-11 Regional distribution of traffic at Faridpur Toll Plaza

FARIDPUR TOLL PLAZA			
STATES	**CARS**	**BUSES**	**TRUCKS**
Uttar Pradesh	92.6%	85.4%	66.6%
Uttarakhand	2.9%	4.0%	12.4%
Delhi	2.8%	8.6%	3.6%
Bihar	0.4%	0.3%	3.4%
Haryana	0.5%	0.9%	3.0%
Punjab	0.4%	0.3%	2.6%
West Bengal	0.1%	0.1%	3.0%
North - East India	0.0%	0.1%	1.4%
Odisha	0.1%	0.1%	1.1%
Jharkhand	0.0%	0.1%	0.9%
Jammu & Kashmir	0.0%	0.1%	0.7%
Himachal Pradesh	0.1%	0.0%	0.7%
Union Territory of Chandigarh	0.0%	0.0%	0.5%
Total	**100%**	**100%**	**100%**

Regional distribution of passenger & goods traffic at Faridpur Toll Plaza is depicted in Figure 4-4. On detailed analysis of the zonal influence factors, it was observed that,

- Approximately 93% of the car passenger vehicle trips are happening within the state of Uttar Pradesh at Faridpur toll plaza, significant amount of the car vehicle trips is origin-destined in Bihar, Uttarakhand and Delhi.
- The state of Uttar Pradesh accounts for almost 68% of all freight traffic. Also, significant amount of truck traffic observed from Uttarakhand, Delhi, Bihar & West Bengal states.

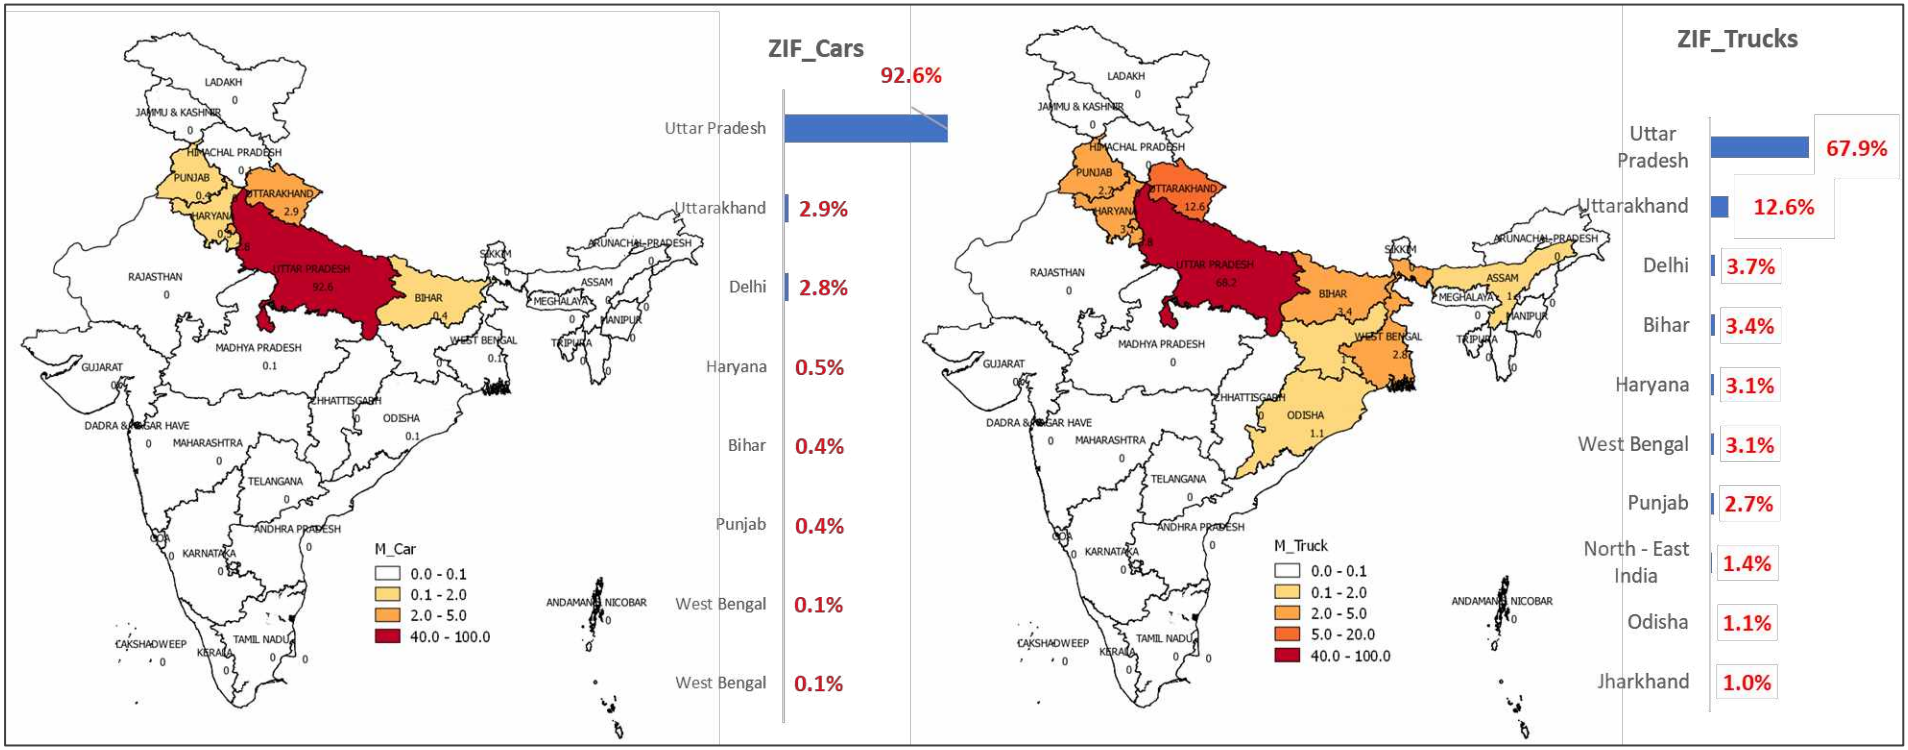

Figure 4-4 Regional distribution of passenger & goods traffic at Faridpur Toll Plaza

Total	**100%**	**100%**	**100%**

Regional distribution of passenger & goods traffic at Alternate Road is depicted in Figure 4-5. On detailed analysis of the Zonal influence factors, it was observed that,

Approximately 91.5% of the Car passenger vehicle trips are happening within the state of Uttar Pradesh at Faridpur Toll Plaza, significant amount of the Car vehicle trips is origin-destined in Uttarakhand, Delhi.

Approximately 69.7% of the truck traffic is plying in the state of Uttar Pradesh. Also, significant amount of truck traffic observed from Uttarakhand, Haryana, North-East India, Bihar, Delhi, etc.

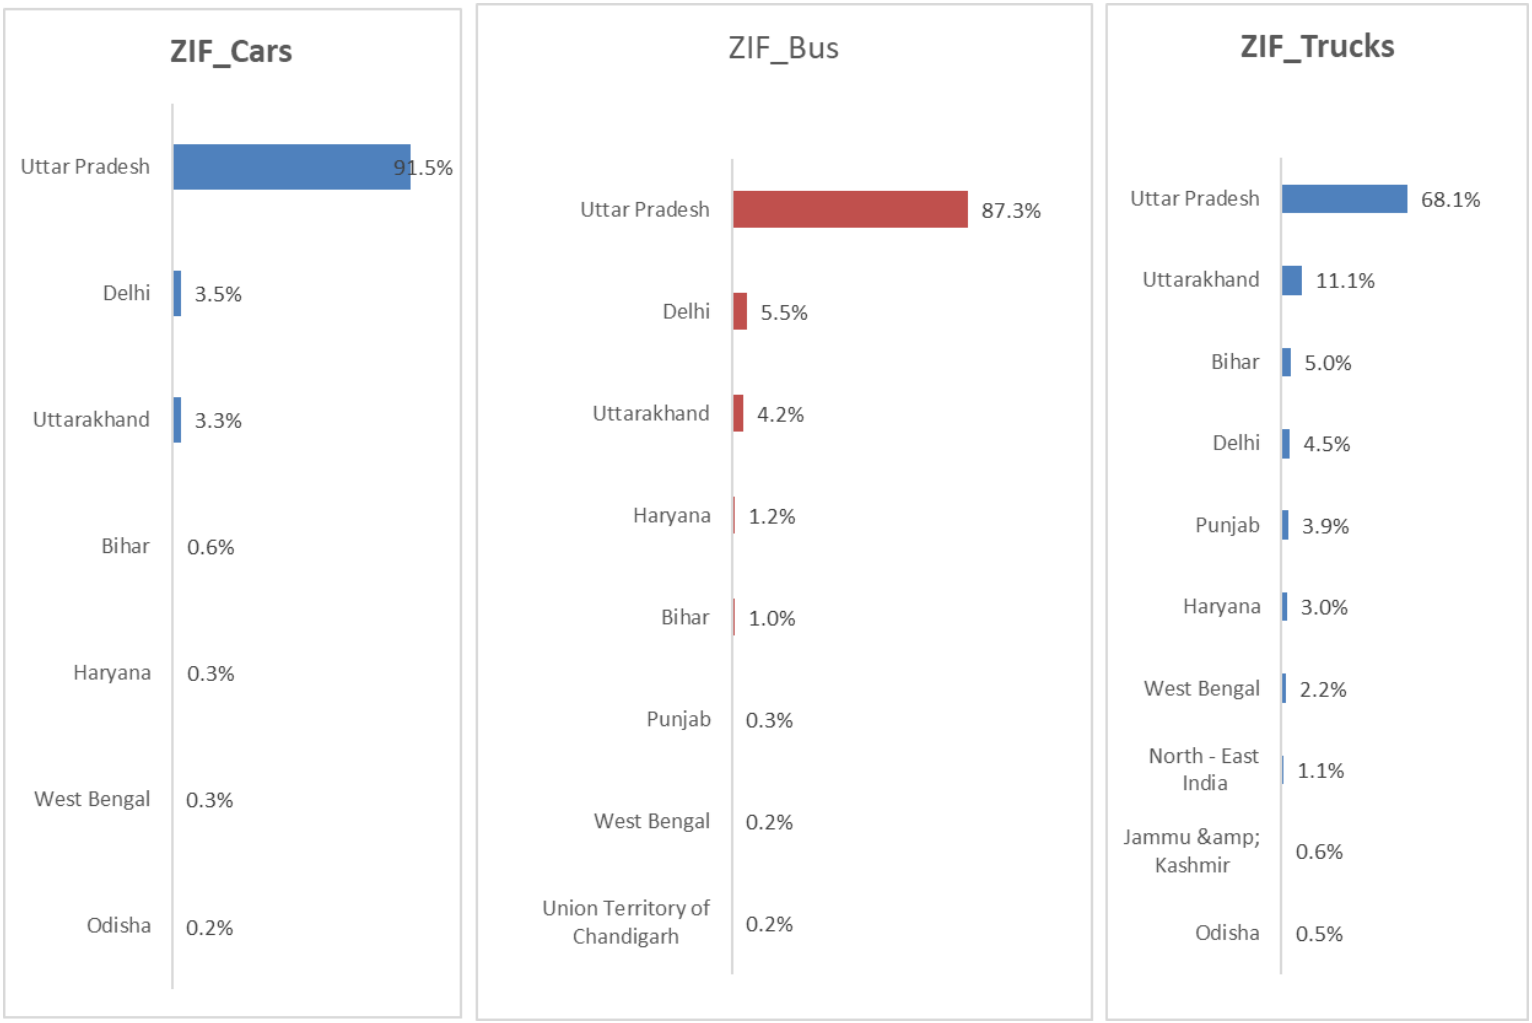

Figure 4-7: Regional distribution of passenger & goods traffic at Faridpur Toll Plaza (2nd OD Survey)

4.4.5 Commodity Distribution of Freight traffic

An analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. Table below presents the toll plaza wise commodity distribution.

Commodity pattern at Faridpur Toll Plaza: -

- The overall share of empty vehicle is observed to be around 34% at Faridpur Toll Plaza.
- The Major Commodities observed at Faridpur Toll Plaza are Parchoon, Fruit & Vegetables, Food Items, Wood are contributing to almost 66% of overall Commodities when Empty trucks are also included.
- The overall share of Parchoon observed to be around 10.5% at Toll Plaza. 8.7% of LCV, 14.7% of 2-Axle trucks, 14.4% of 3-Axle trucks and 8.7% of MAV trucks are observed to be carrying parchoon.
- Major commodities transported by LCV and 2-Axles are Fruits & Vegetables, Parchoon, Parcel, Medicine, Automobile.
- Major Commodities transported by HGVs are Food Items, Parcel, Steel, Fruits & Vegetables, Parchoon, Automobile & POL.

4.4.6 Trip length frequency Distribution

An analysis was carried out to understand the trip length frequency of the passenger and goods vehicles at all the toll plaza locations. Figures below presents the toll plaza wise trip length frequency distribution for goods and passenger vehicles.

4.4.6.1 Goods Vehicles

Trip length Frequency Distribution at Faridpur Toll Plaza

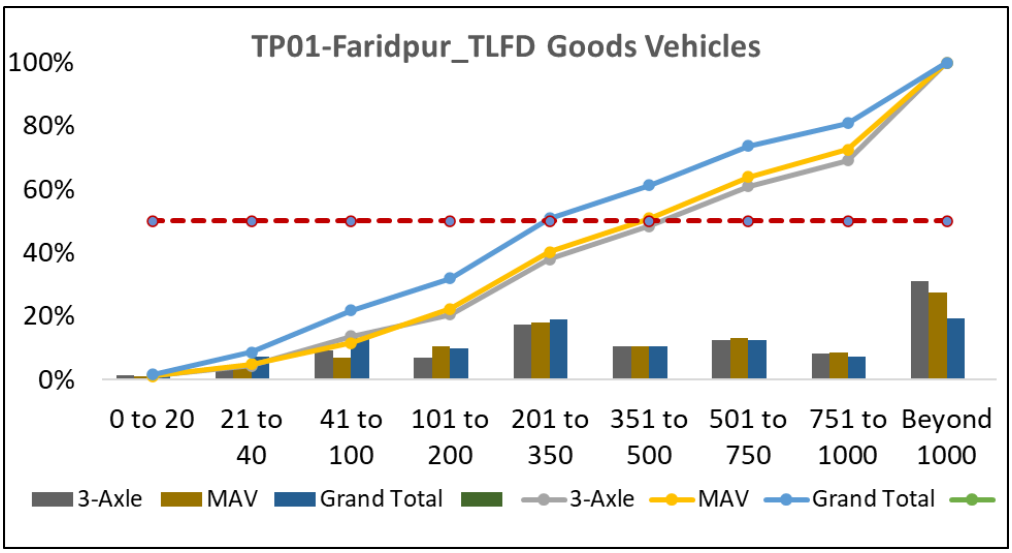

Figure 4-12 Trip length Frequency Distribution at Faridpur Toll Plaza – Goods

- Around 49.7% of LCVs, 22.2% of Trucks, 20.5% 3-Axle, 22.2% MAVs are having trip length less than 200 km.
- 39.4% of LCVs, 47.3% of 2-Axle trucks, 40.3% of 3-Axle trucks and 41.6% of MAV are having trip lengths more than 200 km and less than 750 km.
- Around 10.8% of LCVs, 30.5% of 2-Axle trucks, 39.1% of 3-Axle trucks and 36.2% of MAV are having trip lengths more than 750 km which refers there is significant medium and long-distance traffic through the Faridpur Toll plaza.
- Major OD pairs of (3A & MAV) are Bareilly-Lucknow, Bareilly-Faridpur, Lucknow-Delhi, Bareilly-Shahjahanpur etc.

Trip length Frequency Distribution at Maigalganj Toll Plaza

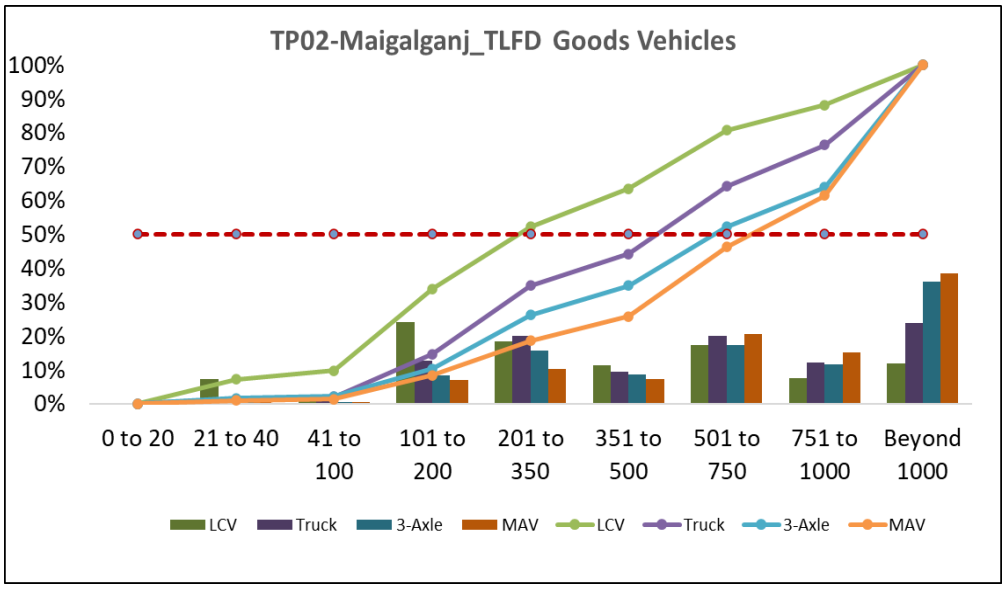

Figure 4-13 Trip length Frequency Distribution at Maigalganj Toll Plaza – Goods

- Around 33.9% of LCVs, 14.7% of Trucks, 10.4% 3-Axle, 8.4% MAVs are having trip length less than 200 km.
- 46.8% of LCVs, 49.4% of 2-Axle trucks, 41.8% of 3-Axle trucks and 37.9% of MAV are having trip lengths more than 200 km and less than 750 km.

- Around 19.3% of LCVs, 35.9% of 2-Axle trucks, 47.8% of 3-Axle trucks and 53.7% of MAV are having trip lengths more than 750 km which refers there is significant medium and long-distance traffic through the Maigalganj Toll plaza.
- Major OD pairs are Bareilly-Lucknow, Shahjahanpur-Sitapur, Shahjahanpur-Lucknow, Bareilly-Sitapur, Lucknow-Delhi etc.

Trip length Frequency Distribution at Alternate Road

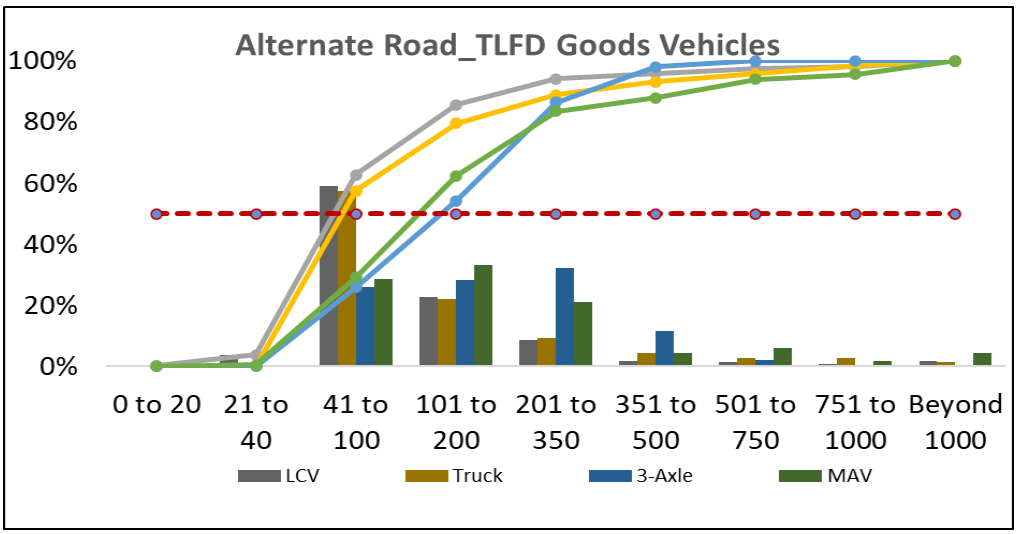

Figure 4-14: Trip length Frequency Distribution at Alternate Road – Goods

- Around 85.5% of LCVs, 81.0% of Trucks, 75.0% 3-Axle, 71% MAVs are having trip length less than 200 km.
- 12.0% of LCVs, 15.0% of 2-Axle trucks, 25.4% of 3-Axle trucks and 22.0% of MAV are having trip lengths more than 200 km and less than 750 km.
- Around 2.6% of LCVs, % of 2-Axle trucks, 0.0% of 3-Axle trucks and 6.7% of MAV are having trip lengths more than 750 km which refers there is significant medium traffic at alternate Survey location.
- Major OD pairs are Bareilly-Nigohi, Faridpur-Bisalpur, Bareilly-Shahjahanpur etc.

Trip length Frequency Distribution at Faridpur Toll Plaza (2nd OD Survey)

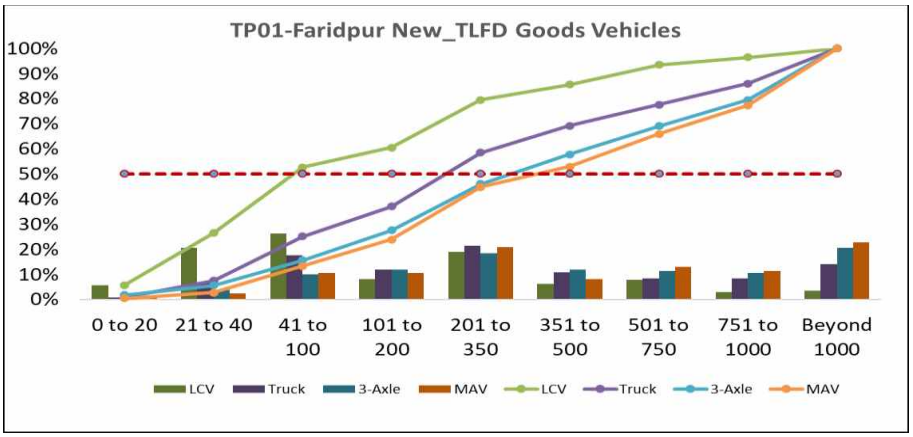

Figure 4-15 Trip length Frequency Distribution at Faridpur Toll Plaza (2nd OD Survey)– Goods

- Around 60.5% of LCVs, 37.1% of Trucks, 27.5% 3-Axle, 23.9% MAVs are having trip length less than 200 km.

- 32.9% of LCVs, 40.5% of 2-Axle trucks, 41.5% of 3-Axle trucks and 42.1% of MAV are having trip lengths more than 200 km and less than 750 km.
- Around 6.5% of LCVs, 22.4% of 2-Axle trucks, 31.0% of 3-Axle trucks and 34.0% of MAV are having trip lengths more than 750 km which refers there is significant medium and long-distance traffic through the Faridpur Toll plaza.
- Major OD pairs of (3A & MAV) are Bareilly-Lucknow, Bareilly-Faridpur, Lucknow-Delhi, Bareilly-Shahjahanpur etc.

4.4.6.2 Passenger Vehicles

Trip length Frequency Distribution at Faridpur Toll Plaza

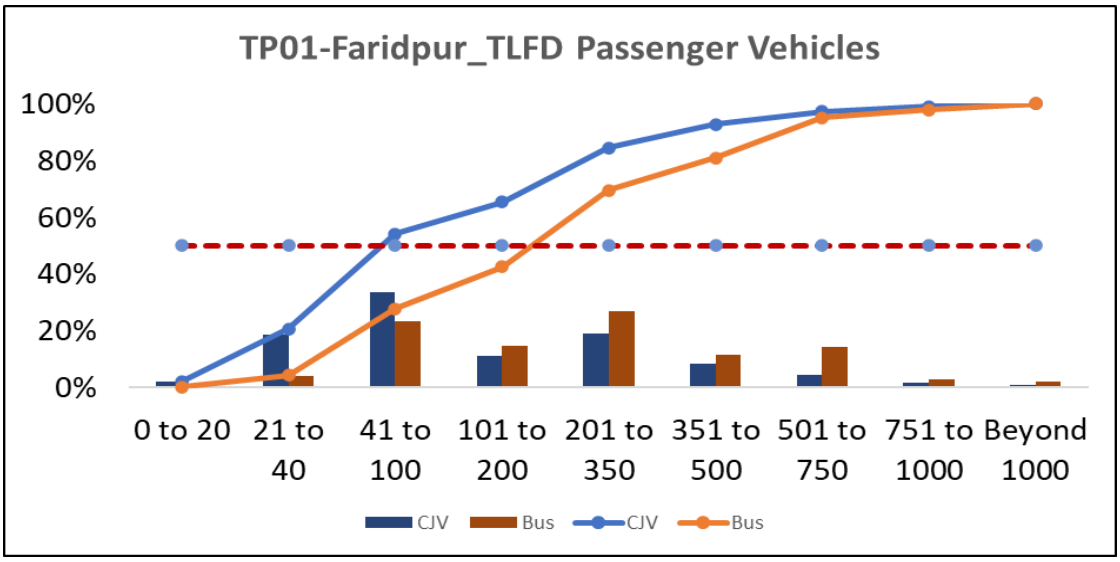

Figure 4-16 Trip length Frequency Distribution at Faridpur Toll Plaza - Passengers

- Around 54.2% of Cars and 27.5% Busses are having less than 100 km trip length.
- Approximately 11.3% of Cars and 14.9% of Busses are having less than 200 km trip length. 18.9% of Cars and 26.9% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.
- 14.6% of cars and 28.5% of Busses trips are between 351 km to 1000 km, and 1.0% of Cars and 2.1% of Busses trips are beyond 1000 km.
- Major OD pairs are Bareilly-Shahjahanpur, Bareilly-Faridpur, Bareilly-Lucknow, Bareilly-Lucknow, Lucknow-Delhi, Shahjahanpur-Delhi etc.

Trip length Frequency Distribution at Maigalganj Toll Plaza

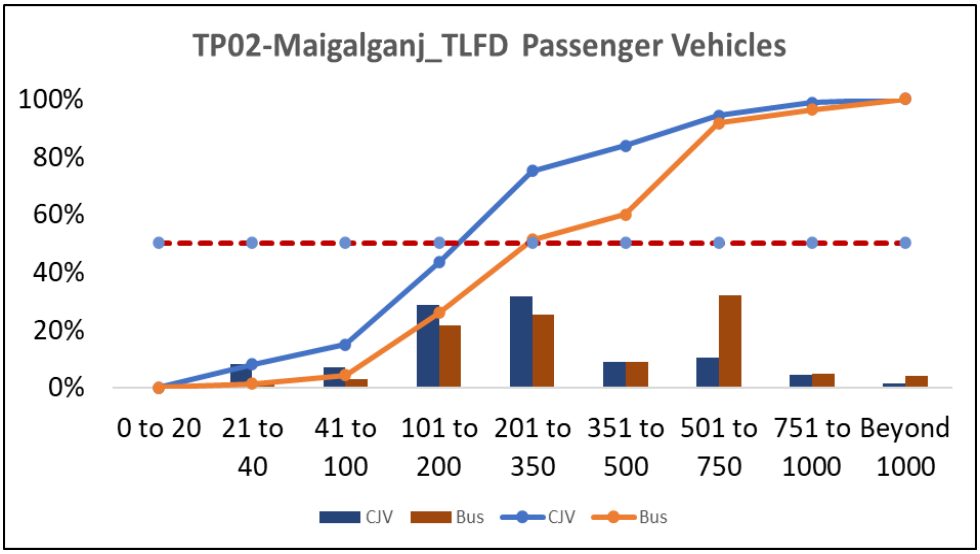

Figure 4-17 Trip length Frequency Distribution at Maigalganj Toll Plaza-Passengers

- Around 14.8% of Cars and 4.2% Busses are having less than 100 km trip length.
- Approximately 28.6% of Cars and 21.6% of Busses are having less than 200 km trip length. 31.6% of Cars and 25.3% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.
- 8.9% of cars and 8.8% of Busses trips are between 351 km to 500 km, 14.8% of Car and 36.3% of Busses trips are between 500 km to 1000 km and 1.3% of Car and 3.7% of Busses trips are beyond 1000 km.
- Major OD pairs are Bareilly-Lucknow, Shahjahanpur-Lucknow, Shahjahanpur-Sitapur, Bareilly-Sitapur etc.

Trip length Frequency Distribution at Alternate Road

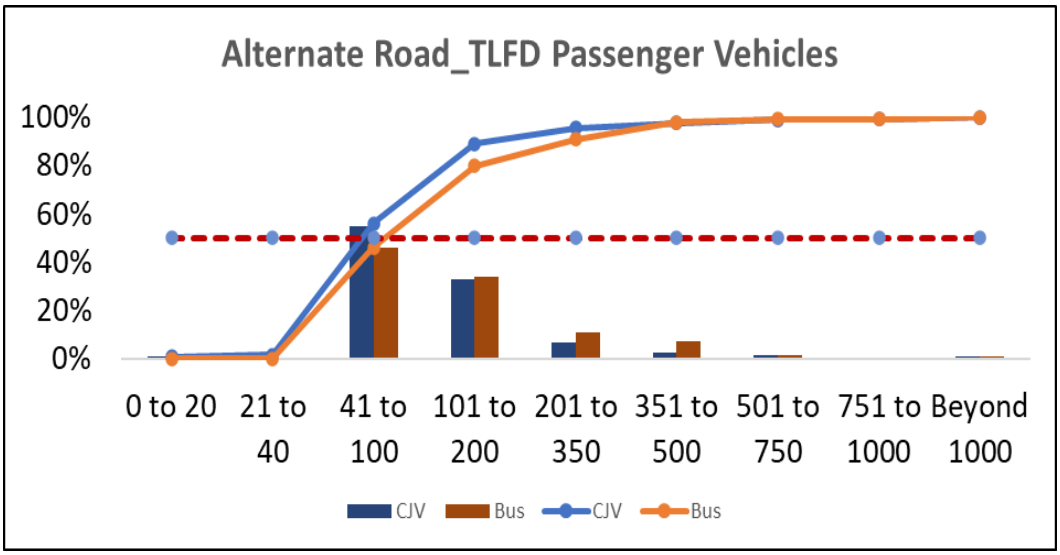

Figure 4-18: Trip length Frequency Distribution at Alternate Road -Passengers

- Around 56.0% of Cars and 45.9% Busses are having less than 100 km trip length.

- Approximately 33.0% of Cars and 33.7% of Busses are having less than 200 km trip length. 6.4% of Cars and 11.0% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.
- 2.3% of cars and 7.2% of Busses trips are between 351 km to 500 km, 1.5% of Car and 1.3% of Busses trips are between 500 km to 1000 km and 1.0% of Car and 1.0% of Busses trips are beyond 1000 km.
- Major OD pairs are Bareilly-Bisalpur, Bareilly-Shahjahanpur, Bareilly-Hardoi Bareilly-Nigohi etc.

Trip length Frequency Distribution at Faridpur Toll Plaza (2nd OD Survey)

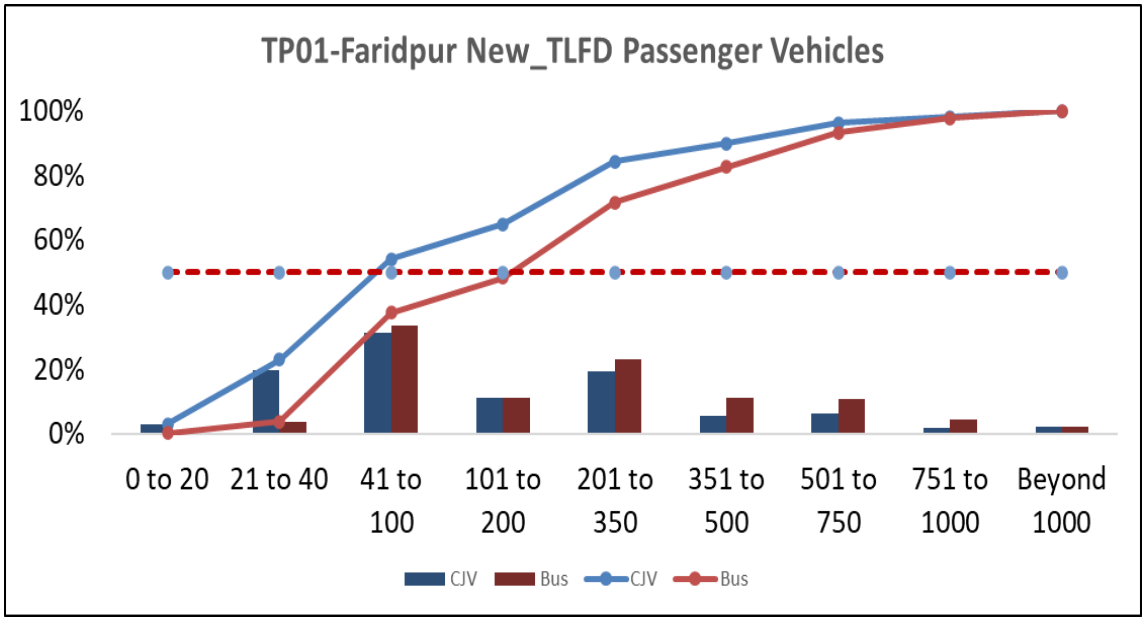

Figure 4-19: Trip length Frequency Distribution at Faridpur Toll Plaza (2nd OD Survey) – Passengers

- Around 54.1.0% of Cars and 37.4% Busses are having less than 100 km trip length.
- Approximately 10.9% of Cars and 10.97% of Busses are having less than 200 km trip length. 19.23% of Cars and 23.2% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.
- 5.7% of cars and 11.1% of Busses trips are between 351 km to 500 km, 8.2% of Car and 15.1% of Busses trips are between 500 km to 1000 km and 2.0% of Car and 2.2% of Busses trips are beyond 1000 km.
- Major OD pairs are Bareilly-Bisalpur, Bareilly-Shahjahanpur, Bareilly-Hardoi Bareilly-Nigohi etc.

4.4.7 Major Trip Generators

An analysis was carried out to identify the major trip generators. Table and figure below present the major trip generators of all passenger and goods vehicles at the toll plazas.

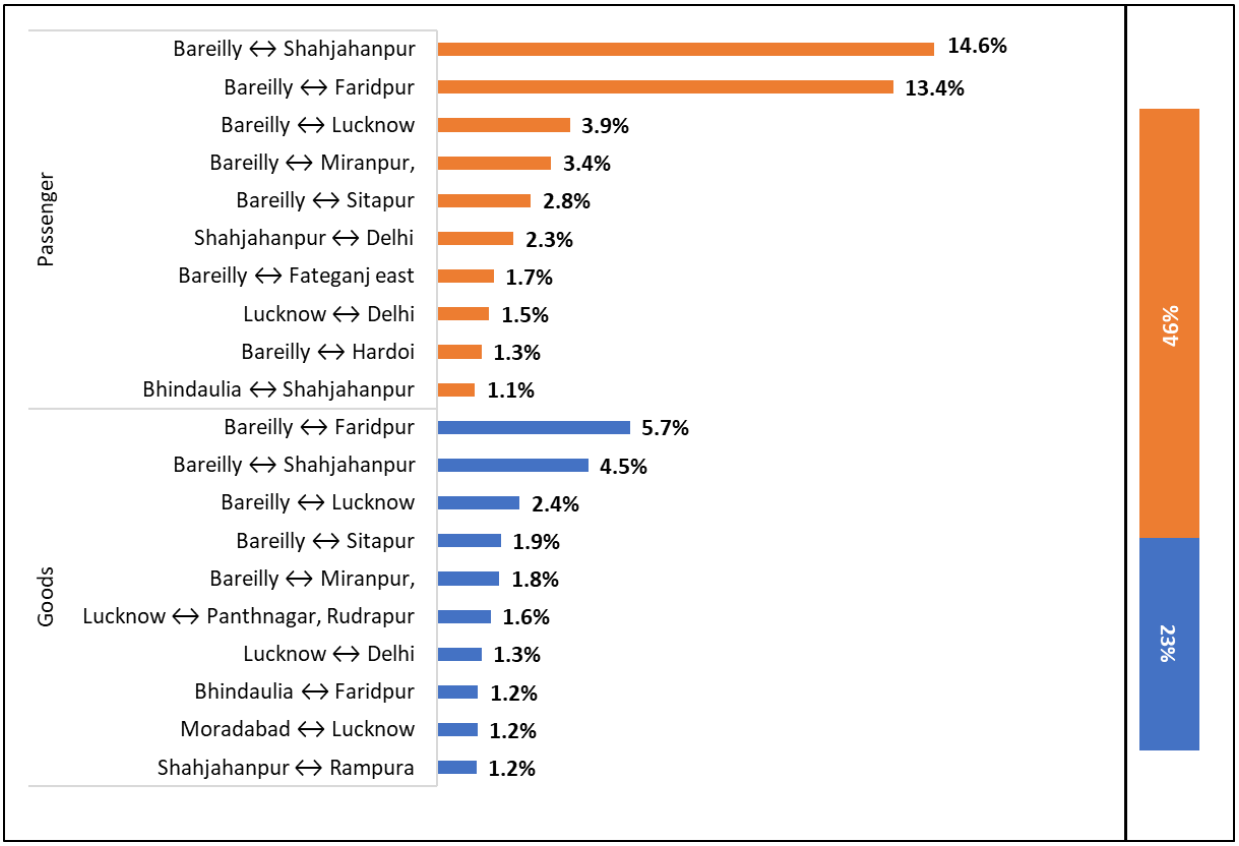

Figure 4-20 Major OD Pairs at Faridpur TP

Top ten OD Pairs comprises around 46% of total passenger traffic and 23% of total goods traffic at Faridpur Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

- Top five OD Pair from passenger mode share is of 38.1%. Major OD pairs are generated from, Bareilly Core City, Shahjahanpur, Faridpur, Lucknow, Delhi, Miranpur etc.

Goods wise Major OD Pair at Toll Plaza:

- Top five OD Pair from goods mode share is of 16.1%. Major OD pairs are generated from Bareilly, Lucknow, Sitapur, Delhi, Rampura, Faridpur etc.

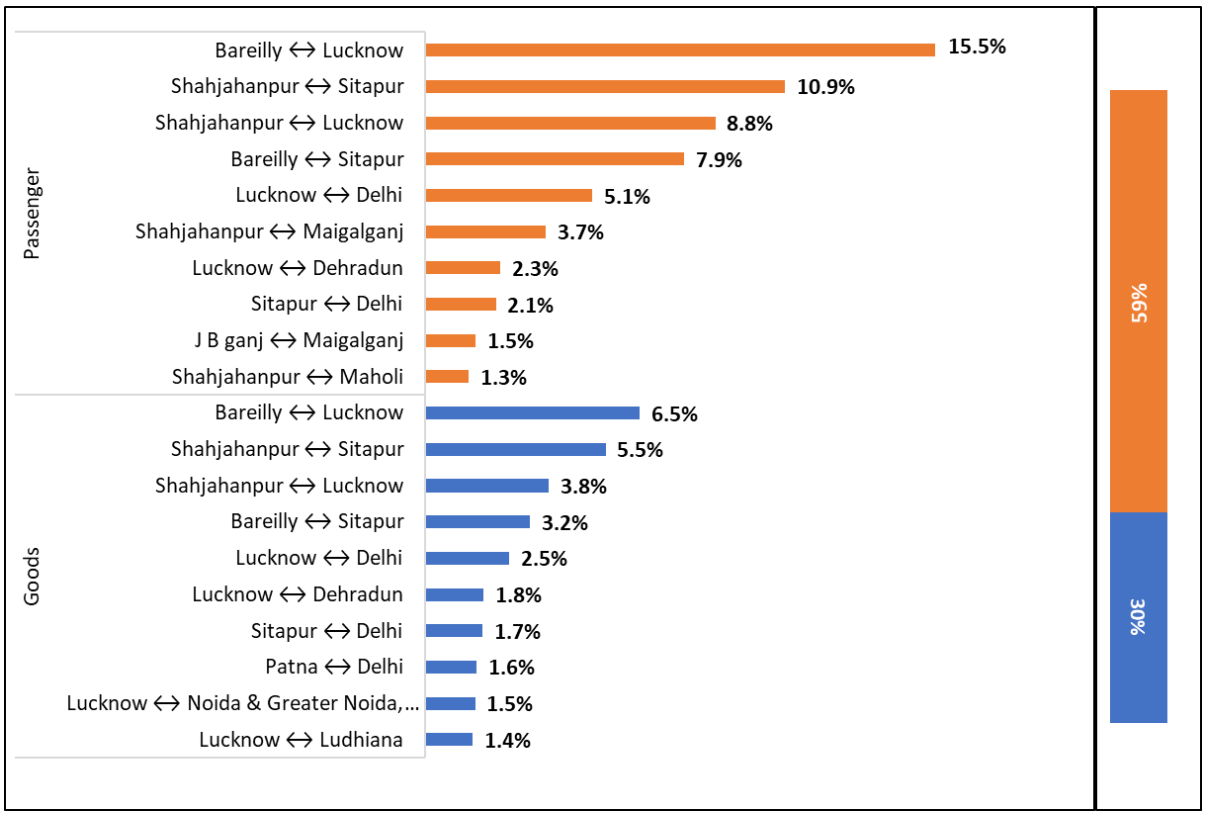

Figure 4-21 Major OD Pairs at Maigalganj TP

Top ten OD Pairs comprises around 59% of total passenger traffic and 30% of total goods traffic at Maigalganj Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

- Top five OD Pair from passenger mode share is of 48.2%. Major OD pairs are generated from Lucknow, Sitapur, Delhi, Shahjahanpur, Bareilly etc.

Goods wise Major OD Pair at Toll Plaza:

- Top five OD Pair from goods mode share is of 21.5%. Major OD pairs are generated from Lucknow, Sitapur, Delhi, Shahjahanpur, Bareilly etc.

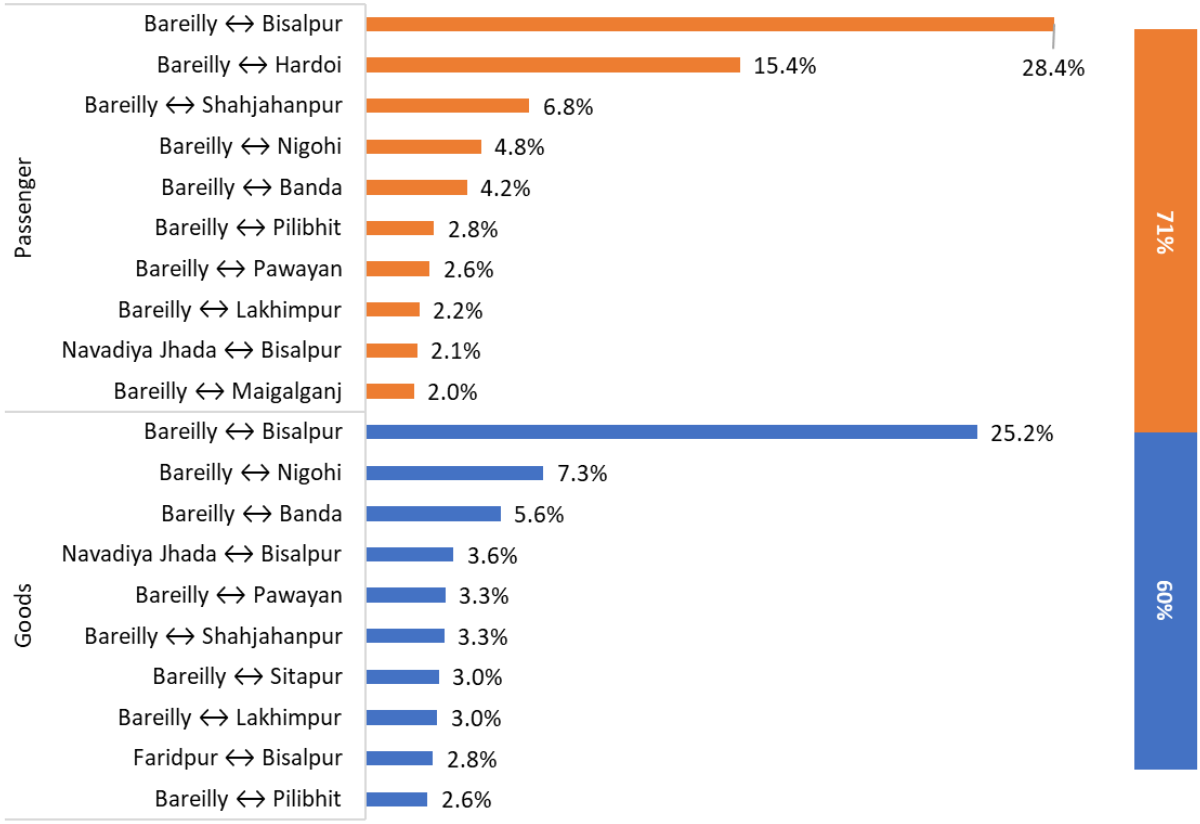

Figure 4-22: Major OD Pairs at Alternate Road

Top ten OD Pairs comprises around 71% of total passenger traffic and 60% of total goods traffic at Maigalganj Toll Plaza.

Passenger wise Major OD Pair at all Toll Plaza's:

Top five OD Pair from passenger mode share is of 60%. Major OD pairs are generated from Bareilly, Bisalpur, Hardoi, Shahjahanpur, Nigohi, Banda etc.

Goods wise Major OD Pair at all Toll Plaza's:

Top five OD Pair from goods mode share is of 50%.

Major OD pairs are generated from Bisalpur, Nigohi, Banda, Navadiya Jhada (Bhuta Town), Faridpur etc.

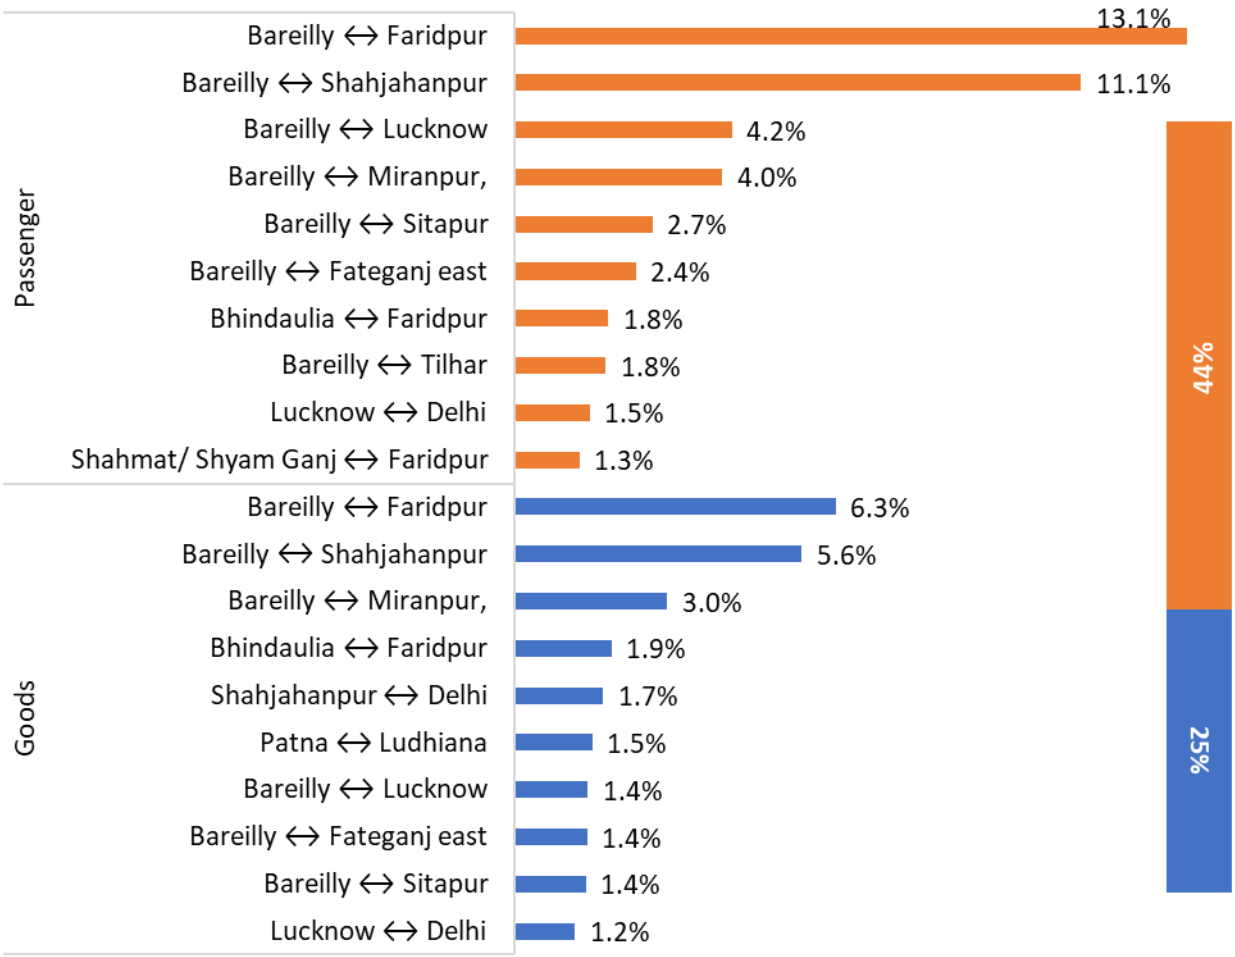

Figure 4-23 Major OD Pairs at Faridpur TP (2nd OD Survey)

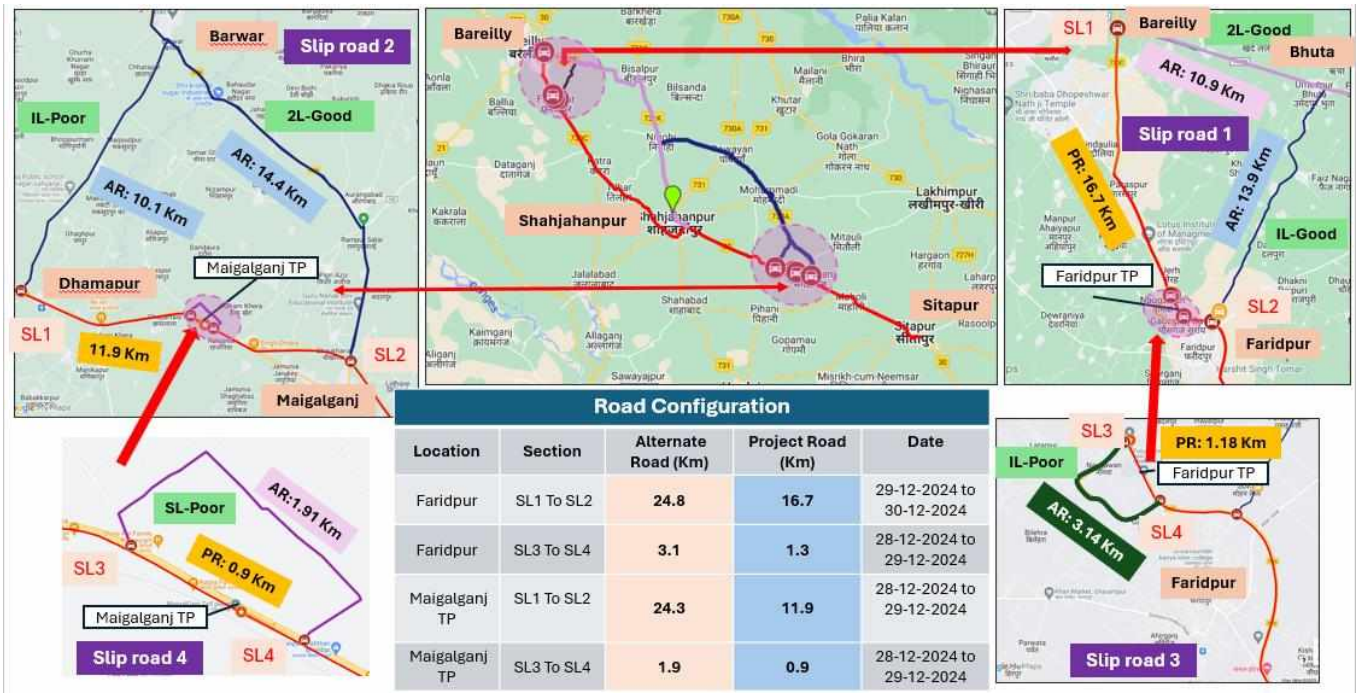
Top ten OD Pairs comprises around 44% of total passenger traffic and 25% of total goods traffic at Faridpur Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:



- Top five OD Pair from passenger mode share is of 35.1%. Major OD pairs are generated from, Bareilly Core City, Shahjahanpur, Faridpur, Lucknow, Delhi, Miranpur etc.

Goods wise Major OD Pair at Toll Plaza:

- Top five OD Pair from goods mode share is of 18.5%. Major OD pairs are generated from Bareilly, Lucknow, Sitapur, Delhi, Rampura, Faridpur etc.

4.4.8 RP Survey

RP Survey was conducted at 4 Locations 2 at Faridpur toll plaza and other 2 at Maigalganj toll plaza.

Road Configuration

Location	Section	Alternate Road (Km)	Project Road (Km)	Date
Faridpur	SL1 To SL2	24.8	16.7	29-12-2024 to 30-12-2024
Faridpur	SL3 To SL4	3.1	1.3	28-12-2024 to 29-12-2024
Maigalganj TP	SL1 To SL2	24.3	11.9	28-12-2024 to 29-12-2024
Maigalganj TP	SL3 To SL4	1.9	0.9	28-12-2024 to 29-12-2024

Figure 4-24: RP Survey Location & Network Map

From the Registration plate survey, it is observed that:

Around 150 vehicles per day are using slip roads at Faridpur Toll plaza. And 78% of vehicles falls in “Car” category.

Around 70 vehicles per day are using slip roads at Maigalganj Toll plaza. And 80% of vehicles falls in “Car” category.

Table 4-19: RP Survey Results Mode Wise

Toll Plaza	Faridpur TP						Maigalganj TP					
Slip Road Location	SL 1	SL 2	Leakage /RP Matched Vehicles	SL 3	SL 4	Leakage /RP Matched Vehicles	SL 3	SL 4	Leakage /RP Matched Vehicles	SL 1	SL 2	Leakage /RP Matched Vehicles

CHAPTER 5

Diversion & Development Traffic Impact Assessment

5. Diversion & Development Traffic Impact Assessment

5.1 Introduction

This chapter presents the details of road network in the project influence area and the potential impact on the project road traffic during concession period. The traffic diversion section covers the comparison of the potential alternate routes with the project road.

Road network assessment and alternate modes were identified, and risk assessment has been done to determine traffic likely to be diverted to / from various routes by mode-wise based on generalized costs including toll fees on project road and alternate routes.

This chapter also presents the details of land development in the project influence area and the potential impact on the project road traffic. Growth rates obtained from elasticity method needs to be adjusted for diversions as some of the upcoming development near project area can significantly affect the traffic estimates. The diversion and development section cover the potential land use development near project area and their effect on the future traffic estimates.

5.2 Diversion Traffic to Project Road/Alternate Routes

5.2.1 Road network assessment

Road network in the project influence area (PIA) was studied in detail from the past reports, latest news articles for all the potential impact roads on the project road traffic. Based on the site appreciation and desktop research it has been observed that there is viable alternate road that exists for the project road the & table below illustrates the list of alternate road development.

Table 5-1 Alternative Roads /Development Impacts on Project Road

S.NO	Alternative Road/ Network/ Land /Improvements	Impact Type	Year Of Impact
1	6 lane greenfield access-controlled highway with a route alignment connecting NH-334 Ganga Expressway	Negative impact on Both Faridpur & Maigalganj TP	FY27: 50% FY28:100%
2	Widening of Shahjahanpur-Hardoi-Lucknow to 4L	Negative Impact on Maigalganj TP	FY27: 50% FY28:100%
3	Ganga E-Way Phase-II (From Haridwar)	Negative Impact on Maigalganj TP	FY36: 50% FY37: 100%
4	4L E-Way from Ghaziabad-Hapur to Kanpur-Unnao Greenfield alignment via Farrukhabad (tentative length 380 Km)	The OD pairs impacted by this expressway are part of the Ganga Expressway diversion	

5.2.2 Approach & Methodology

The Diversion Analysis process starts with the identification of potential alternate routes which was described in the earlier section. Post identification of the alternate routes, the next step involves quantification of the potential divertible traffic on the project road and the identified alternate routes.

The potential divertible traffic is the traffic which could shift from one road to the other road considering all the factors such as Vehicle operating cost, Travel time and Tolls. Subsequently a diversion analysis (binomial model) is performed to identify the quantum of the traffic that shift to the project road (positive diversion) or shift to the alternate road (negative diversion). The positive or the negative diversion is based on the generalized costs obtained from the diversion analysis model.

In this case, as seen in the earlier section there are potential alternate routes which are combination of greenfield & brownfield upgradations. With respect to the potential divertible traffic for the project road it has been quantified based on the O-D analysis. The potential divertible traffic for the proposed alternate for the base year is not available as it is not operational at present (base year). In the absence of potential divertible traffic on the alternate route, the potential divertible traffic on project road is considered as total potential divertible traffic (PR+AR) for the diversion analysis.

5.2.2.1 Diversion 1 Ganga Expressway Impact

Pair 1: Hapur to Lucknow (Ganga E-Way)

- Negative Impact on both toll Plaza's due to proposed Ganga Expressway for the traffic plying between Hapur, Meerut, Ghaziabad Delhi & Greater Noida towards Lucknow, Bihar & beyond.

Pair 2: Hapur to Kanpur (Ganga E-Way)

- Negative Impact on Faridpur toll Plaza's due to proposed Ganga Expressway for the traffic plying between Hapur, Meerut, Ghaziabad Delhi & Greater Noida towards Kanpur, Varanasi & beyond.

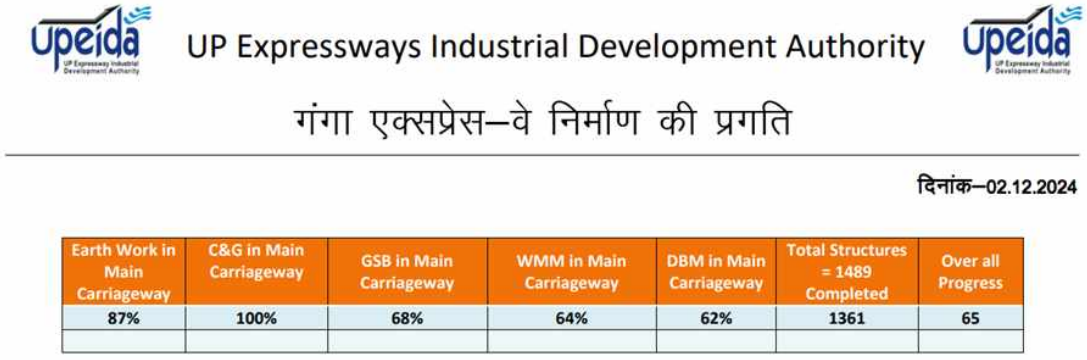
Pair 3: Bareilly to Kanpur (Ganga E-Way)

- Negative Impact on Faridpur toll Plaza's due to proposed Ganga Expressway for the traffic plying between Bareilly, Rampur, Pilbhit & Uttarakhand towards Kanpur, Varanasi & beyond.

Pair 4: Hapur to Shahjahanpur (Ganga E-Way)

- Negative Impact on Faridpur toll Plaza's due to proposed Ganga Expressway for the traffic plying between Uttarakhand, Bareilly, Moradabad & Beyond towards Shahjahanpur, Lakhimpur & Local zones.

5.2.2.2 Diversion 2 Shahjahanpur to lucknow (NH-731 Improvement)



Negative Impact at Maigalganj toll Plaza's due to proposed Ganga Expressway for the traffic plying between Shahjahanpur, Bareilly, Rampur, Moradabad towards Lucknow, Bihar & beyond.

5.2.3 Ganga Expressway

594 km Ganga Expressway project by UPEIDA is an under construction 6 lane greenfield access-controlled highway with a route alignment connecting NH-334 in Meerut District with NH-2 at Prayagraj (Allahabad) Bypass in Prayagraj District.

This greenfield project was first announced in 2008 connect Noida with Ballia. Since then, the project in Phase 1 has been revised to connect Meerut with Prayagraj. In Phase 2, the expressway will be extended by 110 km to Tigri on the Uttar Pradesh / Uttarakhand Border and by 314 km to Ballia near Varanasi.

- **Status:** Under Construction
- **Developers:** Adani Enterprises and IRB Infrastructure Developers
- **Owner:** Uttar Pradesh Expressways Industrial Development Authority (UPEIDA)
- **Project Model:** DBFOT under PPP.

UP Expressways Industrial Development Authority

गंगा एक्सप्रेस–वे निर्माण की प्रगति

दिनांक–02.12.2024

Earth Work in Main Carriageway	C&G in Main Carriageway	GSB in Main Carriageway	WMM in Main Carriageway	DBM in Main Carriageway	Total Structures = 1489 Completed	Over all Progress
87%	100%	68%	64%	62%	1361	65

5.2.4 Diversion-1 (Ganga Expressway Impact)

Traffic coming from Delhi and North Delhi will have two alignments passing on north side of UP state once the Ganga expressway is completely operational. Consultant has considered the impact of ganga expressway in Pair wise as mentioned in the Table 5-2 below.

Table 5-2 Pair wise Route Comparison b/w PR & AR

Pair	From	To	Route Via PR	Route Via Ganga E-way (AR)	Impacted Toll Plaza's
1	Hapur	Lucknow	A-B-C-D-E	A-K-J-I-F-E	Both Toll Plaza's
2	Hapur	Kanpur	A-B-C-I-H	A-K-J-I-F-G-H	Faridpur Toll Plaza
3	Bareilly	Kanpur	B-C-I-H	B-K-J-I-F-G-H	Faridpur Toll Plaza
4	Hapur	Shahjahanpur	A-B-C	A-K-J-C	Faridpur Toll Plaza

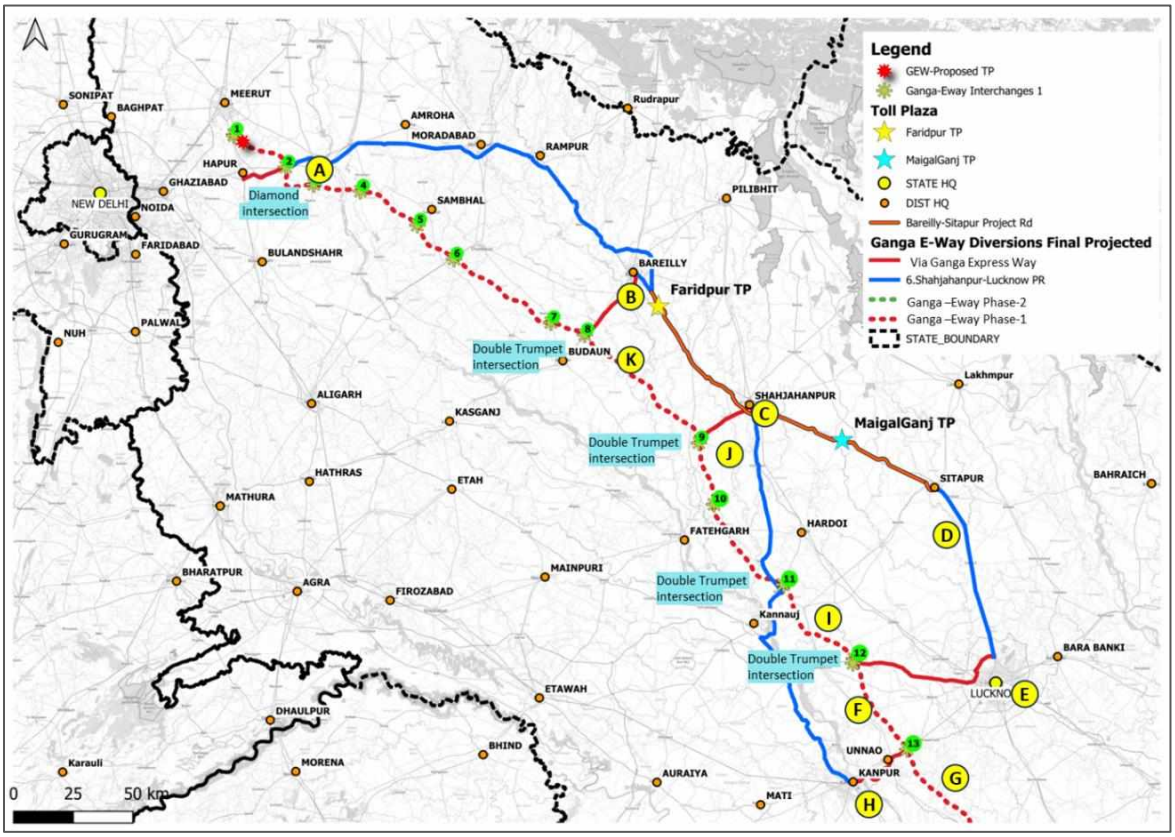


Figure 5-1 Ganga Expressway Route Comparison

Pair 1: Hapur to Lucknow (Ganga E-Way Impact)

Traffic coming from the Hapur, Meerut, Delhi, beyond west part & North of it will have two route options available once the Ganga Expressway is completely operational. The common point for both the Project Road and alternate route will be Hapur and the route comparison between Hapur to Lucknow via Project Road vis a-vis alternate route is described below.

Table 5-3 Hapur Lucknow Route Comparison b/w PR & AR

ROUTE COMPARISON					
YEAR	**ROAD (PR or AR)**	**SECTION**	**LENGTH (KM)**	**ROAD CONFIG**	**REMARKS**
FY25	PR	Hapur (NH334) - Brijghat Toll plaza	19	6L	
	PR	Brijghat Toll plaza - Rajabpur (NH9)	27	6L	
	PR	Rajabpur (NH9) - Moradabad	29	6L	
	PR	Moradabad - Bareilly	82	4L	
	PR	Bareilly - Shahjahanpur	96	4L	
	PR	Shahjahanpur - Lucknow	175	4L	
	PR	South City Extension - Saraikaiyan	5	4L	
	PR	Rampur Bypass	8	2L	2Lane to 4L Upgradation works Going on for 8 Km's length
FY27	AR	Node 2 To Node 11	343	6L-EWAY	

	AR	Node 11 To Lucknow	63	6L-EWAY	Greenfield Expressway under Construction
Total Distance Via PR(Km)			**441**		
Total Distance Via AR(Km)			**406**		

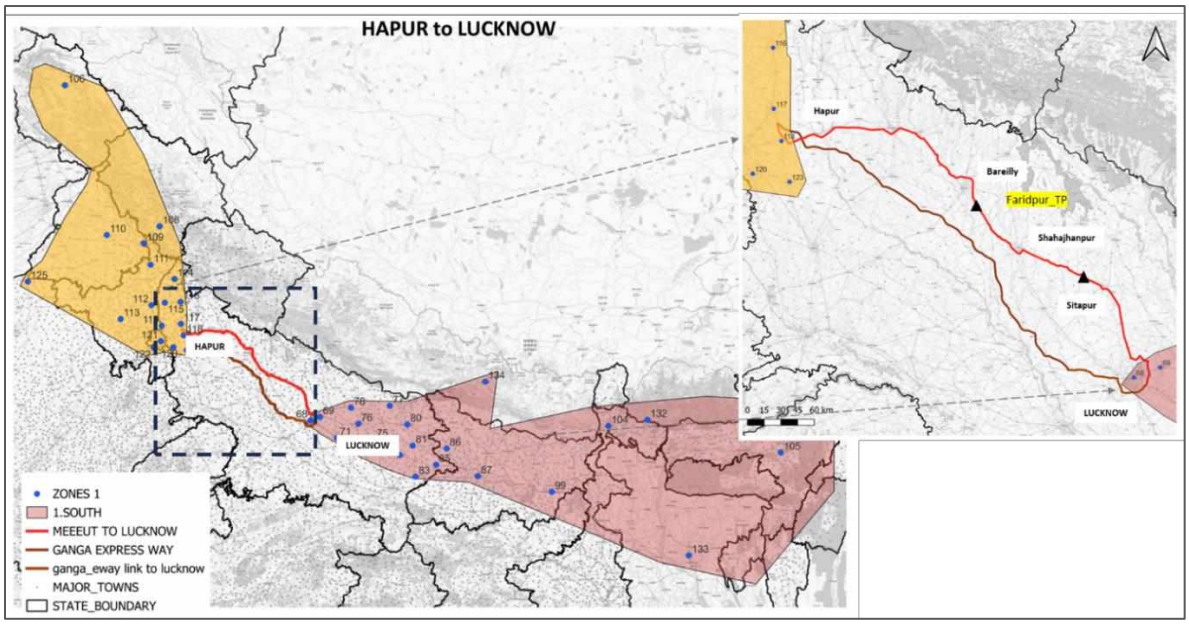

Figure 5-2 Hapur Lucknow (Ganga E-Way) zoning Scheme

It is observed that Project Road is 35 kms longer than alternative route for Hapur to Lucknow route. Traffic zones which are considered for this part of diversion is shown above Figure 5-2.

Zones that are considered by consultant on the North side are Hapur, Delhi, North Rajasthan, Punjab, Himachal Pradesh, Haryana and Jammu & Kashmir (Zones highlighted inside yellow polygon in Figure 5-2). Similarly, zones considered on the South side are Lucknow, Bihar, Northeast India & Northeast Uttar Pradesh were considered for potential divertible traffic estimation. (Zones highlighted inside Brown polygon in Figure 5-2). All the Zones coming in the PIA of the proposed network development are considered and correspondingly travel demand is estimated from the potentially impacted zones. Potential Divertible traffic for the base year is mentioned below.

Table 5-4 Potential Divertible Traffic in Base year (Pair 1)

Mode	Faridpur TP	Maigalganj TP
Car	340	340
Minibus	108	108
Bus-2A	61	61
Bus-3A	221	221
LCV	152	152
2 Axle	379	379
3 Axle	340	340
MAV	108	108

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the

project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

The consultant has considered that this diversion shall happen phase wise with 50% of the divertible traffic diverting in FY-27 and 100% of the divertible traffic diverting in FY-28. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

Table 5-5 Traffic diversion from Faridpur toll plaza to Hapur Lucknow – Diversion1 in FY25

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	340	-185	-2.0%
Bus	108	-82	-8.2%
LCV	61	-36	-7.2%
2 Axle	221	-135	-9.8%
3 Axle	152	-73	-8.6%
MAV	379	-226	-10.1%

Table 5-6 Traffic diversion from Maigalganj toll plaza to Hapur Lucknow – Diversion1 in FY25

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	340	-185	-4.2%
Bus	108	-82	-16.7%
LCV	61	-36	-9.5%
2 Axle	221	-135	-12.7%
3 Axle	152	-73	-9.6%
MAV	379	-226	-15.6%

The tables below illustrate the divertible traffic onto the project road at Faridpur toll plazas from FY-25 up to FY-46. The sudden jump in traffic from FY27 to FY28 is due to the consideration of phase wise diversion as described earlier.

Pair 2: Hapur to Kanpur (Ganga E-Way Impact)

Traffic coming from the Hapur, Meerut, Delhi, beyond west part & North of it will have two route options available once the Ganga Expressway is completely operational. The common point for both the Project Road and alternate route will be Hapur and the route comparison between Hapur to Kanpur via Project Road vis a-vis alternate route is described below in Table 5-7.

Table 5-7 Hapur Kanpur Route Comparison b/w PR & AR

ROUTE COMPARISON					
Year	Road (PR or AR)	SECTION	LENGTH (KM)	ROAD CONFIG	REMARKS
FY25	PR	Hapur (NH334) - Brijghat Toll plaza	19	6L	

ROUTE COMPARISON					
Year	**Road (PR or AR)**	**SECTION**	**LENGTH (KM)**	**ROAD CONFIG**	**REMARKS**
		Brijghat Toll plaza - Rajabpur (NH9)	27	6L	
		Rajabpur (NH9) - Moradabad	29	6L	
		Moradabad – Bareilly	82	4L	
		Bareilly – Shahjahanpur	96	4L	
		Shahjahanpur – Shahabad	22	4L	
		Shahabad (NH731) – Bilgram	56	2L	
		South City Extension – Saraikaiyan	5	4L	
		Rampur Bypass	8	2L	2Lane to 4L Upgradation works Going on for 8 Km's length
FY28	AR	Node 2 To Node 11	297	6L-EWAY	Greenfield Expressway under Construction
Total Distance Via PR(Km)			**344**		
Total Distance Via AR(Km)			**297**		

It is observed that Project Road is 47 kms longer than alternative route for Hapur to Kanpur route. Traffic zones which are considered for this part of diversion is shown below.

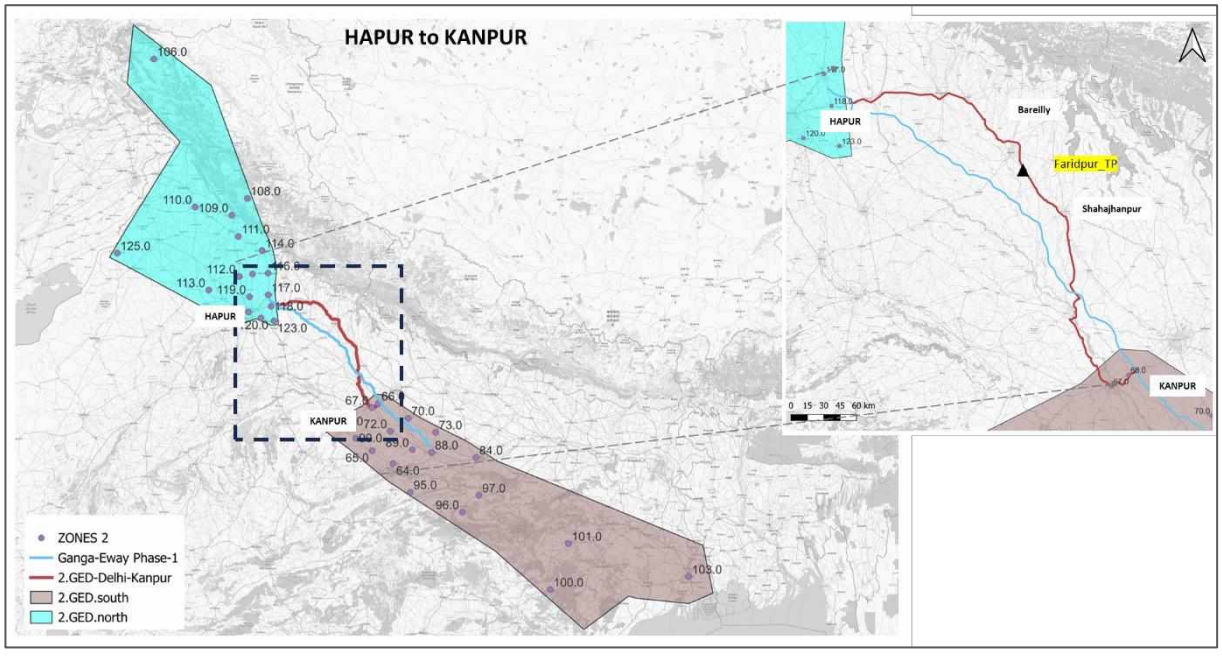

Figure 5-3 Hapur Kanpur (Ganga E-Way) zoning Scheme

Zones that are considered by consultant on the North side are Hapur, Delhi, North Rajasthan, Punjab, Himachal Pradesh, Haryana and Jammu & Kashmir (Zones highlighted inside yellow polygon in Figure 5-3). Similarly, zones considered on the South side are Kanpur, Odisha, Varanasi & Kolkata were considered for potential divertible traffic estimation. (Zones

highlighted inside Brown polygon in Figure 5-3). All the Zones coming in the PIA of the proposed network development are considered and correspondingly travel demand is estimated from the potentially impacted zones. Potential Divertible traffic for the base year is mentioned below in Table 5-8.

Table 5-8 Potential Divertible Traffic in Base year (Pair 2)

Mode	Faridpur TP
Car	46
Minibus	0
Bus-2A	8
Bus-3A	0
LCV	21
2 Axle Truck	74
3 Axle Truck	53
MAV	121

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

The consultant has considered that this diversion shall happen phase wise with 50% of the divertible traffic diverting in FY-27 and 100% of the divertible traffic diverting in FY-28. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

Table 5-9 Traffic diversion from Faridpur toll plaza to Hapur Kanpur -Diversion1 in FY25

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	46	-31	-0.3%
Bus	8	-8	-0.8%
LCV	21	-15	-2.9%
2 Axle	74	-66	-4.8%
3 Axle	53	-37	-4.4%
MAV	121	-104	-4.6%

The tables below illustrate the divertible traffic onto the project road at Faridpur toll plazas from FY-25 up to FY-46. The sudden jump in traffic from FY27 to FY28 is due to the consideration of phase wise diversion as described earlier.

Pair 3: Bareilly to Kanpur (Ganga E-Way Impact)

Traffic coming from the Bareilly, Moradabad, Pilibhit, & Uttarakhand will have two route options available once the Ganga Expressway is completely operational. The common point for both the Project Road and alternate route will be Bareilly and the route comparison between Bareilly to Kanpur via Project Road vis a-vis alternate route is described below.

Table 5-10 Bareilly Kanpur Route Comparison b/w PR & AR

ROUTE COMPARISON					
Year	**Road (PR or AR)**	**SECTION**	**LENGTH (KM)**	**ROAD CONFIG**	**REMARKS**
FY25	PR	Bareilly - Shahjahanpur	96	4L	
		Shahjahanpur - Shahabad	22	4L	
		Shahabad (NH731) - Bilgram	56	2L	
		South City Extension - Saraikaiyan	5	4L	
FY27	AR	Node 8 - Node 9	66	6L-EWAY	Greenfield Expressway under Construction
		Node 9 - Node 10	28	6L-EWAY	
		Node 10 - Node 11	47	6L-EWAY	
		Bareilly - Node 8	48	4L	
		11th-Bilgram	2	2L	
Total Distance Via PR(Km)			**179**		
Total Distance Via AR(Km)			**191**		

It is observed that Project Road is 12 kms shorter than alternative route for Bareilly to Kanpur route. Traffic zones which are considered for this part of diversion is shown below.

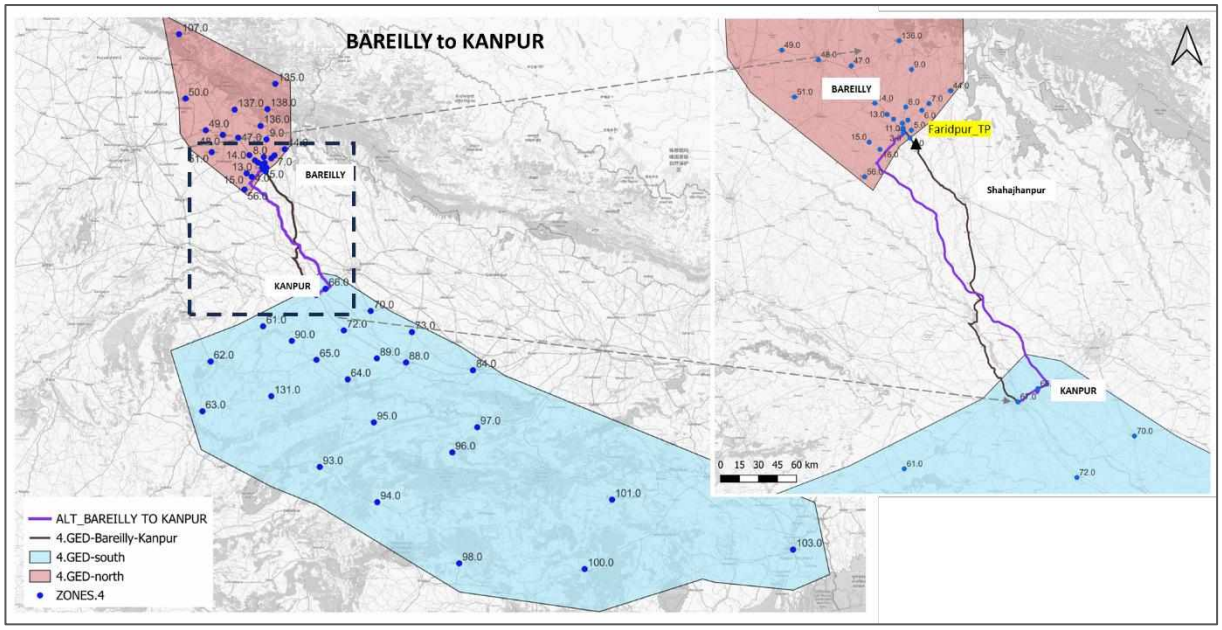

Figure 5-4 Bareilly Kanpur (Ganga E-Way) zoning Scheme

Zones that are considered by consultant on the North side are Bareilly, Moradabad, Pilibhit, & Uttarakhand (Zones highlighted inside brown polygon in Figure 5-4). Similarly, zones considered on the South side are Kanpur, Odisha, Varanasi & Kolkata were considered for potential divertible traffic estimation. (Zones highlighted inside blue polygon in Figure 5-4). All the Zones coming in the PIA of the proposed network development are considered and correspondingly travel demand is estimated from the potentially impacted zones. Potential Divertible traffic for the base year is mentioned below.

Table 5-11: Potential Divertible Traffic in Base year (Pair 3)

MAV	58	-33	-1.5%

The tables below illustrate the divertible traffic onto the project road at Faridpur toll plazas from FY-25 up to FY-46. The sudden jump in traffic from FY27 to FY28 is due to the consideration of phase wise diversion as described earlier.

CHAPTER 6

Traffic Growth rate estimation

6. Traffic Growth Rate Estimation

6.1 Background

Demand for transport is derived demand. Derived demand is an economic term which refers demand for a good in one sector occurring because of demand from another sector. Transport users are accessing services not because of its direct benefits but because they wish to access product. Transport demand is basically movement of goods and passengers. Passengers travel to satisfy the need (work, school, college, recreation, etc.) and nobody travel just for the sake of travelling and we transport good as a part of overall economic activity. Derived demand for transportation is often difficult to estimate for future just by analysing the traffic growth in past years as it has derived from demand from some other sectors which may or may not vary in future in the same way. To consider trend in other sector and effect of the same on transport demand factors such as GDP, Primary GDP, secondary GDP, tertiary GDP, states GDP, Per Capita Income and vehicle registrations data is considered. These data are readily available as published by various organizations and more representative of growth in economy and related sectors.

The investment priorities are governed by the traffic demand, assessed benefits, and cost of the project. Demand plays the significant role, which governs the type of facility / infrastructure to be created. This in turn determines likely benefits and costs to develop the same. Prediction of traffic demand becomes an important task and must be conducted near accurately. The accurate estimation of traffic has direct bearing on the viability of project. Recognizing this, efforts were made to carefully assess all the parameters that help in predicting the traffic demand in future which necessitates realistic estimation of traffic growth rates. This chapter explains the methodology and estimation of traffic growth rates for the project for the horizon years. Traffic growth on a road facility is generally estimated based on the historical trends, in the present case traffic growth rates are estimated using Elasticity method as per IRC-108-2015 - *Guidelines for Traffic Forecast on Highways*.

6.2 Methodology

Traffic growth rate estimation follows systematic approach which is based on econometric modelling. The detailed methodology to arrive at growth rate is explained in the following sections.

6.2.1 Governing Factors for Traffic Growth

Traffic growth is governed by number of factors such as Gross National Product (GNP) or Gross Domestic Product (GDP), Agricultural output, Industrial Output which are mainly economic indicators and population, rural/urban mix of population which are demographic factors. Since these indicators vary widely across the country, traffic growth rate varies from state to state, and within state from region to region. So, it is necessary to identify project influence zones and giving consideration while arriving at above indicators.

6.2.2 Determination of Past Trends

Past trend of traffic growth is key parameter in determination of future trend. Past trend of traffic can be analysed from variety of indicators such as traffic flow from census, vehicle registration and fuel sales. Vehicle registrations data is readily available as published by trusted organization is used for this study. For establishing reliable growth rates data should be taken for considerable for number of years. The ideal way to arrive at rate of growth is through regression analysis. Once we have analysed growth in traffic, we can arrive at traffic growth in project influence area by finding out weight of different project influence areas using surveys.

6.2.3 Goods Vehicle Forecasting

Goods vehicle forecasting is done based on growth in tonnage and splits among distinct categories of vehicles. Growth in tonnage is obtained like procedure explained above. For vehicular splits base year splits were considered as benchmark and future year splits were projected based on experience and past growth trends in the same category of vehicles. Once we have tonnage and splits projections number of goods based on vehicle category and corresponding growth rate is calculated.

Traffic forecasting for project road traffic was done considering past trend in growth and analyzing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

6.3 Determination of Growth Trends

Past data pertaining to the project corridor was sourced from the client. This includes traffic data for all the two toll plazas Faridpur & Maigalganj. The findings from the data are summarized in the following subsequent sections.

6.3.1 Past traffic trend at all toll plazas

Past traffic trends were derived based on the historic traffic data provided by the client. Separate analysis was carried out for toll plaza 01 at Faridpur and toll plazas 02 at Maigalganj, respectively. Traffic count summary, travel pattern for both passenger and goods traffic from the historic traffic data is presented below in Table 6-1.

Table 6-1 Past Traffic Trend at Faridpur (TP1) and Maigalganj Toll Plazas (TP2) based on ETC data

Toll Plaza	Source	FY Year	CJV	LCV/Minibus	Bus/2Axle	3Axle	MAV	Total (Veh)	Total (PCU)
Faridpur TP	ETC	FY-2024	7,088	539	2,415	966	2,474	13,481	29,175
	ETC	FY-2025*	7,580	526	2,369	837	2,216	13,527	27,957
	CAGR % (FY 24-25)		**6.94%**	**-2.41%**	**-1.90%**	**-13.35%**	**-10.43%**	**0.34%**

	CAGR % (FY 24-25*)		**6.59%**	**0.52%**	**-2.04%**	**-18.60%**	**-21.54%**	**-4.23%**	

*FY-2025 * - Apr24-Nov24 Based AADT*

6.3.2 Project Influence Area

A study of the socio-economic profiles of the regions comprising the project influence area (PIA) provides an overview of the factors likely to influence the pattern of economic development and hence the flows and volumes of traffic on the proposed highway. The details include population, per-capita income (PCI), GDP (India), GSDP (States), GDDP (Districts), registered vehicle population and targeted growth rates of the economy. The profiles help to generate basic inputs for the estimation of future growth in transport demand based on past scenarios, perspective changes in transport demand elasticity and economic growth rates.

The analysis of traffic pattern observed on the project road (at both the toll plaza locations) from traffic studies indicates that most of the traffic is generated from Uttar Pradesh, Uttarakhand, Delhi, Bihar, Haryana, Punjab & West Bengal. Hence, the above-mentioned states have been considered as PIA zones in assessing traffic growth. Since drivers of growth for all the traffic streams would be different, these were analyzed separately. In addition, truck traffic was analyzed considering LCV, 2 Axle and 3 Axle, MAV separately to consider the expected changes in freight vehicle market share in future years.

Table 6-2 Project influence areas impact on both toll plazas

States	FARIDPUR TP			MAIGALGANJ TP		
	Cars	Buses	Trucks	Cars	Buses	Trucks
Uttar Pradesh	92.6%	85.4%	66.6%	90.9%	77.3%	63.8%
Uttarakhand	2.9%	4.0%	12.3%	3.7%	2.7%	7.1%
Delhi	2.8%	8.6%	3.7%	3.1%	15.0%	5.2%
Bihar	0.4%	0.3%	3.4%	0.5%	1.3%	5.4%
Haryana	0.5%	0.9%	3.0%	0.8%	2.4%	3.5%
Punjab	0.4%	0.3%	2.6%	0.5%	0.4%	3.7%
West Bengal	0.1%	0.1%	3.0%	0.2%	0.7%	3.7%
North - East India	0.0%	0.1%	1.4%	0.1%	0.0%	2.8%
Himachal Pradesh	0.1%	0.0%	0.7%	0.1%	0.0%	1.2%
Union Territory of Chandigarh	0.0%	0.0%	0.5%	0.1%	0.2%	0.9%
Odisha	0.1%	0.1%	1.1%	0.0%	0.0%	0.7%
Jammu & Kashmir	0.0%	0.1%	0.7%	0.0%	0.0%	1.1%
Total	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**

6.3.3 Growth in Tonnage

To accommodate the dynamic change within the sale of goods vehicles of distinct categories in growth rate estimates, it is pragmatic to consider the overall growth of tonnage on project road at distinct locations. Once the growth of tonnage is established, tonnage share for distinct categories of trucks shall be assumed based on the past trend observed at the toll plaza locations and the potential market share of the individual truck categories with respect to the

region (PIA). Using this growth in tonnage and assumed future tonnage share of distinct categories of goods vehicles the growth rate of each category will be back calculated.

To determine, growth of Historic traffic tonnage, PIA registered vehicles data was converted into total tonnage based on the historic vehicle split. The growth in payloads over the years is shown in the table below.

Table 6-3 Pay load for Different Categories

Mode	LCV	2A TRUCK	3 A TRUCK	MAV
FY-2018	5	9	16	25
FY-2019	5	11.1	17.1	28.5

6.3.4 Growth in Registered Vehicles

The growth in vehicle registrations in the project road influence region is generally a good indicator, as it is found to correlate reasonably well with traffic growth. Thus, it is possible to establish a definite trend and correlation between traffic growth and vehicle registration. To establish future traffic on the project corridor, the trend in vehicle registrations of the influencing areas, which are significantly contributing traffic to the corridor is also studied. Significant growth in registrations of car, buses and trucks has been observed in the project influence areas.

Growth in personal car is observed to be highest followed by freight vehicles and buses in the state of Uttar Pradesh. Compounded annual growth rate of cars, buses and trucks weighted for project area of Toll Plaza 1 at Faridpur is 10.53%, 9.99% & 8.31% respectively as shown in Table 8-4 Weighted vehicle registration data for Project Influence Area of TP1 – Faridpur Table 8-4in Annexures. Similarly, for Maigalganj TP 2 it is 10.50%, 9.42% & 8.13% respectively as shown in Table 8-5 in Annexures.

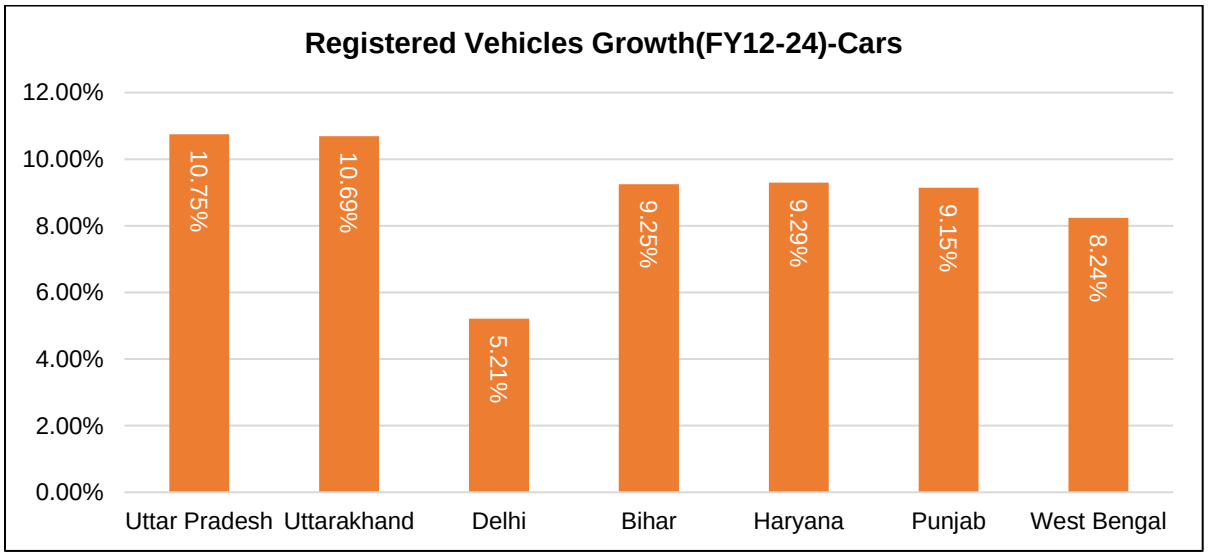

Figure 6-1 Long term growth trends – Registered Cars in the PIA

6.3.5 Past Growth in Regional Economies

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. The time series data of economic indicators is one major economic variable followed in the econometric method of traffic forecasting through establishing a relationship between dependent (traffic / registered vehicles) and independent variable (GDP / GSDP / GDD) for project influence areas. Past economic growth for the PIA zones is sourced from the Central Statistical Organisation (CSO) and are presented in Table 6-4.

Table 6-4 GSDP (in Rs. Millions) for PIA zones

Year	Uttar Pradesh	Uttarakhand	Delhi	Bihar	Haryana	Punjab
2012	72.4	11.5	34.4	24.7	29.8	26.7
2013	75.8	12.4	36.7	25.7	32.1	28.1
2014	80.2	13.4	39.3	27.0	34.8	29.9
2015	83.4	14.1	42.8	27.9	37.1	31.2
2016	90.8	15.3	47.6	29.6	41.3	33.0
2017	101.2	16.8	51.2	31.9	45.7	35.3
2018	105.6	18.1	54.2	34.4	48.2	37.5
2019	109.7	18.6	56.5	38.1	53.3	39.7
2020	114.2	19.0	58.6	39.8	54.5	41.3
2021	109.0	16.7	53.4	36.9	49.6	40.7
2022	121.5	18.4	58.0	40.0	54.4	43.4
2023	132.4	19.8	62.6	44.2	58.7	46.2
2024	142.3	21.3	67.2	46.7	63.4	49.3
CAGR (FY12 - 24)	**5.8%**	**5.3%**	**5.7%**	**5.4%**	**6.5%**	**5.3%**

6.3.6 Commercial Vehicles Sale Trend

Category wise commercial sales trend is presented in the below Figure 6-4. From the figure it is observed that market share of 2 Axle truck and 3 Axle truck is declining from the previous Years whereas MAV market share is increasing. Due to improved road infrastructure and over the years and due to technological advancements in commercial vehicle segments, there is a shift from 2 Axle /3 Axle trucks to MAVs.

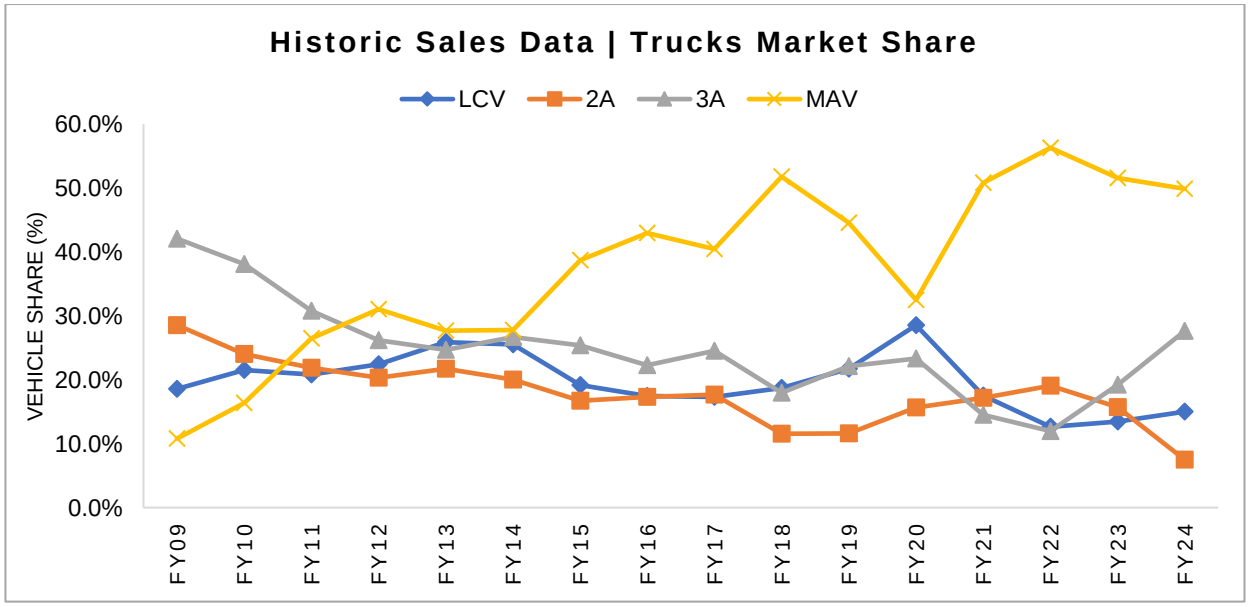

Figure 6-4 Market share between commercial truck categories

6.4 Traffic Growth Drivers

Before going to the traffic growth estimation through the established relation between economic variables and traffic variables, it is prudent to highlight the growth profile of the project corridor in terms of the geographic location and local economic growth potential. The Table 6-5 below summarises the major growth prospects for the traffic in the future on the project road.

Table 6-5 List of developments in the PIA-Growth Driver

Sl. No	Developments	Description	Impact Type
1	Tourism – Agra, Vrindhavan, Ayodhya, Varanasi	The number of tourists visiting Uttar Pradesh has surged, growing from 16 crore in 2016 to over 48 crores currently, with more than 32 crore tourists recorded between January and June 2024 alone[2]. The state experiences an annual footfall of 540 million across its four major religious cities—Varanasi, Ayodhya, Prayagraj, and Mathura-Vrindavan. The upcoming inauguration of the Ram Mandir in Ayodhya is expected to draw an additional 50 to 100 million tourists each year. Moreover, Prayagraj experiences a significant surge in visitors during the Kumbh Mela, which occurs once every six years. In 2017, the city saw a staggering 250 million visitors in less than two months. The Maha-Kumbh in Prayagraj, set to begin on January 13, 2025, is expected to attract an even greater crowd, with projections of 500 million visitors.	Current Growth Driver
2	Industries	The Bareilly-Sitapur stretch serves as a key industrial corridor, with sugar factories being the dominant industry, accounting for 62% of the region's industrial activity. Other notable sectors include food products (10%), flour mills (8%), chemicals, fertilizers, plywood, and agro products, among others. Major companies like Bajaj Hindustan Ltd., WIMCO, IFFCO, Reliance, Bharat Petroleum, Dalmia Bharat Limited and Ramaa Shyama play a significant role in driving economic growth in the area. This corridor stands out as a critical hub for agro-processing, logistics, and diverse industries, supporting regional development.	Current Growth Driver
3	State upcoming developments	The UP Global Investor Summit 2023 marked a significant milestone with 18,643 MoU's signed, amounting to a total investment of Rs 33.50 lakh crore. Key sectors driving these investments include renewable energy (12.41%), higher education (9%),	Future Growth Driver

Sl. No	Developments	Description	Impact Type
		industrial parks (11.35%), manufacturing, logistics, and warehousing. The real estate industry and IT-enabled services also contributed significantly to this growth.	
4	Mega Food Park in Baheri	A major project, the Mega Food Park in Baheri, is under development, featuring a Dairy Craft Cheesemaking plant across 12 acres with an investment of Rs 250 crore, expected to create 600 direct jobs and benefit local farmers.	Future Growth Driver
5	Industrial township	• A new industrial township near **Jhumka** intersection is underway, further bolstering economic and employment opportunities in the region. • The **Moradabad Special Economic Zone** (SEZ) spans 464.28 acres, offering robust infrastructure and sector-specific facilities for handicraft trade, textile, IT/ITES, and hardware manufacturing, making it a multi-product hub. Out of 137 allotted plots, 45 industrial units are already operational, with 377 plots still available for new investments. • The **Greater Bareilly Township**, which focuses on planned urban growth and housing solutions. Additionally, 35 villages have been integrated into the Bareilly Development Authority (BDA) jurisdiction, facilitating easier land acquisition and MSME township development. These initiatives mark significant progress in infrastructure, industrial growth, and urban expansion in Bareilly, Moradabad, and surrounding regions, paving the way for economic advancement and employment opportunities. • The development of "**Medi city**", a designated area focusing on health businesses and activities. This project aims to create a hub for healthcare-related infrastructure and services, with the proposed Medi City land included in the Master Plan 2021.	Future Growth Driver
6	Road network improvements	• **Bareilly Southern Bypass and its connectivity** improvements. Two major road sections are proposed: Ramganga Bridge to Binaur (26 km) and Bareilly South Bypass from Parsakhera to Tilhar Mod (31 km). These road projects are crucial for linking Bareilly to the Ganga Expressway, enhancing regional connectivity and supporting economic growth. However, these projects are currently in the proposal stage, with no reports available yet.	Future Growth Driver

Sl. No	Developments	Description	Impact Type
		• **Ganga Expressway** - 594 km Ganga Expressway project by UPEIDA is an approved 6 lane greenfield access-controlled highway with a route alignment connecting NH-334 in Meerut District with NH-2 at Prayagraj (Allahabad) Bypass in Prayagraj District. Currently under construction stage. • **Widening of Shahjahanpur-Hardoi-Lucknow to 4L** - Currently the Shahjahanpur-Hardoi-Lucknow (NH-731) road is under upgradation from 2 lane to 4 lane.	

6.5 Transport Demand Elasticity

An Econometric method is proposed for forecasting future traffic trend based on elasticity which considers transport demand and most likely pattern of economic growth. The Elasticity Method relates traffic growth to changes in the related economic parameters. To calculate elasticity for various modes mode-wise impact of project influence area on project stretch is calculated which further useful in getting weighted GSDP values for project area. Based on individual state GDP and their mode-wise weight, weighted statistics for State GDP, registered number of vehicles, per capita income and other parameters were calculated for all the previous years. Elasticities were estimated based on regression analysis between registered vehicles & historic AADT and all economic parameters. From the statistical significance and observations from major highways, the elasticities are moderated for the base year. Base year elasticity serves as a base for moderating elasticities for the horizon years.

Plaza wise elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend with the GSDP, PCI, Population and tonnage are shown in below Table 6-6.

Table 6-6 Elasticity values – Complete statistical analysis

Vehicle Type	Dependent Variable	Independent Variable	Elasticity	
			TP1 – Faridpur	TP 2- Maigalganj
Car	Registered Vehicles	PCI	2.39	2.42
Car	Registered Vehicles	GSDP	1.78	1.78
Bus	Registered Vehicles	PCI	2.37	2.33
Bus	Registered Vehicles	GSDP	1.72	1.63
Bus	Registered Vehicles	Population	7.23	6.81
Trucks	Registered Vehicles	GSDP	1.51	1.47
Car	AADT	PCI	1.65	1.66
Car	AADT	GSDP	1.23	1.24
Bus	AADT	PCI	0.82	0.86
Bus	AADT	GSDP	0.59	0.60
Bus	AADT	Population	2.77	2.75
Trucks	AADT	GSDP	0.54	0.54

Vehicle Type	Dependent Variable	Independent Variable	Elasticity	
			TP1 – Faridpur	TP 2- Maigalganj
Trucks	Tonnage	GSDP	0.91	0.92

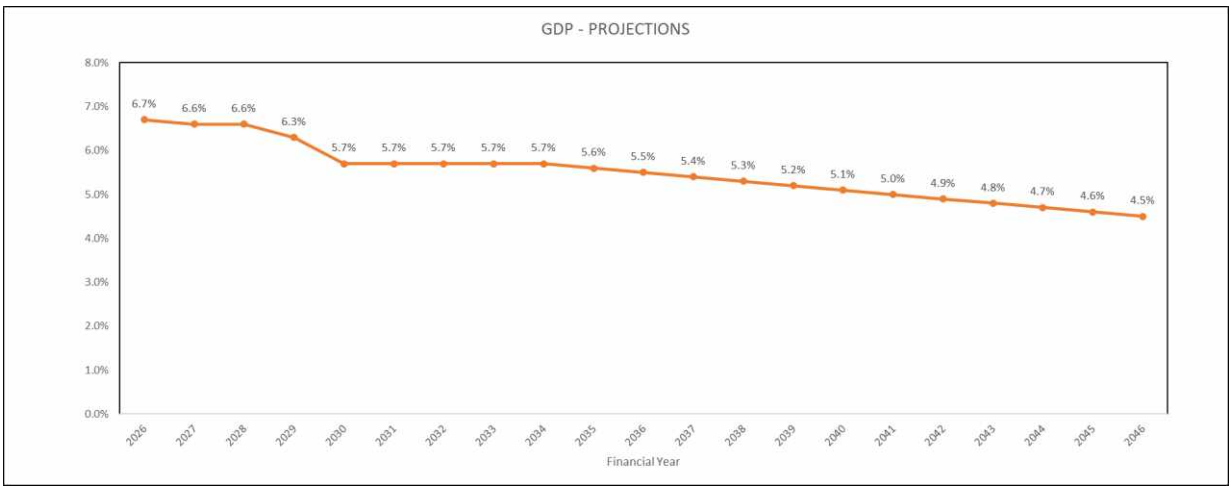
Elasticity values obtained from Registered vehicles are adopted for car & bus and trucks, average elasticity value obtained from the similar projects which is again moderated is considered for the traffic projections. Moderated elasticities are shown in below Table 6-7.

Table 6-7 Moderated Elasticity Values for All TPs

Vehicle Type	Dependent Variable	Independent Variable	TP1 – Faridpur	TP 2- Maigalganj
Car	Registered Vehicles	PCI	1.35	1.30
Bus		GSDP	0.50	0.50
Trucks (Tonnage)		GSDP	0.80	0.80

Generally, the spread of economic development induces changes in the spatial distribution of activities and corresponding changes in transport demand elasticity. As regions become more self-sufficient, the need for long-distance transport diminishes. Accordingly, it was assumed that transport demand elasticity, for both freight and passenger traffic, would tend to decline over time, despite growth in per capita income.

Table 6-8 Moderated Future Elasticity Values for Car, Bus, and Trucks for All TPs



Regression Analysis - Future Elasticities			
Vehicle Type	Year	Faridpur (TP 1)	Maigalganj (TP 2)
Car	FY 26 – FY 30	1.35	1.30
	FY 31 – FY 35	1.28	1.24
	FY 36 – FY 40	1.22	1.17
	FY 41 – FY 45	1.16	1.11
Bus	FY 26 – FY 30	0.50	0.50
	FY 31 – FY 35	0.48	0.48
	FY 36 – FY 40	0.45	0.45
	FY 41 – FY 45	0.43	0.43
Trucks [GDP]	FY 26 – FY 30	0.80	0.80
	FY 31 – FY 35	0.76	0.76
	FY 36 – FY 40	0.72	0.72
	FY 41 – FY 45	0.69	0.69

Reg Veh means Registered vehicles of the PIA States and AADT means Historic traffic data on the Project Road or Adjacent roads.

For Historic AADT No's, roads in the PIA have been referred from adjacent section for the regression analysis

6.6 Future Growth of PIA

The economic impact of the 2020 coronavirus pandemic in India has been largely disruptive. The World Bank and other rating agencies had initially downgraded India's growth for fiscal year 2021 with the lowest figures India has seen in three decades since India's economic liberalization in the 1990s.

6.7 Projected Traffic Growth Rates – Normal

Based on the projected elasticity values for TP 01 and TP 02 the growth of PIA, the future average annual compound traffic growth rates by vehicle type have been estimated.

The traffic growth for the of most likely scenario is estimated and are presented in the following tables.

6.7.1 Traffic Growth Rates: TP 01 – Faridpur Toll Plaza

The section illustrates the normal traffic growth rates for Faridpur Toll Plaza for Most Likely scenario.

Table 6-11 Normal traffic growth rates for toll plaza 01 – Faridpur – Most Likely

6.8 Projected Traffic Growth Rates – Effective

There are some developments in road and land use pattern surrounding project stretch which were detailed in the "diversion & Development Traffic Impact Assessment" chapter. Effective traffic growth rates include the normal traffic projections and the impacts of diversions and developments in the PIA which are detailed in the chapter "Diversion and Development Traffic Impact Assessment". Considering the significance of the effective growth rates, the future traffic projections and associated toll revenue estimations are provided in the next chapter "Traffic and Toll Revenue Forecast."

CHAPTER 7

Traffic and Toll Revenue Forecast

7. Traffic & Toll Revenue Forecast

7.1 General

This chapter presents estimates of total traffic for all the two toll plazas of project corridor with Most likely scenario as explained in previous chapter. Normal traffic projections have arrived by applying the traffic growth rates on the base year traffic. Effective traffic projection has arrived by considering the future adjustments in the form of diversions and developments detailed in the Chapter "Diversion and Development Traffic Impact assessment" in overall traffic growth estimate.

7.2 Effective Traffic Projections at Faridpur (TP 1)

Effective traffic projections include the impact of road network improvement and land developments (if any). Traffic beyond year FY 2025 is summaries based on effective traffic growth rates and base year AADT. Mode wise traffic projection for Most likely Scenario for all the horizon years for Faridpur (TP 1) are estimated and effective future traffic is as shown in below Table 7-1.

Table 7-1 Effective Future Traffic (AADT): Faridpur (TP 1) – Most Likely

YEAR	Car	Minibus	Bus-2A	Bus-3A	LCV	2 Axle Truck	3 Axle Truck	MAV	TOTAL PCU

7.3 Effective Traffic Projections at Maigalganj (TP 2)

Effective traffic projections include the impact of road network improvement and land developments (if any). Traffic beyond year FY 2025 is summaries based on effective traffic growth rates and base year AADT. Scenario wise and Mode wise traffic projection for all the horizon years for Maigalganj (TP 2) are estimated and effective future traffic is shown in below Table 7-2.

Table 7-2 Effective Future Traffic (AADT): Maigalganj (TP 2) – Most Likely

YEAR	Car	Minibus	Bus-2A	Bus-3A	LCV	2 Axle Truck	3 Axle Truck	MAV	TOTAL PCU
FY 2025	4,369	24	493	0	374	1,059	760	1,454	18,446

Similarly, for the entire project the Normal Traffic PCU Growth (CAGR) observed between FY-25 and FY-56 is 4.07%. Effective traffic growth for the same period is 3.11%. The graph Figure 7-1 below illustrates the growth of effective traffic (PCU terms) for the project for Most Likely scenario.

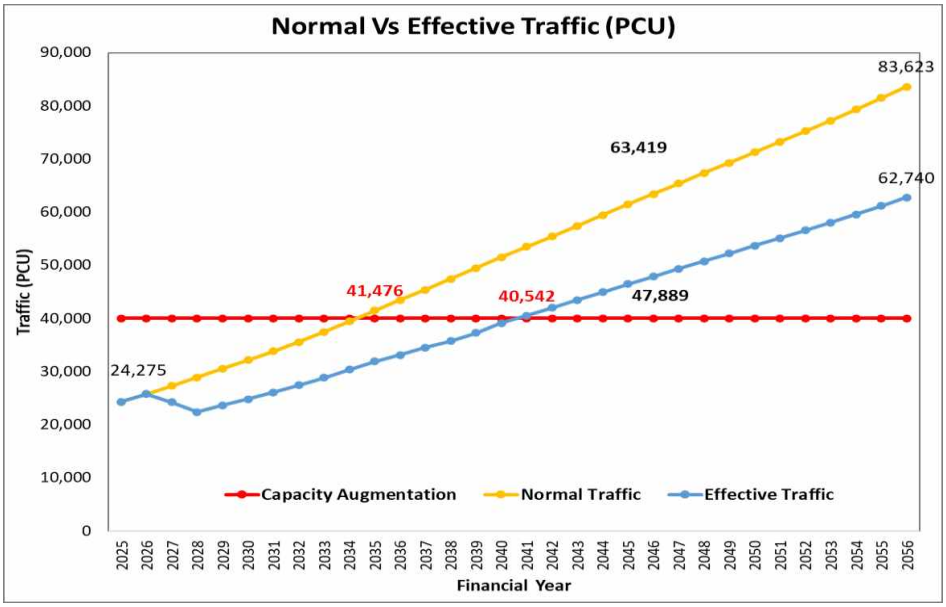

Figure 7-1 Future Traffic Projections in PCU

7.5 Toll Revenue Forecasting

Toll revenue projections or forecasting is calculated based on the projected traffic and projected toll rates. Toll rates by vehicle and toll category depends on the tolling length, wholesale price

index (WPI) and the base rates which are applicable by vehicle category are according to the National Highway fee notification for the project.

7.5.1 Toll Plaza Control Length

Toll plaza control length for two plazas has been mentioned in the below Table 7-6.

Table 7-6 Base rate fee by vehicle category for payable length for FY 25

FY	Toll Plazas	Highway Length (Kms)	Net Bypass Length (Kms)	Structure Length (Kms)	Total Length (Kms)
FY25	Faridpur (TP1)	66.913	11.272	0.445	78.630
	Maigalganj (TP2)	58.806	17.905	0.400	77.111
Schedule M Future Years	Faridpur (TP1)	66.913	11.272	0.615	78.800
	Maigalganj (TP2)	60.589	17.801	0.400	78.790

7.5.2 Toll revenue estimation

7.5.2.1 Toll Fee Revision Methodology

Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the toll rules 2008.

A) Base Rate

As per the National Highway Fee Rules, 2008 and subsequent amendments till to date, the rate of fee for use of a section of national highway of four or more lanes for the base year 2007-08 are given as mentioned in below Table 7-7. Fee applicable shall be the rate multiplied by the length of the highway section for which toll is to be collected.

Table 7-7 Base rate fee by vehicle category for payable length

Type of vehicle	Base Rate Fee Per Km (in rupees)
Car	0.65
LCV	1.05
Bus or Truck	2.20
Truck 3A	2.40
HCM or EME or MAV (3-6 Axles)	3.45
Over Sized Vehicle (OSV)	4.20

B) Annual Revision of Rate of Fee

The amount of fee and the revision thereof effective from 1st April. The user fee shall be increased annually, without compounding by 3%. revision because of variation in WPI shall be restricted to 40%.

$$\text{Applicable rate of fee } = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPIA} - \text{WPI B}}{\text{WPI B}}\right\} * 0.40$$

Were,

WPI-A means the Wholesale Price Index on December 31, 2023.
WPI-B means the Wholesale Price Index of week ending on 6th January 2007.i.e 208.7.
The actual fees to be charged shall be rounded off to the nearest Five rupees.

7.5.2.2 WPI Forecasts

A) Wholesale Price Index

Wholesale price index (WPI) tracks the price movement of key commodities of national relevance grouped under three main categories Primary Articles, Fuel & Power and Manufactured Products. Based on this individual movement, the WPI is determined through the averaging principle.

Till the year 2010 the index was computed with base year 1993-94 for about 435 commodities grouped as above. The index published by the Office of Economic Advisor, Prime Minister's Office on weekly basis.

B) Past trends of the Wholesale Price Index

Past data of WPI for the month of December from FY-2015 to FY-2024 was collected and analyzed for its trends. WPI Trends for all the Commodities for the past and the assumed WPI Inflation values for the future years are presented in the below Figure 7-2.

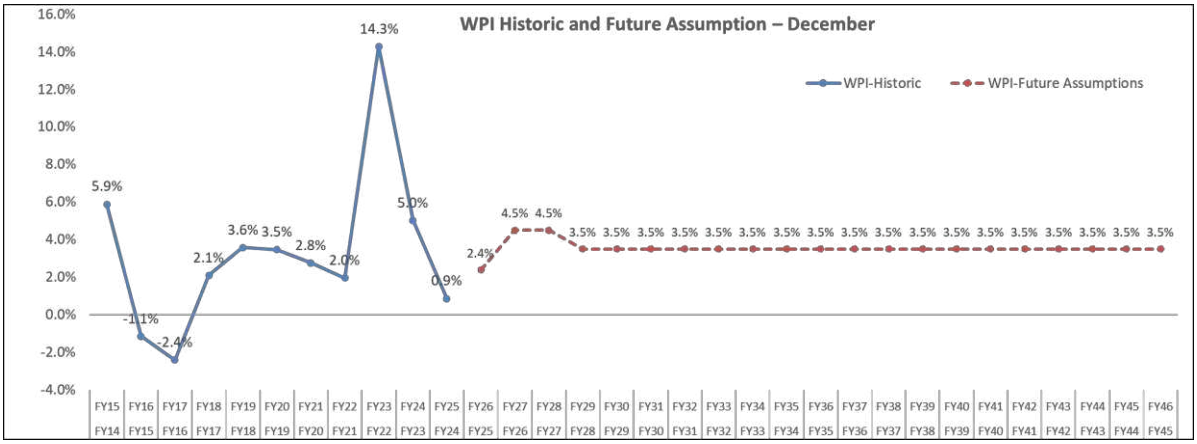

Figure 7-2 Past & future trend of Wholesale Price Index (WPI)

The decrease in inflation in the recent years can be attributed to the lower commodity prices like oil, metals etc. along with the drop in the prices of the primary articles like food products etc.

7.5.2.3 Toll Fee Projections

A) Base Year (FY24)

As per the NH Fee rules 2007-08:

Toll fee for the fiscal year FY-2024 has been arrived by considering the toll plaza control length which were mentioned in the toll plaza control length table. From 01st April 2024 the toll fee rates for the Toll Plaza locations are presented in the tables below.

Table 7-8 Toll Fees for the year FY-2025 from Apr'24 to March'25 for TP1 – Faridpur

VEHICLE TYPE	SINGLE	RETURN	MONTHLY PASS	DISTRICT REGISTERED	LOCAL PASS
Car, Jeep, Van	130	195	4,315	65	340
Light Commercial Vehicle or Minibus	210	315	6,970	105	-

OSV	850	1,275	28,325	425	-

7.5.3 Vehicle wise Trip Categories

Toll revenue is estimated by considering different concessions provided to the road users by vehicle category and eligible number of trips based on the toll category. The number of eligible trips in crossing toll plaza varies by the toll fee category i.e., Single (Full fare), Local passenger and Monthly Pass of both passenger and commercial vehicles are presented in the below Table

7-10 and Table 7-11. The estimation of the share of individual toll vehicle by type of toll ticket category is based on the recent toll traffic data of the period from Apr'2024 to July'2024.

Table 7-10 Vehicle wise Trip Categories at Faridpur (TP 1)

Vehicle Type / Toll Category	Single Journey	Return Journey	Monthly Pass	Local Comm	Local Pass	Exemptions	TOTAL (Excl. Penalties)

7.5.4 Capacity Augmentation

As per the IRC recommendations, the designed Target Traffic is to be determined for LOS B as per IRC Code – IRC: SP:84-2019 which is 40,000 PCU's.

The Capacity Augmentation for any homogenous/toll-able section(s) of the Project Highway in case the average daily traffic of PCUs for that homogenous/toll-able section(s), in any Accounting Year shall exceed the designed capacity Target Traffic for Project Highway and shall continue to exceed the designed capacity for 1 (One) consecutive Accounting Years following thereafter ("Capacity Augmentation").

Currently, the project road traffic comprises two homogeneous sections for each toll plaza. The Average PCU in FY-2046 is 47,886 PCU at Overall project corridor which is not crossing the design capacity of the project highway. Hence, capacity augmentation is required within the concession period for section from Bareilly-Sitapur & the details reg the same has been mentioned below.

Table 7-12:Capacity Augmentation Assumptions

Homogeneous Section	Toll Plaza's	Capacity Breaching 40000 PCU (Years) – 1 Years	Planning (2 Year)	Construction Period (2 Years)
Bareilly-Shahjahanpur	Faridpur	FY 35	FY 36 & 37	FY 38 & 39
Shahjahanpur-Sitapur	Maigalganj	Not exceeding capacity before the end of the concession period		

During the conversion from 4-lane to 6-lane road infrastructure, road users experience discomfort while traveling, prompting some to shift to alternative routes. This phenomenon was observed in the consultant's previous traffic studies. Based on these observations, the consultant has assumed a higher diversion during the construction period, with reduced speeds on the project corridor. Also toll rates for this period (during construction) is 75% of actual toll rates.

7.5.5 Toll revenue projections

Toll revenue is projected based on the future traffic projections, toll fees by vehicle and toll category and trip rates. Traffic numbers are projected by fiscal year i.e., FY25, FY26 etc. and toll rates are revised on 01st April every year. Toll revenues are projected by fiscal year till the end of concession period and considering maximum possible extension referring clauses related to additional toll way, capacity augmentation and modification of concession period.

(a) Toll would be collected for all the days in a year.

(b) Revenue projected from FY-2025 to FY-2056.

The toll revenue projections are done for the effective case which is basically the consideration of all network improvements and land developments as described in the chapter "Traffic Growth Estimation". The below Table 7-13 summarizes the projected annual toll revenue at both the toll plazas and Overall project.

Table 7-13 Estimated Annual Toll revenue (Effective case) in Rs. Crores – Most Likely

FY	Faridpur TP	Maigalganj TP	Total Revenue
FY25	131	91	223
FY26	145	102	246
FY27	145	97	242
FY28	141	90	231
FY29	153	99	252
FY30	167	107	274
FY31	183	117	299
FY32	200	128	328
FY33	218	139	357
FY34	237	152	389
FY35	259	165	424
FY36	278	180	458
FY37	300	194	495
FY38	323	209	532
FY39	349	226	575
FY40	383	247	629
FY41	411	265	675
FY42	442	285	726
FY43	477	306	783
FY44	513	330	843
FY45	550	353	903
FY46	589	378	967
FY47	631	405	1,035
FY48	678	434	1,112
FY49	721	463	1,183
FY50	770	494	1,264
FY51	823	527	1,350
FY52	880	563	1,443
FY53	936	601	1,537
FY54	1,001	640	1,642
FY55	1,068	683	1,752
FY56	1,144	730	1,874
CAGR (FY 25-46) (%)	**7.41%**	**6.99%**	**7.24%**
CAGR (FY 25-56) (%)	**7.23%**	**6.94%**	**7.11%**

The Revenue Growth (CAGR) at Faridpur Toll Plaza is observed to be 7.23% for FY25-FY56. Similaraly at Maigalganj Toll Plaza it is observed to be 6.94% for FY25-FY56.

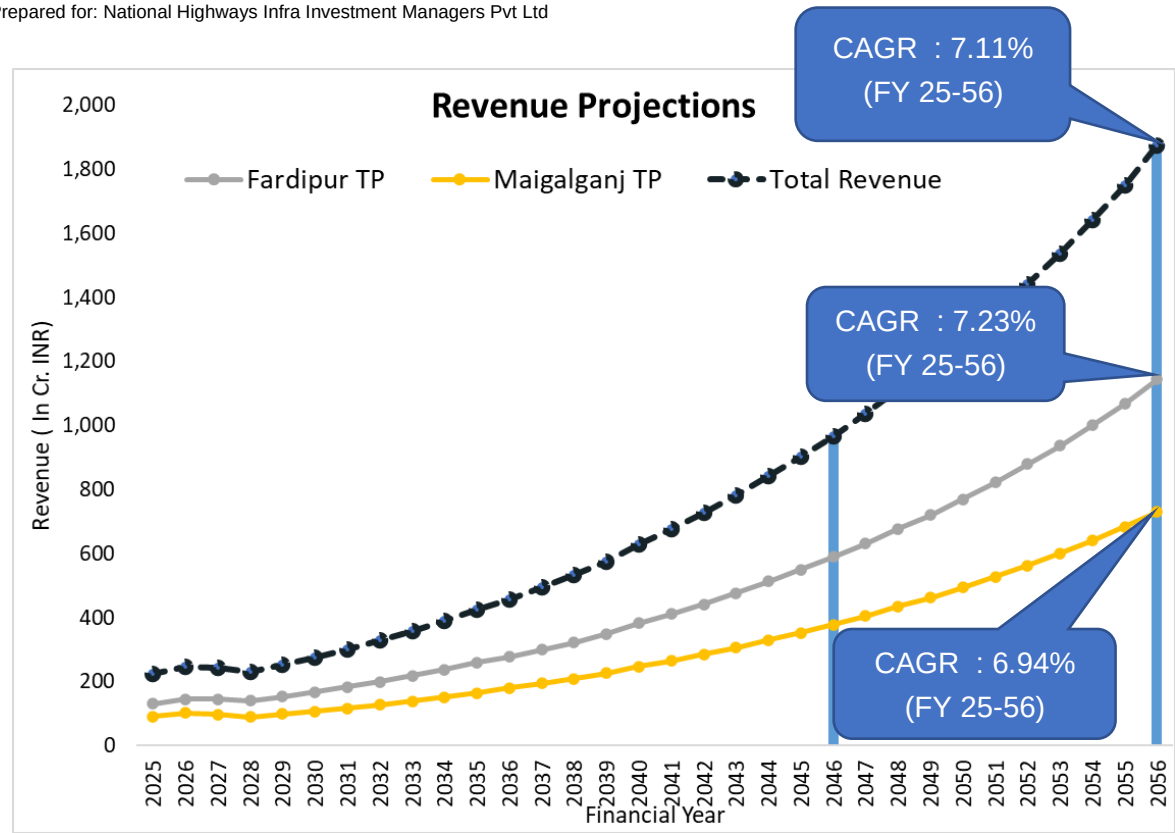

Figure 7-3 Toll Revenue Projections

7.5.6 Overloading Analysis

7- day axle load survey data (as part of technical due diligence) has been provided by the technical consultant of the client which has been analysed to understand the extent of overloaded vehicles.

Table 7-14: Overloading Analysis for Project Road Toll Plazas

Mode	Sample-All Commodities (a)		Overloaded(>20%)-(b)		%ge Overloaded(>20%)-(b/a)		Final %ge Overloaded (>20%) after applying Factors	
	Faridpur	Maigalganj	Faridpur	Maigalganj	Faridpur	Maigalganj	Faridpur	Maigalganj
LCV	1,369	1,655	0	0	0.0%	0.0%	0.0%	0.0%
2AT	1,649	1,352	3	5	0.2%	0.4%	0.0%	0.0%
3AT	1,462	1,533	30	83	2.1%	5.4%	0.0%	0.3%
MAV	3,507	2,946	267	506	7.6%	17.2%	0.4%	0.3%

As observed from the seven-day axle load analysis, around 2.1% of 3A trucks and 7.6% of the MAVs are above 20% overloading limit at Faridpur TP. Similarly, around 5.4% of 3A trucks and 17.2% of the MAVs are above 20% overloading limit at Maigalganj TP. However, after excluding the commodities such as fruits and vegetables, petroleum products, chemicals and gas, heavy machinery and industrial equipment since these are having stickiness to Project road as well as OD pairs with lead greater than 500 km & applying 25% factor to the final Overloading no's , the revised overloading percentage in the category of above 20% overloading comes out to be around 0.0% in 3A and 0.4% in MAV at Faridpur TP & 0.3% in 3A and 0.3% in MAV at Maigalganj TP.

Based on the surveys done, potential for collecting overloading revenue found but presence of alternate routes necessitates no collection of overloading revenue.

Conclusion

the toll revenues are expected to grow while implementing with Schedule M (FY 25-56) at 7.11% CAGR on overall Bareilly Sitapur project Corridor. Consultant doesn't recommend Cash penalty going forward after few years due to FasTAG penetration is likely to be close to 100%. Also, Concessionaire needs to deposit Cash penalty revenue with Authority.

****

8. Annexures

Monthly traffic and Revenue for both the Toll plazas are mentioned below. Monthly ADT traffic includes Cash & Exempt traffic as well for both the toll plazas. Monthly ADR also includes Cash revenue for both the toll plazas.

Table 8-1: Monthly ADT & ADR for Faridpur Toll plaza

EXECUTIVE SUMMARY

Project Overview

The Project Road, NH-334 (old NH-58), connects major industrial, agricultural, and cultural centres in India, serving as a primary conduit for freight and passenger traffic in the states of Uttarakhand and Uttar Pradesh and connects important cities and towns like Meerut, Muzaffarnagar, Roorkee and Haridwar etc.

The project road section, Muzaffarnagar-Haridwar, a part of NH-334 (old NH-58) in the state of Uttar Pradesh and Uttarakhand, starts at 131.00 km near Muzaffarnagar and ends at 218.00 near Haridwar with a length of 79 km. There are two operational toll plazas on the project road, Chhapar TP (km 138.552) and Bahadrabad TP (km 187.370). Both toll plazas have 14 tolling lanes (staggered 7 lanes in each direction). This project has been offered by NHAI to National Highways Infra Investment Managers Private Limited (NHIIMPL) for transfer to InvIT in the fourth round for a concession period of 20 years with maximum extension till 30 years.

Figure 0-1 shows the context and alignment of project road with major places along the highway.

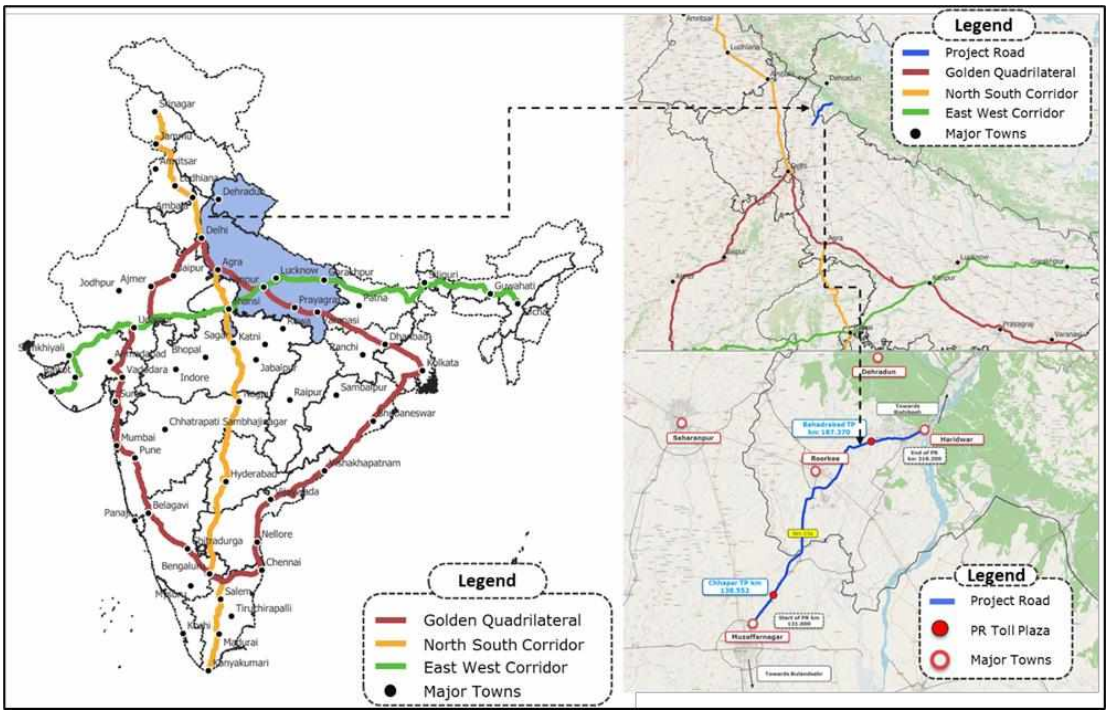

Figure 0-1: Project Road and Location of Toll Plazas

Salient Growth Feature and Traffic Generators

The project road serves the short distance traffic for both passenger and freight which is mainly generated from/to Delhi NCR to/from Roorkee/Haridwar/Dehradun/Rishikesh.

In wider context, PR also serves the traffic for the freight vehicles, which is plying from/to Haridwar/Roorkee and surroundings to/from Ahmedabad/Surat/Vadodara and surroundings.

The project road section is located in the districts of Muzaffarnagar and Haridwar.

Muzaffarnagar district in Uttar Pradesh, is strategically located to connect economic hubs due to its extensive road network. The district's diverse agronomic activities, including sugarcane, wheat, mangoes, and rice, contribute to the country's sugar industry. The district has seen significant industrial growth, particularly in sugar and jaggery production units, steel, paper, and chemical industries.

Haridwar district located in western part of Uttarakhand and is renowned for its extensive Ayurvedic practice and production of herbal medicines. Sugarcane, rice, wheat, legumes, and oil seeds are among its principal crops. With the founding of two PSUs, Hindustan Antibiotics Ltd. and Bharat Heavy Electricals Ltd., industrialization began since 1960s. A new "Industrial Development Zone" is to be established close to Haridwar by the Uttarakhand State Industrial Development Corporation (SIDCUL). Haridwar also hosts the Ardh Kumbh every six years and the Kumbh Mela every twelve years adding a boom to its tourism.

Traffic Volume and Vehicle Composition - AADT for FY25

The toll data for both the toll plazas was made available by the client from August 2022 to November 2024. The month-on-month mode wise traffic for this period April 2023 to November 2024 for both the toll plazas is presented in **Figure 0-2**.

Figure 0-2: Month on Month Traffic Data for TP01 and TP02

The AADT for FY25 is estimated by annualizing the ETC data from April 2024 to November 2024. For TP01-Chhapar, a SCF based on 8–12-month factor derived from the average of FY23 and FY24 ETC traffic data of Siwaya TP, has been adopted.

In case of TP02-Bahadrabad, an 8–12-month SCF has been derived based on the average of FY23 and FY24 ETC traffic data. Additionally, cash and exempted traffic for FY25 (Apr

to Oct) have been added to the estimated ETC traffic of Chhapar and Bahadrabad toll plazas.

The AADT of FY25 along with the Seasonal Correction Factor (SCF), Average Daily Traffic (ADT), cash traffic and exempt traffic for respective months of FY25 is presented in **Table 0-1**.

Particulars		CJV	LCV	2-Axle	3-Axle	MAV	OSV	PCUs

Table 0-1: AADT for FY25

Travel Pattern

- The car traffic from/to Delhi/Ghaziabad/Noida and Surroundings to/from SIDCUL/Haridwar/Rishikesh and Surroundings is about 19-22 percent at TP01 & TP02.
- About 28-33 percent of Bus traffic at TP01 & TP02 was found to be travelling from/to Delhi/Ghaziabad/Noida and Surroundings to/from SIDCUL/Haridwar/Rishikesh and Surroundings.
- 3A trucks from/to Rajasthan/Central/South India to/from SIDCUL/Haridwar/Rishikesh and Surroundings is about 10-17 percent at TP01 & TP02.
- In case of MAVs, around 8 and 20 percent at TP01 & TP02 respectively, were found to be plying between Delhi/Ghaziabad/Noida and Surroundings to/from SIDCUL/Haridwar/Rishikesh and Surroundings.
- The MAV traffic is observed to be having Roorkee-Delhi and Roorkee-Haridwar as top OD pair at both toll plazas.

Network Impacts

In context of the project road, three road network developments which may impact the traffic on the project road are:

1. Impact of Delhi-Dehradun Expressway (with spur to Haridwar)

The assessment for the route between Delhi NCR & beyond and Dehradun/Haridwar & beyond has been done for the two traffic streams:

- Traffic plying between Delhi NCR & beyond and Dehradun & beyond
- Traffic from/to Delhi NCR & beyond to/from Haridwar/Rishikesh & beyond

The proposed expressway will be a mix of brownfield upgradation/greenfield alignment. The negative impact of traffic at the toll plazas has been considered as 40 percent in FY26 and 100 percent from FY27 onwards.

During the six laning of the project road section DDE may take away higher traffic due to construction activities on PR. For estimating this impact, six laning toll rates at 75 percent and reduced speeds on PR due to construction activity have been considered. It is to be noted that higher diversion percentages have been considered for diversion to DDE during construction period for six laning in FY35 and FY36 and lower percentage of diversion is applicable once the six laning is complete from FY37 onwards.

The total diverted traffic estimated for FY25 after the operation of Delhi-Dehradun Expressway at the two toll plazas is presented in **Table 0-2** before and after six laning of the project road section.

Potential Streams	Modes				
	Car	LCV	2A	3A	MAV
Diverted Traffic Before Six Laning of PR					
Chhapar TP	22.9	9.2	21.8	27.1	21.2
Bahadrabad TP	19.2	11.4	22.3	34.9	34.6
Diverted Traffic During Construction Period for Six Laning of PR					
Chhapar TP	28.8	10.2	24.5	30.7	24.4
Bahadrabad TP	24.3	12.6	25.8	39.7	39.8

Table 0-2: Diverted Traffic to Delhi-Dehradun Expressway - FY25

2. Impact of Ganga Expressway Phase II

The assessment for the route between East UP/Meerut & beyond and Haridwar & beyond has been done for the two traffic streams:

- Traffic plying between East UP & beyond and Haridwar & beyond
- Traffic from/to Meerut & beyond to/from Haridwar & beyond

The total diverted traffic after the operation of Ganga Expressway Phase II at the two toll plazas estimated for FY25 is presented in **Table 0-3**.

Potential Streams	Modes				
	Car	LCV	2A	3A	MAV
Diverted Traffic (East UP & beyond)					
Chhapar TP	1.3	0.7	1.4	1.4	1.7
Bahadrabad TP	1.3	0.8	1.6	1.7	3.6
Diverted Traffic (Meerut & beyond)					
Chhapar TP	0.4	0.2	0.2	0.3	0.2
Bahadrabad TP	0.4	0.2	0.2	0.3	0.4

Table 0-3: Diverted Traffic to Ganga Expressway Phase II – FY25

In total Ganga Expressway Phase II may take away around 692 PCUs from both the toll plazas. The negative impact of traffic at all the toll plazas has been considered as 50 percent in FY35 and 100 percent from FY36 onwards.

3. Impact of Upper Ganga Canal Road

The assessment is done for the stream to/from Purquazi & beyond for Chhapar toll plaza. The total diverted traffic estimated for FY25after the operation Upper Ganga Canal Road at the Chhapar toll plazas is presented in **Table 0-4**.

Potential Streams	Modes		
	Car	LCV	PCU
Diverted Traffic			
Chhapar TP	15.4	11.6	9.0

Table 0-4: Diverted Traffic to the Upper Ganga Canal Road – FY25

The proposed expressway may take away around 15 percent in cars and 12 percent in LCVs. Because of the two-way movement on this two-lane road abutting farmlands, presence of height restriction barriers and difficulty in manoeuvring higher axle vehicles, only car & LCV traffic have been considered for further analysis and freight traffic is not considered. The negative impact of traffic at all the toll plazas has been considered as 50 percent in FY28 and 100 percent from FY29 onwards.

Traffic Growth Rates

The estimated traffic growth rates for the project road based on the elasticity approach have been presented till FY55 in line with the maximum extendable concession period of 30 years in **Table 0-5**.

2055	6,834.0	11,427.2	18,261.2

Table 0-12: Base Case Revenue

The project road will have a CAGR of 7.7 percent for the period between FY25 to FY45.

1. INTRODUCTION

1.1 General

National Highways Authority of India (NHAI) has setup NHAI InvIT to monetize its completed and operational National Highway projects with the objective of mobilizing additional resources through capital markets. One continuous road section with a length of 79 kilometers viz., Muzaffarnagar-Haridwar of NH-334 (old NH-58) in the state of Uttar Pradesh and Uttarakhand referred to as Project Road (PR), has been offered by NHAI to National Highways Infra Investment Managers Private Limited (NHIIMPL) for transfer to InvIT in the fourth round for a concession period of 20 years with maximum extension till 30 years.

The project highway, NH-334 (old NH-58), is connecting many of the major industrial, agricultural and cultural centres of India. The total length of NH-334 (old NH-58) is roughly 207 km starting from Haridwar Chandi Chowk in the state of Uttarakhand and ending at Bulandshahar in the state of Uttar Pradesh. NH-334 (old NH-58) acts as a primary conduit for transportation of freight as well as passenger traffic in these states as well as connects important cities and towns like Meerut, Muzaffarnagar, Roorkee and Haridwar etc.

Figure 1-1 shows the alignment of NH-334 (old NH-58) with major places along the highway.

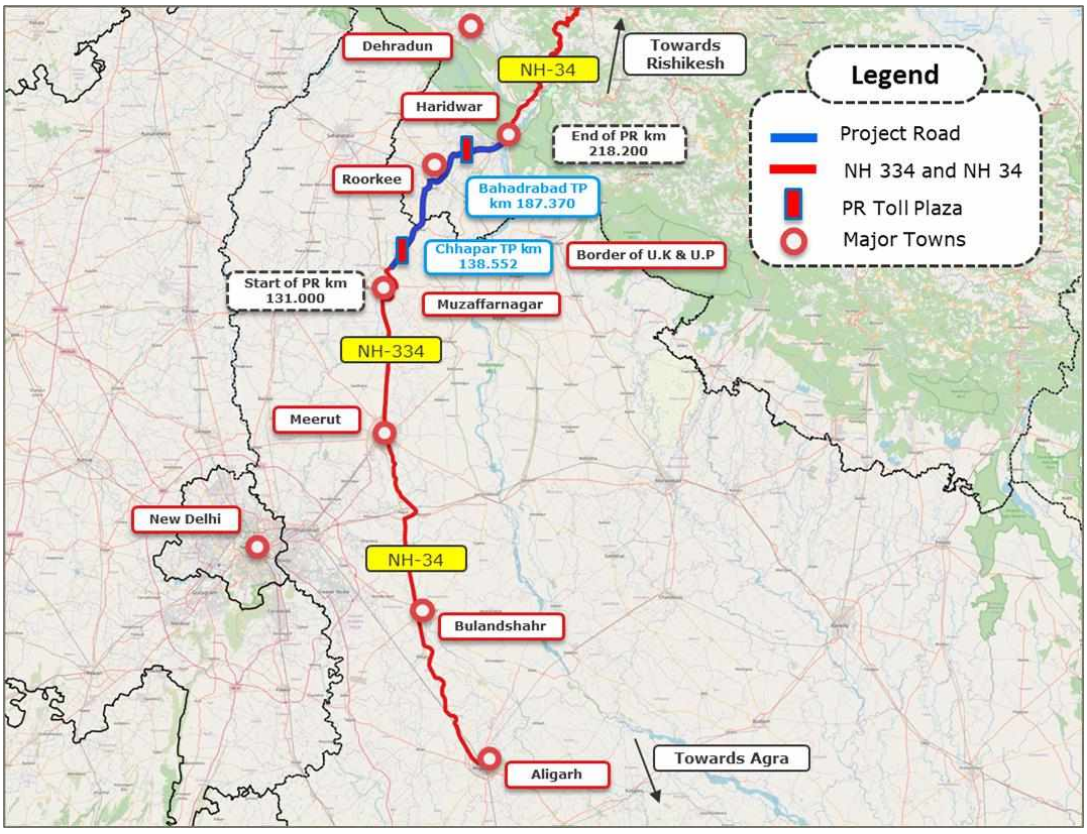

Figure 1-1: Alignment of NH-334 (Old NH-58) with Major Places

National Highways Infra Investment Managers Private Limited, the Investment Manager to InvIT has appointed Ramboll India Private Ltd as the Traffic Consultant to carry out a

study for assessing the present traffic levels, travel pattern and future traffic & revenue estimation till year FY55 duly considering the network characteristics, future economic perspective in the influence area of the project.

1.2 Scope of Services

The scope of the study includes the following:

- Undertake Traffic Survey on the highway section as per the following:
  - Seven days 24 hours Videography Traffic Counts at or near the existing toll plaza locations on the project road to derive the Average Daily Traffic (ADT)
  - One day Origin-Destination survey at or near the existing toll plaza locations to assess the existing travel pattern of vehicles plying on the project road – origin and destination.
- Estimation of the base year AADT FY25
- Analysis of OD data to cover:
  - Regional distribution of traffic and influence factors for different zones contributing traffic on the corridor
  - Identification of Project Influence Area from analysis of travel pattern - regional distribution of traffic,
  - Main traffic generators (industrial areas, towns, ports etc.)
  - Commodity composition- Goods type distribution
  - Top OD pairs by vehicle types
- Review of past traffic studies, traffic/toll data and other relevant reports as may be available to determine category wise volume of traffic for past years as well as for current year
- To identify competing route and analyse the network conditions, traffic characteristics & level of toll charged and the advantage/ disadvantage of the competing road and their impact on the project traffic
- Carry out a study of past economic performance of influence area
- Diversion analysis, wherever needed – cost ratio-based diversion analysis using spreadsheets to be carried out for respective potential OD pairs.
- Preparation of traffic projections till year FY55 in three scenarios – low, most likely and high
- Capacity analysis of the road or any other requirements for potential capacity augmentation
- Estimation of tollable traffic streams by toll category and estimation of toll

revenue as per categories of traffic streams stipulated in the tolling schedule for the study period

- Review future road and transportation network developments in the area of influence of the project and identify those schemes that may impact positively or negatively traffic on the toll road
- Identify factors which may have a positive and / or negative impact on the traffic - all major developments like DFC, industrial corridors, economic corridors, ports, Bharatmala, Sagarmala
- Scenario Analysis of toll revenue – Critical parameters of diversion (if applicable) and three scenarios of traffic growth (most likely, low and high).

1.3 Report Structure

This report is divided into four chapters, including this introduction chapter. Chapter 2 details upon the project road characteristics and socio – economic profile of the districts in the project influence area including the estimation of AADT and travel characteristics in the Project Influence Area (PIA). Chapter 3 contains the details on the derivation of traffic growth rates used for traffic forecasting and presents traffic projections for the study period. Chapter 4 presents the details regarding tolling strategy, toll rates and the revenue projections for the duration of the concession.

2. TRAFFIC SURVEY AND ANALYSIS

2.1 General

To understand the traffic characteristics, the volume of traffic and travel pattern of vehicles plying on the project road were collected through primary surveys. This chapter presents the details of the project road characteristics, traffic surveys carried out, their analysis and the salient findings. The results of the analysis will be utilized in assessing the traffic growth and estimation of traffic and revenue forecast on the project road for the concession period.

2.2 Project Road Characteristics

The project road section, Muzaffarnagar-Haridwar, a part of the NH-334 (old NH-58) in the state of Uttar Pradesh/Uttarakhand, starts at km 131.560 near Muzaffarnagar and ends at km 209.120 near Haridwar with a length of about 79 km. The project road falls under the jurisdiction of Muzaffarnagar district of Uttar Pradesh and Haridwar district of Uttarakhand passing through settlements of Muzaffarnagar, Chhapar, Roorkee, Bahadrabad and Haridwar. There are two operational toll plazas on the project road, one near Muzaffarnagar (Chhapar TP at km 138.55) and other near Haridwar (Bahadrabad TP at km 187.37). Both Chhapar and Bahadrabad toll plazas have 14 tolling lanes (staggered 7 lanes in each direction).

The alignment of project road and toll plaza locations is shown in **Figure 2-1**.

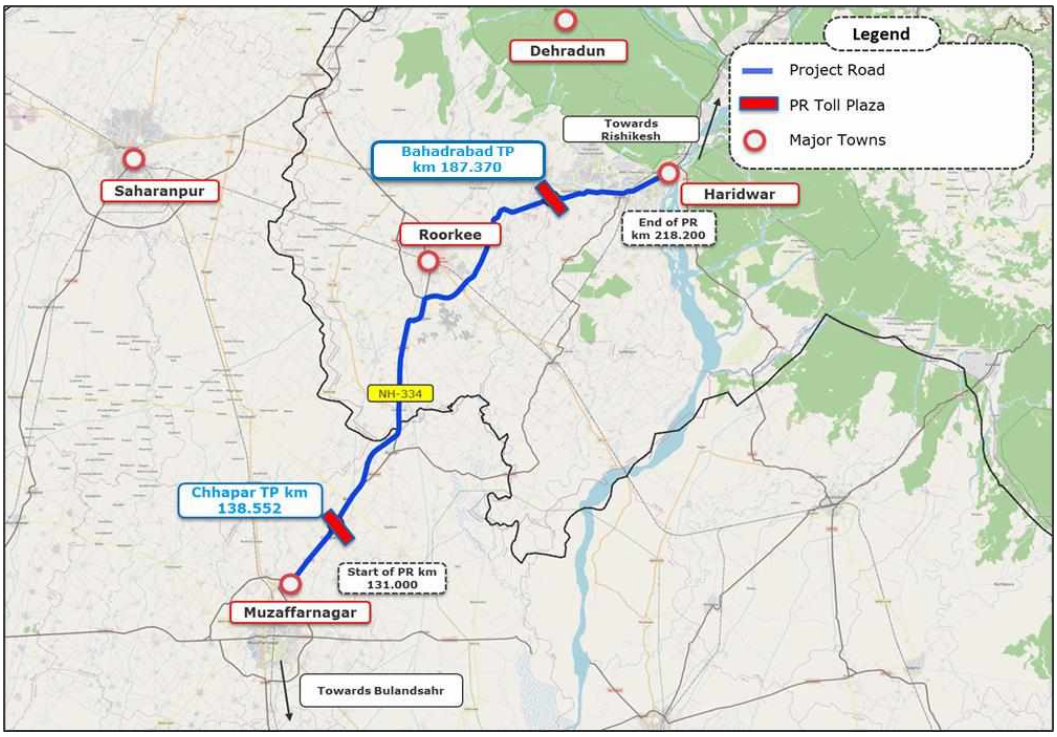

Figure 2-1: Project Road and Location of Toll Plazas

The project road serves the short distance traffic for both passenger and freight which is mainly generated from/to Delhi NCR to/from Roorkee/Haridwar/Dehradun/Rishikesh.

In wider context, PR also serves the traffic for the freight vehicles, which is plying from/to Haridwar/Roorkee and surroundings to/from Ahmedabad/Surat/Vadodara and surroundings.

2.2.1 Profile of Project Influence Area District

Muzaffarnagar District

Muzaffarnagar district, situated in the northern part of Uttar Pradesh, has an area of approximately 4,000 sq. km and as per the 2011 census, Muzaffarnagar has a population of approximately 28.4 lakh.

Muzaffarnagar district's strategic location plays a crucial role in connecting various economic hubs due to its extensive road network. It is intersected by some of the major highways, including the NH-334 that links Delhi to Dehradun and the National Highway 119, ensuring seamless connectivity to Uttarakhand.

Given its location between the Ganges and Yamuna rivers, the district has diverse agronomic activities. The predominant crops include sugarcane, yielding one of the highest productions in the country, and contributing significantly to the country's sugar industry. Other major crops include wheat, mangoes, and rice, which are supported by the favourable climatic conditions and abundant water resources from canal systems.

Muzaffarnagar has also seen considerable industrial growth with the establishment of various agro-based industries, primarily sugar and jaggery production units. Other industries include steel, paper, and chemical industries, which have proliferated due to the advantageous location close to the National Capital Region (NCR), providing easy access to markets and raw materials. Jaggery is recognized under One District One Product in PMFME (Pradhan Mantri Formalisation of Micro Food Processing Enterprises) Scheme for Muzaffarnagar district.

Haridwar District

Haridwar district lies in the western part of Uttarakhand with an area of 2,360 sq. km. and as per the 2011 census, the population of the district is 18.90 lakhs. Due to Haridwar's location on the bank of river Ganga, the land of Haridwar district is highly fertile.

Haridwar is known for its rich ayurvedic tradition and the presence of herbal medicine manufacturing. The major agricultural crops of the district are sugarcane (with three sugar mills in the district), rice, wheat, pulses, oil seeds, etc. Mushroom is recognized under One District One Product in PMFME Scheme for Haridwar district.

Two centrally owned public sector enterprises (PSUs) of Hindustan Antibiotics Ltd and Bharat Heavy Electricals Ltd are located near Haridwar. Uttarakhand's State Industrial Development Corporation (SIDCUL) will now set up a new "Industrial Development Zone" in the area adjacent to Shivalik Nagar near Haridwar, to encourage industrialization.

The industrial profile of SIDCUL is presented in **Figure 2-2.**

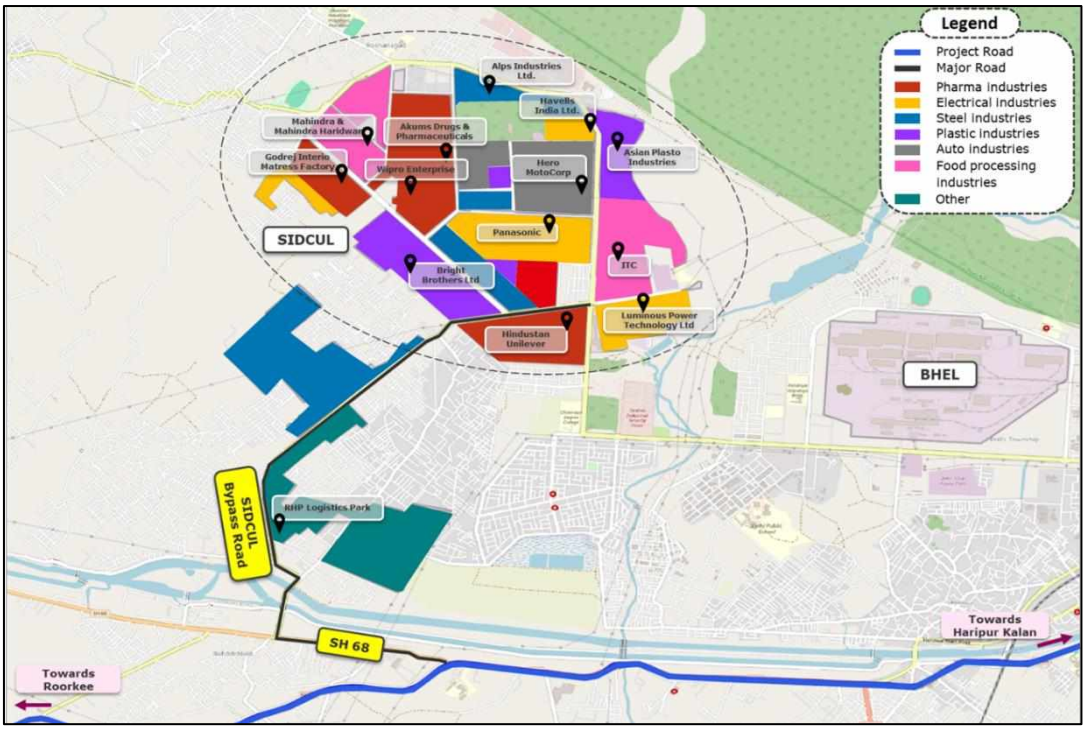

Figure 2-2: Industrial Profile of SIDCUL

Haridwar is one of the four holy cities in India that host the Kumbh Mela, a gathering of millions of devotees, every 12 years. The Ardh Kumbh is held in the district every six years. Kanwar Mela is also held in Haridwar district every year during the monsoon season. Haridwar also serves as the gateway to Char Dham of Uttarakhand.

The industrial profile surrounding the PR toll plazas is presented in **Figure 2-3**.

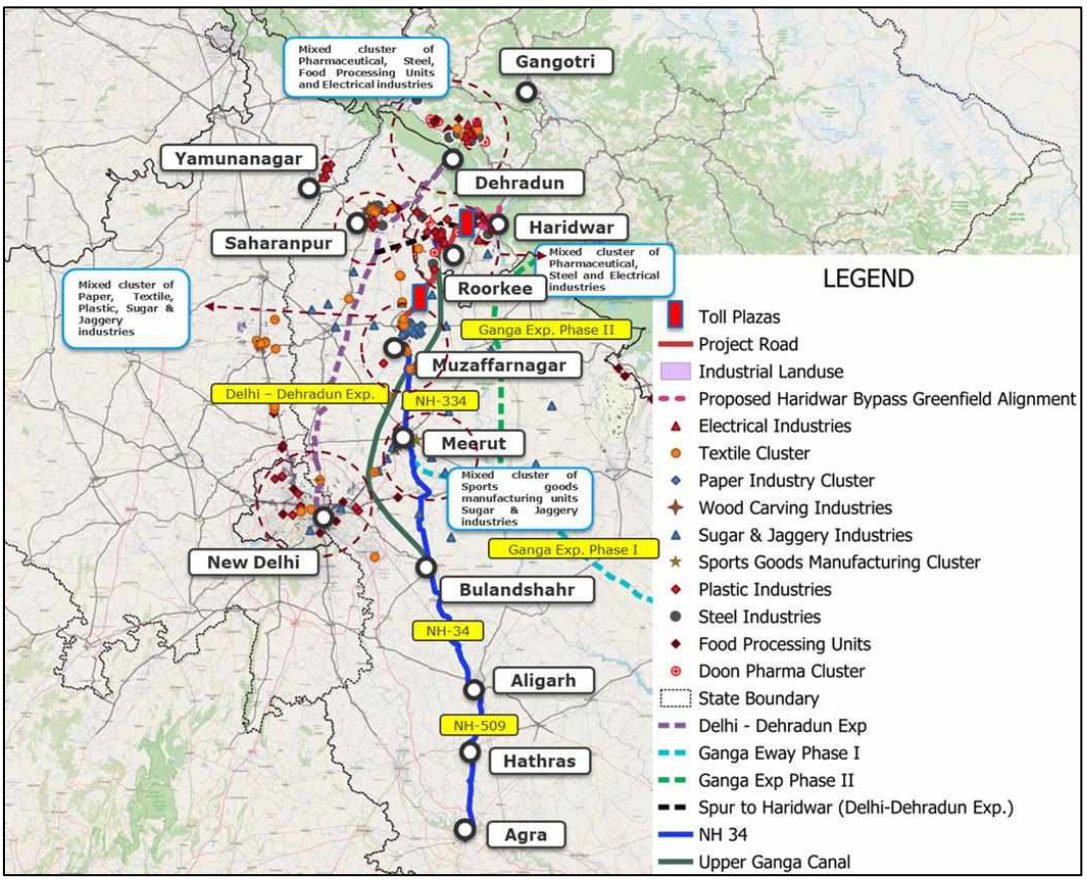

Figure 2-3: Industrial Profile of the Project Road

Upon studying the industrial profile of PR, it was observed that Muzaffarnagar district consists of mixed clusters of paper, textile, plastic, sugar and jaggery industries while Haridwar district consists of mixed clusters of pharmaceutical, steel and electrical industries.

2.3 Traffic Surveys

To understand the characteristics and the volume of traffic using the project road, data on road network, traffic and travel pattern of vehicles plying on the project road were collected through primary traffic surveys. Traffic volume video graphic survey for seven days and origin-destination (OD) survey as roadside interview for one day at toll plaza locations were initially conducted on the project road in August 2024. In addition, OD surveys were carried out at both the toll plazas in January 2025 to revalidate the travel pattern. The schedule of the traffic surveys and locations on the project road are given in **Table 2-1**.

Location	Chainage	Duration	Date(s)
Classified Traffic Volume Counts			
TP01 – Chhapar	km 138.55	7 Days	20th Aug–26th Aug 2024
TP02 – Bahadrabad	km 187.37		
Origin and Destination Survey - August 2024			
TP01 – Chhapar	km 138.55	1 Day	22nd Aug 2024
TP02 – Bahadrabad	km 187.37		
Additional Origin and Destination Survey - January 2025			
TP01 – Chhapar	km 138.55	1 Day	17th Jan 2025
TP02 – Bahadrabad	km 187.37		

Table 2-1: Traffic Survey Locations and Schedule

Trained enumerators were engaged for conducting traffic surveys under the supervision of experienced transport planner. The vehicle classification as generally used in the traffic surveys of NHAI studies along with their PCU values, as suggested in IRC: 64 – 1990, are presented in **Table 2-2**.

Vehicle Type	PCU Factor
Motorized Vehicles	
Car, Jeep, Van &Taxi	1.0
Two –Wheeler	0.5
Three-Wheeler (Auto-Rickshaw)	1.0
Mini-Bus/ School Bus	1.5
Govt. Bus/ Private Bus	3.0
Mini LCV/Max Pick Up	1.0
Light Commercial Vehicle (LCV)	1.5
2-Axle Truck	3.0
3-Axle Truck	3.0
Multi-Axle Vehicle (MAV 4-6 Axle)	4.5
HME	4.5
Agricultural Tractor	1.5
Agricultural Tractor with Trailer	4.5
Non – Motorised Vehicles	
Cycle	0.5
Cycle Rickshaw	2.0
Animal Drawn Cart	6.0

Table 2-2: Vehicle classification and PCU factors

2.4 Traffic Characteristics

The data collected from the traffic volume count survey was analysed in order to get the results with respect to existing traffic intensity, flow pattern, hourly variation, and composition of traffic on the study road network. The various traffic characteristics have been analysed under the following heads:

- Average Daily Traffic (ADT)
- Daily variation, Hourly variation, and Traffic composition
- Annual Average Daily Traffic (AADT)

2.4.1 Average Daily Traffic (ADT)

The traffic volume data collected at the toll plaza locations during the seven days survey has been analysed. The summary of ADT in terms of vehicles and PCUs is presented in **Table 2-3**.

Mode	TP01- Chhapar	TP02- Bahadrabad
Tollable vehicles		
Car/Jeep/Van/Taxi	17,534	19,904
Minibus	123	212
Standard Bus	1,310	1,471
Mini LCV	917	726
LCV	1,900	1,205
2 Axle	442	611
3 Axle	391	341
MAV (4-6 Axle)	1,205	622
HMV/ MAV (=>7 Axle)	4	10
Non Tollable vehicles		
Two-Wheeler	13,099	24,361
Auto Rickshaw	566	1,524
Agri. Tractors	228	286
Total Non-Motorised	152	233
Total Vehicles/PCUs		
Total Tollable Vehicles	23,827	25,103
Total Non Tollable Vehicles	14,045	26,405
Total Vehicles	37,873	51,508
Total PCU	42,685	53,452
Tollable PCU	33,359	32,871

Table 2-3: Average Daily Traffic at TP01 & TP02

- The observed total vehicles are around 37,873 and 51,508 at TP01 and TP02 respectively.
- Car traffic has a share of around 46.3 percent (17,534 vehicles) and 38.6 percent (19,904 vehicles) at TP01 and TP02 respectively.
- Total freight vehicles account for a share of 13.4 percent at TP01 and 7.4 percent at TP02. Within the freight traffic, MAV accounts for about 3.2 percent (1,205 vehicles) and 1.2 percent (622 vehicles) at TP01 and TP02 respectively.
- The tollable traffic recorded at TP01 and TP02 is about 63 percent and 49 percent respectively.
- Other motorised non-tollable vehicles (two-wheeler, auto rickshaw and tractor) account for about 37.1 percent at Chhapar toll plaza and 51.3 percent at Bahadrabad toll plaza.

2.4.2 Daily Variation, Hourly Variation, and Traffic Composition

The day wise variation, hourly variation and the traffic composition at the toll plaza locations is presented in **Figure 2-4**.

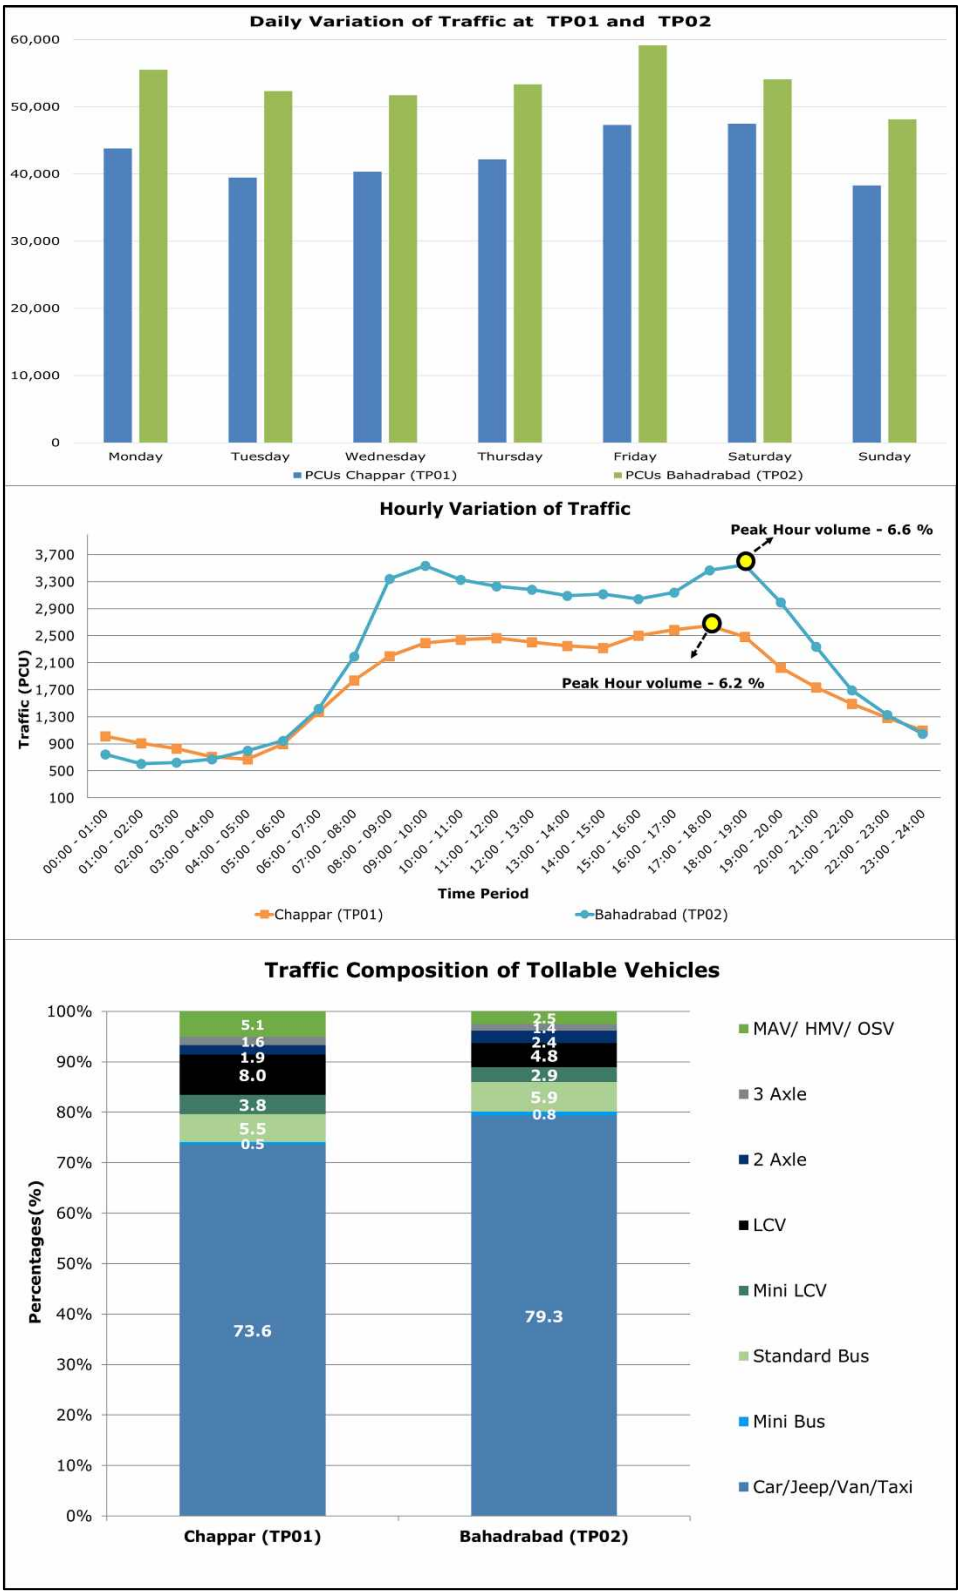

Figure 2-4: Daily Variation, Hourly Variation and Traffic Composition at TP01 & TP02

- The directional distribution at the toll plaza locations is almost equal with Muzaffarnagar-Haridwar having a directional distribution of 51.1 percent at TP01 and 48.9 percent at TP02.
- The peak hour at both the toll plazas was observed to be in the evening with TP01 and TP02 to be observed between 17:00-18:00 and 18:00-19:00 respectively.

- In case of passenger traffic, car traffic has a share of about 73.6 percent at TP01 and 79.3 percent at TP02. While bus traffic has a share of about 5.5 and 5.9 percent at TP01 and TP2 respectively.
- In case of freight traffic, MAVs have a share of about 5.1 percent at TP01 and 2.5 percent at TP02.

2.4.3 Comparison of Toll Data with TVC

ETC vs TVC Excluding Cash and Exemptions Traffic

The TVC survey was conducted from 20th August 2024 to 26th August 2024. A comparison of the average of 7 days between TVC and Toll Data of the survey dates is presented in **Table 2-4**.

Day/Date	CJV	LCV/ Minibus	2A/Bus	3A	MAV/ OSV	Total	PCU
TP01- Chhapar							
Toll Data (ETC)	13,978	797	2,486	388	1,245	18,895	29,401
TVC	18,451	2,023	1,752	391	1,209	23,827	33,359
Variation (Toll data minus TVC)	-4,473	-1,226	734	-4	36	-4,932	-3,958
Variation (%)	-24.2	-60.6	41.9	-0.9	3.0	-20.7	-11.9
TP02- Bahadrabad							
Toll Data (ETC)	11,737	640	2,314	323	644	15,658	23,506
TVC	20,630	1,418	2,081	341	633	25,103	32,871
Variation (Toll data minus TVC)	-8,893	-778	233	-18	11	-9,445	-9,366
Variation (%)	-43.1	-54.8	11.2	-5.3	1.7	-37.6	-28.5

Table 2-4: Comparison Between TVC and ETC Data Excluding Cash & Exempted Traffic

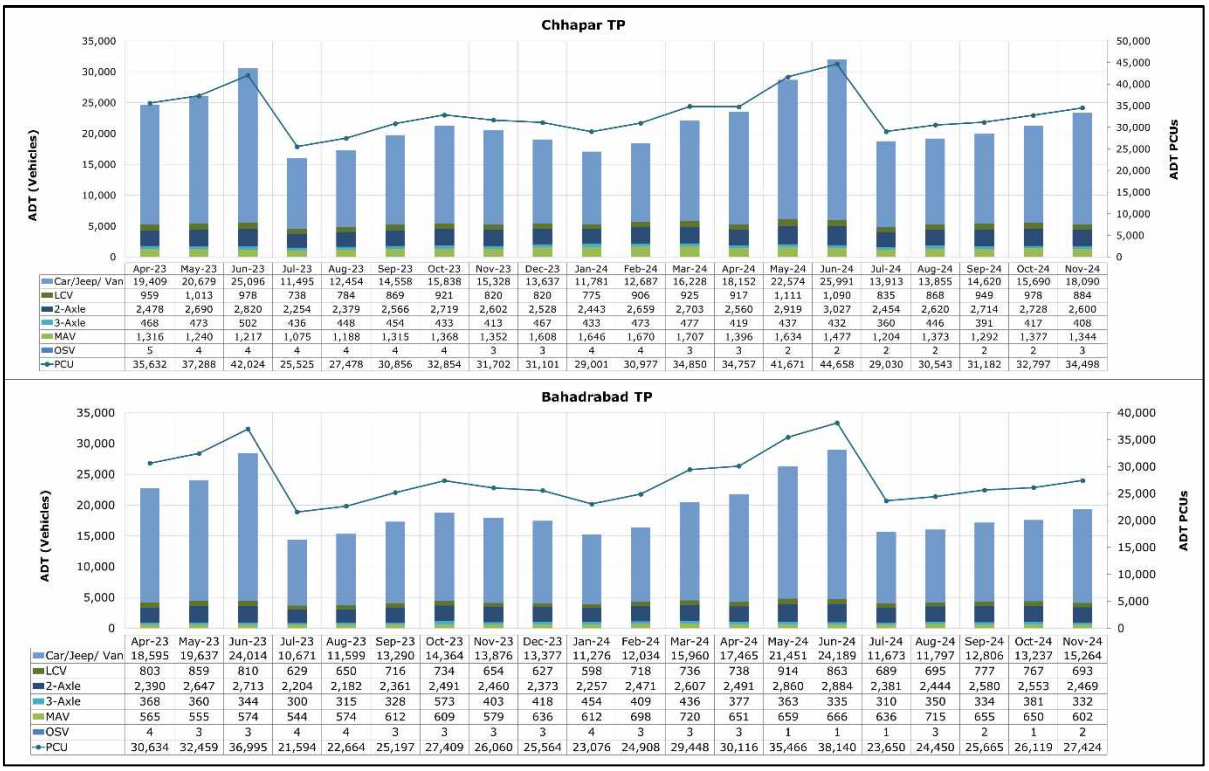
The variation in total traffic is about 21 percent (at TP01) and 38 percent (at TP02) on an average per day between the toll plaza count and videography. The comparison shows TVC is higher than ETC in almost all the modes except 2A/ Bus category. The ETC data does not include traffic under exemptions and violations. The variation between LCV and trucks could be attributed to cross classifications between these categories of vehicles.

ETC vs TVC Including Cash and Exemptions Traffic

A comparison between TVC and ETC data (7-day average) including cash and exempted traffic for the days of survey is presented in **Table 2-5**.

Day/Date	CJV	LCV/ Minibus	2A/ Bus	3A	MAV/ OSV	Total	PCU
TP01- Chhapar							
Toll Data (ETC)	18,552	890	2,540	390	1,253	23,624	34,314
TVC	18,451	2,023	1,752	391	1,209	23,827	33,359
Variation (Toll data minus TVC)	101	-1,133	787	-1	44	-203	956
Variation (%)	0.5	-56.0	44.9	-0.4	3.6	-0.9	2.9
TP02- Bahadrabad							
Toll Data (ETC)	18,279	703	2,396	331	650	22,359	30,440
TVC	20,630	1,418	2,081	341	633	25,103	32,871
Variation (Toll data minus TVC)	-2,351	-715	315	-10	17	-2,744	-2,431
Variation (%)	-11.4	-50.4	15.1	-3.1	2.7	-10.9	-7.4

Table 2-5: Comparison Between TVC and ETC Data Including Cash & Exempted Traffic



The comparison of TVC vs ETC in total traffic after adding cash and exempted traffic shows lesser variation than earlier comparison at TP01, whereas TP02 still shows a gap of about 10.9 percent on an average per day between the ETC data and TVC count.

2.4.4 Annual Average Daily Traffic (AADT)

The traffic plying on any road generally varies over different periods of the year depending on the cycle of different socio-economic activities in the regions through which it passes. Therefore, in order to have a more realistic picture of the traffic on the project road, it is required to assess its seasonal variation to estimate the annual average daily traffic (AADT).

The past toll traffic data for the toll plaza was made available by the client from August 2022 to November 2024 as presented in **Appendix 2.1**.

The month-on-month mode-wise traffic for the period from April 2023 to November 2024 is presented in **Figure 2-5**.

Figure 2-5: Month on Month Traffic Data for TP01 and TP02

The AADT for FY25 is estimated by annualizing the ETC data from April 2024 to November 2024. It is to be noted that due to the Kawar Yatra in the month of July/August, both toll plazas are closed for tolling for around 5-8 days and thus, in estimation of AADT, those days have not been considered.

The past ETC traffic data of adjacent section of Siwaya TP as available with Ramboll, has also been studied and the traffic profile was found to be similar with relation to Chhapar TP. For TP01-Chhapar, a SCF based on 8–12-month factor derived from the average of FY23 and FY24 ETC traffic data of Siwaya TP, has been adopted.

In case of TP02-Bahadrabad, an 8–12-month SCF has been derived based on the average of FY23 and FY24 ETC traffic data.

Additionally, cash and exempt traffic for FY25 (Apr to Oct) has been added to the estimated AADT of ETC traffic of Chhapar and Bahadrabad toll plazas.

The AADT of FY25 along with the Seasonal Correction Factor (SCF), Average Daily Traffic (ADT), cash traffic and exempt traffic for respective months of FY25 is presented in **Table 2-6**.

Particulars		CJV	LCV	2-Axle	3-Axle	MAV	OSV	PCUs

Table 2-6: AADT for FY25

2.5 Travel Characteristics

2.5.1 Survey Methodology

To understand the travel demand pattern in the region and tollable traffic streams, Origin and destination (OD) surveys were carried out at the toll plaza locations. The OD survey was carried out for 24 hours, by roadside interview method as described in IRC: 102-1988. Both passenger and commercial vehicles plying on the project road were stopped on a random sampling basis and interviewed.

The travel characteristics obtained by OD survey facilitate the identification of:

1. Local and through traffic on the project road.
2. Potential divertible traffic to/from project road to various alternative routes.

Trained enumerators under the supervision of transport planners collected the trip characteristics using survey forms designed for this purpose. The OD survey elicited characteristics like origin, destination, frequency, purpose of trip for passenger vehicles and commodity being transported for goods vehicles. The information pertaining to origin and destination of trips collected during roadside interviews was analysed to obtain the trip distribution based on a zoning system suitably designed for the present study.

2.5.2 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed giving due consideration to the following factors:

- The road network catering to the traffic on the project road and its generating points
- Important towns, villages, factories, and industrial centres around the project road area
- Administrative boundaries of districts and states.
- Configuration of the project road in the regional road network with respect to other roads

Two major types of areas were identified for analysis purpose: -

Immediate Influence Area (IIA): It includes the cities/towns/villages and districts along the project road and adjacent to it, which generate/attract trips to the project road. In this study, it consists of districts Muzaffarnagar, Haridwar, Baghpat, Bijnor, Meerut, Saharanpur and Dehradun in the state of Uttar Pradesh and Uttarakhand.

Broad Influence Area (BIA): It includes the remaining districts of Uttar Pradesh Uttarakhand and remaining states of India.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA. The zoning system adopted for data collection was based on 94 zones and is presented in **Appendix 2.2**. The zoning map is presented as **Figure 2-6**.

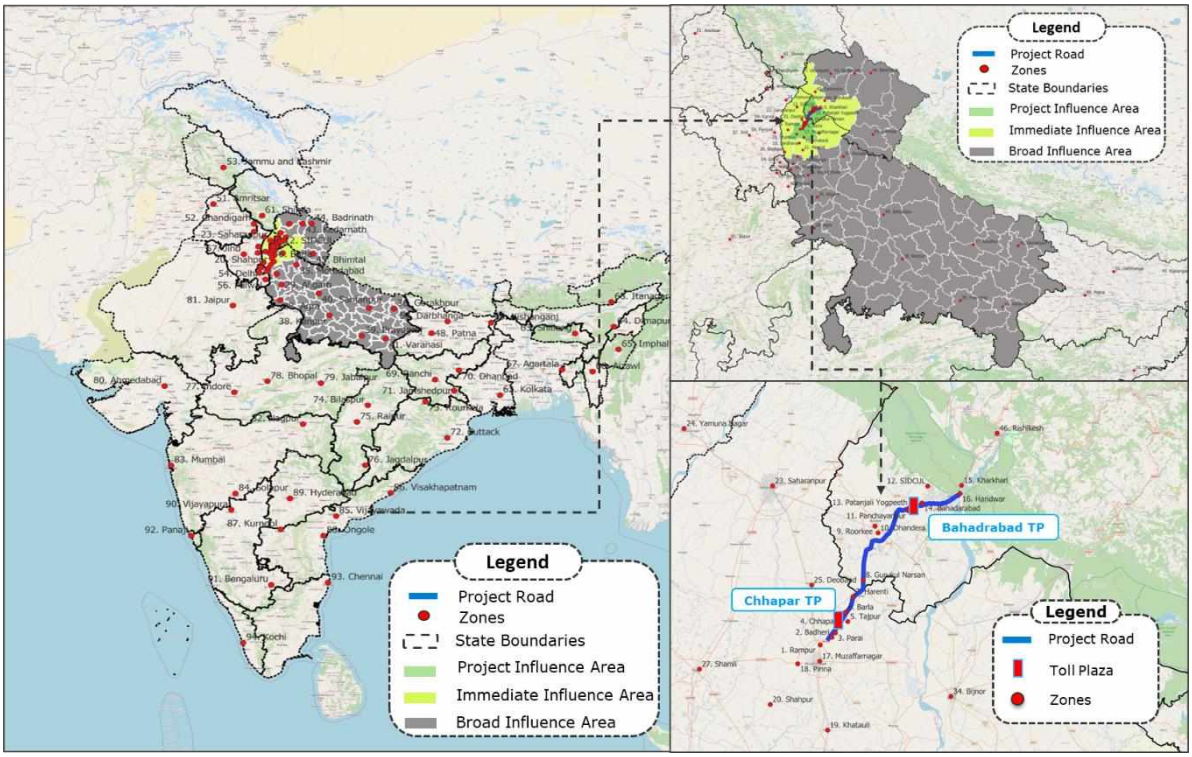

Figure 2-6: Zoning Map

2.5.3 Sample Size

The toll traffic data does not provide the individual traffic volume count of all categories of vehicles. The seven-day traffic volume video count at the existing toll plazas was analysed to get the individual volume count of all categories of vehicles along with the direction split.

The vehicles during the OD surveys were interviewed on a random sample basis. **Table 2-7** shows the AADT and the sample size (both in absolute numbers and in percentage terms) captured during the exercise.

Modes	Car	M Bus	Bus	MLCV	LCV	2A	3A	MAV/ OSV	Total
TP01- Chhapar									
Sample	3,656	454	217	692	449	1,165	388	923	7,944

Percentage	19.9	73.2	57.6	41.5	58.6	42.1	74.2	66.1	27.2

Table 2-7: Sample Size Collected in OD Survey at TP01 & TP02

Based on the sample size of different categories of vehicles interviewed during the OD survey, direction-wise expansion factors were calculated based on FY25 AADT. The OD matrices for all vehicle categories were generated and analysis was done in terms of regional distribution, travel pattern and commodity distribution.

2.5.4 Regional Distribution

Based on the OD matrices, the regional distribution of tollable vehicles at the toll plaza locations has been calculated. **Table 2-8** gives the distribution indicating the attraction and generation zones for the traffic on the project road.

Region/Modes	Car	M Bus	Bus	MLCV	LCV	2A	3A	MAV

Table 2-8: Regional Distribution of Tollable Traffic (in %) On Project Road

Passenger traffic:

- Car traffic at both the toll plaza locations is majorly from Uttarakhand (45.7 percent at TP01 and 68.1 percent at TP02) followed by Uttar Pradesh (32.8 percent at TP01 and 12.3 percent at TP02).
- In case of Bus traffic, Uttarakhand contributes about 48.0 percent at TP01 and 60.7 at TP02 respectively, followed by Uttar Pradesh with around 17-23 percent at Chhapar and Bahadrabad TP.

Freight Traffic

- Around 45.4 percent of MLCV at TP01 and 72.7 percent at TP02 are from Uttarakhand followed by Uttar Pradesh accounting for around 37.0 and 14.3 at TP01 and TP02 respectively.
- In case of 2A/3A trucks, Uttarakhand contributes around 48 percent followed by Uttar Pradesh with 30-31 percent at Chhapar TP and at Bahadrabad TP, Uttarakhand contributes to about 66-70 percent followed by Uttar Pradesh contributing about 13 percent.
- In case of MAVs, Uttarakhand accounts for about 48.4 percent at TP01 and 63.6 percent at TP02. The state of Uttar Pradesh contributes around 26.5 percent at TP01 and 11 percent at TP02, followed by Delhi accounting to about 8-10 percent at TP01 and TP02.

- MAVs are observed to be having Muzaffarnagar/Delhi/Ghaziabad/Noida- Roorkee as top OD pair at Chhapar toll plaza and Delhi/Ghaziabad/Noida/Roorkee-SIDCUL/Haridwar as top OD pair at Bahadrabad toll plaza.

The mode wise top 20 OD pairs are given in **Appendix 2.3**.

2.5.5 Travel Pattern

To assess the travel pattern of vehicles, the important streams of traffic plying on the project road are estimated. The list of the popular movements found at the toll plaza locations is presented in **Table 2-9**.

Sr. No.	Traffic Streams	Car	MBus	Bus	MLCV	LCV	2A	3A	MAV
TP01-Chhapar									
1	Meerut/Muzaffarnagar/Panipat and surroundings to Roorkee and surroundings	32.7	8.3	10.6	29.4	18.7	29.3	18.2	23.7

Table 2-9: Traffic Streams (%) at TP01 and TP02

Passenger Traffic:

- At TP01 (Stream 1), around 32.7 percent of car traffic was found plying between Meerut/Muzaffarnagar/Panipat and surroundings to/from Roorkee and surroundings.

- The car traffic from/to Delhi/Ghaziabad/Noida and surroundings to/from SIDCUL/Haridwar/Rishikesh and Surroundings is about 19-22 percent at TP01 (Stream 6) and TP02 (Stream 3).
- At TP01 (Stream 2) and TP02 (Stream 1), around 15-18 percent of car traffic was found plying between Meerut/Muzaffarnagar/Panipat and surroundings to/from SIDCUL/Haridwar/Rishikesh and surroundings.
- At TP02 (Stream 5), around 43.7 percent of car traffic was found plying between Roorkee and surroundings to SIDCUL/Haridwar/Rishikesh and Beyond.
- About 28-33 percent of Bus traffic at TP01 (Stream 6) and TP02 (Stream 3) was found to be travelling from/to Delhi/Ghaziabad/Noida and surroundings to/from SIDCUL/Haridwar/Rishikesh and surroundings.
- At TP01 (Stream 2) and TP02 (Stream 1), around 25-28 percent of Bus traffic was found plying between Meerut/Muzaffarnagar/Panipat and surroundings to/from SIDCUL/Haridwar/Rishikesh and surroundings.

Freight Traffic:

- At TP01 (Stream 2) and TP02 (Stream 1) about 22-24 percent of LCVs were found plying between Meerut/Muzaffarnagar/Panipat and surroundings to/from SIDCUL/Haridwar/Rishikesh and surroundings.
- At TP02 (Stream 5), about 46.1 percent of 2A trucks were found plying between Roorkee and surroundings to/from SIDCUL/Haridwar/Rishikesh and Beyond.
- At TP01 (Stream 2) 28.1 percent and TP02 (Stream 1) 18.3 percent of 3A trucks were found plying between Meerut/Muzaffarnagar/Panipat and surroundings to/from SIDCUL/Haridwar/Rishikesh and surroundings.
- 3A trucks from/to Rajasthan/Central/South India to/from SIDCUL/Haridwar/Rishikesh and surroundings is about 10-17 percent at TP01 (Stream 14) and TP02 (Stream 11).
- In case of MAVs, around 8 and 20 percent at TP01 (Stream 6) and TP02 (Stream 3) respectively, were found to be plying between Delhi/Ghaziabad/Noida and surroundings to SIDCUL/Haridwar/Rishikesh and surroundings.
- At TP02 (Stream 5), around 34.3 percent of MAVs were found plying between Roorkee and surroundings to SIDCUL/Haridwar/Rishikesh and Beyond.

It is worth mentioning that the results of additional OD surveys carried out in January 2025 are similar to those observed in August 2024. The regional distribution and traffic streams from additional OD surveys are presented in **Appendix 2.4.**

2.5.6 Commodity Distribution

Analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. The direction wise commodity distribution for the two toll plazas is presented in **Appendix 2.5**.

The commodity distribution for TP01 and TP02 is presented in **Figure 2-7**.

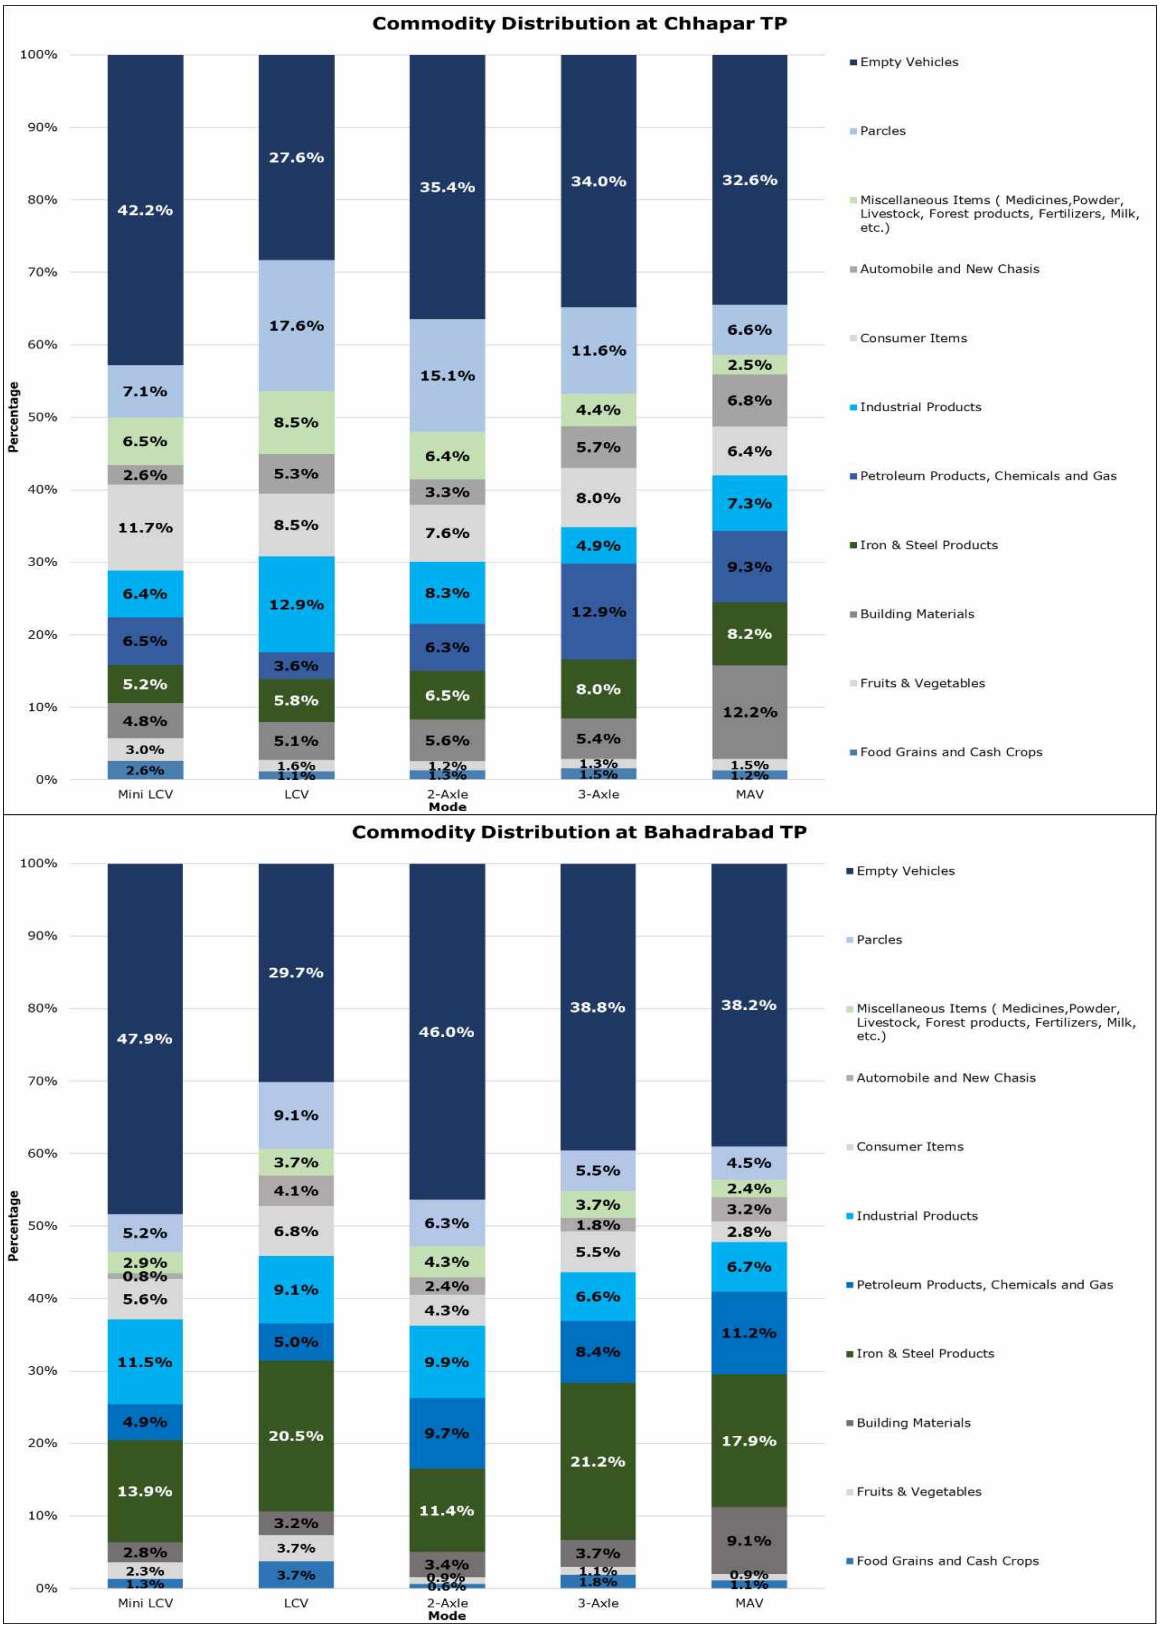

Figure 2-7: Commodity Distribution at TP01 and TP02

- Major commodities being transported across both the toll plazas are iron and steel, consumer items, industrial products and equipment's, petroleum/gas products, parcels etc.

TP01:

- Around 12-18 percent of LCVs, 2A, and 3A trucks are found to be transporting parcels with OD pairs are between Roorkee-Meerut, Haridwar-Delhi and Roorkee-Delhi.
- In case of petroleum products around 9-13 percent of 3A trucks and MAVs are transporting them as a commodity. Major OD pairs found are between Roorkee-Muzaffarnagar.
- Around 8-13 percent of LCVs and 2A trucks are transporting industrial products with major OD pairs found are between Roorkee-Delhi and Roorkee-Muzaffarnagar.
- Around 12 percent of MAVs are transporting building materials as a commodity. Major OD pairs found are between Roorkee- Muzaffarnagar.
- Around 8 percent of 3A/MAVs are found to be transporting iron and steel. Major OD pairs are between Roorkee-Muzaffarnagar.

TP02:

- Around 18-21 percent of LCVs/3A/MAVs are found to be transporting iron and steel. Major OD pairs are between Haridwar-Panipat, Haridwar-Ahmedabad and Roorkee-Bahadrabad.
- In case of petroleum products around 8-11 percent of 2A/3A trucks and MAVs are transporting them as a commodity. Major OD pairs found are between Roorkee-Haridwar and Roorkee-Bahadrabad.
- Around 9-10 percent of LCVs and 2A trucks are transporting industrial products with major OD pairs found are between SIDCUL-Delhi and Haridwar-Muzaffarnagar.
- Around 9 percent of MAVs are transporting building materials as a commodity. Major OD pairs found are between Haridwar-Chandigarh.
- Around 6-9 percent of LCVs, 2A trucks are found to be transporting parcels with OD pairs are between Haridwar-Delhi and Roorkee-Haridwar.

The distribution of building materials on the project is presented in **Table 2-10** and the major components are found to be sand and cement from the OD survey data.

Commodities	MLCV	LCV	2A	3A	MAV
TP01-Chhapar					
Sand	22.6	25.0	36.1	42.5	24.2
Marble	6.5	6.8	11.1	7.5	1.1
Cement	51.6	47.7	50.0	47.5	70.3
Other Building Materials - Bricks, Chips, Tiles	19.4	20.5	2.8	2.5	4.4
Total	100.0	100.0	100.0	100.0	100.0
BM % Of total commodity	4.8	5.1	5.6	5.4	12.2
TP02-Bahadrabad					
Sand	0.0	15.4	4.8	7.1	0.0
Cement	55.6	84.6	85.7	92.9	100.0
Other Building Materials - Bricks, Chips, Tiles	44.4	0.0	9.5	0.0	0.0
Total	100.0	100.0	100.0	100.0	100.0
BM % Of total commodity	2.8	3.2	3.4	3.7	9.1

Table 2-10: Distribution (%) of Building Materials on Project Road

In case of TP01, about 47-52 percent of all MLCV/LCV/2A/3A trucks and 70 percent of MAVs transporting building materials, are found to be carrying cement with major OD pairs between Haridwar-Delhi, Haridwar-Meerut and Roorkee-Meerut.

Among all the trucks carrying building materials, about 36-43 percent of 2A/3A trucks at TP01 are transporting sand with major OD pairs between Bhagwanpur-Delhi, Manglaur-Meerut and Roorkee-Meerut.

In case of TP02, more than 85 percent of all heavy freight vehicles carrying building materials are found to be transporting cement as a commodity with major OD pairs between Haridwar-Delhi, Haridwar-Meerut and Roorkee-Meerut. Additionally, about 44 percent of MLCVs are found to be transporting other building materials which include bricks, chips, tiles, etc.

3. TRAFFIC GROWTH RATE AND PROJECTIONS

3.1 General

The project road is a part of the NHAI InvIT Round 4 portfolio and the projections of traffic and revenue have been presented till FY55 in line with the maximum extendable concession period of 30 years. The estimation of the traffic using the tolled highway, and its future growth are important elements to assess the project's economics as these are generally the main/sole source of revenue for the project This chapter details various aspects of the current traffic of the project road and its growth potential as assessed by Ramboll.

3.2 Project Road Traffic

The traffic that is likely to use the project road was estimated on the basis of the traffic and travel characteristics gathered as part of the study. The traffic on the project road would normally consist of the following components:

- Normal Traffic
- Diverted Traffic
- Induced/Developmental Traffic

3.2.1 Normal Traffic

Normal traffic is the traffic which is already plying on the project road as assessed in section 2.4.4.

3.2.2 Diverted Traffic

Diverted traffic is generally dictated by the presence of an alternative route at a lower generalised cost, which is in-turn defined by the road configuration and its condition, the type of vehicle and its operating costs, the average riding speed, the route distance, and any tolling that may apply on a specific route. A detailed road network assessment along with site reconnaissance survey was conducted on the project road and vicinity to identify alternate routes.

The assessment of any likely traffic diversion from/to the Project Road (PR) has been done using the cost-ratio analysis as described below:

- Assessment of the potential divertible traffic sensitive to network improvements based on the observed travel pattern.
- Calculation of road user cost of travelling on the project road and the alternative route. The road user cost includes vehicle operating cost (VOC), travel time cost (TTC) and toll cost (TC), if any. VOC comprises of the cost of fuel, spare parts, maintenance labour, tyre, engine oil, grease, fixed cost, depreciation and crew wages.

- The toll rates for expressway have been considered as 1.6 times the normal NHAI per km toll rates (accounting for 1.25 times for normal length of expressway and increase for the likely equivalent structure length).

The road user cost is estimated based on vehicle operating cost equations presented in IRC SP-30,2019 which is based on updation of Road User Cost Study (RUCS) carried out by Central Road Research Institute in 2019 for Ministry of Road Transport and Highways. Using the likely traffic stream speeds and lane configuration, the vehicle operating, and travel time costs are estimated for each of the routes. Road user cost on the identified routes is calculated and diversion percentages are estimated using diversion curve method mainly for trucks. In this method, traffic likely to be diverted from/to the project road, was estimated using Logit model, which computes expected diversion percentage based on the ratio of perceived cost on the existing and proposed facilities. The perceived cost is the financial vehicle operating cost and the time saving cost including toll charges (if any). According to the model, a vehicle will shift if the perceived cost on an alternative route is lower in comparison to existing route. The diversion equations for estimating diversion have been adopted from Indian National Expressway Network Report, MORTH (2009) as mentioned in IRC 108:2015. These equations are presented in **Table 3-1**.

Vehicle	Cost Ratio (CR) Interval	Equations
Truck	<= 0.750	% Div. = 100 - ((CR/0.75) * 5)
	0.750 <= CR <= 1.250	% Div. = 95 - ((CR-0.75)/0.5) * 90
	1.250 <= CR <= 2.0	% Div. = ((2-CR)/0.75) * 5

Source: IRC 108-2015

Table 3-1: Diversion Equations Used for Analysis

In case of project road, there are no short distance alternative route options in the vicinity of the toll plazas which could be used to bypass the project road toll plazas.

However, in wider context, there are three major developments in the project road network that could provide alternative route options for the traffic using the project road at present and may divert away to these routes once operational. These network level developments have been studied in detail and analysed to work out the impact on the PR traffic. The proposed network developments are:

A. Delhi-Dehradun Expressway - DDE (with spur to Haridwar)

B. Ganga Expressway Phase II

C. Upper Ganga Canal Road (Kawar Path)

A. Impact of Delhi-Dehradun Expressway (with spur to Haridwar)

The Delhi-Dehradun Expressway is one of the transformative infrastructure projects to enhance the connectivity between Delhi and Dehradun, 210 kilometres in length, is an under construction 12 lane (Phase-I) and 6 lane (Phase II, III & IV) access-controlled road by NHAI with a route alignment through Delhi, Uttar Pradesh & Uttarakhand. The expressway starts at Akshardham in Delhi and ends in Dehradun, Uttarakhand.

DDE is being developed in four phases -

- First phase from Akshardham to Baghpat with brownfield upgradation, 32 kms in length consisting of 12 lanes, includes 6 express and 6 local lanes.
- Second phase starts from Baghpat and ends at Saharanpur with greenfield alignment, 118 km in length and consists of 6 lanes.
- Third phase from Saharanpur to Ganeshpur with brownfield upgradation, 40 km in length and consists of 6 lanes.
- The last phase or fourth phase starts from Ganeshpur and ends at Dehradun with brownfield upgradation, 19.5 km in length and consists of 4/6 lanes.

The expressway is having 8 interchanges in total with other NHs, SHs. It also has one spur, Saharanpur Bypass-Haridwar (50.7 km), which increases the connectivity between Delhi and Haridwar. The proposed Delhi-Dehradun Expressway aims to tackle the persistent challenge of traffic congestion and disruptions caused by the submergence of the existing highways, especially during the monsoon season. The Delhi-Dehradun expressway is expected to be opened to traffic by July 2025, with the Haridwar spur segment scheduled for completion by September 2025.

The Haridwar spur of the Delhi-Dehradun Expressway is a significant extension designed to enhance connectivity between the main expressway and the holy city of Haridwar. This spur is approximately 50.7 kilometres long and will serve as a crucial link for travellers heading to Haridwar from the expressway. The spur begins at the 108-kilometer mark on the Delhi-Dehradun Expressway, just south of Saharanpur. It will pass north of Roorkee before terminating at the proposed Haridwar ring road.

Delhi-Dehradun Expressway with spur to Haridwar and interchanges is represented in **Figure 3-1**.

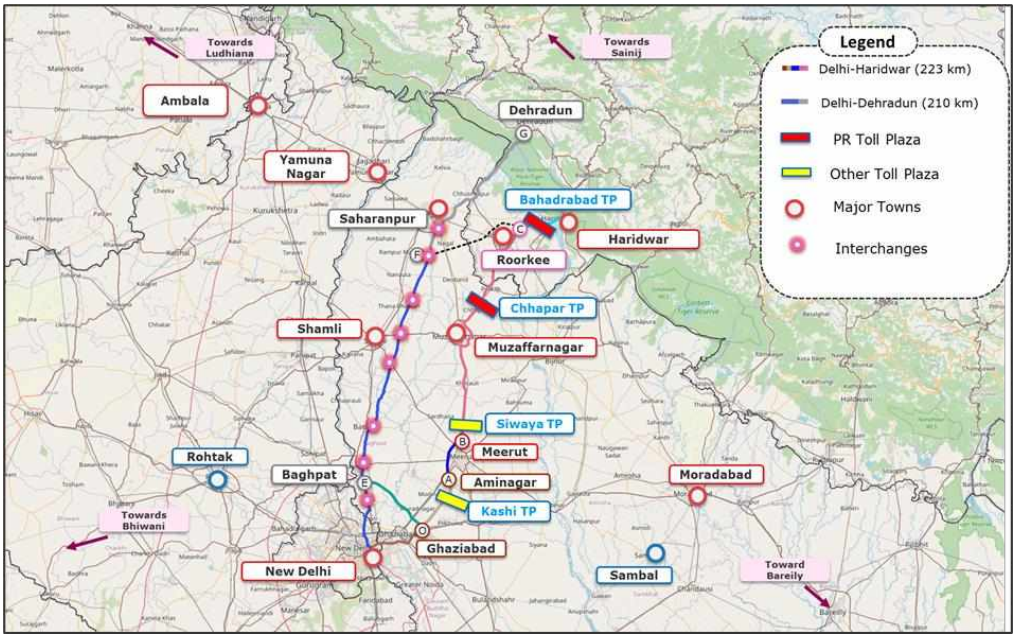

Figure 3-1: Delhi-Dehradun Expressway with Haridwar Spur

Saharanpur to Haridwar spur of DDE will be having an overlap of about 7 km with the project road section of Muzaffarnagar – Haridwar. The spur will be merging with NH-334 at chainage km 182.070 on the project road and will be an elevated section on PR till it lands through the spur after Bahadrabad toll plaza (km 187.370). It will diverge into service roads on each side continuing till km 188.900 and will merge with PR after Bahadrabad toll plaza. The merging of spur of DDE with NH-334 is represented in **Figure 3-2**.

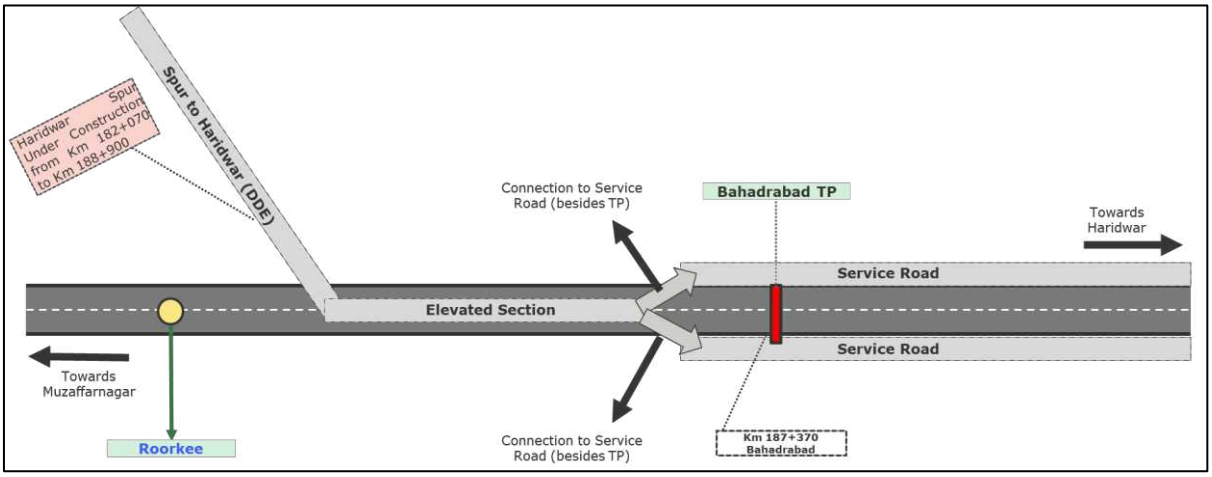

Figure 3-2: DDE Spur to Haridwar Merging with NH-334

The completion of Delhi Dehradun Expressway coupled with Haridwar spur corridor may provide an alternate route option to long distance traffic from/to Delhi NCR & beyond to/from Dehradun/Haridwar/Rishikesh & beyond.

For the traffic originating from North/ Northwest Delhi (considered 25 percent of Total Delhi traffic), the start point for taking the route via DDE has been considered as Wazirabad bridge and the start point for rest of Delhi (considered 75 percent of total Delhi traffic) has been considered as Akshardham.

The impact of completion of this corridor has been studied for two streams of traffic:

- Traffic from/to Delhi NCR & beyond to/from Dehradun & beyond (for Chhapar TP)
    - Northwest Delhi to Dehradun & beyond
    - Rest of Delhi/Noida/Gurgaon to Dehradun & beyond
    - Ghaziabad & surroundings to Dehradun & beyond
    - Panipat, Shamli & surroundings to Dehradun & beyond
    - Central/South India to Dehradun & beyond
    - Meerut & surroundings to Dehradun & beyond
    - Muzaffarnagar & surroundings to Dehradun & beyond
- Traffic from/to Delhi NCR & beyond to/from Haridwar/Rishikesh & beyond (for Chhapar and Bahadrabad TP)
    - Northwest Delhi to Haridwar/Rishikesh & beyond

- Rest of Delhi/Noida/Gurgaon to Haridwar/Rishikesh & beyond
- Ghaziabad & surroundings to Haridwar/Rishikesh & beyond
- Panipat, Shamli & surroundings to Haridwar/Rishikesh & beyond
- Central/South India to Haridwar/Rishikesh & beyond

A.I Route Choice between Delhi NCR & Beyond and Dehradun & Beyond For Chhapar TP

The route via project road and the alignment of the Delhi-Dehradun Expressway for Dehradun & Beyond traffic is presented in **Figure 3-3**.

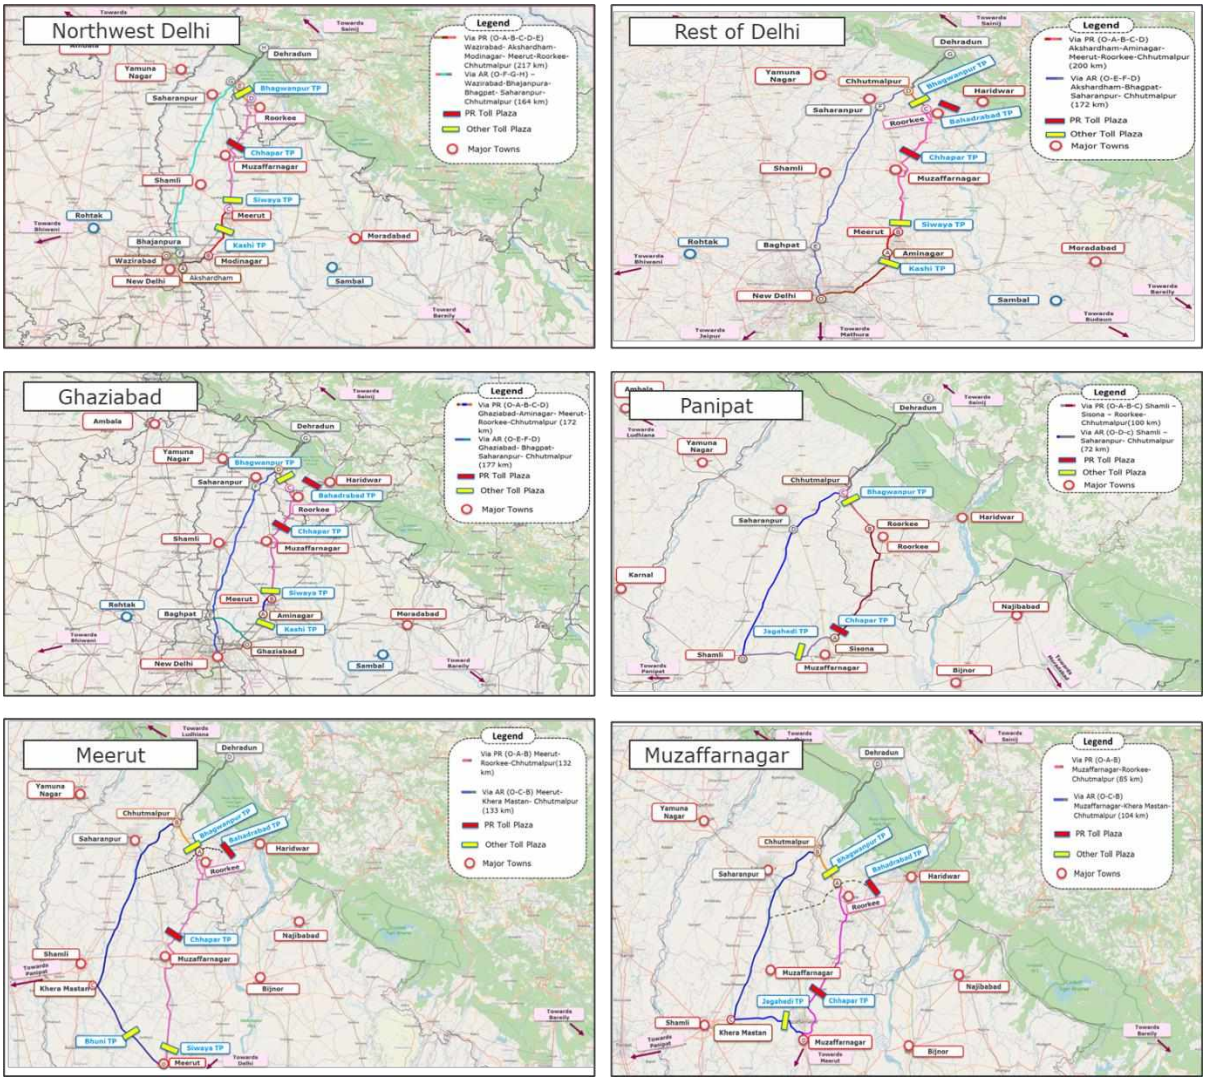

Figure 3-3: Project Road and Delhi-Dehradun Expressway Alignment for Dehradun & Beyond traffic

The potential divertible traffic is the traffic plying between Delhi NCR & beyond to Dehradun and beyond which has been estimated from the OD survey conducted during the present study.

The results of diversion analysis along with the potential divertible traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-2**.

Potential Streams	Length (In Km)		Modes

Table 3-2: Diversion Analysis for Delhi-Dehradun Expressway for Dehradun & Beyond traffic – FY25

The proposed expressway may take away around 4-10 percent of the car & freight traffic from Chhapar toll plaza for the Dehradun & beyond traffic which is approximately 2,979 PCUs in absolute terms.

A.II Route Choice between Delhi NCR & Beyond and Haridwar/Rishikesh & Beyond (via Haridwar Spur) For Chhapar and Bahadrabad TP

The route via project road and the alignment of the Delhi-Dehradun Expressway via Haridwar spur for Haridwar/Rishikesh & beyond traffic is presented in **Figure 3-4**.

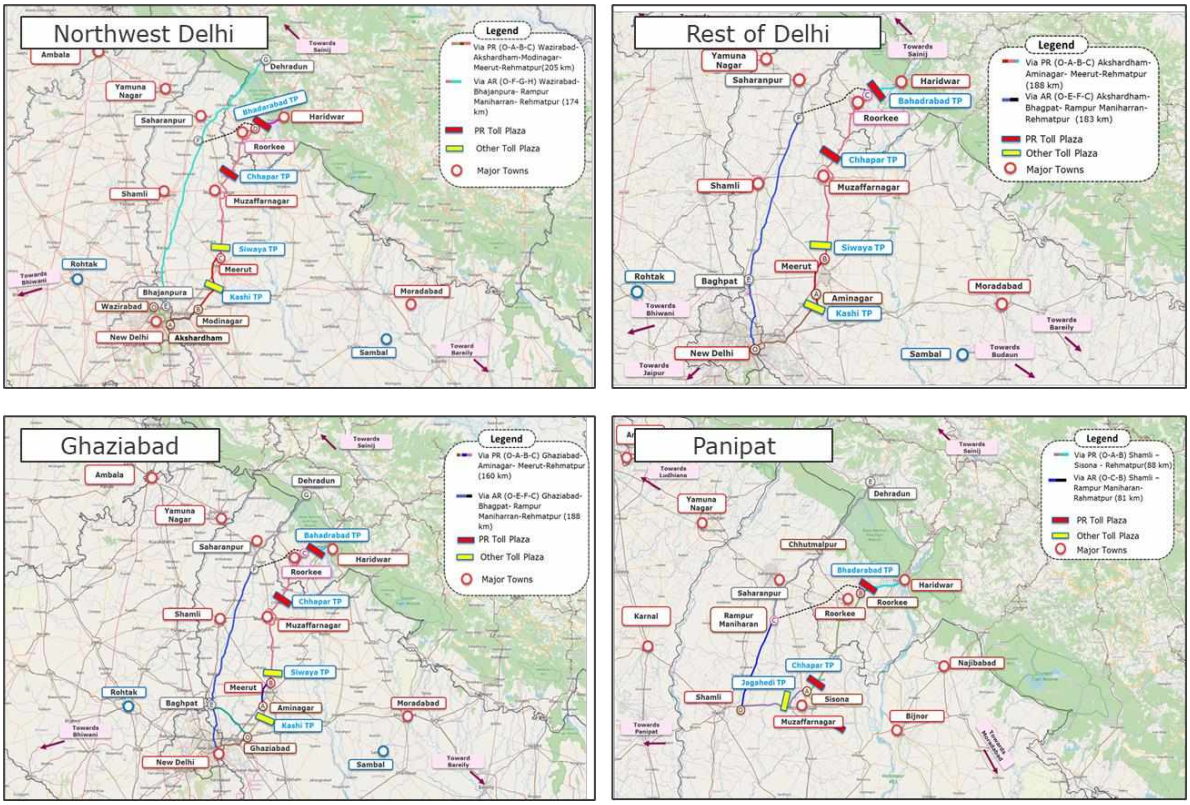

Figure 3-4: Project Road and Delhi-Dehradun Expressway Alignment via Spur to Haridwar for Haridwar & Beyond traffic

The potential divertible traffic is the traffic plying between Delhi NCR & beyond to Haridwar/Rishikesh and beyond which has been estimated from the OD survey conducted during the present study. This diversion analysis is considered for both Chhapar and Bahadrabad toll plazas.

The results of diversion analysis along with the potential divertible traffic, diversion percentages and diverted traffic estimated for FY25 for Chhapar toll plaza is presented in **Table 3-3.**

Potential Streams	Length (In Km)		Modes

Potential As % of AADT						
Haridwar & beyond traffic	31.4	20.5	29.6	45.9	46.9	32.5
Total	**6,970**	**168**	**784**	**169**	**328**	**11,559**
Diverted Traffic as % of AADT						
Haridwar & beyond traffic	19.2	11.4	22.3	34.9	34.6	21.6
Diverted Traffic	**4,253**	**95**	**594**	**131**	**247**	**7,684**

Table 3-5: Total Diverted Traffic to Delhi-Dehradun Expressway – FY25

In total Delhi-Dehradun Expressway may take away around 8,953 PCUs from Chhapar toll plaza and 7,684 PCUs from Bahadrabad toll plaza. This traffic has been grown and considered appropriately in the respective years of impact. The negative impact of traffic at the toll plazas has been considered as 40 percent in FY26 and 100 percent from FY27 onwards.

In addition to this, during the six laning of the project road section DDE may take away higher traffic due to construction activities on PR. For estimating this impact, six laning toll rates at 75 percent and reduced speeds on PR due to construction activity have been considered. A comparison of diversion percentages before and during six laning estimated for FY25 is presented in **Table 3-6**.

Potential Streams	Modes				
	Car	LCV	2A	3A	MAV
Diverted Traffic Before Six Laning of PR					
Chhapar TP	22.9	9.2	21.8	27.1	21.2
Bahadrabad TP	19.2	11.4	22.3	34.9	34.6
Diverted Traffic During Construction Period for Six Laning of PR					
Chhapar TP	28.8	10.2	24.5	30.7	24.4
Bahadrabad TP	24.3	12.6	25.8	39.7	39.8

Table 3-6: Impact of Six Laning of PR on DDE Diversion – FY25

B. Impact of Ganga Expressway Phase II

The Ganga Expressway is a major infrastructure project in Uttar Pradesh, designed to enhance connectivity across the state and facilitate smoother transportation between key cities. As of February 2025, the expressway is approximately 80 percent complete, with significant progress made in both phases of construction. The first phase is nearing operational readiness ahead of the Prayagraj Maha Kumbh Mela, while the entire expressway is expected to be fully operational by April 2025. Spanning about 602 kilometres, the Ganga Expressway will connect Meerut to Prayagraj and further extend into surrounding districts. Currently the expressway phase I from Prayagraj to Meerut on BOT basis.

Under Phase II of Ganga Expressway, it will be extended from Meerut to Haridwar for which the timelines are yet not known.

The impact of completion of this corridor has been studied for two streams of traffic:

- Traffic from/to East UP & beyond to/from SIDCUL/Haridwar & beyond
- Traffic from/to Meerut & surroundings to/from SIDCUL/Haridwar & beyond

The impact has been considered for both the toll plazas (Chhapar and Bahadrabad toll plaza). The route via project road and the alignment of the Ganga Expressway Phase II is presented in **Figure 3-5.**

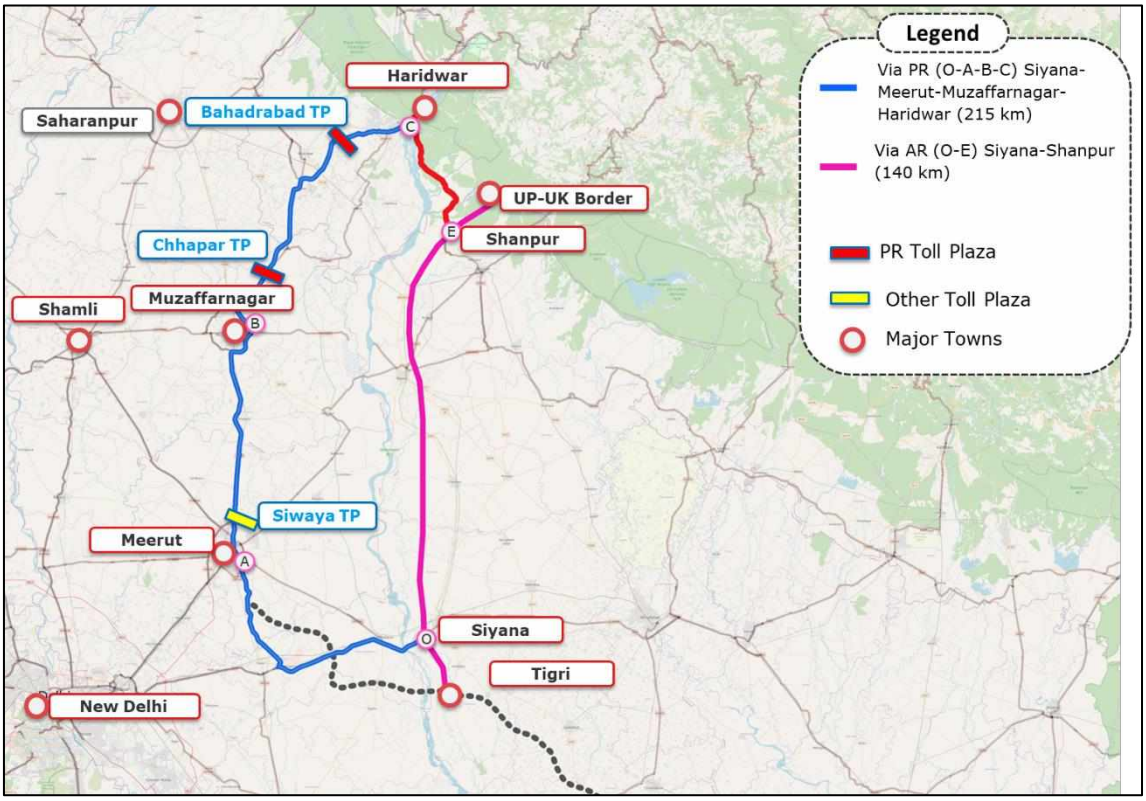

Figure 3-5: Project Road and Tentative Ganga Expressway Phase II Alignment

B.I Route Choice between East UP and Haridwar & Beyond

The prominent route for East UP - Haridwar traffic via project road (O-A-B-C) is about 215 km and the proposed alternate route (O-E) via Ganga Expressway Phase II will be

about 140 km for Haridwar bound traffic. Thus, the alternate route will be about 75 km shorter than the route via PR.

Thus, route via Ganga Expressway Phase II once completed may attract some of the car & freight vehicles which are currently using the project road.

The potential divertible traffic is the traffic plying between East UP/Bihar & beyond to Haridwar and beyond which has been estimated from the OD survey conducted during the present study. The results of diversion analysis for East UP & beyond to Haridwar & beyond traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-7**.

Potential Streams	Length (In Km)		Modes					
	PR	AR	Car	LCV	2A	3A	MAV	PCU
Potential for East UP & Beyond to Haridwar & Beyond								
Potential As % of AADT								
East UP Bound – Chhapar TP	215	140	1.3	0.7	1.5	1.5	1.8	1.4
East UP Bound – Bahadrabad TP	215	140	1.4	0.9	1.6	1.7	3.7	1.6
Diversion based on Cost Ratio								
East UP Bound			95.5	96.9	97.7	97.9	97.7	
Diverted traffic to AR future								
East UP Bound – Chhapar TP			1.3	0.7	1.4	1.4	1.7	1.4
East UP Bound – Bahadrabad TP			1.3	0.8	1.6	1.7	3.6	1.6
Total Diverted Traffic			**291**	**7**	**42**	**6**	**25**	**560**

Table 3-7: Diversion Analysis for Ganga Expressway Phase II for East UP to Haridwar & beyond traffic – FY25

The proposed expressway may take away around 1-4 percent of the car & freight traffic from both toll plazas for the East UP & beyond to Haridwar & beyond traffic which is approximately 560 PCUs in absolute terms.

B.II Route Choice between Meerut & Surroundings and Haridwar & Beyond

The prominent route for Meerut - Haridwar traffic via project road is about 132 km and the proposed alternate route via Ganga Expressway Phase II will be 193 km long for Haridwar bound traffic. Thus, the alternate route is about 61 km longer than the route via PR.

The results of diversion analysis for Meerut & surroundings to Haridwar & beyond traffic, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-8**.

Potential Streams	Length (In Km)		Modes					
	PR	AR	Car	LCV	2A	3A	MAV	PCU
Potential for East UP NCR & Beyond to Dehradun & Beyond								
Potential As % of AADT								
Meerut - Haridwar & Beyond - Chhapar	132.2	193.3	4.7	4.0	4.3	6.6	3.9	4.6
Meerut - Haridwar & Beyond - Bahadrabad	132.2	193.3	4.8	5.0	4.7	7.8	8.2	5.2
Diversion based on Cost Ratio								
Meerut Bound			9.2	4.0	4.3	4.4	4.3	
Diverted traffic to AR future								
Meerut Bound – Chhapar TP			0.4	0.2	0.2	0.3	0.2	0.3
Meerut Bound – Bahadrabad TP			0.4	0.2	0.2	0.3	0.4	0.4
Total Diverted Traffic			**99**	**2**	**5**	**1**	**2**	**132**

Table 3-8: Diversion Analysis for Ganga Expressway Phase II for Meerut to Haridwar & Beyond Traffic – FY25

The proposed expressway may take away around 0.2 – 0.4 percent of the car & freight traffic from both toll plazas for the Meerut & surroundings to Haridwar & beyond traffic which is approximately 132 PCUs.

In total from both the traffic streams of East UP and Meerut, Ganga Expressway Phase II may take away around 692 PCUs from both the toll plazas. This traffic has been grown and considered appropriately in the respective years of impact. The negative impact of traffic at all the toll plazas has been considered as 50 percent in FY35 and 100 percent from FY36 onwards.

C. Impact of Upper Ganga Canal Road (Kawar Path)

The Upper Ganga Canal Road is a significant infrastructure project aimed at enhancing connectivity between Delhi/Ghaziabad/Noida/Greater Noida and Dehradun/Haridwar, spanning approximately 147.8 kilometres. It is planned to be constructed on the western bank of Ganga Canal. The canal road will commence from the Sanauta Bridge in Bulandshahar and extend to Purquazi in Muzaffarnagar, crossing through key locations such as Ghaziabad, Meerut, and Deoband. The eastern bank already has existing canal road consists of 2 lanes with other side having farmland, the new road will add up 2 more lanes and make it as 4 lane road. Due to the presence of 54 villages along the route across all the districts whose residents rely on this as primary route but during the month of Sharvan it gets congested because of influx of lot of pilgrimages because of Kawar Yatra from various parts of India to collect holy water from the Ganges which runs along this route. This upcoming Upper Ganga canal road aims to ease the traffic congestion during the yatra.

As the Dehradun bound traffic has already been considered as a potential for Delhi-Dehradun Expressway, only to/from Purquazi & beyond traffic is considered for canal road for Chhapar toll plaza.

The route via project road and the tentative alignment of the Upper Ganga Canal Road is presented in **Figure 3-6**.

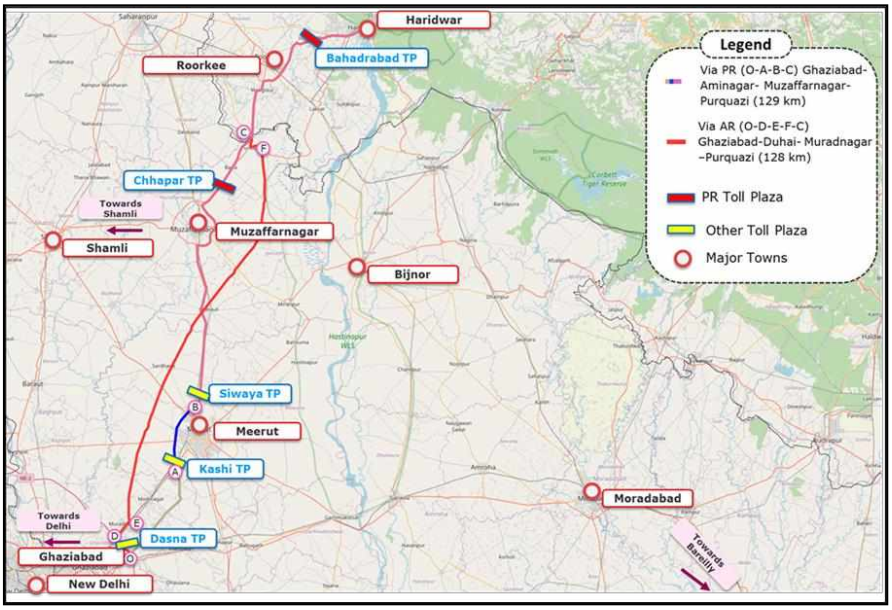

Figure 3-6: Project Road and Upper Ganga Canal Road alignment

The prominent route for Ghaziabad-Purquazi is via project road (O-A-B-C) which is about 129 km and the alternate route via Upper Ganga Canal Road (O-D-E-F-C) will be about 128 km for Purquazi & beyond traffic. Thus, the route via canal road will be about 1 km shorter than the route via PR.

The results of diversion analysis for the traffic to/from Purquazi & beyond, diversion percentages and diverted traffic estimated for FY25 is presented in **Table 3-9**.

Potential Streams	Length (In Km)		Modes					
	PR	AR	Car	LCV	2A	3A	MAV	PCU (Car & LCV)
Potential for Upper Ganga Canal Road (Kawar Path)								
Potential As % of AADT								
Potential	129	128	32.4	17.7	37.8	30.6	40.2	18.7
Diversion percentage Based on Cost Ratio Analysis								
Diversion %			47.5	65.3	47.0	54.4	50.4	
Diverted Traffic to AR future								
Loss in %			15.4	11.6	17.8	16.7	20.2	9.0
Total Diverted Traffic			**3,481**	**119**	**513**	**73**	**297**	**3,659**

Table 3-9: Diversion Analysis for Upper Ganga Canal Road for Purquazi & Beyond Traffic - FY25

The proposed expressway may take away around 15 percent in cars and 12 percent in LCVs. Because of the two-way movement on this two-lane road abutting farmlands, presence of height restriction barriers and difficulty in manoeuvring higher axle vehicles, only Car & LCV traffic have been considered for further analysis and freight traffic is not considered. This traffic has been grown and considered appropriately in the respective years of impact. The negative impact of traffic at all the toll plazas has been considered as 50 percent in FY28 and 100 percent from FY29 onwards.

3.2.3 Induced/ Development Traffic

Developmental /new generated traffic is the one which would be generated, over and above normal growth, because of lowering of transport costs or new developments in the immediate influence area of the project road. In case of the project road, there is no development envisaged in the vicinity of the project road.

Bharatmala Pariyojana is the second largest highways construction project in the country since NHDP, under which almost 50,000 km or highway roads were targeted across the country. It will look to improve connectivity particularly on economic corridors, border areas and far-flung areas with an aim of quicker movement of cargo and boosting exports. The Phase-I includes economic corridors of around 9,000 km; inter-corridor and feeder routes of around 6,000 km; 5,000 km roads under the National Corridors Efficiency Program, border and international connectivity roads of around 2,000 km; coastal and port connectivity roads of around 2,000 km; expressways of around 800 km and 10,000 km of NHDP roads. The total length in phase 1 comes to around 34,800 km.

Uttar Pradesh is developing multiple economic corridors to enhance industrial growth, improve logistics, and attract investments. One of the key projects is the Uttar Pradesh Defence Industrial Corridor (UPDIC) which covers Aligarh, Agra, Jhansi, Kanpur, Lucknow and Chitrakoot. This corridor aims to promote domestic defence manufacturing and reduce dependence on imports.

The Eastern Dedicated Freight Corridor (EDFC) is another major infrastructure project passing through Uttar Pradesh. It connects Ludhiana in Punjab to Sonnagar in Bihar, facilitating efficient freight movement. Cities like Kanpur, Prayagraj, and Meerut benefit from improved logistics, with multimodal logistics parks planned along the corridor to support industrial activities.

The Delhi-Mumbai Industrial Corridor (DMIC) also has a presence in UP, with the Integrated Industrial Township at Greater Noida (IITGN) being a key initiative. The township is designed to support manufacturing sectors such as electronics, automobiles, and logistics, offering modern infrastructure for industries.

Additionally, UP’s expressways are being developed as economic corridors. The Ganga Expressway, Purvanchal Expressway and Bundelkhand Expressway have designated industrial zones to attract businesses. Along the Ganga Expressway, around 1,522 hectares have been identified for industrial development, with an expected investment of ₹2,300 crore.

As the project road caters to the long/ short distance traffic, this project section will continue to remain as an important highway and cater to the industrial needs along the corridor and may see sustained growth in the future.

3.3 Methodology for Traffic Growth Rate Estimation

Traffic growth for both passenger and freight vehicles has been estimated using the econometric approach as described in IRC-108, 2015. For freight traffic, due consideration has been given to the total tonnage transported and the shift in types of vehicles used for moving goods.

The econometric model applied, relates traffic growth to changes in state (or district) domestic product via an elasticity factor. According to IRC guidelines, elasticity based econometric model for highway projects should be derived in the following form:

$Log_e(P) = A0 + A1\ Log_e\ (EI)$, where:

P - Traffic Volume

EI - Economic Indicator

A0 - Regression Constant

A1 - Regression Co-efficient (Elasticity Index)

In order to estimate traffic on the project road, the methodology described below has been followed:

Identify the influence area - From the analysis of OD survey data, the project influencing states and districts, which are likely to impact the traffic growth on the project road, were identified.

Review Past traffic Data – Based on toll data available for the project, a review of past traffic and tonnage growth is carried out.

Analysis of economic growth of the Project Influencing Area (PIA) - For each PIA state, an economic profile describing past performance and future outlook was prepared. This also considers India's past economic performance and its future outlook.

Estimation of traffic elasticity to income – in order to translate economic growth into traffic growth, an elasticity factor was estimated.

Derivation of traffic growth rates – On the basis of the weighted (based on OD shares) PIA outlook and related traffic elasticity, traffic growth rates were estimated.

The methodology thus adopted incorporates, as basic data inputs, the perspective growth envisaged in the influence area and the changes in transport demand elasticities over a period of time. The traffic growth rates by vehicle type for the project road have been determined till FY55 in line with the maximum extendable concession period of 30 years

3.4 Identification of PIA States

The regional distribution observed on the project road shows that Uttarakhand is the main contributor of traffic at both the toll plaza locations; additionally, for TP02, Uttar Pradesh also has a significant share in case of both passenger and freight vehicles. Thus,

these two states have been considered as primary PIA states. Moreover, the states of Delhi, Haryana and Rajasthan also contribute to the project road traffic.

The mode wise normalized regional distribution at both the toll plazas is presented in **Figure 3-7**.

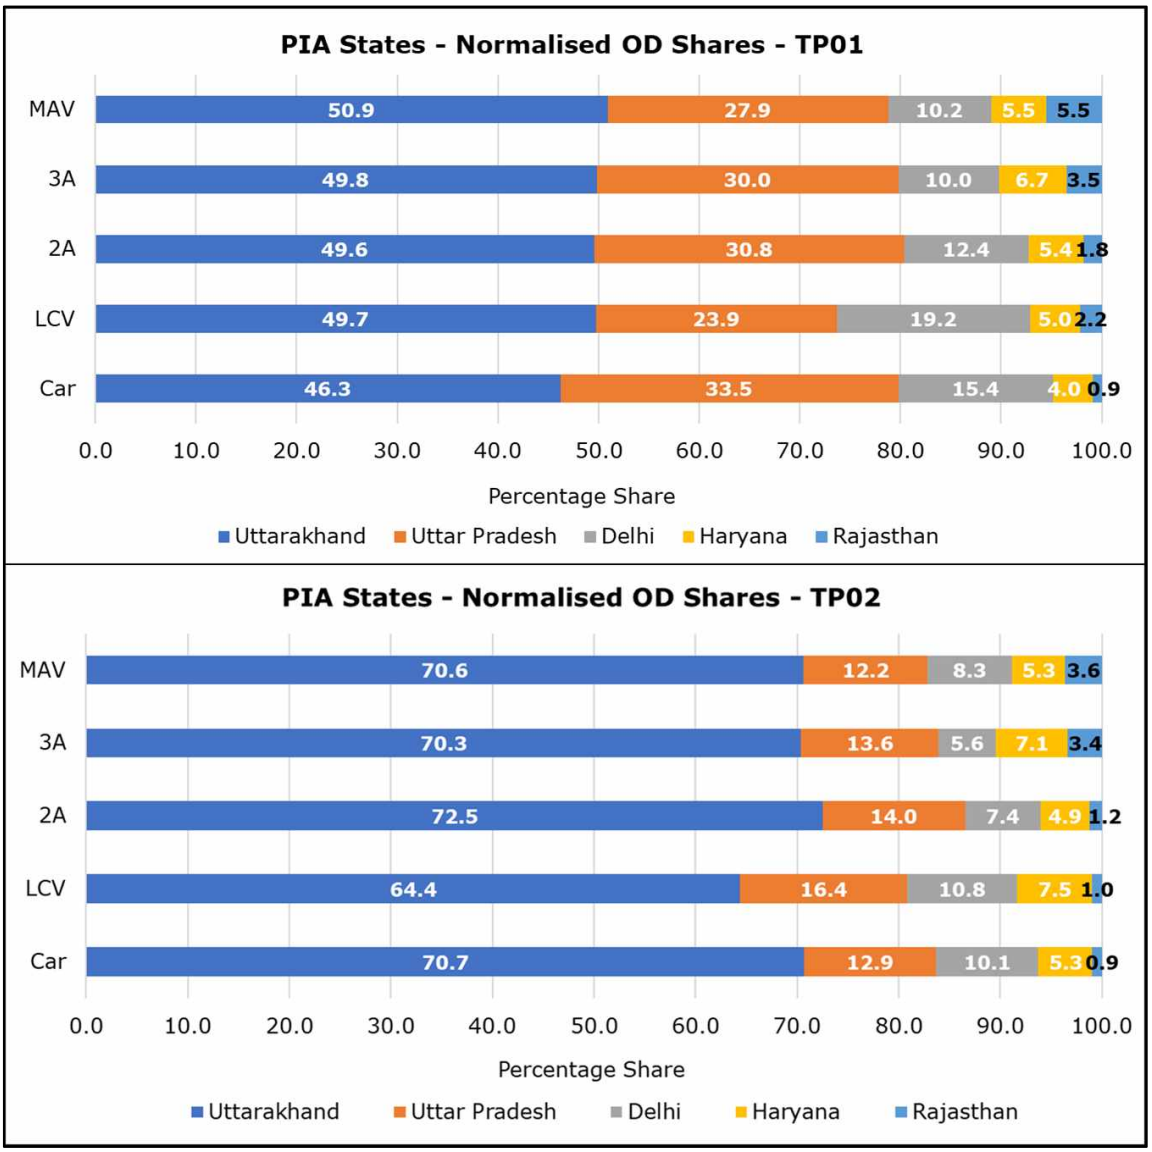

Figure 3-7: Normalised Regional Distribution (%) for PR

The OD shares show that for car traffic, around 46.3 percent at TP01 and 70.7 percent at TP02 is coming from Uttarakhand. Moreover, around 33.5 percent at TP01 and about 12.9 percent of traffic is being generated from Uttar Pradesh. Similarly, Delhi has a share of around 15.4 percent at TP01 and about 10.1 percent at TP02 whereas, the remaining 1-5 percent traffic is from Rajasthan and Haryana for both the toll plazas.

The share of 2A traffic from Uttarakhand is around 49.6 percent for TP01 and 72.5 percent for TP02; the state of Uttar Pradesh contributes around 30.8 percent for TP01 and 14.0 percent for TP02. Moreover, Delhi has a share of about 12.4 percent and 7.4 percent at TP01 and TP02 respectively whereas, Delhi and Haryana have a share of around 1-5 percent for each toll plaza locations.

In case of 3A truck category, Uttarakhand has a share of around 49.8 percent for TP01 and 70.3 percent for TP02. Around 30.0 percent and 13.6 percent is from Uttar Pradesh for TP01 and TP02 respectively, followed by 3-10 percent of the traffic being generated from Rajasthan, Delhi, and Haryana.

For MAVs, around 50.9 percent and 70.6 percent traffic is being generated from Uttarakhand for TP01 and TP02 respectively whereas, around 12 percent and 28 percent traffic is coming from Uttar Pradesh for TP01 and TP02. The remaining 3-10 percent is from Rajasthan, Delhi, and Haryana for both the toll plazas.

Considering the predominance of Uttarakhand and Uttar Pradesh in the project road traffic, these two states have been considered as the primary PIA states for both passenger and freight traffic. In addition to Uttarakhand and Uttar Pradesh, the other PIA states which have been considered for both passenger and freight traffic are Rajasthan, Delhi, and Haryana.

3.5 Past Economic Growth of PIA

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. A number of economic indicators for the PIA states, as published by Central Statistical Organisation (2011-12 prices), have been studied to assess their past performance.

PIA State - Uttarakhand

Past economic performance of the state has been as follows:

- Uttarakhand's Gross State Domestic Product (GSDP) stood at Rs 2,133.8 billion in FY24 and has been growing at a trendline growth rate of 4.7 percent since FY12.
- The secondary sector is the largest contributor to GSDP of Uttarakhand, with a share of about 49.8 percent. Tertiary sector stood at 41.7 percent and primary sector at 8.4 percent of the GSDP in FY24.

PIA State – Uttar Pradesh

Past economic performance of the state has been as follows:

- Uttarakhand's Gross State Domestic Product (GSDP) stood at Rs 14,233.6 billion in FY24 and has been growing at a trendline growth rate of 5.6 percent since FY12.
- The tertiary sector is the largest contributor to GSDP of Uttar Pradesh, about 47.5 percent. Secondary sector has a share of about 28.4 percent and about 24.2 percent is contributed by primary sector to GSDP in FY24.

The change of sectoral composition of GSDP over the years is presented in **Figure 3-8**.

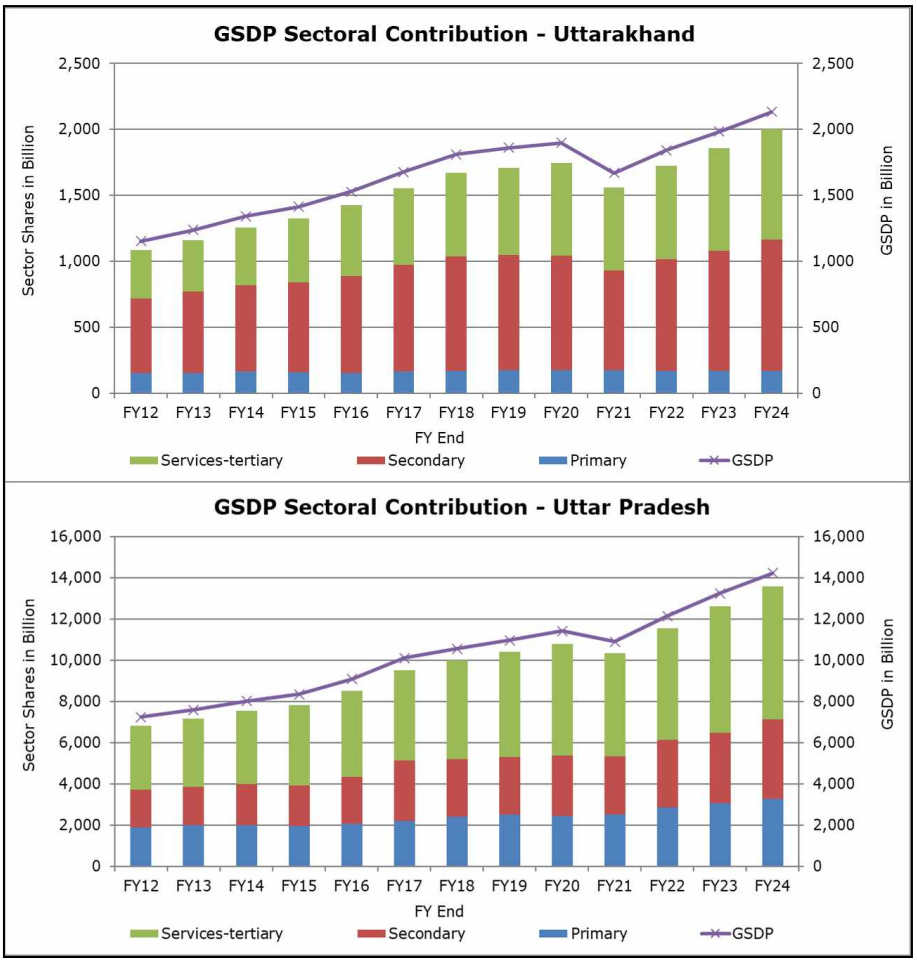

Figure 3-8: GSDP (in Rs Billion) and its Sectoral Composition for Uttarakhand and Uttar Pradesh

The performance of the state economy and its different sectors has been studied using time trend analysis. The average annual growth rates as obtained using regression analysis are presented in **Table 3-10**.

Particulars	Uttarakhand		Uttar Pradesh	
	FY12 to FY24	FY14 to FY24	FY12 to FY24	FY14 to FY24
GSDP	4.7	3.6	5.6	5.3
Agriculture and Allied	1.0	1.0	4.6	5.4
Industry	4.0	2.9	6.2	6.0
Services	6.7	5.3	6.0	5.3
Construction	5.9	5.8	5.8	6.5
Per Capita Income	3.5	2.4	4.1	3.9

Table 3-10 : Average Annual Growth Rates (%) of State Income for Uttarakhand and Uttar Pradesh

Uttarakhand

Uttarakhand is a predominant exporter of organic agricultural products, agro-based and processed foods, aromatic and medicinal plant-based products, pharmaceuticals, nutraceuticals, and services sectors like tourism and wellness.

Uttarakhand has a well-developed Integrated Industrial Estates (IIEs), IT Parks and growth centers at various well approachable locations within the state. In addition to the existing IT Park at Dehradun, the state government will set up additional IT Park at Ram Nagar/Pant Nagar. Some of the key IT players are Hiltron, Wipro, HCL, Modi Infotech etc.

The budget for 30 national highway (NH) projects worth is Rs 4,755 crore is allotted to Haridwar and eight NH projects worth Rs 2,200 crore in Tanakpur, Champawat.

As of October 2024, the Char Dham Highway Development Project, initiated in December 2016, has achieved around 75 percent completion. This project aims to enhance connectivity to the sacred Char Dham pilgrimage sites—Gangotri, Yamunotri, Kedarnath, and Badrinath—and improve access to the India-China border roads. The project is systematically divided into multiple packages, with significant segments commencing from Rishikesh. The anticipated completion date is set for December 2024.

According to Department for Promotion of Industry and Internal Trade (DPIIT), the state has enticed the Foreign Direct Investment (FDI) equity inflows worth US$ 189.5 million during the period October 2019 to June 2024.

Due to the availability of fertile soil and favourable climatic conditions, the state has rich agricultural regions. Sugarcane, wheat, rice and potato are the major agricultural products of the state. Fruits like apple, orange, pear, grapes, peaches, plums, apricots, litchi, mango and guava are widely grown in the state, which has huge potential for crop development horticulture and processing industries.

The state also has a mega food park at Haridwar. These two mega food parks are anticipated to contribute US$ 995.35 million to the GSDP of the state and expected to generate about 30,000 direct and 290,000 indirect employment opportunities in the state by 2020. The Government is planning to develop Uttarakhand as a manufacturing hub for organically processed food units. So, it invites food processing companies to come and produce organic processed food products in the state.

Uttarakhand aims to double tourist arrivals to 70 million by 2030. Sonprayag-Gaurikund-Kedarnath Ropeway Project is being implemented by National Highways Logistics Management Limited (NHMLL) with a length of 13 km and the estimated cost of the project will be over $985 billion (US$ 126.77 million).

Uttar Pradesh

Uttar Pradesh is a predominant exporter of telecom instruments, meat and edibles, apparel and clothing, footwear, iron and steel products, aluminium products, handmade carpet (excl. silk), mechanical appliances, and organic chemicals, etc.

Currently, the state has 14 operational Special Economic Zones (SEZs), 24 have been formally approved and 23 have been notified. These SEZs are dispersed over a manifold range of sectors including textiles, handicrafts, electronics hardware, non-conventional energy, and IT SEZs. The state has emerged as an IT hub and supports units of key IT players like Tech Mahindra, IBM, TCS, HCL, Adobe, etc. The state has proposed the development of 40 IT/ITeS parks, excluding IT SEZs, along with 2 biotech zones and a knowledge park.

The state has made significant strides in fostering economic growth and attracting substantial investments by developing world-class road infrastructure. Major operational projects include the 165 km, six-lane Yamuna Expressway linking Greater Noida to Agra, the 302 km Agra-Lucknow Expressway, and the 340 km Purvanchal Expressway connecting Lucknow to Ghazipur near the Bihar border. Additionally, the 296 km Bundelkhand Expressway connects backward regions like Chitrakoot and Banda to the national capital region through other expressways. Ongoing projects like the Gorakhpur Link Expressway, which connects Gorakhpur to the Purvanchal Expressway, and the Ganga Expressway, stretching from Meerut to Prayagraj, promise to further enhance connectivity across the state. These initiatives are paving the way for faster, more reliable, and access-controlled transport networks, facilitating regional development, and boosting economic opportunities.

According to Department for Promotion of Industry and Internal Trade (DPIIT), the state has enticed the Foreign Direct Investment (FDI) equity inflows worth US$ 1,679 million during the period April 2019 to June 2024.

Due to the availability of fertile soil and favourable climatic conditions, the state has a rich agricultural belt. Food grains such as wheat, rice, maize, millet, gram, pea, and lentils are produced in large quantities giving Uttar Pradesh the tag of the country's largest food grains producer. Uttar Pradesh is also the country's largest producer of vegetables. The state has proposed the development of an integrated agro/food processing zone at Hapur.

The state is also the second largest producer of sugar in the country. Most of the sugar mills are in the western Uttar Pradesh belt in districts of Meerut, Muzaffarnagar, Bijnor, Saharanpur, Moradabad, Rampur, Bareilly, etc. The prominent sugar mills operated by large players are Bajaj Hindustan Sugar Limited, Balarampur Chini Mills Limited, Dhampur Sugar Mills Limited, and Oudh Sugar Mills Limited. The state has also introduced National Dairy Plan (NDP) to boost the dairy industry of the state. It houses large number of units of key players in dairy products like Mother Dairy, Amul, Gyan, Paras, Namaste India, etc.

The per capita income of Uttarakhand is Rs. 182,281 in the year FY24. During FY12 to FY24, a growth of about 3.5 percent is seen in the state Uttarakhand. Similarly, the per capita income of Uttar Pradesh is Rs. 60,037 in the year FY24. During FY12 to FY24, a growth of about 4.1 percent is seen in the state Uttar Pradesh. The growth in per capita income of Uttarakhand and Uttar Pradesh since FY12 is presented in **Figure 3-9**.

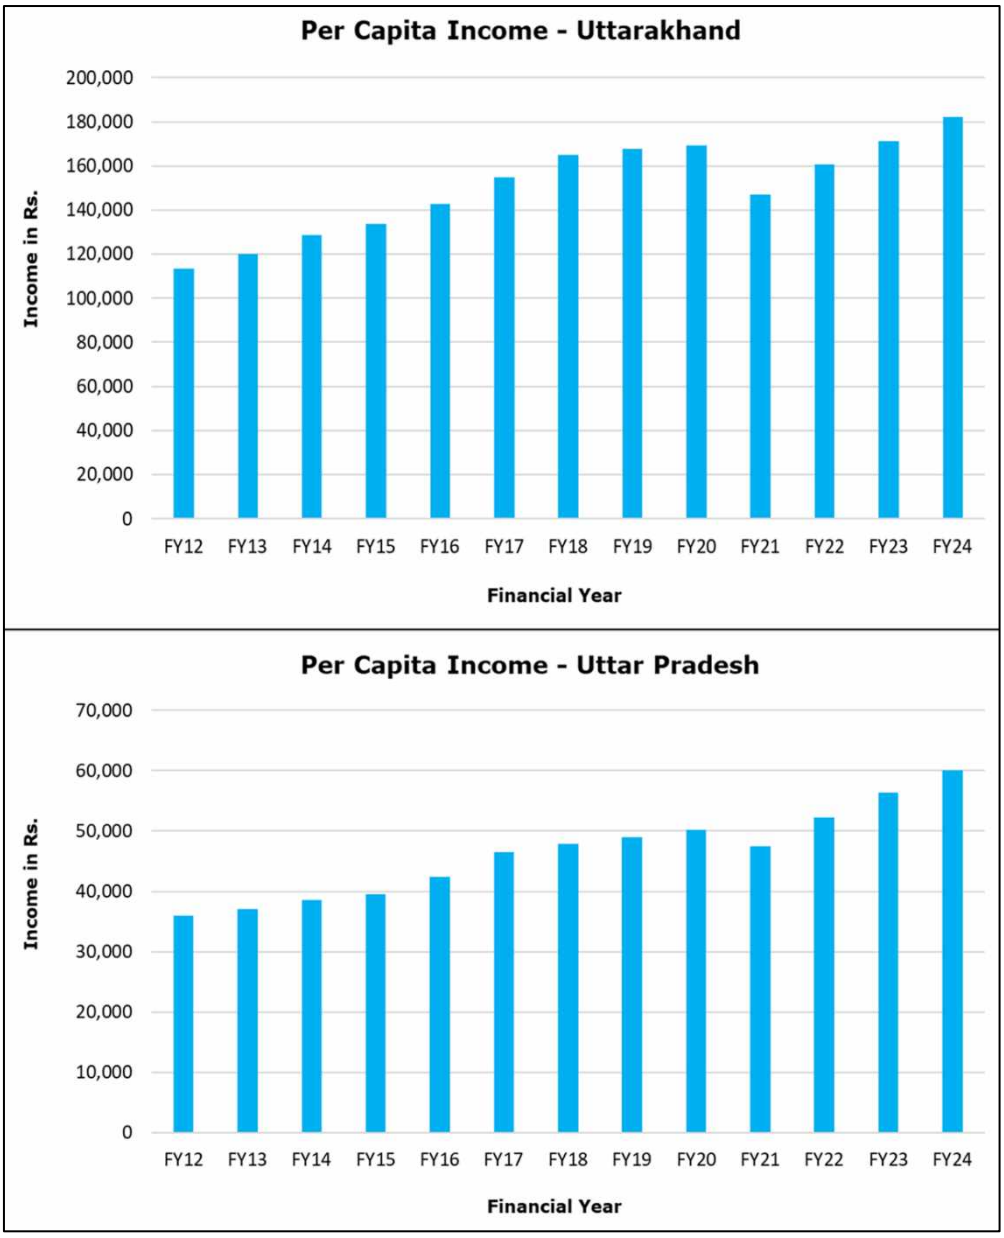

Figure 3-9: Per Capita Income of Uttarakhand and Uttar Pradesh from FY12 to FY24

Other PIA States

The other PIA states contributing to the traffic on the project road are Delhi, Haryana and Rajasthan. Economic indicators of PIA states are as follows.

- Gross State Domestic Product (GSDP) of Delhi stood at Rs 6,722.5 billion in FY24 and has been growing at a compounded annual growth rate of 5.3 percent since FY12.
- Haryana's Gross State Domestic Product (GSDP) stood at Rs 6,340.3 billion in FY24 and has been growing at a compounded annual growth rate of 6.2 percent since FY12.
- Gross State Domestic Product (GSDP) of Rajasthan stood at Rs 8,451.2 billion in FY24 and has been growing at a compounded annual growth rate of 5.3 percent since FY12.
- The service sector is the largest contributor to GSDP for the PIA states in FY24 – about 84.4 percent in Delhi, 50.7 percent in Haryana and 44.0 percent in Rajasthan.

The average annual growth rates as obtained using regression analysis for the period FY12 to the latest available year are presented in **Table 3-11**.

Particular/States	Delhi	Haryana	Rajasthan
	FY12 To FY24		
GSDP	5.3	6.2	5.3
Primary	0.5	3.6	3.5
Secondary	5.7	6.2	5.6
Tertiary	5.3	6.6	6.1
Construction	5.5	3.9	3.2
Per Capita Income	3.3	4.7	3.9

Table 3-11: Average Annual Growth Rates (%) of State Income for Other PIA States

The GSDP over the years for the PIA states are presented in **Figure 3-10**.

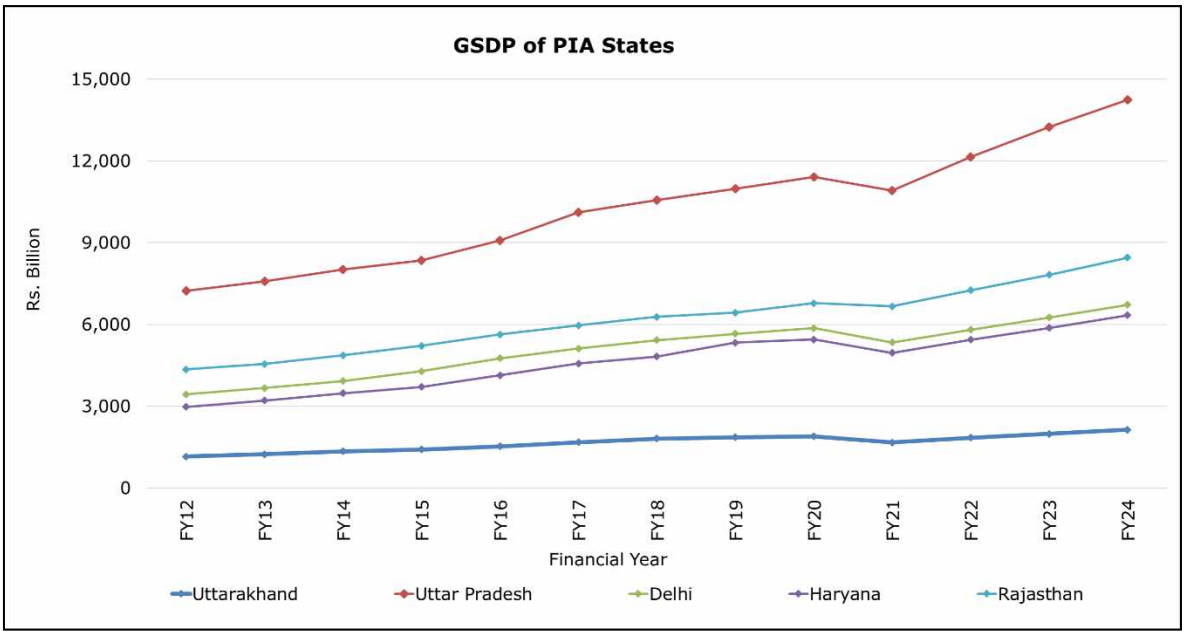

Figure 3-10: GSDP (in Rs Billion) for PIA States

3.6 India and PIA Outlook

3.6.1 India's Past Performance and Outlook for Future

India's growth trend during the recent years has been presented in **Figure 3-11**.

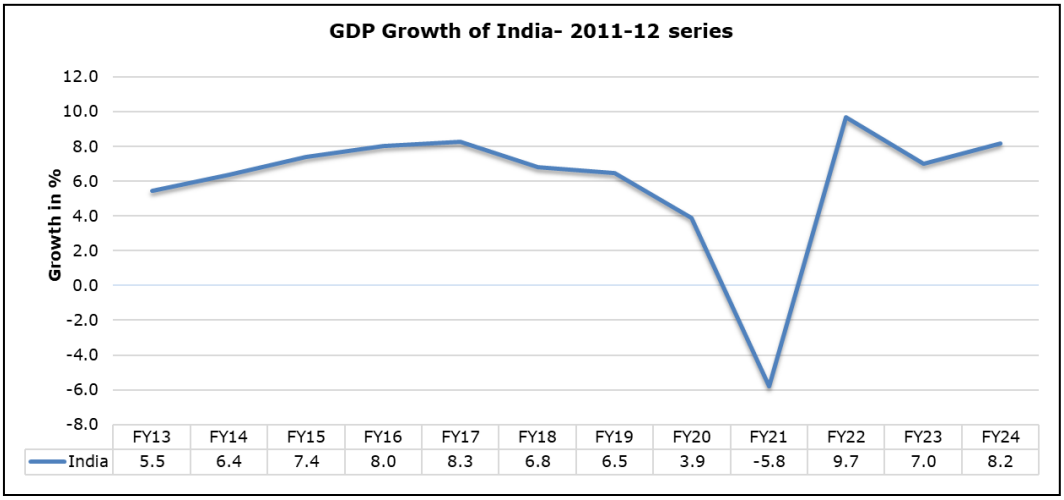

Figure 3-11: GDP Growth in India

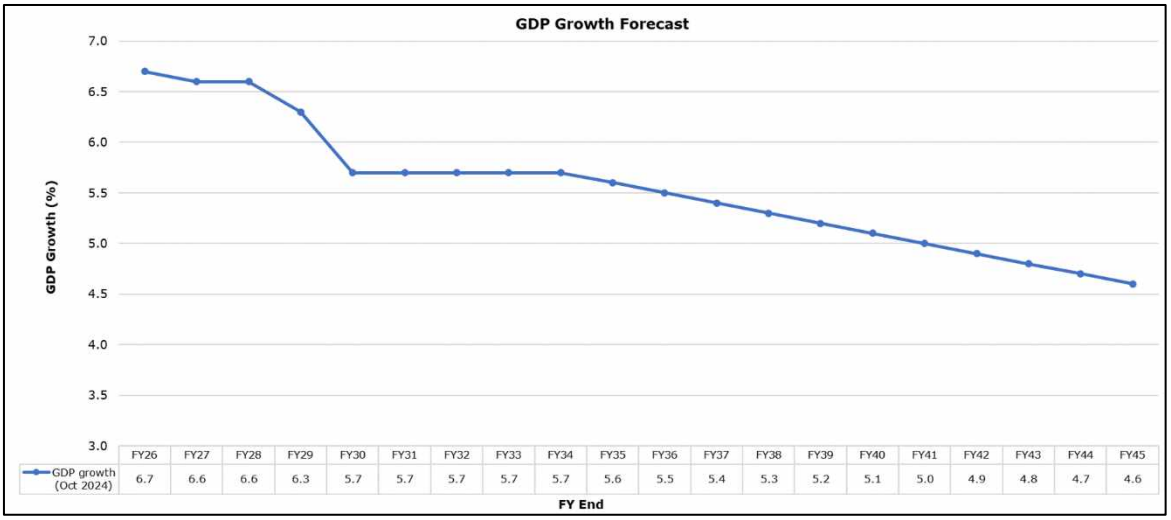

India’s economy has navigated through a series of fluctuations since FY12, from a slowdown to a sharp contraction due to the pandemic, followed by a strong recovery. Structural reforms and global dynamics continue to play crucial roles in shaping India's economic future.

India’s economic growth has generally followed an accelerating trajectory until FY18, positioning it as one of the fastest-growing major economies in the world over the medium term. The real GDP growth rates were 8.3 percent in FY17, 6.8 percent in FY18, and 6.5 percent in FY19, reflecting a solid performance. Over the period from FY12 to FY19, the long-term average growth rate stood at 7.2 percent.

However, in FY20, the economy slowed down due to a combination of structural challenges and global economic headwinds, leading to a more modest growth rate of 3.9 percent. The outbreak of COVID-19 further exacerbated the situation, triggering a global recession and imposing significant economic disruptions. The Indian government's lockdown measures severely impacted the economy, contributing to a contraction of 5.8 percent in FY21.

India’s GDP grew by 9.7 percent in FY22 and continued its recovery with a growth of 7.0 percent in FY23 and 8.2 percent in FY24. The recent forecast by Reserve Bank of India (RBI) indicates a growth rate of 6.4 percent for FY25.

In light of the outlook being predicted by various agencies for the current and future years, the year-on-year growth for Indian economy based on the forecast of Consensus Economics (October 2024 Publication), provided by the client for FY26 and beyond as used in the analysis are presented in **Figure 3-12**.

	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	FY37	FY38	FY39	FY40	FY41	FY42	FY43	FY44	FY45
GDP growth (Oct 2024)	6.7	6.6	6.6	6.3	5.7	5.7	5.7	5.7	5.7	5.6	5.5	5.4	5.3	5.2	5.1	5.0	4.9	4.8	4.7	4.6

Figure 3-12: GDP Forecast of India

3.6.2 PIA States Outlook

A snapshot of the main economic indicators in the past years is based on data published by Central Statistical Organisation (CSO) for the PIA states and is presented in **Table 3-12**.

Indicators	Uttarakhand	Uttar Pradesh	Delhi	Haryana	Rajasthan
GSDP in Rs Billion (Till FY24)	2,133.8	14,233.6	6,722.5	6,340.3	8,451.2
GSDP growth (FY12 to FY24)	4.7%	5.6%	5.3%	6.2%	5.3%
Per capita Income in Rs (FY24)	1,82,281	60,037	3,11,398	2,09,499	1,03,652
Sector Share (%) in FY24					
Agriculture and allied	8.4	24.2	1.6	16.3	29.4
Industry	49.8	28.4	13.9	33.0	26.6
Services	41.7	47.5	84.4	50.7	44.0

Table 3-12: Main Economic Indicators of PIA States

To forecast the PIA states' performance, the past growth of State GDPs relative to India's GDP has been analysed, and both short-term and long-term multipliers have been derived. In determining future multipliers, year-on-year variations and the size of the state's economy have been carefully considered.

The past and adopted multipliers for PIA states to Indian economy are presented in **Table 3-13**.

Period	India	Uttarakhand	Uttar Pradesh	Delhi	Haryana	Rajasthan
Past growth (%)						
FY12 to FY24	5.9	5.3	5.8	5.7	6.5	5.7
FY15 to FY24	5.7	4.7	6.1	5.1	6.1	5.5
Past Multipliers - Average of years						
FY13 to FY24		1.1	0.9	1.1	1.2	0.9
FY15 to FY24		1.0	0.9	1.0	1.1	0.9
Multipliers adopted for future						
States w.r.t. India		1.0	0.9	1.0	1.1	0.9

Table 3-13: Past and Future Multipliers of PIA States

3.7 Past Traffic Data on Project Road

Past ETC traffic data is provided by the client from December 2021 to November 2024 for the toll plaza locations. A comparison of the ETC data of FY23 and FY24 has been carried out with estimated AADT for FY25 without considering cash and exempt. Traffic data with respect to financial year and vehicular modes along with the end point growth from the time series analysis of the traffic data is presented in **Table 3-14** for both the project road toll plazas.

FY/Mode	CJV	LCV/MBus	2 Axle	3 Axle	MAV/OSV	PCU
TP01 – Chhapar						
Past Traffic						
FY23	14,657	923	2,299	505	1,194	29,827
FY24	15,766	876	2,570	456	1,396	32,441
FY25	17,333	931	2,706	433	1,454	34,688
YoY Growth (%)						
FY23 vs FY24	7.6	-5.1	11.8	-9.5	16.9	8.8
FY24 vs FY25	9.9	6.3	5.3	-5.2	4.2	6.9
End Point Growth (%)						
FY23 vs FY25	8.7	0.5	8.5	-7.4	10.3	7.8
TP02 – Bahadrabad						
Past Traffic						
FY23	12,835	771	2,188	340	503	23,839
FY24	14,891	711	2,429	392	610	27,167
FY25	15,020	735	2,580	356	687	28,023
YoY Growth (%)						
FY23 vs FY24	16.0	-7.7	11.0	15.3	21.2	14.0
FY24 vs FY25	0.9	3.3	6.2	-9.1	12.7	3.2
End Point Growth (%)						
FY23 vs FY25	8.2	-2.4	8.6	2.4	16.9	8.4

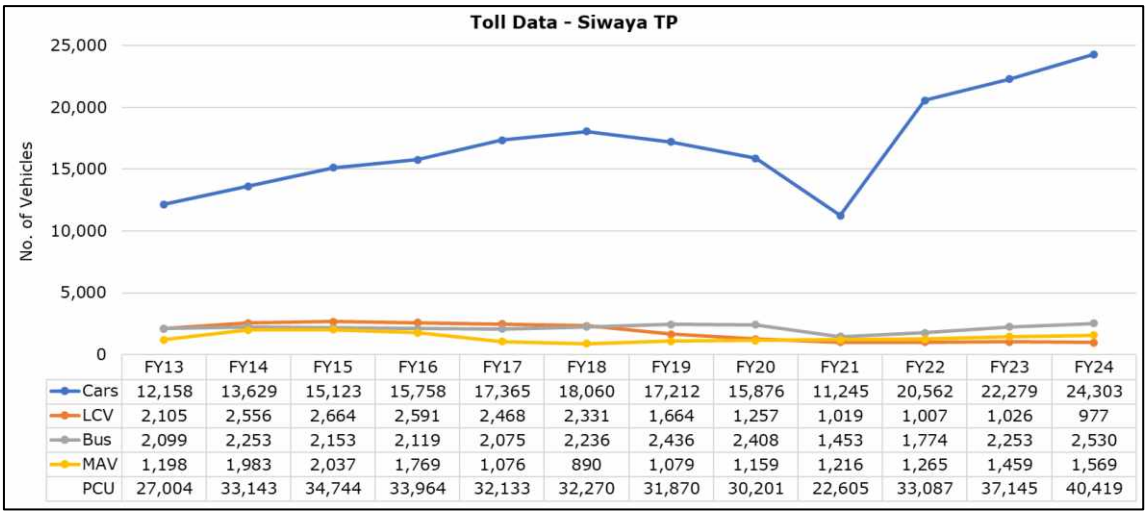

Table 3-14: Past Traffic Trend Analysis of ETC Data

In case of car traffic, a growth between 8-9 percent is observed at each toll plaza during FY23 and FY25. For 2A trucks, around 9 percent growth is observed between FY23 and FY25 at both toll plaza locations. MAVs have a growth of about 10.3 percent at TP01 and about 16.9 percent at TP02 while comparing FY23 to FY25. The overall PCU growth is around 8 percent at both toll plazas during FY23 to FY25.

3.7.1 Past Toll Data from adjacent section

In addition to the project road traffic data, past traffic of Siwaya TP of adjacent road section in proximity has also been analysed to study the traffic growth trends on NH-334.

The traffic for different years is presented in **Figure 3-13**.

	FY13	FY14	FY15	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24
Cars	12,158	13,629	15,123	15,758	17,365	18,060	17,212	15,876	11,245	20,562	22,279	24,303
LCV	2,105	2,556	2,664	2,591	2,468	2,331	1,664	1,257	1,019	1,007	1,026	977
Bus	2,099	2,253	2,153	2,119	2,075	2,236	2,436	2,408	1,453	1,774	2,253	2,530

PCU	27,004	33,143	34,744	33,964	32,133	32,270	31,870	30,201	22,605	33,087	37,145	40,419

Figure 3-13: Past Traffic at NH-334 toll section - Siwaya TP

A time series analysis of the past traffic data is presented in **Table 3-15**.

FY/Mode	CJV	LCV	Bus/Truck	3A/MAV	PCU
Siwaya TP					
End Point Growth in %					
FY13 vs FY20	3.9	-7.1	2.0	-0.5	1.6
FY15 vs FY20	1.0	-13.9	2.3	-10.7	-2.8
FY13 vs FY23	6.2	-6.9	0.7	2.0	3.2
FY13 vs FY24	6.5	-6.7	1.7	2.5	3.7
FY18 vs FY24	5.1	-13.5	2.1	9.9	3.8
FY22 vs FY24	8.7	-1.5	19.4	11.4	10.5

Table 3-15: Past Growth Analysis at NH-334 Toll Section – Siwaya TP

The FY13 vs FY24 comparison shows about 6.5 percent growth at the toll plaza. The MAV growth has been around 9.9 percent between FY18 and FY24 and about 11.4 percent during FY22 to FY24. For overall PCUs, about 3.8 percent growth has been observed between FY18 and FY24 at the toll plaza.

3.8 Past and Future Transport Demand Elasticity

The econometric model applied for the project, relates traffic growth to changes in state domestic product via an elasticity factor according to IRC guidelines.

A regression between weighted GSDP (as independent variable) and weighted registered vehicles (as dependant variable) of PIA states was carried out.

Vehicle registration data is also used as a proxy wherein operational toll data is not available. Vehicle registration data represents all vehicles registered in the state, but does not indicate actual number of vehicles plying on the road as it does not account for factors such vehicles taken off the road due to lack road worthiness, those registered in a state but mostly used elsewhere, etc. Consequently, the elasticity values based on vehicle registration may not be representative of the traffic growth trends on the project road.

Also, the elasticity values from the adjacent section of Siwaya have been assessed in forming the project road future elasticities. The trend line elasticities observed in Siwaya toll road section over the past years is presented in **Table 3-16**.

FY/Mode	Car	LCV	Bus/2A	3A/MAV
FY22 vs FY24	1.7	-0.1	4.1	2.5
FY17 vs FY24	1.5	-3.6	0.6	1.6
FY16 vs FY24	1.0	-3.1	0.3	0.1

Table 3-16: Past Elasticities on Siwaya Toll Plaza of Meerut Muzaffarnagar Section

The point to point and trend line actual elasticity between weighted income (GSDP) and traffic is presented in **Table 3-17**.

FY/Mode	CJV	LCV	Bus/Truck	3 Axle	MAV/OSV
Point to Point Elasticity					
TP01 - Chhapar					
FY23 vs FY24	1.0	-0.7	1.6	-1.3	2.2
TP02 - Bahadrabad					
FY23 vs FY24	2.1	-1.0	1.5	2.0	2.8

Table 3-17: Actual Past Traffic Elasticity on PR based on Toll data

Cars

- The motorization rate for cars (per 1000 population) in India has gone up from 6.6 in 2001 to 25 in 2019. Although India's car fleet has been growing at 10 percent for nearly 25 years, its motorization rate is low compared to other countries of similar wealth and much lower than developed countries with motorization rate of around 450. The low motorization rate suggests that there is room for continued growth for many years to come. With the continual increase in motorization rate and improved road network usage of cars for inter-urban travel is showing a growing trend.
- A regression between GSDP (as independent variable) and registered vehicles (as dependent variable) of PIA state was carried out for the states of Uttarakhand and Uttar Pradesh which showed an elasticity of 2.0 and 1.4 during the period between FY12 and FY24.
- The past elasticity of 1.0 and 2.1 is observed for the period between FY23 and FY24 at TP01 and TP02 respectively. For Siwaya TP, elasticity is observed to be 1.0 for FY16 vs FY24 period.
- It is likely that this growth would slow down over time as the market becomes more mature and saturated, therefore elasticity to GSDP can be expected to decline over time. With the anticipated growth momentum in the coming years, for the project road an elasticity value of 1.0 have been considered for the concession period for the project road.

LCV/Minibus

- Predominance of Mini LCV in the LCV category for short haul traffic is being witnessed across many national highways. The LCV segments are also witnessing a smart uptick in demand in the goods carrier segment, where the 2T mini-truck and 2-3.5T pickups dominate with 90 percent share of the total LCV goods segment.
- For project road, an elasticity of 0.2 has been adopted till the end of concession period.

Bus/Truck

- Over the years in India there has been a change in passenger's travel mode preferences with increasingly more people shifting from public transport systems towards personalised modes. This has resulted, in general, in elasticity of bus traffic/demand to GSDP lower than unity.

- The toll plaza data shows a past elasticity of 1.5-1.6 for both toll plazas between FY23 and FY24 comparison in combined Bus/Truck category. The same is observed to be 4.1 during FY22 vs FY24 at the adjacent section at Siwaya TP. For the project road, an elasticity of Bus/Truck traffic to GSDP of 0.9 has been adopted till FY30 and has been tapered thereafter.

3A Truck/MAV

- In India as a whole, the freight vehicle mix has been changing in the last decade favouring MAV to 2A/3A vehicles for long-distance traffic, given the operational efficiencies achievable with larger vehicles. Considering the ongoing technical advancements in automobile industry, some of the standard 2A/3A trucks would gradually be replaced by MAVs. Mature National Highways with tolling in operation for few years, have already witnessed the shift in 2A/3A trucks to MAV for long distance movement and the limited number of 2A/3A trucks are being used for local movements.
- For the project road, past elasticity of 2.2 and 2.8 between FY23 and FY24 comparison is observed for MAVs. Siwaya TP shows the past elasticity of 1.6 for MAVs between FY17 vs FY24 period.
- For the project road, 0.2 has been considered for 3A trucks till the end of concession period and an elasticity of 1.0 has been considered for MAVs till FY30 and has been tapered thereafter.

It has been assumed that transport demand elasticity, for both freight and passenger traffic, would gradually decline over time, despite growth in per capita income, as regions becomes more mature, self-sufficient and with alternative mode of transport available to users. Due consideration has been given to the tonnage shifts happening in the market with Mini LCV gaining importance for short distance movements over LCVs and MAVs being preferred over 2A/3A for long distance movements due to better operational efficiencies.

While assigning elasticities to different modes, freight travel pattern and over all elasticity of cargo tonnage with respect to weighted GSDP has been an important consideration. The recommended elasticity values adopted for all vehicle types in line with the traffic growth being observed on other national highways and changes in freight traffic pattern observed on the project road are presented in **Table 3-18**.

TP01 & TP02					
Period/Modes	**Cars**	**LCV**	**Bus/2A**	**3A**	**MAV**
Up to FY30	1.0	0.2	0.9	0.2	1.0
FY31-FY35	1.0	0.2	0.8	0.2	0.9
FY36-2040	1.0	0.2	0.7	0.2	0.8
Beyond FY40	1.0	0.2	0.7	0.2	0.8

Table 3-18: Recommended Elasticity for Project Road Toll Plazas

3.9 Projected Traffic Growth Rates

Based on the moderated perspective elasticity values and the projected growth rates of the income for PIA states, the future average annual compound traffic growth rates by vehicle type have been estimated for the project road by using the following relationship:

$T_{gr} = (GSDP_{gr}) \times E;$

where,

T_{gr} – Traffic growth rate for mode

$GSDP_{gr}$ – Growth rate of GSDP

E – Elasticity value for mode

Using the year-on-year mode wise weighted income for PIA and elasticity for different time periods, traffic growth rates have been estimated for each year till FY55 in line with the maximum extendable concession period of 30 years. The estimated traffic growth rates for the project road along with the implied growth rates after considering the impact of diversions including six laning of PR have been presented in **Table 3-19**.

Table 3-19: Traffic Growth Rates for Project Road (%)

In derivation of above growth rates, the likely shift of buses to cars in case of passenger vehicles and the replacement/ tonnage shift of 2A/3A trucks to MAV for long distance in case of freight vehicles has been duly considered.

The above growth rates relate to the most likely Base Case. In addition, two sets of traffic growth rates under low and high cases have also been considered and impact on toll revenue evaluated for both these cases. Based on the risk analysis of key parameters like economic growth and elasticity of travel demand impacting traffic growth, two additional growth scenarios have been presented. Low growth scenario considers a 20 percent reduction in growth rates relating to about 10 percent decline each in elasticity and economic growth. The high growth scenario considers a 20 percent increase in

growth rates signifying about 10 percent increase each in elasticity and economic parameters.

3.10 Projections Mode-wise Traffic

Table 3-20 presents the projections of the mode-wise vehicles under Base Case after diversion till FY55.

2055	147,036	135,613	141,325	96,949	104,405	100,677
CAGR (FY25-FY45)	4.6%	4.8%	4.7%	2.5%	3.5%	3.0%

Table 3-21: Projected Traffic in PCUs on the Project Road (Before and After Diversion)

With the considered diversion impacts, the projected traffic is expected to reach 40,000 PCUs by FY32, serving as a trigger for six-laning. Allowing a two-year period for DPR preparation and land acquisition, the impact of six-laning construction on traffic is anticipated during FY35 and FY36 for the Meerut-Muzaffarnagar-Haridwar section.

As a result of this, higher diversion percentages (as provided in Table 3-6 of DDE diversion) have been considered for diversion to DDE during construction period of FY35 and FY36 and lower percentage of diversion is applicable once the six laning is complete from FY37 onwards.

4. TOLL REVENUE PROJECTIONS

4.1 Tolling Strategy

The project road will continue to have an "Open System" of toll collection which enables the concessionaire to collect tolls from through traffic as well as from short distance one.

As mentioned earlier, there are two operational toll plazas on the project road, TP01-Chhapar at km 138.552 and TP02 - Bahadrabad at 187.370 with an effective tolling length of 40.519 km and 85.957 km respectively being charged at present.

4.2 Schedule of User Fee

As per Schedule of User Fee for the project, the per km toll rates applicable from 2007-08 for normal tolling length, bypasses and permanent structures, the revision basis and concessions are provided.

The concessions to traffic have been given in the form of rates as below:

Local traffic

Car / Jeep / Vans - includes local users owning a vehicle registered for non-commercial purposes, residing within a distance of 20 km from the toll plaza and crossing the same for commuting purposes.

Commercial vehicles - includes local users owning a commercial vehicle (excluding vehicles under National Permit), registered with address on the Registration Certificate of a particular district and uses such vehicle for commuting on a section of National Highway, permanent bridge, tunnel or bypass, as the case may be, which is located within that district, shall be levied user fee on all toll plazas which are located within that district at the rate of fifty per cent of the prescribed rate of fee (single journey rate). No such concession shall be provided, if a service road or alternative road is available for use by such commercial vehicles. Thus, local commercial traffic has to pay only 50 percent of the normal ticket.

Daily Pass

When the vehicle has to cross the tolled section more than once in a day, the user shall have the option to pay one and half times (1.5 times) of the fee for a single entry; this pass shall be valid for 2 entries within 24 hours of purchase.

Monthly Pass

A user, who makes use of the project road frequently during a month, may opt to purchase a monthly pass upon payment of a charge equal to two-thirds of the fee payable for 50 single journeys; this pass can be used for a maximum 50 one-way journeys over the month of validity.

Thus, the different categories of toll tickets are as follows:

(i) Traffic paying normal toll rates (single trip)

(ii) Traffic paying return journey rates

(iii) Traffic paying monthly pass rates

(iv) Traffic paying local personal rates

(v) Traffic paying local commercial rates

4.3 Tolling Segmentation

The tolling stream distribution for the project road has been derived from the average of ETC toll data of FY25 from April 2024 to November 2024. The cash and exemption traffic (April – October 2024) has been added to the ETC traffic distribution and the resultant tolling segmentation is presented in **Table 4-1**.

Type	Car	LCV	Bus/2A Trucks	3A Trucks	MAV	OSV
TP01-Chhapar						
Single	42.2	42.8	31.7	67.3	56.0	100.0
Return	34.7	48.3	62.0	31.7	43.5	0.0
Monthly	0.0	0.0	0.0	0.0	0.0	0.0
Local personal	0.2	0.0	0.0	0.0	0.0	0.0
Local commercial	0.0	0.1	0.2	0.0	0.0	0.0
Exemptions	22.8	8.8	6.1	1.0	0.5	0.0
Total	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**
TP02 – Bahadrabad						
Single	38.6	40.7	27.4	48.5	62.8	100.0
Return	28.6	45.9	63.2	35.7	34.2	0.0
Monthly	0.0	0.0	0.0	0.0	0.0	0.0
Local personal	1.8	0.0	0.0	0.0	0.0	0.0
Local commercial	0.9	3.8	6.8	12.8	1.4	0.0
Exemptions	30.2	9.6	2.6	3.0	1.5	0.0
Total	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

Table 4-1: Tolling Distribution

In case of cars, the normal toll paying traffic is likely to be about 42.2 percent at TP01 and 38.6 percent at TP02. The car traffic for return journey is around 34.7 percent at TP01 and 28.5 percent. The share of exempted traffic is between 23-30 percent at both toll plaza locations.

In case of LCVs, both toll plazas display a consistent share for single tickets varying between 41-43 percent and similarly in return journey tickets with a share between 46-48 percent.

Across the two toll plazas, Bus/2A Trucks exhibit around 27-32 percent share for single tickets and around 62-63 percent for return tickets.

In case of 3A trucks, the share of normal toll paying traffic is around 67.3 percent at TP01 and around 48.5 percent at TP02 whereas, share of return traffic is around 32-36 percent across both the toll plazas. The share of local commercial ticket is around 12.8 percent TP02.

In case of MAVs, at TP01 around 56.0 percent and 62.8 percent of traffic at TP02 is opting for normal ticket due to their long lead of travel and around 43.5 and 34.2 percent of MAV falling under return journey category at TP01 and TP02 respectively.

Trip rate for local personal pass users for cars is 0.2 percent at TP01 and 1.8 percent at TP02 for monthly pass it is considered as 1.67 across all the modes. For daily pass, trip rate of 2.0 has been considered for all the modes.

4.4 Toll Rates

This section presents details on the toll rates that are likely to be imposed on the users of the project road during the study period. The toll rates (Rs/km) for the base year 2007-08 for different vehicle categories as per toll fee rules are presented in **Table 4-2**.

Mode	Base rate per km (in Rs)
Car, Jeep, Van, LMV	0.65
LCV /M Bus	1.05
Bus/ 2 Axle Truck	2.20
3 Axle	2.40
MAV	3.45
Oversized	4.20
Local Passenger	150

Table 4-2: Toll Rates in Rs/km for Different Vehicle Categories

The toll notification states that the 2007 toll rates shall be increased without compounding by three per cent each year with effect from the 1st day of April 2008 and such increased rate shall be deemed to be the base rate for the subsequent years.

In addition to this, the rate of fee for use of bypass forming part of a section of a National Highway constructed with a cost of Rs 10 crore or more, for the base year 2007, shall be one and a half times of the per km base rates specified above and the length of such bypass shall be excluded from the length of such section of National Highway.

In addition to this, the fee levied and collected hereunder for permanent bridge/ structures, as the case may be, having a length of 60 m or more on the basis of the equivalent length for structure as specified shall be due and payable at the toll plaza.

The details of normal tolling lengths, bypass length (at 1.5 times) and equivalent structure lengths being charged at Chhapar and Bahadrabad as per the information in the Gazette notification and Schedule M for the project are presented in **Table 4-3**.

Particulars	Gaz. Notification Length	Schedule M Length	
		Before Completion of Improvement (till 31st May FY28)	After Completion of Improvement (From 1st June FY28)
TP01 Chhapar at km 138.552			
A. Normal	27.595	27.595	26.545
B. Bypass	7.709	7.709	7.709
C. Equivalent structure	0.136	0.136	1.186
Base Length	35.440	35.440	35.440
Tolling Length = A+(B*1.5) + (C*10)	40.519	40.519	49.969
TP02 Bahadrabad at km 187.370			
A1. Normal - 2 lane (to be charged at 60%)		0.397	0.397
A2. Normal - 4/6 lane	24.471	22.621	22.531
B. Bypass	16.224	16.224	16.224
C1. Equivalent structure - 2 lane (to be charged at 60%)	0.525	0.653	0.653
C2. Equivalent structure - 4/6 lane	1.900	3.750	3.840
Base Length	43.120	43.645	43.645
Tolling Length = A+(B*1.5) + (C*10)	85.957	88.613	89.423

Table 4-3: Tolling Length (in km) for the Project Road

It is to be noted that for TP02, current toll rates are not matching with the effective tolling length, for which additional 15 km of tollable length to be charged to match the toll rates for FY25.

The applicable base rates shall be revised annually with effect from April 1 each year to reflect the increase in wholesale price index for the month of December of the immediate preceding year in which such revision is undertaken but such revision shall be restricted for 40 per cent of the increase in wholesale price index.

Actual WPI information for December 2024 of 155.4 under 2011-12 series converted into 1999-00 series (155.4*1.873*1.641=477.636) has been used. WPI increase of 4.5 is considered for FY27 & FY28, while WPI forecast for remaining years beyond December 2027 has been considered as 3.5 percent as provided by the client.

The stream of toll rates likely to be charged basis schedule -M lengths and adopted WPI assumptions at the toll plaza of the project road in cardinal years till FY55 is presented in **Table 4-4**. The toll fee has been rounded to nearest 5 Rupees as per toll fee rules.

FY End	Car	LCV/ M Bus	Bus/ 2A Truck	3-axle Truck	MAV	OSV	Car Local
TP01 - Chappar							
2025 (Existing)	60	95	200	220	315	385	340

2055	440	710	1,485	1,620	2,330	2,835	1,130

Table 4-4: Toll Rates at Toll Plazas (in Rs)

The users purchasing return journey tickets will pay 1.5 times the above toll rates; the traffic opting for monthly pass will pay 33.3 times (two-thirds of 50 single journeys) the normal traffic toll rates.

4.5 Toll Revenue Estimates

Total Revenue collected at the toll plaza location during for FY24 and FY25 (Apr-Nov) is Rs 1,544.0 million and Rs 1,250.2 million respectively. The mode wise past revenue for the project road toll plaza is presented in **Table 4-5**.

FY/TP	Car/Jeep/ Van	LCV	2-Axle	3-Axle	MAV	OSV	Total
TP01 - Chhapar							
FY23 - 8 months	163.7	16.1	87.5	22.1	79.5	0.3	369.3
FY24 - 12 months	305.5	25.9	151.8	32.1	138.1	0.4	653.7
FY25 - 8 months	231.8	18.8	106.8	19.9	92.5	0.1	469.9
TP02 - Bahadrabad							
FY23 - 8 months	229.1	22.3	139.1	25.1	58.5	0.4	474.6
FY24 - 12 months	473.3	34.7	238.1	39.6	104.3	0.4	890.3
FY25 - 8 months	418.8	31.0	206.5	31.3	92.5	0.1	780.4

Table 4-5: Mode-wise Past Revenue (In Millions)

The total assured remittance amount for FY25 for the project road toll plaza is Rs. 1,826.7 million as against model estimate of 1,877.8 million resulting in a variation of 2.8 percent, the details of which are presented in **Table 4-6**.

Particulars	TP01	TP02	Total
Actual Remittance	662.4	1,164.3	1,826.7
FY25 Revenue (Model)	703.6	1,174.3	1,877.8
Variation (%)	6.2	0.9	2.8

Table 4-6: Remittance vs Estimated Revenue (In Millions) Comparison for FY25

As per the site findings, WIM is currently installed in all the lanes at both toll plazas whereas no overloading is being charged currently.

In view of this, 7- day axle load survey data has been provided by the technical consultants of the client which has been analysed to understand the extent of overloaded vehicles at both toll plazas. The analysis shows similar overloading trends across the seven days. The findings of the overloading analysis are presented in **Table 4-7**.

S.No.	Vehicle Type	Within Permissible Limit	Within Tolerance up to 5%	>5%-<10%	>10%-<20%	>20%	Total	Adopted %
TP01 – Chhapar (%)								
1	LCV	99.8	0.0	0.2	0.0	0.0	100.0	
2	2A	98.3	0.7	0.2	0.4	0.3	100.0	
3	3A	61.8	12.1	13.1	11.1	2.0	100.0	1.9
4	MAV	59.7	6.3	7.0	12.3	14.7	100.0	12.3
TP02 – Bahadrabad (%)								
1	LCV	100.0	0.0	0.0	0.0	0.0	100.0	
2	2A	99.7	0.2	0.0	0.0	0.05	100.0	
3	3A	58.8	21.2	12.6	7.3	0.1	100.0	0.1
4	MAV	75.5	7.8	6.6	5.5	4.6	100.0	4.0

Table 4-7: Overloaded Vehicles on the PR

As observed from the axle load analysis, around 14.7 and 4.6 percent of the MAVs are above 20 percent overloading limit at TP01 and TP02 respectively whereas, this percentage is around 2.0 and 0.1 percent in 3A trucks at TP01 and TP02 respectively. However, the commodities such as fruits and vegetables, petroleum products, chemicals and gas, heavy machinery and industrial equipment are less likely to be overloaded. Hence, the revised overloading percentage after excluding these commodities in the category of above 20 percent overloading comes out to be around 1.9 percent and 0.1 percent in 3A Trucks and about 12.3 percent and 4.0 percent for MAVs, which has been adopted for the further analysis.

The overloading vehicles are liable to pay the overloading penalty as per the provisions of the concession agreement. The concession agreement of the latest TOT project states that overloading penalty should be charged as per the NHAI overloading circular. As per the amended National Highways Fee (Determination of Rates and Collection) Rules, 2018, "the driver or owner or person in charge of a mechanical vehicle shall be liable to pay fee, for entering the overloaded vehicle on the National Highway, to the user fee collecting agency, equal to fees as presented in **Table 4-8**.

Percentage of excess load over Maximum Permissible Gross Vehicular Weight	Multiplying factor to base rate fees	Fees
0% to 20%	Two	[(Fees applicable for such category of mechanical vehicle under sub-rule (2) of rule 4) X (Multiplying factor)]
>20% to 40%	Four	
>40% to 60%	Six	
>60% to 80%	Eight	
>80% and above	Ten	

Table 4-8: User Fee for Overloaded Vehicles

However, as per the operational overloading practices at the toll plazas where overloading penalty is being charged, it is either the next higher category toll or two times the normal fee which is usually being collected.

Continuing with the practice of two times toll, since 3A Trucks and MAVs are heavily overloaded, with WIM in place at Chhapar and Bahadrabad, the practice of charging them for one-time extra payment can be put in place.

Although the quantum of overloaded vehicles is high but after factoring in the practical number of vehicles from whom overloading can be charged, under a more pragmatic scenario, it is assumed that around 25 percent of this adopted overloaded category is charged for one-time additional payment. This results in 0.5 percent in 3A and 1.0-3.0 percent of MAV AADT of FY25 at the two toll plazas - paying one-time extra toll. However, with strict overloading compliance in place in the future years, this overloading percentage is likely to decline over the years of concession.

At present, overloading is not being collected at the two TPs and the proportion of the overloading revenue is not much, therefore, it has not been considered in the base case.

4.6 Toll Revenue Projections

Toll revenue streams have been calculated assuming that:

- Toll would be collected for all 365 days in a year and for 366 days in a leap year
- Toll revenues have been presented from FY25 to FY55 in line with the maximum extendable concession period of 30 years

The toll revenue for both toll plazas at the project road after considering the impacts of all diversions for the base case is presented in **Table 4-9**.

FY Ending	TP01 -Chhapar	TP02 - Bahadrabad	Total
2025	703.6	1,213.0	1,916.6
2026	691.3	1,203.5	1,894.8
2027	661.8	1,128.8	1,790.6
2028	835.3	1,284.1	2,119.5
2029	889.6	1,402.7	2,292.3
2030	973.5	1,530.8	2,504.3
2031	1,062.5	1,682.2	2,744.6
2032	1,164.3	1,831.9	2,996.2
2033	1,250.2	1,994.3	3,244.5
2034	1,369.0	2,185.2	3,554.1
2035	1,379.0	2,191.2	3,570.2
2036	1,480.9	2,366.6	3,847.6
2037	1,718.8	2,752.0	4,470.8
2038	1,857.7	2,967.3	4,825.0
2039	2,013.6	3,220.7	5,234.4
2040	2,178.4	3,509.1	5,687.5
2041	2,350.9	3,794.7	6,145.5
2042	2,540.7	4,107.2	6,647.9
2043	2,731.8	4,442.0	7,173.9
2044	2,976.5	4,819.2	7,795.7
2045	3,194.5	5,216.3	8,410.8
2046	3,434.2	5,629.3	9,063.5
2047	3,721.0	6,095.9	9,816.8
2048	4,022.7	6,584.9	10,607.6
2049	4,339.7	7,114.0	11,453.7
2050	4,660.3	7,714.3	12,374.6
2051	5,047.3	8,338.6	13,385.9
2052	5,427.3	9,050.9	14,478.2
2053	5,854.0	9,738.8	15,592.8
2054	6,326.4	10,519.5	16,845.9
2055	6,834.0	11,427.2	18,261.2

Table 4-9: Toll Revenue (in Rs Million) for the Project Road

Majority of the revenue is expected to come from cars with about 53.3 percent of the total revenue. Amongst other categories, Bus/2A Trucks represent a share of around 25.4 percent of total revenue followed by MAV/OSVs having a share of about 15.9 percent and LCV is likely to generate about 2.9 percent of total revenue followed by around 2.6 percent share by 3A Trucks.

Vehicles paying normal tolls are around 56.8 percent of total toll revenue for the project road section and around 41.9 percent of the traffic may fall in return pass category, while the remaining 1.3 percent is generated from monthly and local concession passes.

4.7 Scenario Analysis

For toll road projects, revenue streams are generally based on the assessment of the traffic volume (base and future) crossing the toll plazas and the applicable toll imposed on the user of the road. There is an inherent element of uncertainty in any forecast and

whilst is not possible to measure risk in a strictly statistical sense (as many of the risks are largely or partly unknown), in this section an attempt is made at quantifying the main risks that could have an impact on this forecast.

The econometric approach used to derive traffic growth, is based on the estimation of GSDP growth rates for the influence area economies and traffic demand elasticity by mode; the estimation of both variables contains a certain degree of uncertainty which can be represented in the scenario analysis. Scenario analysis has been done in the following subheadings for the base case:

High Case

The high case is based on a more optimistic economic outlook for future years and higher elasticity values as compared to the base case. Therefore, traffic growth rates of 20 percent higher than the base case for every year and for all the mode are considered.

Low Case

A growth rate of 20 percent lower than base case for all types of vehicles has been considered in the present analysis to reflect uncertainty with regard to economic performance of PIA states and lower elasticity values.

The result of base case and scenario is presented in **Table 4-10**. A comparison versus base case has been presented for the Present Value of the project (at 12 percent discount rate) and the compounded annual growth rate (CAGR) from FY25 to FY45/FY55.

FY Ending March	Base Case	High Growth (+20%)	Low Growth (-20%)
2025	1,916.6	1,916.6	1,916.6
2026	1,894.8	1,915.9	1,873.6
2027	1,790.6	1,830.4	1,751.3
2028	2,119.5	2,189.9	2,050.6
2029	2,292.3	2,393.2	2,194.8
2030	2,504.3	2,639.5	2,374.9
2031	2,744.6	2,919.6	2,578.9
2032	2,996.2	3,216.6	2,789.4
2033	3,244.5	3,515.4	2,992.8
2034	3,554.1	3,886.9	3,247.8

2055	18,261.2	23,596.8	14,129.0
PV12 FY25 till FY45	23,267.7	25,350.4	21,409.2
PV12 till FY45 vs base		9.0%	-8.0%
CAGR FY25 to FY45	7.7%	8.6%	6.7%
PV12 FY25 till FY55	29,686.9	33,346.6	26,562.9
PV12 till FY55 vs base		12.3%	-10.5%
CAGR FY25 to FY55	7.8%	8.7%	6.9%

Table 4-10: Comparison of Annual Revenues Forecasts in Rs Million (Base) to Alternate Traffic Growth Assumptions

The project road revenues will have a CAGR of 7.7 percent for the period FY25 to FY45. The high growth scenario would generate about 9.0 percent higher PV than the base case while low growth scenario may result in 8.0 percent lower PV than the base case.

Disclaimer

IBI Group India Private Limited while preparing the report relied on the data and information provided by the Vendor Traffic data. The information has not been independently verified by IBI Group and which IBI Group has assumed to be accurate and complete. The results of this study constitute the opinion of IBI Group. This opinion is based on normal professional effort with respect to future traffic and revenue for the tolled highway asset and subject to the time and budget constraints of the study's scope of work and based on the information available to IBI at the time of execution of this study. IBI cannot guarantee or assure future events in connection to this traffic and revenue forecast.

IBI Group and its officers, employees shall not be liable for any direct, indirect, incidental, consequential, or special loss or damage or other liability of any nature arising from its use of the Report or reliance upon any of its content. To the maximum extent permitted by law, such release from and indemnification against liability shall apply in contract, tort (including negligence), strict liability, or any other theory of liability.

Table of Contents

1. EXECUTIVE SUMMARY 12

1.1 PROJECT OVERVIEW 12
1.2 SALIENT GROWTH FEATURES AND TRAFFIC GENERATORS 13
1.3 TRAFFIC VOLUME AND COMPOSITE OF VEHICLES 13
1.3.1 Historical traffic data 13
1.3.2 Toll segmentation 17
1.3.3 Base Year Traffic (AADT) 23
1.3.4 Traffic Forecast 24

2. INTRODUCTION 31

2.1 GENERAL 31
2.2 OBJECTIVE AND SCOPE OF WORK 32
2.3 COMPOSITION OF THE REPORT 33

3. PROJECT INFLUENCE AREA CHARACTERISTICS 35

3.1 PROJECT ROAD 35
3.2 CHHATTISGARH PROFILE 36
3.2.1 Economic & Industrial Profile 37
3.2.2 Agriculture Profile 38
3.2.3 Infrastructure Profile 38
3.3 MADHYA PRADESH PROFILE 39
3.3.1 Economic & Industrial Profile 39
3.3.2 Agriculture Profile 40
3.3.3 Infrastructure Profile 41
3.4 MAHARASHTRA PROFILE 42
3.4.1 Economic & Industrial Profile 42
3.4.2 Agriculture Profile 43
3.4.3 Infrastructure Profile 43
3.5 RAIPUR DISTRICT 44
3.5.1 Demographic & Geographical Profile 44
3.5.2 Economy 44
3.5.3 Agriculture & Allied Sector 45
3.5.4 Industrial Profile 45
3.6 BILASPUR DISTRICT 45
3.6.1 Demographic & Geographical Profile 45
3.6.2 Economy 46
3.6.3 Agricultural & Allied Sector 46
3.6.4 Industrial Profile 46
3.7 BALODA BAZAR DISTRICT 47
3.7.1 Demographic & Geographical Profile 47
3.7.2 Economy 47
3.7.3 Agricultural & Allied Sector 47
3.7.4 Industrial Profile 47

4. PRIMARY AND SECONDARY DATA COLLECTION & ANALYSIS 50

4.1 GENERAL 50
4.2 PAST DATA FROM SECONDARY SOURCES AND PRIMARY SURVEYS 50
4.2.1 Past traffic trend findings: Project Corridor 50
4.3 TRAFFIC SURVEYS 53
4.3.1 Average Daily Traffic 53
4.3.2 Vehicle Composition 54
4.3.3 Seasonal Correction Factors 55
4.3.4 Annual Average Daily Traffic (AADT) 55

4.4 TRAVEL CHARACTERISTICS OF THE ROAD USERS 56
4.4.1 Survey Methodology 56
4.4.2 Sample Size 56
4.4.3 Traffic Zoning System 57
4.4.4 Travel Pattern and Zone Influence Factors 57
4.4.5 Commodity Distribution of Freight traffic 64
4.4.6 Trip length frequency Distribution 66
4.4.7 Major Trip Generators 70

5. DIVERSION & DEVELOPMENT TRAFFIC IMPACT ASSESSMENT 74

5.1 INTRODUCTION 74
5.2 DIVERSION TRAFFIC TO PROJECT ROAD/ALTERNATE ROUTES 74
5.2.1 Road network assessment 74
5.2.2 Approach & Methodology 74
5.2.3 Widening of NH-130B to 4L 75
5.2.4 Diversion-1 (Impact of Widening of NH-130B to 4Lane on All Three Plaza) 76
5.2.5 Diversion-2 (Impact of Raipur–Dhanbad Economic Corridor (Korba) At Mudhipar Toll Plaza) 80
5.2.6 Diversion-3 (Impact of Raipur–Dhanbad Economic Corridor (Regional) At Mudhipar Toll Plaza) .. 83

6. TRAFFIC GROWTH RATE ESTIMATION 88

6.1 BACKGROUND 88
6.2 METHODOLOGY 88
6.2.1 Governing Factors for Traffic Growth 88
6.2.2 Determination of Past Trends 88
6.2.3 Goods Vehicle Forecasting 89
6.3 DETERMINATION OF GROWTH TRENDS 89
6.3.1 Past Traffic Trend at All Toll Plazas 89
6.3.2 Project Influence Area 91
6.3.3 Growth in Tonnage 92
6.3.4 Growth in Registered Vehicles 93
6.3.5 Past Growth in Regional Economies 94
6.3.6 Commercial Vehicles Sale Trend 94
6.4 TRAFFIC GROWTH DRIVERS 95
6.5 TRANSPORT DEMAND ELASTICITY 97
6.6 FUTURE GROWTH OF PIA 98
6.7 PROJECTED TRAFFIC GROWTH RATES – NORMAL 99
6.7.1 Traffic Growth Rates: TP 01 – Tarapongi 101
6.7.2 Traffic Growth Rates: TP 02 – Bhojpuree 102
6.7.3 Traffic Growth Rates: TP 03 – Mudhipar 103
6.8 PROJECTED TRAFFIC GROWTH RATES – EFFECTIVE 105
6.8.1 Traffic Growth Rates: TP 01 – Tarapongi 105
6.8.2 Traffic Growth Rates: TP 02 – Bhojpuree 106
6.8.3 Traffic Growth Rates: TP 03 – Mudhipar 107

7. TRAFFIC & TOLL REVENUE FORECAST 111

7.1 GENERAL 111
7.2 EFFECTIVE TRAFFIC PROJECTIONS AT TARAPONGI (TP 1) 111
7.3 EFFECTIVE TRAFFIC PROJECTIONS AT BHOJPUREE (TP 2) 113
7.4 EFFECTIVE TRAFFIC PROJECTIONS AT MUDHIPAR (TP 3) 115
7.5 TRAFFIC COMPARISON FOR ALL TPS 117
7.6 TOLL REVENUE FORECASTING 121
7.6.1 Toll Plaza Control Length 121
7.6.2 Toll revenue estimation 121
i. Toll Fee Revision Methodology 121
ii. WPI Forecasts 122

7.6.3 Vehicle wise Trip Categories 124
7.6.4 Toll revenue projections..... 127

CHAPTER 1

Executive Summary

1. Executive Summary

IBI Group India Private Ltd (Consultant) was appointed by National Highways Infra Investment Managers Pvt Ltd to carry out the traffic due diligence study for the Raipur-Bilaspur section of NH-30/130. This study "Toll Traffic and Revenue Assessment for Raipur-Bilaspur section of NH-30/NH-130 in the state of Chhattisgarh" summarizes IBI's evaluation of the future traffic and toll revenues considering Risk factors and Growth drivers expected during the project concession period.

1.1 Project Overview

The project road, a combination of NH-30 and NH-130, connects Raipur in the south to Bilaspur in the north, passing through Simga and Nandghat. After Simga, NH-30 bifurcates, linking Raipur to Jabalpur in the north while also passing through Jagdalpur, Sukma, Bhadrachalam, and Kothagudem before terminating in Vijayawada in the south. NH-130 extends further, connecting Raipur with Bilaspur, Katghora, and Ambikapur with Korba, a coal mining hub to the north, and Durg and Bhilai, major steel production centers to the south, the project road plays a vital role in transporting iron ore, coal, steel, and other goods. The project road has three toll plazas (TPs), Tarapongi Toll Plaza, Bhojpuree Toll Plaza and Mudhipar Toll Plaza.

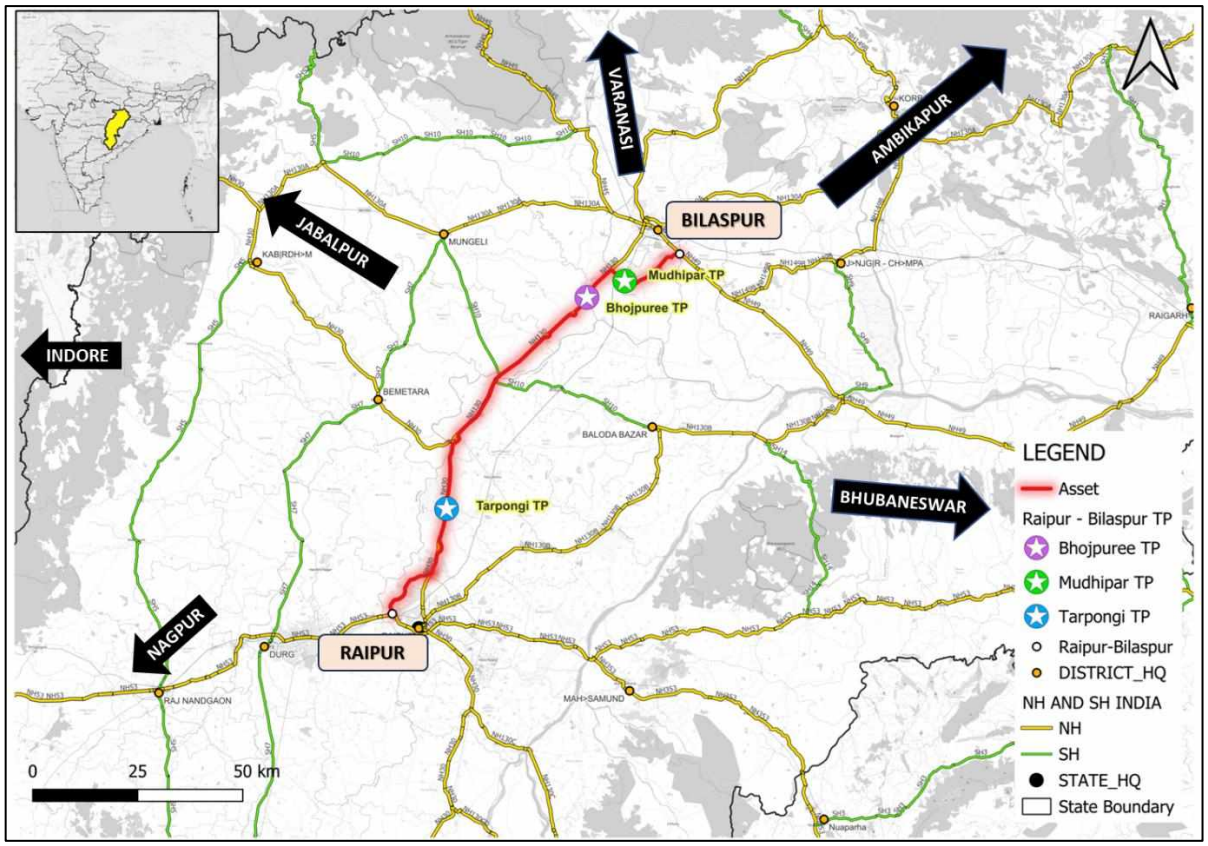

Figure 1-1: Corridor with existing toll plaza location

1.2 Salient growth features and traffic generators

The Raipur-Bilaspur section is a vital economic corridor influenced by multiple industries, playing a crucial role in regional and national logistics.

The coal mining industry significantly impacts this corridor, with major coalfields such as Gevra, Dipka, Kusmunda, and Mand-Raigarh collectively producing over 150 million tonnes of coal annually. These mines support power plants and industries across the country, generating substantial freight traffic through hundreds of daily truck and rail shipments. This industrial activity positions the road as a critical backbone for regional economic growth.

The cement industry also thrives along this corridor, with major plants operated by Ultratech Cement, Ambuja Cement, ACC Cement, and Shree Cement. These facilities contribute over 15 million tonnes of cement production annually, serving infrastructure and construction needs across central and eastern India. The high freight movement of raw materials and finished products further reinforces the road’s importance in economic development.

Similarly, the steel industry plays a crucial role, with major steel plants such as Jindal Steel and Power (Raigarh), SAIL's Bhilai Steel Plant, and multiple sponge iron units in Raipur. These plants produce over 20 million tonnes of steel annually, catering to the construction, automotive, and industrial sectors. The constant movement of raw materials like iron ore and finished steel products highlights the corridor’s significance in industrial transportation.

Additionally, the corridor facilitates the transportation of fly ash, a byproduct of several thermal power plants in the region, including Korba, Sipat, and Tamnar. These plants generate over 30 million tonnes of fly ash annually, which is extensively used in cement manufacturing, brick production, and infrastructure projects. The steady demand for fly ash ensures continuous freight movement, making the road an essential link for efficient resource utilization.

Looking ahead, the cement sector is witnessing significant investments, further reinforcing the region's industrial growth. Ambuja Cement is investing Rs. 1,600 crore in Nawada for a 6 MTPA unit, expected to create 250 direct and 1,000 indirect jobs by December 2025. Shree Cement has allocated Rs. 2,000 crore for capacity expansion, while Ramco Cements plans to invest Rs. 1,403 crore to double its Andhra Pradesh capacity and install a 10 MW waste heat recovery system by FY26. UltraTech Cement is committing Rs. 32,400 crore to expand its capacity to 200 MTPA. Additionally, ACC and the Adani Group have introduced "Bagcrete" and launched a Concrete R&D facility, while Dalmia Cement has launched Dalmia Supreme Cement in Eastern India. These investments position the corridor as a future growth driver in the cement industry.

With coal, steel, cement, and power industries fuelling freight traffic, the Raipur-Bilaspur corridor remains a key driver of industrial and economic growth in the region.

1.3 Traffic volume and composite of vehicles

1.3.1 Historical traffic data

Traffic and revenue data for Tarapongi, Bhojpuree (Oct 2022 – Nov 2024), and Mudhipar (Nov 2022 – Oct 2024) toll plazas were sourced from the Concessionaire. The data, includes toll categories like single journey, local pass, and exempted traffic, was analyzed for trends, & seasonal variations.

Monthly ADT in PCU for Tarapongi Toll Plaza:

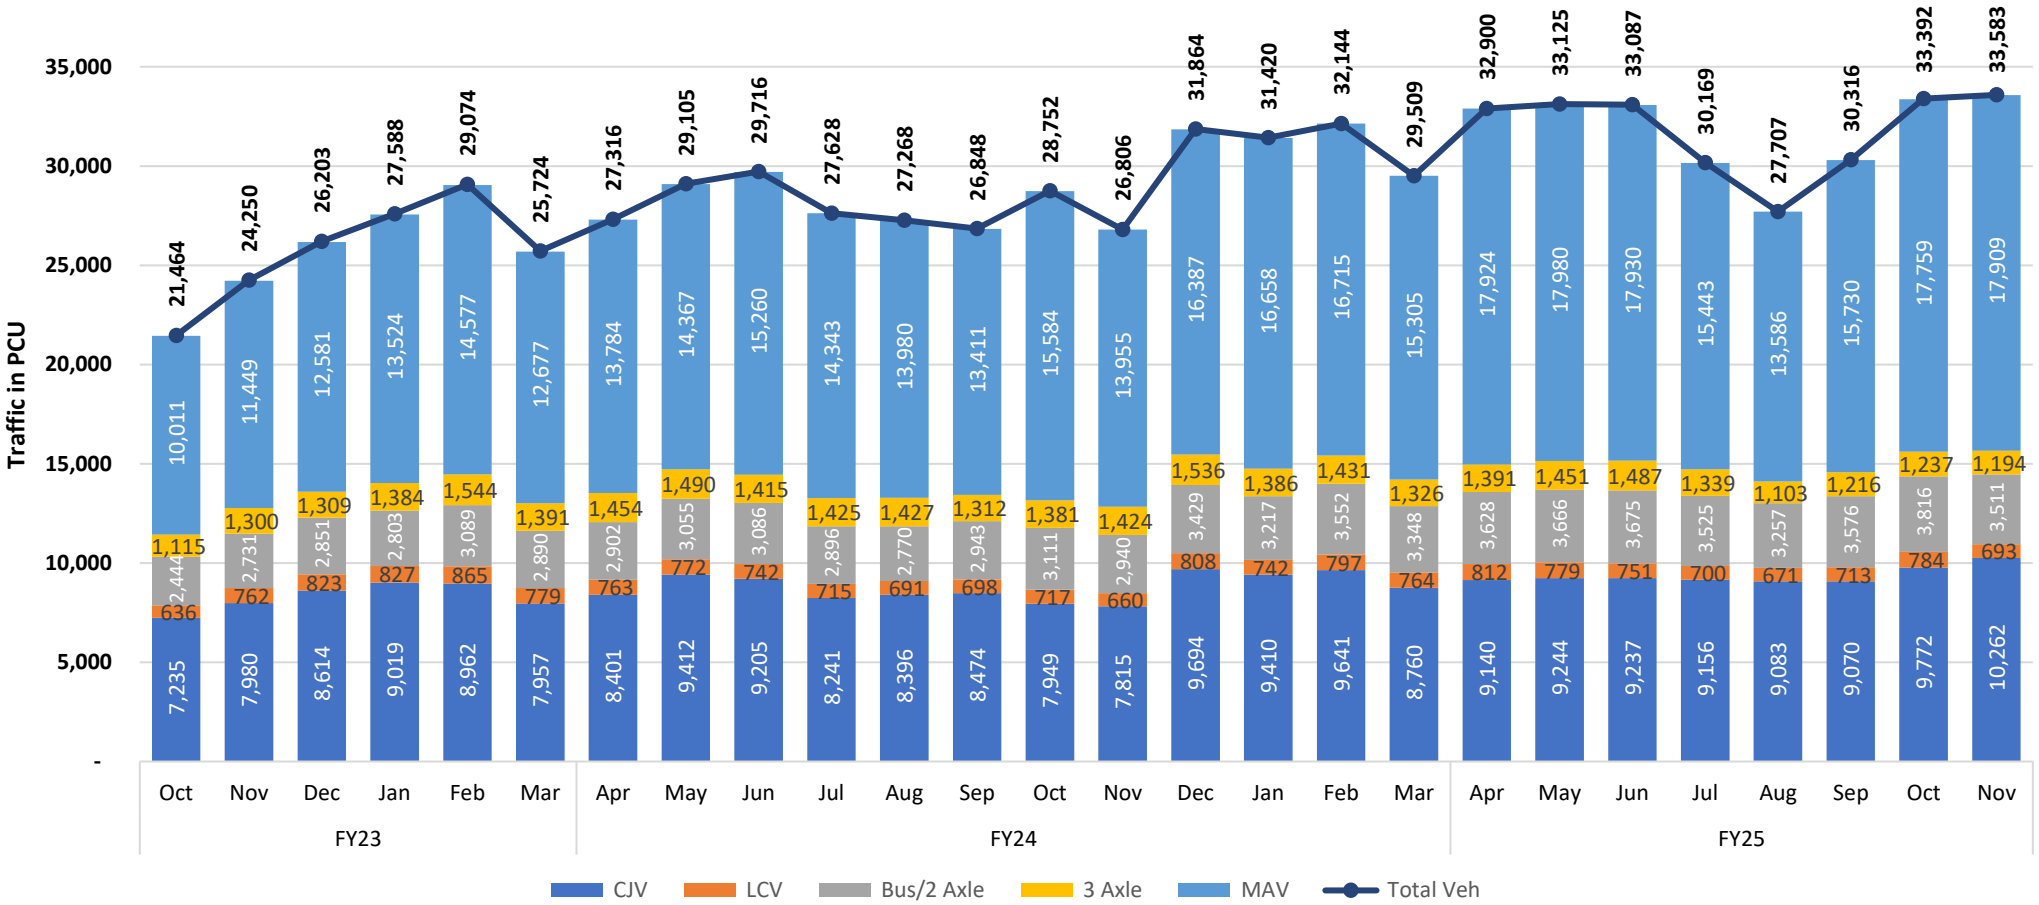

Figure 1-2 Historic Traffic Trend of Tarapongi Toll Plaza

The daily traffic, measured in Passenger Car Units (PCUs), has generally been in the range of 20,000 to 30,000 PCUs over the period from December FY23 to October FY25.The traffic has shown an upward trend, with a Compound Annual Growth Rate (CAGR) of 12.5% from FY23 to FY25.The daily revenue has also grown consistently, reaching ₹28.94 lakhs in October FY25.The revenue has shown a CAGR of 14.5% from FY23 to FY25.

Monthly ADT in PCU for Bhojpuri Toll Plaza:

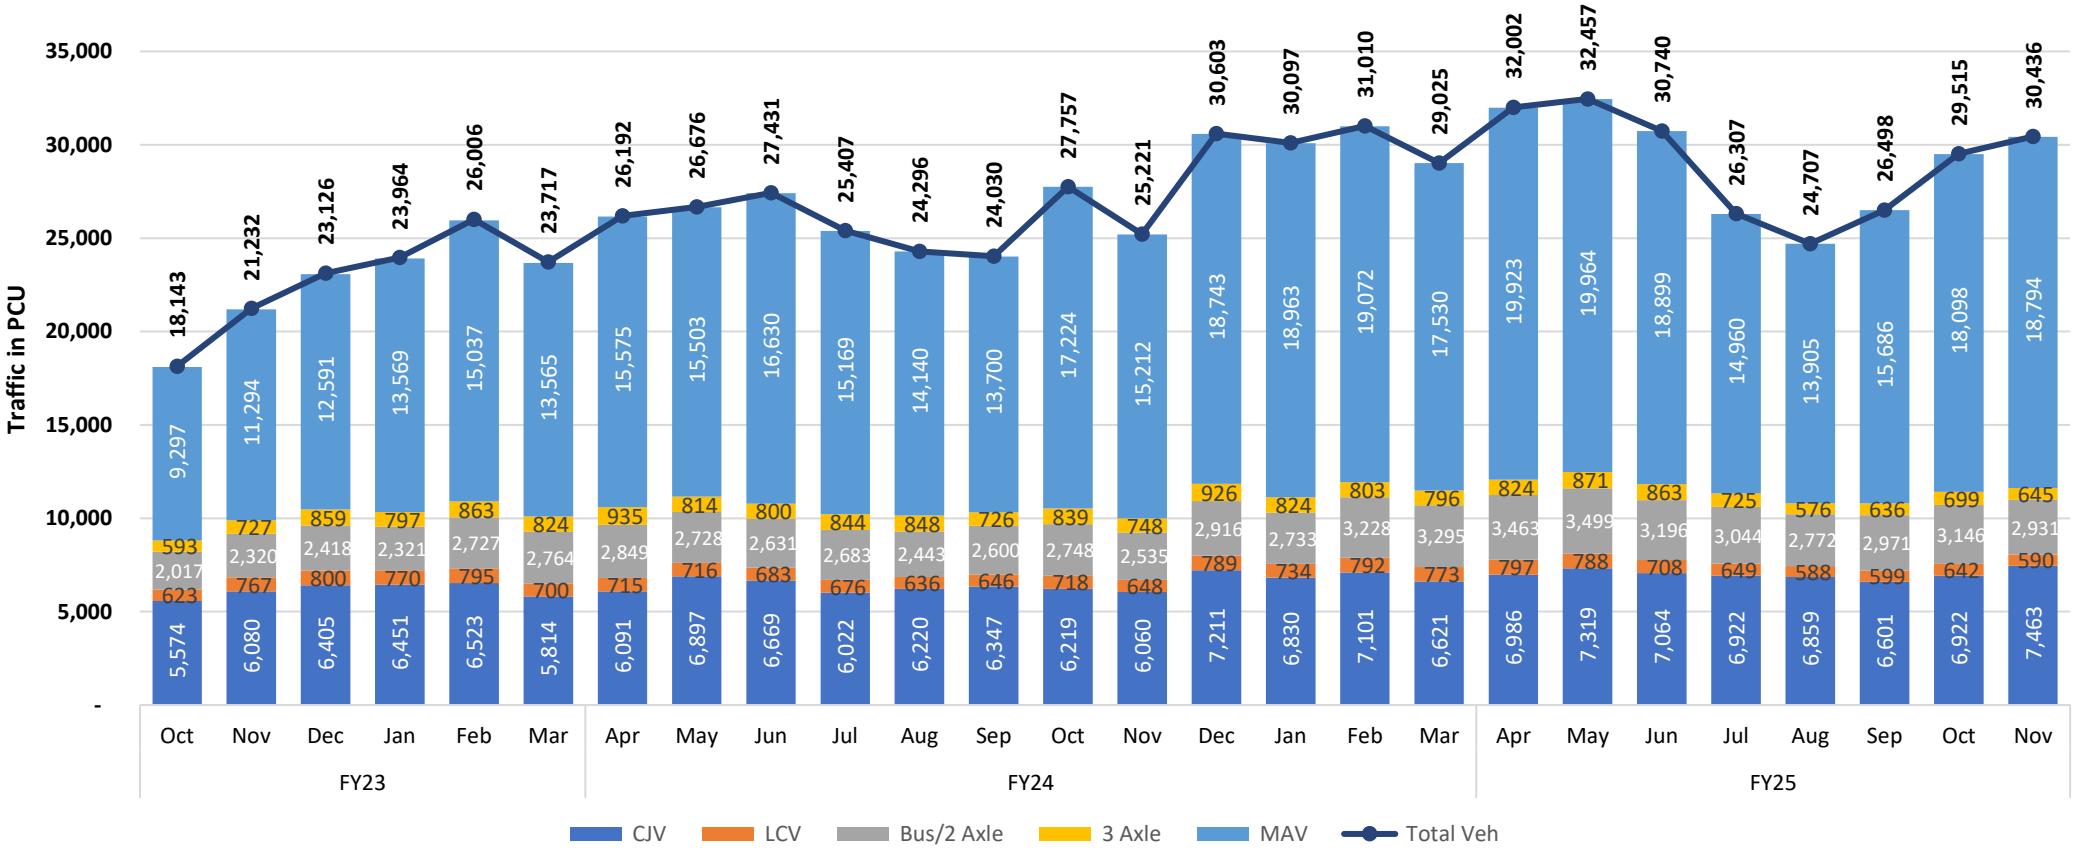

Figure 1-3 Historic Traffic Trend of Bhojpuri Toll Plaza

The daily traffic, measured in Passenger Car Units (PCUs), has generally been in the range of 6,000 to 8,500 PCUs over the period from December FY24 to October FY25. The traffic has shown an upward trend, with a Compound Annual Growth Rate (CAGR) of 16.9% from FY23 to FY25.The daily revenue has grown consistently, reaching ₹28.26 lakhs in October FY25.The revenue has shown a CAGR of 15.6% from FY23 to FY25.

Monthly ADT in PCU for Mudhipar Toll Plaza:

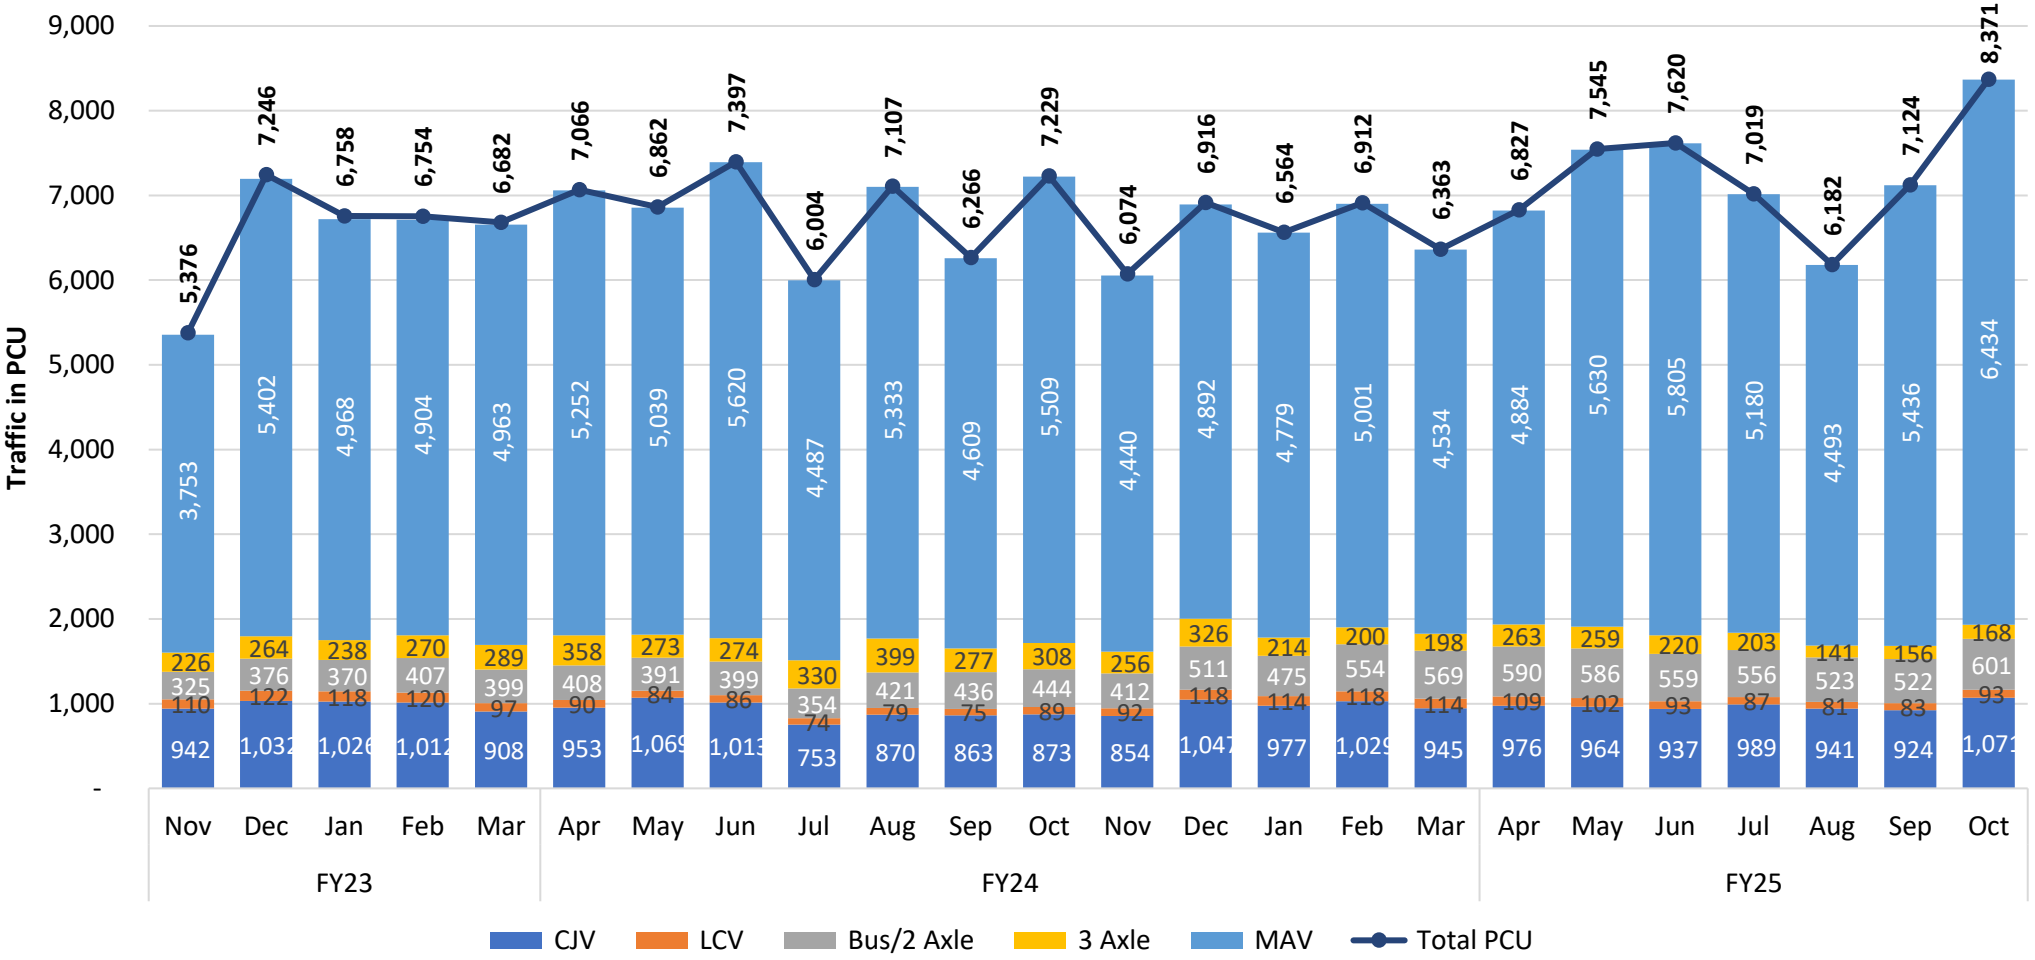

Figure 1-4 Historic Traffic Trend of Mudhipar Toll Plaza

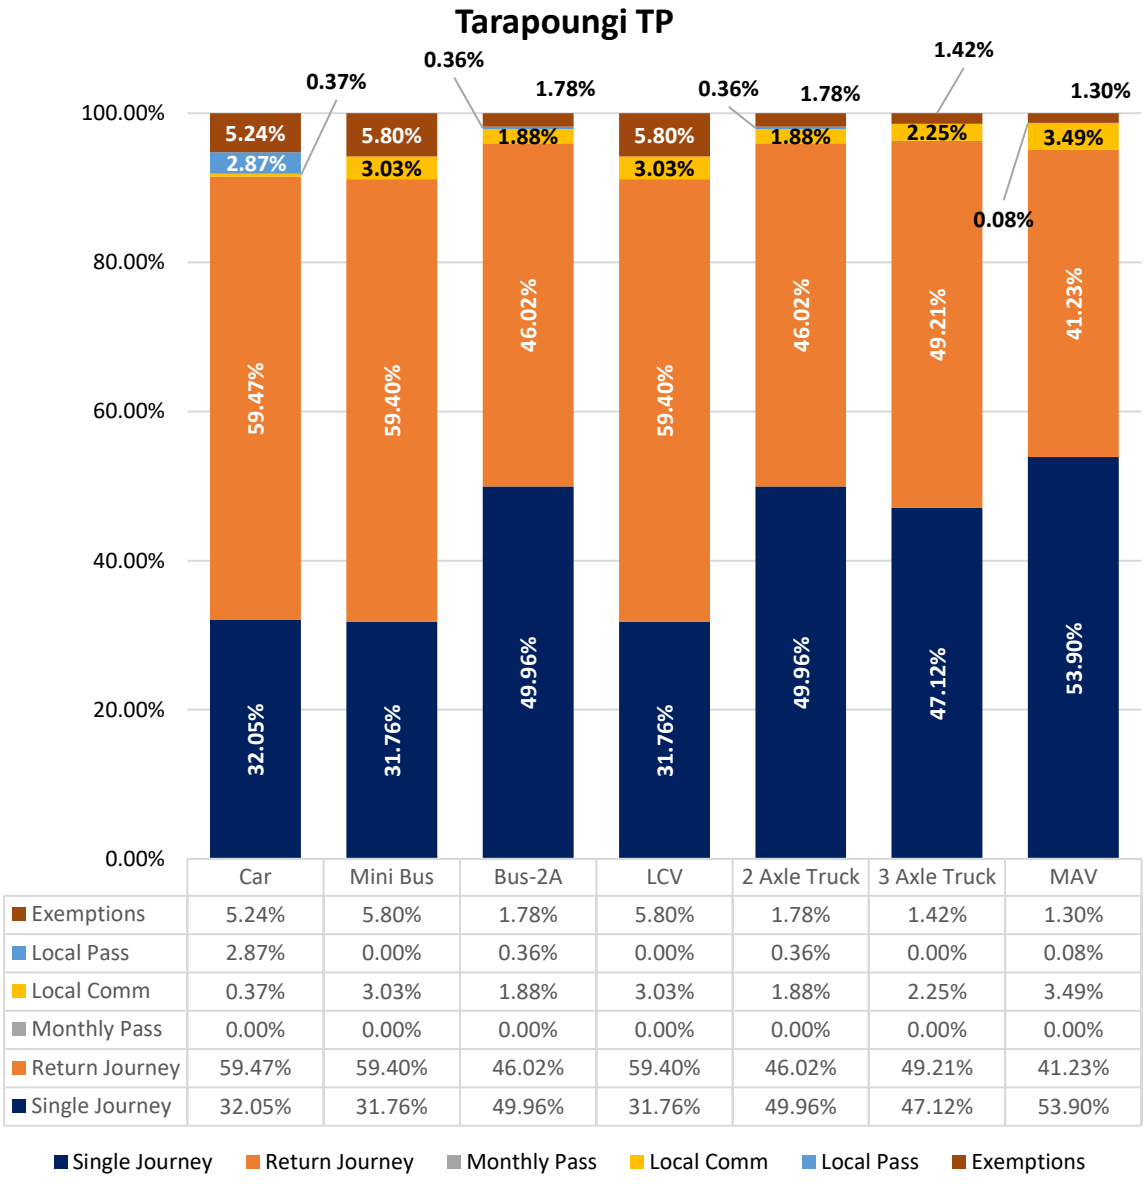


Based on the available data from Dec-FY24 to Oct-FY25 it can be observed that the traffic has been varying around 6000 to 8500 PCUs daily and having revenue of around 3 lack to 4 lacks daily. Daily revenue grew consistently, reaching ₹4.04 lakh in October FY25, with a CAGR of 22.7% from FY23 to FY25.Daily traffic ranged from 6,378 to 8,499 PCU, showing an upward trend with a CAGR of 18.8% over the same period.

1.3.2 Toll segmentation

The combined data from Tarapongi, Bhojpuri, and Mudhipar Toll Plazas shows varied travel patterns across vehicle types. Tarapongi and Bhojpuri see more return journeys for cars and LCVs, while Mudhipar has a higher share of single journeys. Trucks and MAVs at Tarapongi and Bhojpuri have a balanced mix of single and return trips, whereas Mudhipar is dominated by single journeys. Local commercial traffic and exemptions are present at all three plazas in different proportions.

Local pass usage varies across locations and vehicle types. The consultant has estimated a potential increase in Local Daily Commuter (LDC) share, especially at Tarapongi, with a phased rise from FY-26 to FY-30. Each toll plaza reflects distinct travel characteristics in trip types, local pass reliance, and exemptions.

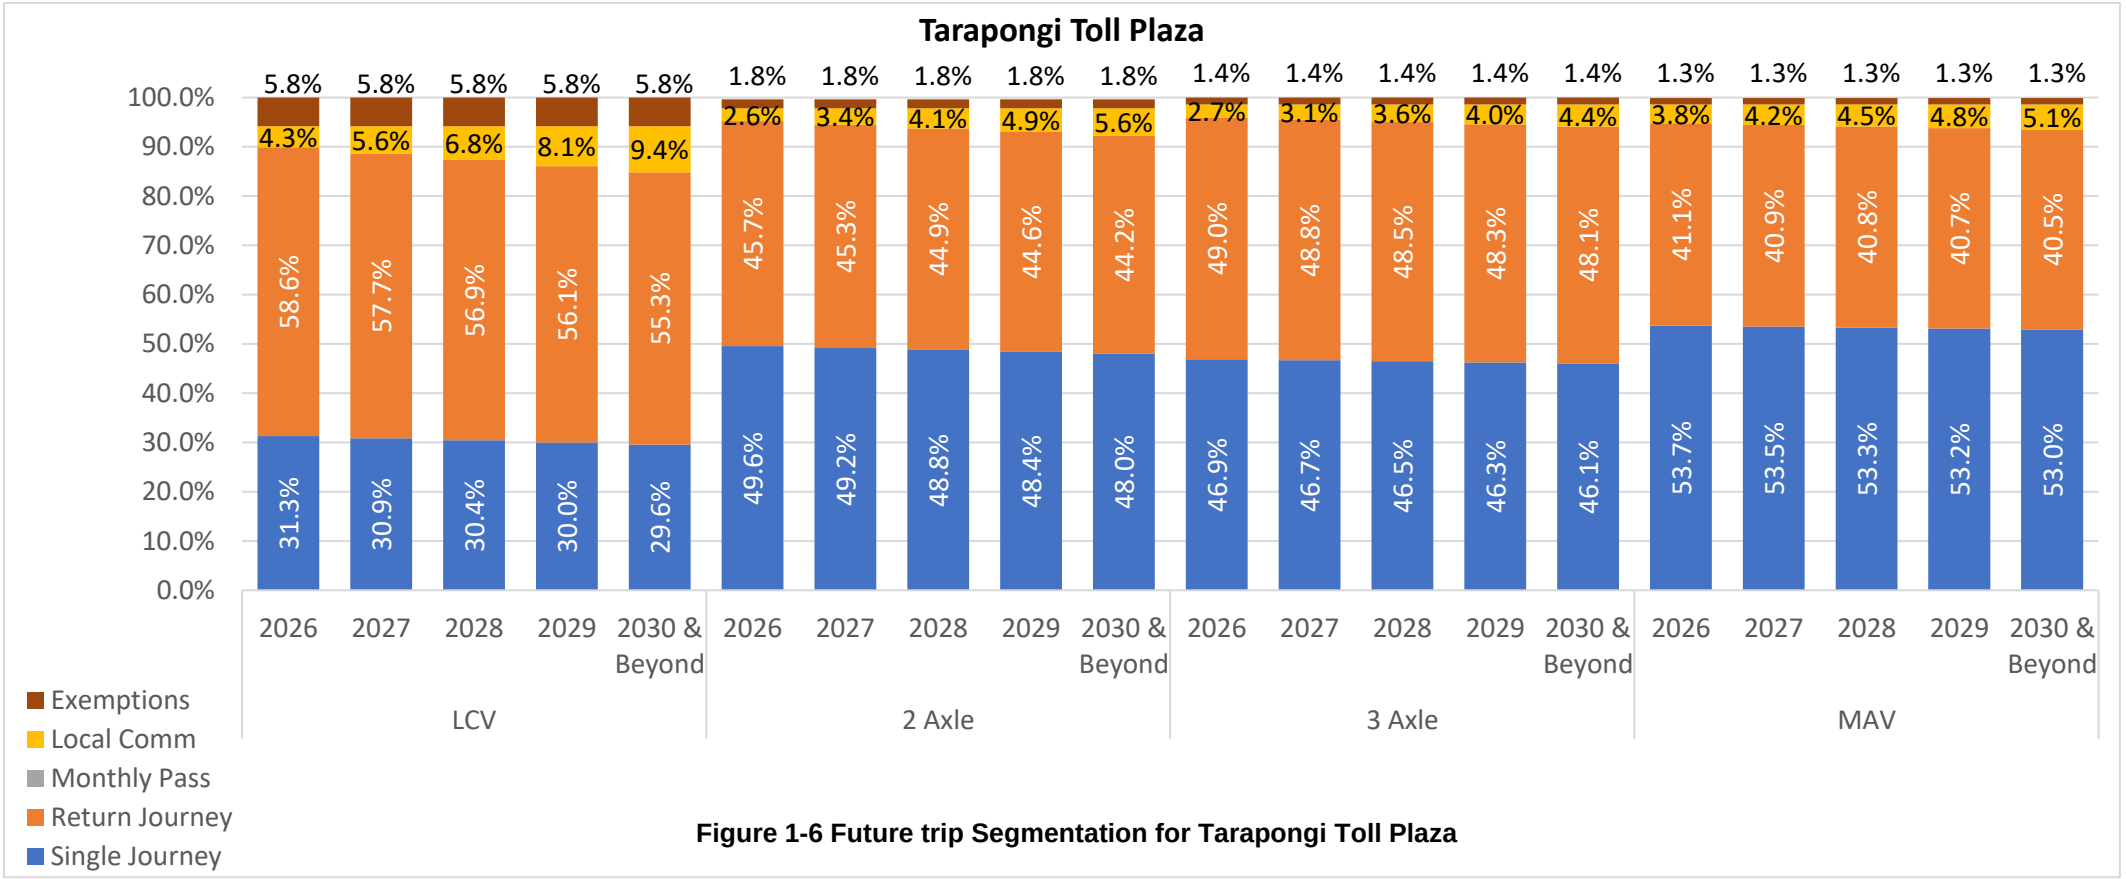
Tarapongi Toll Plaza:

	Car	Mini Bus	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV
Exemptions	5.24%	5.80%	1.78%	5.80%	1.78%	1.42%	1.30%
Local Pass	2.87%	0.00%	0.36%	0.00%	0.36%	0.00%	0.08%
Local Comm	0.37%	3.03%	1.88%	3.03%	1.88%	2.25%	3.49%
Monthly Pass	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Return Journey	59.47%	59.40%	46.02%	59.40%	46.02%	49.21%	41.23%
Single Journey	32.05%	31.76%	49.96%	31.76%	49.96%	47.12%	53.90%

Figure 1-5 Base Year (FY25) Trip Segmentation for Tarapongi Toll Plaza

Future trip Segmentation for Tarapongi Toll Plaza:

LDC shall increase and shall cap at 75% (25% of the users will not obtain the LDC due to insufficient LDC compliance) of the Actual Share estimated from Survey. For future projections, the consultant has noted an expected increase in Local Daily Commuter (LDC) share at Tarapongi in a phased manner from FY-26 to FY-30 for LCV, 2A,3A and MAV. Additionally, exemptions are factored in using available data, ensuring alignment with observed trends. The final adopted segmentation reflects these adjustments, and it is assumed that the forecast segmentation will remain consistent throughout the concession period.



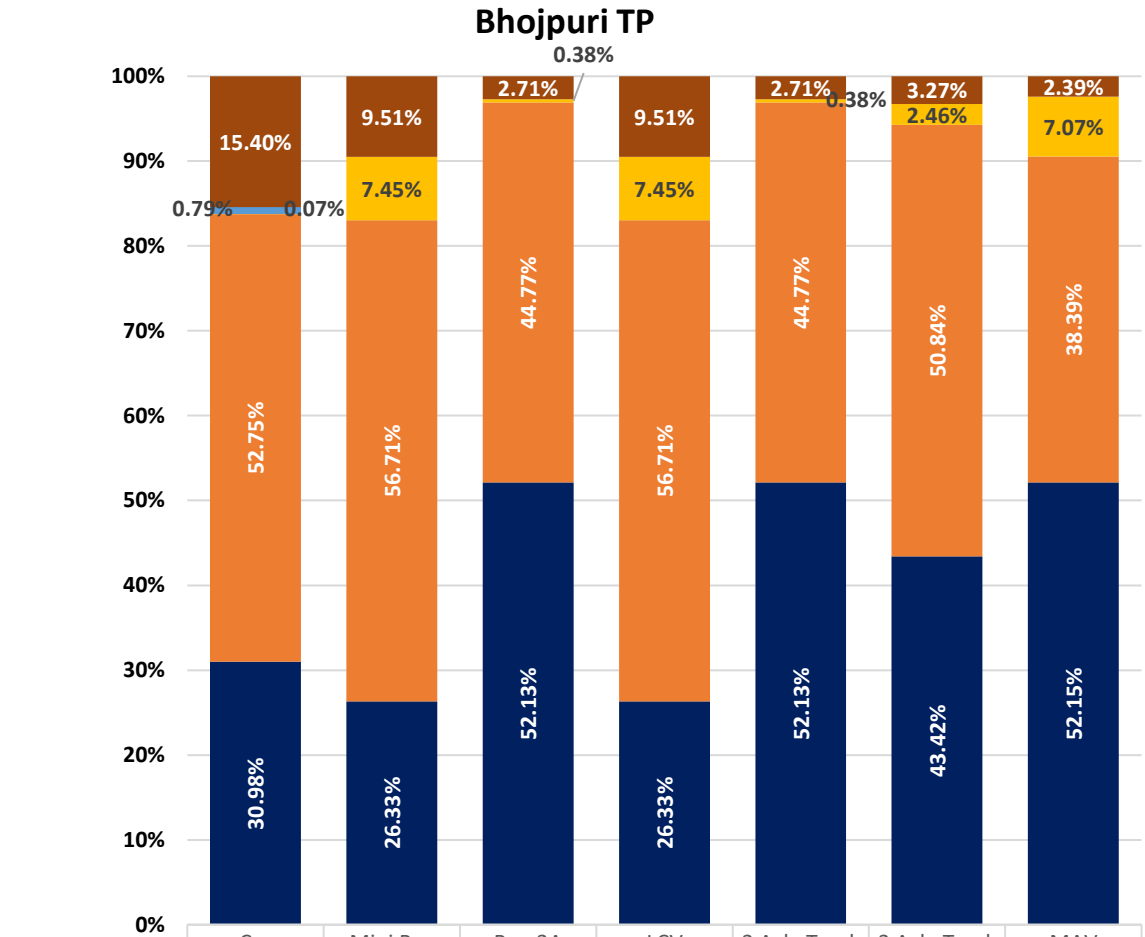


Figure 1-6 Future trip Segmentation for Tarapongi Toll Plaza

Bhojpuri Toll Plaza:

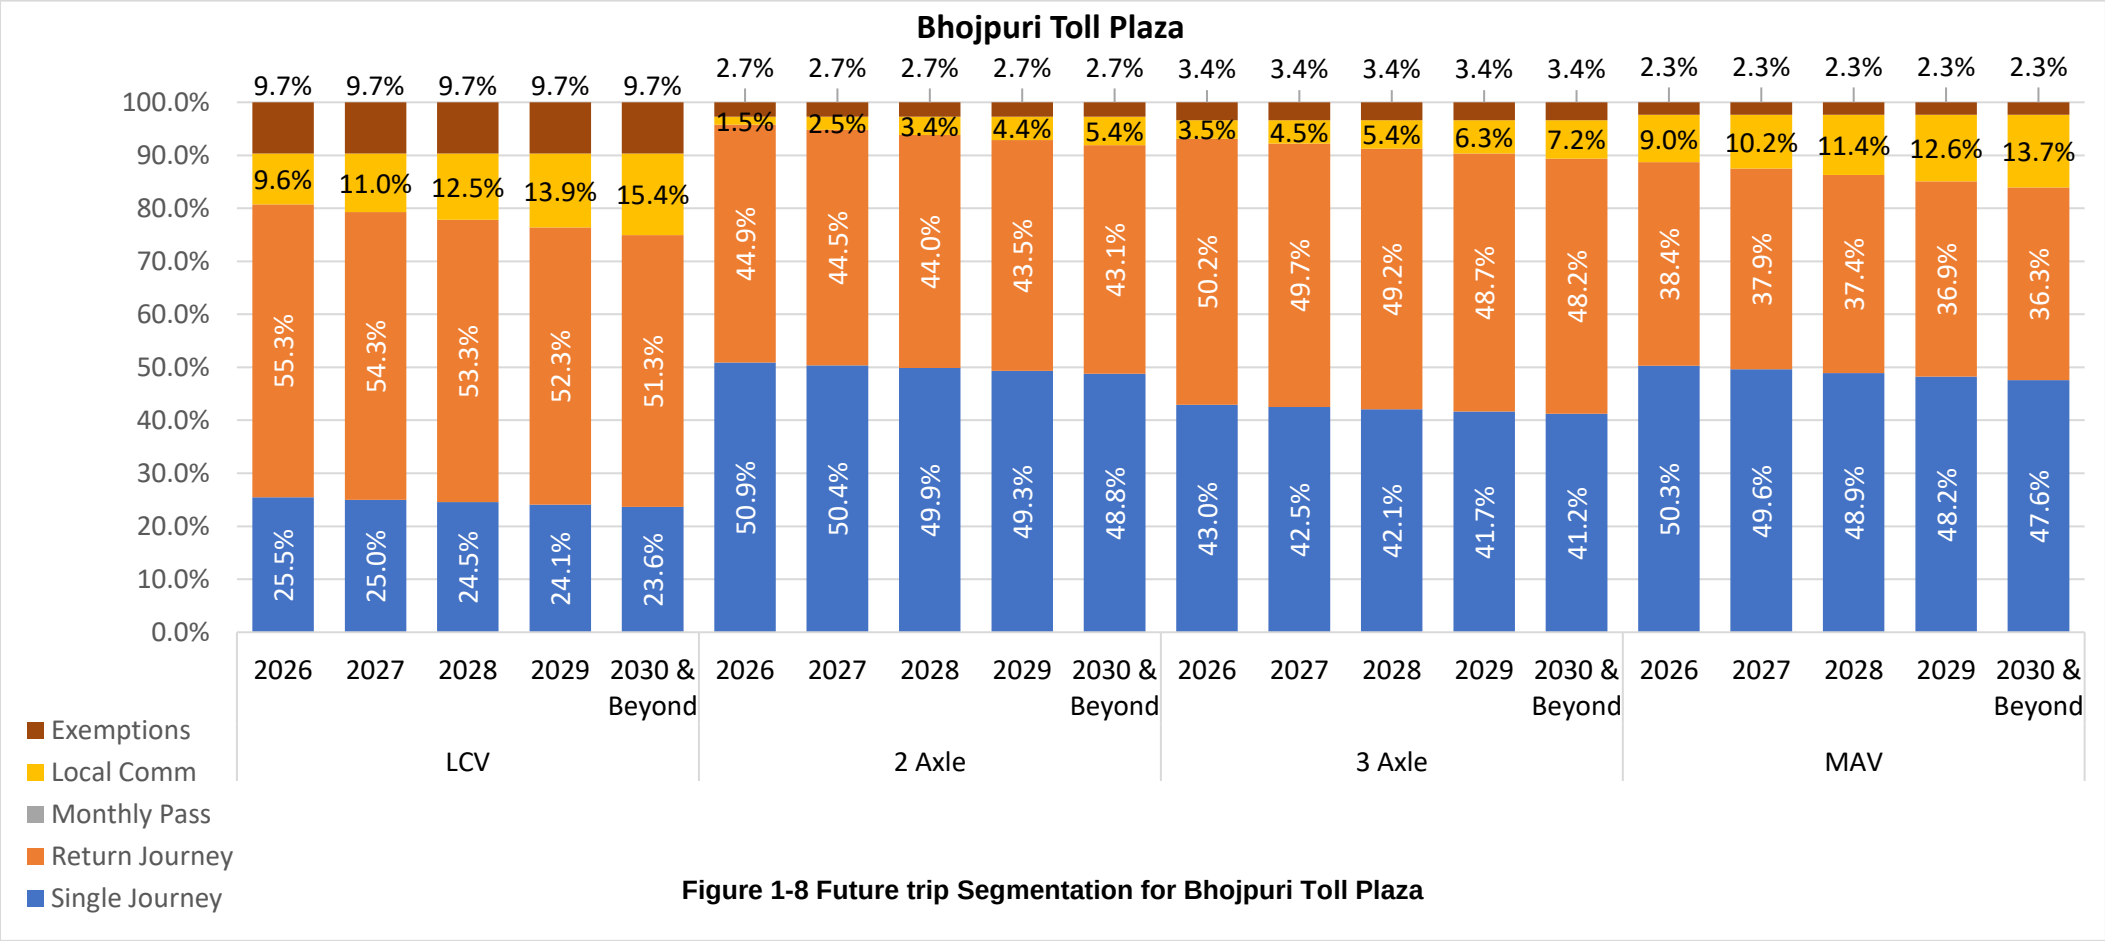
Trip segmentation for FY25

	Car	Mini Bus	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV
Exemptions	15.40%	9.51%	2.71%	9.51%	2.71%	3.27%	2.39%
Local Pass	0.79%	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Local Comm	0.07%	7.45%	0.38%	7.45%	0.38%	2.46%	7.07%
Monthly Pass	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Return Journey	52.75%	56.71%	44.77%	56.71%	44.77%	50.84%	38.39%
Single Journey	30.98%	26.33%	52.13%	26.33%	52.13%	43.42%	52.15%

Figure 1-7 Base Year (FY25) Trip Segmentation for Bhojpuri Toll Plaza

Future trip Segmentation for Bhojpuri Toll Plaza

DC shall increase and shall cap at 75% (25% of the users will not obtain the LDC due to insufficient LDC compliance) of the Actual Share estimated from Survey. For future projections, the consultant has noted an expected increase in Local Daily Commuter (LDC) share at Bhojpuri in a phased manner from FY-26 to FY-30 for LCV, 2A,3A and MAV. Additionally, exemptions are factored in using available data, ensuring alignment with observed trends. The final adopted segmentation reflects these adjustments, and it is assumed that the forecast segmentation will remain consistent throughout the concession period.



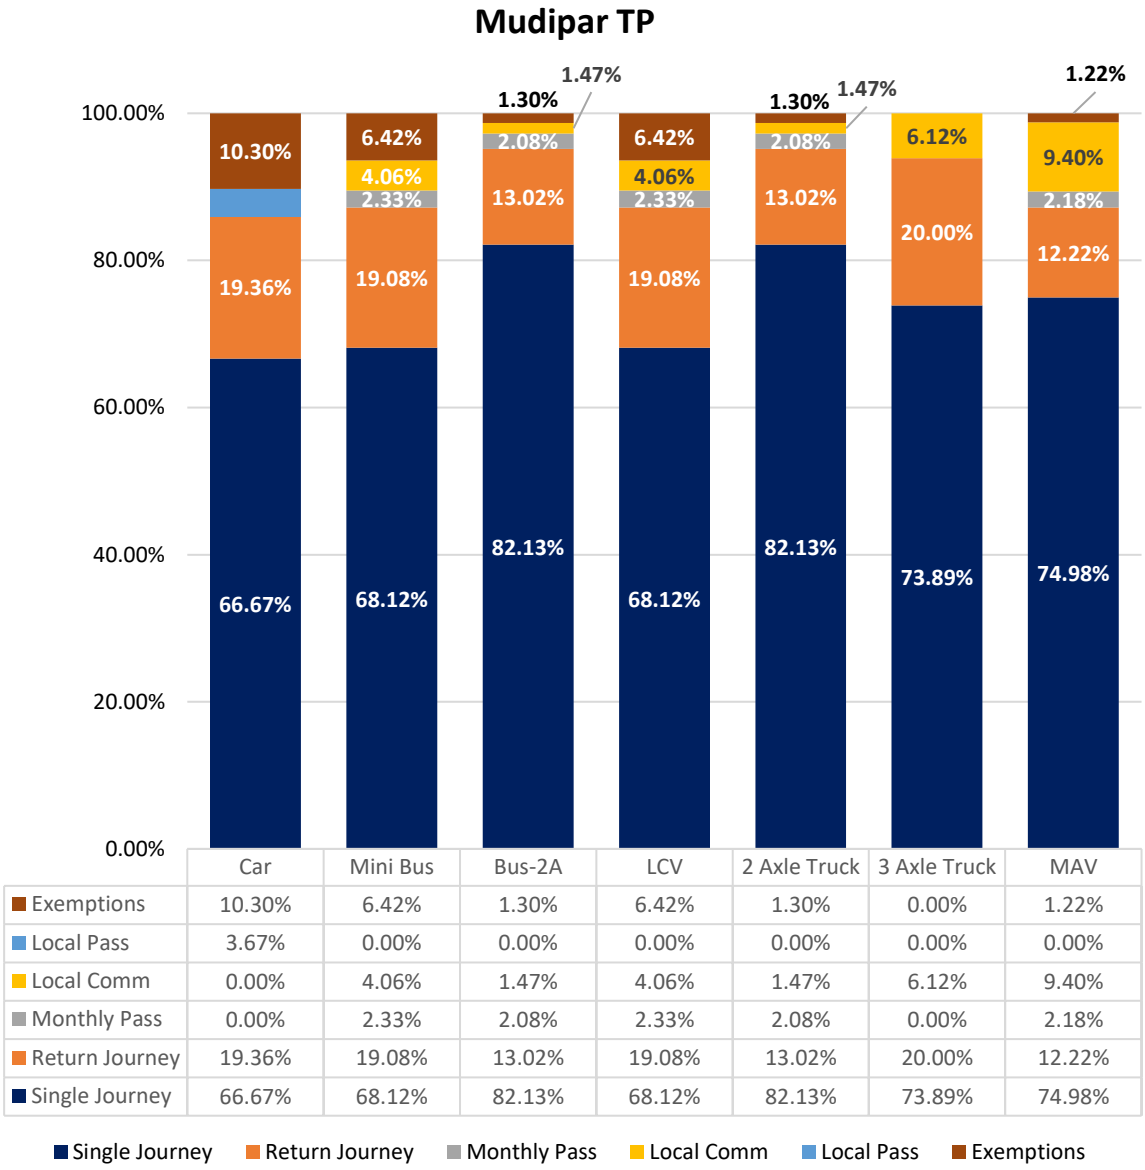


Figure 1-8 Future trip Segmentation for Bhojpuri Toll Plaza

Mudhipar Toll plaza:

Trip segmentation for FY25

	Car	Mini Bus	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV
Exemptions	10.30%	6.42%	1.30%	6.42%	1.30%	0.00%	1.22%
Local Pass	3.67%	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Local Comm	0.00%	4.06%	1.47%	4.06%	1.47%	6.12%	9.40%
Monthly Pass	0.00%	2.33%	2.08%	2.33%	2.08%	0.00%	2.18%
Return Journey	19.36%	19.08%	13.02%	19.08%	13.02%	20.00%	12.22%
Single Journey	66.67%	68.12%	82.13%	68.12%	82.13%	73.89%	74.98%

Figure 1-9 Base Year (FY25) Trip Segmentation for Mudhipar Toll Plaza

Future trip Segmentation for Mudhipar Toll Plaza:

LDC shall increase and shall cap at 75% (25% of the users will not obtain the LDC due to insufficient LDC compliance) of the Actual Share estimated from Survey. For future projections, the consultant has noted an expected increase in Local Daily Commuter (LDC) share at Mudhipar in a phased manner from FY-26 to FY-30 for LCV, 2A,3A and MAV. Additionally, exemptions are factored in using available data, ensuring alignment with observed trends. The final adopted segmentation reflects these adjustments, and it is assumed that the forecast segmentation will remain consistent throughout the concession period.

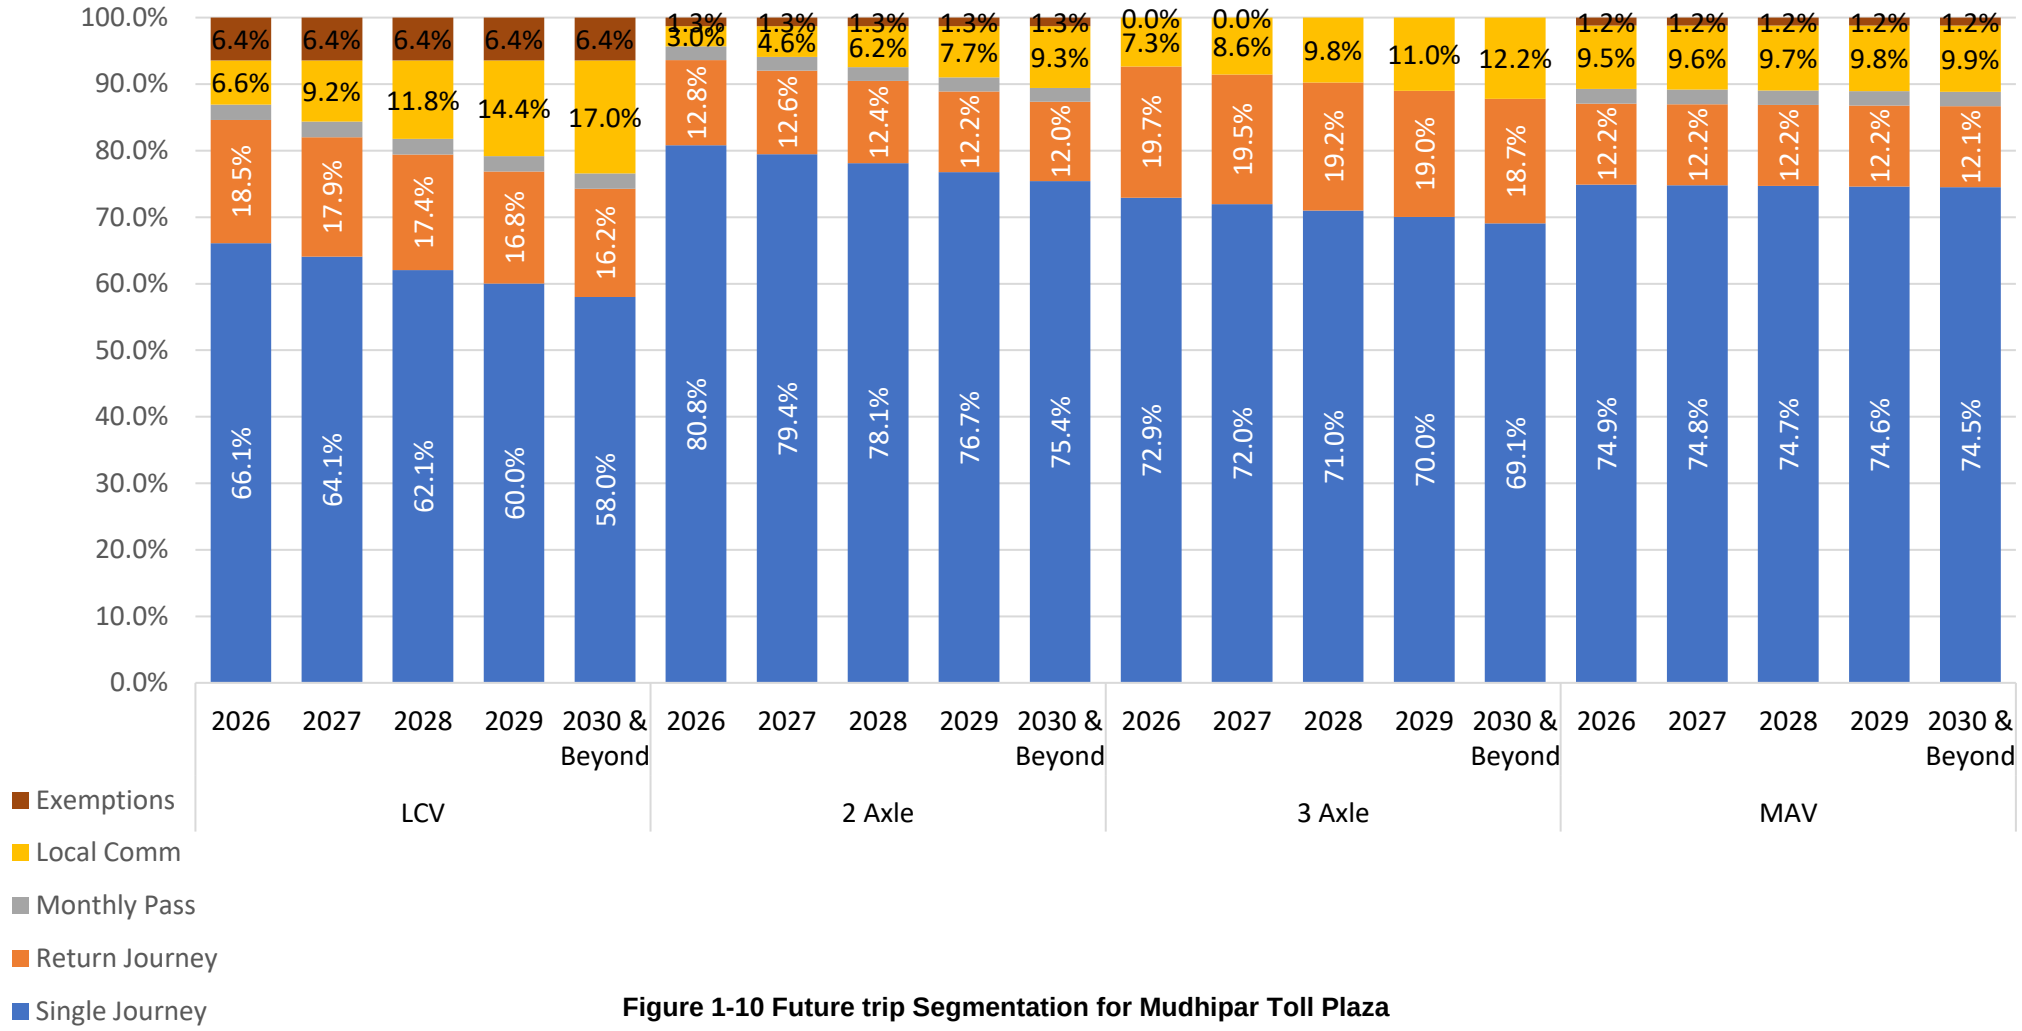

Figure 1-10 Future trip Segmentation for Mudhipar Toll Plaza

1.3.3 Base Year Traffic (AADT)

- The Consultant recommends FY 25 (Apr to Nov 2024) ETC Toll plaza data for Base Year AADT for Tarapongi & Bhojpuri and FY25(Apr-Oct) for Mudhipar Toll Plaza, as it is based on the most recent data.
- IHMCL data for FY23 and ETC data FY24 is considered most suitable for SCF calculation for all three toll plazas.
- Final AADT has arrived by adding adjusted ADT (with selected SCF) arrived from ETC data (April to Nov 2024/Oct 2024, which excludes cash & exemption/violation traffic), cash & exempt traffic from non-ETC data (April to Nov/Oct 2024) and forced exemption/violation data obtained from traffic survey.

Adopted AADT for all three toll plazas has been mentioned below.

Table 1-1 AADT FOR TARAPONGI TOLL PLAZA FY25

1.3.4 Traffic Forecast

Traffic forecasting for project road traffic was done considering past trend in growth and analysing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

The network developments near the Asset's alignment, which are expected to impact traffic on the Asset during the concession period, include the 4-laning of NH-130B (Raipur – Baloda Bazar – Sarangarh), the Raipur–Dhanbad Economic Corridor (EC-07), and associated upgrades in the region.

The 4-laning of NH-130B, covering approximately 169 km out of the total 216 km, is currently in the planning stage, with an estimated completion in FY-31. This development is expected to have a negative impact on the Asset's traffic from FY-32 onward.

The Raipur–Dhanbad Economic Corridor (EC-07), a 707 km-long access-controlled expressway, is under construction to enhance connectivity between Chhattisgarh and Jharkhand. The corridor comprises both greenfield and brownfield sections, including the upgrade of the Raipur–Bilaspur Expressway to a six-lane highway. The ongoing construction between Bilaspur and Urga is expected to be completed by FY-27, positively impacting the Asset from the same year. A subsequent phase of the corridor is anticipated to be completed by FY-31, further influencing traffic patterns from FY-32.

All these network impacts are considered in the Traffic Projections.

The methodology used for the study included following steps:

- The influencing factors obtained from OD surveys are utilized in deriving the key socio-economic parameters of the Project Influence Area (PIA) for the historic trend.
- Through regression analysis for various combinations of dependent and independent parameters is conducted to evaluate the significance of the relation.
- Potential growth of various vehicle categories was separately assessed based on its probable market share in expected multi-modal development.
- The elasticity values for the selected relation are taken & used for the traffic growth rates estimation. However, there are several steps performed before obtaining the traffic growth rates which are explained in the chapter 6.

Traffic and Revenue Assumptions

Traffic Assumptions: -

- Future traffic forecasting was done using elasticity approach which considers the elasticity of transport demand and probable pattern of future growth of the economy.

- Elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend and AADT-tonnage with the growth of PCI, GSDP and Moderated elasticity values chosen for the analysis based on previous trends in socioeconomic variables.
- For Car, Bus and truck traffic, the adopted elasticity values are as follows –
    - Tarapongi TP – 1.20, 0.50, 0.90
    - Bhojpuree TP – 1.20, 0.50, 0.90
    - Mudhipar TP - 1.20, 0.50, 0.90
- Based on the projected elasticity values for TP 1, TP2 and TP 3 the growth of PIA, the future average annual compound traffic growth rates by vehicle type have been estimated by using the following relationship:
    - For freight vehicle, the tonnages on the corridors are projected. The existing market share of different category of goods vehicles are then adjusted for the future years based on the past tonnage trend observed.
    - Normal traffic projections have arrived by applying the traffic growth on the base year traffic.
- The future traffic projections are presented for Effective case traffic projections & the Effective case has arrived by considering the future adjustments in the form of diversions and developments detailed in the chapter 5.

Revenue Assumptions: -

- Toll revenue projections or forecasting will be calculated based on the projected traffic and projected toll rates.
- Toll rates by vehicle and toll category depends on the tolling length, wholesale price index (WPI) and the base rates which are applicable by vehicle category are according to the NH fee notification for the project.
- Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the National highway fee rules 2008.
- Fee applicable shall be the rate multiplied by the length of the highway section for which toll is to be collected.
- The amount of fee and the revision thereof effective from 1st April every year shall be calculated as follows:

$$\text{Applicable rate of fee} = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPIA} - \text{WPI B}}{\text{WPI B}}\right\} * 0.40$$

Were
WPI-A means the Wholesale Price Index on December 31, 2023.
WPI-B means the Wholesale Price Index of week ending on 6th January 2007.i.e 208.7.
The actual fees to be charged shall be rounded off to the nearest Five rupees.

Traffic and Toll revenue projections

Toll revenue is projected based on the future traffic projections, toll fees by vehicle and toll category and trip rates. Traffic numbers are projected by fiscal year i.e., FY25, FY26 etc. and toll rates are revised on 01st April every year. Toll revenues are projected by fiscal year till the end of concession period and considering maximum possible extension referring clauses related to Additional toll way, Capacity augmentation and modification of concession period.

(a) Toll would be collected for all the days in a year.

(b) Revenue projected from FY-2025 to FY-2056. (End of Concession period is 2046, How ever the same has been estimated till FY-2056 as long-term projections)

The toll revenue projections are done for the effective case which is basically the consideration of all network improvements and land developments as described in the chapter “Traffic Growth Rate Estimation”. Like the effective traffic projections, the below table summarizes the projected annual toll revenue for all the toll plazas for Most Likely scenario.

Table 1-1-13: Estimated Annual Toll revenue (Effective case) in Rs. Crores – Most Likely

FY YEAR	Tarapongi TP	Bhojpuree TP	Mudhipar TP	Total Revenue
FY25	107	105	14	227
FY26	117	115	16	247
FY27	130	127	18	276

CHAPTER 2
Introduction

2. Introduction

2.1 General

IBI Group India Private Ltd (Consultant) was appointed by National Highways Infra Investment Managers Pvt Ltd to carry out the traffic due diligence study for the Raipur-Bilaspur section of NH-30.

The project road is part of the major National Highway 30, Providing connectivity between states like Chhattisgarh, Karnataka. The project road has three toll plazas (TPs), Tarapongi Toll Plaza, Bhojpuree Toll Plaza and Mudhipar Toll Plaza.

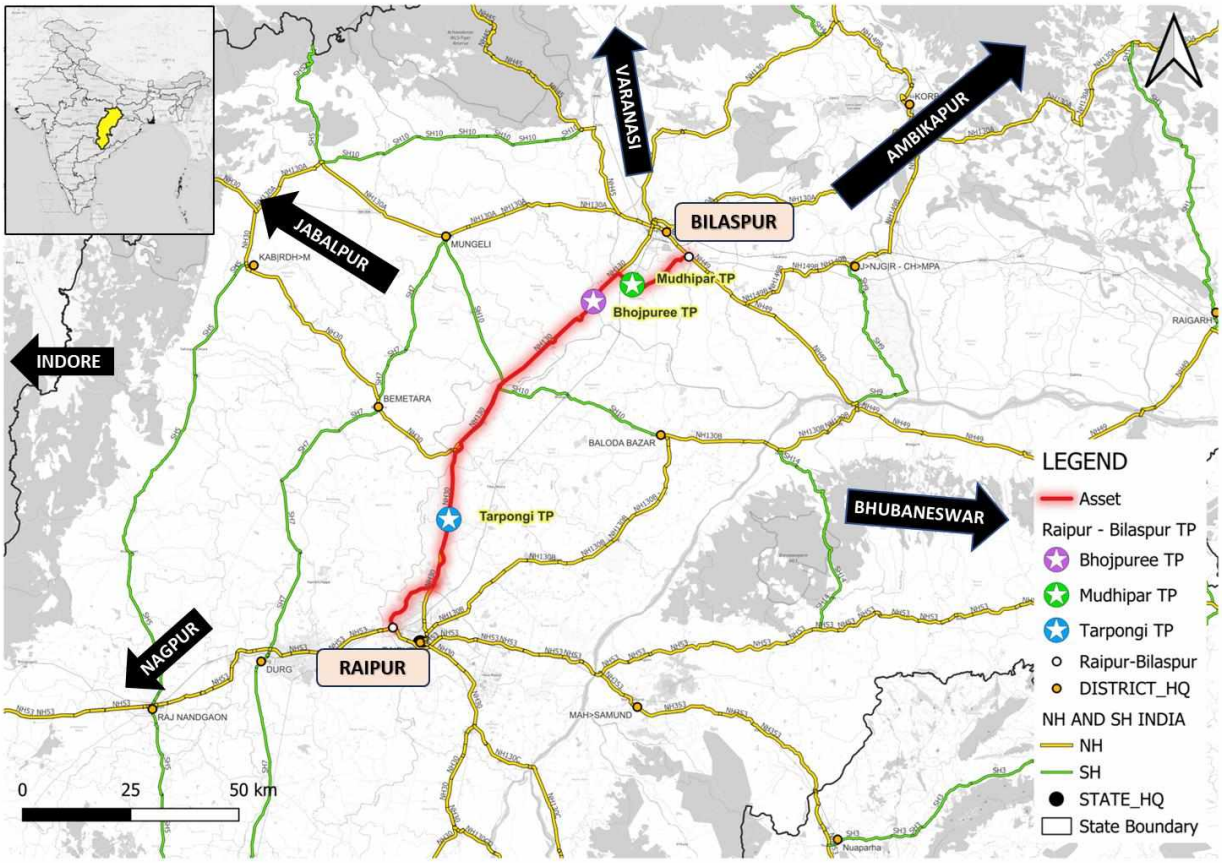

Figure 2-1: Project Corridor with existing toll plaza location

As part of this study, a systematic methodology has been followed to assess the characteristics of the existing traffic on the project road and traffic growth during the remaining period of the concession i.e., till (FY-2046). however traffic projections are estimated till FY2056 as long term projections considering the maximum extension of concession period. The details pertaining to the data collection, primary as well as secondary, and results from its analysis are presented in the subsequent chapters of this report.

The Traffic report presents the existing traffic characteristics, methodology used to derive traffic growth rates, details on adopted traffic growth rates, forecasted traffic, diverted, and generated traffic if any for the next Twenty (20) years. Based on these, future tollable traffic and toll revenues at the existing toll plaza locations are assessed and presented.

2.2 Objective and Scope of work

The main objective of the study is to carry out review of existing traffic & revenue data and forecasting the future traffic and revenues for the project road for the remaining concession period considering the potential risks and developments in view of the micro and macro characteristics related to demographics, economy, alternate routes, project road, regional network & peripheral development in the project influence area (PIA).

The scope of work is to assess the horizon year traffic & toll revenue at the toll plaza locations on the project road through:

- Review of Data and Documents:
    - Reviewing the Historical data on classified traffic volume & revenue data for the project highway's Toll Plazas.
    - Reviewing the Past traffic study reports.
    - Conducting gap analysis between actual and projected traffic & revenue for current/last year and ascertaining the reasons thereof.
    - ETC & Non ETC data for the historic period for the project road toll plazas .
    - Traffic volume/ revenue data collected from the concerned PIUs, and actual amount remitted by User Fee Collection Agencies to NHAI.
- Traffic Surveys:
    - 7 Days Traffic Volumes counts at all the toll plazas of project road using Videography method. The vehicle classification system as given in relevant IRC code may be followed.
    - All results shall be analyzed, and the annual average daily traffic (AADT) shall be worked out by applying seasonal correction / variation factors.
    - Triangulation of traffic forecasts shall be undertaken based on data from secondary sources and analysis of variations (if any), from the traffic as per TVC and as per data shared by NHIIMPL.
    - 1 Day Origin- Destination study at all the toll plazas of project road using roadside interview techniques.
    - The road-side interviews on random sample basis to cover all vehicles. The location of the O-D survey and commodity movement surveys shall normally be the same as for the classified traffic volume count.
    - Identification of Project Influence Area and traffic generators (industrial areas, towns, ports etc.) from analysis of travel pattern covering:
        a) Regional distribution of traffic – through/ bypassing traffic/ inter-state, intra-state/interdistrict, intra-district etc.
        b) Commodity composition- Goods type distribution.
        c) Top OD pairs by vehicle types.
        d) Travel frequency and trip purpose distribution leading to traffic segmentation by toll rate category.
    - Traffic diversion analysis, in case, there are existing routes, or new alternative routes are planned by relevant Authority.
    - Identification of and traffic analysis relating to Competing Routes ((including rail/DFC etc.), if any.
    - Assessment of impact of network improvements based on observed travel pattern.

  - Traffic growth rate estimation based on the elasticity approach using econometric modelling
  -

- Traffic & Revenue Estimates:
  - The values of elasticity of transport demand shall be based on the prevailing practices in the country. The Advisors shall give complete background including references for selecting the value of transport demand elasticity.
  - The demand estimates shall be done assuming three scenarios, namely, optimistic, pessimistic and most likely traffic growth. The growth factors shall be worked out for five- yearly intervals or as appropriate.
  - Above all will include formulation of future economic outlook based on recent economic performance, extent of impact of covid waves and expected economic recovery thereafter.
  - Key factors to be considered in forecasting traffic/ revenue:
    a) Seasonal Correction Factors
    b) Influence area of the project and its economic perspective
    c) Key traffic drivers of the project
    d) Present and future elasticity of transport demand by vehicle type
    e) Traffic growth rate trends observed
    f) Impact of upcoming developments and future development potential of the region
    g) Study of impact of competing routes in terms of diversion from/to the project road - Identification of competing routes and network condition, traffic characteristics & level of tolls charged, if any on the competing corridors
    h) Review of nearby toll plaza/past traffic & revenue data for accurate estimation of traffic growth and to study the past traffic growth trend.
    i) Scenario testing for toll revenue
    j) Any other competing transportation facility
    k) Distribution of traffic into different tolling streams (normal paying and concessions as applicable in line with CA)

2.3 Composition of the Report

This Report is further divided into seven chapters. Chapter 1 contains the executive summary of the report providing a brief outcome of the study. Chapter 2 provides a brief description of the project including the background and key objectives of the study. Chapter 3 contains details of the project road existing connectivity and its influence area. Chapter 4 contains details pertaining to various secondary and primary data and its analysis to understand the base year traffic and travel characteristics. Chapter 5 presents the traffic diversion analysis. This chapter details out the approach and methodology adopted for identification of the potential divertible traffic. It also, elaborately illustrates the approach and methodology adopted for the identification of alternate networks & routes and finally presents the Diverted traffic.

Chapter 6 illustrate the potential developments, growth drivers in the PIA and the potential developmental traffic generated out of the identified developments and, presents the estimation of the traffic growth rates used for traffic forecasting and Final chapter 7 presents the traffic and revenue projections for the entire concession period.

CHAPTER 3

Characteristics of the Project Influence Region

3. Project Influence Area Characteristics

This chapter examines various areas which significantly influence the project road. Demographic, geographical, agricultural & industrial sector, and industrial profile of project influence area is discussed in this chapter.

3.1 Project Road

Key element of any traffic assessment is the understanding of the spread of regions around the project that influence the traffic on the highway and establish the relationship between them. This was achieved through extensive data collection from secondary sources/past reports.

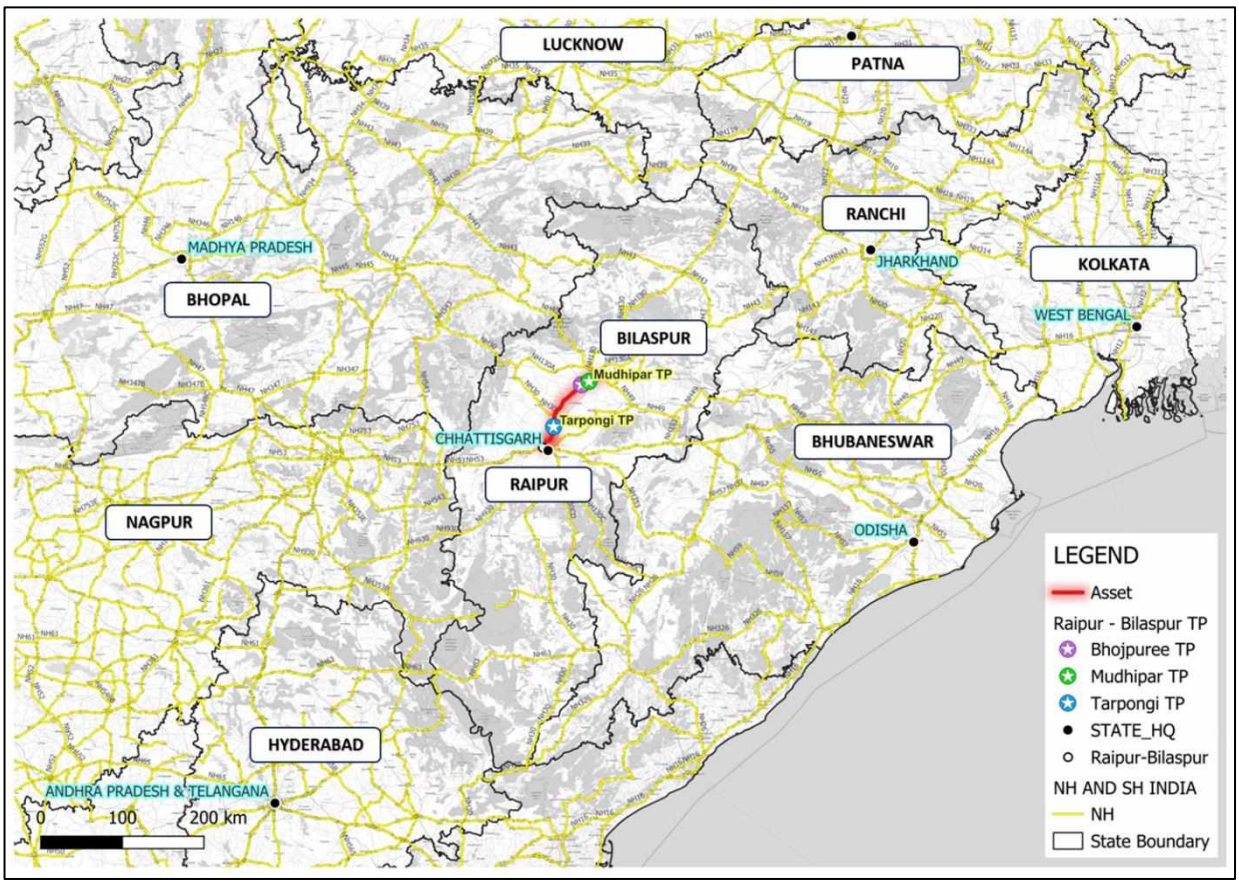

Figure 3-1: Project Road Network at Regional Level

Generally, the area which contributes to the total traffic plying on project road is called the project influence area (PIA). PIA is further classified into primary (immediate) and secondary (broad) influence area, depending on its distance from the project road. The immediate influence area of the project corridor comprises of region/districts of Chhattisgarh, Maharashtra & Madya Pradesh which are in immediate proximity to the project road contributing above 90% of the project road traffic.

Based on the study of the secondary information and past traffic data, the project influence area is divided into: Immediate Influence Area, which comprises of the traffic generators located along the project highway including the end points. Broad Influence Area, which comprises of long-distance destinations which are catered by project highway beyond immediate influence area. The project road with its primary and secondary influence area is as presented in the table below.

Table 3-1: Major Traffic Generating Nodes for Project Road

SL. NO.	STATES	IMPORTANT CITIES
Immediate Influence Area		
A1	Chhattisgarh	Raipur, Bilaspur, Baloda bazar
Broad Influence Area		
B1	Madhya Pradesh	
B2	Maharashtra	

3.2 Chhattisgarh Profile

Chhattisgarh is the ninth largest state by area and 17th most populous in India, comprising 33 districts. Its capital city is Raipur-an important industrial and commercial center. Naya Raipur, also called Atal Nagar, is the first greenfield smart city of India. Chhattisgarh borders Uttar Pradesh in the north, Madhya Pradesh in the northwest, and Maharashtra in the southwest as well as Telangana in the south and Jharkhand in northeast and Odisha in its southeast. The state area comes to 135,192 sq km, being very rich in minerals: a key factor behind large-scale

production of India's steel and power. Chhattisgarh has five administrative divisions named: Raipur, Bilaspur, and Bastar. These are the main regions in governance and economic activity.

The state is marked with dense forests, undulating plains, and the Maikal Hills. It also has prominent rivers like Mahanadi, Indravati, and Shivnath, which play a crucial role in irrigation

and drinking water supply. The region has natural attractions in the form of waterfalls, caves, and wildlife sanctuaries, it is a developing tourist destination for eco-tourism.

Raipur and Bhilai are major industrial centers, Bhilai having one of the largest steel plants in India. Other cities, Bilaspur and Korba, are important trade and power generation centers, making Chhattisgarh the "Power Hub of India."

The state has 26 districts across three regions: Coastal Andhra, Uttarandhra, and Rayalaseema, separated by the Eastern Ghats. Coastal plains are agriculturally productive, while Rayalaseema's peneplains suit livestock grazing. 62% of the population depends on agriculture. Four cities - Amaravati, Kakinada, Tirupati, and Visakhapatnam - are designated as smart cities.

3.2.1 Economic & Industrial Profile

The GSDP of Chhattisgarh would be around Rs. 5.61 trillion (US$ 67.27 billion) in the financial year 2024-25. Chhattisgarh State GSDP grew at a CAGR of 10.67% from 2015-16 to 2024-25.

Chhattisgarh is one of the few states that have surplus power. Korba district is in Chhattisgarh, and that region is also termed as India's power capital. It is one of the most remunerative states in terms of electricity in utility terms. Chhattisgarh as of May 2024 has a total installed capacity for power generation at 14,161.12 MW that includes 9,227 MW under private utilities, 1,971.05 MW under state utilities, and 2,9162 MW under central utilities.

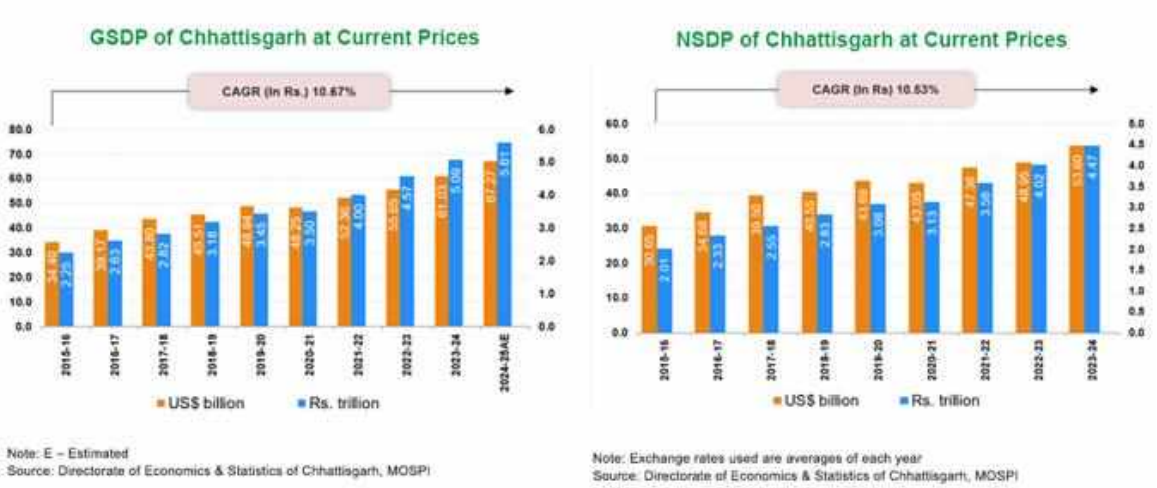

Figure 3-2: GSDP and NSDP of Chhattisgarh (Source: MoSPI)

Mineral resources are Chhattisgarh's greatest strength. It has significant reserves of minerals, including coal, iron ore and dolomite, which are leading producers of these minerals. Besides this, the state has vast deposits of bauxite, limestone and quartzite. The state has an estimated 35.4% of India's tin ore reserves.

Chhattisgarh is the only state in the country that produces tin concentrate Chhattisgarh has a diversified industrial base mainly in automobile and auto component manufacturing. There are over 150 such manufacturing units located mainly in cities like Visakhapatnam and Chittoor. Hyundai, Kia, Ashok Leyland, and Mahindra & Mahindra are some of the key players that have gained a lot of ground here, which further developed the state in this regard.

3.2.2 Agriculture Profile

Chhattisgarh is a big contributor to the agricultural sector of India as 76% of the population is residing in the rural areas and depends on agriculture for their livelihood. Agriculture accounts for about 20% of the state's GDP. The net cultivated area covers about 5.9 million hectares, and an extensive network of irrigation system fed by rivers like Mahanadi, Indravati, Shivnath, and Hasdeo.

Rice is the major crop in the state. Besides rice, pulses, oilseeds, maize, and small millets are the major crops grown in the state. Wheat, sugarcane, groundnuts, and cotton are the other important crops of the state. Tendu leaves, mahua, and tamarind are the minor forest produces and, therefore, add to the rural sectors' economy of the state.

Livestock, poultry farming, and fishery are the sectors related to the agricultural economy of Chhattisgarh. The state promotes organic and sustainable farming. There are agricultural export zones for rice in Raipur and for vegetables in Durg. A special variety of red rice is also being cultivated in the Bastar region that is becoming a popular variety due to its nutritional content.

Since the state has concentrated on traditional crops and forest produce and emphasizes modern agricultural practices, Chhattisgarh has significant contributions to make to the agricultural sector of India.

3.2.3 Infrastructure Profile

Chhattisgarh has come a long way in creating infrastructure, which has well aided the state's growth.

Transportation:

Roads: The state consists of a vast network of roads. The state has major national highways like NH-16, the central government sanctioned ₹11,000 crore to improve connectivity via roads. Four national highways amounting to 236.1 km will be developed.

Railways: Chhattisgarh has excellent railway connectivity and falls under the Southeast Central Railway zone, and two major junctions Raipur and Bilaspur form important centers of passage.

Ports: Chhattisgarh is a landlocked state, but for the purpose of trade, it depends on the ports available in the neighboring states for all import and export operations.

Water Infrastructure:

Chhattisgarh has undertaken huge irrigation schemes and integrated water supply plans to promote agriculture and water supply to towns and villages.

Smart City Projects:

Raipur, Bilaspur, and Naya Raipur (Atal Nagar) come under Smart City Mission, which focuses on upgrading urban development to improve life and infrastructure. Projects cover roads, international cricket stadium, and educational institutions.

3.3 Madhya Pradesh Profile

Figure 3-3 District Map of Madhya Pradesh

Madhya Pradesh is the second-largest state by area and the fifth-most populous state in India, comprising 52 districts. The state capital, Bhopal, is known as the "City of Lakes," while Indore, the largest city, is a major commercial hub. Madhya Pradesh is bordered by Uttar Pradesh to the northeast, Chhattisgarh to the southeast, Maharashtra to the south, Gujarat to the west, and Rajasthan to the northwest. Known as the "Heart of India" due to its central location, the state spans an area of 308,252 sq km. Madhya Pradesh is divided into ten administrative divisions, including Bhopal, Indore, Gwalior, and Jabalpur, which serve as key centers for governance and development.

Madhya Pradesh boasts diverse geography, encompassing the Vindhya and Satpura ranges, fertile plains, and the rugged Chambal ravines. The state is known for its rich landscapes, including dense forests, sprawling plateaus, and attractive river valleys. Major rivers such as the Narmada, Chambal, Betwa, and Tapti serve as vital lifelines, supporting agriculture and providing drinking water to the region.

Indore is recognized as an emerging hub for commerce and education, alongside other prominent cities like Bhopal and Jabalpur, which are known for their industrial and cultural significance in central India.

3.3.1 Economic & Industrial Profile

Madhya Pradesh's GSDP at current money prices, in 2023-24 is roughly Rs. 13.87 trillion / US$ 166.31 billion. The State's NSDP has also been estimated to be around Rs. 12.42 trillion / US$ 148.92 billion, respectively, for 2023-24.

The NSDP of the state during the period between 2015-16 and 2023-24 registered a CAGR of about 12.44%. The state of Madhya Pradesh is rich in fuel, minerals, agriculture, and biodiversity. The diamond production in the state was 38,437 carats in the year 2018-19.

Apart from the strategies/ policies of IT, Biotechnology, Tourism, and SEZs, there are specific monetary as well as strategy/policy incentives to the organizations under Industrial Promotion Policy-2014 of Madhya Pradesh. To attract investors and help entrepreneurs, the State Government has identified TRIFAC as the agency that fosters the single window system for quick clearance and approval of all the clearances and consents.

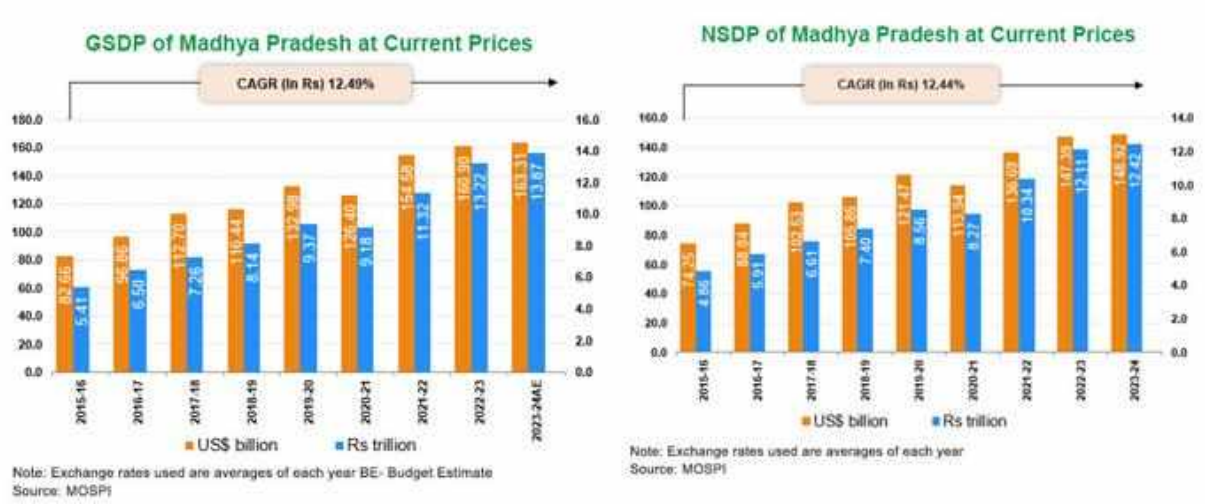

Figure 3-4 GSDP and NSDP of Madhya Pradesh (Source: DoES, Madhya Pradesh)

At current prices, GSDP of Madhya Pradesh was estimated at Rs. 13.87 trillion (US$ 166.31 billion) in 2023-24. GSDP grew at a CAGR (in Rs.) of 12.49% from 2015-16 to 2023-24. NSDP of Madhya Pradesh was estimated to be about Rs. 12.42 trillion (US$ 148.92 billion) in 2023-24. Between 2015-16 and 2023-24, the state's NSDP increased at a CAGR of about 12.44%.

Madhya Pradesh is blessed with immense natural resources- fuel, minerals, agriculture, and biodiversity. In fact, it is also the only diamond-producing state in the country. Diamond production in the state had reached 25,603 thousand tonnes in the year 2019-20.

The state is rich in natural resources, fuels, minerals, agriculture, and biodiversity. Sectoral growth is inducted by SEZs near Jabalpur, industry parks in Indore and food parks at multiple places. The state is rich with minerals and has the richest reserves of stone, diamonds and copper in India not-withstanding the notable ones in coal, coal-bed methane, manganese and dolomite, amongst others. In addition to the above, more than 280 pharmaceutical units are under operation in the industrial area of Dewas, Indore, Pithampur, Mandideep, and Malanpur.

3.3.2 Agriculture Profile

Being described as the "Heart of India," Madhya Pradesh is one of the large contributors to the agricultural economy of India. About 70% of its population inhabits rural areas, while agriculture and allied sectors make it a corner stone of its economy, accounting for about 25% to the GDP of the state. About 20 million hectares are cultivable land in this state, which is recharged by major rivers, namely Narmada, Chambal, Betwa, and Tapti.

Wheat is the state's flag crop and therefore the leading producer of wheat in India. It ranks first as a producing state in India for soybean and pulses. Other major crops are rice, maize, gram, oilseeds, and cotton. The aromatic basmati rice of Madhya Pradesh is in high demand and not only in India but all over the world.

The state's agricultural economy is diversified, comprising horticulture, livestock rearing, poultry farming, and fisheries. Madhya Pradesh is the leading producer of oranges, guavas, and

bananas, while Malwa and Vidisha regions are famous for producing high-quality fruits. The state is also India's largest producer of herbs and medicinal plants; hence it has been called the "Herbal State."

Sharbati variety of wheat, black salt rice produced in the state, acquired geographical indication tags to underline its unique qualities as well as cultural significance. Agricultural export zones have been created for fruits such as mangoes, oranges, and medicinal plants.

3.3.3 Infrastructure Profile

Madhya Pradesh, being in the heart of India, is rapidly developing its infrastructure to support strong economic growth and investment. Its strategic location puts it at the heart of the country's trade and industry.

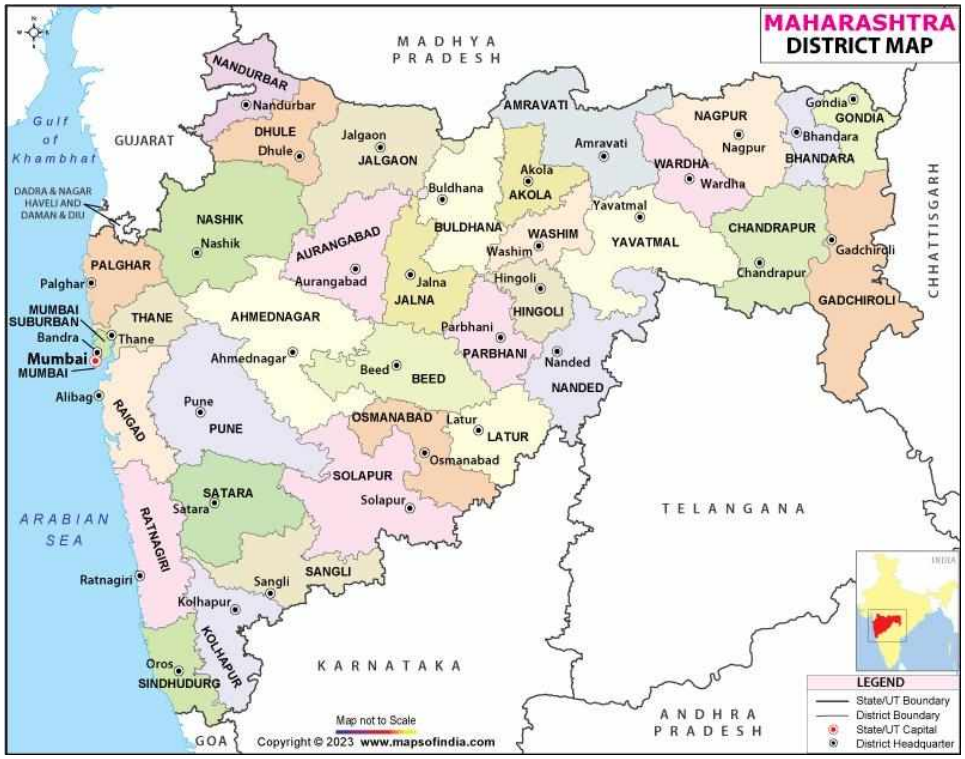
Transport

Madhya Pradesh has a vast road network of 2,90,000 km that connects it with major cities of India through 20 National Highways. It has roughly 5,000 km of rail network, which gives the state an important connectivity route both for passengers and freight movements. The Inland Container Depot at Mandideep in Madhya Pradesh enables the state to become a player in logistics and trade activities. Further, it is endowed with five airports of which the busiest one is Devi Ahilya Bai Holkar Airport at Indore that is also newly accredited among the cleanest airports of India.

Power:

The installed power generation capacity in Madhya Pradesh is about 25,000 MW with increasing focus on renewable energy. It is one of the largest producers of wind and solar energy in the country. The Rewa Ultra Mega Solar Park is one of the largest solar projects in Asia.

Industrial Infrastructure



Madhya Pradesh has 78 industrial areas and several SEZs in the state, focusing on IT, textiles, and pharmaceuticals. The state is a part of major industrial corridors, such as the Delhi-Mumbai Industrial Corridor, and has established industrial hubs such as Pithampur, often referred to as the "Detroit of India," for its automotive industries.

IT Infrastructure:

IT destinations emerging in Madhya Pradesh include Indore and Bhopal. The cities house various IT companies and startups within IT parks and SEZs. IT and e-governance initiatives are actively being promoted by the state government to help create an enabling environment for technology-driven growth.

3.4 Maharashtra Profile

Maharashtra is the third largest in terms of area and second by population of states in India covering 36 districts. Mumbai is the state capital. This city is also a financial capital of India and among the world's most populous cities. The state is bordered with Gujarat and Madhya Pradesh towards the north, Chhattisgarh towards the east, Telangana toward southeast, Karnataka to its south, Goa toward its southwest, and Arabian Sea to the west. The state covers an area of 307,713 sq. km and is an economic powerhouse and the leader in industrial, agricultural, and cultural domains. Maharashtra is further divided into six administrative divisions: Konkan, Pune, Nagpur, and Aurangabad, which are vital regions for growth and governance.

Maharashtra geographical landscape consists of the Western Ghats, the Deccan Plateau, and a long coastline along the Arabian Sea. The state comprises fertile plains, rugged hills, and dense forests. The major rivers in the state are Godavari, Krishna, Bhima, and Tapi, which provide lifeblood to agriculture and drinking water.

Mumbai, Pune, and Nagpur are big cities. Mumbai is an important financial, entertainment, and cultural city. Pune is IT and an educational hub; Nagpur is a logistics and trade center. Maharashtra's industrial belt - Nashik, Aurangabad, and Kolhapur, contributes significantly to the Indian economy.

3.4.1 Economic & Industrial Profile

Maharashtra's GSDP came in at Rs. 42.67 trillion (US$ 512.83 billion) during 2024-25, growing 10.17% CAGR between 2015-16.

Mumbai is the state capital, which is India's commercial capital and a global financial hub with many banking services. Pune has become the educational center. Maharashtra is a key hub for IT, electronics, and business outsourcing.

Besides having pro-industry policies in favour of good business climate, the State has policies encouraging investments in multiple industries for its economic growth in the state, as per DPIIT,

FDI inflow in Maharashtra (In October 2019-June 2024) stands at US$ 77,573 million. Maharashtra stood as the number one in FDI reception.

Investment proposals of Rs. 1.13 lakh crore (US$ 15.23 billion) were attracted with expected employment >2.50 lakh in June 2020, at Magnetic Maharashtra 2.0.

The total exports from the state during FY25 (April-August 2024) were US$ 26.50 billion. Engineering goods, pearls, precious stones, gold jewellery, drug formulations, and electronics were exported.

Maharashtra is India's largest producer of sugar and the most industrialized state. Sugarcane production had reached as high as 109.67 lakh tons during 2022-23, cotton 8.31 million bales, and raw silk production had risen from 523 MT in 2021-22 to 620 MT during 2022-23.

3.4.2 Agriculture Profile

Geographically, Maharashtra located in the western part of India and spans a diverse landscape, ranging from coastal plains along the Arabian Sea to the Western Ghats and vast plateaus. It falls under the category of semi-arid to sub-humid tropics. Maharashtra is the third-largest state in India, covering an area of 307,713 sq km. According to the 2011 census, it is the second-most populous state, with a population of 112.4 million. Maharashtra occupies approximately 9.4% of India's total land area, holds 9.3% of the country's population, and is supplied by around 9% of India's total water resources. The state's varied geography supports a diverse range of industries and agricultural activities.

3.4.3 Infrastructure Profile

The economy of the state is well supported by highly developed infrastructures. The road network of the state, with national highways and state highways connecting the urban and rural sectors of the state, is excellent in nature. Major cities like Mumbai, Pune, Nagpur, and Nashik are well connected through road networks and hence transportation is accessible throughout the state.

Maharashtra is quite well-connected by rail network that is the primary means of public transport in the state. The major cities of the state are Mumbai, Pune, Nashik, and Aurangabad. The state capital, Mumbai is home to one of the world's busiest airports, Chhatrapati Shivaji Maharaj International Airport which hosts both domestic and international flights. Maharashtra also has

a very long coastline with the Arabian Sea and comprises major ports that include the Mumbai Port as well as Jawaharlal Nehru Port-Nhava Sheva. Collectively these ports hold the majority share of India's maritime trade.

Maharashtra relies on the total of thermal, hydroelectric, and renewable sources of energy. There is considerable investment in solar and wind power. It is also ahead in the development of solutions for energy efficiency and clean technologies. Maharashtra boasts of having one of the highest installed capacities of power generation in the country.

Maharashtra has good water supply and sanitation infrastructure. It gives equal importance to both urban and rural water management. The cities of Mumbai and Pune have highly modern sanitation and waste management facilities.
Telecommunication is very advanced in the state, with a wide reach of high-speed internet and mobile connectivity. Maharashtra has emerged as the hub for technology and digital innovation, especially in cities like Pune and Mumbai.

Maharashtra is also investing in its widening educational and healthcare infrastructure. Some of India's best universities and research institutions are in the state, including the University of Mumbai and Indian Institute of Technology (IIT) Bombay. Its healthcare sector comprises both government and private institutions with the promise of quality service to the people. All these efforts will help it maintain its position at the front line of India's economy and culture.

3.5 Raipur District

Raipur is a city and the administrative headquarters of the Raipur district in Chhattisgarh, India. It is centrally located in the state and serves as an important cultural, industrial, and economic hub.

3.5.1 Demographic & Geographical Profile

According to the 2011 census, Raipur district has a population of 2,163,754, which comprises about 7.4% of Chhattisgarh's total population. The district covers an area of approximately 13,083 square kilometers, making up around 5.5% of the total area of the state. Raipur has a tropical climate with distinct summer, monsoon, and winter seasons. The district shares borders with Durg on the west, Mahasamund on the east, and Baloda Bazar on the north.

Raipur is rich in biodiversity and fertile plains, nourished by the Mahanadi River, which runs through the district and supports agriculture and daily needs of the people. There are several reservoirs and irrigation projects, such as Tandula and Kharun dams, that contribute to the water management system of the district.

3.5.2 Economy

Raipur is a major economic hub of Chhattisgarh, with diversified economy through agriculture, manufacturing, and services. The city is labeled as an industrial powerhouse hosting a variety of steel plants, cement factories, and other heavy industries. The district also benefits from its strategic location on national highways and rail networks, which are used for trade and commerce.

Small-scale industries, retail markets, and the increasing service sector are the support elements of the district economy. This is due to Raipur's status as an essential regional distributor of goods within the district and across borders

3.5.3 Agriculture & Allied Sector

Agriculture is an essential sector in Raipur as it provides employment to most of the population. The area has fertile alluvial soil and favourable climatic conditions, which supports varied crops.

Principal Crops

Kharif (summer) crops: Paddy (rice), maize, soybeans, and pulses like arhar (pigeon pea) and moong (green gram).

Rabi (winter) crops: Wheat, chickpeas, mustard, and linseed.

Horticulture: Fruits like mangoes, guavas, and bananas, and vegetables like tomatoes, onions, and green chilies.

Besides crop cultivation, the district has a significant dairy farming and poultry industry, which adds to its agricultural output.

3.5.4 Industrial Profile

Raipur is one of the most industrialized districts in Chhattisgarh, with industries ranging from heavy manufacturing to small-scale enterprises.

Key Industrial Sectors:

- Steel and Cement Industries: Raipur is known as the “Steel Capital of India” due to its large number of steel plants and rolling mills. The district also houses several cement factories, making it a significant contributor to the construction sector.
- Argo-Based Industries: The region is marked by the prominent rice mills, oil extracting units, and food processing industries. Processed rice as well as edible oils prepared from Raipur are very contributory to the state agricultural export.
- Small-Scale Industries: Small-scale Industries engaged in manufacturing handicrafts, ceramics, etc., are growing in numbers in Raipur.
- Tourism-Related Industries: Though Raipur is primarily an industrial center, it also supports tourism-related industries, including hotels, restaurants, and travel agencies, due to the local attractions such as the Purkhauti Muktangan museum and nearby wildlife sanctuaries.

3.6 Bilaspur District

Bilaspur is a city and the administrative headquarters of the Bilaspur district in Chhattisgarh, India. Situated in the central part of the state, Bilaspur acts as an important cultural, commercial, and educational center.

3.6.1 Demographic & Geographical Profile

According to the 2011 census, the population of Bilaspur district is 2,663,629 that constitutes nearly 9% of Chhattisgarh's population. The area covered by the district is 8,272 square kilometers and is about 6.1% of the state's total area.

Bilaspur is a place having a tropical climate with the summers being extremely hot, it has monsoon season during which it is relatively cool in winters. It lies in the Mahanadi River basin plains that sustain agriculture activities of the district. It is flanked by Korba on the north, by

Raipur to the south and Janjgir-Champa to the east. The population density is 322 persons per square kilometer. The participation rate of labor force in the district is approximately 46.5%.

Water resources in Bilaspur are Arpa and Maniari rivers, along with major reservoirs like the Khudia Dam and Hasdeo Barrage, providing for irrigation and drinking water.

3.6.2 Economy

Bilaspur is an active business center in Chhattisgarh, mainly due to its strong agricultural base and growing industries and services. Its rice mills give it a nickname: "Rice Bowl of Chhattisgarh." The region also acts as a regional commercial center, facilitated by its location and connectivity with rail and road links.

The presence of coalfields in the region further boosts Bilaspur’s economy, with coal mining and related industries contributing significantly to its industrial profile.

3.6.3 Agricultural & Allied Sector

Agriculture is the backbone of Bilaspur’s economy, providing livelihoods for most of its population. The district's fertile soils and abundant water resources make it one of the most agriculturally productive regions in Chhattisgarh.

Main Crops:

Kharif (monsoon) crops: Paddy (rice), maize, pulses (arhar and moong), and soybeans

Rabi (winter) crops: Wheat, chickpeas, mustard and linseed

Horticulture: Bilaspur also grows vegetables like tomatoes, onions, and green chilies, and fruits include mangoes, guavas, and bananas.

Besides the products of agriculture, the district enjoys a rich dairy and poultry industry, which is part of the agricultural economy

3.6.4 Industrial Profile

Bilaspur is an emerging industrial hub, with industries ranging from Agro-processing to coal-based manufacturing.

Important Industrial Sector:

Rice Mills: There are several rice mills that process the huge paddy harvest of the region in Bilaspur, and its rice is supplied to other parts of the state and country.

Coal Mining and Energy: The district is close to the rich coalfields of Korba, and it is a center for coal mining and thermal power generation. Coal-based industries are one of the major contributors to the local economy.

Agro-based Industries: The district has several Agro-processing units, including oil extraction plants, flour mills, and units producing packaged food products.

Small-Scale Industries: Small-scale manufacturing units manufacture things like pottery, bamboo, and handloom products for which Bilaspur is identified.

Tourism-Dependent Industries: Ratanpur Temple, Achanakmar Wildlife Sanctuary, and Khutaghat Dam, etc. are the attractions of Bilaspur that support the tourism-related sector. Hospitality services, local handicrafts, and travel agency provide employment in the tourism-based sector.

3.7 Baloda Bazar District

Baloda Bazar is a city, in which the administrative headquarters of Baloda Bazar district exists in Chhattisgarh, India. In the central part of the state, Baloda Bazar exists near approximately 80 km northeast of the state capital of Raipur.

3.7.1 Demographic & Geographical Profile

According to the 2011 census, Baloda Bazar district has a population of 1,300,000, accounting for about 5.4% of Chhattisgarh's population. The district covers an area of 4,529 square kilometers, which is 2.2% of the state's total area. Baloda Bazar has a tropical climate with well-defined summer, monsoon, and winter seasons.

The district is geographically diverse, with a mix of plains and plateaus. To the west, it borders Raipur district, while to the east lies Mahasamund district, Bilaspur district to the north, and Gariaband district to the south. The main water sources are the Shivnath and Jonk rivers, which support agriculture and daily needs. There are also several reservoirs and irrigation projects in Baloda Bazar, enhancing its agricultural potential.

The population density is 287 inhabitants per square kilometer, and the district has shown steady population growth. The labor force participation rate for the district was recorded at approximately 48.3% for the year 2017-2018

3.7.2 Economy

Baloda Bazar is an emerging economic hub of Chhattisgarh with increasing industrial sectors, strong base of agriculture and small industries. The cement manufacturing industries have made it popular enough to be referred as "Cement Hub of Chhattisgarh".

The economy of the district is further supported by its proximity to major trade routes and connectivity with urban centers like Raipur. Small-scale industries and trade in agricultural products are also other significant contributors to the economic landscape

3.7.3 Agricultural & Allied Sector

Baloda Bazar is an emerging economic hub of Chhattisgarh with increasing industrial sectors, strong base of agriculture and small industries. The cement manufacturing industries have made it popular enough to be referred as "Cement Hub of Chhattisgarh".

The economy of the district is further supported by its proximity to major trade routes and connectivity with urban centers like Raipur. Small-scale industries and trade in agricultural products are also other significant contributors to the economic landscape

3.7.4 Industrial Profile

Baloda Bazar is an industrial growth center, mainly focused on cement manufacturing, small-scale industries, and agro-based processing units.

Major Industries:

Cement Industry: The district is known for its large number of cement factories, which produce a significant portion of Chhattisgarh's cement output. Major cement companies, such as ACC and Ultratech, have facilities in Baloda Bazar.

Agro-Based Industries: Rice mills, oil extraction units, and other processing plants are present here. Packaged food production and processing of fruits and vegetables are also notable contributors.

Small-Scale Industries: Handicrafts, ceramics, and local goods manufacturing are emerging industries that support the local economy.

Tourism-Related Industries: Baloda Bazar is not a prominent tourism site; however, some religious destinations, such as temples and natural reservoirs, attract visitors to a lesser extent, making ways for small-scale tourism-related activities, including hospitality and retailing.

CHAPTER 4

Primary & Secondary Data Collection & Analysis

4. Primary and Secondary Data Collection & Analysis

4.1 General

As part of the traffic study of Raipur-Bilaspur section of NH-30/ NH-130/ Bilaspur Bypass spanning 126.5 km, in the state of Chhattisgarh, extensive data collection was conducted to develop base data. The main objective is to understand the present traffic situation based on primary traffic surveys and the historical toll operations data shared by the client, highlight the future threats (if any), and Final recommendation of a suitable growth rate for traffic forecast. The data collection included the primary surveys in the field and the secondary data collection from toll operations and the data available in public domain. This chapter presents the details of traffic surveys, the locations, schedule, and the findings of the primary surveys conducted.

4.2 Past Data from Secondary Sources and Primary Surveys

The findings from the data are summarized in the following subsequent sections.

4.2.1 Past traffic trend findings: Project Corridor

Past traffic trends were derived based on the past traffic data sourced from the Toll operations data. Past traffic AADT, (CAGR%) is presented in the following tables. Monthly traffic and Revenue numbers are mentioned in Annexures. Remittance collected at both the project road locations for FY24 is mentioned in below table.

Table 4-1 Remittance collected at both the Toll Plazas for FY24

Project Stretch	Plaza Name	Period	Contract Period	Total/Daily	Amount in)Rs.)
Raipur - Simga section	**Tarpongi**	01.04.2023-31.03.2024	**24.08.2023 - 24.08.2024**	Total	90,57,11,000

*FY2023 Oct-Mar & FY-2025 * - Apr24-Nov24 Based AADT*

Between FY23 & FY25, the traffic in PCU terms has grown by **18.1%**. In the same period, cars have witnessed growth at a rate of **7.9%** whereas goods vehicles 3Axle have witnessed negative growth of **-3.0%** and Bus/2Axle have witnessed a growth at a rate of **17.7%**. In the same period MAVs have grown at **25.8%** at Bhojpuree Toll Plaza.

Table 4-4: Past Traffic Trend at Mudhipar Toll Plaza (TP3)

Source	FY	CJV	LCV	Bus/2 Axle	3 Axle	MAV	OSV	Total Vehicles	Total PCUs	Growth %
ETC Summary	FY23	904	61	107	83	963	5	2,340	5,923	
ETC Summary	FY24	937	61	149	92	1,102	2	2,343	6,718	0.1%
ETC Summary	FY25	1,007	60	197	68	1,295	1	2,628	7,725	12.2%
CAGR %	*FY23 to FY25*	***5.5%***	***-0.3%***	***35.6%***	***-9.7%***	***16.0%***	***-54.5%***	***6.0%***	***14.2%***	
CAGR %	*FY24 to FY25*	***7.5%***	***-0.7%***	***32.1%***	***-26.5%***	***17.6%***	***-40.5%***	***12.2%***	***15.0%***	

*FY2023 Nov-Mar & FY-2025 * - Apr24-Oct24 Based AADT*

Between FY23 & FY25, the traffic in PCU terms has grown by **14.2%**. In the same period, cars have witnessed growth at a rate of **5.5%** whereas goods vehicles 3Axle have witnessed negative growth of **-9.7%** and Bus/2Axle have witnessed a growth at a rate of **35.6%**. In the same period MAVs have grown at **16.0%** at Bhojpuree Toll Plaza.

- The toll plaza locations have seen a consistent decline in 3Axle trucks and high growth in MAV traffic over the years. This is mostly due to preference of Higher axled trucks by the Transporters observed similarly across India.

- India general election & Chhattisgarh legislative assembly elections were held in May-2024, which might have impacted the passenger traffic (recreational trips) in the current year FY25.

4.3 Traffic surveys

The traffic surveys are generally conducted to achieve the various project objectives. The Key outcomes of CTVC Survey are), to derive the average daily traffic by type of vehicle along the project corridor, Traffic composition and Vehicle composition.

Similarly, the key outcomes of the OD analysis include,

i) Origin zone & Destination zone of the vehicle type
ii) The frequency of travel i.e., daily, weekly, monthly, or occasionally and Toll Category.
iii) Trip purpose
iv) Commodity carried of goods vehicle.

For this Study, the Consultant has analyzed the survey data i.e., both the Classified Traffic Volume Count (Project Roads) and the Origin – Destination Survey (Project Roads) obtained through the Primary Surveys. Nevertheless, the Consultant before analyzing and utilizing the data for the project, has conducted a detailed and thorough review of the primary data and found the data to be accurate enough for achieving the objectives of the study. The subsequent sections would provide a more detailed analysis.

- Major traffic generators and routes
- Past traffic trend at each toll plaza location
- Travel pattern of the road users at the toll plaza locations
- Probable diversion routes

The various vehicle types having varied sizes and characteristics were converted into equivalent passenger car units (PCU). The Passenger Car Unit recommended by Indian Road Congress in “Guidelines for Capacity of Roads in Rural Areas” (IRC-64-1990) have been used for PCU conversion and are presented in below table.

Table 4-5 Vehicle Classification and PCU Factors

VEHICLE TYPE	PCU	VEHICLE TYPE	PCU
Car/Jeep/Taxi	1.0	Auto Rickshaw	1.0
Minibus/ LCV	1.5	Agricultural Tractor	1.5
Standard Bus	3.0	Agricultural Tractor & Trailer	4.5
2/3 Axle Truck	3.0	Animal Drawn Vehicle	6.0
MAV	4.5	Cycle	0.5
Two-Wheeler	0.5	Cycle Rickshaw	2.0

4.3.1 Average Daily Traffic

The traffic volume count data was collected for Seven days (24 Hrs) at the survey locations on the project route to arrive at the average daily traffic (ADT).

The summary of ADT in terms of vehicles and PCUs at each survey location along the Project routes are presented in below figure and table.

Table 4-6: ADT Summary from the surveys

S.NO	VEHICLE	TARAPONGI TP	BHOJPUREE TP	MUDHIPAR TP
1	Car	8,811	7,235	1,094
2	Mini LCV	1,314	1,089	189
3	Minibus	26	34	4
4	Bus	373	260	2
5	3-Ax Bus	0		
6	LCV	1,113	1,003	191
7	Truck-2 Axle	580	443	116
8	Truck-3Axle	471	264	72
9	MAV	4,263	4,405	1,624
10	OSV	5	7	7
Traffic vehicles		**16,956**	**14,739**	**3,299**
Traffic PCU		**35,309**	**32,631**	**9,485**

The Consultant, for the purpose of the study has relied on the historic data for the computation of Base year Average Daily Traffic for Project Road locations. The Consultant considered toll operation data obtained from the months of April to November (for Tarapongi and Bhojpuri Toll Plaza) and April to October (For Mudhipar Toll Plaza) of Fiscal Year 2025 for the computation of the base year Average Daily Traffic. Final ADT arrived from ETC data (April to November 2024 for Tarapongi & Bhojpuri and April-October 2024 for Mudhipar, which excludes cash & exemption/violation traffic). The table below illustrates the Recommended Average Daily Traffic adopted for the base year.

Table 4-7: Base Year Recommended ADT

S.NO	VEHICLE	TARAPONGI TP-1	BHOJPUREE TP-2	MUDHIPAR TP-3
1	**CJV**	8,827	6,641	972
2	**LCV**	461	405	59
3	**Bus/2 Axle**	1,173	1,015	187
4	**3 Axle**	428	235	67
5	**MAV**	3,681	3,806	1,202
6	**OSV**	2	2	1
Traffic vehicles		**14,572**	**12,104**	**2,507**
Traffic PCU		**30,893**	**28,134**	**7,279**

4.3.2 Vehicle Composition

Analysis was conducted to find the traffic composition by type of vehicles among the tollable traffic at Three Toll Plaza locations on the Project Road sections. Vehicular composition distribution in terms of cars, buses and trucks is summarized in below table and shown in below figure and traffic composition by type of vehicle by location is shown in below figure. Salient findings from the analysis are presented below:

- It is observed that, car mode has highest share at Tarapongi & Bhojpuri toll plaza. Approximately, 52% Car traffic observed at Tarapongi TP, 49% at Bhojpuri TP. The 2nd highest traffic at both locations is MAV traffic.

- MAV traffic share is highest at Mudhipar toll plaza. The 2nd highest traffic is car.

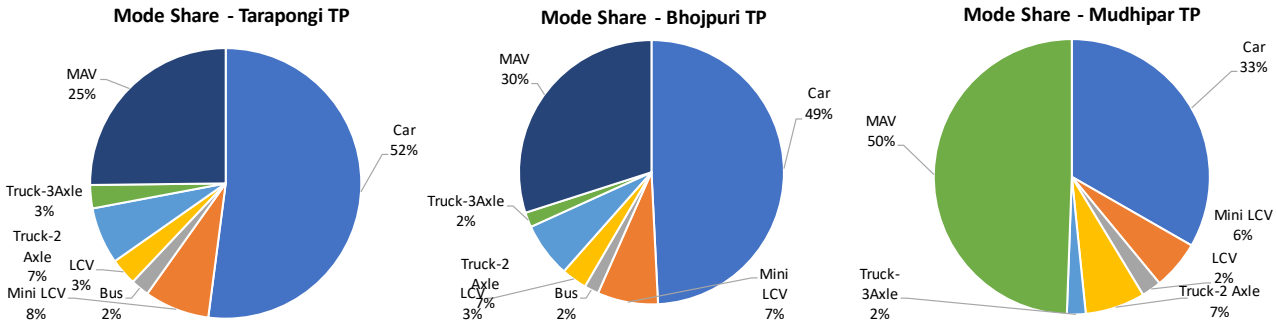

Figure 4-1: Traffic composition (Vehicles) by Locations

4.3.3 Seasonal Correction Factors

SCF values adjust the ADT to calculate the Annual Average Daily Traffic (AADT). Since the ADT values are based on traffic data for an 8-month period (April 2024 to November 2024) for Tarapongi and Bhojpuri plazas, and a 7-month period (April 2024 to October 2024) for Mudhipar plaza, SCFs are applied to account for seasonal variations. The SCFs are derived as the average of FY-23 (from IHMCL) and FY-24 traffic data (from ETC data) across all modes of traffic.

4.3.4 Annual Average Daily Traffic (AADT)

- Annual Average Daily Traffic = (Average Daily Traffic X Seasonal Correction Factor) + Cash Traffic (from Non ETC) + Exemption/violation data obtained from traffic survey conducted on 26th July (for 24 hrs).
- As discussed in the earlier sections, owing to higher reliability, and based on the latest data, the consultant considered the toll operations data (ETC data) obtained for the months of April 2024 to November 2024 (FY-25) as base year ADT for Tarapongi & Bhojpuri Plaza and April 2024 to October 2024 (FY-25) as base year ADT for Mudhipar Toll Plaza, cash & Exemptions traffic from Non-ETC Transaction Data (April 2024 to November 2024) and Further Forced exemption/violation data obtained from traffic survey conducted during 22nd October to 28th October and recommends the same for the computation of base year Average Annual Daily Traffic (AADT).

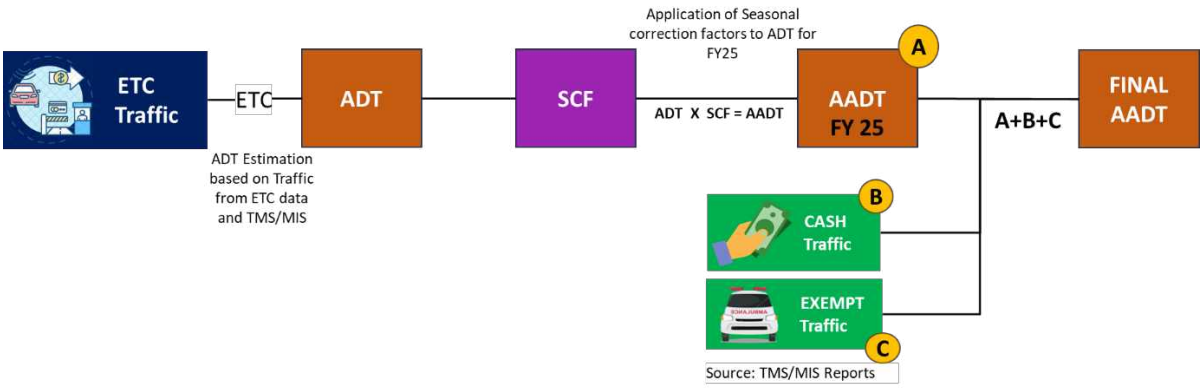

Table 4-8: Base Year Recommended AADT

S.NO	VEHICLE	TARAPONGI TP-1	BHOJPUREE TP-2	MUDHIPAR TP-3
1	Car	9,701	8,075	1,145
2	Minibus	11	15	1
3	Bus-2A	488	404	4
4	Bus 3A	0	0	0
5	LCV	486	442	66
6	Truck-2A	760	691	196
7	Truck-3A	445	250	68
8	MAV	3,923	4,186	1,311
9	OSV	2	2	1
Traffic vehicles		**15,818**	**14,065**	**2,792**
Traffic PCU		**33,195**	**31,644**	**7,954**

4.4 Travel Characteristics of the Road users

4.4.1 Survey Methodology

Origin Destination Survey helps in understanding the travel demand pattern of the traffic on the project road. The travel characteristics obtained by O-D survey facilitate the identification of:

- Local and through traffic on the project road.
- Major influence zones of both the passenger and commercial traffic.
- Major commodities carried by the truck traffic.

The O-D survey elicited characteristics like origin, destination, and frequency, purpose of trip for passenger vehicles and commodity type, the information pertaining to origin and destination of trips was analyzed to obtain the trip distribution based on a zoning system provided.

4.4.2 Sample Size

The vehicles during the OD surveys were interviewed on a random sample basis and Table below shows the sample size distribution (in percentage terms) captured at the survey locations along the Project stretches.

Table 4-9 Sample Size Collected from Origin-Destination Survey

LOCATION	CAR/ MINI LCV	MINI BUS	Bus	LCV	2-AXLE TRUCK	3-AXLE TRUCK	MAV & ABOVE	GRAND TOTAL
Tarapongi Toll Plaza	39%	42%	55%	39%	77%	53%	67%	**48%**
Bhojpuree Toll Plaza	32%	21%	16%	22%	53%	46%	64%	**42%**
Mudhipar Toll Plaza	46%	84%	84%	37%	80%	57%	61%	**55%**

4.4.3 Traffic Zoning System

To understand the spatial dimensions of the trip characteristics of the vehicles interviewed during the O-D survey, a detailed zoning system was developed considering the following factors:

- The road network catering to the traffic on the project road and its generating points.
- Important towns, villages, factories, and industrial centers around the project road area.
- Administrative boundaries of districts and states.
- Configuration of the project road in the regional road network with respect to other roads.

Two major types of areas were identified for analysis purposes.

Immediate Influence Area (IIA): Immediate Influence Area includes the cities/towns/villages and districts along the project road and adjacent to its which generates/attracts trips to the project road.

Broad Influence Area (BIA): Broad Influence Area includes other major traffic generating/attracting trips, but to a lesser degree when compared to IIA.

Detailed zoning system is prepared for IIA, while more aggregate or broad zoning is developed for BIA.

The zoning system adopted for data collection was based on 172 zones for better understanding the zonal influence by vehicle category at each toll plaza location. Detailed TAZ list is presented in Annexure.

4.4.4 Travel Pattern and Zone Influence Factors

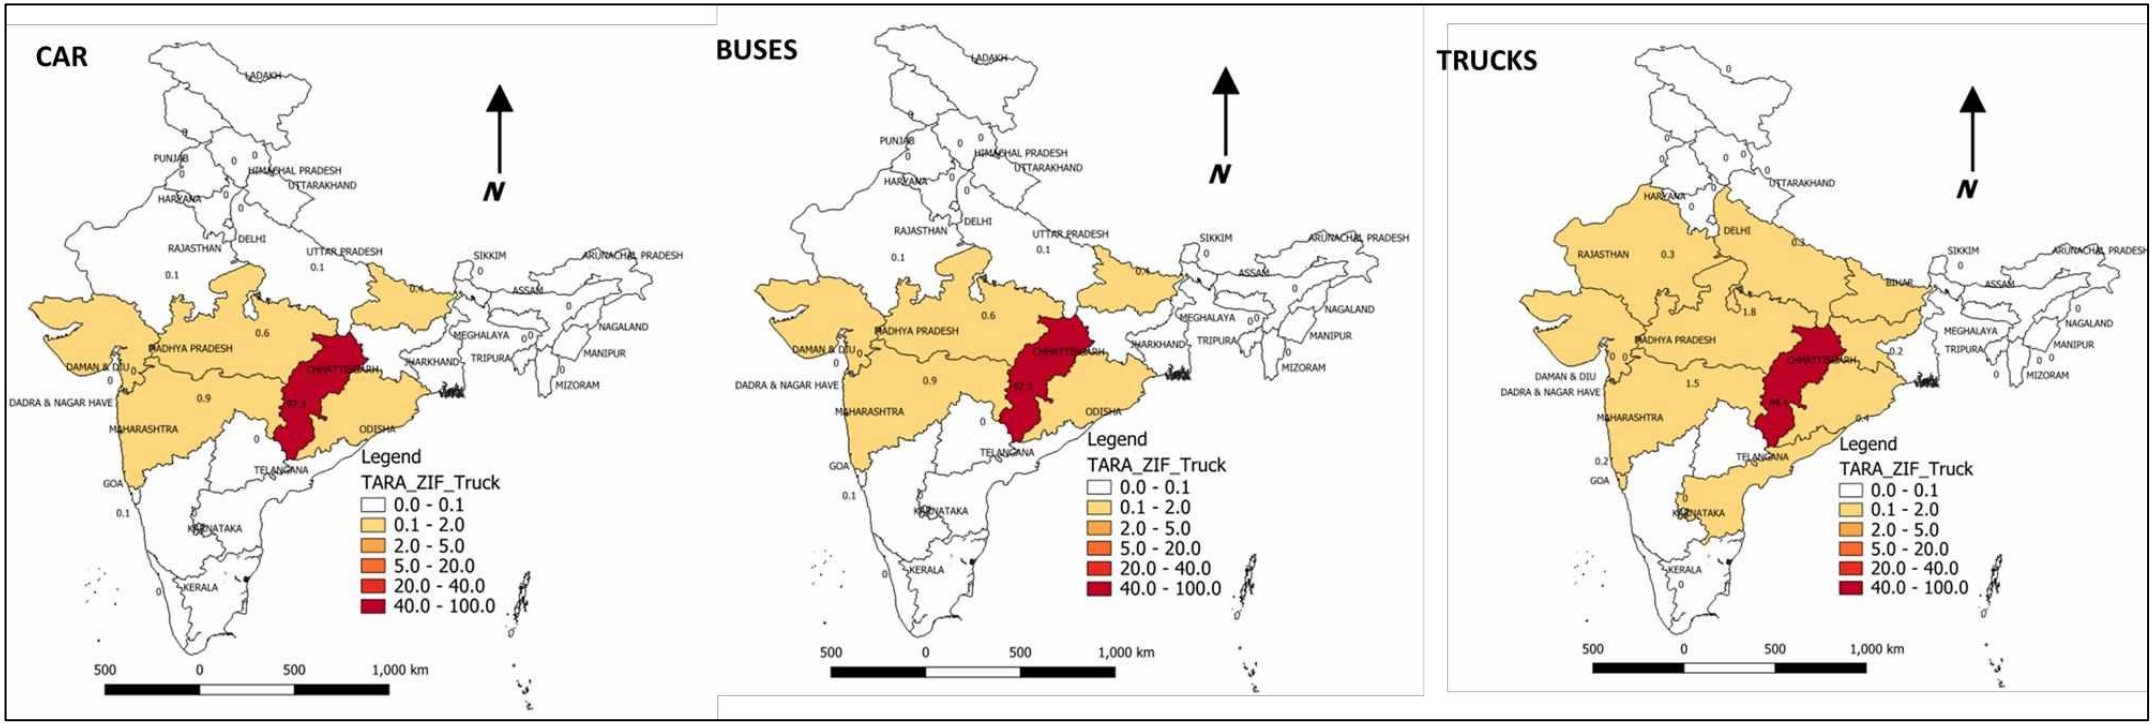
From the origin & Destination survey data, location wise base year OD matrices were developed for each type of vehicle. Sample OD matrix is expanded to AADT by applying the expansion factors. The O-D matrices describing the travel pattern of both goods and passenger vehicles are used for identification of major OD pairs on the project corridor and for further analysis of movement pattern and estimation of through traffic. It is observed that the major influencing States for the project Sections are Chhattisgarh, Karnataka, Tamil Nadu, West Bengal, Odisha, Kerala, Jharkhand, Assam, Puducherry, and Maharashtra.

Different vehicles interact in different degrees with the different zones depending on their purpose, commodity transported, frequency of travel etc. Vehicle category-wise zone-wise influence factors are established for interpretation of OD patterns.

Section wise influence factors were derived from the average of Influence factors by category at survey locations in the respective project sections. Section wise influence factors for cars, buses and trucks are summarized and shown in Below tables.

Regional Distribution of traffic at Tarapongi Toll Plaza: -

Table 4-10 Regional Distribution of traffic at Tarapongi Toll Plaza



TARAPONGI TOLL PLAZA			
STATES	**CARS**	**BUSES**	**TRUCKS**
Chhattisgarh	97.2%	98.6%	94.0%

TARAPONGI TOLL PLAZA			
STATES	**CARS**	**BUSES**	**TRUCKS**
Maharashtra	0.9%	0.5%	1.5%
Madhya Pradesh	0.6%	0.0%	1.8%
Jharkhand	0.1%	0.0%	0.2%
Bihar	0.4%	0.2%	0.7%
Odisha	0.3%	0.4%	0.4%
Uttar Pradesh	0.1%	0.3%	0.3%
Gujarat	0.2%	0.0%	0.5%
Rajasthan	0.1%	0.0%	0.3%
Goa	0.1%	0.0%	0.2%
West Bengal	0.0%	0.0%	0.0%
Andhra Pradesh	0.0%	0.0%	0.2%
Tamil Nadu	0.1%	0.0%	0.1%
Total	**100%**	**100%**	**100%**

On detailed analysis of the Zonal influence factors, it was observed that,

- Approximately 97% of the Car passenger vehicle trips are happening within the state of Chhattisgarh at Tarapongi toll plaza, significant amount of the Car vehicle trips is origin-destined in Maharashtra & Madya Pradesh.
- Approximately 94% of the truck traffic is plying within the state of Chhattisgarh. Also, significant amount of truck traffic observed from Maharashtra & Madya Pradesh.

Figure 4-2: Regional distribution of Passenger & Goods traffic at Tarapongi Toll Plaza

Regional Distribution of traffic at Bhojpuree Toll Plaza-

Total	**100%**	**100%**	**100%**

On detailed analysis of the Zonal influence factors, it was observed that,

- Approximately 94% of the Car passenger vehicle trips are happening within the state of Chhattisgarh at Mudhipar toll plaza, significant amount of the Car vehicle trips are origin-destined in Jharkhand & Madhya Pradesh.

Approximately 86% of the truck traffic is plying in the state of Chhattisgarh. Also, significant amount of truck traffic observed from Jharkhand, Madya Pradesh & Maharashtra.

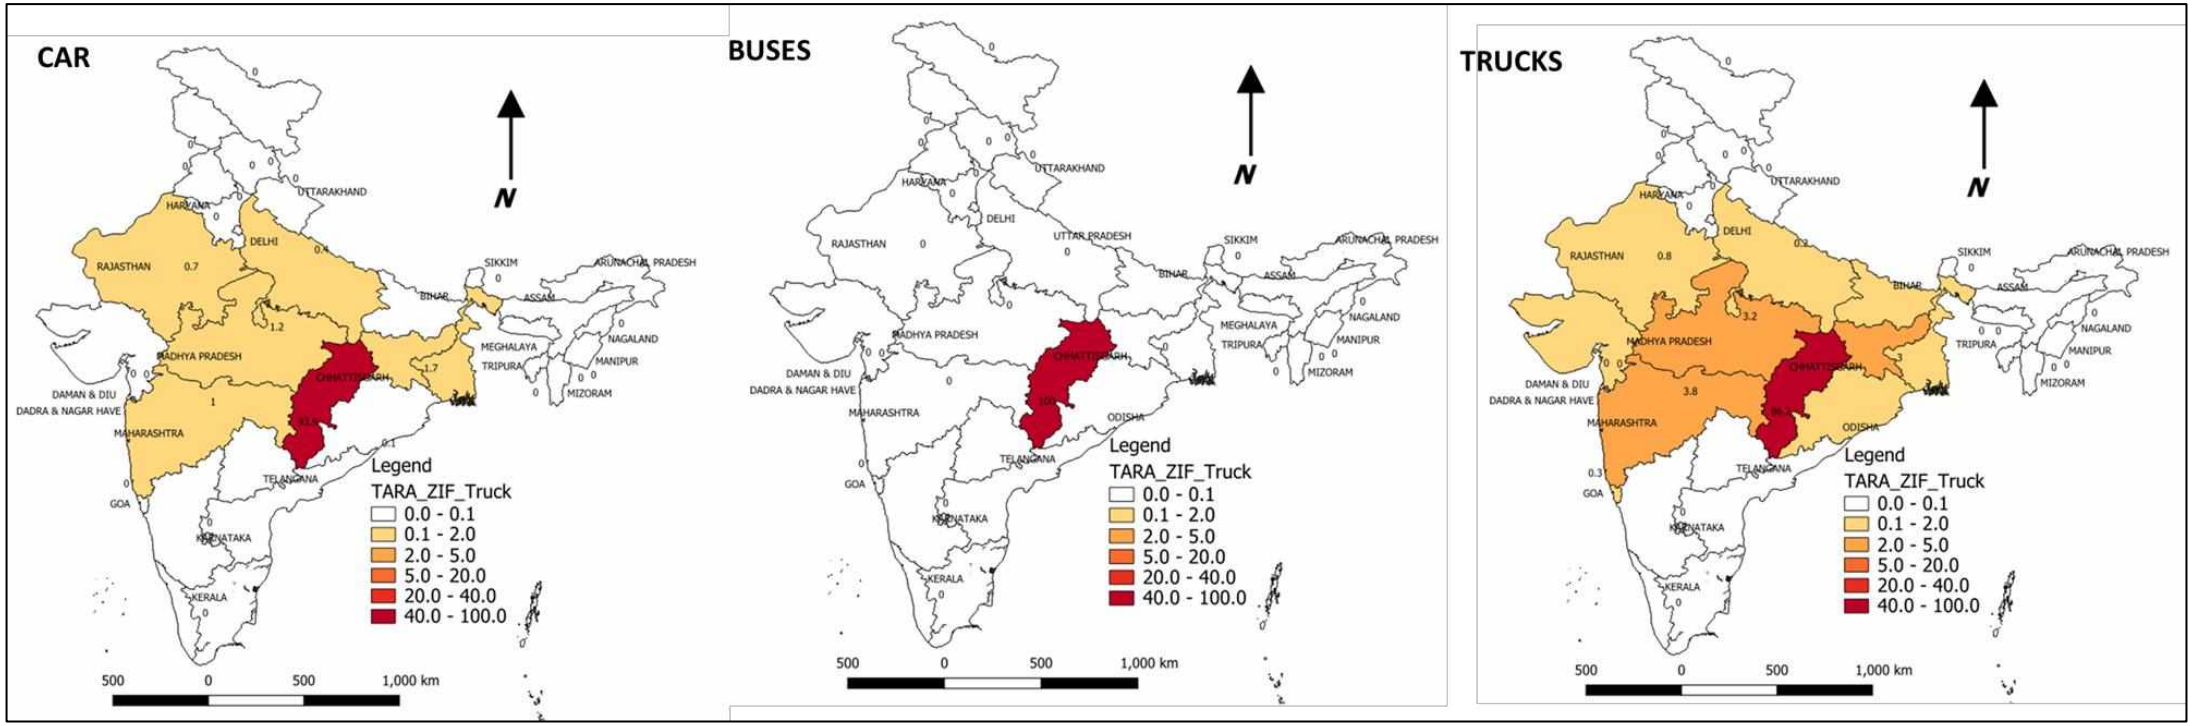

Figure 4-4: Regional distribution of Passenger & Goods traffic at Mudhipar Toll Plaza

4.4.5 Commodity Distribution of Freight traffic

An analysis was also carried out to understand the different commercial vehicles being used to transport different commodities. Table below presents the toll plaza wise commodity distribution.

Commodity pattern at Tarapongi Toll Plaza: -

- The overall share of empty vehicle is observed to be around **36.6**% at Tarapongi Toll Plaza.
- The Major Commodities observed at Tarapongi Toll Plaza are **Steel, Coal and Fly Ash** are contributing to almost **64.1%** of overall Commodities when Empty trucks are also included.
- Major commodities transported by LCV and 2-Axles are Food Items, Fruits & Vegetables, Parcel, Parchoon, Automobile, Plastics & Livestock.
- Major Commodities transported by HGVs are Steel, Coal and Fly Ash, Parcel, Automobile & Plastics.

Table 4-13 Commodity Pattern at Tarapongi Toll Plaza (TP1)

TARAPONGI TP (TP1)					
COMMODITY	**LCV**	**TRUCK**	**3-AXLE**	**MAV**	**GRAND TOTAL**

4.4.6 Trip length frequency Distribution

An analysis was carried out to understand the trip length frequency of the passenger and goods vehicles at all the toll plaza locations. Figures below presents the toll plaza wise trip length frequency distribution for goods and passenger vehicles.

Goods Vehicles

Trip length Frequency Distribution at Tarapongi Toll Plaza

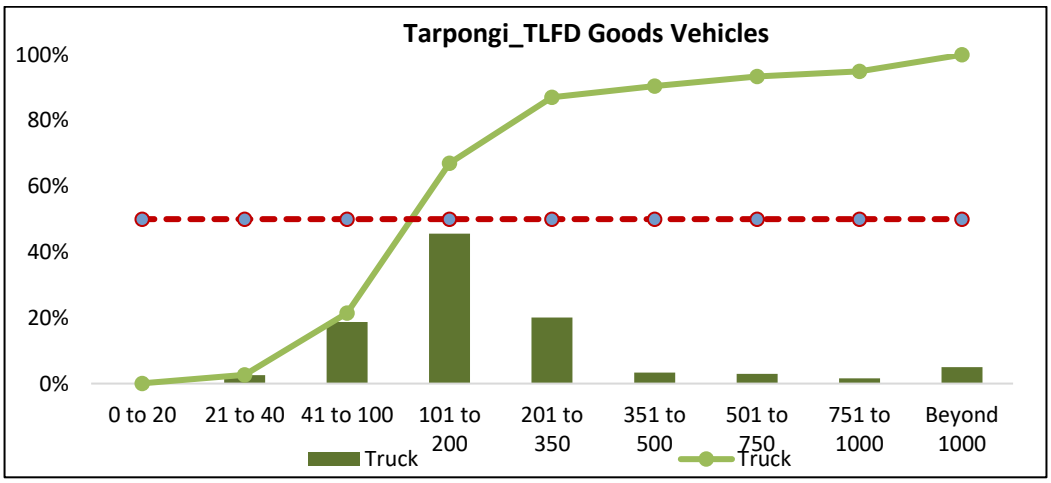

Figure 4-5: Trip length Frequency Distribution at Tarapongi Toll Plaza – Goods

- Around 87.07% Trucks are having trip length less than 200 km.
- 6.34% of Trucks are having trip lengths more than 200 km and less than 750 km. There is significant short and medium-distance traffic through the Tarapongi Toll plaza.
- Around 6.59% Trucks are having trip lengths more than 750 km.
- Major OD pairs are generated from Raipur, Baloda Bazar, Durg, Ambikapur, Dhamtari, etc

Trip length Frequency Distribution at Bhojpuree Toll Plaza

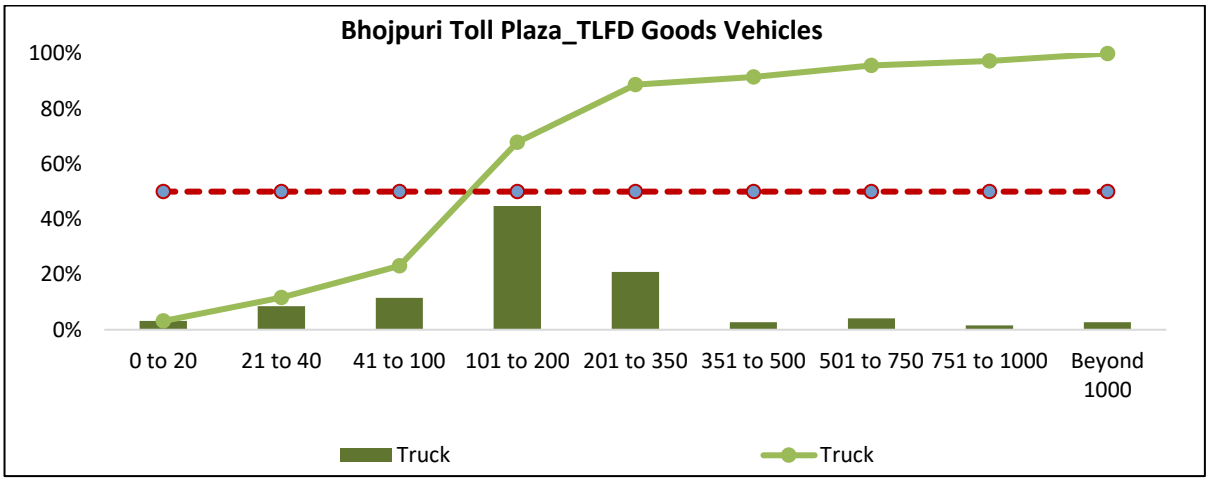

Figure 4-6: Trip length Frequency Distribution at Bhojpuree Toll Plaza – Goods

- Around 88.8% Trucks are having trip length less than 200 km.
- 6.9% of Trucks are having trip lengths more than 200 km and less than 750 km. There is significant short and medium-distance traffic through the Tarapongi Toll plaza.
- Around 4.3% Trucks are having trip lengths more than 750 km.
- Major OD pairs are generated from Raipur, Baloda Bazar, Durg, Ambikapur, Dhamtari, etc.

Trip length Frequency Distribution at Mudhipar Toll Plaza

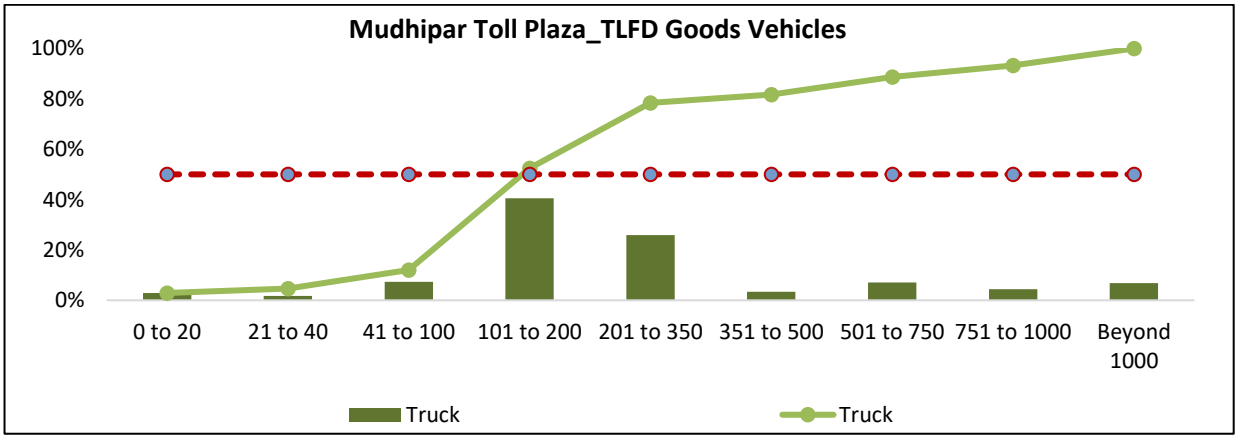

Figure 4-7: Trip length Frequency Distribution at Bhojpuree Toll Plaza – Goods

- Around 78.4% Trucks are having trip length less than 200 km.
- 10.3% of Trucks are having trip lengths more than 200 km and less than 750 km. There is significant short and medium-distance traffic through the Tarapongi Toll plaza.
- Around 11.3% Trucks are having trip lengths more than 750 km.
- Major OD pairs are generated from Raipur, Bilaspur, Raigarh, Korba, Nagpur, Champa, Ambikapur, etc.

Passenger Vehicles

Trip length Frequency Distribution at Tarapongi Toll Plaza

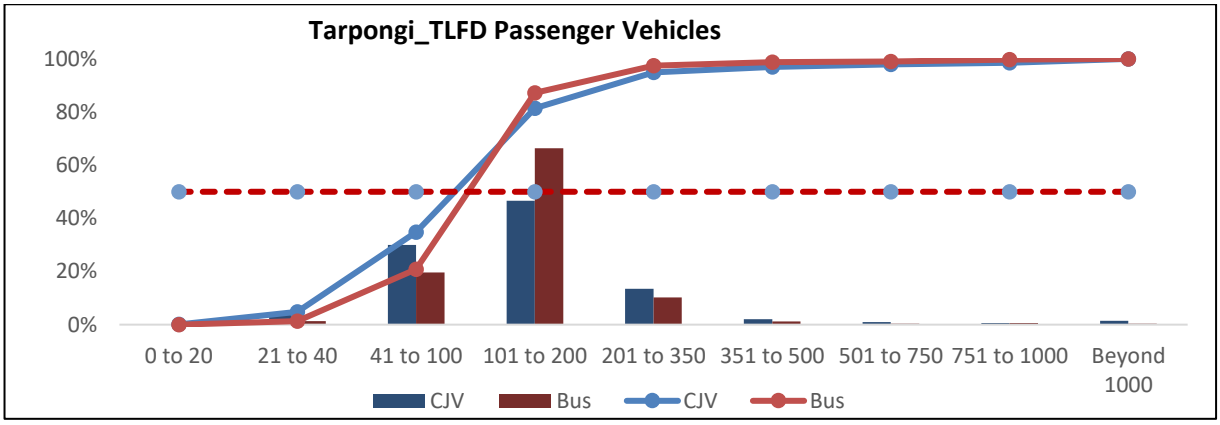

Figure 4-8: Trip length Frequency Distribution at Tarapongi Toll Plaza - Passengers

- Around 34.8% of Cars and 20.9% Busses are having less than 100 km trip length.
- Approximately 81.4% of Cars and 87.3% of Busses are having less than 200 km trip length. 13.5% of Cars and 10.3% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.
- 3.6% of cars and 2.2% of Busses trips are between 351 km to 1000 km, and 1.5% of Cars and 0.3% of Busses trips are beyond 1000 km.
- Major OD pairs are Bilaspur-Raipur, Raipur-Simga, Raipur-Bemetara, Raipur-Kawardha, Bilaspur-Bhilai, etc.

Trip length Frequency Distribution at Bhojpuree Toll Plaza

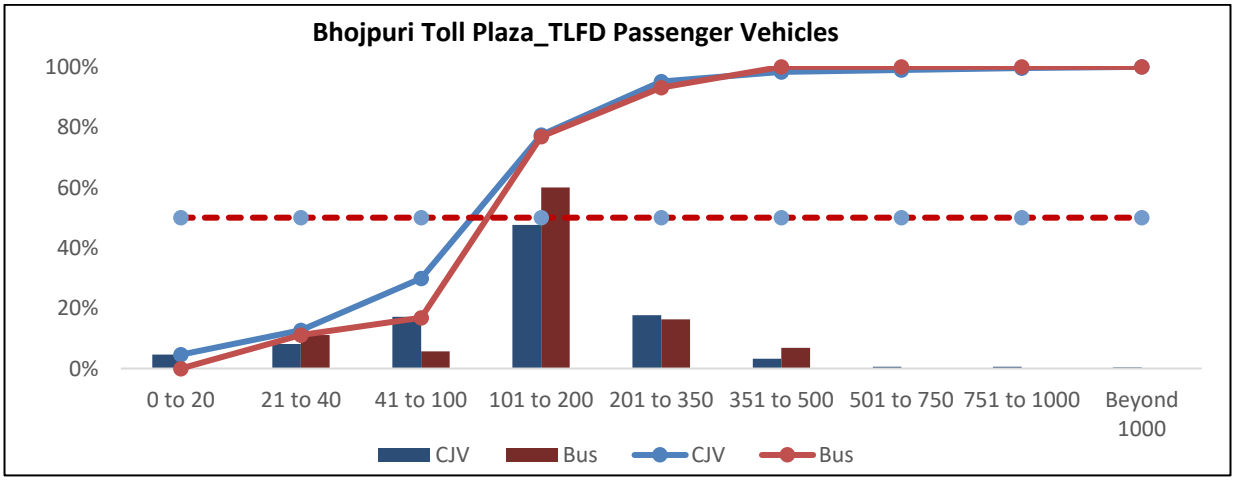

Figure 4-9: Trip length Frequency Distribution at Bhojpuree Toll Plaza-Passengers

- Around 29.9% of Cars and 16.8% Busses are having less than 100 km trip length.

- Approximately 77.4% of Cars and 76.8% of Busses are having less than 200 km trip length. 17.7% of Cars and 16.3% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.

- 4.5% of cars and 6.9% of Busses trips are between 351 km to 1000 km, and 0.4% of Cars are beyond 1000 km.

- Major OD pairs are Bilaspur-Raipur, Raipur-Korba, Bilaspur-Sargaon, Bilha-Sargaon, Bilaspur-Simga, etc.

Trip length Frequency Distribution at Mudhipar Toll Plaza

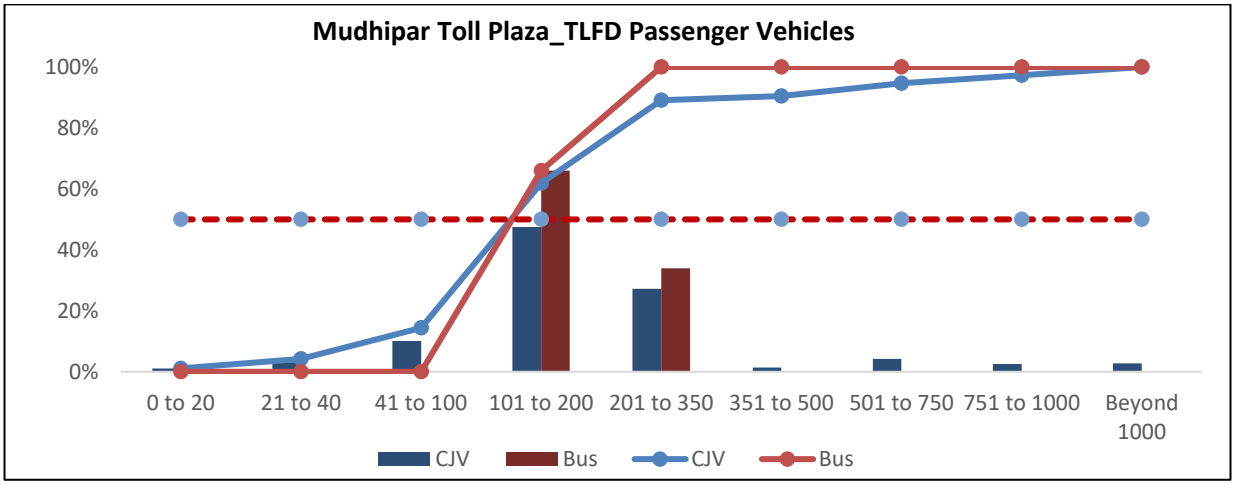

Figure 4-10: Trip length Frequency Distribution at Bhojpuree Toll Plaza-Passengers

- Around 14.4% of Cars are having less than 100 km trip length.
- Approximately 61.9% of Cars and 66.0% of Busses are having less than 200 km trip length. 27.2% of Cars and 34.0% of Busses are observed to be having trip lengths more than 200 km and less than 350 km.
- 8.2% of cars trips are between 351 km to 1000 km, and 2.7% of Cars trips are beyond 1000 km.
- Major OD pairs are Raipur-Raigarh, Raipur-Champa, Bilaspur-Raigarh, Raipur-Korba, Raipur-Sipat, etc.

-

4.4.7 Major Trip Generators

An analysis was carried out to identify the major trip generators. Table and figure below present the major trip generators of all passenger and goods vehicles at the toll plazas.

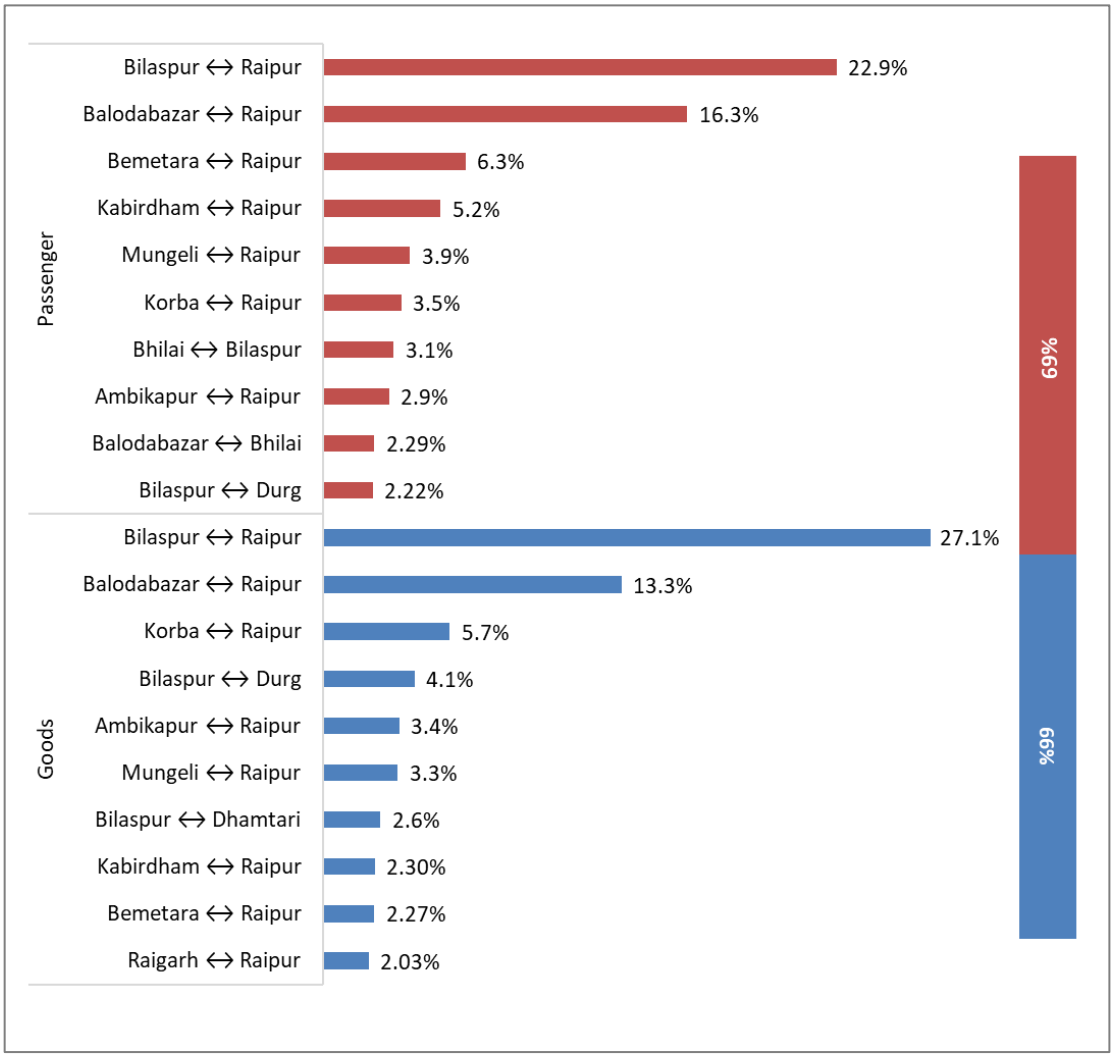

Figure 4-11: Major OD Pairs at Tarapongi TP

From the Top Origin- Destination pair analysis of both passengers and Goods (3 Axle trucks & MAV), it is observed that the top ten OD Pairs comprises around 69% of total passenger traffic and 66% of goods traffic (3A & MAV only) at Tarapongi Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

Top five OD Pair from passenger mode share is of 54.6%. Major OD pairs are generated from Bilaspur, Raipur, Baloda Bazar, Bemetara, Kabirdham, Mungeli, Korba etc.

Goods wise Major OD Pair at Toll Plaza:

Top five OD Pair from goods mode share is of 53.6%. Major OD pairs are generated from Raipur, Baloda Bazar, Durg, Ambikapur, Dhamtari, etc.

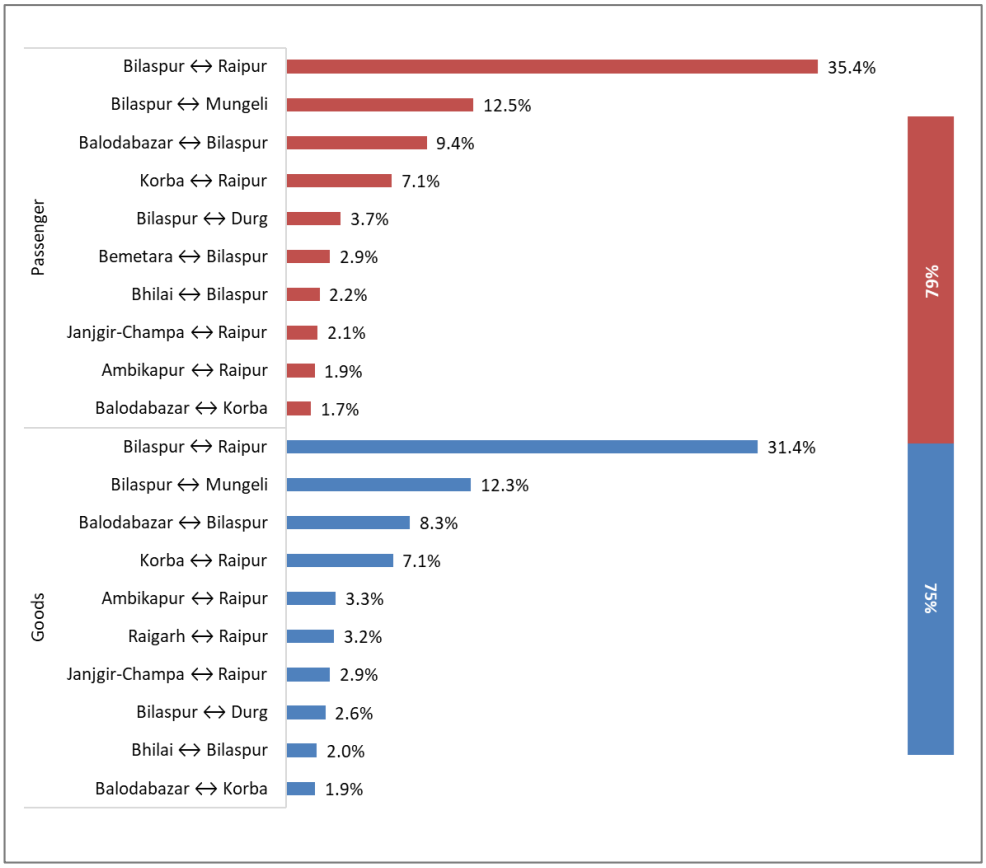

Figure 4-12: Major OD Pairs at Bhojpuri TP

From the Top Origin- Destination pair analysis of both passengers and Goods it is observed that the top ten OD Pairs comprises around 79% of total passenger traffic and 75% of total goods traffic at Bhojpuree Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

Top five OD Pair from goods mode share is of 68%. Major OD pairs are generated from Raipur, Baloda Bazar, Durg, Ambikapur, Dhamtari, etc.

Goods wise Major OD Pair at Toll Plaza:

Top five OD Pair from goods mode share is of 62.4%. Major OD pairs are generated from Raipur, Baloda Bazar, Durg, Ambikapur, Dhamtari, etc.

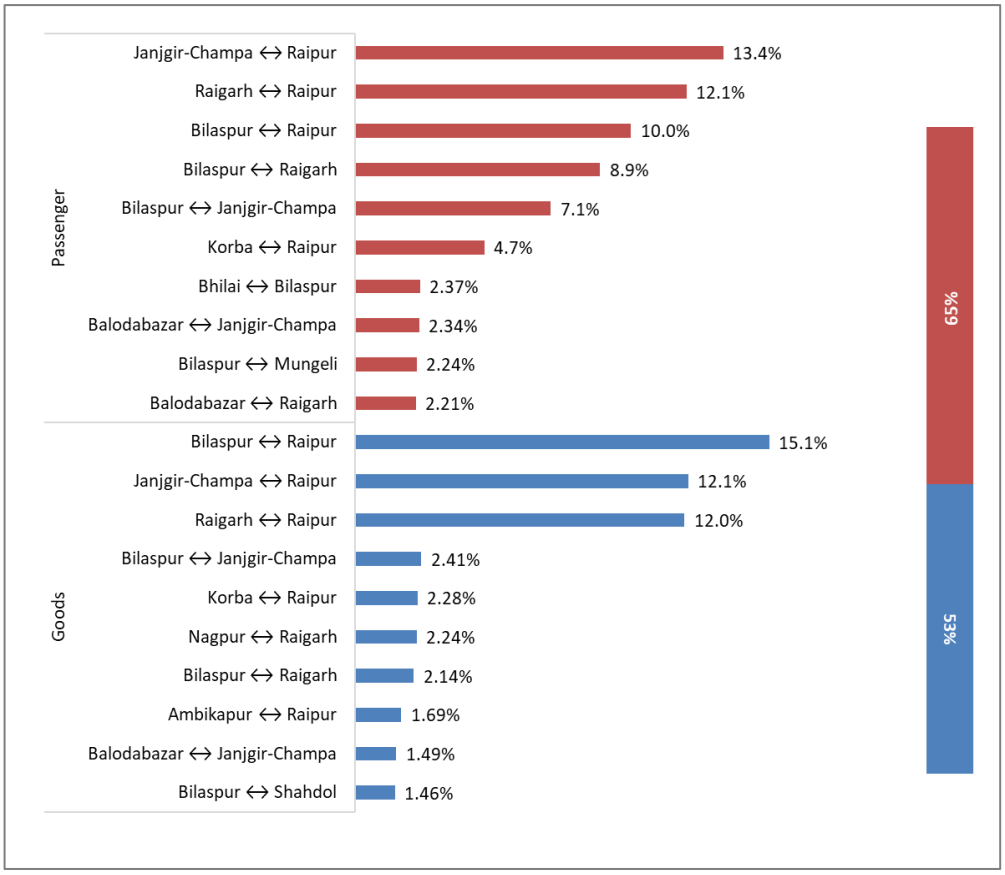

Figure 4-13: Major OD Pairs at Mudhipar TP

From the Top Origin- Destination pair analysis of both passengers and Goods it is observed that the top ten OD Pairs comprises around 65% of total passenger traffic and 53% of total goods traffic at Mudhipar Toll Plaza.

Passenger wise Major OD Pair at Toll Plaza:

Top five OD Pair from passenger mode share is of 51.5%. Major OD pairs are generated from Raigarh, Raipur, Bilaspur, Champa, Korba, Bhilai, etc.

Goods wise Major OD Pair at Toll Plaza:

Top five OD Pair from goods mode share is of 43.8%. Major OD pairs are generated from Raipur, Bilaspur, Raigarh, Korba, Nagpur, Champa, Ambikapur, etc.

CHAPTER 5

Diversion & Development Traffic Impact Assessment

5. Diversion & Development Traffic Impact Assessment

5.1 Introduction

This chapter presents the details of road network in the project influence area and the potential impact on the project road traffic during concession period. The traffic diversion section covers the comparison of the potential alternate routes with the project road.

Road network assessment and alternate modes were identified, and risk assessment has been done to determine traffic likely to be diverted to / from various routes by mode-wise based on generalized costs including toll fees on project road and alternate routes. This chapter also presents the details of land development in the project influence area and the potential impact on the project road traffic. Growth rates obtained from elasticity method needs to be adjusted for diversions as some of the upcoming development near project area can significantly affect the traffic estimates. The diversion and development section cover the potential land use development near project area and their effect on the future traffic estimates.

5.2 Diversion Traffic to Project Road/Alternate Routes

5.2.1 Road network assessment

Road network in the project influence area (PIA) was studied in detail from the past reports, latest news articles for all the potential impact roads on the project road traffic. Based on the site appreciation and desktop research it has been observed that there are viable alternate road that exists for the project road the & table below illustrates the list of alternate road development.

Table 5-1: Alternative Roads /Development Impacts on Project Road

S.NO	ALTERNATIVE ROAD/ NETWORK/ LAND /IMPROVEMENTS	IMPACT TYPE	YEAR OF IMPACT
1	Widening of NH-130B to 4L	Negative Impact	FY 32
2	Raipur–Dhanbad Economic Corridor (Korba Traffic)	Positive Impact.	FY 27
3	Raipur–Dhanbad Economic Corridor (Regional Traffic)	Positive Impact.	FY 32

5.2.2 Approach & Methodology

The Diversion Analysis process starts with the identification of potential alternate routes which was described in the earlier section. Post identification of the alternate routes, the next step involves quantification of the potential divertible traffic on the project road and the identified alternate routes.

The potential divertible traffic is the traffic which could shift from one road to the other road considering all the factors such as Vehicle operating cost, Travel time and Tolls. Subsequently a diversion analysis (binomial model) is performed to identify the quantum of the traffic that shift to the project road (positive diversion) or shift to the alternate road (negative diversion). The positive or the negative diversion is based on the generalized costs obtained from the diversion analysis model.

In this case, as seen in the earlier section there are potential alternate routes which are combination of greenfield & brownfield upgradations. With respect to the potential divertible

traffic for the project road it has been quantified based on the O-D analysis. The potential divertible traffic for the proposed alternate for the base year is not available as it is not operational at present (base year). In the absence of potential divertible traffic on the alternate route, the potential divertible traffic on project road is considered as total potential divertible traffic (PR+AR) for the diversion analysis.

The subsequent sections provide further elaboration on the potential divertible traffic, generalized costs and the divertible traffic and future divertible traffic on the project road till the end of the concession period.

The estimation of Traffic diversion away from project road for various diversions mentioned above are explained below.

Diversion 1:

- Negative diversion due to proposed Widening of NH-130B to 4L for the traffic plying between Raipur and Raigarh & nearby regions.

Diversion 2:

- Positive diversion due to proposed Raipur–Dhanbad Economic Corridor (Korba) for the traffic plying between Raipur and Korba.

Diversion 3:

- Positive diversion due to proposed Raipur–Dhanbad Economic Corridor (Regional) for the traffic plying between Raipur and Dhanbad and Nearby regions.

5.2.3 Widening of NH-130B to 4L

The proposed widening of NH-130B from a 2-lane to a 4-lane configuration along the Raipur – Baloda Bazar – Sarangarh corridor is a significant infrastructure upgrade aimed at improving regional connectivity. Spanning a total length of 216 km, approximately 169 km of this highway is planned for expansion to 4 lanes. This project is expected to decongest traffic, boost economic activities, and enhance safety for commuters traveling along this critical route. It will also facilitate better trade and tourism opportunities between the cities and surrounding areas.

However, this development could negatively impact the Raipur to Bilaspur toll road, which serves as a primary arterial route in the region. The improved NH-130B may divert traffic, particularly long-haul and commercial vehicles, reducing the overall toll revenue on the Raipur-Bilaspur corridor.

Project Status:

As of January 2025, the National Highways Authority of India (NHAI) has not publicly disclosed specific details regarding the current status of the NH-130B widening project on their official platforms, including the NHAI Data Lake.

Since the Project is in Planning stage the estimated completion can be assumed as in FY31.

5.2.4 Diversion-1 (Impact of Widening of NH-130B to 4Lane on All Three Plaza)

Traffic coming from the Raipur and Raigarh & nearby regions will have two route options available one Via Project Road and another is Via Baloda Bazar. The common point for both the Project Road and alternate route will be Raipur and Raigarh and the route comparison between Raipur to Raigarh via Project Road vis a-vis alternate route is described below.

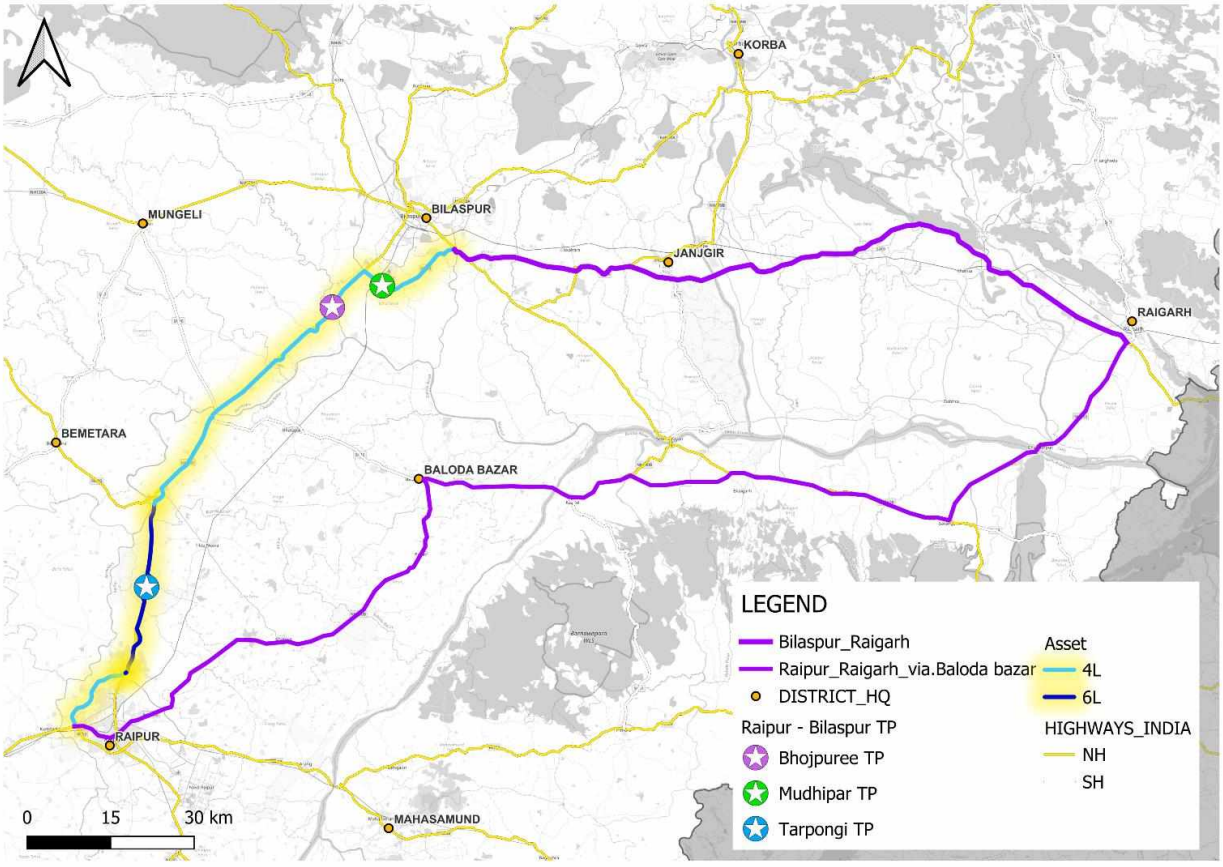

Figure 5-1: Raipur to Raigarh Route Comparison

Network Characteristics like Length, Road configuration etc. for both PR and AR are mentioned in the below table.

ROUTE COMPARISON				
YEAR	ROAD (PR or AR)	SECTION	LENGTH (KM)	ROAD CONFIG
FY25	PR	Raipur Bypass	15	4L
	PR	Raipur Simga	33	6L
	PR	Simga to Bilaspur Bypass	58	4L
	PR	Bilaspur Bypass to Amartal	45	4L

ROUTE COMPARISON				
YEAR	ROAD (PR or AR)	SECTION	LENGTH (KM)	ROAD CONFIG
	PR	Amartal to Raigarh	109	2L
	PR	Raigarh Urban Section	2	4L
FY28	AR	Raipur Urban Section	20	4L
	AR	Raipur to Baloda Bazar	71	2L
	AR	Baloda Bazar Urban Section	4	4L
	AR	Baloda bazar to Sarangarh	98	2L
	AR	Sarangarh to Raigarh	47	2L
	AR	Raigarh Urban Section	2	4L

Road Section	Highway No.	Length (Km)
Project Road	**Raipur to Raigarh**	**262**
Alternate Road	**Raipur to Raigarh**	**242**

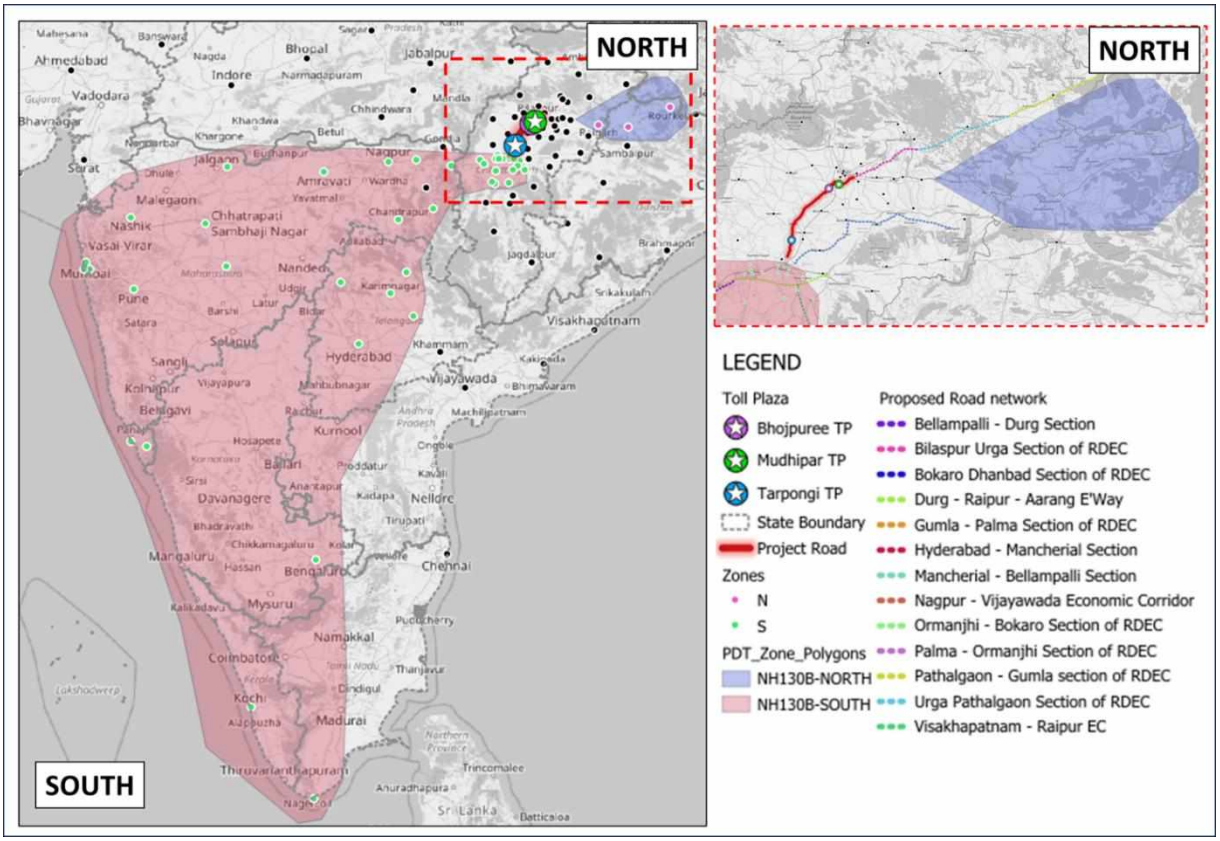

Table 5-2: Raipur to Raigarh Route Comparison b/w PR & AR

It is observed that Project Road is 20 kms longer than alternative route for Raipur-Raigarh route. Traffic zones which are considered for this part of diversion is shown below.

The fig:5-4 shows the PDT Zoning scheme. The figure refers to the region or zones considered under PDT estimation for NH130B for all three-toll plaza

Table 5-3: Potential Divertible Traffic in Base year

Mode	Project Road (TP1)	Project Road (TP2)	Project Road (TP3)
Car	182	184	169
Minibus	1	1	0
Bus-2A	6	7	3
Bus-3A	-	-	-
LCV	14	14	11
2 Axle	23	27	29
3 Axle	13	13	13
MAV	203	210	178

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and

Figure 5-2: NH-130B zoning Scheme

vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.

The consultant has considered that this diversion shall happen phase wise with 50% of the divertible traffic diverting in FY-32 and 100% of the divertible traffic diverting in FY-33. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

Table 5-4: Traffic diversion from Tarapingi toll plaza to NH130B-Diversion1 in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	182	(110)	-1.1%
Bus	6	(4)	-0.8%
LCV	14	(9)	-1.9%
2 Axle	23	(17)	-2.2%
3 Axle	13	(10)	-2.2%
MAV	203	(156)	-4.0%

Table 5-5: Traffic diversion from Bhojpuri toll plaza to NH130B-Diversion1 in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	184	(111)	-1.4%
Bus	7	(5)	-1.2%
LCV	14	(9)	-2.1%
2 Axle	27	(20)	-2.9%
3 Axle	13	(10)	-3.9%
MAV	210	(161)	-3.8%

Table 5-6: Traffic diversion from Mudhipar toll plaza to NH130B-Diversion1 in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	169	(102)	-8.9%
Bus	3	(2)	-68.0%
LCV	11	(7)	-11.3%
2 Axle	29	(22)	-11.2%
3 Axle	13	(10)	-14.7%
MAV	178	(136)	-10.4%

5.2.5 Diversion-2 (Impact of Raipur–Dhanbad Economic Corridor (Korba) At Mudhipar Toll Plaza)

The route analysis between Bilaspur and Korba presents two distinct options for Traffic in this region. The primary route incorporates the Project Road, which forms part of the strategic Raipur-Dhanbad Economic Corridor (RDEC). This alignment offers improved infrastructure and enhanced connectivity, making it an attractive option for traffic between these cities.

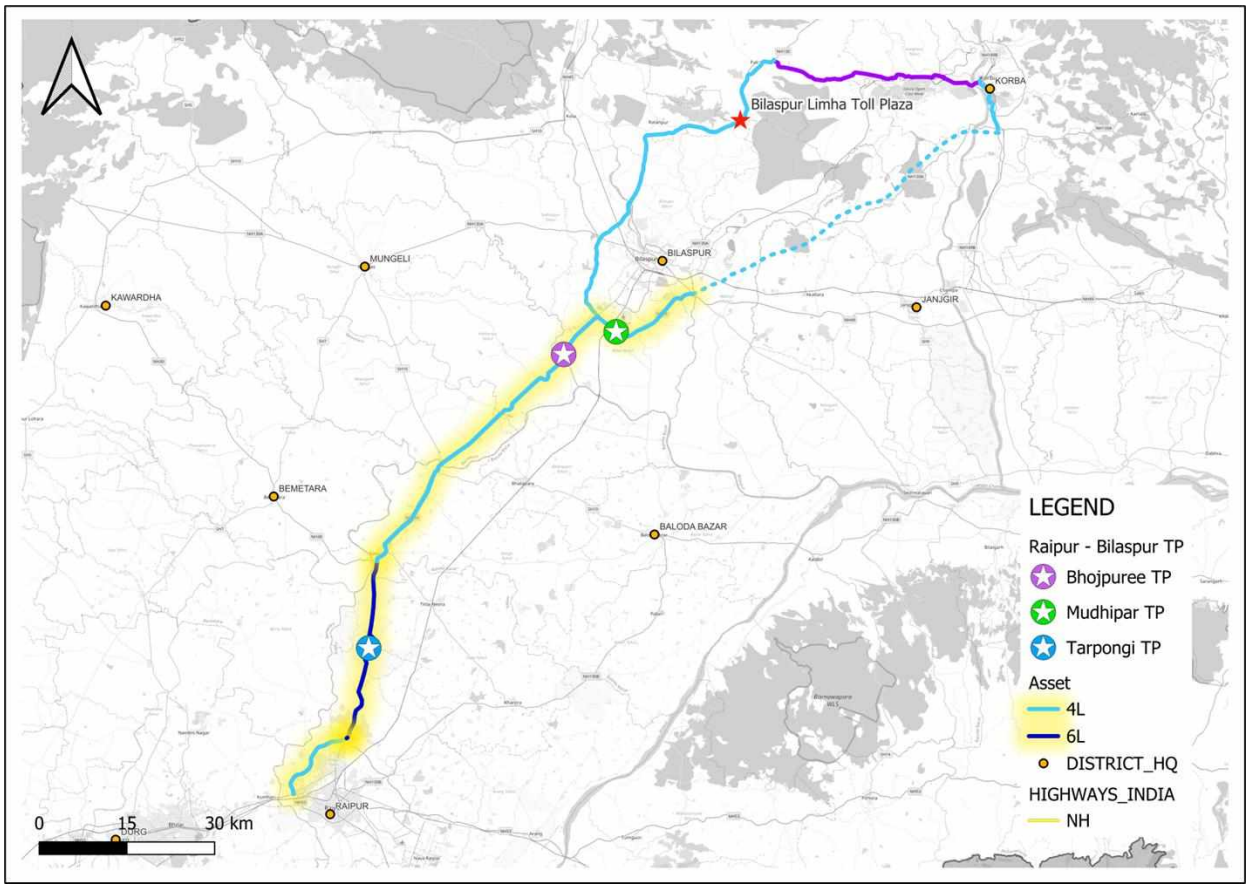

Figure 5-3: Bilaspur to Korba Route Comparison

The alternative route utilizes the existing National Highway 130 (NH130), which has traditionally served as the connection between these urban centers. Both routes share common points at the Bilaspur Bypass Start point and Korba, creating natural nodes for traffic distribution and interchange. The the Project Road along the RDEC is expected to create a positive traffic diversion from NH130, as Trips opt for the improved infrastructure and potentially reduced travel times offered by the new corridor.

This traffic redistribution pattern demonstrates the effectiveness of the RDEC's alignment along the Project Corridor, suggesting successful infrastructure planning that addresses regional connectivity needs while providing users with viable routing options based on their specific requirements and preferences.

Network Characteristics like Length, Road configuration etc. for both PR and AR are mentioned in the below table.

ROUTE COMPARISON				
YEAR	ROAD (PR or AR)	SECTION	LENGTH (KM)	ROAD CONFIG
FY27	PR	Bilaspur Bypass	21	4L
	PR	Bilaspur Bypass - Urga	65	4L-E'Way
	PR	Urga - Korba	10	2L
	PR	Korba - Kusmunda/Gevra	8	2L
FY25	AR	Bilaspur Bypass to Makhanpur	67	4L
	AR	Makhanpur to Kusmunda	32	2L

Road Section	Highway No.	Length (Km)
Project Road	**Bilaspur Bypass to Korba (via RDEC)**	**104**
Alternate Road	**Bilaspur Bypass to Korba**	**99**

Table 5-7: Bilaspur to Korba Route Comparison b/w PR & AR

It is observed that Project Road is 05 kms longer than alternative route for Bilaspur-Korba route. Traffic zones which are considered for this part of diversion is shown below.

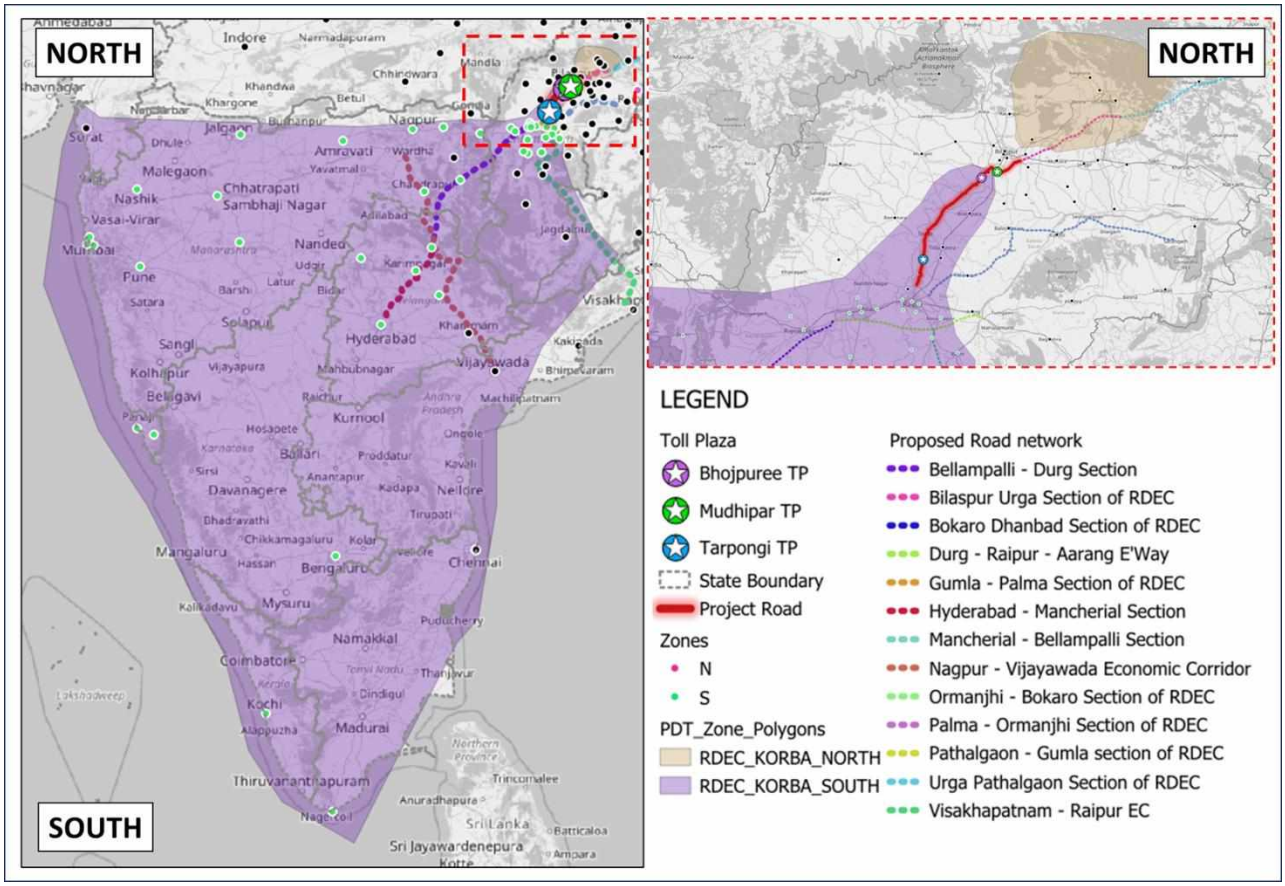

Figure 5-4: NH-130B zoning Scheme

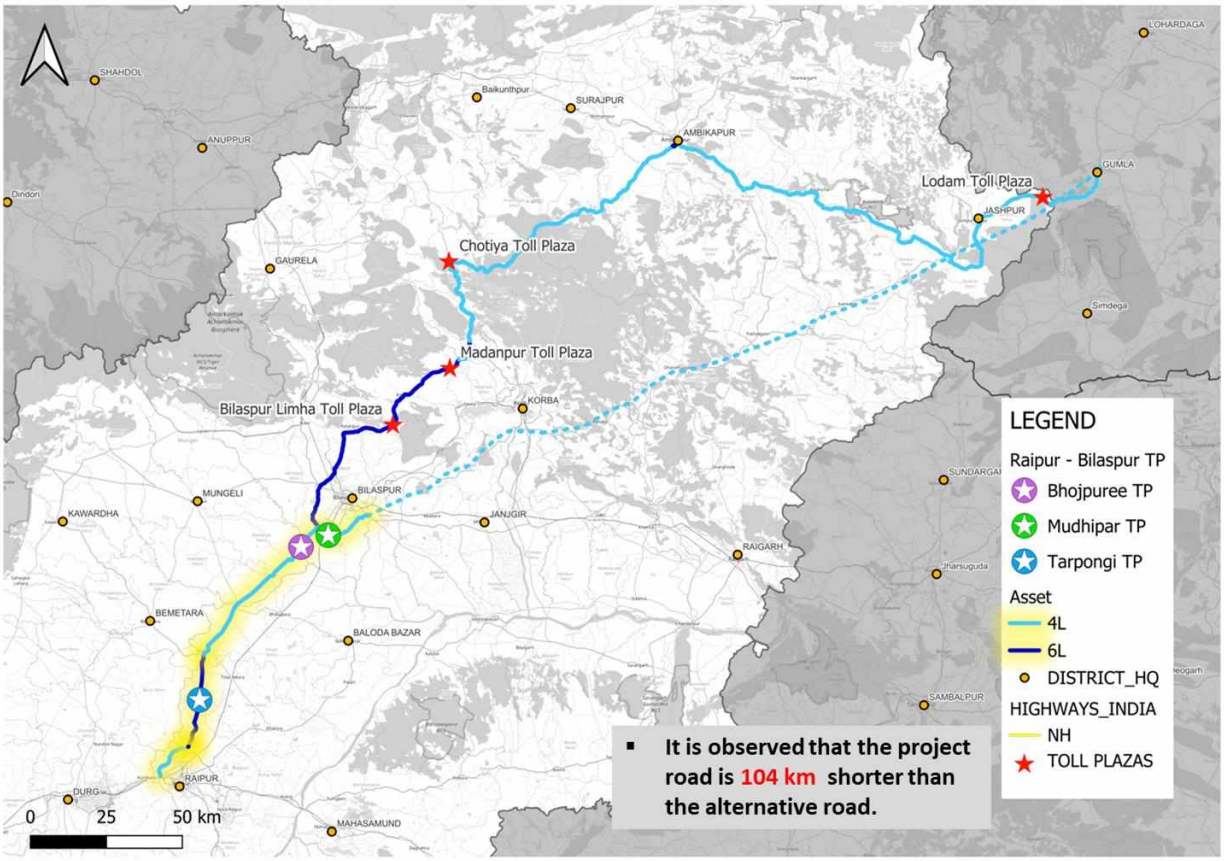
The fig shown shows the PDT Zoning scheme. The figure refers to the region or zones considered under PDT estimation for NH130B for all mudhipar toll plaza

Table 5-8: Potential Divertible Traffic in Base year

Mode	Alternate Road (TP3)
Car	868
Minibus	0
Bus-2A	6
Bus-3A	0
LCV	54
2 Axle	29
3 Axle	23
MAV	511

Diversion analysis has been done by comparing the project and alternate routes in terms of generalized costs. Using the spreadsheet diversion analysis tool, traffic diversion to / from the project road is estimated. Generalized cost is calculated based on the value of time (VOT) and vehicle operating costs (VOC) including toll fee rates. These generalized cost variables are sourced from the Indian Roads Congress publication IRC: SP:30: 2019 “Manual on Economic Evaluation of Highway Projects in India” and applicable inflation values are used to arrive at the cost variables in the year of applicable diversion.



The consultant has considered that this diversion shall happen phase wise with 50% of the divertible traffic diverting in FY-27 and 100% of the divertible traffic diverting in FY-28. The table below illustrates the quantum of divertible traffic obtained, the diverted traffic considered and the percentage composition of the diverted traffic with respect to AADT.

Table 5-9: Traffic diversion to Mudhipar toll plaza From NH130-Diversion2 in (FY25)

Vehicle Type	Divertible traffic	Diverted traffic	% Of diverted traffic w.r.t. to AADT
Car	868	384	33.5%
Bus	6	3	77.4%
LCV	54	17	26.2%
2 Axle	29	3	1.4%
3 Axle	23	5	7.8%
MAV	511	111	8.5%

5.2.6 Diversion-3 (Impact of Raipur–Dhanbad Economic Corridor (Regional) At Mudhipar Toll Plaza)

The route analysis between Bilaspur and Gumla highlights two key options for traffic flow in the region. The proposed Raipur-Dhanbad Economic Corridor (RDEC), incorporating the Project

Road, is poised to serve as a vital infrastructure upgrade, offering improved connectivity and enhanced road conditions that make it an attractive choice for traffic between these cities.

Figure 5-5: Bilaspur to Korba Route Comparison

In contrast, the alternate route via National Highway 130 (NH130) is serving as a primary link but faces limitations in terms of capacity and infrastructure quality. Both routes share natural nodes for traffic distribution, such as the Bilaspur Bypass, creating opportunities for efficient traffic interchange.

The development of the RDEC is expected to create a significant positive diversion of traffic to the Project Road, as road users, particularly commercial and long-haul traffic, will likely opt for the superior infrastructure, reduced travel times, and greater reliability provided by the new corridor.

The RDEC's alignment strategically addresses regional connectivity needs, attracting diverted traffic from NH130 and other surrounding routes. This diversion will not only reduce congestion on NH130 but also enhance the utility of the Project Road, boosting its role as a backbone for economic and logistical movement in the region. By providing a faster, safer, and more efficient alternative, the Project Road is well-positioned to handle increased traffic volumes, reinforcing the benefits of strategic infrastructure planning under the RDEC initiative.

Network Characteristics like Length, Road configuration etc. for both PR and AR are mentioned in the below table.

ROUTE COMPARISON				
YEAR	ROAD (PR or AR)	SECTION	LENGTH (KM)	ROAD CONFIG
FY32	PR	Bilaspur Bypass	21	4L
	PR	Bilaspur Bypass - Urga	70	4L-E'Way
	PR	Urga - Pathalgaon	88	4L-E'Way
	PR	Pathalgaon - Gumla	137	4L-E'Way
FY25	AR	Bilaspur Bypass to Madanpur	87	4L
	AR	Madanpur to Ambikapur	142	2L
	AR	Ambikar Pur Bypass	2	4L
	AR	Ambikapur to Gumla	189	2L

Road Section	Highway No.	Length (Km)
Project Road	**Raipur to Gumla (via RDEC)**	**316**
Alternate Road	**Raipur to Gumla**	**420**

Table 5-10: Bilaspur to Gumla Route Comparison b/w PR & AR

It is observed that Project Road is 104 kms Shorter than alternative route for Bilaspur-Gumla route. Traffic zones which are considered for this part of diversion is shown below.

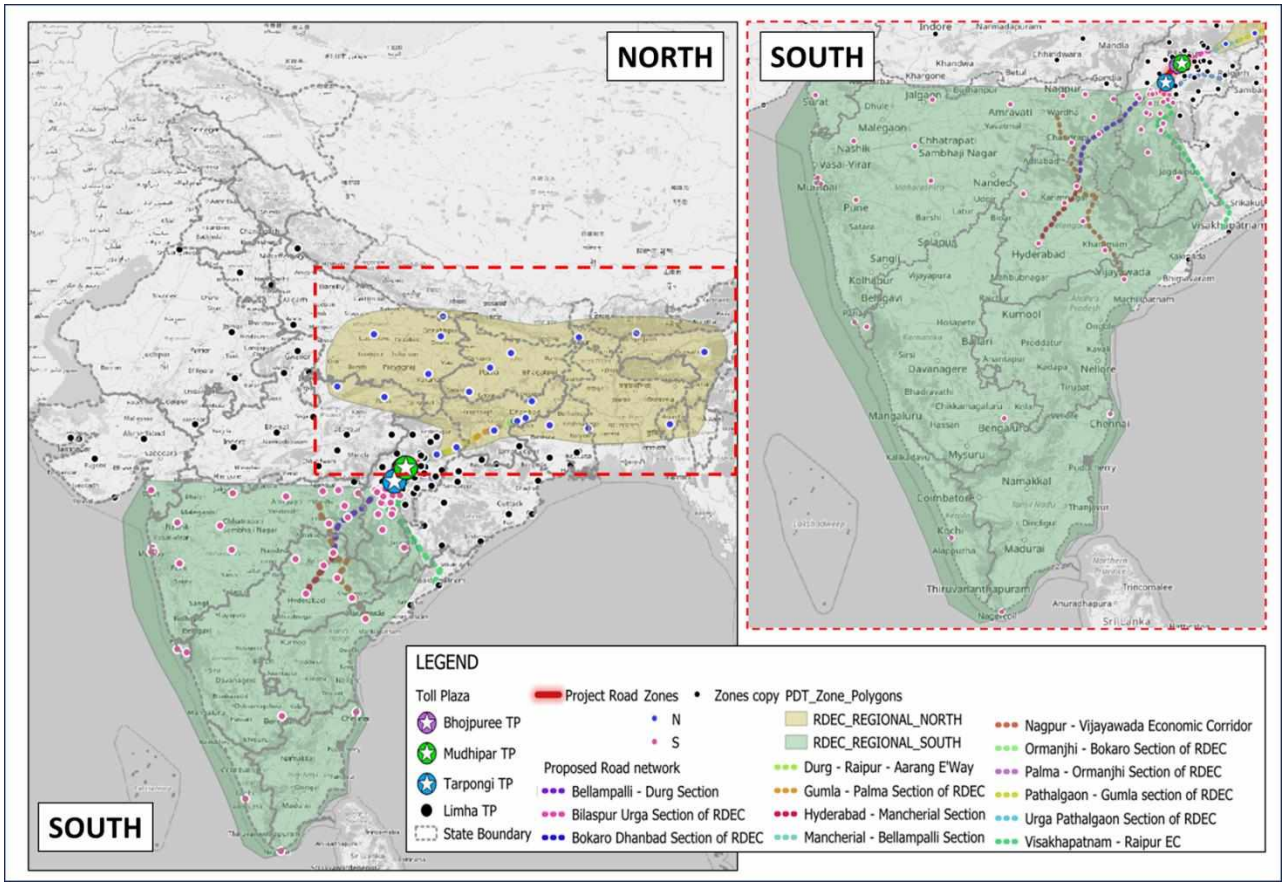


Figure 5-6: NH-130B zoning Scheme

The fig shown shows the PDT Zoning scheme. The figure refers to the region or zones considered under PDT estimation for NH130B for all mudhipar toll plaza

CHAPTER 6

Traffic Growth Rate Estimation

6. Traffic Growth Rate Estimation

6.1 Background

Demand for transport is derived demand. Derived demand is an economic term which refers demand for a good in one sector occurring because of demand from another sector. Transport users are accessing services not because of its direct benefits but because they wish to access product. Transport demand is basically movement of goods and passengers. Passengers travel to satisfy the need (work, school, college, recreation, etc.) and nobody travel just for the sake of travelling and we transport good as a part of overall economic activity. Derived demand for transportation is often difficult to estimate for future just by analysing the traffic growth in past years as it has derived from demand from some other sectors which may or may not vary in future in the same way. To consider trend in other sector and effect of the same on transport demand factors such as GDP, Primary GDP, secondary GDP, tertiary GDP, states GDP, Per Capita Income and vehicle registrations data is considered. These data are readily available as published by various organizations and more representative of growth in economy and related sectors.

The investment priorities are governed by the traffic demand, assessed benefits, and cost of the project. Demand plays the significant role, which governs the type of facility / infrastructure to be created. This in turn determines likely benefits and costs to develop the same. Prediction of traffic demand becomes an important task and must be conducted near accurately. The accurate estimation of traffic has direct bearing on the viability of project. Recognizing this, efforts were made to carefully assess all the parameters that help in predicting the traffic demand in future which necessitates realistic estimation of traffic growth rates. This chapter explains the methodology and estimation of traffic growth rates for the project for the horizon years. Traffic growth on a road facility is generally estimated based on the historical trends, in the present case traffic growth rates are estimated using Elasticity method as per IRC-108-2015 - *Guidelines for Traffic Forecast on Highways*.

6.2 Methodology

Traffic growth rate estimation follows systematic approach which is based on econometric modelling. The detailed methodology to arrive at growth rate is explained in the following sections.

6.2.1 Governing Factors for Traffic Growth

Traffic growth is governed by number of factors such as Gross National Product (GNP) or Gross Domestic Product (GDP), Agricultural output, Industrial Output which are mainly economic indicators and Population, Rural/Urban mix of population which are demographic factors. Since these indicators vary widely across the country, traffic growth rate varies from state to state, and within state from region to region. So, it is necessary to identify project influence zones and giving consideration while arriving at above indicators.

6.2.2 Determination of Past Trends

Past trend of traffic growth is key parameter in determination of future trend. Past trend of traffic can be analysed from variety of indicators such as traffic flow from census, vehicle registration and fuel sales. Vehicle registrations data is readily available as published by trusted organization is used for this study. For establishing reliable growth rates data should be taken

for considerable for number of years. The ideal way to arrive at rate of growth is through regression analysis. Once we have analysed growth in traffic, we can arrive at traffic growth in project influence area by finding out weight of different project influence areas using surveys.

6.2.3 Goods Vehicle Forecasting

Goods vehicle forecasting is done based on growth in tonnage and splits among distinct categories of vehicles. Growth in tonnage is obtained like procedure explained above. For vehicular splits base year splits were considered as benchmark and future year splits were projected based on experience and past growth trends in the same category of vehicles. Once we have tonnage and splits projections number of goods based on vehicle category and corresponding growth rate is calculated.

Traffic forecasting for project road traffic was done considering past trend in growth and analysing prospects of project influence area. Elasticity approach of growth rate estimation was used for long term traffic forecasting.

6.3 Determination of Growth Trends

Past data pertaining to the project corridor was sourced from the client. This includes traffic data for all the two toll plazas Tarapongi & Bhojpuree. The findings from the data are summarized in the following subsequent sections.

6.3.1 Past Traffic Trend at All Toll Plazas

Past traffic trends were derived based on the historic traffic data provided by the client. Separate analysis was carried out for toll plaza 01 at Tarapongi and toll plazas 02 at Bhojpuree, respectively. Traffic count summary, travel pattern for both passenger and goods traffic from the historic traffic data is presented below.

Table 6-1: Past Traffic Trend at Tarapongi Toll Plaza (TP1)

6.3.2 Project Influence Area

A study of the socio-economic profiles of the regions comprising the project influence area (PIA) provides an overview of the factors likely to influence the pattern of economic development and hence the flows and volumes of traffic on the proposed highway. The details include Population, Per-capita Income (PCI), GDP (India), GSDP (States), GDDP (Districts), Registered Vehicle population and targeted growth rates of the economy. The profiles help to generate basic inputs for the estimation of future growth in transport demand based on past scenarios, perspective changes in transport demand elasticity and economic growth rates.

The analysis of traffic pattern observed on the project road (at all the toll plaza locations) from traffic studies indicates that most of the traffic is generated from Chhattisgarh, Karnataka, Tamil Nadu & West Bengal. Hence, the above-mentioned states have been considered as PIA zones in assessing traffic growth. Since drivers of growth for all the traffic streams would be different, these were analysed separately. In addition, truck traffic was analysed considering LCV, 2 Axle and 3 Axle, MAV separately to consider the expected changes in freight vehicle market share in future years.

6.3.3 Growth in Tonnage

To accommodate the dynamic change within the sale of goods vehicles of distinct categories in growth rate estimates, it is pragmatic to consider the overall growth of tonnage on project road at distinct locations. Once the growth of tonnage is established, tonnage share for distinct categories of trucks shall be assumed based on the past trend observed at the toll plaza locations and the potential market share of the individual truck categories with respect to the region (PIA). Using this growth in tonnage and assumed future tonnage share of distinct categories of goods vehicles the growth rate of each category will be back calculated.

To determine, growth of Historic traffic tonnage, PIA registered vehicles data was converted into total tonnage based on the historic vehicle split. The growth in payloads over the years is shown in the table below.

Table 6-7 Pay load for Different Categories

Mode	LCV	2A TRUCK	3 A TRUCK	MAV
FY-2018	5	9	16	25
FY-2019	5	11.1	17.1	28.5

6.3.4 Growth in Registered Vehicles

The growth in vehicle registrations in the project road influence region is generally a good indicator, as it is found to correlate reasonably well with traffic growth. Thus, it is possible to establish a definite trend and correlation between traffic growth and vehicle registration. To establish future traffic on the project corridor, the trend in vehicle registrations of the influencing areas, which are significantly contributing traffic to the corridor is also studied. Significant growth in registrations of car, buses and trucks has been observed in the project influence areas.

Growth in personal car is observed to be highest followed by Freight vehicles and Buses in the state of Chhattisgarh. Compounded annual growth rate of cars, buses and trucks weighted for project area of Toll Plaza 1 at Tarapongi is 10.84%, 7.37%, 6.86% respectively (Ref: Annexure) Similarly, for Bhojpuree TP 2 it is 10.97%, 7.11%, 6.75% respectively (Ref: Annexure).

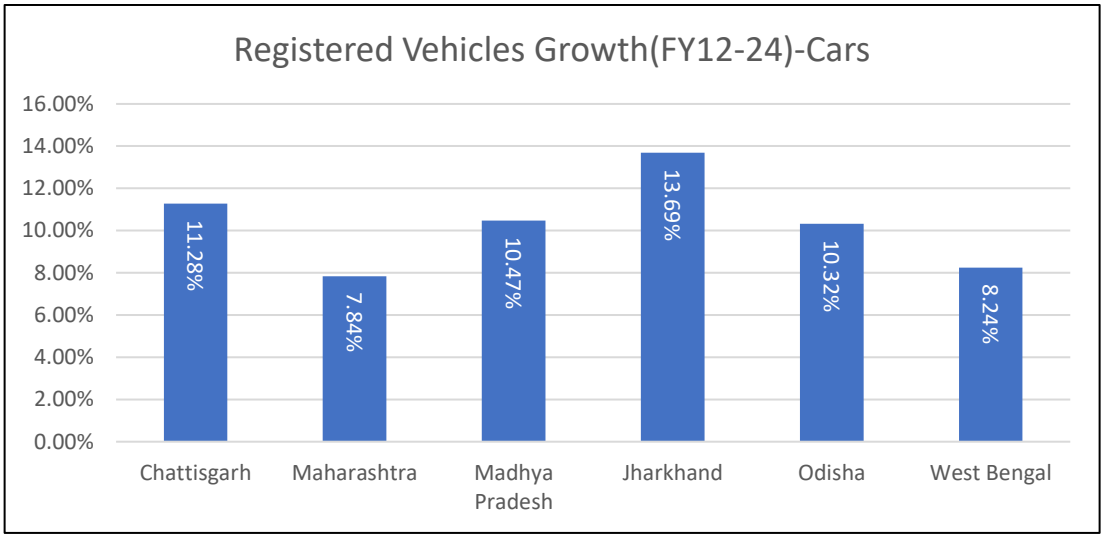

Figure 6-1: Long Term Growth Trends – Registered Cars in the PIA

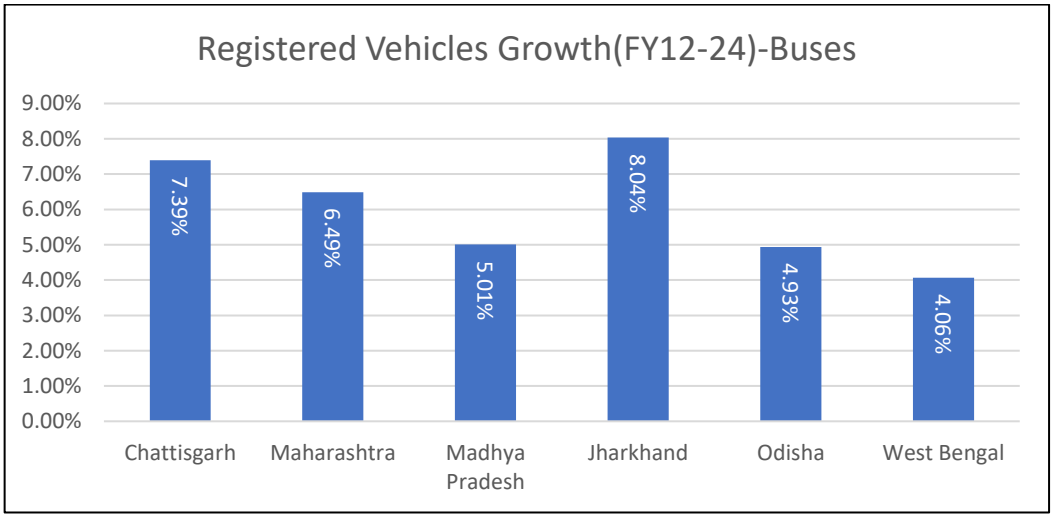

Figure 6-2: Long Term Growth Trends – Registered Buses in the PIA

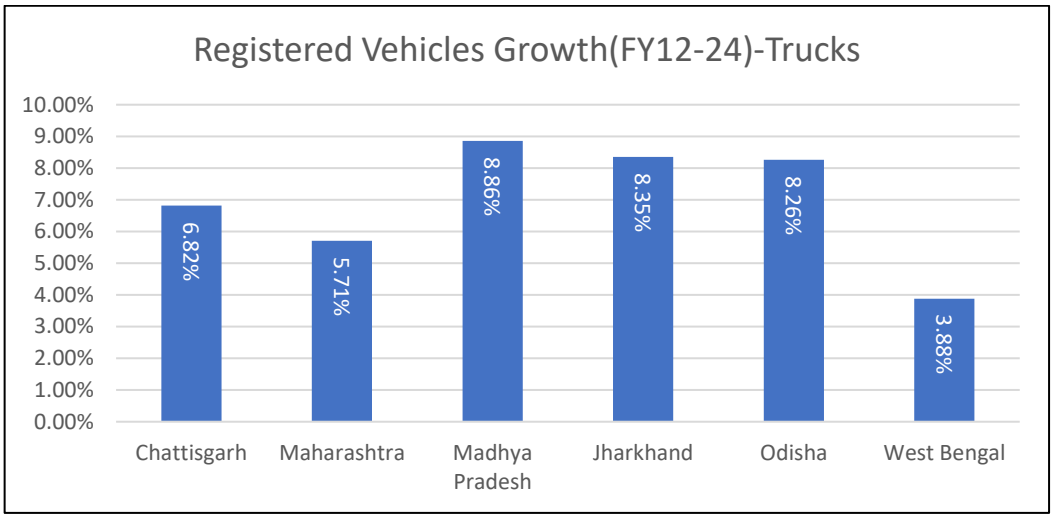

Figure 6-3 Long Term Growth Trends – Registered Trucks in the PIA

6.3.5 Past Growth in Regional Economies

Growth of traffic on the project road depends on existing development and future growth prospects of the connecting regions. The time series data of economic indicators is one major economic variable followed in the econometric method of traffic forecasting through establishing a relationship between dependent (traffic / registered vehicles) and independent variable (GDP / GSDP / GDD) for project influence areas. Past economic growth for the PIA zones is sourced from the Central Statistical Organisation (CSO) and are presented below.

Table 6-8: GSDP for PIA zones

YEAR	Chhattisgarh	Madya Pradesh	Maharashtra
2012	1,58,07,382	3,15,56,159	12,80,36,944
2013	1,65,97,740	3,51,68,262	13,57,94,185
2014	1,82,57,954	3,65,13,394	14,51,61,464
2015	1,85,81,344	3,83,94,448	15,43,16,487
2016	1,90,58,377	4,18,73,574	16,54,28,361
2017	2,13,70,477	4,70,66,916	18,07,04,575
2018	2,20,13,569	4,97,10,165	18,88,70,619
2019	2,44,57,916	5,43,27,196	19,57,38,075
2020	2,51,54,906	5,67,52,504	20,04,66,252
2021	2,51,19,230	5,41,01,572	18,58,36,988
2022	2,80,60,929	5,84,46,991	20,27,97,104
2023	3,02,11,868	6,22,90,790	21,23,41,262
2024	3,21,94,473	6,60,36,335	22,23,34,593
CAGR (12-24)	**7.67%**	**6.58%**	**4.71%**

6.3.6 Commercial Vehicles Sale Trend

Category wise commercial sales trend is presented in the below figure. From the figure it is observed that market share of 2 Axle truck and 3 Axle truck is declining from the previous

Years whereas MAV market share is increasing. Due to improved road infrastructure and over the years and due to technological advancements in commercial vehicle segments, there is a shift from 2 Axle /3 Axle trucks to MAVs.

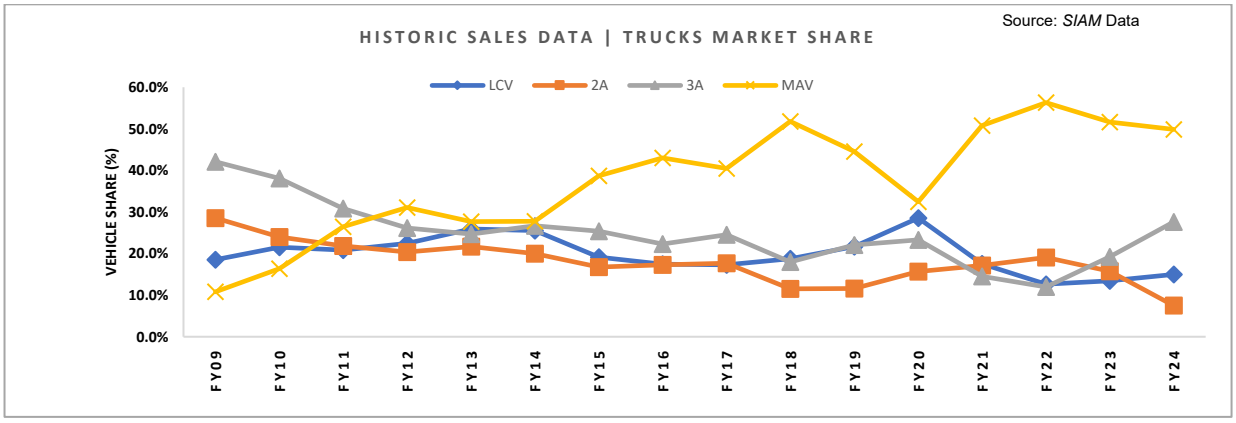

Figure 6-4: Market Share between Commercial Truck Categories

6.4 Traffic Growth Drivers

Before going to the traffic growth estimation through the established relation between economic variables and traffic variables, it is prudent to highlight the growth profile of the project corridor in terms of the geographic location and local economic growth potential. The table below summarises the major growth prospects for the traffic in the future on the project road.

Table 6-9: List of Developments in the PIA-Growth Driver

SL. NO	DEVELOPMENTS	DESCRIPTION	IMPACT TYPE
1	Coal Mines	The Raipur-Bilaspur section is a vital corridor influenced by the coal mining industry, with major coalfields such as Gevra, Dipka, Kusmunda, and Mand-Raigarh located nearby. These coal mines collectively produce over 150 million tonnes of coal annually, supporting power plants and industries across the country. The industrial activity from these mines generates substantial freight traffic, with hundreds of trucks and rail shipments daily, positioning this road as a critical backbone for regional economic growth and logistics.	Growth Driver
2	Cement Industries	The Raipur-Bilaspur Road section is a critical corridor for the cement industry, with prominent plants such as those operated by Ultratech Cement, Ambuja Cement, ACC Cement, and Shree Cement located in and around this region. These plants collectively contribute to over 15 million tonnes of cement production annually, catering to infrastructure and construction demands	Growth Driver

SL. NO	DEVELOPMENTS	DESCRIPTION	IMPACT TYPE
		across central and eastern India. This industrial activity generates substantial freight movement, with hundreds of trucks transporting raw materials and finished products daily, making this road a key driver of regional economic growth and logistics.	
3	Steel Industries	The Raipur-Bilaspur Road section is a crucial corridor for the steel industry, hosting major steel plants such as Jindal Steel and Power (Raigarh), SAIL's Bhilai Steel Plant, and several sponge iron units in Raipur. These facilities collectively produce over 20 million tonnes of steel annually, supplying construction, automotive, and industrial sectors across India. The industry generates significant freight movement, with hundreds of trucks and rail shipments transporting raw materials like iron ore and finished steel products daily, reinforcing the road's importance as a driver of industrial and economic growth in the region.	Growth Driver
5	Flyash Depositions	The Raipur-Bilaspur Road section is a key corridor for fly ash transportation, with several thermal power plants in the region, such as Korba, Sipat, and Tamnar, generating over 30 million tonnes of fly ash annually. This byproduct is widely utilized in cement manufacturing, brick production, and infrastructure projects, leading to substantial freight movement along the route. The steady demand for fly ash in construction and industrial sectors positions this road as an essential link for efficient resource utilization and economic activity in the region.	Growth Driver
6	Cement Sector	Ambuja Cement: Rs. 1,600 crore investment in Nawada for a 6 MTPA unit, creating 250 direct and 1,000 indirect jobs by December 2025. - Shree Cement: Rs. 2,000 crore (USD 240 million) for capacity expansion. - Ramco Cements: Rs. 1,403 crores to double Andhra Pradesh capacity and install	Future growth driver

SL. NO	DEVELOPMENTS	DESCRIPTION	IMPACT TYPE
		a 10 MW waste heat recovery system by FY26. - UltraTech Cement: Rs. 32,400 crores for 200 MTPA capacity expansion. - ACC & Adani Group: Introduced "Bagcrete" and launched a Concrete R&D facility. - Dalmia Cement: Launched Dalmia Supreme Cement in Eastern India.	

6.5 Transport Demand Elasticity

An Econometric method is proposed for forecasting future traffic trend based on elasticity which considers transport demand and most likely pattern of economic growth. The Elasticity Method relates traffic growth to changes in the related economic parameters. To calculate elasticity for various modes mode-wise impact of project influence area on project stretch is calculated which further useful in getting weighted GSDP values for project area. Based on individual state GDP and their mode-wise weight, weighted statistics for State GDP, registered number of vehicles, per capita income and other parameters were calculated for all the previous years. Elasticities were estimated based on regression analysis between registered vehicles & Historic AADT and all economic parameters. From the statistical significance and observations from major highways the elasticities are moderated for the base year. Base year elasticity serves as a base for moderating elasticities for the horizon years.

Plaza wise Elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend with the GSDP, PCI, Population and tonnage are shown in below table.

Table 6-10: Elasticity values – Complete statistical analysis

VEHICLE TYPE	DEPENDENT VARIABLE	INDEPENDENT VARIABLE	ELASTICITY		
			TP1 – Tarapongi	TP 2- Bhojpuree	TP 3- Mudhipar
Car	Registered Vehicles	PCI	**2.23**	**2.26**	**2.23**
Car	Registered Vehicles	GSDP	**1.75**	**1.77**	**1.76**
Car	Registered Vehicles	GSDP Tertiary sector	**2.04**	**2.07**	**2.01**
Bus	Registered Vehicles	PCI	**1.58**	**1.53**	**1.58**
Bus	Registered Vehicles	GSDP	**1.24**	**1.21**	**1.23**
Bus	Registered Vehicles	Population	**5.48**	**5.28**	**5.45**
Trucks	Registered Vehicles	GSDP	**1.14**	**1.15**	**1.18**
Trucks	Registered Vehicles	Secondary Sector GSDP	**0.87**	**0.89**	**0.96**

Elasticity values obtained from Reg vehicles are adopted for car & bus and trucks, average elasticity value obtained from the similar projects which is again moderated is considered for the traffic projections. Moderated elasticities are shown in below table.

Table 6-11: Moderated Elasticity Values for All TPs

VEHICLE TYPE	DEPENDENT VARIABLE	INDEPENDENT VARIABLE	Tarapongi TP	Bhojpuri TP	Mudhipar TP
Car	Reg Veh	PCI	**1.20**	**1.20**	**1.20**
Buses		GSDP	**0.50**	**0.50**	**0.50**
Trucks		GSDP	**0.90**	**0.90**	**0.90**

Generally, the spread of economic development induces changes in the spatial distribution of activities and corresponding changes in transport demand elasticity. As regions become more self-sufficient, the need for long-distance transport diminishes. Accordingly, it was assumed that transport demand elasticity, for both freight and passenger traffic, would tend to decline over time, despite growth in per capita income.

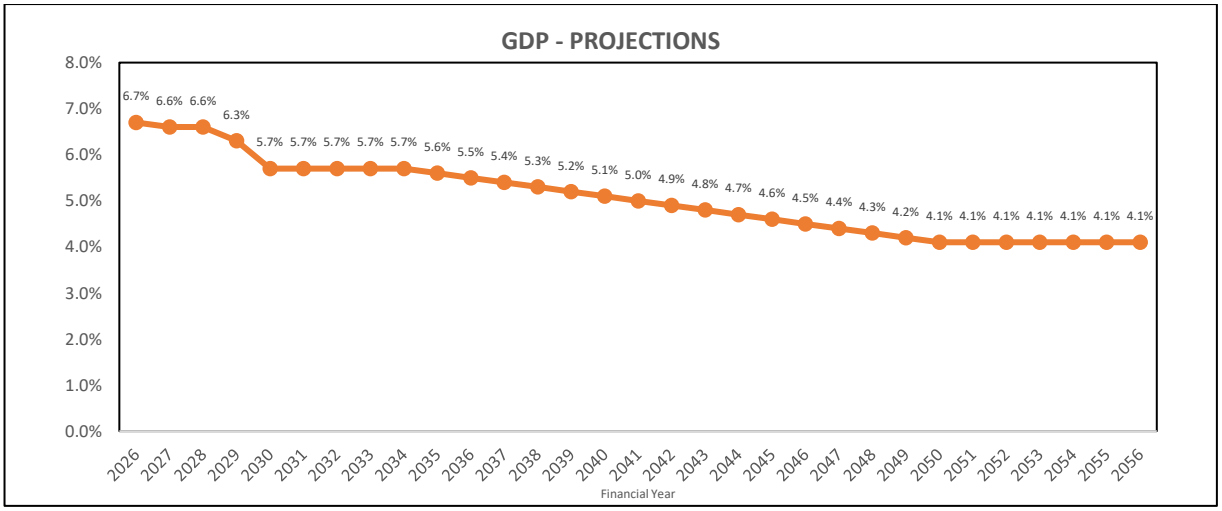

Table 6-12: Moderated Future Elasticity Values for Car, Bus, and Trucks for All TPs

REGRESSION ANALYSIS - FUTURE ELASTICITIES				
VEHICLE TYPE	FY	Tarapongi (TP 1)	Bhojpuree (TP 2)	Mudhipar (TP3)
Car	**FY 26 – FY 30**	1.20	1.20	1.20

	FY 41 – FY 45	0.43	0.43	0.43
	FY 46 – FY 50	0.41	0.40	0.40
	FY 51 – FY 55	0.40	0.40	0.40
Trucks [GDP]	**FY 26 – FY 30**	0.90	0.90	0.90
	FY 31 – FY 35	0.86	0.86	0.86
	FY 36 – FY 40	0.81	0.81	0.81
	FY 41 – FY 45	0.77	0.77	0.77
	FY 46 – FY 50	0.73	0.70	0.70
	FY 51 – FY 55	0.70	0.66	0.66

6.6 Future Growth of PIA

The economic impact of the 2020 coronavirus pandemic in India has been largely disruptive. The World Bank and other rating agencies had initially downgraded India's growth for fiscal year 2021 with the lowest figures India has seen in three decades since India's economic liberalization in the 1990s.

The consultant has adopted the consensus GDP provided by client for Future years. The Consultant has established a relationship between the GDP growth of India and the growth in GSDP of PIA. The same past relationship has moderated and applied to PIA states for the future GSDP Projections. The projected values of GDP of India and GSDP of PIA zones considered for the analysis is provided in the table below.

Source: Consensus GDP.

Figure 6-5: GDP Projections of India – Scenario Wise

6.7 Projected Traffic Growth Rates – Normal

The upcoming network improvements in the Raipur-Bilaspur region, including the development of multiple economic corridors and expressways, are expected to have a significant impact on traffic growth rates.

1. Raipur – Dhanbad Economic Corridor (700 km): A proposed/under-construction 6L & 4L expressway, improving connectivity between Raipur, Ranchi, and Dhanbad, linking to the Kolkata – Varanasi Expressway.
2. Hyderabad – Raipur Economic Corridor (530 km): A proposed Greenfield/Brownfield expressway, enhancing travel between Hyderabad and Raipur.
3. Visakhapatnam – Raipur Expressway (460 km): A 6-lane access-controlled expressway under construction, connecting Visakhapatnam Port with Raipur.
4. Nagpur – Vijayawada Economic Corridor (405 km): A 4-lane expressway under construction, linking Nagpur, Telangana, and Andhra Pradesh.

The following figure shows the future road network improvements around the project corridor.

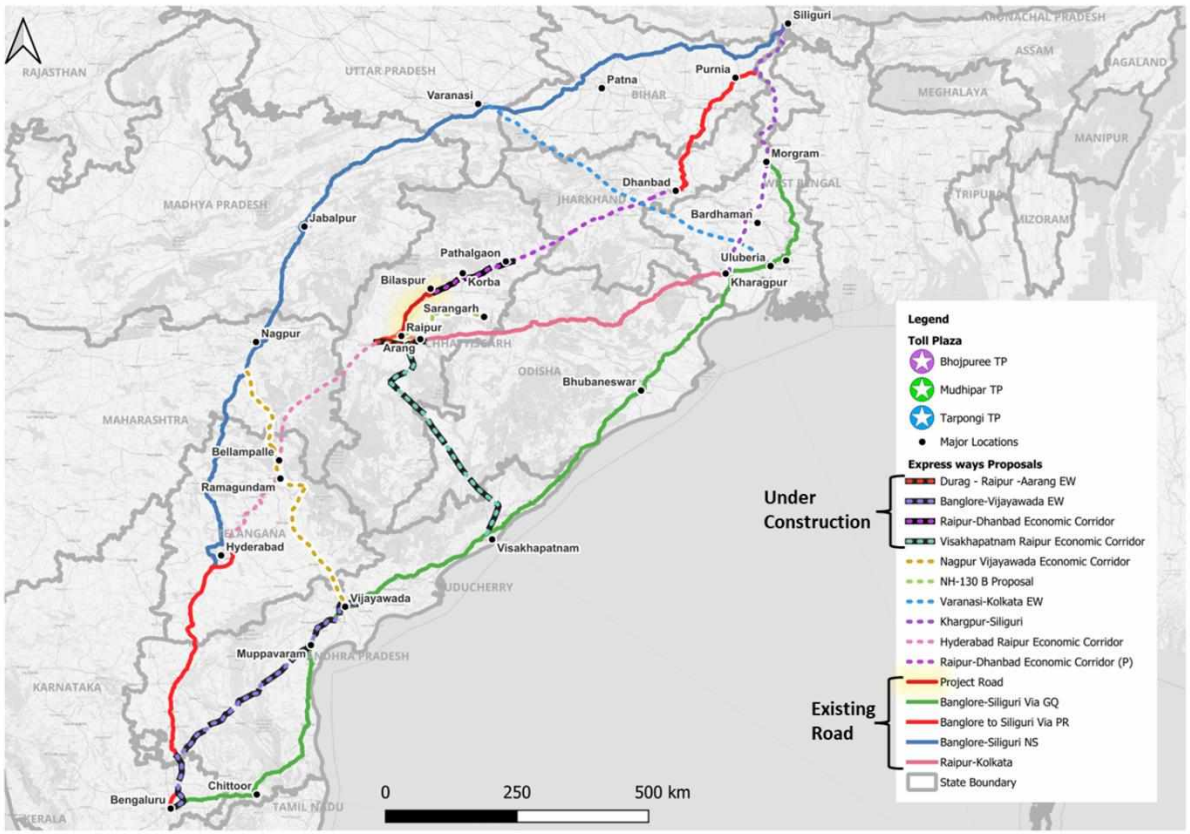

Figure 6-6 Future Road network Improvements around the Project corridor

Based on the projected elasticity values for TP 01 TP 02 and TP 03 the growth of PIA, the future average annual compound traffic growth rates by vehicle type have been estimated.

The traffic growth for the of most likely scenario is estimated and are presented in the following tables.

6.7.1 Traffic Growth Rates: TP 01 – Tarapongi

The section illustrates the Normal traffic Growth rates for Tarapongi Toll Plaza for Most Likely scenario.

6.8 Projected Traffic Growth Rates – Effective

There are some developments in road and land use pattern surrounding project stretch which were detailed in the "diversion & Development Traffic Impact Assessment" chapter. Effective traffic growth rates include the normal traffic projections and the impacts of diversions and developments in the PIA which are detailed in the chapter "Diversion and Development Traffic Impact Assessment". Considering the significance of the effective growth rates, the future traffic projections and associated toll revenue estimations are provided in the next chapter "Traffic and Toll Revenue Forecast."

6.8.1 Traffic Growth Rates: TP 01 – Tarapongi

The section illustrates the Effective traffic Growth rates for Tarapongi Toll Plaza for Most Likely scenario.

Table 6-16: Effective Traffic Growth Rates for Toll Plaza 01 – Tarapongi – Most Likely

CHAPTER 7

Traffic and Toll Revenue Forecast

7. Traffic & Toll Revenue Forecast

7.1 General

This chapter presents estimates of total traffic for all the two toll plazas of project corridor with Most likely scenario as explained in previous chapter. Normal traffic projections arrived by applying the traffic growth rates on the base year traffic. Effective traffic projection arrived by considering the future adjustments in the form of diversions and developments detailed in the Chapter “Diversion and Development Traffic Impact assessment” in overall traffic growth estimate.

7.2 Effective Traffic Projections at Tarapongi (TP 1)

Effective traffic projections include the impact of road network improvement and land developments (if any). Traffic beyond year FY 2025 is summaries based on effective traffic growth rates and base year AADT. Mode wise traffic projection for Most likely Scenario for all the horizon years for Tarapongi (TP 1) are estimated and effective future traffic is as shown in below table.

Table 7-1: Effective Future Traffic (AADT): Tarapongi (TP 1) – Most Likely

FY	Car	Minibus	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV	Total Veh	PCU
2025	9,701	11	488	486	760	445	3,923	15,818	33,195

7.4 Effective Traffic Projections at Mudhipar (TP 3)

Effective traffic projections include the impact of road network improvement and land developments (if any). Traffic beyond year FY 2025 is summaries based on effective traffic growth rates and base year AADT. Scenario wise and Mode wise traffic projection for all the horizon years for Mudhipar (TP 3) are estimated and effective future traffic is shown in below table.

Table 7-3: Effective Future Traffic (AADT): Mudhipar (TP 3) – Most Likely

FY	Car	Minibus	Bus-2A	LCV	2 Axle Truck	3 Axle Truck	MAV	Total Veh	PCU
2025	1,145	1	4	66	196	68	1,311	2,792	7,954

- Similarly Entire Project has Normal Traffic (PCU) CAGR (FY 25-46) at All plaza is estimated to be **4.77%** and the effective Traffic (PCU) observed CAGR of **4.72%** over the concession period.
- Normal Traffic (PCU) CAGR (FY 25-56) at All plaza is estimated to be **4.21%** and the effective Traffic (PCU) observed CAGR of **4.18%** over the concession period.

.

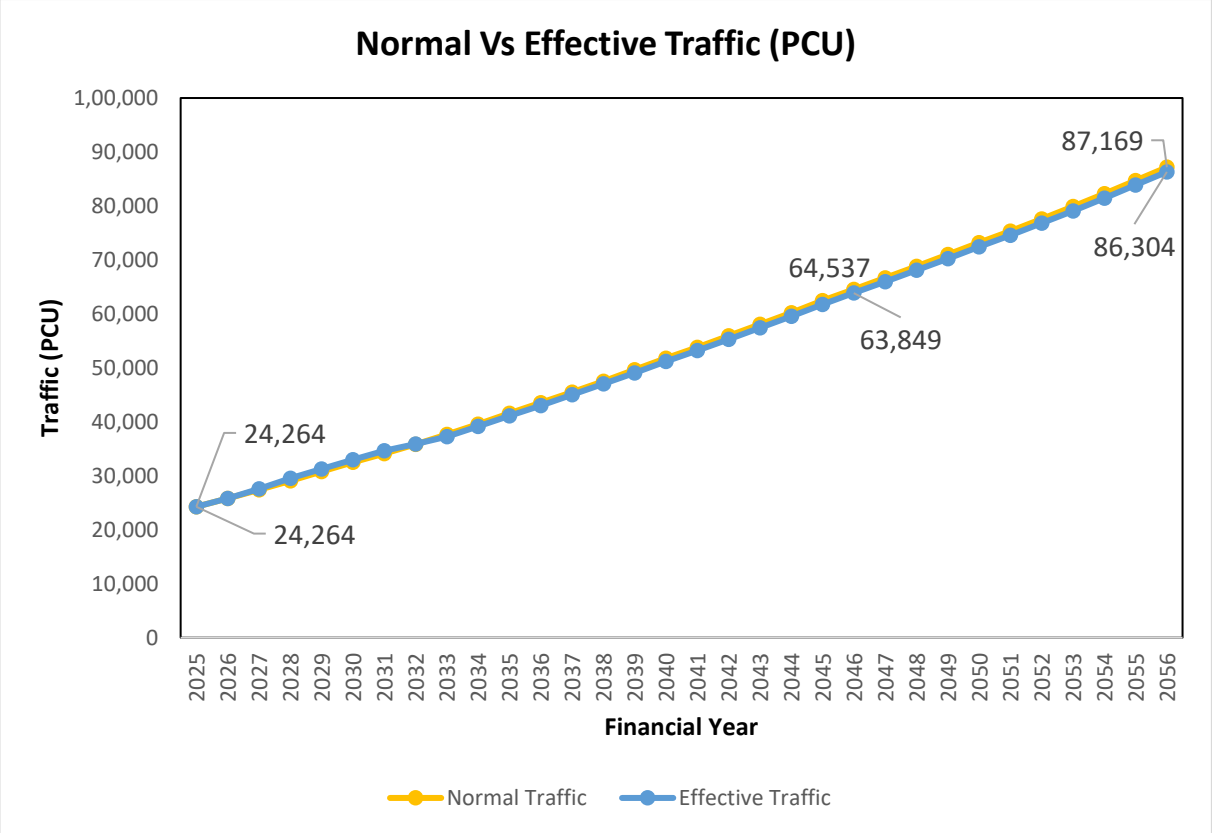

Figure 7-1: Future Traffic Projections in PCU

7.6 Toll Revenue Forecasting

Toll revenue projections or forecasting is calculated based on the projected traffic and projected toll rates. Toll rates by vehicle and toll category depends on the tolling length, wholesale price index (WPI) and the base rates which are applicable by vehicle category are according to the National Highway fee notification for the project.

7.6.1 Toll Plaza Control Length

Toll plaza control length for two plazas has been mentioned in the below table.

Table 7-8: Base rate fee by vehicle category for payable length for FY 25

TOLL PLAZA	Highway Length (Kms)	Net Bypass Length (Kms)	Structure Length (Kms)	Total Length (Kms)
Tarapongi (TP1)	23.720	24.486	0.374	48.580
Bhojpuree (TP2)	47.798	8.933	0.669	57.400
Mudhipar (TP3)	0.000	20.351	0.194	20.545

7.6.2 Toll revenue estimation

i. Toll Fee Revision Methodology

Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the toll rules 2008.

a) Base Rate

As per the National Highway Fee Rules, 2008 and subsequent amendments till to date, the rate of fee for use of a section of national highway of four or more lanes for the base year 2007-08 are given as mentioned in below table. Fee applicable shall be the rate multiplied by the length of the highway section for which toll is to be collected.

Table 7-9: Base rate fee by vehicle category for payable length

TYPE OF VEHICLE	BASE RATE FEE PER KM (IN RUPEES)
Car	0.65
LCV	1.05
Bus or Truck	2.20
Truck 3A	2.40
HCM or EME or MAV (3-6 Axles)	3.45
Over Sized Vehicle (OSV)	4.20

b) Annual Revision of Rate of Fee

The amount of fee and the revision thereof effective from 1st April. The user fee shall be increased annually, without compounding by 3%. revision because of variation in WPI shall be restricted to 40%.

$$\text{Applicable rate of fee} = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPIA} - \text{WPI B}}{\text{WPI B}}\right\} * 0.40$$

Were
WPI-A means the Wholesale Price Index on December 31, 2023.
WPI-B means the Wholesale Price Index of week ending on 6th January 2007.i.e 208.7.
The actual fees to be charged shall be rounded off to the nearest Five rupees.

ii. WPI Forecasts

WPI Inflation values for the future years have been provided by client and are presented in the below Figure.

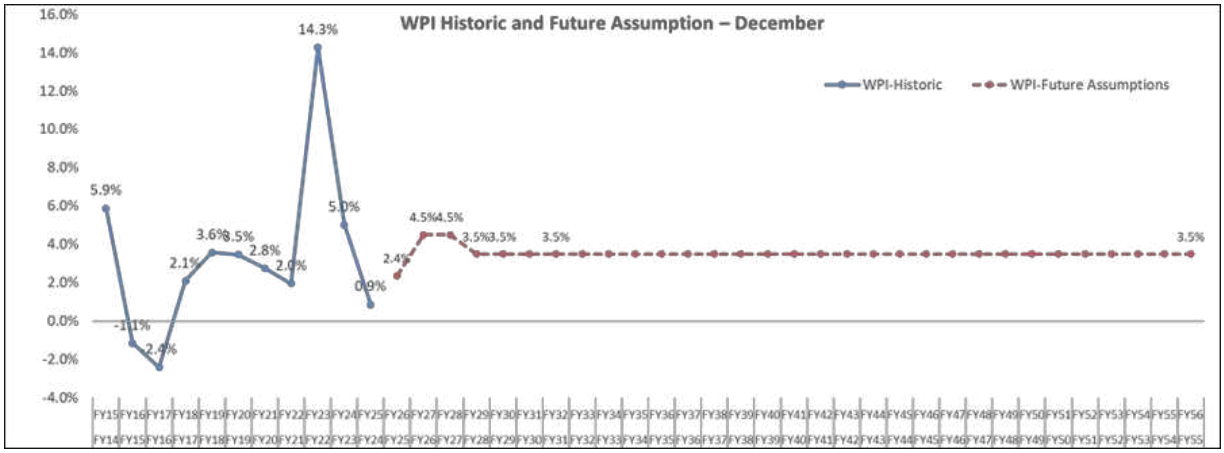

Figure 7-2: Past & Future Trend of Wholesale Price Index

The decrease in inflation in the recent years can be attributed to the lower commodity prices like oil, metals etc. along with the drop in the prices of the primary articles like food products etc.

Toll Fee Projections

a) Base Year (FY25)

As per the NH Fee rules 2007-08:

Toll fee for the fiscal year FY-2024 has been arrived by considering the toll plaza control length which were mentioned in the toll plaza control length table. From 01st April 2024 the toll fee rates for the Toll Plaza locations are presented in the Tables below.

Table 7-10: Toll Fees for the year FY-2025 from June'24 to March'25 for TP1 – Tarapongi

VEHICLE TYPE	SINGLE	RETURN	MONTHLY PASS	DISTRICT REGISTERED	LOCAL PASS
Car, Jeep, Van	95	140	3,140	45	340
Light Commercial Vehicle or Minibus	150	230	5,070	75	-
Bus - 2 Axle	320	480	10,620	160	-

OSV	310	460	10,255	155	-

7.6.3 Vehicle wise Trip Categories

Toll revenue is estimated by considering different concessions provided to the road users by vehicle category and eligible number of trips based on the toll category. The number of eligible trips in crossing toll plaza varies by the toll fee category i.e., Single (Full fare), Local passenger and Monthly Pass of both passenger and commercial vehicles are presented in the below tables. The estimation of the share of individual toll vehicle by type of toll ticket category is based on the recent toll traffic data of the period from Apr'2024 to July'2024.

Table 7-13: Vehicle wise Trip Categories at Tarapongi (TP 1)

VEHICLE TYPE / TOLL CATEGORY	Single Journey	Return Journey	Monthly Pass	Local Comm	Local Pass	Exemptions	TOTAL (Excl. Penalties)
Car	32.05%	59.47%	0.00%	0.37%	2.87%	5.24%	100.00%
Minibus	31.76%	59.40%	0.00%	3.03%	0.00%	5.80%	100.00%

7.6.4 Toll revenue projections

Toll revenue is projected based on the future traffic projections, toll fees by vehicle and toll category and trip rates. Traffic numbers are projected by fiscal year i.e., FY25, FY26 etc. and toll rates are revised on 01st April every year. Toll revenues are projected by fiscal year till the end of concession period and considering maximum possible extension referring clauses related to Additional toll way, Capacity augmentation and modification of concession period.

(c) Toll would be collected for all the days in a year.

(d) Revenue projected from FY-2025 to FY-2044.

The toll revenue projections are done for the effective case which is basically the consideration of all network improvements and land developments as described in the chapter "Traffic Growth Estimation". The below table summarizes the projected annual toll revenue at both the toll plazas and Overall project.

Table 7-16: Estimated Annual Toll revenue (Effective case) in Rs. Crores – Most Likely

Financial Year	TARAPONGI TP (In Crore. INR)	BHOJPURI TP (In Crore. INR)	MUDHIPAR TP (In Crore. INR)	TOTAL (In Crore. INR)
2025	107	105	14	227
2026	117	115	16	247
2027	130	127	18	276
2028	145	142	22	308
2029	159	155	24	337
2030	174	169	26	369
2031	191	184	28	403
2032	207	200	31	437
2033	222	214	33	469
2034	243	234	37	513
2035	265	255	40	559
2036	289	278	44	611
2037	316	302	47	664
2038	343	328	52	722
2039	372	356	56	784
2040	406	388	61	855
2041	438	418	65	921
2042	472	452	71	995
2043	511	487	77	1,075
2044	555	527	83	1,165
2045	596	568	89	1,253
2046	642	610	96	1,348
2047	691	655	103	1,449
2048	743	706	111	1,560
2049	794	758	119	1,671
2050	853	812	128	1,793
2051	915	871	137	1,923
2052	983	935	148	2,066
2053	1,050	998	158	2,205

Financial Year	TARAPONGI TP (In Crore. INR)	BHOJPURI TP (In Crore. INR)	MUDHIPAR TP (In Crore. INR)	TOTAL (In Crore. INR)
2054	1,126	1,072	170	2,367
2055	1,205	1,149	182	2,537
2056	1,297	1,231	196	2,724
CAGR (25-46)	**8.90%**	**8.73%**	**9.47%**	**8.86%**
CAGR (25-56)	**8.38%**	**8.26%**	**8.79%**	**8.35%**

- It is estimated that the toll revenues are expected to grow (FY 25-46) at **8.86%** CAGR on overall Raipur-Bilaspur project Corridor.
- Consultant doesn't recommend Cash penalty going forward after few years due to FasTAG penetration is likely to be close to 100%. Also, Concessionaire needs to deposit Cash penalty revenue with Authority.

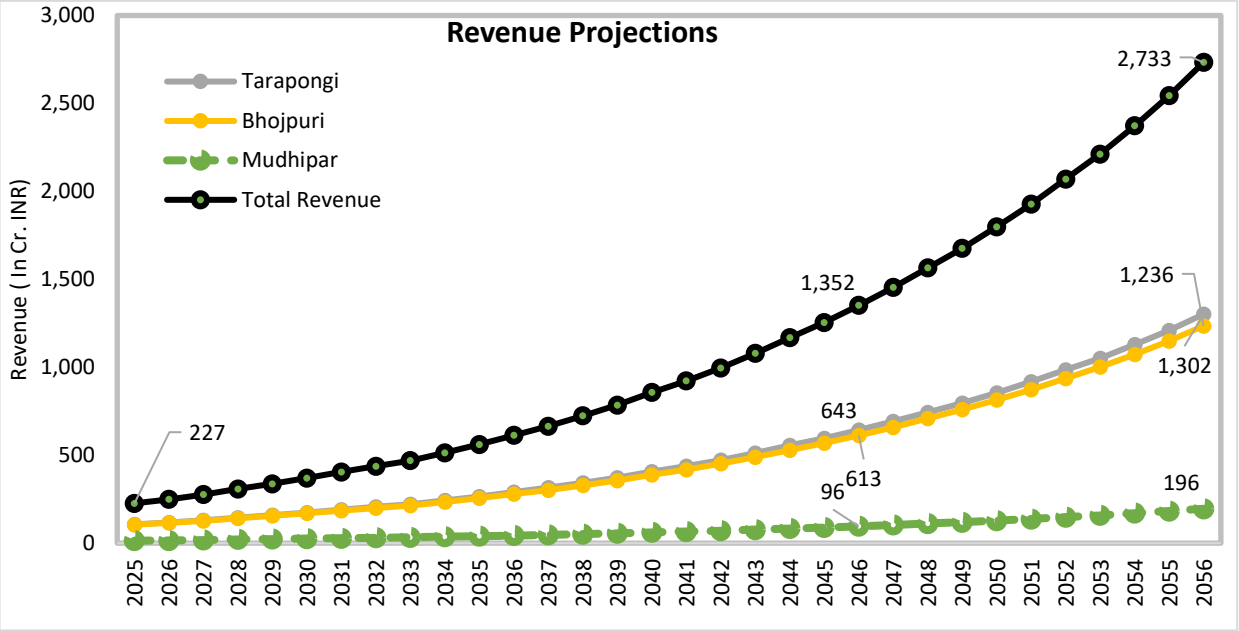

Figure 7-3 : Toll Revenue Projections

Overloading Analysis

7- day axle load survey data (as part of technical due diligence) has been provided by the technical consultant of the client which has been analysed to understand the extent of overloaded vehicles

Table 7-17: Overloading Analysis for Project Road Toll Plazas

Mode	Sample-All Commodities (a)			Overloaded(>20%)-(b)			%ge Overloaded(>20%)-(b/a)			Final %ge Overloaded(>20%) after applying Factors		
	Tarpongi	Bhojpuri	Mudhipar	Tarpongi	Bhojpuri	Mudhipar	Tarpongi	Bhojpuri	Mudhipar	Tarpongi	Bhojpuri	Mudhipar
LCV	1335	597	505	13	4	23	1.0%	0.7%	4.6%	0.2%	0.1%	0.2%
2AT	508	701	178	28	19	5	5.5%	2.7%	2.8%	0.7%	0.2%	0.1%
3AT	543	229	173	73	22	25	13.4%	9.6%	14.5%	0.7%	0.9%	0.6%
MAV	3688	4574	2483	846	1010	873	22.9%	22.1%	35.2%	3.6%	3.1%	2.6%

As observed from the seven-day axle load analysis, around 13.4% of 3A trucks and 22.9% of the MAVs are above the 20% overloading limit at Tarpongi. Similarly, around 9.6% of 3A trucks and 22.1% of the MAVs are above the 20% overloading limit at Bhojpuri, while 14.5% of 3A trucks and 35.2% of the MAVs exceed the 20% limit at Mudhipar.

However, after excluding commodities such as fruits and vegetables, petroleum products, chemicals and gas, heavy machinery, and industrial equipment—which have a strong association with the project road and OD pairs with a lead greater than 500 km—and applying a 25% adjustment factor to the final overloading numbers, the revised percentage of vehicles exceeding the 20% overloading limit is significantly reduced. The adjusted figures indicate that the overloading percentage stands at around 0.7% for 3A trucks and 3.6% for MAVs at Tarpongi, 0.9% for 3A trucks and 3.1% for MAVs at Bhojpuri, and 0.6% for 3A trucks and 2.6% for MAVs at Mudhipar.

Based on the surveys conducted, there is potential for collecting overloading revenue. However, the presence of alternate routes makes the implementation of overloading revenue collection less feasible

Conclusion

Consultant recommended Net Traffic growth for the period FY-2025 to FY-2046 at 4.72% for the overall project after considering all the possible risks on the project and future growth opportunities which were detailed in previous chapters and in the Executive summary. The Toll revenue growth is projected at a CAGR% of 8.86% for the period between FY25 to FY46.

CHAPTER 8

Annexures

8. Annexures

Table 8-1 and 8-2 represents Daily traffic and revenue data for Tarapongi and Bhojpuri Toll Plazas from FY23 (October) to FY25 (November), covering ETC, cash, and exempt traffic.

1 Executive Summary

Project overview

Project road Gandhidham-Mundra is a 4-lane, 71.400 kms long stretch with 8.730 kms Anjar bypass, on national highways (NH) 8A/41 which connects Gandhidham and Mundra. Project road gives connectivity to Mundra port & Kandla Ports in the west region. The project stretch has one toll plaza by the name of Mokha which lies at the chainage of km 44+500 near Mokha Village. Most of the traffic is originating/destined to Mundra port. Around 61% of the truck is container trucks.

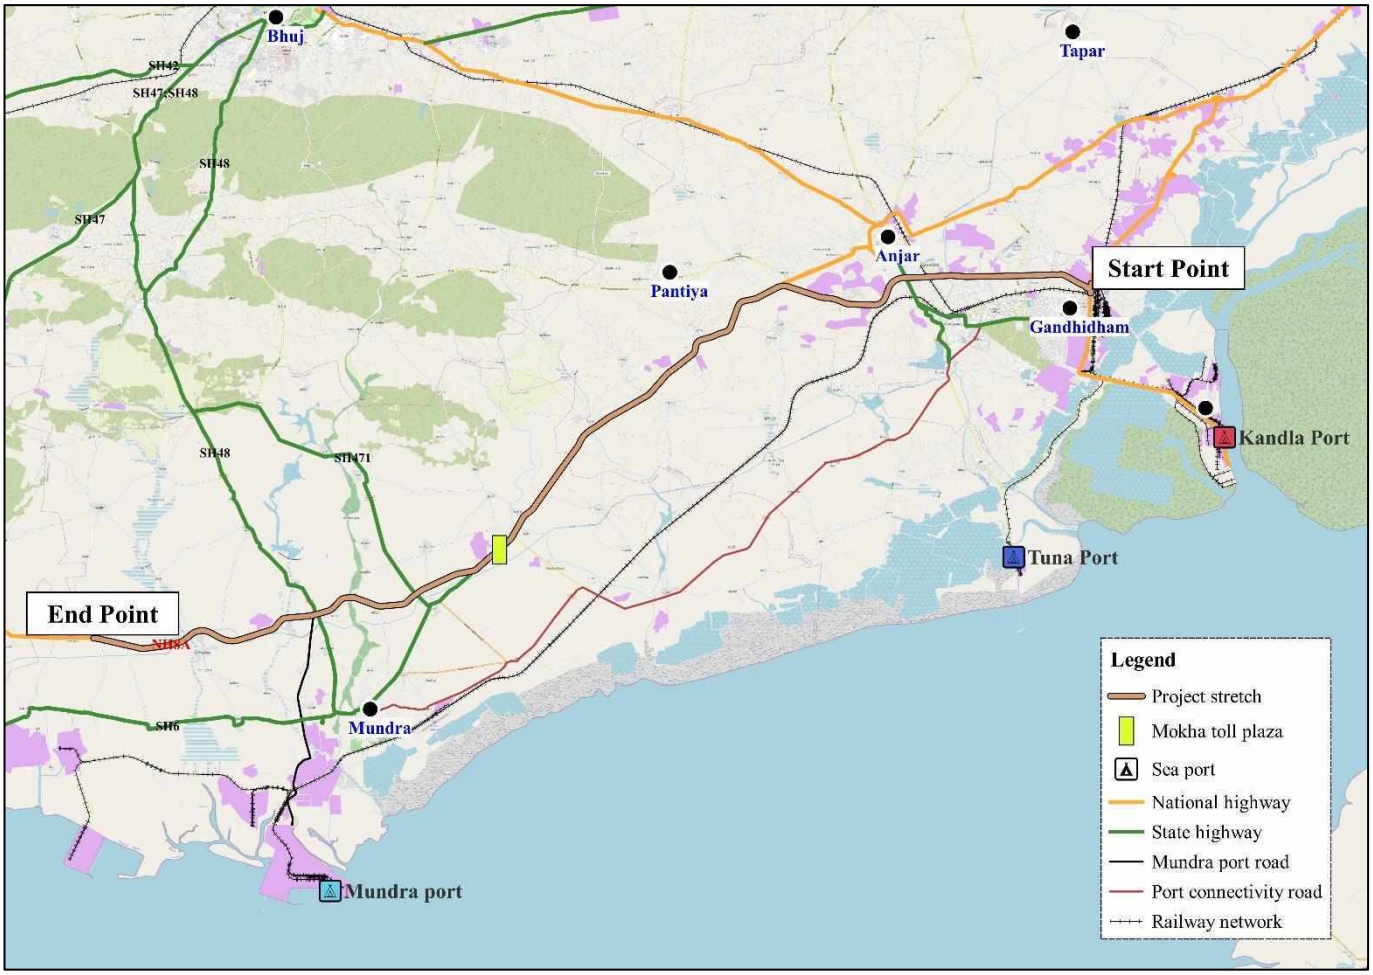

Figure 1-1: Project Road

Salient growth features and traffic generators

Container traffic holds major share around 61% in the overall traffic. Project road gives connectivity to two important seaports in the region which are Mundra Port and Kandla Port. Mundra Port, located in Gujarat, India, is the largest commercial port in the country and a critical hub for container traffic. It handles a significant volume of cargo, including containers, dry bulk, liquid bulk, and automobiles. The port's strategic location on the western coast of India allows it to serve the vast hinterland regions, including the National Capital Region, Gujarat, Punjab, Rajasthan, and Madhya Pradesh. Mundra Port operates five container terminals across 12 berths, with a combined capacity of 9.5 million TEUs (twenty-foot equivalent units). India’s container traffic decadal growth (FY14-FY24) is around 7.7% and Mundra port’s container traffic decadal growth (FY14-FY24) is around 12.0%.

Second most carried commodity is tiles and ceramics, which is around 5.3%. The Morbi Ceramic Cluster, located in Gujarat, India, is one of the largest and most significant ceramic industry clusters in the world. It is situated about 250 km from Ahmedabad and is renowned for its extensive production of ceramic products. The cluster comprises over 600 units, producing a wide range of items including wall tiles, floor tiles, vitrified tiles, polished glazed vitrified tiles, and sanitary ware.

Traffic volume and composite of vehicles

Traffic Survey Data

The following table shows the TVC seven-day traffic count of Gandhidham (Kandla)-Mundra Port section of NH-8A/41 according to the Traffic Consultant:

Table 1-1: Average Daily Traffic (ADT) from Traffic Volume Count Survey

Date	Days	Car	LCV + 2 Axle	3-axle	MAV	Vehicles	PCUs

Historical traffic data

The chart below shows the average daily traffic on Gandhidham-Mundra stretch from April 2022 to November 2024.

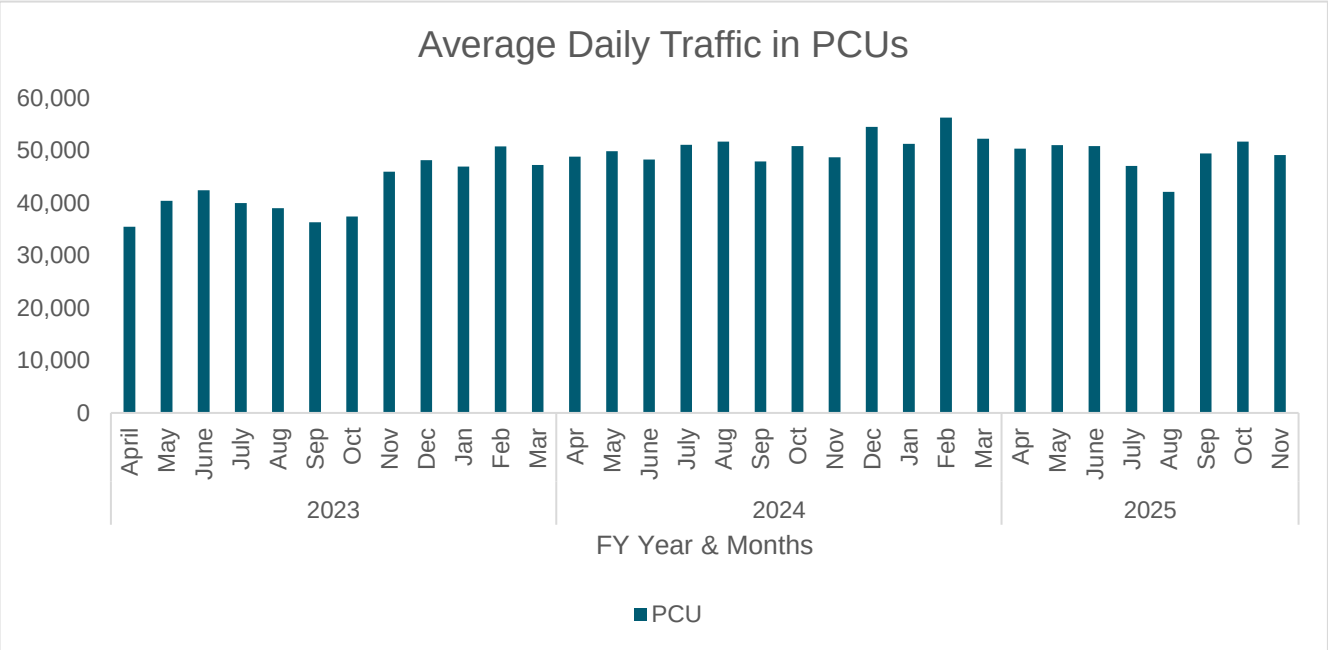

Figure 1-2: Historic Monthly Average Daily Traffic (MADT) in PCU

Source: Crisil Intelligence

Overloading scenario on the project stretch

To ascertain the quantum of overloading, a seven-day axle load survey was done by the technical consultants of the client. The results of axle load survey provided by the client, reveal that overloaded vehicles form a sizeable share of vehicles across categories. As per the survey, 41% of the MAVs, 40% of 3 axle and 3% of the 2 Axle vehicles are overloaded (considering more than 5% overload than permissible limits).

Tiles, Wood, Rice and Coal are key commodities which are overloaded.

As per discussions with the client, it is proposed that overloading will be levied on 25% of MAV and 3 Axle vehicles which are overloaded for more than 20% of the threshold and applied to the traffic which is travelling with trip length of less than 350kms and excluding commodities like fruits & vegetables, petroleum products and machinery. The quantum of vehicles for charging overloading penalty is decided after considering the practical numbers which can be charged per lane per hour. The revenue potential is arrived at, by considering an overloading levy equivalent to 1x of single journey toll rates.

Following table shows the overloading scenario for commercial vehicles on the stretch.

Table 1-2: Overloading survey Analysis

Direction	Vehicle Category	Sample	>5% overload	>20% overload	>5% overload	>20% overload
Overall	MAV	723	296	78	41%	11%
Overall	2A	107	3	0	3%	0%
Overall	3A	111	44	11	40%	10%
Gandhidham-Mundra	MAV	391	161	52	41%	13%
Gandhidham-Mundra	2A	36	2	0	7%	1%
Gandhidham-Mundra	3A	51	30	9	58%	17%
Mundra-Gandhidham	MAV	331	134	26	41%	8%
Mundra-Gandhidham	2A	71	1	-	1%	0%

Tollable Length and Toll Rates

In terms of tollable length of 78.500 Km, includes road length of 61.881 Kms (excluding 0.7889 km of structure) and Anjar bypass length of 8.730 kms. In India, toll rates are as per notification by the Ministry of Road Transport and Highways in the National Gazette. The present toll rates are determined with reference to the published base toll rates and are adjusted annually at the beginning of each fiscal year equal to 40% of the movement in the wholesale price index in December of the preceding year plus a fixed 3%.

As per Gazette notification dated 05.12.2008, under National Highways Fee (Determination of Rates and Collection) Rules 2008 [GSR 838 (E)] and as per new gazette [S.O. 3272(E)] notification for the Mokha Plaza in July 2023, the per km toll rates applicable from 2007/08 for normal tolling length and permanent structure, the revision basis and concessions are provided

Toll rates at Mokha Toll Plaza, calculated as per schedule-M data, applicable until March 2025 (2024-25) are as provided below:

Table 1-6: Toll Rates

Type of vehicle	Single Journey	Return Journey	Monthly Pass	Commercial Vehicle Discount
Car/Jeep/Van	120	180	4,050	60
LCV	195	295	6,545	100

2 Overview of project stretch

Project stretch delineation

Project road Gandhidham-Mundra is a 4-lane, 71.400 kms long stretch with 8.730 kms Anjar bypass, on national highways (NH) 8A/41 which connects Gandhidham and Mundra. Project road gives connectivity to Mundra port & Kandla Ports in the west region. The project stretch has one toll plaza by the name of Mokha which lies at the chainage of km 44+500 near Mokha Village.

Table 2-1: Details of the road stretch

Project stretch	State	Toll plaza	Length (km)
Gandhidham (Kandla) to Mundra Port section of NH-41 (from Existing Km 0+000 to Existing Km 71+400) in the State of Gujarat	Gujarat	Mokha	71.4

Industrial profile

Kutch district has several key industrial areas that contribute significantly to its economy. Major industrial areas are developed by Gujarat Industrial Development Corporation (GIDC), which are in Gandhidham, Mundra, Bhuj, Mith Rohar and Anjar. Kutch district is home to a diverse range of industries such are cement industry, agro based, chemical, salt production, power industry, textile, etc. The Kandla Special Economic Zone (KASEZ), located in the

Kutch district of Gujarat, is one of India's most prominent SEZs. with area about 1000 acres with 318 operational units. Hosts a variety of industries, including textiles, chemicals, engineering goods, etc.

Kutch produces nearly 75% of Gujarat's minerals, including bauxite, China clay, lignite, and limestone. Industrial areas along the project road and major industries in the region is presented in the below figure.

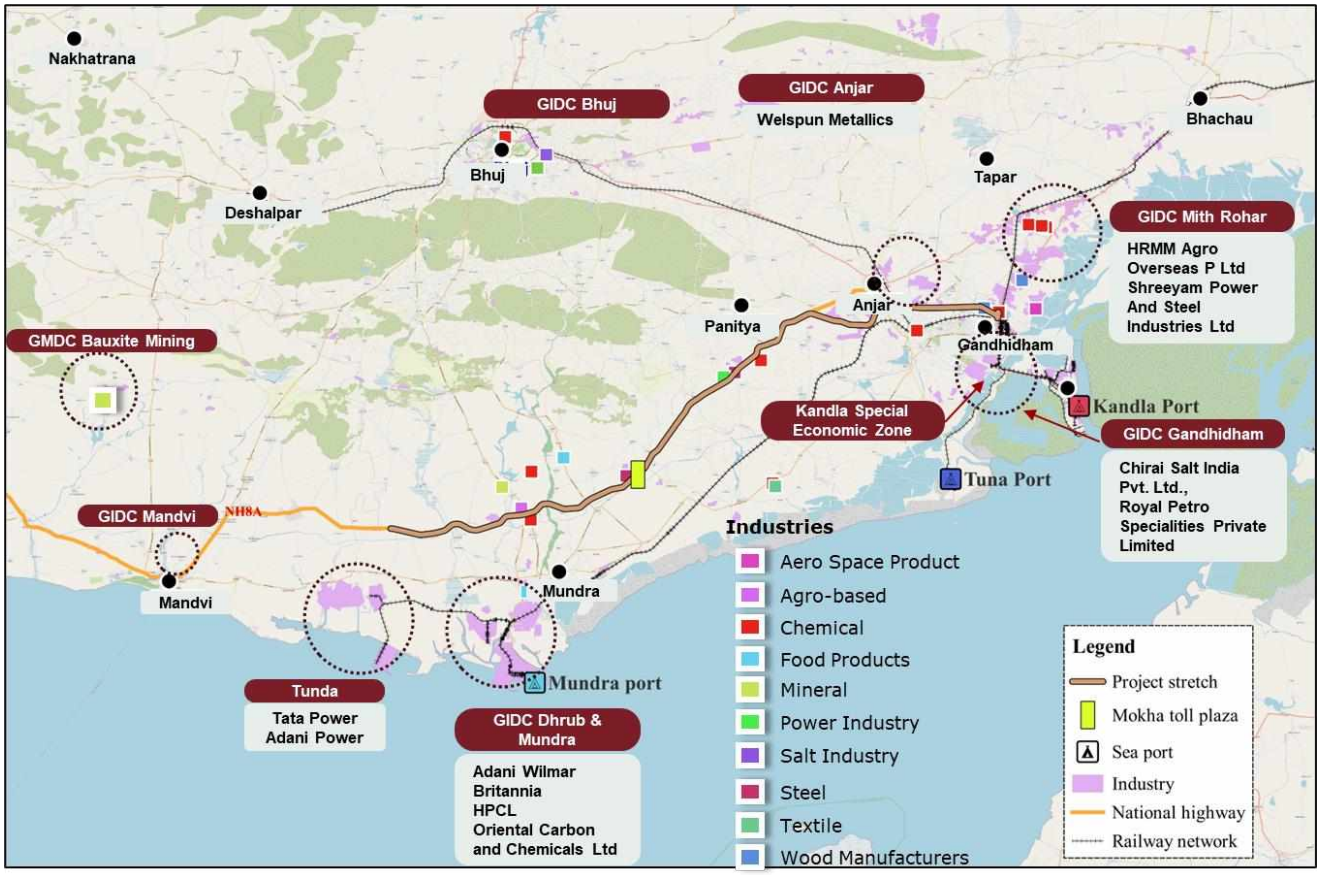

Figure 2-3: Industrial areas

Source: Open Street Map, Crisil Intelligence

Plenty of Warehouses are in the project influence are especially near Mundra port, Gandhidham, Anjar region. These warehouses cater to store Agro products, Plywood, FMCG, Iron & Steel, Pharmaceuticals commodities. Warehouses along the project road is presented in below figure.

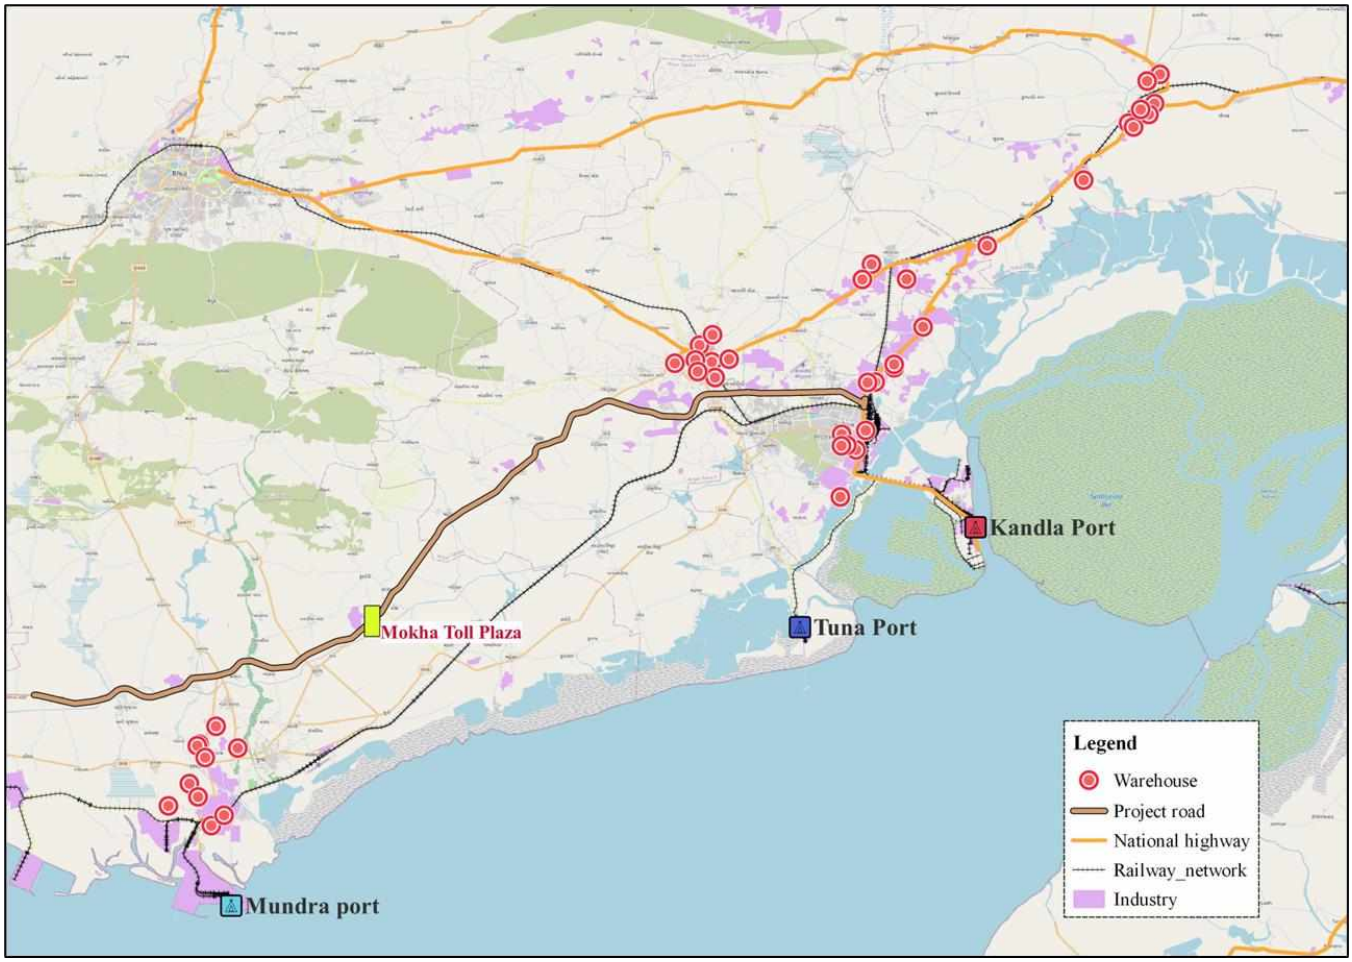

Figure 2-4: Warehouses along project road

3 Primary Data Collection & Analysis

General

Primary traffic surveys, i.e. Traffic volume count and Origin Destination surveys were collected on the project road to understand the traffic and travel pattern of vehicles plying on the project road.

For the present study, seven days video-based traffic volume count and one day origin destination survey conducted at the toll plaza location on the project road. The schedule of the traffic surveys carried out as part of the study on the project road are presented in the below table and figure.

Table 3-1: Type of Survey & Schedule

Location	Type of Survey	Survey Duration	Survey Date
Mokha Toll Plaza	Traffic Volume Count (TVC) Survey	7 Days	28th July-2024 to 3rd August-2024
	Origin-Destination (O-D) Survey	1 Day	31st July 2024
	Local District Count (LDC) Survey	1 Day	31st July 2024
Vadala Junction	Turning Movement Count (TMC) Survey	1 Day	30th July 2024
Gandhidham		1 Day	3rd August 2024
Pragpar		1 Day	4th August 2024
Vadala-Luni Road	Origin-Destination (O-D) Survey	1 Day	31st July 2024

Traffic Characteristics

The seven days traffic volume count was analysed to get existing traffic intensity, daily variations, and traffic composition.

The vehicle classification and there PCU values as suggested in IRC: 64-1990 are presented in **Table 3-2**.

Table 3-2: PCU Factors-IRC:64-1990

Mode	PCU
Car/Jeep	1.0
Two-Wheeler	0.5
Three-Wheeler	1.0
Minibus/School Bus	1.5
Bus (Govt/Pvt)	3.0
Mini LCV	1.0
LCV	1.5
2-Axle	3.0
3-Axle	3.0
MAV (4-6 Axles)	4.5
HME/OSV	4.5
Agricultural Tractor	1.5
Agricultural Tractor with Trailer	4.5
Cycle	0.5
Cycle Rickshaw	2.0
Animal Drawn Crat	6.0

Source: IRC:64-1990

The average daily tollable traffic volume at the toll plaza locations were analysed. The summary of ADT in terms of vehicles and PCUs is presented in table.

Table 3-3: Average Daily Traffic (ADT) for the Project Section

Mode	Gandhidham to Mundra	Mundra to Gandhidham	ADT
Car	817	843	1,660
Minibus	12	11	23
Bus	73	74	147
3-Ax Bus	0	0	0
Mini LCV	279	281	560
LCV	97	95	192

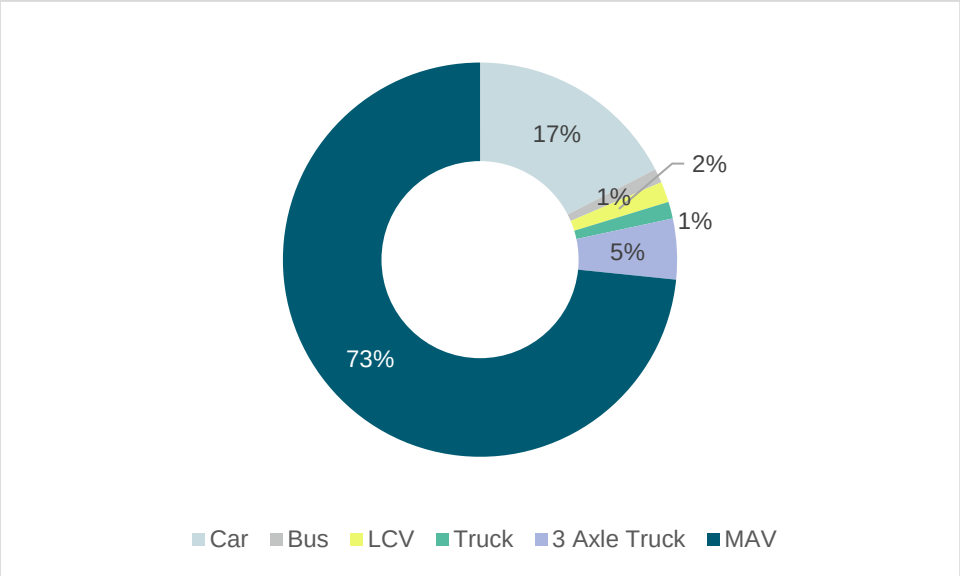

Figure 3-2: Tollable traffic composition (%)

An analysis of TVC traffic at Mokha Plaza is presented below.

- Passenger vehicles constitute 19% of the tollable traffic and Goods 81% of the tollable traffic in vehicle terms.
- MAV is having highest share with around 73%, followed by 3 Axle truck with 17% share.
- Average Daily traffic is about 12,738 and 47,473 in traffic vehicles and PCU terms respectively.

TVC survey data for the seven-day period is presented in the below table.

Table 3-4: Daily traffic volume at Mokha Plaza based on TVC survey

Date	CAR/Jeep/Van	LCV	2-Axle	3-Axle	MAV	OSV	Total
7/28/2024	2,155	151	215	608	9,614	0	12,743

Origin-Destination (OD) and Commodity Analysis

Origin-Destination survey was carried out at Mokha Plaza for 24-hours, by roadside interview method as described in IRC: 102-1988. A random sampling approach was employed to interview both passenger and freight vehicles traversing the project road at the toll plaza locations. The survey aimed to gather information on various aspects, including origin, destination, frequency of trips, purpose of travel and for freight vehicles, the type of commodity being transported.

The regional distribution of tollable vehicles at the toll plaza locations has been estimated based on OD matrices is presented in below table and figure.

The project influencing states will provide an overview of the factors likely to influence the pattern of economic development and hence the flows and volumes of traffic on the project road.

The key influencing regions from the origin destination survey are Mundra, Gandhidham, Ahmedabad and Morbi for passenger traffic and for goods traffic Mundra, Gandhidham, Morbi and Rajasthan. Regional distribution for passenger traffic and goods traffic is given in the below table.

Based on the O-D survey analysis insights, it was observed the in goods most of the traffic movement was towards/starting from Gandhidham region, it was observed through site visit and interactions with various stakeholders like transporters, warehouse establishments, the commodities movements which are travelling from states Rajasthan, Delhi, Haryana and Punjab and beyond are getting containerised at Gandhidham region (Gandhidham has plenty of warehouse's), potentially transported through a hub and spoke. To capture this traffic, consultants analysed Origin-Destination survey data of Samakhiyali Plaza model (additional Inscope traffic from S is considered for WDFC Impact), which is located after Gandhidham. Samakhiyali OD insights is presented in annexures.

Table 3-5: Regional Distribution in % for passenger traffic

Region	% Influence
Mundra	49.9%
Gandhidham	40.2%
Ahmedabad	4.4%
Morbi	1.6%
North India	1.2%
Other parts of Gujarat	0.7%
Rajasthan	0.7%
Central & East India	0.6%
South Gujarat	0.6%
Maharashtra & South India	0.2%
Total	**100%**

Source: Crisil Intelligence

Table 3-6: Regional Distribution in % for goods traffic

Region	% Influence
Mundra	50.0%
Gandhidham	17.6%
Morbi	13.2%
Rajasthan	6.2%
North India	5.1%
Ahmedabad	3.8%
Central & East India	1.7%
Maharashtra & South India	1.2%
South Gujarat	0.8%
Other parts of Gujarat	0.3%
Total	**100%**

Source: Crisil Intelligence

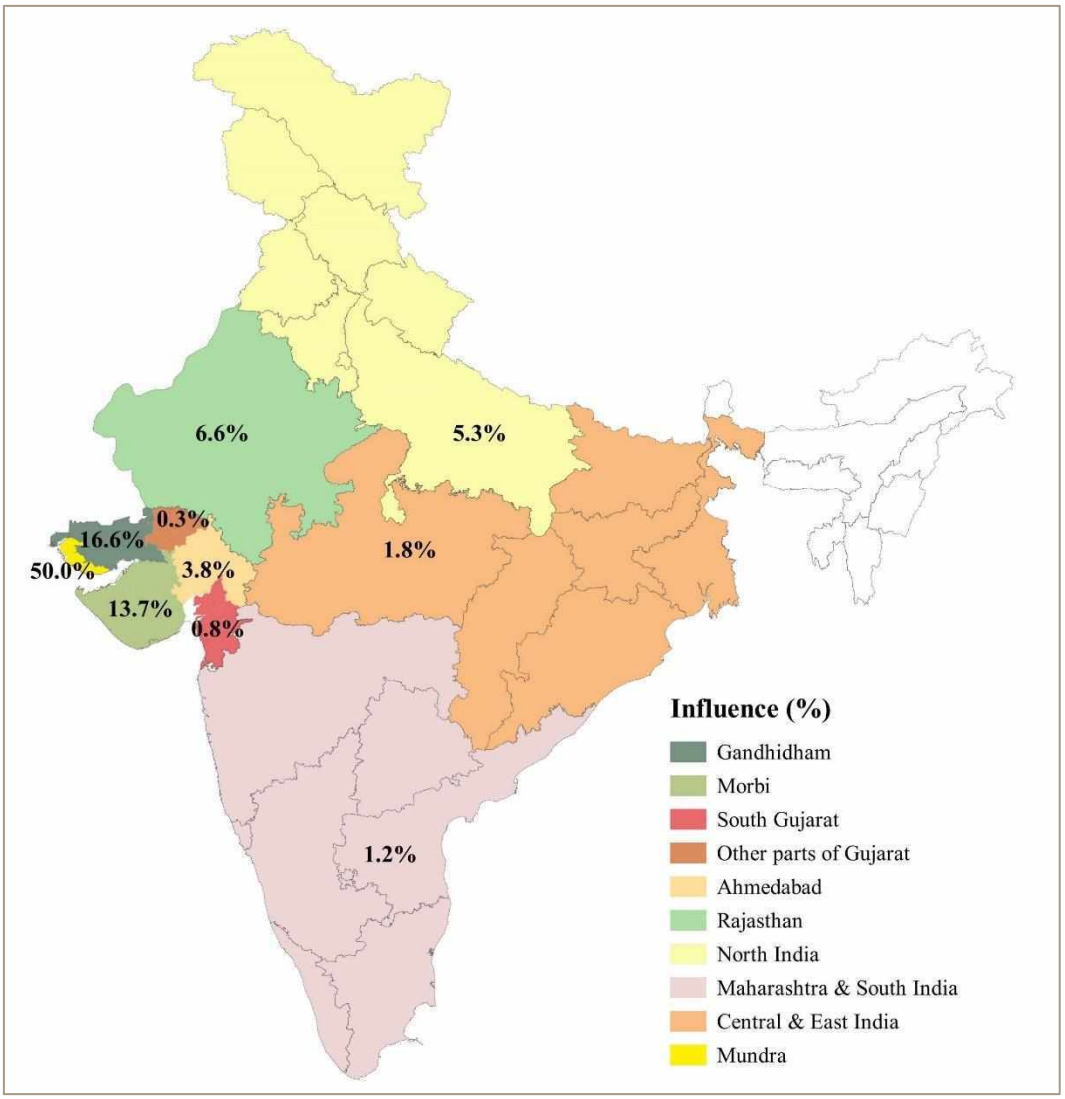

Figure 3-3: Regional Distribution for MAV traffic (%)

Source: Open Street Map, Crisil Intelligence

Passenger Traffic

- **Mundra** contribute to 49.8% car traffic and followed by **Gandhidham** with 41.7% region, indicating the more local movement.
- **Mundra-Gandhidham and Mundra-Anjar** and vice versa are the major OD pairs in car traffic**.**

Freight Traffic

- **Mundra** contribute to 50.0% car traffic and followed by **Gandhidham** with 16.3% region of MAV traffic. Morbi region contribute to 13.7% traffic.
- **For Container traffic, Mundra, Gandhidham and Morbi** region contribute to 83% of MAV traffic.
- **For Tiles & Ceramics commodity traffic, Mundra, Gandhidham and Morbi** region contribute to 82% of MAV traffic.
- **For Agricultural produce (Majorly Rice) commodity traffic apart from top regions like Mundra, Gandhidham and Morbi region, North India** region contribute 6.9% of traffic.

.

Commodity Distribution

Analysis was carried out to understand the various freight vehicles being used to transport different commodities. Table below presents the commodity distribution for Mokha Plaza.

Table 3-7: Commodity Distribution (in %) for Mokha Plaza

Commodity	LCV	2 Axle Truck	3 Axle Truck	MAV	Total
Container	45.2%	66.4%	63.8%	61.0%	61.0%

Source: Crisil Intelligence

- The analysis of freight movement across the toll plaza reveals that the major commodities being transported include container, tiles & ceramics, Agri produce and Consumer foods.
- Reason for higher container traffic is due to the project road connects the Mundra port, which is the largest commercial port in India, which has handled 7.4[1] million TEUs of container traffic in FY 24.
- From OD it has been evident that most trips (especially agri produce) are ending at Gandhidham, due to the presence of warehouses around the Gandhidham region, the commodities are getting containerised and potentially transported through a hub and spoke model.
- Around 64% 3 Axle Trucks traffic carry container, followed by 5.6% of agricultural produce.
- Around 61% MAV traffic carry container, followed by 5.6% of tiles and ceramics.

Source: Crisil Intelligence

- For Gandhidham-Mundra direction, container traffic is slighter higher than the Mundra-Gandhidham direction. agri produce, followed by tiles & ceramic products among the top commodities.
- For Mundra-Gandhidham direction, tiles & ceramics, followed by consumer foods among the top commodities.

Container is the topmost commodity on the stretch

Container traffic holds major share around 61.0% in the overall traffic. Project road gives connectivity to two important seaports in the region which are Mundra Port and Kandla Port. Mundra Port, located in Gujarat, India, is the largest commercial port in the country and a critical hub for container traffic. It handles a significant volume of cargo, including containers, dry bulk, liquid bulk, and automobiles. The port's strategic location on the western coast of India allows it to serve the vast hinterland regions, including the National Capital Region, Gujarat, Punjab, Rajasthan, and Madhya Pradesh. Mundra Port operates five container terminals across 12 berths, with a combined capacity of 9.5 million TEUs (twenty-foot equivalent units). India’s container traffic decadal growth (FY14-FY24) is around 7.7% and Mundra port’s container traffic decadal growth (FY14-FY24) is around 12.0%.

Tiles & Ceramics commodity accounts for nearly 12.6% of the total container traffic and 5% of the total traffic on the project stretch

The Morbi Ceramic Cluster, located in Gujarat, India, is one of the largest and most significant ceramic industry clusters in the world. It is situated about 250 km from Ahmedabad and is renowned for its extensive production of ceramic products. The cluster comprises over 600 units, producing a wide range of items including wall tiles, floor tiles, vitrified tiles, polished glazed vitrified tiles, and sanitary ware.

Morbi's ceramic industry is known for its advanced technology and high-quality products, with many units utilizing state-of-the-art equipment imported from around the globe.

The Morbi Ceramic Cluster provides direct employment to about 68,000 people and indirectly supports many more through related businesses and professions. The industry is a major contributor to the local economy, fostering growth and development in the region. The cluster's products are not only supplied domestically but also exported to various international markets, enhancing its global footprint.

Overall, the Morbi Ceramic Cluster is a vital industrial hub that significantly contributes to India's ceramic production and export capabilities. Its continuous growth and adoption of new technologies ensure that it remains a key player in the global ceramic industry.

Export volumes recorded 28% growth on-year in fiscal 2024 with ceramic tiles exporters benefitting from certain favourable developments like lifting of the anti-dumping duty imposed by UAE on ceramic tiles from India. Meanwhile, despite the European Union announcing anti-dumping duty on ceramic tiles from India in 2023, the same is lesser for ceramic tiles from India as compared to tiles from competitors like Turkey and China giving India an added advantage with regards to expansion in exports to European nations. This is majorly on the back of superior quality tiles being produced in India at comparatively affordable prices. Globally, ceramic tiles import from India are well preferred due to these factors.

Going forward as well, we expect growth momentum to continue owing to continued cost competitiveness of Indian manufacturers as well as major global importers wanting to reduce their dependence on sole supplier i.e. China

In fiscal 2025, volume and value growth expected to be boosted by the growth in new real estate project completions, however replacement demand is estimated to continue its upward trajectory in fiscal 2025 as work from home for service sector continues to aid to overall tiles demand. Also, construction & completion of PMAY Urban to remain buoyant during the period as the government races to complete the scheme before the expected extended timeline.

Commodities carried by container traffic is provided in annexures.

4 Traffic Assessment of Project Stretch

General

This section summarizes the historical performance of the project section in order to understand baseline traffic patterns comprising of historical tollable traffic and revenue growth, traffic and revenue composition, trip distribution, trip factors, seasonality and trend of traffic over the available data set.

The historical tollable traffic and revenue data mode wise was made available by client from April 2022 till November 2024 and is presented in below table.

Table 4-1: Historical Traffic and Revenue Data Availability

Data Source	Type of Data	Period
ETC Data	Traffic & Revenue Data Vehicle Wise & Segment Wise	April 2022 – November 2024
IHMCL (Non ETC Data)	Traffic and Revenue Data Vehicle Wise (Cash & Exemption Data)	Nov 2022 to October 2024

Source: Client, Crisil Intelligence

MAVs contribute 91% of the Plaza traffic in terms of PCUs

Project road has seen steady growth in FY 24, however was dip in traffic this fiscal year of 25, showing negative growth of -0.2% in terms of PCU's (April-Nov YTD). The degrowth traffic is due reasons like cyclone Asna impact and excessive rainfall during the monsoon periods. The summary of historic tollable ETC traffic data from April 2022 to November 2024 is presented in below table.

Table 4-2: Historic Traffic

FY Year	Months	Cars	LCV	2-Axle	3-Axle	MAV	OSV	Vehicles	PCU

June 2023 data is adjusted for the cyclone Bijparjoy Impact (Data till 23rd June).
For August month data is considered till 25th august, rest of the days were affected by floods in Kutch region of Gujarat (Cyclone Asna).
Source: Client ETC Data, Crisil Intelligence

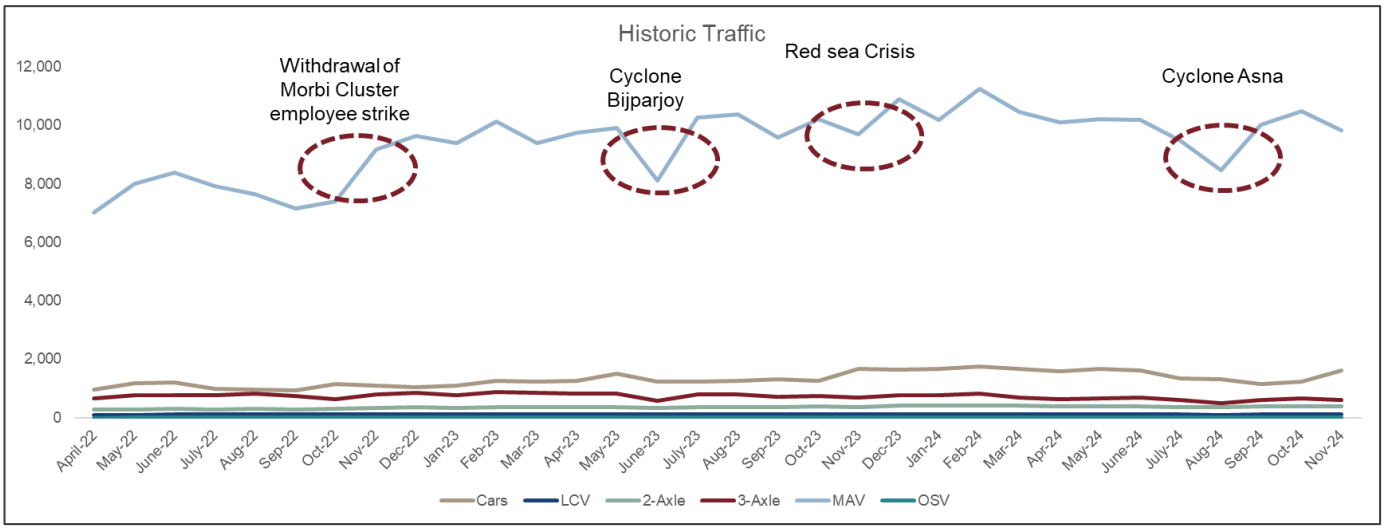

Figure 4-1: Historic traffic with events

Historic traffic has seen some changes in trend due to some events which has occurred during this period. Over the years Kutch region has witnessed cyclones, in June 2023 witnessed cyclone Bijparjoy and in last week of august 2024 Kutch region witnessed cyclone Asna. Traffic also depends on the ceramic cluster of Morbi region. Tiles & ceramics export has been fluctuating over the years due to various factors like antidumping, industry shutdowns, employee strikes. Mundra port also witnessed red crisis impact in October 2023.

Table 4-3: Historic traffic vehicle share (%) (April-Nov 2024)

Mode	Traffic Volume (Vehicles)	Traffic Volume (PCUs)	Share (%) - PCUs
Cars	1,447	1,447	2.9%
LCV	113	170	0.3%
2-Axle	375	1,125	2.3%
3-Axle	625	1,876	3.8%

Mode	Traffic Volume (Vehicles)	Traffic Volume (PCUs)	Share (%) - PCUs
MAV	9,988	44,948	90.6%
OSV	7	34	0.1%
Total	**12,557**	**49,600**	**100.0%**

Source: Client ETC Data, Crisil Intelligence

Based on the analysis of the Non ETC Data of the current fiscal year of FY 25, the cash component (% of ETC) is high for the car category which is around 3.2% and for rest of the categories it is negligible. In case of exemptions (% ETC), for car is significantly higher which is around 50%, for LCV it is around 38% and for MAV it is around 0.4% which is least among all vehicles. The cash & exemption (%) is presented in the below table.

Table 4-4: Cash & Exemption Traffic

Particulars	FY Year	Cars	LCV	2-Axle	3-Axle	MAV	OSV	Vehicles	PCU
ETC ADT (Apr-Oct)	FY 25	1,423	113	374	628	10,010	7	12,555	49,675
Cash ADT (Apr-Oct)	FY 25	46	0	0	0	0	0	46	46
Exemption ADT (Apr-Oct)	FY 25	721	43	4	2	24	1	795	916
Cash & Exemption ADT (Apr-Oct)	FY 25	767	43	4	2	24	1	842	962
Cash (%)		3.2%	0.1%	0.0%	0.0%	0.0%	0.0%

The Historic revenue trends suggest decrease in the revenue in FY 2025 when compared to FY 24 due to start of issuance of the Local commercial discount from June 2024 based on the new gazette notification which was published in July 2023.

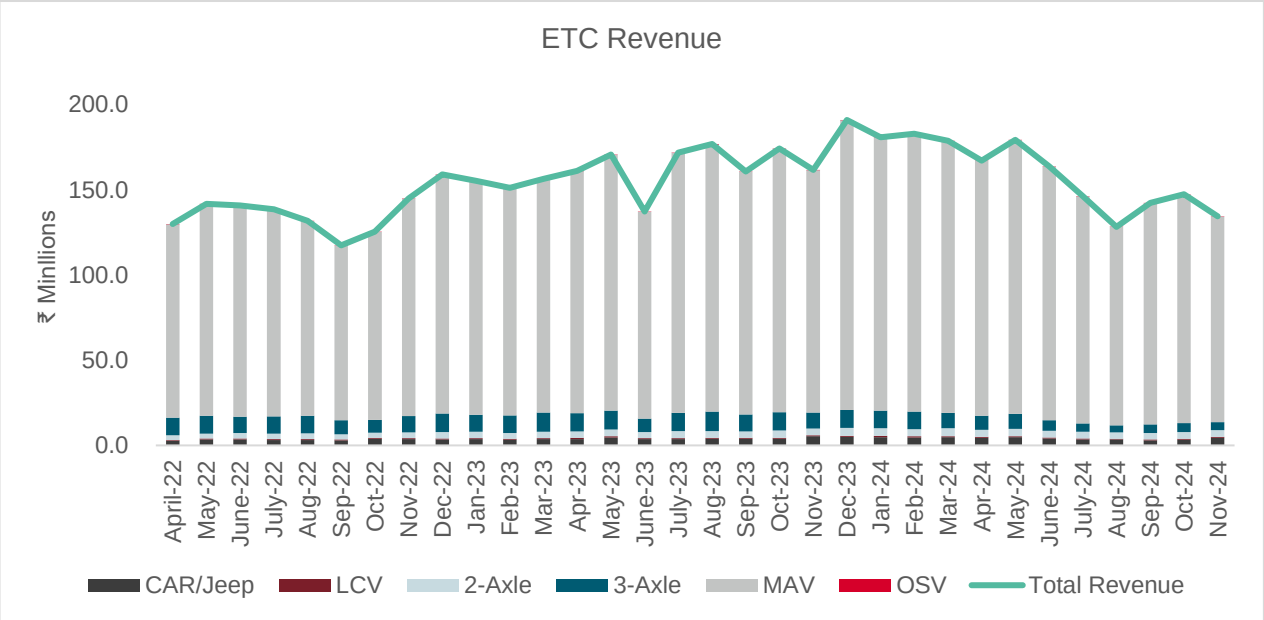

Figure 4-2: Historic Revenue

Source: Client ETC Data, Crisil Intelligence

Trip segmentation

National Highways Authority of India notified new gazette notification for the Mokha Plaza in July 2023 and as per toll rate revision order of FY 25, five types of toll tickets are being issued at Mokha Plaza, which are single journey, return journey, monthly pass, local personal pass, local commercial discount and exemptions. Apart from the notified ticketing, local pass for non-commercial (Discount MP) traffic is being issued at the toll plaza.

Table 4-7: Historic Trip Segmentation

FY Year	Months	Single	Return	LDC	Discount MP	Exemptions	Total
2024	Apr	60.13%	26.21%	0.00%	0.00%	13.67%	100.0%
	May	59.97%	27.52%	0.00%	0.00%	12.51%	100.0%
	June	62.90%	24.62%	0.00%	0.00%	12.48%	100.0%

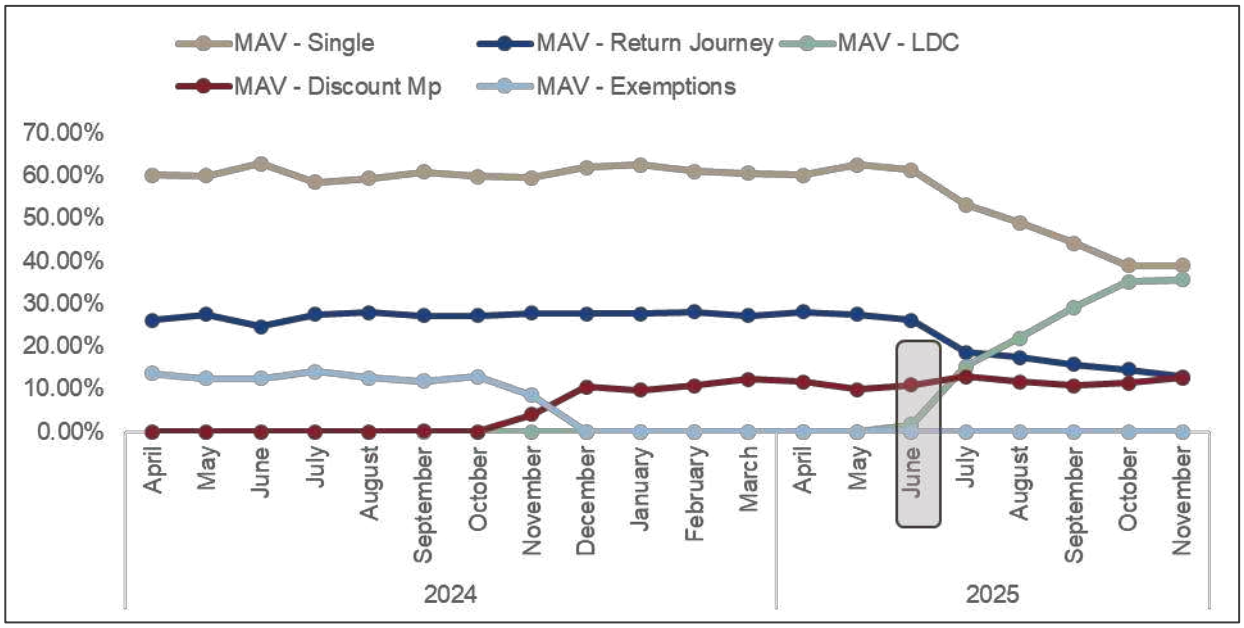

Figure 4-3: Trip Segmentation for MAV from April 2023 to November 2024

Source: Crisil Intelligence

The issuance of the Local Commercial Discount (LDC) started from June 2024 (Rate revision order for FY 25 implemented from June 3rd, 2024, instead of April 1st, 2024, due to modal code of conduct). Fee for commercial vehicle (excluding vehicles plying under National permit) registered in the district where the Toll Plaza falls shall be 50% of the specified rate for that category of vehicle provided no service road or alternative road is available for use of such commercial vehicles. Local Registered Vehicle (RTO Codes) for Kutch District is GJ 19 & GJ 39.

Prior to the new gazette notifications (notified in July 2023), Local Commercial Discount (LDC) toll ticket was not being issued. Local Commercial Discount (LDC) trips gradually increased from June 2024 1.5% to 35.6% in November 2024. Consultants predicts LDC trips will increase further and consolidate.

Estimation of Local Commercial Discount (LDC) trip segmentation is based on the following assumptions (data points).

- Estimated the share of local registered vehicles (GJ 19 & GJ 39) at Mokha plaza in the overall traffic.
- Analysed the nearby toll plaza LDC trip segmentation, which also has the same local registered vehicle plying (GJ 19 & GJ 39). Consultants has also looked at percentage universe of the local registered vehicles (GJ 19 & GJ 39) which is availing the Local Commercial Discount tickets in the total traffic (all registered vehicles). For example, in MAV 59% of vehicles at the plaza are local registered vehicles of the total traffic, 41% of traffic is availing local commercial discount tickets which suggest about 69% of local registered vehicles are availing local commercial discount tickets.

5 Base Traffic Estimation

Base Traffic Estimation

Traffic volumes on roads varies throughout the year, influenced by socio-economic activities in the surrounding regions. To accurately estimate the Annual Average Daily Traffic (AADT) for the road, it is crucial to account for these seasonal variations.

To achieve this, a seasonal correction factor is applied, which is derived from secondary data sources such as historical traffic data, fuel sales and similar indicators.

For base traffic (annual average daily traffic) estimation of the present study, the 8-months (Apr-24-Nov-24) of ETC traffic data were annualized using SCF factor of FY 24 ETC traffic data (excluding the Bijparjoy cyclone impact)to arrive at the annual average daily traffic (AADT) for FY 25. ETC AADT for the fiscal is expanded based on share of cash and exemption traffic, estimated from Non ETC Data, to arrive at total AADT for the fiscal.

The AADT estimation for the base case for FY25 is presented table below

Table 5-1: Base Traffic Estimation -FY25 AADT

Particulars	FY Year	Cars	LCV	2-Axle	3-Axle	MAV	OSV	Vehicles	PCU
ADT (Apr-Nov) *	FY 25	1,447	113	375	625	9,988	7	12,557	49,600
SCF	FY 24**	1.08	1.01	1.05	1.00	1.03	1.05		
AADT	**FY 25**	**1,549**	**115**	**393**	**624**	**10,242**	**8**	**12,930**	**50,894**
Cash (%)		3.2%	0.1%	0.0%	0.0%	0.0%	0.0%		
Exemption (%)		50.7%	38.2%	1.1%	0.4%	0.2%	11.7%		
Cash & Exemption (%)		53.9%	38.3%	1.1%	0.4%	0.2%	11.7%		
AADT	**FY 25**	**2,385**	**159**	**397**	**626**	**10,266**	**9**	**13,841**	**51,928**

**For August month data is considered till 25th august, rest of the days were affected by floods in Kutch region of Gujarat (Cyclone Asna)*
***June 2023 data is adjusted for the cyclone Bijparjoy Impact (Data till 23rd June).*

Source: Client-ETC & Non ETC Data

For estimating the base revenue, the toll rates applicable for FY 25 is multiplied with base year FY 25 ADDT traffic numbers by adopting the trip segmentation which is mentioned section 8 and Table 8-2.

Table 5-2: Base Revenue -FY25 AADT

Particulars	FY Year	Cars	LCV	2-Axle	3-Axle	MAV	OSV	Total

6 Key Influencing factors

Ports in vicinity

Mundra port and Kandla port are located on either side of the project road. Mundra port container traffic directly influences project road traffic.

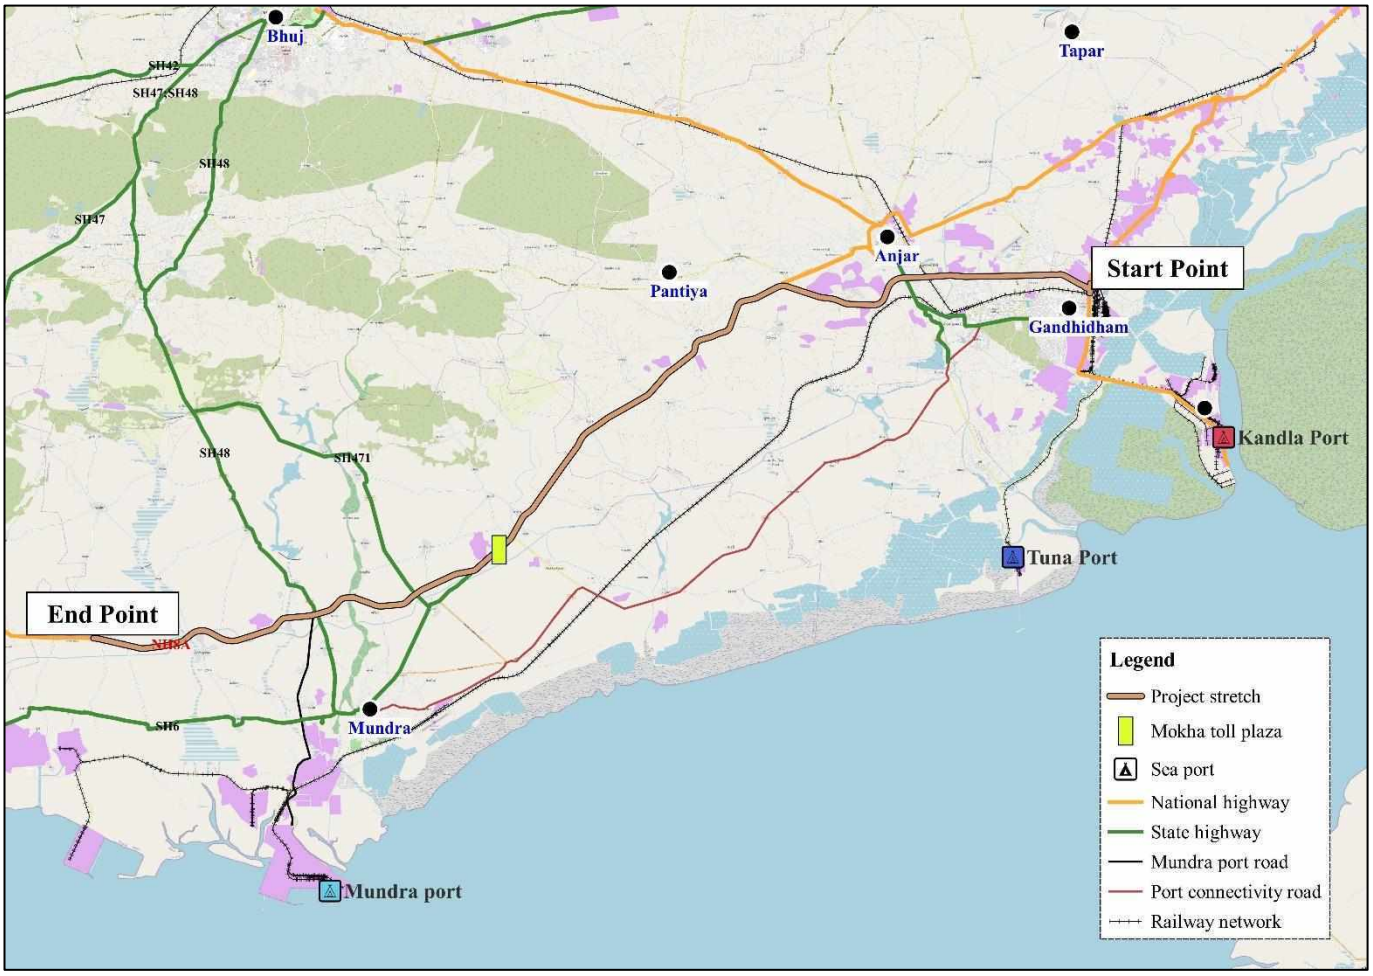

Figure 6-1: Location of Mundra port and Kandla port

Source: Open Street Map, Crisil Intelligence

Mundra Port

Mundra Port, located in Gujarat, is India's largest commercial port and handles a significant amount of container traffic. It is an all-weather port with state-of-the-art facilities for handling various types of cargo, including containers, crude oil, dry bulk, breakbulk, automobiles, and liquid cargo

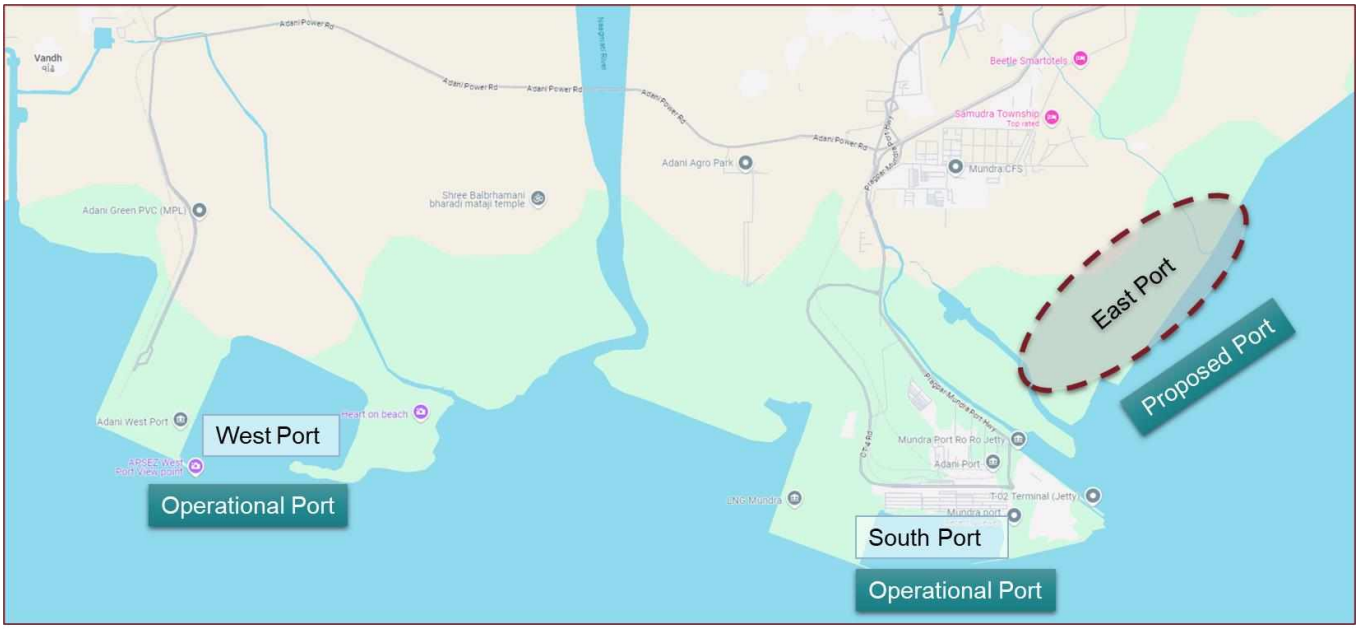

Figure 6-2: Layout Plan for Mundra port

Source: Google Maps, Crisil Intelligence

Mundra Port has cargo capacity of 264 MMT (million metric tons). It has total of 5 container terminals, 12 container berths with combined capacity of 9.5 million TEU's (Twenty Foot Equivalent Units).

Container terminal 1 (CT 1) commenced operation in 2003, operated by Mundra International Container Terminal Pvt Ltd (a unit of DP World), CT1 has a capacity of 1.3 million TEUs (Twenty-foot Equivalent Units) annually. The container terminal 2 or CT2 – Adani Mundra Container Terminal – with a city to handle 1.8 million TEUs is run by APSEZ itself. This terminal was originally designed to handle 1.3 million TEUs, but as demand grew, APSEZ converted an adjacent dry and break-bulk cargo handling terminal into a container handling facility some four years ago, adding 0.5 million TEUs of capacity. It began operation in 2007.

An equal joint venture between APSEZ and Terminal Investment Ltd, a unit of Mediterranean Shipping Co S A, the world's top container carrier by capacity, runs the container terminal 3 (CT3) – Adani International Container Terminal Pvt with a capacity to handle 3.1 million TEUs. It began operations in 2013. The 1.3 million TEU capacity container terminal 4 (CT4) – Adani CMA Mundra Terminal Pvt Ltd - is operated by an equal joint venture between APSEZ and CMA CGM S A. IT began operation in 2017. A new berth - T3 - with a capacity of 0.8 million TEUs is being commissioned to cater to the rising volumes at Mundra Port.

Figure 6-3: Container terminals at Mundra's south port

Historic container traffic in India and Mundra port

Decadal growth of container traffic in India has shown CAGR (FY14-FY24) of 7.7% with expansion across various major ports across India and western region. Mundra port has shown grown faster than India's container growth with CAGR (FY14-FY24) of 12.0% fuelled by capacity additions at Mundra port.

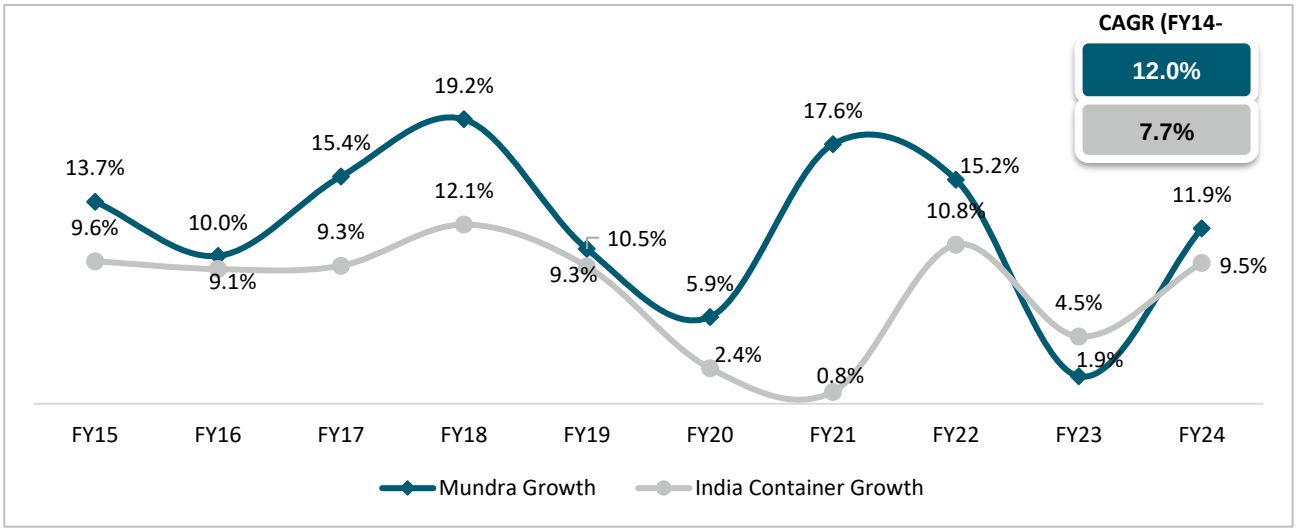

Figure 6-4: Mundra's container traffic vis-à-vis India's container traffic for last decade

Source: Crisil Intelligence

Mundra Port's container traffic has grown significantly more than other competitive ports like JNPT due to factors like its high operational efficiency, which includes quick turnaround times and effective container evacuation strategies, added capacity whenever the utilization has crossed 70% levels, invested heavily in modern infrastructure, including deep draft berths that can handle large vessels. In contrast, while JNPT (Jawaharlal Nehru Port Trust) remains a major container handling port in India, it has faced challenges such as congestion and limited expansion capacity.

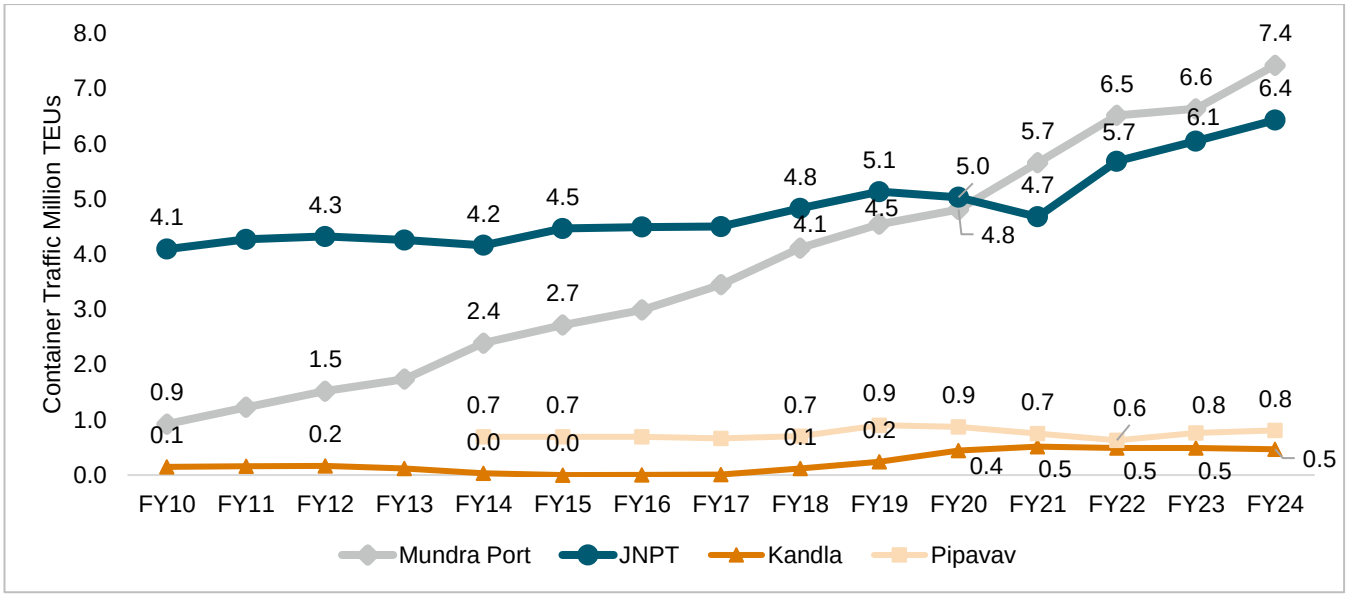

Figure 6-5: Container traffic at competing ports

Source: Crisil Intelligence

Approach for port traffic outlook

To estimate the port traffic outlook for the horizon years, consultants first examined India's container traffic growth over the last decade in relation to the country's GDP and calculated the GDP multiplier for container traffic. Forecasted India's container traffic based on this multiplier. Following this, analyzed the share of western ports and the core hinterland in India's overall hinterland traffic, as well as the share of individual ports within the core hinterland.

To assess the impact on Mundra's container traffic due to the upcoming container terminals at Tuna Tekra and Vadhwan ports, consultants estimated the projected share of competing ports on the core hinterland traffic. Finally, consultants evaluated the impact of railway developments, such as the Western Dedicated Freight Corridor (WDFC) and the Morbi Inland Container Depot (ICD), on road container traffic. The detailed approach for the port traffic outlook is illustrated in the chart below.

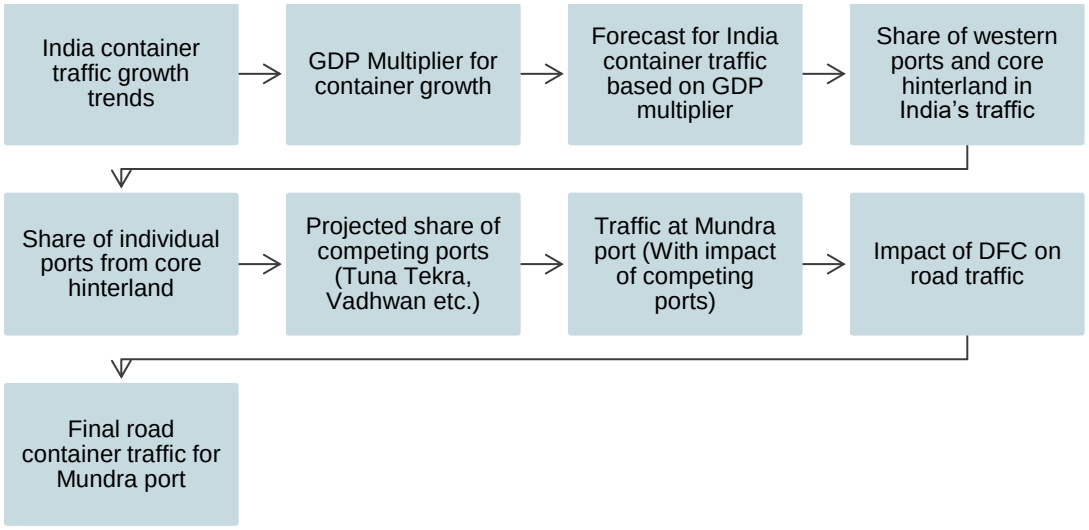

Figure 6-6: Approach adopted for port traffic outlook

Source: Crisil Intelligence

India container traffic growth trends

Consultants has investigated the India's container traffic from FY 2014 to FY 2024. Consultants has looked at the decadal growth of container traffic in India has shown CAGR (FY14-FY24) of 7.7%. India's container growth has been notable in recent years, driven by several key factors like

- India's expanding role in global supply chains has led to a rise in both exports and imports. This growth necessitates efficient logistics solutions, particularly containerized shipping.
- Programs like the Sagarmala Project and the Maritime India Vision 2030 aim to enhance port infrastructure and logistics capabilities.
- The rapid growth of e-commerce in India has transformed logistics and distribution channels.
- Investments in port infrastructure, such as the development of dedicated freight corridors and inland container depots, have improved the efficiency of cargo movement.
- India's strategic partnerships and trade agreements with countries like the UAE and the US have enhanced access to global markets, boosting containerized trade.

The overall economic growth in India has led to increased demand for goods, further driving the need for containerized transport

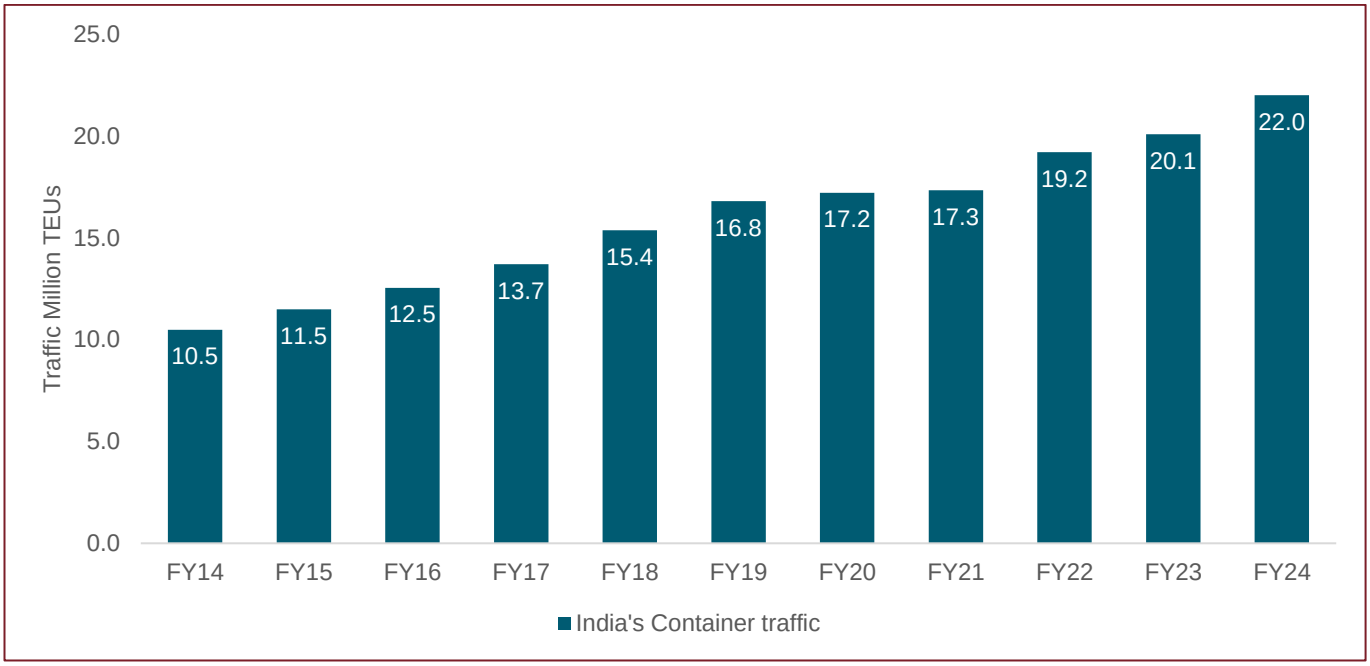

Figure 6-7: India's Container traffic

Source: Crisil Intelligence

GDP multiplier

India's Container traffic growth has shown close correspondence with respect with India's GDP growth. The multiplier between the India's GDP and container traffic growth used in the estimation of the future container traffic.

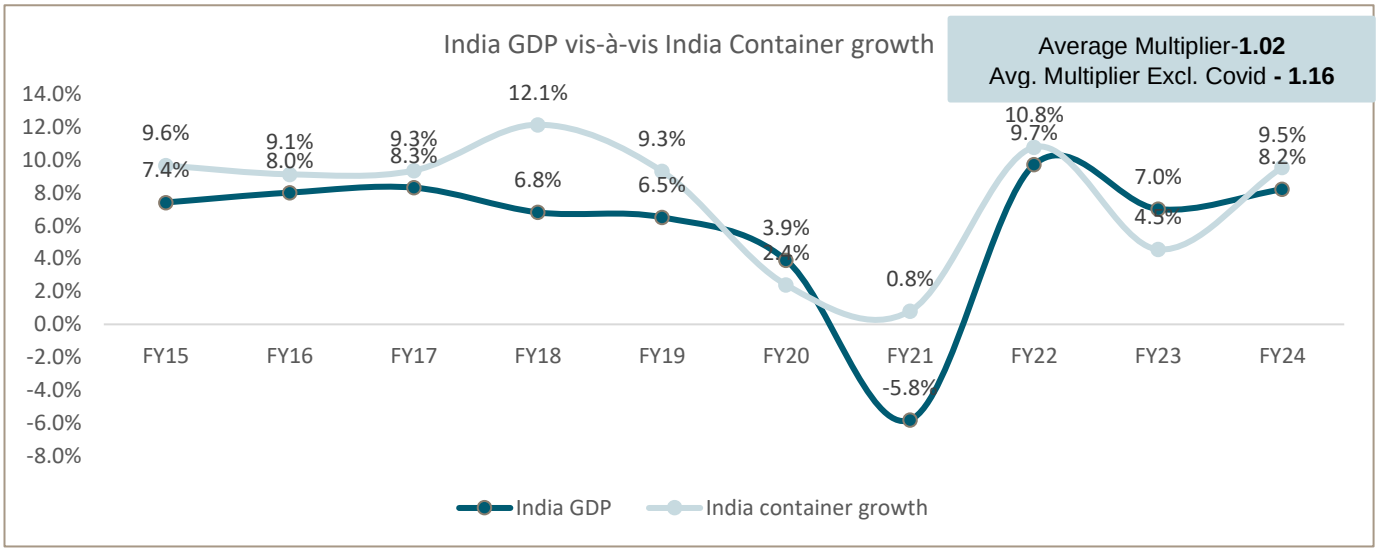

Figure 6-8: GDP Multiplier

Source: Crisil Intelligence

The historic average multiplier between India's GDP with container traffic is about 1.02 including the covid years and the average multiplier excluding covid years is about 1.16 and the same multiplier is used for next five years to estimate the container traffic growth and for horizon years multiplier is reduced gradually.

Table 6-2: GDP Multiplier

Particulars	FY26	FY27	FY28	FY29	FY30	FY31-FY35	FY36-40	FY41-45	FY46-50	FY51-55
GDP growth	6.7%	6.6%	6.6%	6.3%	5.7%	5.7%	5.3%	4.8%	4.3%	4.0%
Multiplier	1.16	1.16	1.16	1.16	1.16	1.13	1.05	0.89	0.71	0.54
Container growth	7.8%	7.7%	7.7%	7.3%	6.6%	6.4%	5.6%	4.3%	3.1%	2.1%

Source: Crisil Intelligence

Share of Western Ports

The container traffic share of the western ports over the years has remained the same, which is around ~70% of the overall India's container traffic share.

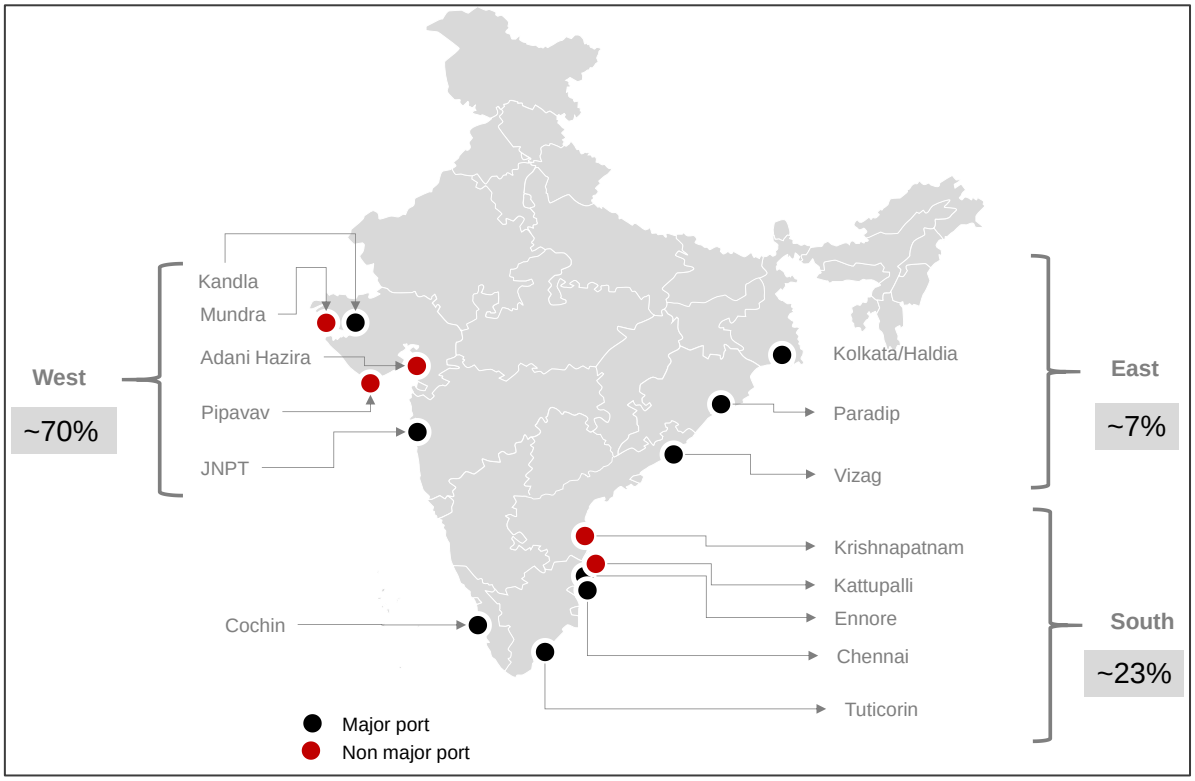

Figure 6-9: Western port share in India's Container traffic

Boxes represent share of region's ports in container traffic of India

Source: Indian Ports Association, Port websites, Industry, Crisil Intelligence

Impact of Upcoming Tuna Tekra and Vadhwan Ports on Mundra's Container Traffic

Tuna Tekra Port

At Tuna Tekra port, container terminal is being developed at a cost of approximately ₹4,244 crore (around $510 million) through a Public-Private Partnership (PPP) between DP World and the Deendayal Port Authority. Once completed, the terminal will have an annual capacity of 2.19 million TEUs (Twenty-foot Equivalent Units). The terminal will feature a 1,100-meter berth capable of handling next-generation vessels carrying over 18,000 TEUs. This state-of-the-art container terminal will cater to future trade demands from Northern, Western, and Central India, connecting these regions to global markets. The Project will be completed by FY 2027. It will start operation from FY 2028.

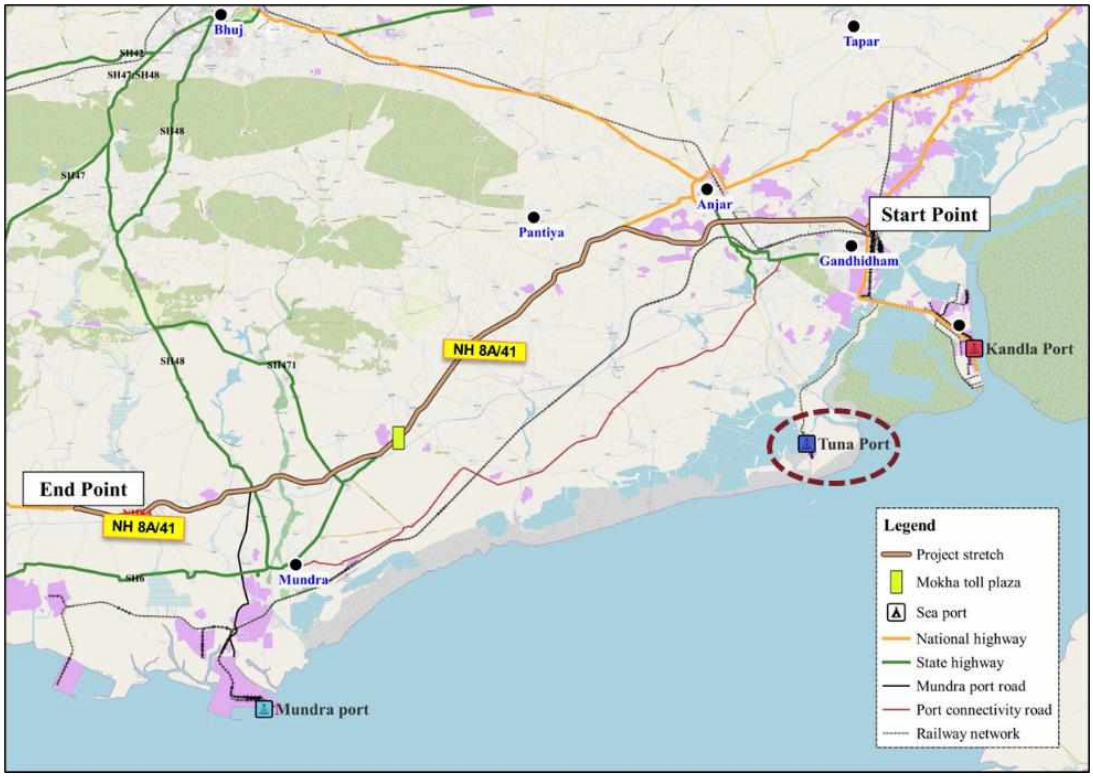

Figure 6-10: Location of Tuna Port

Source: Open Street Maps, Crisil Intelligence

Vadhwan Port

Vadhwan Port is a proposed deep-sea port located in Vadhwan, Palghar district, Maharashtra, India. The port is being developed by Vadhwan Port Project Limited (VPPL), a special purpose vehicle, with the Jawaharlal Nehru Port Authority (JNPA) holding a 74% stake and the Maharashtra Maritime Board holding 26%. The estimated cost of the project is ₹76,220 crore (approximately $8.8 billion). The port will include container berths, liquid berths, ro-ro berths, and multipurpose cargo berths. The proposed container terminal at Vadhwan port will have capacity of 6.8 MTEUs in phase I of the project. Impact year for the project is considered from FY 2032.

Mundra port got environmental and coastal regulation zone clearance for Expansion

Adani Ports & Special Economic Zone Ltd (APSEZ) has received environmental and coastal regulation zone clearance from the Centre to double the capacity of Mundra port at a cost of Rs 45,000 crore.

APSEZ applied to the Expert Appraisal Committee (EAC) of the Ministry of Environment, Forest, and Climate Change to increase the Mundra Port's capacity by 289 million tonnes to 514 million tonnes as part of an expansion plan covering 3,335 hectares. The details of the proposed expansion are given below. The proposed expansion will be carried out in east port of Mundra.

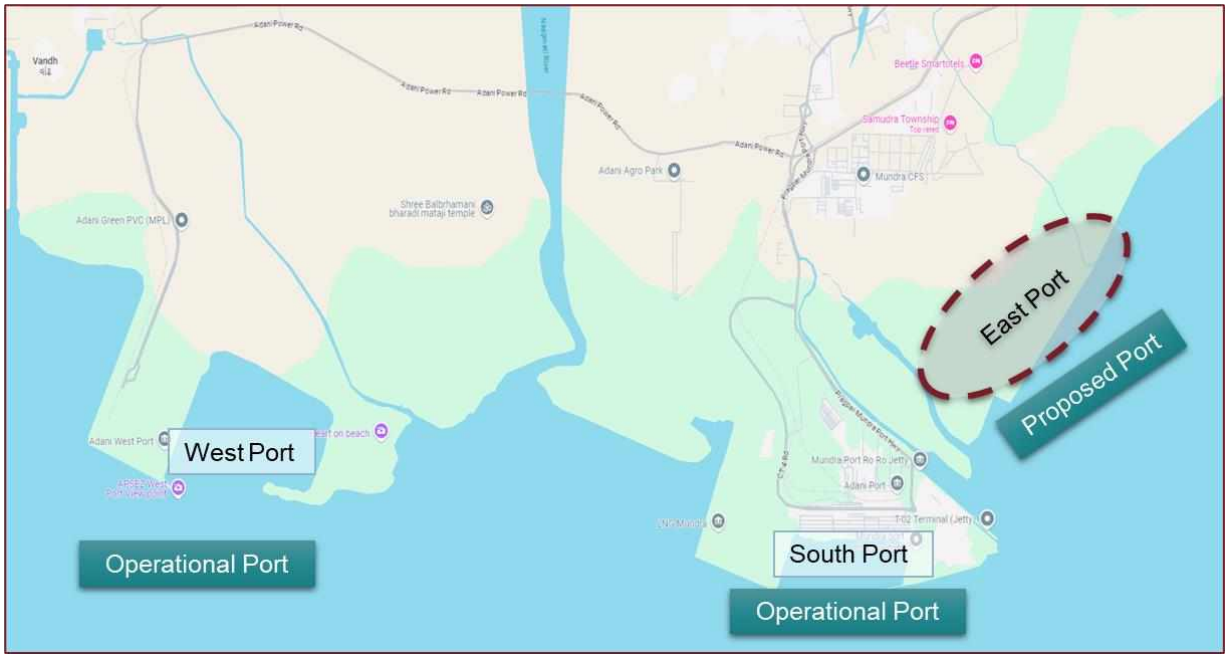

Figure 6-11: Proposed expansion of Mundra Port

Dry Bulk & Break Bulk Cargo	140
Containers	250 (25 million TEUs)
Liquid Cargo	84
Gas/Cryogenics/Liquid	40
Total	**514**

Source: Adani ports and special economic zone limited (APSEZ), Crisil Intelligence

To assess the impact of upcoming Tuna Tekra port and Vadhwan port, following approach is adopted,

- Existing hinterland traffic pattern is analysed.
- Size of port, connectivity option and distance with hinterland.

To assess impact of new ports, existing hinterland container traffic patterns are analysed for various regions such as Kutch/Morbi, Central Gujarat, Saurashtra, Rajasthan, NCR, Upper North, and Western Madhya Pradesh, which are integral to the hinterland traffic served by western ports like Mundra, Kandla, Pipavav, Hazira, and Nhava Sheva.

- **Kutch/Morbi Region**: Primarily served by Mundra Port, with Kandla Port as a secondary option.

- **Central Gujarat Region**: Mainly served by Mundra Port, followed by Nhava Sheva (JNPT).
- **Saurashtra Region**: Predominantly served by Pipavav Port.
- **Rajasthan, NCR, Upper North**: Primarily served by Mundra Port, with Nhava Sheva as a secondary port.
- **Western Madhya Pradesh Region**: Mainly served by Nhava Sheva Port.
- **Western Maharashtra Region**: Primarily served by Nhava Sheva Port.
- **South Gujarat Region**: Mainly served by Nhava Sheva Port.

Table 6-5: Region wise traffic served by various Western ports

Regions	Mundra	Kandla	Pipavav	Hazira	Nhava Sheva	Traffic (As % of core hinterland)
Kutch/Morbi						
Central Gujarat						
Saurashtra						
Rajasthan						
NCR+						
Upper North						
Western MP						
Core hinterland						
South Gujarat						
Western Maharashtra

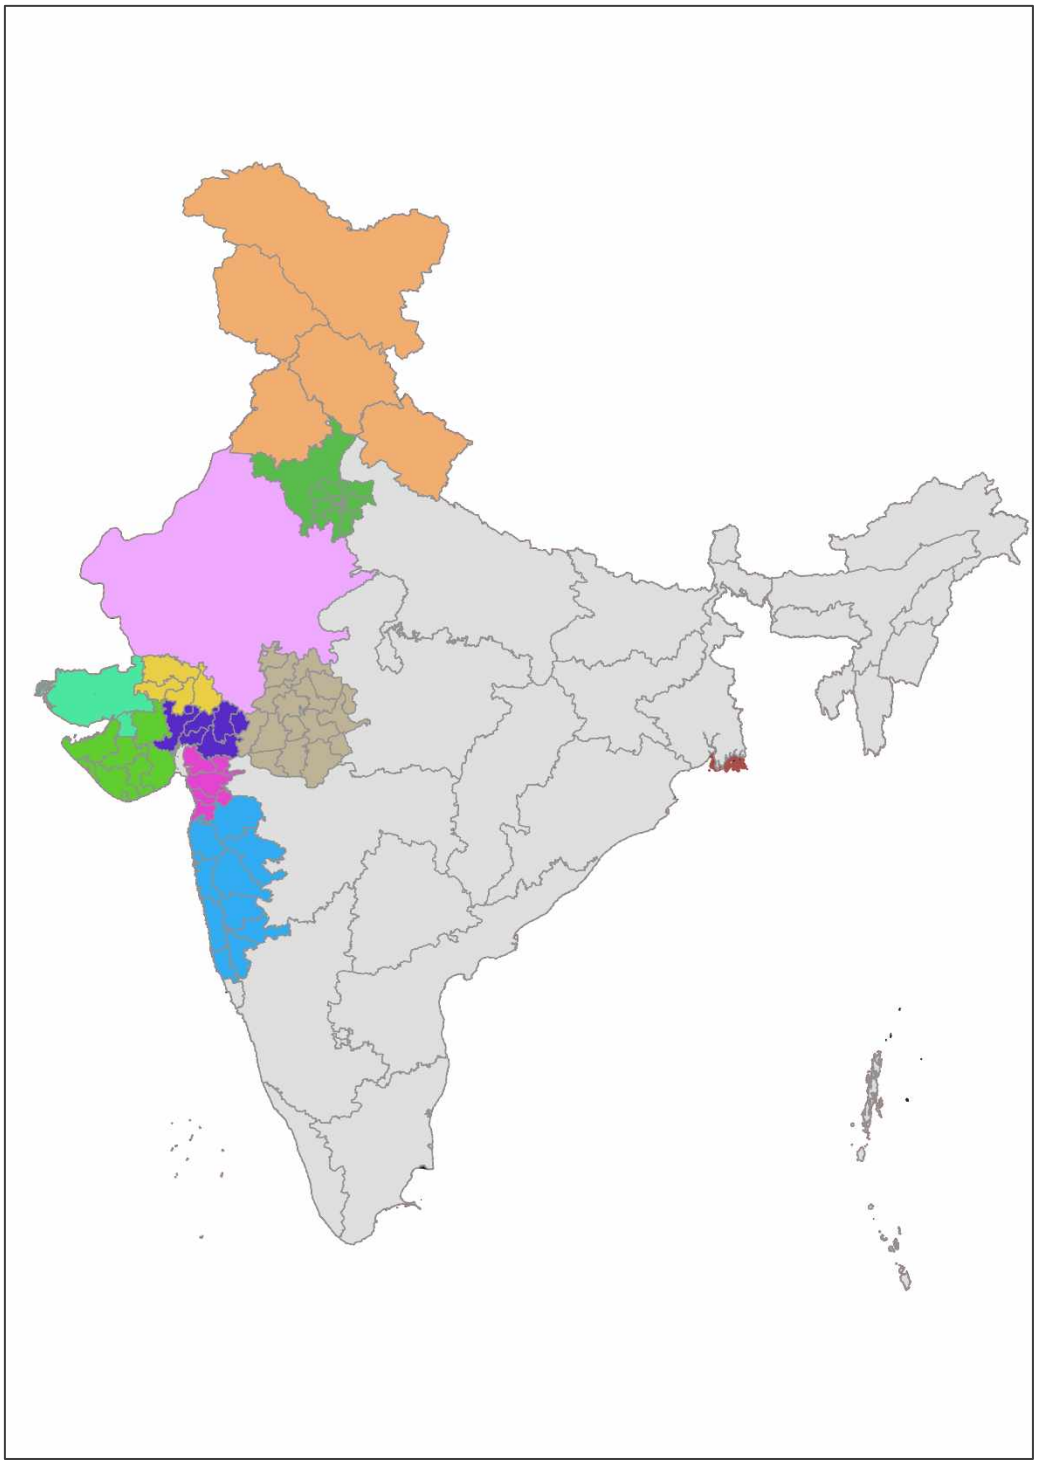

Figure 6-12: Key regions served by western ports

Source: Open Street Map, Crisil Intelligence

Consultants also investigated with size of ports, connectivity options and distance for estimating impact of upcoming ports. To assess the connectivity option, Port Liner Shipping Connectivity Index (PLSCI) is a measure developed by the United Nations Conference on Trade and Development (UNCTAD) to assess how well ports are connected to the global container shipping network. Countries' access to world markets depends largely on their transport connectivity, especially as regards regular shipping services for the import and export of manufactured goods. A higher value is associated with better connectivity. Larger ports only have better connectivity, due to multiple terminals and varied liner calls.

Distance to various regions served by the ports is assessed and Nhava Sheva has bigger disadvantage vis-à-vis Mundra port, and the details are mentioned in the below table.

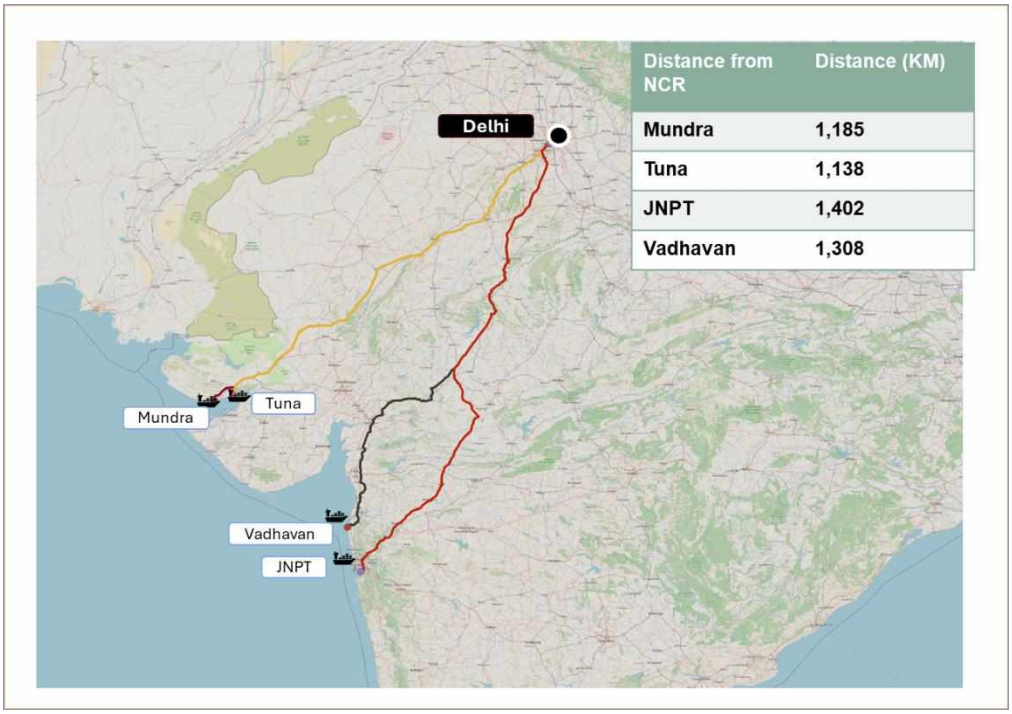

Figure 6-13: Distance to NCR region from various ports

Source: Open Street Map, Crisil Intelligence

Table 6-6: Region wise distance to various ports(km)

Region/Km	Mundra	Kandla	Pipavav	Hazira	Nhava Sheva	Tuna Tekra	Distance Δ Mundra	Distance Δ Mundra
Kutch	193	138	265	480	754	138	-28%	-82%
Central Gujarat	357	301	305	289	564	301	-16%	-47%
Saurashtra	258	202	192	460	723	202	-22%	-72%
Rajasthan	876	819	965	935	1198	819	-7%	-32%
NCR+	1206	1160	1305	1190	1416	1160	-4%	-18%
Upper North	1204	1148	1379	1369	1699	1148	-5%	-32%
Western MP	747	691	660	511	608	691	-7%	14%

Source: Crisil Intelligence

Considering various factors such as existing traffic patterns in the core hinterland, port size, connectivity options, and distance from the hinterland, the estimated share and impact of the Tuna Tekra port on existing ports have been assessed. The impact of Tuna Tekra is expected to begin in FY 2028. From that fiscal year, Tuna Tekra will start handling traffic, with a gradual ramp-up in volumes that aligns with the development of ancillary infrastructure and the Container Freight Station (CFS) ecosystem. The Tuna Tekra port is anticipated to have a mild impact on Mundra port container traffic.

The impact of the upcoming Vadhwan port has been assessed using similar criteria as for Tuna Tekra. Due to its distance disadvantage relative to Mundra port concerning the core hinterland, Vadhwan port is expected to have a lesser impact on Mundra port's traffic. However, it is anticipated to have a more significant impact on the traffic at Nhava Sheva (JNPT) port, for the cargo emanating from the core hinterland. Impact year considered for the Vadhwan port is considered from FY 2032.

Table 6-7: Impact of Tuna Tekra and Vadhwan ports.

Particulars	FY25	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33
Mundra BAU	5.5	6.0	6.4	6.9	7.4	7.9	8.4	9.0	9.6

Mundra's container traffic growth over the concession period from FY 25-45 is presented below figure.

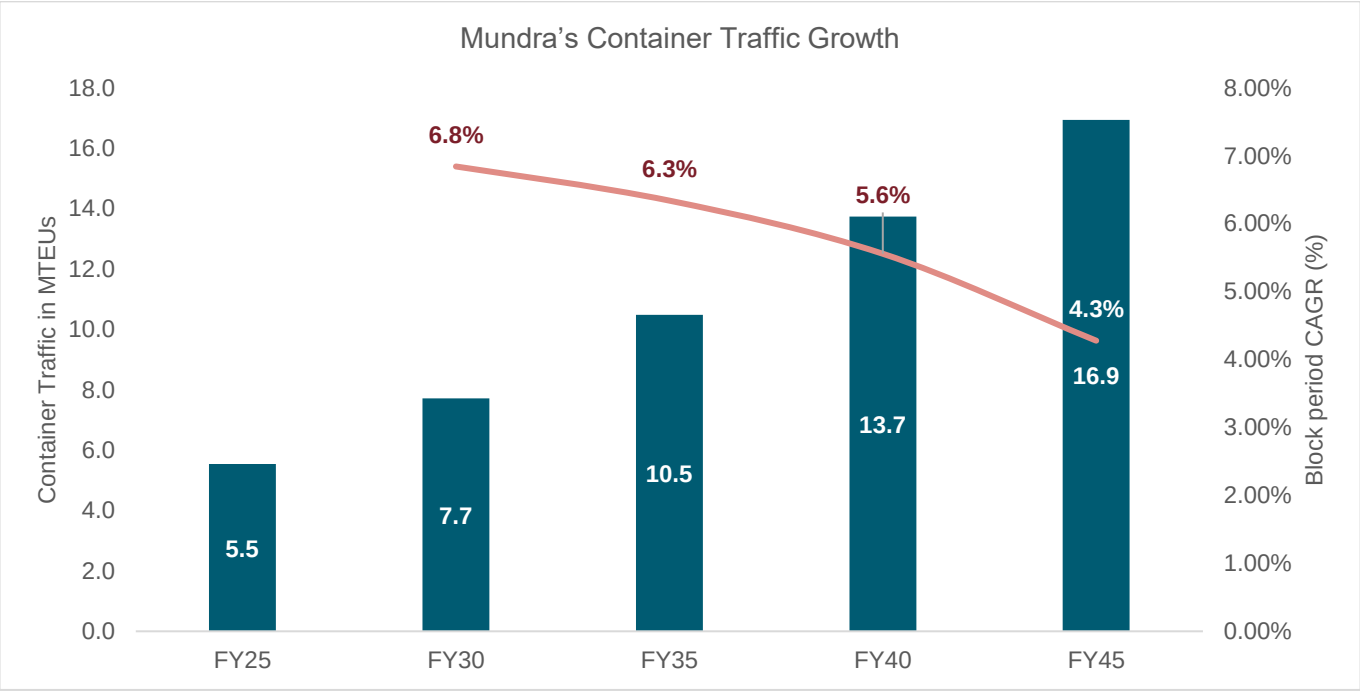

Figure 6-14: Mundra port's container traffic growth

Source: Crisil Intelligence

Other network developments

In the case of the project road, there are no short distance alternate routes available that will impact the traffic on the project road. However ongoing and upcoming long-distance networks that could impact the project road are:

- Western Dedicated Freight Corridor (WDFC)
- Morbi Inland Container Depot -ICD (Railway)

The alignment of the developments along with the project road is presented in Figure 6-15.

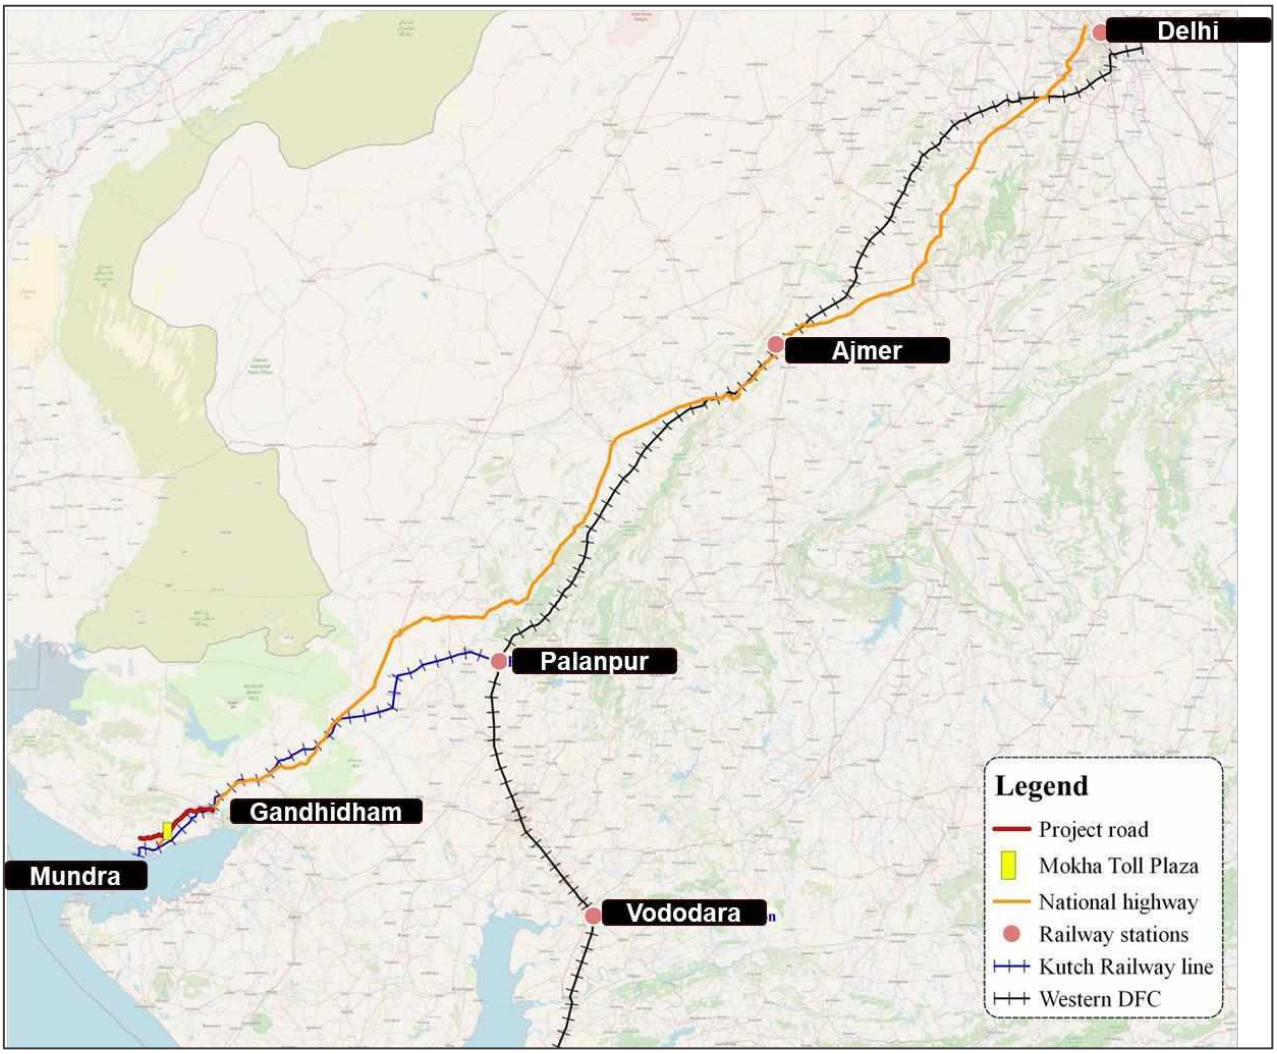

Figure 6-15: Network Development Around the Project Corridor

Source: Open Street Map, Crisil Intelligence

The details of the development in term of milestone, expected completion date and possible impact to project road traffic is presented in below table.

Table 6-8: Details of Network Development and Possible impact

S. No	Details of Development	Milestone/Completion	Possible Impact
1	**WDFC** • 1,506 km long • The freight corridor will pass through the state of Delhi, Uttar Pradesh, Haryana, Rajasthan, Gujarat and Maharashtra	93.2% section is commissioned and rest of section between Sachin – JNPT is under construction.	At present WDFC the partial impact of the WDFC and KRCL Railway which connects the North India region to Mundra Region since the operations of the KRCL line from 2023 and the balance impact of the WDFC is assessed in the current study

S. No	Details of Development	Milestone/Completion	Possible Impact
	KRCL Line connecting Mundra to Palanpur • Kutch Railway Company Limited which connects Mundra to Palanpur station of WDFC	Doubling of the existing railway line completing electrification of the same and these works were completed in February 2023 and May 2023, respectively	
2	**Morbi Inland Container Depot (ICD)** • Morbi ICD connects Mundra port through KRCL Line • ICD handled around ~50,000 TEU in fiscal 2024, equivalent to roughly ~100 MAVs per day	Operational from Feb 2023.	It connects the Morbi Tiles & Ceramic Cluster. Additional impact of 1% of MAV is considered for FY26-FY28 period.

Source: Crisil Intelligence

Impact of Western Dedicated Freight Corridor (WDFC)

The Western Dedicated Freight Corridor (Western DFC) is an ambitious under-construction project spanning 1,506 km in India. It aims to connect Dadri, near Delhi in Uttar Pradesh, to Jawaharlal Nehru Port in Navi Mumbai, Maharashtra. Being developed by the Dedicated Freight Corridor Corporation of India Limited (DFCCIL), a public-sector unit under the Ministry of Railways, the Western DFC will feature electrified double-line operation. Western Dedicated Freight Corridor (DFC) will have a negative impact on traffic.

The alignment of the WDFC and the project section is presented in below figure.

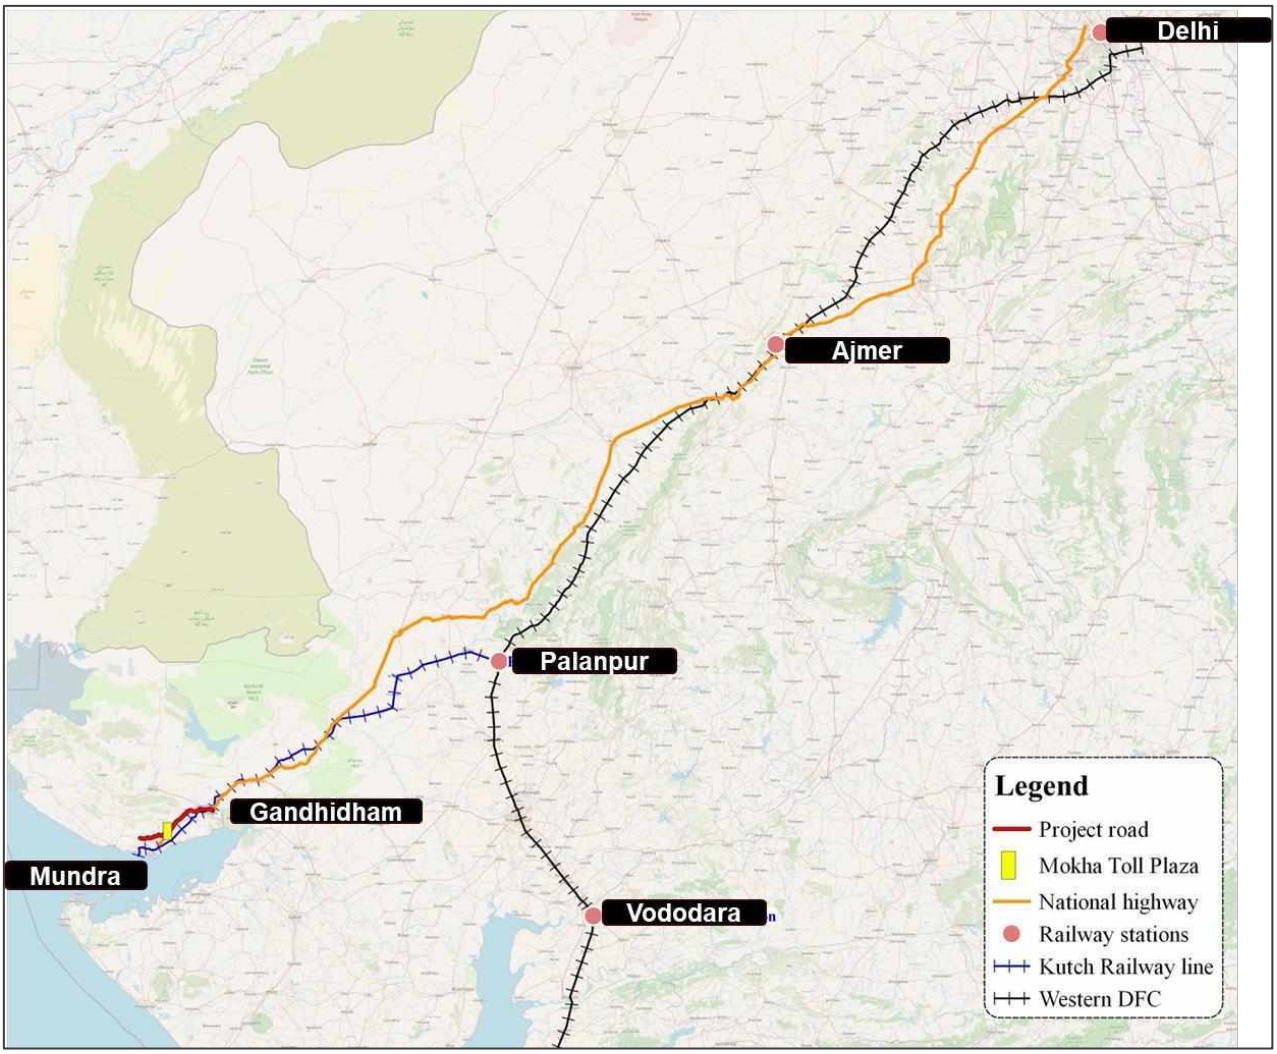

Figure 6-16: Alignment of WDFC and Project Road

Source: Open Street Map, Crisil Intelligence

KRCL was incorporated in January 2004 as an SPV for converting the existing meter gauge to broad gauge on the existing 301-km railway line between Gandhidham and Palanpur in Gujarat. KRCL took up the project for doubling the existing railway line and completing electrification of the same and these works were completed in February 2023 and May 2023, respectively. KRCL railway line which provides connectivity to two major seaports [Adani Port (erstwhile Mundra Port) and Deen-Dayal Port (erstwhile Kandla Port) with the northern mainland. It will also be a feeder route to the Western Dedicated Freight Corridor (WDFC).

The WDFC, may take away some of the traffic which is currently using the project road. The assessment of WDFC diversion from the project road is presented in below table.

Table 6-9: Status of WDFC

Section	Distance (Km)	Status	Completion Date
Dadri – Rewari	127	Operational	2024 January
Rewari - Madar	306	Operational	2021 January
Madar -Palanpur	353	Operational	2022 June
Palanpur-Makarpura	290	Operational	2023 October
Makarpura - Sachin	135	Operational	2023 June

Section	Distance (Km)	Status	Completion Date
Sachin - Vaitarna	193	Operational	2024 December
Vaitarna - JNPT	102	Under Construction	2025 December
Total	1,504		

Source: Dedicated Freight Corridor Corporation of India Limited, Crisil Intelligence

Binary Logit Mode (Mode Choice Model) is used to analyse the impact of the WDFC Impact. Following assumptions are made in assessing the impact of WDFC.

- Zones/traffic falling within the 100km radius of the WDFC stations is considered.
- Binary logit analysis to estimate the diversions.
- Impact year is considered from FY26
- Inscope traffic is considered for more than 500 Km. (Binary logit model suggest shift from rail to road for the trip lengths with more than 500km due to the savings from travel time and travel cost)
- The mode choice model has been used (National Rail Plan) based on the most evident factors of any goods transfer, i.e. Travel Time and Travel Cost.
- Commodities considered are Agri produce, Automobiles, Coal, Iron & steel, POL and Containers.
- Impact is considered in step wise approach with 25% for FY 26 to 100% in FY 2029

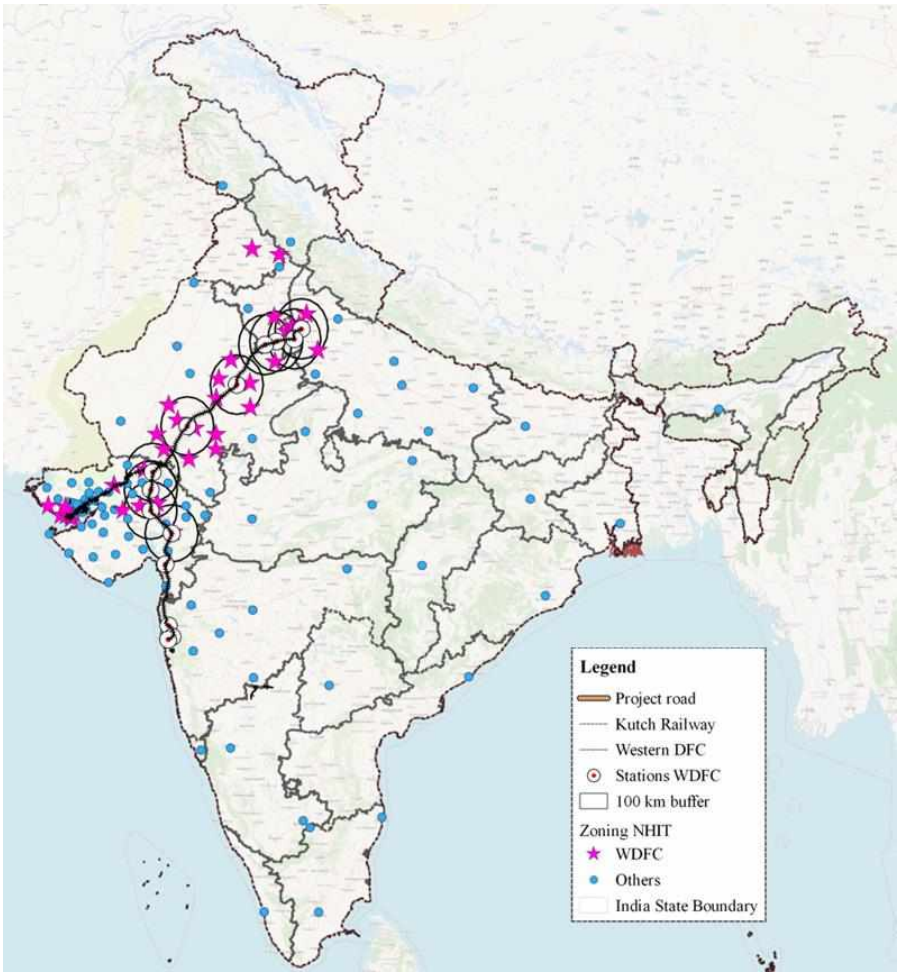

Figure 6-17: Inscope Zones considered for WDFC Impact

Source: Open Street Map, Crisil Intelligence

Binary Logit Model

To estimate the rail share, binary logit model has been used. Choice of Mode to be used is dependent on various factors. Two of the most important factors are **Travel Time and travel cost**. Other factors are availability of modes, transferability and last mile haulage of that commodity and reliability etc. Mode choice model has been developed based on the most evident factors of any goods transfer i.e. Travel Time and Travel Cost and the Probability of any Commodity to be transferred by any mode has been estimated by the Binary Logit Model. Utility equation is developed by the Difference of Travel time and Difference of Travel cost of the same Origin Destination pairs of two different Modes (Road and Rail).

In addition to Inscope traffic from project road (Mokha Plaza) OD, Long distance Inscope traffic (from OD analysis) at Samakhiyali Plaza, potentially transported through a hub and spoke model is also considered (50% of the long-distance traffic is considered as Inscope traffic). The analysis indicates that the WDFC may result in loss of about 7.7% of truck traffic, 3.8% of 3 axle trucks and 4.5% of MAV traffic. Overall impact of 4.3% in PCU terms.

Figure 6-18: Components of Travel Time and Cost

Table 6-10: Diverted Traffic

Vehicle Type	Inscope (Mokha Plaza)	Inscope (Samakhiyali Plaza)	% Diversion
2 Axle Truck	15.2%	8.0%	-7.7%
3 Axle Truck	8.0%	3.4%	-3.8%
MAV	11.3%	2.8%	-4.5%
Vehicle	**9.0%**	**2.4%**	**-3.7%**
PCU	**10.5%**	**2.7%**	**-4.3%**

Source: Crisil Intelligence

Impact of Morbi Inland Container Depot (Railway)

The Navkar Inland Container Depot (ICD) in Morbi started its operations on February 28, 2023. The facility is spread over more than 150 acres near the Industrial Hub of Morbi. It is located on the trunk route from Ahmedabad to Gandhidham. The ICD offers extensive warehousing, real-time visibility of cargo, and a large pool of cargo handling equipment. It provides cost-effective solutions for both export and import cargo movements. The Navkar Inland Container Depot (ICD) in Morbi has a capacity to handle 2,00,000 TEUs (Twenty-foot Equivalent Units) per annum. ICD handled around ~50,000 TEU in fiscal 2024, equivalent to roughly ~100 MAVs per day. Additional impact of 1% of MAV is considered for FY26-FY28 period.

Table 6-11: Summary of WDFC & Morbi ICD Impacts

S No.	Name of Impact	Positive/Negative	Year of Impact	In scope traffic (%)	% Diversion
1.	Western Dedicated Freight Corridor	Negative	FY 26	2 Axle Truck- 23.2% 3 Axle Truck- 11.4% MAV- 14.1%	2 Axle Truck-7.7% 3 Axle Truck-3.8% MAV-4.5% PCU-4.3%
2.	Morbi ICD (Railway)	Negative	FY 26	MAV-18.5%	MAV-1% PCU-0.5%

Source: Crisil Intelligence

7 Traffic Growth Estimation & Traffic Forecast

Commodity Overview

As mentioned in section primary data collection & analysis, the analysis of freight movement across the toll plaza reveals that the major commodities being transported include containers, tiles & ceramics, agri produce and consumer foods.

Containers

Container traffic holds major share around 61.0% in the overall traffic. Project road gives connectivity to two important seaports in the region which are Mundra Port and Kandla Port. Mundra Port, located in Gujarat, India, is the largest commercial port in the country and a critical hub for container traffic. It handles a significant volume of cargo, including containers, dry bulk, liquid bulk, and automobiles. The port's strategic location on the western coast of India allows it to serve the vast hinterland regions, including the National Capital Region, Gujarat, Punjab, Rajasthan, and Madhya Pradesh. Mundra Port operates five container terminals across 12 berths, with a combined capacity of 9.5 million TEUs (twenty-foot equivalent units). India’s container traffic decadal growth (FY14-FY24) is around 7.7% and Mundra port’s container traffic decadal growth (FY14-FY24) is around 12.0%.

Tiles & Ceramics

The Morbi Ceramic Cluster, located in Gujarat, India, is one of the largest and most significant ceramic industry clusters in the world. It is situated about 250 km from Ahmedabad and is renowned for its extensive production of ceramic products. The cluster comprises over 600 units, producing a wide range of items including wall tiles, floor tiles, vitrified tiles, polished glazed vitrified tiles, and sanitary ware.

Morbi's ceramic industry is known for its advanced technology and high-quality products, with many units utilizing state-of-the-art equipment imported from around the globe.

The Morbi Ceramic Cluster provides direct employment to about 68,000 people and indirectly supports many more through related businesses and professions. The industry is a major contributor to the local economy, fostering growth and development in the region. The cluster's products are not only supplied domestically but also exported to various international markets, enhancing its global footprint.

Overall, the Morbi Ceramic Cluster is a vital industrial hub that significantly contributes to India's ceramic production and export capabilities. Its continuous growth and adoption of new technologies ensure that it remains a key player in the global ceramic industry.

Export volumes recorded 28% growth on-year in fiscal 2024 with ceramic tiles exporters benefitting from certain favourable developments like lifting of the anti-dumping duty imposed by UAE on ceramic tiles from India. Meanwhile, despite the European Union announcing anti-dumping duty on ceramic tiles from India in 2023, the same is lesser for ceramic tiles from India as compared to tiles from competitors like Turkey and China giving India an added advantage with regards to expansion in exports to European nations. This is majorly on the back of superior quality tiles being produced in India at comparatively affordable prices. Globally, ceramic tiles import from India are well preferred due to these factors.

Going forward as well, we expect growth momentum to continue owing to continued cost competitiveness of Indian manufacturers as well as major global importers wanting to reduce their dependence on sole supplier i.e. China

In fiscal 2025, volume and value growth expected to be boosted by the growth in new real estate project completions, however replacement demand is estimated to continue its upward trajectory in fiscal 2025 as work from home for service sector continues to aid to overall tiles demand. Also, construction & completion of PMAY Urban to remain buoyant during the period as the government races to complete the scheme before the expected extended timeline.

Agri Produce

Agri produce commodity accounts for 3.5% total traffic on the project stretch. In container sub commodity it accounts for 7.5% of the container traffic.

Basmati Rice is major contributor among agricultural produce. Basmati rice belt in India primarily spans the northern regions, particularly in the states of Punjab, Haryana, Himachal Pradesh, Uttarakhand, and parts of Uttar Pradesh and Jammu & Kashmir. These areas are known for their ideal climatic conditions and fertile soil, which are perfect for cultivating high-quality Basmati rice. Rice gets exported from Mundra port. The top export destinations for Indian Basmati rice include Iran, Saudi Arabia, Iraq, the United Arab Emirates, and Kuwait

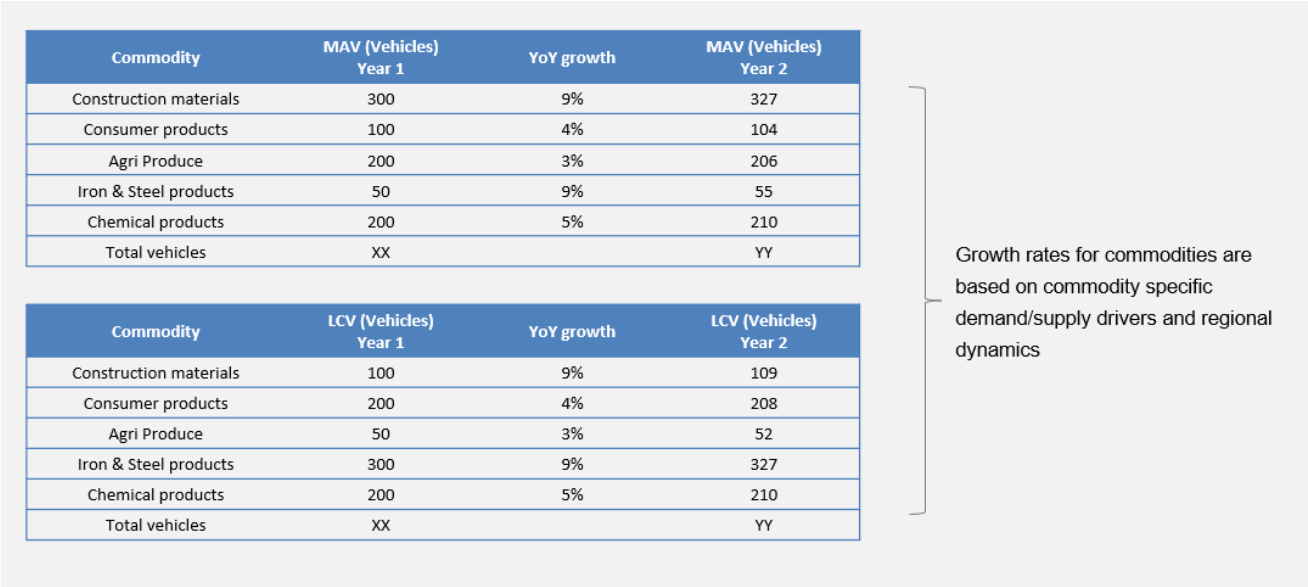
Crisil's methodology considers the growth of the Agri produce commodity at the regional level to derive the traffic growth of each vehicle category. Growth in Agri produce is highly volatile as it depends on the positive outcome of the monsoon season. Hence on a long-term period, it grows at a low rate compared to the aggregate GDP.

Consumer Foods

The fast-moving consumer goods (FMCG) industry or consumer packaged goods (CPG) industry is mainly responsible for producing, distributing, and marketing fast-moving consumer goods. Fast-moving consumer goods (FMCG) sector is India's fourth-largest sector and has been expanding at a healthy rate over the years because of rising disposable income, a rising youth population, and rising brand awareness among consumers.

Changing food habits and consumption patterns post the pandemic, rising demand for healthy products, increasing appetite for discretionary spends on processed foods and increasing focus on health and sanitation, shift in demand from loose to branded packaging to support growth. Demand is also expected to be supported by new product launches, rising distribution network with players catering to multiple segments.

Approach for traffic growth rates estimation



Crisil, based on its coverage of 80+ sectors and the MSME industry, has developed a knowledge base to understand the growth of industries and demand across various regions and clusters. The growth expectations for various industries are applied to each vehicle category based on the commodity composition of the vehicle category. For example, the share of light commercial vehicles (LCVs) carrying agricultural commodities is expected to grow as per agricultural output growth; the share of LCVs carrying consumer products is expected to grow as per the volume growth of durables; and the share of Multi axle vehicles (MAVs) carrying steel commodities is expected to grow as per demand/supply volume of steel products based on regional dynamics. This approach helps Crisil provide a more accurate growth rate of commercial traffic in the region.

For passenger traffic, Crisil assesses the sale of passenger cars in the region, growth of vehicular population, purpose and frequency of passenger travel, population growth, expansion of the city, and infrastructure development in the catchment area.

Further, Crisil also examines the various factors that will impact traffic over the concession period, such as

upcoming alternative road routes, truck aggregation by logistics players, dedicated freight corridors and other transportation options. Thus, the analysis considers the impact of central and state policies, growth in production and consumption centres along the stretch, and infrastructure in the adjoining regions. The report covers both growth drivers and restraints for the traffic along the stretch. CRISIL has enumerated and detailed the parameters that will positively/negatively impact the traffic on the stretch in the future.

Crisil has used its proprietary traffic projection methodology to project traffic using regional industry growth assumptions, macroeconomic developments, infra development and consumption centre growth factors of the catchment area and adjacent regions.

Commodity	MAV (Vehicles) Year 1	YoY growth	MAV (Vehicles) Year 2
Construction materials	300	9%	327
Consumer products	100	4%	104
Agri Produce	200	3%	206
Iron & Steel products	50	9%	55
Chemical products	200	5%	210
Total vehicles	XX		YY

Commodity	LCV (Vehicles) Year 1	YoY growth	LCV (Vehicles) Year 2
Construction materials	100	9%	109
Consumer products	200	4%	208
Agri Produce	50	3%	52
Iron & Steel products	300	9%	327
Chemical products	200	5%	210
Total vehicles	XX		YY

Figure 7-1: Commodity based approach: Illustrative example for Commercial vehicles.

Commodity Outlook

Crisil Intelligence has forecasted the freight traffic growth based on the growth in relevant sectors influencing traffic in the region. Industry growth has been analysed and forecasted based on our proprietary database of industries for the surrounding regions that impact traffic on project road as well as our internal assessment on a relevant set of sectors at the pan India level.

Package wise forecast incorporates the regional dynamics including, but not limited to, investments, commodity trends, district output (GDDP) profile (primary/secondary, construction/manufacturing) etc.

The traffic for the coming years is projected by factoring in the impact of these parameters on commodity wise growth rates and is presented in below table.

Table 7-1: Commodity Outlook for the Project Section

Commodity Type	Share	FY 26	FY27-31	FY32-45
Agri Produce	3.5%	3.0%	2.6%	1.2%
Automobiles	0.4%	7.5%	6.5%	2.9%
Chemical products	1.7%	4.0%	3.9%	1.7%
Coal	1.7%	2.5%	2.3%	1.0%
Construction materials	1.8%	6.5%	5.9%	2.6%

Commodity Type	Share	FY 26	FY27-31	FY32-45
Consumer Foods	3.5%	6.5%	5.5%	2.4%
Consumer Products	0.4%	6.5%	5.5%	2.4%
Courier & parcel	2.2%	8.0%	7.2%	3.2%
Iron & Steel Products	1.4%	6.5%	6.0%	2.6%
Machinery	0.8%	5.0%	3.4%	1.5%
Milk & Animal Food	0.2%	4.0%	3.9%	1.7%
Others	1.0%	5.5%	4.7%	2.1%
Paper products	0.7%	5.5%	4.7%	2.1%
Petroleum Products	1.1%	3.0%	2.2%	1.0%
Pharmaceuticals	0.1%	7.1%	6.8%	3.0%
Plastic products	2.6%	5.5%	5.0%	2.2%
Plywood & Timber products	1.1%	5.0%	4.9%	2.1%
Rubber products	0.6%	6.0%	5.8%	2.6%
Textile & Footwear	1.4%	5.0%	4.9%	2.1%
Tiles & Ceramic products	5.3%	8.0%	7.0%	3.1%
Container	61.0%	7.8%	5.8%	3.8%

Overloading scenario on the project stretch

To ascertain the quantum of overloading, a seven-day axle load survey was done by the technical consultants of the client. The results of axle load survey provided by the client, reveal that overloaded vehicles form a sizeable share of vehicles across categories. As per the survey, 41% of the MAVs, 40% of 3 axle and 3% of the 2 Axle vehicles are overloaded (considering more than 5% overload than permissible limits).

Tiles, Wood, Rice and Coal are key commodities which are overloaded.

As per discussions with the client, it is proposed that overloading will be levied on 25% of MAV and 3 Axle vehicles which are overloaded for more than 20% of the threshold and also applied to the traffic which is travelling with trip length of less than 350kms and excluding commodities like fruits & vegetables, petroleum products and machinery. The quantum of vehicles for charging overloading penalty is decided after considering the practical numbers which can be charged per lane per hour. The revenue potential is arrived at, by considering an overloading levy equivalent to 1x of single journey toll rates.

Following table shows the overloading scenario for commercial vehicles on the stretch.

Table 7-4: Overloading traffic

Direction	Vehicle Category	Sample	>5% overload	>20% overload	>5% overload	>20% overload
Overall	MAV	723	296	78	41%	11%
Overall	2A	107	3	0	3%	0%
Overall	3A	111	44	11	40%	10%
Gandhidham-Mundra	MAV	391	161	52	41%	13%
Gandhidham-Mundra	2A	36	2	0	7%	1%
Gandhidham-Mundra	3A	51	30	9	58%	17%

Direction	Vehicle Category	Sample	>5% overload	>20% overload	>5% overload	>20% overload
Mundra-Gandhidham	MAV	331	134	26	41%	8%
Mundra-Gandhidham	2A	71	1	-	1%	0%
Mundra-Gandhidham	3A	60	14	3	23%	4%

8 Revenue forecast

General

The project section is under “open tolling system” which enables the concessionaire to collect tolls from long distance as well as short distance traffic joining the project from adjoining highways.

User Fee Schedule

As per the revised toll gazette notification in July 2023 for the project road, National Highways Fee (Determination of Rates and Collection) Rules, 2008 is being followed for estimating the user fee.

The concessions of traffic have been provided under the categories/ toll tickets as presented in below table.

Table 8-1: Tolling Tickets

Ticket	Maximum number of one-way journeys allowed	Period of validity
Single/Normal	Single	-
Daily Pass	Multiple	24 hours
Monthly Pass	Multiple	One month from the date of payment
Local Personal	Single	-
Local Commercial Discount	Single	-

Traffic Segmentation

As mentioned in section historical toll data is used in adopting the segmentation for the project road. In finalising the trip segmentation for the Local commercial discount (LDC) following approach is used.

Estimation of Local Commercial Discount (LDC) trip segmentation is based on the following assumptions (data points).

- Estimated the share of local registered vehicles (GJ 19 & GJ 39) at Mokha plaza in the overall traffic.
- Analysed the nearby toll plaza LDC trip segmentation, which also has the same local registered vehicle plying (GJ 19 & GJ 39). Consultants has also looked at percentage universe of the local registered vehicles (GJ 19 & GJ 39) which is availing the Local Commercial Discount tickets in the total traffic (all registered vehicles). For example, in MAV 59% of vehicles at the plaza are local registered vehicles of the total traffic, 41% of traffic is availing local commercial discount tickets which suggest about 69% of local registered vehicles are availing local commercial discount tickets.

The traffic tolling segmentation in (%) adopted for the present study for FY25 onwards is presented in below table.

Table 8-2: Traffic Segmentation in % - FY25

Vehicle Type	Single Journey	Return Journey	Monthly Pass	Local Commercial	Local Pass	Exemptions	Total
Car/Jeep/Van	26.5%	31.0%	0.0%	0.0%	4.9%	37.6%	100%
Minibus	25.8%	47.9%	0.0%	2.0%	0.0%	24.3%	100%
2 Axle Bus	36.4%	59.0%	0.0%	3.5%	0.1%	1.0%	100%

Vehicle Type	Single Journey	Return Journey	Monthly Pass	Local Commercial	Local Pass	Exemptions	Total
LCV	25.8%	47.9%	0.0%	2.0%	0.0%	24.3%	100%
Truck	36.4%	59.0%	0.0%	3.5%	0.1%	1.0%	100%
3 Axle Truck	17.6%	24.2%	0.0%	38.0%	11.9%	8.3%	100%
MAV	26.1%	19.0%	0.0%	42.0%	10.7%	2.2%	100%
OSV	75.6%	15.6%	0.0%	1.0%	0.0%	7.7%	100%

Tolling lengths

The tollable lengths for the project section for plaza as per schedule M is presented in below table.

Table 8-3: Tolling Lengths

No.	Location of Toll Plaza (Existing chainage [km])	Length (km) for which Fee is Payable
1.	At km 44.500 of NH-41 Near Mokha Village in Kutch District of Gujarat	61.881 [excluding 0.7889 km of structure (having length more than 60 m) and excluding bypass length 8.730 km]

Source: Technical schedules (Schedule M), Crisil Intelligence

Table 8-4: Bypass Details

Location of Toll Plaza (Chainage)	Name of Bypass and Location	Taking off	Merging at	Length and Cost of bypass for which additional fee is payable		Rate at which fee payable
				Length (km)	Cost Rs. Crore)	
At km 44.500 of NH-41 Near Mokha Village in Kutch District of Gujarat	Anjar Bypass of NH-41	11.270	20.000	8.730	84.09	150% for four and more lane, of the base rates

Source: Technical schedules (Schedule M), Crisil Intelligence

Table 8-5: Structure Length Details

Location of Toll Plaza (Chainage)	Length of structures (km) to be converted into equivalent road length	Equivalent road length (km)	Rate at which fee is payable
At km 44.500 of NH-41 Near Mokha Village in Kutch District of Gujarat	0.7889	7.889	100% for four and more lane, of the base rates

Source: Technical schedules (Schedule M), Crisil Intelligence

Toll Rates Estimation

The toll rates (Rs/km) for the base year 2007-08 for different vehicle categories are as per fee rule/concession agreement mentioned above and are presented in the below table.

Table 8-6: Base Rate in Rs/km

Vehicle Type	Base rate of fee per km for the Base Year 2007-08 (in Rupees)
Car, Jeep, Van, or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05
Bus or Truck (Two Axles)	2.20

Vehicle Type	Base rate of fee per km for the Base Year 2007-08 (in Rupees)
Three-axle commercial vehicles	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (four to six axles)	3.45
Oversized Vehicles (seven or more axles)	4.20

Source: NHAI-Determination of Rates and Collection Rule 2008

Review and Outlook of Whole-Sale price index (WPI)

The projected toll rates are dependent on Wholesale Price Index (WPI) assumptions for 2024 to 2045. For WPI projection, Crisil Intelligence has relied on inputs from Client. Past and outlook WPI growth is presented in below table.

Table 8-7: WPI

Year	WPI	Expected Year-on-year growth
2024	466.6	
2025	477.6	**2.4%**
2026	499.1	**4.5%**
2027	521.6	**4.5%**
2028	539.8	**3.5%**
2029	558.7	**3.5%**
2030	477.6	**3.5%**
2031-2053	↓	**3.5%**
2054	1320.4	**3.5%**

Source: Projected WPI (P): Client Input

Revenue Estimates

The revenue projections for the project road are presented in the below table.

Table 8-8: Revenue in ₹ Million for the Project Section

FY Year	Cars	Minibus	2 Axle Bus	LCV	Truck	3 Axle Truck	MAV	OSV	Total Veh.	YoY Growth (%)
FY-2025	52	1	22	6	27	62	1,551	2	1,723	8.9%
FY-2026	59	1	24	7	28	65	1,691	2	1,877	10.5%

Samakhiyali Plaza OD Insights

Samakhiyali Origin-Destination survey analysis insights is as follows.

The regional distribution of tollable vehicles at the toll plaza locations has been estimated based on OD matrices is presented in below table and figure.

Table 9-2: Regional Distribution in % at Samakhiyali Plaza

Region	% Influence
Gandhidham	49.9%
Morbi	21.6%
North India	6.5%

Region	% Influence
Ahmedabad	6.4%
Rajasthan	5.6%
Other parts of Gujarat	4.8%
South Gujarat	2.7%
Central & East India	1.3%
Maharashtra & South India	1.2%
Total	**100%**

Turning Movement Survey Insights

Turning Movement Survey were conducted at three locations. The survey schedule and location are presented in

the below table and figure. Insights are provided in the below figures.

Table 9-3: Type of Survey & Schedule

Location	Type of Survey	Survey Duration	Survey Date
Vadala Junction	Turning Movement Count (TMC) Survey	1 Day	30th July 2024
Gandhidham		1 Day	3rd August 2024
Pragpar		1 Day	4th August 2024

Source: Crisil Intelligence

Figure 9-2: Survey Locations

Source: Open Street Map, Crisil Intelligence

TMC at Pragpar

TMC at Pragpar indicates 86% of the traffic uses the project road up to Pragpar moving towards Mundra.

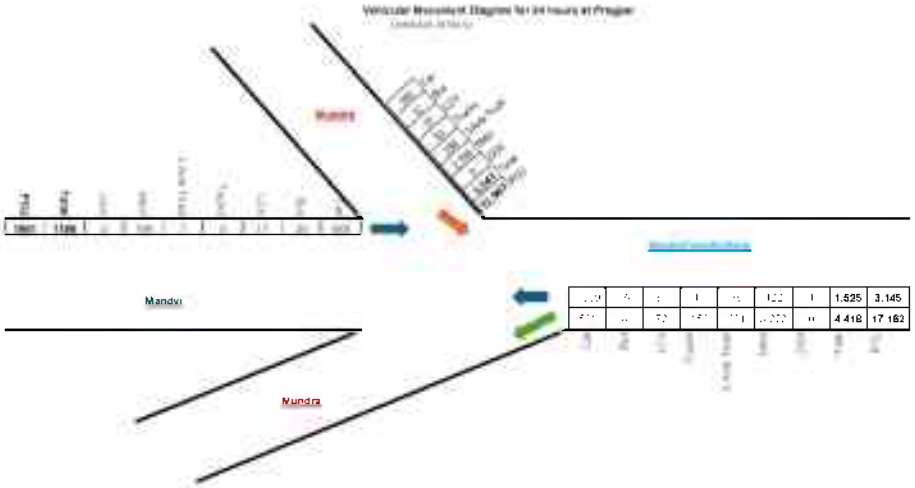

Figure 9-3: TMC at Pragpar

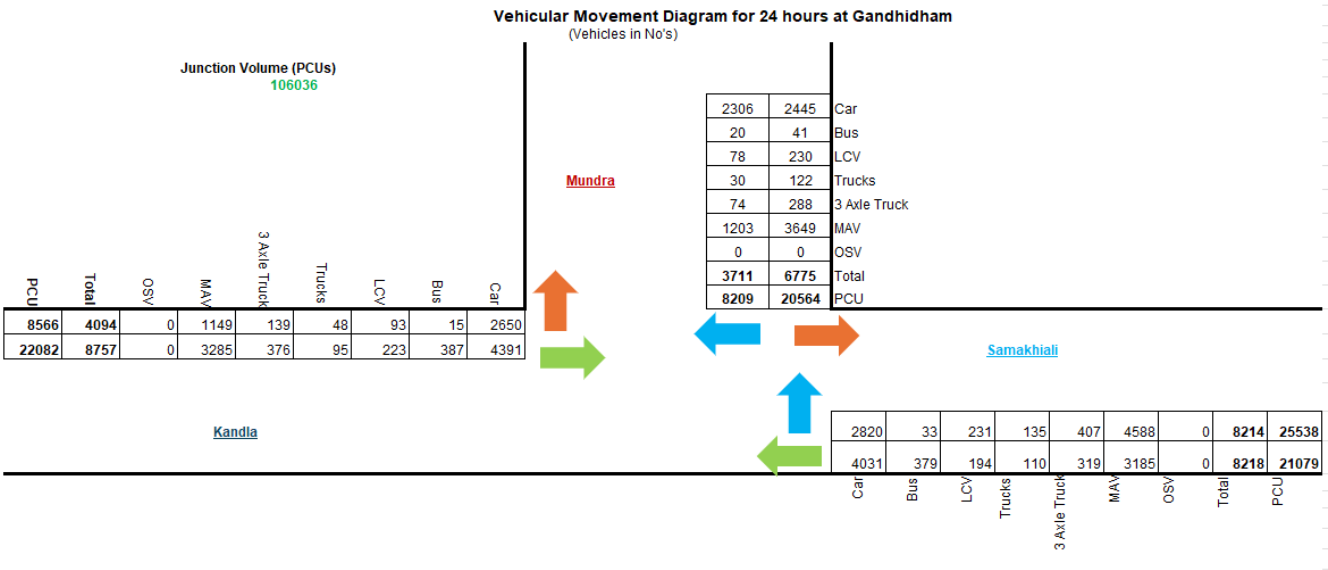
Source: Crisil Intelligence

TMC at Gandhidham

TMC at Gandhidham indicated 40% of the traffic moves towards Gandhidham/Kandla Region.



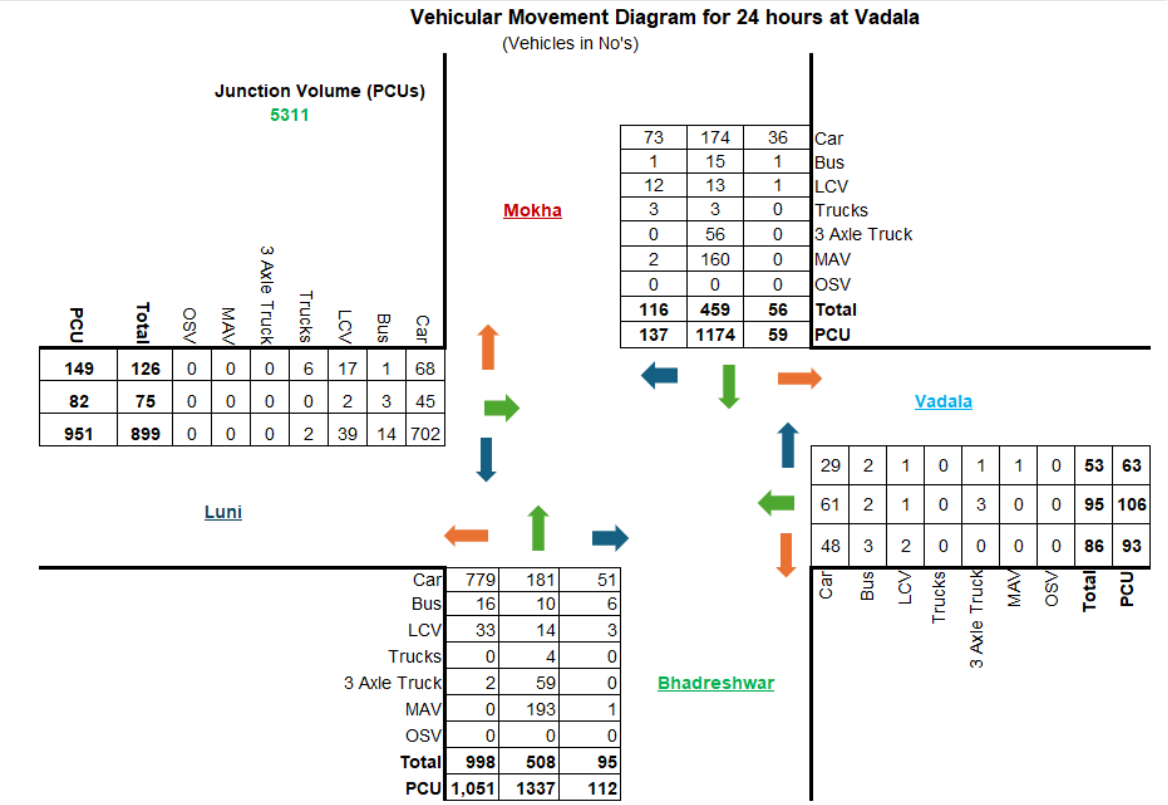


Figure 9-4: TMC at Gandhidham

Source: Crisil Intelligence

TMC at Vadala

TMC at Vadala indicated no traffic is bypassing the plaza to avoid toll using the SH/MDR road at Vadala Junction.

About Crisil Intelligence (formerly Market Intelligence & Analytics)

Crisil Intelligence is a leading provider of research, consulting, risk solutions and advanced data analytics, serving clients across government, private and public enterprises. We leverage our expertise in data-driven insights and strong benchmarking capabilities to help clients navigate complex external ecosystems, identify opportunities and mitigate risks. By combining cutting-edge analytics, machine learning and AI capabilities with deep industry knowledge, we empower our clients to make informed decisions, drive business growth and build resilient capacities.

For more information, visit Intelligence.Crisil.com

About Crisil

Crisil is a global, insights-driven analytics company. Our extraordinary domain expertise and analytical rigour help clients make mission-critical decisions with confidence.

Large and highly respected firms partner with us for the most reliable opinions on risk in India, and for uncovering powerful insights and turning risks into opportunities globally. We are integral to multiplying their opportunities and success.

Headquartered in India, Crisil is majority owned by S&P Global.

Founded in 1987 as India's first credit rating agency, our expertise today extends across businesses: Crisil Ratings, Crisil Intelligence, Crisil Coalition Greenwich and Crisil Integral IQ.

Our globally diverse workforce operates in the Americas, Asia-Pacific, Europe, Australia and the Middle East, setting the standards by which industries are measured.

Section 1: Executive Summary

1.1 Introduction

1.1.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 15th July 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 1-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	NH No.	Lane	Length (km)
1	**Narasannapeta to Ranastalam**	**Madapam**	**NH-16**	**4/6 Lane**	**53.799**
2	Ranastalam to Anandapuram via Kopperla	Nathavalasa	NH-16	6 Lane	48.980
	Anandapuram to Visakhapatnam	-	Old NH-16	4 Lane	17.564
3	Anandapuram to Anakapalle via Pendurthi	Dukkavanipalem & Marripalem	NH-16	6 Lane	48.605
Total					**168.948**

This report pertains to the stretch Narasannapeta to Ranastalam section of NH-16 in the state of Andhra Pradesh.

1.1.2 Objectives

The main objective of the present assignment is to

1. review project documents and understanding schedule B and schedule F requirements for improvement works for the assessment of Capex and Opex during the concession period.
2. conduct field investigations to assess the existing asset condition and future deterioration.
3. validate executed works with respect to schedule A and assessment of improvement Works

4. review quality of construction based on available data, design and drawings.
5. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
6. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

1.2 Site Visit

The Technical Consultant visited site from 25th July 2024 to 11th August 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road.

1.2.1 Salient Features

Table 1-2: Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length	Lane Configuration	Pavement Type	Date of COD	O&M Handover Date to InVIT	Concessionaire / Remarks
			From	To	(km)					
1	Narsannapeta to Ranasthalam	Madapam @ 589+554 (16 lanes)	580+671	629+880	49.209	6-lane	Flexible, except from km 612+720 to km 616+720 on MCW and Toll Plaza where it is with rigid	16-02-2023	20-01-2037	M/s Apco Arasavalli Expressway Pvt. Ltd (HAM)
			629+880	634+470	4.590	4-lane	Flexible	31-03-2027	31-03-2037	Elevated Corridor; Tender invited under EPC mode with 10 yrs DLP

Asset-wise details of Project assets are given below:

Table 1-3: Detail of Assets

S. No	Description	Narasannapeta to Ranastalam Section (from km 580+671 to km 634+470)	
		Schedule-A	At Site
1	Total Project Length (km)	53.799	53.799
2	Service Roads/ Slip Roads (km)	95.766	**89.077**[1]

[1] In Sch A, service road from km 629+880 to km 634+470 is considered on BHS for entire length however existing SR is there for a length of only 2.88 km for BHS. SR for remaining length yet to be constructed on EPC mode by NHAI, hence not considered by the Consultant as existing SR.

1.3 Surveys and Investigations

1.3.1 Network Survey Vehicle (NSV)

The Network Survey Vehicle, which is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools, is used for automatic data collection pertains to pavement condition and road inventory data. The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. Summary of findings of NSV survey is given in preceding sections.

[β] Major bridge @ km 590+773 on RHS (length – 592.5m) is having rigid pavement whereas Flexible pavement is considered in Sch A. There is negligible difference on LHS.

[π] Sch A indicates that all bus shelters are with bays which is not the case at 10 locations. Moreover, two existing shelters at Ranasthalam urban area from km 629+880 to km 634+470 are not Considered in Sch A.

[2] Flyover at Ranasthalam urban area, i.e. at 632+136, is considered in Sch A which is yet to be constructed.

1.3.1.1 Pavement Type

Project stretch is having flexible pavement except at toll plazas and from km 612+720 to km 616+720 where it is rigid pavement.

1.3.1.2 Pavement Distresses

The summary of pavement distresses for each lane of main carriageway in terms of percentage length are presented below:

Narsannapeta - Ranastalam

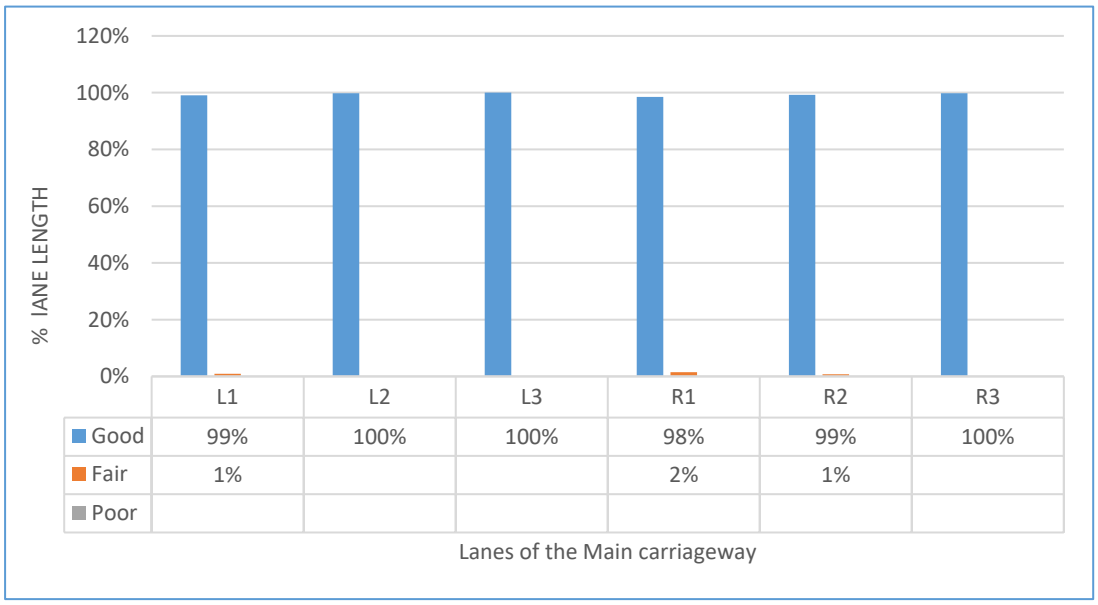

Figure 1-1: Summary of Pavement Distress

1.3.1.3 Pavement Roughness

Roughness value measured for each lane of main carriageway using NSV. The summary of direction-wise roughness distribution for each lane in term of percentage length are presented below.

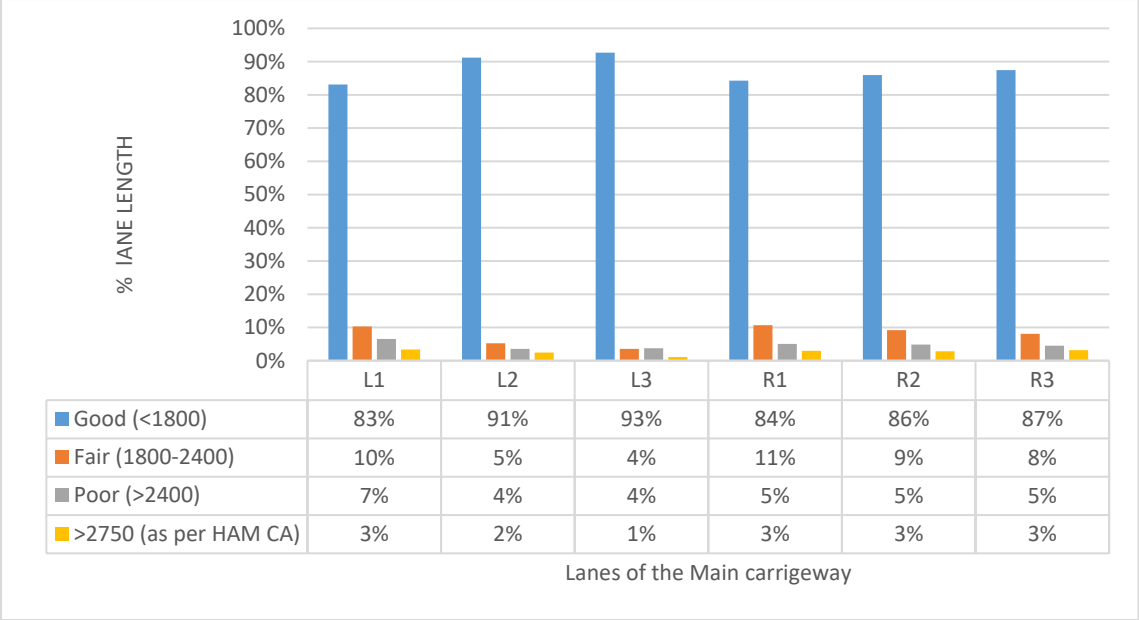

Figure 1-2: Pavement Roughness Charts

Km-wise pavement condition and distress in the form of strip chart is included in **Annexure - 4.2**.

1.3.2 Test Pit Investigations

Test pit investigations was planned to conduct at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). However, the project is partially access control throughout the length, thereby no earthen shoulder has been found and thus test pits were taken at the locations where feasible to dug at the interface of the paved and earthen shoulder. The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 1-4:Summary of Existing Pavement Crust Thickness

Date of Sampling	Location of Trial Pit	Lanes	Pavement Composition (mm)						
			BT	PQC	DLC	WMM	Cemented layer	GSB	SUBGRADE
Narsannapeta-Ranastalam Section									
07.08.24	587+800LHS	6	170	-	-	100	150	200	500
06.08.24	613+100LHS	6	-	270	130	100	150	200	500
06.08.24	587+600RHS	6	90	-	-	100	150	200	500
06.08.24	619+700RHS	6	120	-	-	100	150	200	500
06.08.24	628+900RHS	6	130	-	-	100	150	200	500
07.08.24	630+900LHS	4	130	-	-	260	-	200	500
06.08.24	633+500RHS	4	130	-	-	250	-	200	500

Observations and Conclusions:

- The existing pavement along the project corridor of Narsannapeta-Ranastalam is flexible in most of the length except Etcherla bypass from km 612+720 to km 616+720 and toll plaza location where it is with rigid type. The pavement composition comprises of bituminous layer, granular base/sub-base on subgrade for flexible pavement whereas PQC, DLC and granular layer for rigid pavement
- The pavement type for service road in all the above project packages is flexible type and has been designed for 10MSA traffic.
- Throughout the project road, consistent bituminous/ cemented/ granular layer thickness are found.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in below sections.

Table 1-5:Test Results: Narsannapeta-Ranastalam Section

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade

630+900LHS	GC (Clayey Gravel)	55.3	38.3	25.6	29.7	32.5	17.7	14.8	10.0	2.05	7.5	1.70	8.0	12.4	17.0	Not found
633+500RHS	GC (Clayey Gravel)	58.5	40.9	27.9	30.6	32.9	15.8	17.1	10.0	2.03	8.5	1.64	8.0	12.5	17.0	Not found

Observations and Conclusions

The subgrade soils are generally consistent throughout the project road and CBR values are in compliance with the design CBR as adopted during the 6-lane works. Further, it has been observed during the site visit that most of the soils in the region found to be red soil having CBR values more than 10% and this is one the reason for better performance of the pavement of the project highways.

1.3.3 Axle Load Survey

Axle load survey has been conducted in compliance with IRC 37 2018 for 24 hours in both directions at the existing toll plaza locations. Obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 1-6: Vehicle Damage Factors (VDF)

Toll Plaza	Direction *	Vehicle Damage factors				
		Bus	LCV	2-Axle	3-Axle	MAV
Madapam Toll Plaza (km 589+550)	LHS	-	2.06	3.61	5.79	10.46
	RHS	-	1.68	2.61	5.36	8.09

** LHS: Srikakulam to Anakapalli RHS: Anakapalli to Srikakulam*

There is a significant difference between the axle loads of commercial vehicles flying in both directions of traffic, due in inconsistent commodity pattern generating from different locations along the project highway and thus, separate factors have been considered for traffic assessment. Further, 7-day axle load survey values are lower than one days and hence adopted the above values in the study.

1.3.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique” to determine the remaining life of the pavement structure.

The detailed remaining life analysis is done using 90 percent reliability equation of IRC: 115-2014 is presented in tables below for LHS and RHS carriageway.

Table 1-7:Section-wise Pavement Remaining life

S.No	Homogeneous sections			Existing Thickness, mm		Total Crust	Remaining Life @ 90% Reliability		
	From, km	To, km	Length	BT	Granular		Fatigue	Rutting	Remaining Life, MSA

1.3.4.1 FWD data Analysis for Rigid Pavement

As per IRC: 117-2015, the collected FWD data for the rigid pavement has been analysed to determine the following parameters.

- Modulus of subgrade reaction k (MPa/m)
- Elastic modulus of concrete E_c (MPa)
- Flexural Strength of concrete f_{mr} (MPa)
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of the parameter for PQC and Load Transfer Efficiency is presented in **Annexure 4.7** for both LHS and RHS directions respectively.

From the test results the observations were draw-down. The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table **below**.

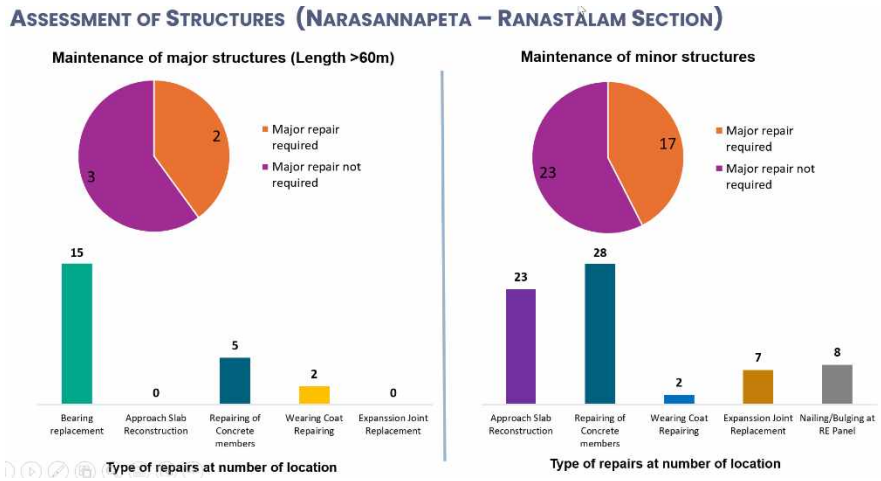

Table 1-8: Outcome of FWD Data Analysis for Rigid Pavement

Side		LHS					RHS				
Chainage (Km)		Modulus of subgrade reaction k (MPa/m)	Elastic modulus of concrete Ec (MPa)	Strength of concrete fc (MPa)	Flexural Strength of concrete f_{mr} (MPa)	LTE (%)	Modulus of subgrade reaction k (MPa/m)	Elastic modulus of concrete Ec (MPa)	Strength of concrete fc (MPa)	Flexural Strength of concrete f_{mr} (MPa)	LTE (%)
From	To										
Narsannapeta - Ransastalam Section (km 612+200 to km 616+200)											
612.200	613.000	73.769	28780	33.8	4.0	91.2	61.180	34856	48.7	4.9	96.1
613.000	614.000	58.496	31302	39.3	4.4	93.0	118.370	33314	44.8	4.7	91.7
614.000	615.000	83.520	32732	43.0	4.6	94.2	83.037	34974	49.5	4.9	90.7
615.000	616.000	79.837	33099	44.3	4.6	93.6	114.721	32249	41.7	4.5	92.0
616.000	616.200	108.318	37212	55.6	5.2	89.4	131.174	33198	44.4	4.6	87.6

- The PQC concrete slab has adequate strength with average flexural strength of more than 4.2MPa for the above rigid pavement project sections.
- Load Transfer Efficiency (LTE) for Transverse joints is more than 50% for both LHS & RHS direction and thus, joints are in good condition.
- Load Transfer Efficiency (LTE) for Longitudinal joints is more than 40% for both LHS & RHS direction so, the joint system is adequate in load transfer.

1.3.5 Structure Inventory and Condition Survey

There are deficiencies noted in the structures and relevant repair-rehabilitation measures are suggested. Requirement of immediate repairs for major structures (length > 60m) and minor structures are presented below.

1.4 Key Technical Issues

1.4.1 Reinforced Earth Wall (RE Wall)

Bulging and cracks are observed in RE wall panels in Narsannapeta – Ranasatalam section at the approaches of flyovers and underpasses. Affected approximate number of panels are provided below:

- VUP @ 581+330: 20 panels
- LVUP @ 582+478: 11 panels
- VUP @ 588+620: 35 panels
- VUP @ 597+725: 05 panels
- Flyover @ 608+780: 08 panels

The Project is under HAM till 15th February 2038. Existing HAM Concessionaire has done nailings to address these bulging. It may be safely assumed that if the stability of RE wall sustains till the end of existing concession terms, wall shall be further stabilised. However, a detailed study may be done to ascertain the reasons for these bulging and its remedial measures.

1.4.2 Damaged Bearings

Problems with the bearings are observed in the form of tilting, cracking, not properly placed and compressed. Affected structures are

MJBR: @ 590+750, @ 605+523, @ 655+573, @ 675+164 and @ 709+692

It is presumed that existing HAM Concessionaires will fix all these bearings before handing over.

1.5 Capital Expenditure Requirement

1.5.1 Improvement Works as Per Schedule B

Schedule B of each stretch specifies the requirements of initial improvement which the concessionaire has to construct within 3/6 months of Handover Date.

Improvement Scope specified for each stretch is tabulated below:

Table 1-9: Improvement works as per Schedule B

S. No.	Description	Unit	Narsannapeta-Ranasatalam
1	Approach slabs reconstructed	Nos.	17
2	Junction improvement	Nos.	30
3	Curve improvement	Nos.	50
4	Truck lay bye: Sewage disposal system	Nos.	3
5	Landscaping and median plantation	Km	16.2

S. No.	Description	Unit	Narsannapeta-Ranasatalam
6	Transverse Bar Marking	Nos.	17
7	Antiglare	Km	2.51
8	Kerb stone	Lm.	10,760

1.5.2 Immediate Maintenance Requirements

This section is under HAM (Annuity) concession up to 2037. So, obligation for immediate repair requirements do not lie with InvIT Concessionaire. However, toll plaza renovation cost and TMS replacement cost has been considered for existing toll plaza.

1.6 O&M Cost Estimation

1.6.1 Recommended MM Cycles for Pavement

Considering the initial pavement design period and crust, remaining life data, anticipated traffic loading during the concession period, and in compliance to the provisions of schedule B, the following cycle of Major maintenance is proposed for satisfactory performance of the pavement during operation period to serve both functional and structural requirements.

Table 1-10: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)				
	CAPEX	Routine Maintenance	Periodic Maintenance	ATMS & TMS Replacement	Toll Operation & Admin Cost
Narsannapeta-Ranastalam	Toll plaza renovation cost TMS (all the existing defects to be rectified by HAM Concessionaire)	**Till O&M Handover**: Manpower cost for clearing considered **After Handing Over**: Regular	**FY37**- Revalid. Survey **FY38**- Improvement works as per Sch.-B & road marking **FY42**- ***MCW:*** 40BC, 50DBM for 10% length ***SR:*** 40BC, 50DBM for 10% length ***Rigid***: Retexturing, replacement of joint sealant and 2.0% of panel ***Structure***: Replacement of wearing coat, expansion Joint, Bearing replacement for 40% of total number **FY45**-Road marking, Micro surfacing	**FY33** 50% TMS **FY40**- 100%TMS 40% ATMS	01.04.2025

1.6.2 Cost Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of Initial Improvement, MMR and O&M are given below

Table 1-11: Cost Estimate (Initial Improvement, MMR and O&M)

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	7.45					0.60					6.30	0.11		3.99

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

1.7 Conclusion

The project highway is a partially access controlled consists of 6-lane divided carriageway with service roads on both sides with minimum number of merging and diversion points on the highway for access to service roads. The 6-lane project has been completed on HAM mode and at present toll is being collected by Toll Collection Agency appointed by NHAI. The project highway is also having 4-lane divided carriageway at Ranastalam built-up area (part of project from Narsannapeta-Ranastalam), for which improvement proposals have been undertaken by NHAI in the form of construction of 6-lane elevated corridor. The performance of the pavement is satisfactory in terms of pavement roughness and quality of the pavement surface without having major distresses. However, few of the locations noted with low severity rutting for which rectification measures in progress for flexible pavement. As part of present study, the required Engineering Investigations along with site visual observations were made for evaluation of the asset condition and accordingly established the required maintenance and rehabilitation measures/decisions for the concession period. The period maintenance by functional/structural overlays are required at every 6th year as per the CA would be sufficient to keep the project stretch in good condition and hence suitable major maintenance strategy has been recommended to improve the service life during the concession period.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report it is concluded that most of the structures are in sound condition and no major repair is required in near future. However, there are issues with the bearings for few structures and bulging in RE wall location. As the entire road sections are in HAM, these defects are to be rectified by the existing Concessionaires. It is to be ensured that asset quality assessment is done thoroughly at the time of handing over so that these defects and any other defects occur during the remaining HAM concession period is rectified.

The assessment of estimated cost of such repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

Section 2: Introduction

2.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 15th July 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 2-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	NH No.	Lane	Length (km)
1	**Narasannapeta to Ranastalam**	**Madapam**	**NH-16**	**4/6 Lane**	**53.799**
2	Ranastalam to Anandapuram via Kopperla	Nathavalasa	NH-16	6 Lane	48.980
	Anandapuram to Visakhapatnam	-	Old NH-16	4 Lane	17.564
3	Anandapuram to Anakapalle via Pendurthi	Dukkavanipalem & Marripalem	NH-16	6 Lane	48.605

This report pertains to the stretch Narasannapeta to Ranastalam.

2.2 Objectives

The main objectives of the present assignment is to

review project documents and understanding schedule B requirements for improvement works for the assessment of Capex and Opex during the concession period.

1. conduct field investigations to assess the existing asset condition and future deterioration.
2. validate executed works with respect to schedule A and assessment of improvement works
3. review quality of construction based on available data, design and drawings.
4. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
5. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

2.3 Technical Consultant Team

The Technical Consultant commenced its services from 15th July 2024 and the team comprising of Highway, Pavement & Structure Engineers and Experts have conducted site visit from 25th July 2024 to 11th August 2024 to appreciate the project corridor characteristics. This report highlights the findings from visual assessment, available documents shared with the consultant, discussion with NHAI officials involved with the maintenance and operation of project road at site and other local enquiries. Analysis of data as obtained from various survey and investigations conducted at site are present in this report.

Date-wise various field activities at site are shown below in bar chart form in **Figure 2.1.**

PROJECT STRETCHES	25-Jul	26-Jul	27-Jul	28-Jul	29-Jul	30-Jul	31-Jul	01-Aug	02-Aug	03-Aug	04-Aug	05-Aug	06-Aug	07-Aug	08-Aug	09-Aug	10-Aug	11-Aug

2.4 Disclaimer

The information and documents received from the Client are being reviewed by the Consultant and have been used for preparing this report. Due care has been taken while reproduction of the information where required to avoid typographical or other errors.

2.5 Structure of the Report

The report has been structured into nine sections as follows:

Section 1: Executive Summary
Section 2: Introduction
Section 3: Inventory and Condition Assessment
Section 4: Surveys and Investigations
Section 5: Review of Documents

Section 6: Capital Expenditure (CapEx) Requirement

Section 7: Operation & Maintenance

Section 8: Analysis & Comparisons with Seller Data

Section 9: Conclusions

Section 3: Inventory and Condition Assessment

3.1 General

The Technical Consultant visited site from 25th July 2024 to 11th August 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road. This chapter elaborates various findings of these surveys and studies conducted by the Technical Consultant team in different sections.

3.2 Project Corridor

The project stretch details are listed below:

Table 3-1: Detail of Project Stretch

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length (km)
			From	To	
1	Narasannapeta to Ranastalam	Madapam	580+671	634+470	53.799

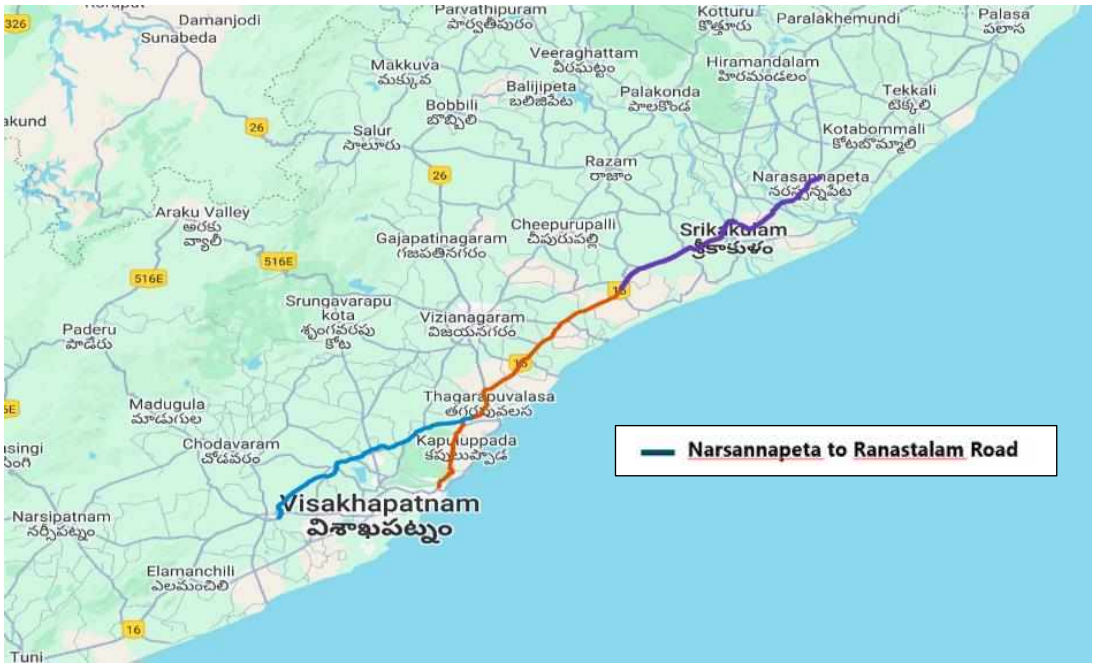

Figure 3-1: Project Location Map

3.3 Project Brief

3.3.1 Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length	Lane Configuration	Pavement Type	Date of COD	O&M Handover Date to InVIT	Concessionaire / Remarks
			From	To	(km)					
1	Narsannapeta to Ranasthalam	Madapam @ 589+554 (16 lanes)	580+671	629+880	49.209	6-lane	Flexible, except from km 612+720 to km 616+720 on MCW and Toll Plaza where it is with rigid	16-02-2023	20-01-2037	M/s Apco Arasavalli Expressway Pvt. Ltd (HAM)
			629+880	634+470	4.590	4-lane	Flexible	31-03-2027	31-03-2037	Elevated Corridor; Tender invited under EPC mode with 10 yrs DLP

Details of Assets:

Table below provides the quantum of the assets and compare the same with the Schedule A stipulations:

S. No	Description			Narasannapeta to Ranastalam Section (from km 580+671 to km 634+470)	
				Schedule-A	At Site
1	Total Project Length (km)			53.799	53.799
2	Service Roads/ Slip Roads (km)			95.766	**89.077**[3]
3	Pavement (km)	Flexible	LHS	49.129	**49.139**[β]
			RHS	49.129	**48.609**[β]
		Rigid	LHS	4.670	**4.660**[β]
			RHS	4.670	**5.190**[β]
4	Bus Shelters (no.)			-	**12**[π]
	Bus bays with Shelters (no.)			40	**30**[π]
	Bus bays (no.)			-	-
5	Truck Lay-bays/Parking (no.)			3	**3**
6	Toll Plaza (no.)			1	1
7	Rest Area (no.)			-	3
8	Major Bridges (no.)			3	3
9	Minor bridges (no.)			14	14
10	ROB's (no.)			-	-
11	Flyover (no.)			3	**2**[4]
12	Overpass for new Int. Airport (no.)			-	-
13	VUP's (no.)			11	11
14	LVUP (no.)			12	12
15	PUP/CUP (no.)			3	3
16	Foot Over Bridge (no.)			1	1
17	Culverts (no.)	Pipe Culvert		119	119
		Slab Culvert		1	1
		Box Culvert		58	58

[3] In Sch A, service road from km 629+880 to km 634+470 is considered on BHS for entire length however existing SR is there for a length of only 2.88 km for BHS. SR for remaining length yet to be constructed on EPC mode by NHAI, hence not considered by the Consultant as existing SR.

[β] Major bridge @ km 590+773 on RHS (length – 592.5m) is having rigid pavement whereas Flexible pavement is considered in Sch A. There is negligible difference on LHS.

[π] Sch A indicates that all bus shelters are with bays which is not the case at 10 locations. Moreover, two existing shelters at Ranasthalam urban area from km 629+880 to km 634+470 are not Considered in Sch A.

[4] Flyover at Ranasthalam urban area, i.e. at 632+136, is considered in Sch A which is yet to be constructed.

3.4 Road Inventory and Condition Survey

3.4.1 Road Inventory

The Road Inventory is conducted to assess and list out the existing features of the project corridor and to validate that project road is conforming to the requirements of CA. It covers all the existing physical features such as terrain, land use, carriageway surfacing type, shoulder width, junctions, water bodies, roadside arboriculture, general drainage conditions, etc. It was carried out in accordance with the guidelines given in IRC: SP 19-2001, generally by visual means, and supplemented by simple tape measurement.

The road inventory data collected for the project highway is presented in the **Annexure 3.1.**

3.4.2 Terrain

The project highway falls in plain terrain.

3.4.3 Land Use

The land along the project highway is predominantly agricultural followed by built up, barren, forest, residential and commercial areas. Details of land use are given in the **Table 3.2**.

Table 3-2: Land Use

Description	Narasannapeta to Ranastalam			
	Length (km)		%age	
	LHS	RHS	LHS	RHS
Agriculture	27.659	30.999	51.41%	57.62%
Built-Up Area (Residential/Commercial/ Industrial)	24.310	21.550	45.19%	40.06%
Others (Water Bodies/ Forest etc.)	1.830	1.250	3.40%	2.32%
Total	**53.799**	**53.799**	**100%**	**100%**

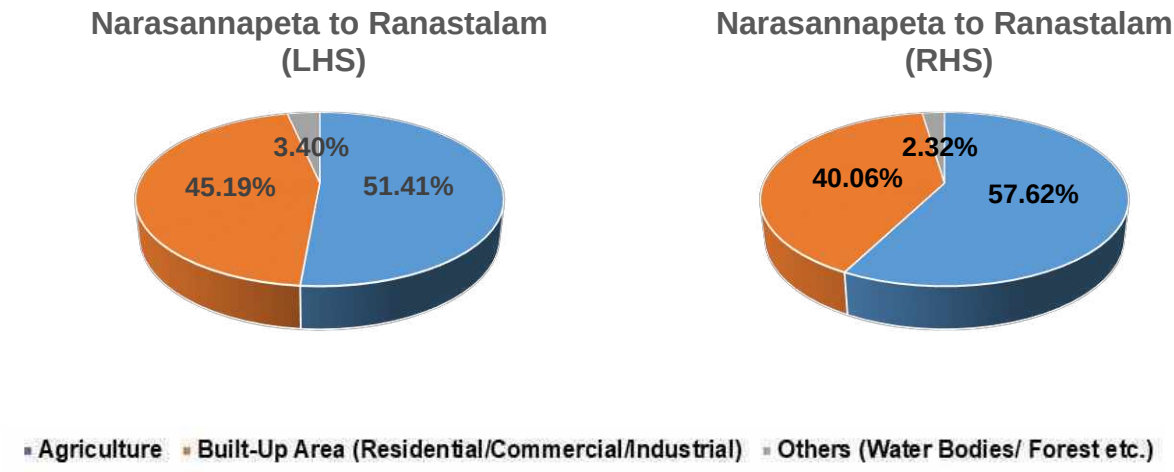

Figure 3-2: Land Use

3.4.4 Main Carriageway

Most of the length of the project highway is a 6-lane divided carriageway with paved shoulder configuration. The carriageway width is 11.0m (with kerb shyness) with 1.5m wide paved shoulder at rural area, 11.0m (with kerb shyness) with 2.0m wide paved shoulder at urban area and 11.0m (with kerb shyness) with 2.5m wide paved shoulder at underpasses location all along the project corridor except at toll plaza, bridges and ROBs.

There are four lane with paved shoulder configuration for around 4.5km towards the end of Narasannapeta to Ranastalam section. Carriageway width for these sections is 7.25m (including kerb shyness) with 1.5m wide paved shoulder on either side on main carriageway.

Details are show in **Table 3.3** and **Figure 3.3** below.

Table 3-3: Main Carriageway

S. No.	Section	Chainage (km)		Length (km)	Lane	Type of Pavement	Remarks
		From	To				
1	Narasannapeta – Ranastalam	580+671	589+200	8.529	6-lane with Paved Shoulder	Flexible	
		589+200	589+850	0.650		Rigid	Madapam @589+580
		589+850	612+720	22.870		Flexible	
		612+720	616+740	4.020		Rigid	
		616+740	629+880	13.140		Flexible	
		629+880	634+470	4.590	4-lane with Paved Shoulder	Flexible	
				53.799			

6 lane Flexible Carriageway (Typ)

6 lane Rigid Carriageway (Etcherla Bypass)

Figure 3-3: Main Carriageway

3.4.5 Service Road/Slip Roads

Total linear length (both side length) of service/slip road length for the project road is 271.608 km with 89.103 km falls in Narasannapeta to Ranastalam section. Flexible pavement is there for the service roads at all the locations. Details of service road are given below.

Table 3-4: Service Road

Service Road (LHS)			Service Road (RHS)		
Chainage (km)		Length (km)	Chainage (km)		Length (km)
From	To		From	To	
Narasannapeta to Ranastalam Section

5	593+200	594+600	1.400	LHS	Singupuram
6	599+600	600+000	0.400	Both Side	Pedapadu
7	600+200	600+500	0.300	LHS	Patrunivalasa (Rural)
8	603+900	605+100	1.200	RHS	Gopi Nagar
9	604+300	604+700	0.400	LHS	Gopi Nagar
10	608+200	608+700	0.500	LHS	Seepannaidupeta
11	610+100	610+300	0.200	Both Side	FareedPeta
12	610+700	610+900	0.200	LHS	FareedPeta
13	611+500	611+950	0.450	Both Side	Nava Bharat Nagar
14	617+530	618+030	0.500	Both Side	Chilakapalem
15	622+430	622+930	0.500	Both Side	Budumuru Village
16	626+230	626+530	0.300	Both Side	Budatavalasa Village
17	626+580	626+780	0.200	Both Side	Bonthupeta Village
18	628+130	628+580	0.450	Both Side	Laveru Village
19	631+260	633+200	1.940	Both Side	Ranasthalam

3.4.7 Major and Minor Junctions

3.4.7.1 Major Junction

Provision of grade separation in the form of underpasses (CUPs, PUPs, LVUPs, VUPs and Flyovers) are there at all major junctions for the entire project road except for the 4-

lane section from km 630+000 to km 634+500. All access to the project highway is through the Service/Slip Road.

There are 10 nos. of Major Junction. Details of the major junction are given in the **Table 3.6** below:

Table 3-6: List of Major Junction

Sr. No.	Chainage (Km)	Type of Junction	Cross Road leads to	
			LHS	RHS
Narasannapeta to Ranastalam Section				
1	581+300	Y	-	Paralakhemundi
2	586+950	Y	-	Urlam
3	592+340	X	Gara	Amadalavalasa
4	600+160	Y	Srikakulam	-
5	604+520	X	Srikakulam	Ragolu
6	608+780	Y	Srikakulam	-
7	609+710	Y	Srikakulam	-
8	612+700	Y	-	Etcherla
9	616+740	Y	-	Etcherla
10	627+545	Y	-	Cheepurupalli

3.4.7.2 Minor Junction

There are 20 nos. minor junctions all along the project section. Other village or town road are connected with service / slip road and the road users are coming through service / slip road to connect with main carriageway. Summary of the minor junctions are given in the **Table 3.7** below:

Table 3-7: Summary of Minor Junction

Sr. No.	Type of Junction	Narasannapeta to Ranastalam Section
1	T Junction	3
2	Y Junction	8
3	X Junction	9

3.4.8 Median

Median width is predominantly 4.0m-4.5m (excluding shyness). However, narrow median is observed at few locations due to ROW constraints or in built-up stretches. Details of sections with narrow median width are given in the **Table 3.8** below:

Table 3-8: Details of Narrow Median (Width < 4.5m)

Chainage (km)		Width (m)	Section	Remarks
From	To			
613+100	614+200	1.5 - 2.0	Narasannapeta to Ranastalam	ROW constraints
631+200	633+050	1.5 - 2.0		Built-up Area

3.4.9 Earthen / Hard Shoulder

Earthen shoulders are provided on the outer side of the main carriageway. The width of these shoulders is 1.5m to 2.5m.

3.4.10 Drainage

Cover Drains are provided with service and slip road in entire of project road. Median cut drains are provided at super-elevated portion for efficiently draining out rainwater. Package wise details of Drainage are given in the **Table 3.9** and shown in **Figure 3.5.**

Table 3-9: Drainage System

Description	Narasannapeta to Ranastalam Section
Covered lined Drain (km)	77.625
Open Lined Drain (km)	0.410

General observation of drainage conditions during the site reconnaissance are:

- Cleaning and maintenance of roadside drainage needs improvement. Cover at drain is missing at few locations.
- There are provisions of down-take pipes along the RE wall approaches. However, these are not adequate and most of the runoffs are through the longitudinal slope and water was draining off to the service road at the end of the slope.
- Provision of chute drain at high embankment location is observed. Water is draining off from the main carriageway to drain through the service road. This will adversely affect the pavement of service road.
- Median cut drain (chute) connected to longitudinal median drains and then through sumps and hume pipes are provided at super-elevation section to drain out the water from one carriageway to another at curve location. However, this drain system is missing at one or two super-elevation locations and rain waters are stagnant near the median.
- Though there were considerable rains during the time of inventory survey, no overtopping of road was observed at any location. It was further confirmed by the locals also.

Cover Drain at Slip Road Location

Cover Drain at Service Road Location

Missing Median Drain at curve location

Inadequate Drainage at RE wall Approaches

Figure 3-5: Drainage System

3.4.11 Road Furniture

3.4.11.1 W-Beam Crash Barrier, Concrete Crash Barrier and Pedestrian Guardrail

W-Beam Crash Barrier

W-beam Crash Barrier is provided at high embankment location, Separator (in between main carriageway and service road), near major structures and at outer side of sharp curves in the entire project road. Package wise length of W-Beam Crash Barrier are given in the **Table 3.10** and shown in **Figure 3.6.**

Table 3-10: W-Beam Crash Barrier

Description	Narasannapeta to Ranastalam Section
W-Beam Crash Barrier (km)	77.625

Figure 3-6: W-Beam Crash Barrier near High Embankment and Separator

Concrete Crash Barrier

Concrete Crash Barrier is provided at approaches of ROBs, Flyovers and Underpasses almost all through the project road. Length of CC barrier are given in Table **3.11** and shown in **Figure 3.7.**

Table 3-11: Concrete Crash Barrier

Description	Narasannapeta to Ranastalam Section
Concrete Crash Barrier (km)	42.284

Figure 3-7: Concrete Crash Barrier

Pedestrian Guardrails

Pedestrian guard rail is there between main carriageway and service road. Length of Pedestrian Guardrails are given in the Table 3.12 and shown in Figure 3.8.

Table 3-12: Pedestrian Guardrails

Description	Narasannapeta to Ranastalam Section
Pedestrian Guardrail (km)	5.090

Figure 3-8: Pedestrian Guardrails

3.4.11.2 Sign Boards and Gantry

There are adequate number of signboards along the project road and most of them are in good condition. There are many variable message signs (VMS), overhead and cantilever gantry signs as well. Location of gantry signs are shown in **Table 3.13** and **Figure 3.9** below.

Table 3-13: Variable Message Signs (VMS) / Cantilever & Overhead Gantry

S. No.	Chainage (km)	Side	Type	S. No.	Chainage (km)	Side	Type

Figure 3-9: VMS and Gantry Signboards

In general, these appurtenances are in good condition.

3.4.11.3 5 km / Km / Hectometer Stones

5Km, Km & Hectometer stones are observed at shoulder & median. Most of stones are in good condition.

Figure 3-10: Kilometer & Hectometer Stones

3.4.12 Project Facilities

3.4.12.1 Bus Bays and Shelters

As main carriageway is access controlled, Bus bays/shelters are at service/slip roads. It is observed that few shelters are of tin shade and are in poor condition. There are three types of facilities for boarding the bus by the road users. There are bus bay with shelters, only bus bay without shelters and only shelters without bays. Package-wise number of these facilities are given in **Table 3.14** and shown in **Figure 3.11** below.

Table 3-14: Bus Bays and Shelters

3.4.12.3 Streetlight

Street light in the form of single/double arm poles are provided in toll plaza, underpasses and built-up area along the project road. Package-wise length provided for street lighting is give in **Table 3.16** and few examples are shown in **Figure 3.13.**

3.5 Toll Plaza

The purpose of the Toll Plaza is to collect toll from road users of the Project highway with transparency in the system. There are four toll plazas along the project road. Booths are available for all lanes. Administrative buildings are there at all four Toll Plazas.

3.5.1 Madapam Toll Plaza (TP-1)

Madapam Toll Plaza (TP-1) is located at km 589+580, Narasannapeta - Ranastalam stretch which has 16 lanes (8+8 Lanes). Reserve lanes are at centre in both directions

and being used as emergency lanes. Extra wide lanes are the outermost lanes in both direction.

3.5.2 Toll Plaza Administration Building

The Plaza administration building serves as the support structure for the operation and maintenance of the toll plaza. It is from here that utilities are distributed and controlled, employee amenities are maintained, the toll collection process overseen, revenues are processed & audited. Sale of local passes and recharge is done at Plaza building. Transfer of funds from toll booth to plaza building and from plaza building to bank are being facilitated/managed by administration and financial management functions are also conducted in the building.

Figure 3-16: Toll Plaza Administration Buildings

There are ATMS control centres at admin buildings to do the traffic surveillance and incident management. ATMS control centre at TP-1 is shown below

Figure 3-17: ATMS Control Centre

3.6 Structure Inventory and Condition Survey

This section mainly presents the Site Inventory and Condition Survey of all existing Structures likes Culverts, Minor bridges & Major bridges, Flyovers/ Viaducts, VUP, LVUP, PUP, RUB and ROBs along the project roads. The aim of the section is to present the details of existing structures condition of existing structures and functioning of structures. The structure inventory has been done on the basis of visual assessment of each structure. MBIU has been used for visual assessment inspection of major structures having length greater than 60m.

Number of existing structures along the Project roads are given in the following table. Detailed inventory and condition data is presented in **Annexures – 3.2** and **3.3**.

Table 3-19: Number of Structures

Section 4: Surveys and Investigations

4.1 Visual Condition Assessment

i) In general, pavement condition is good to fair except rutting on wheel paths along middle and inner lane.

ii) As per the IE site team, rutting started after 1 years of COD and 15% of the lane length has already been done the rectification works through milling to a depth of 40mm and relaying back with 40mm fresh BC layer.

iii) Cement treated base (CTB) layer executed in 6-lane widening works.

iv) Bulging of RE wall panel is observed at approaches of underpasses, mainly at LVUP @ 586+920 and VUP @ Ch-597+508.

v) Tiling of bearings observed - One bearings at RHS A1 & One bearings at pier location at MJBR@590+ 750

Figure 4-1: Existing Pavement Distresses (Typ)

4.2 Network Survey Vehicle (NSV)

The Network Survey Vehicle is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools. The survey vehicle is used for automatic data collection pertains to pavement condition and road inventory data, required for preparation of pavement maintenance and management proposals. It allows

all the data to be collected in a single pass consequently minimising the time needed to complete the data collection. The measurement of surface distresses like cracking, ravelling, patching and potholes etc. is done using the calibrated image processing methods. The description of NSV and the methodology adopted is provided in **Annexure-4.1.**

The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. The data has been collected separately for each lane of the Carriageway. NSV Vehicle at the site is shown below.

Figure 4-2: NSV survey

4.2.1 Evaluation of Pavement Condition

NSV survey has been conducted for assessment of pavement condition and its distresses. The pavement surface images captured by NSV were processed in Survey board and all the images are geotagged with corresponding co-ordinates and chainage. By manual intervention with Survey Board, it was mapped/ identified various distresses showing distress type, location, magnitude and severity.

Flexible Pavement Distresses

The following Pavement distresses are considered for assessing the flexible pavement condition as per IRC: 82-2015 “Code of Practice for Maintenance of Bituminous Road Surfaces”.

- Cracking
  - Longitudinal cracks
  - Transverse cracks
  - Alligator cracks/ Crocodile cracks
  - Multiple cracks
- Ravelling

- Shoving
- Bleeding
- Slippage/ Delamination
- Potholes
  - Area: Surface Area of the Pothole;
  - Numbers
- Edge break
- Patching
- Settlements, Depressions

Strip chart showing the observed pavement distresses is provided in **Annexure 4.2** separately for LHS and RHS directions along with roughness. Based on the pavement condition, suitable repair and rehabilitation strategy has been suggested and same shall be presented under the section of Major Maintenance of this report.

4.2.2 Pavement Roughness

The roughness data was collected at 100m interval using NSV on each lane in-terms of IRI (International Roughness Index) value. In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 “Guidelines on Measuring Road Roughness and Norms” with the following equation;

$BI = 630*(IRI)^{1.12}$

Where

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data of Flexible & Rigid Pavement (Toll Plaza Section) was collected through Digital Laser Profilers System (DLP) and the same is presented in **Annexure 4.3**. The summary of Roughness values is presented in tables below

Table 4-1: Narsannapeta - Ranastalam Section: Summary of Pavement Roughness

Condition as per IRC:82-2023, Table 5.1	Unevenness (mm/Km)	LHS						RHS

4.2.3 Rutting

Rutting data of Flexible Pavement has been collected through Digital Laser Profilers System (DLP) of NSV and the same is presented in **Annexure 4.4**. Some of the sections of the project highway has been noted with low-medium severity rutting for which, the existing HAM concessionaire has already done the repair works in removal of such observed wheel path ruts. The section wise observations are as under.

It has been oobserved the wheel path rutting predominantly in middle and inner lane. Milling in progress during the visit for these rutted portions to a depth of 40mm and relaying back with 40mm fresh BC.layer. As per the discussions with IE team, it is learnt that rutting started after 1 years of COD and 15% of the lane length has already been done the rectification works through milling to a depth of 40mm and relaying back with 40mm fresh BC.layer

4.2.4 Test Pit Investigations

Test pit investigations have been planned to conduct at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). However, the project is partially access control throughout the length, thereby no earthen shoulder has been found and thus test pits were taken at the locations where feasible to dug at the edge of the paved and earthen shoulder. The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 4-2: Summary of Existing Pavement Crust Thickness

Date of Sampling	Location of Trial Pit	Lanes	Pavement Composition (mm)						
			BT	PQC	DLC	WMM	Cemented layer	GSB	SUBGRADE
Narsannapeta-Ranastalam Section									
07.08.24	587+800LHS	6	170	-	-	100	150	200	500

06.08.24	633+500RHS	4	130	-	-	250	-	200	500

Figure 4-3: Pavement Composition & Thickness Measurement

Observations and Conclusions:

- The existing pavement along the project corridor of Narsannapeta-Ranastalam is flexible in most of the length except Etcherla bypass and toll plaza location where it is with rigid type. The pavement composition comprises of bituminous layer, granular base/sub-base on subgrade for flexible pavement whereas PQC, DLC and granular layer for rigid pavement
- The pavement type for service road is flexible type and has been designed for 10MSA traffic.
- Throughout the project road, consistent bituminous/ Cemented/granular layer thickness is found.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in below sections.

Test Results: Narsannapeta-Ranastalam Section

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade

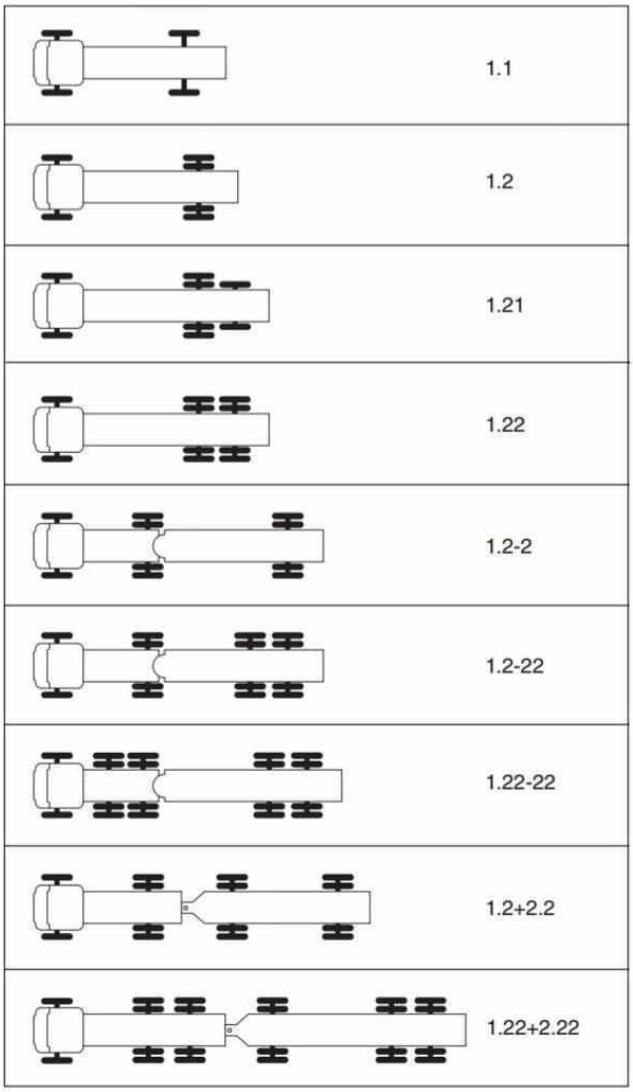
587+600RHS	GC (Clayey Gravel)	55.6	44.1	28.3	27.3	33.5	18.1	15.4	20.0	1.98	9.2	1.66	8.0	12.2	18.0	Not found
619+700RHS	GC (Clayey Gravel)	58.5	43.6	30.1	28.4	35.0	17.0	18.0	20.0	2.01	8.8	1.71	7.0	11.4	16.0	Not found
628+900RHS	GC (Clayey Gravel)	59.4	42.5	28.1	31.3	35.1	16.9	18.2	20.0	2.01	8.8	1.83	7.0	10.3	14.0	Not found
630+900LHS	GC (Clayey Gravel)	55.3	38.3	25.6	29.7	32.5	17.7	14.8	10.0	2.05	7.5	1.70	8.0	12.4	17.0	Not found
633+500RHS	GC (Clayey Gravel)	58.5	40.9	27.9	30.6	32.9	15.8	17.1	10.0	2.03	8.5	1.64	8.0	12.5	17.0	Not found



Observations and Conclusions

The subgrade soils are generally consistent throughout the project road and CBR values are in compliance with the design CBR as adopted during the 6-lane works. Further, it has been observed during the site visit that most of the soils in the region found to be red soil having CBR values more than 10% and this is one the reason for better performance of the pavement of the project highways.

4.3 Axle Load Survey

Vehicle axle loading has a significant effect on pavement design and its impact on performance of the pavement. Therefore, an axle load survey has been conducted from 26th July-2024 to 02nd Aug-2024 in compliance with IRC 37 2018 and such survey was conducted for 24 hours in both directions at each of the existing 4 No's toll plaza locations along the project highway from Narsannapeta-Anakapalli.

The type of vehicle considered for axle load survey along with its axle configurations are presented in below. Few of the survey photographs were shown in Photos as below:

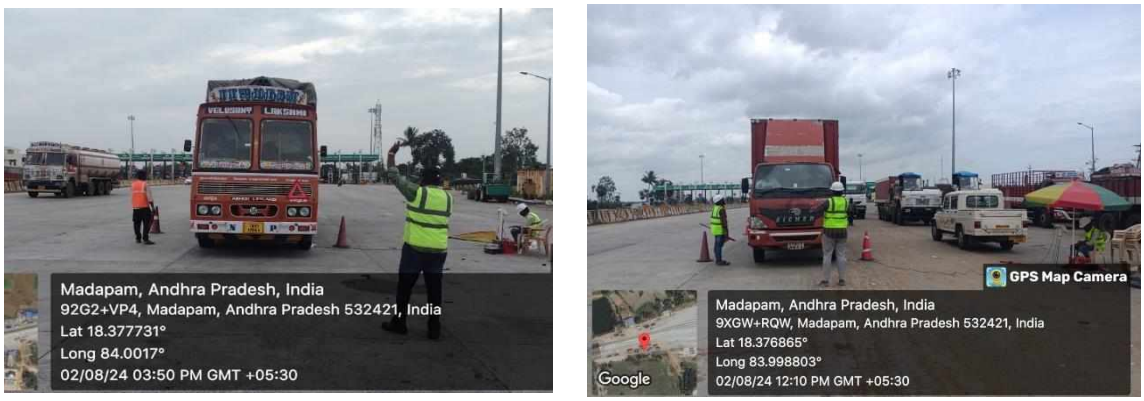


Figure 4-4: Axle Load Survey

The VDF analysis was carried as per procedure given IRC: 37-2018 based on the collected axle load data. The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC:37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions;

- Single axle with single wheel on either side = {axle load in kN / 65}4
- Single axle with dual wheel on either side = {axle load in kN / 80}4
- Tandem axle with single wheel on either side = {axle load in kN /148}4
- Tridem axle with dual wheel on either side = {axle load in kN /224}4

With the stated above procedure, the Vehicle Damage Factor for each class of commercial vehicle on both the directions were calculated separately for empty and loaded vehicles. The Axle load data format and VDF analysis are presented in **Annexure 4.5** and obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 4-3: Vehicle Damage Factors (VDF)

S. No	Toll plaza	Madapam	
		(km 589+550)	
	Vehicle Type	LHS	RHS
1	Bus	-	-
2	LCV	2.06	1.68
3	2-Axle	3.61	2.61
4	3-Axle	5.79	5.36
5	MAV	10.5	8.09

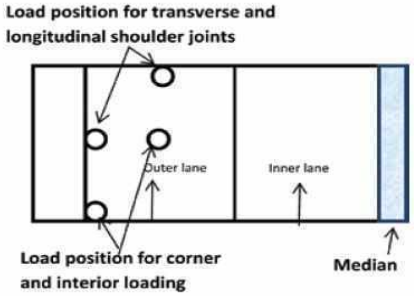
There is a significant difference between the axle loads of commercial vehicles flying in both directions of traffic, due in inconsistent commodity pattern generating from different locations along the project highway and thus, separate factors have been considered for traffic assessment. Further, 7-day axle load survey has been conducted to validate the above

inconstancy and found that VDF values as obtained from these 7-day survey is less than 24 hours' survey and hence adopted the above values in the present due diligence study.

4.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique" to determine the remaining life of the pavement structure.

The principle and description of FWD and its methodology is provided in **Annexure 4.6.**



FWD deflection measurement has been carried out for each direction and the measurement has been carried out at a test point along outer wheel path of each direction which is at an offset of 1m from the outer edge of outer lane as specified in section 5.4.5 of IRC: 115-2014. At every measurement location, four drops were made, such that the first drop was the '**seating drop'** and with the remaining three drops deflections were recorded. Field survey photographs is shown below.

Figure 4-5: FWD Survey at Project Site

The deflection testing has been carried out on the existing pavement as per IRC Codes at the rate of 5 points per km as stipulated in TOR of the Consultant.

Adopted deflection measurement scheme is as under.

Adopted Measurement Scheme	Maximum Spacing(m) for test points along selected wheel path (Flexible Pavement)	Rigid Pavement
(i) measurement along outer wheel paths of outer lanes (3 points)	200	
(ii) measurement along the outer wheel path of inner lane (2 points)	400	

4.4.1 Back-calculation of Layer Moduli for Flexible Pavement

Layer moduli have been back-calculated using KGPBACK program. The pavement has been modelled as a three-layer system with bituminous layer, granular layer and subgrade. The following inputs have been provided for back analysis.

i) Single wheel load 40 kN and contact pressure 0.56 MPa
ii) No. of deflection sensors: 9
iii) Radial Distances of the Geophones i.e., 0,200, 300,450, 600, 900 and 1500mm
iv) Measured Surface Deflections normalized to 40kN in mm
v) Pavement Layer Thicknesses (as measured from Trial Pits)
vi) Poisson's ratio for different layers i.e., 0.35 for bituminous, granular and subgrade
vii) Range of Possible modulus value (Min.- Max.) of bituminous layer, granular layer and subgrade.

Ranges of different layer moduli have been given as input to KGPBACK for back-calculation. These ranges have been selected judiciously by experienced pavement engineering taking into considerations the approximate age of pavement, visual assessment of the condition of bituminous layer, climatic conditions prevailing at the time of deflection measurements and information available from test pits, and laboratory tests conducted as detailed below:

Range of modulus value of existing subgrade:

The range of moduli of existing subgrade is taken based on the subgrade CBR values for the analysis.

Range of modulus value of existing granular layers i.e., base and subbase:

The range of moduli of existing granular layers is based on Appendix III.8.4 of IRC 115-2014.The range for combined (base and sub-base) is taken as 100-500 MPa.

Range of modulus value of existing thick bituminous layers:

The range of moduli of existing thick bituminous layer has been determined on the basis of condition data. If the road condition is good the range is considered as 750 MPa to 3000 MPa, for sections with pavement condition is Fair- Poor, the range specified for thick bituminous layer 400 MPa to 1500 MPa as stipulated in Appendix III.8.4 of IRC: 115-2014 has been taken into consideration.

4.4.1.1 Correction for Temperature

Back-calculated moduli values of the bituminous layers evaluated by FWD survey are influenced by the pavement temperature. The standard pavement temperature for India is recommended as 35°C, hence the back-calculated moduli obtained at temperatures other than the identified standard temperature will have to be corrected using a suitable correction factor using equations 4 and 5 of IRC:115-2014 and the same is extracted below for ready reference.

$$E_{T1} = \lambda E_{T2} \ldots\ldots \textbf{(4)}$$

Where,

λ temperature correction factor, is given as

$$\lambda = \frac{(1-0.238 \ln T_1)}{(1-0.238 \ln T_1)} \ldots\ldots \textbf{(5)}$$

Where,

E_{T1} = Back-calculated modulus (MPa) at temperature $T_1^0\ C$

E_{T2} = Back-calculated modulus (MPa) at temperature $T_2^0\ C$

However, in few sections, after applying the temperature correction the E value of bituminous layers are coming more than 3000MPa. As the project road was constructed with VG-30/VG-40 grade bitumen, it is restricted to keep the maximum E value of 3000MPa, wherever it is exceeding. In these locations, the temperature correction factor was applied as 1.

4.4.1.2 Correction for Seasonal Variation

Moisture content affects the strength of subgrade and granular sub base/base layers. Therefore, the back-calculated moduli of subgrade and granular layers should be taken from field moduli using seasonal corrections. Seasonal correction equations 7 and 8 of IRC: 115-2014 has been extracted below for ready reference.

$$E_{sub_mon=}\ 3.351 * \left(E_{sub_win}\right)^{0.7688} - 28.9 \ldots (6)$$

$$E_{sub_mon} = 0.8554 * (E_{sub_sum}) - 8.461 \ldots (7)$$

where,

E $_{sub_mon}$ = subgrade modulus in monsoon (MPa)

E $_{sub_sum}$ = subgrade modulus in Summer (MPa)

E $_{sub_win}$ = subgrade modulus in Winter (MPa)

$$E_{gran_mon=}\ -0.0003 * \left(E_{gran_sum}\right)^2 + 0.9584 * \left(E_{gran_sum}\right) - 32.989 \ldots (8)$$

$$E_{gran_mon=}\ 10.5523 * \left(E_{gran_win}\right)^{0.624} - 113.857 \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (9)$$

where,

E $_{gran_mon}$ = granular layer modulus in monsoon (MPa)

E $_{gran_sum}$ = granular layer modulus in Summer (MPa)

E $_{gran_win}$ = granular layer modulus in Winter (MPa)

Since the deflection measurements have been carried out in the month of December hence seasonal correction factor is applicable.

The 15th percentile value (as the same has been recommended by IRC: 115-2014 for purpose of design) of back-calculated & corrected layer moduli of each identified homogeneous sub-sections of both directions separately are presented next.

4.4.1.3 Results of Back Calculated Modulii (E) of Pavement Layer

The summary of back calculated E values is presented in **Annexure 4.7**.

4.4.1.4 Remaining Life Estimation for Flexible Pavement

The in-service three-layer pavement system has been analysed with the back-calculated corrected layer moduli and layer thicknesses. The critical strains have been calculated by IITPAVE program. From the performance criteria equations, the residual/remaining rutting and fatigue life have been estimated.

Performance Criteria

The layer moduli of in-service pavement back calculated from FWD deflection data are used to analyse the pavement for critical strains which are indicators of pavement performance in terms of rutting and fatigue cracking. The following approach is proposed for design of bituminous overlays for existing flexible pavements. The mechanistic criteria (fatigue and rutting) adopted in the IRC:37-2018 “Guidelines for the Design of Flexible Pavements”, forms the basis for the overlay design method. Performance models adopted in these guidelines are given below.

a) Fatigue in Bituminous layer:

As it specified in IRC: 115-2014, the fatigue model for 90 percent reliability was used as below

$$N_f = 0.711 * 10^{-04} \times [1/\varepsilon_t]^{3.89} * [1/M_R]^{0.854}$$

As it specified in IRC: 37-2012, the fatigue model for 80 percent reliability was used as below

$$N_f = 2.21 * 10^{-04} \times [1/\varepsilon_t]^{3.89} * [1/M_R]^{0.854}$$

Where,

N_f = fatigue life in number of standard axles,

ε_t = Maximum Tensile strain at the bottom of the bituminous layer

M_R= resilient modulus of the bituminous layer.

b) Rutting in Subgrade:

Rutting model for 90 percent reliability level as specified in IRC: 115-2014 was used as below;

$$N = 1.41 \times 10^{-08} [1/\varepsilon_v]^{4.5337}$$

As it specified in IRC: 37-2012, the rutting model for 80 percent reliability was used as below

$$N = 4.1656 \times 10^{-08} [1/\varepsilon_v]^{4.5337}$$

Where,

N= Number of cumulative standard axles, and

ε_v= Vertical strain in the subgrade

The detailed remaining life analysis is done using 90 percent reliability equation of IRC: 115-2014 is presented in tables below for LHS and RHS carriageway.

Table 4-4: Section-wise Pavement Remaining life

S.No	Homogeneous sections			Existing Thickness, mm		Total Crust	Remaining Life @ 90% Reliability		
	From, km	To, km	Length	BT	Granular		Fatigue	Rutting	Remaining Life, MSA

4.4.1.5 FWD data Analysis for Rigid Pavement

As per IRC: 117-2015, the collected FWD data for the rigid pavement has been analysed to determine the following parameters.

- Modulus of subgrade reaction k (MPa/m)
- Elastic modulus of concrete E_c (MPa)

- Flexural Strength of concrete f_{mr} (MPa)
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of the parameter for PQC and Load Transfer Efficiency is presented in **Annexure 4.7** for both LHS and RHS directions respectively.

From the test results the observations were draw-down. The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table **below**.

Table 4-5: Outcome of FWD Data Analysis for Rigid Pavement

Side		LHS					RHS				
Chainage (Km)		Modulus of subgrade reaction k (MPa/m)	Elastic modulus of concrete Ec (MPa)	Strength of concrete fc (MPa)	Flexural Strength of concrete f_{mr} (MPa)	LTE (%)	Modulus of subgrade reaction k (MPa/m)	Elastic modulus of concrete Ec (MPa)	Strength of concrete fc (MPa)	Flexural Strength of concrete f_{mr} (MPa)	LTE (%)
From	To										
Narsannapeta - Ransastalam Section (km 612+200 to km 616+200)											
612.200	613.000	73.769	28780	33.8	4.0	91.2	61.180	34856	48.7	4.9	96.1
613.000	614.000	58.496	31302	39.3	4.4	93.0	118.370	33314	44.8	4.7	91.7
614.000	615.000	83.520	32732	43.0	4.6	94.2	83.037	34974	49.5	4.9	90.7
615.000	616.000	79.837	33099	44.3	4.6	93.6	114.721	32249	41.7	4.5	92.0
616.000	616.200	108.318	37212	55.6	5.2	89.4	131.174	33198	44.4	4.6	87.6

- The PQC concrete slab has adequate strength with average flexural strength of more than 4.2MPa for the above rigid pavement project sections.
- Load Transfer Efficiency (LTE) for Transverse joints is more than 50% for both LHS & RHS direction and thus, joints are in good condition.
- Load Transfer Efficiency (LTE) for Longitudinal joints is more than 40% for both LHS & RHS direction so, the joint system is adequate in load transfer.

4.5 Mobile Bridge Inspection Unit (MBIU)

4.5.1 Specification

The Mobile Bridge Inspection Unit (referred as (MBIU) is an electro-mechanically driven articulated structure mounted on a vehicle (a truck) as an aid towards proper inspection of bridges or similar infrastructures by enabling an inspection team of 2-3 persons carrying instruments access to the underside of bridge decks overflowing rivers or gorges. The present version is the truck mounted system. As per TOR condition survey of existing structures greater than 60m shall be carried using MBIU.

The overall objective of the condition survey is to identify the need for structural maintenance, rehabilitation and replacement. Signs of distress such as spalling, scaling, cracking, leaching,

excessive deflection, inadequate cover, settlement, exposed reinforcement, corrosion in the reinforcement; shear cracks etc. are identified during this exercise. Special emphasis is given on expansion joints and bearing. Also, the condition of the Approaches, water way and bed protection is examined. The survey identifies the bridges which are more distressed and require testing for their evaluation and rehabilitation measures. Also bridges which require general measures for rehabilitation. Inspection report is prepared in accordance with IRC: SP-35. The report provides recommendation whether a bridge is acceptable to continue in use, whether it can be repaired and/or modified e.g. widened or a new structure.

The structure inventory and condition assessment are given in **Annexure 3.2.** The following structures have been inspected using MBIU machine.

Table 4-6: List of Inspected Structures using MBIU

Sr. No.	Chainage (Km)	Side		Remark
		LHS	RHS	
Narsanpeta – Ransastalam Section				
1	590+750	LHS	RHS	Major Bridge
2	600+172	LHS	RHS	Flyover
3	605+500	LHS	RHS	Major Bridge
4	608+755	LHS	RHS	Flyover
5	623+108	LHS	RHS	Major Bridge

4.5.2 Working Principle

The work of condition survey requires use of Mobile Bridge Inspection Unit at the various bridge sites on the National Highways to overcome the accessibility problems. MBIU increases the accessibility for inspection of underside of high-level bridge decks and helps in continuous inspection of throughout the span of bridge. It has five folded arms. All of them are electro-mechanically operated.

Once the platform is erected by certified person, Inspection and maintenance experts can inspect underside of bridge, note observations as per IRC SP-35 & IRC SP-52 and take photographs for reference.

4.5.3 Advantages

- A large operating range
- A high level of working comfort
- Maximum operational safety
- The shortest possible setting up and dismantling times
- Full mobility in inspection operation without stabilizer supports
- An optimum weight/performance ratio

Figure 4-6: MBIU Survey

4.6 Drone Videography of Entire Stretch

Videography of entire Project Stretch is captured through Drone cameras flown at about 50m above ground. This shall be useful for observing various features of Project Stretch from bird's eye level.

Figure 4-7: Drone Videography

Section 5: Review of Documents

5.1 General

Technical Consultant (TC), since the start of technical due diligence study, has requested for various documents from the Client. A list of documents required were shared with the Client before TC team started the study which was appended with few more queries after the conclusion of the site visit once the project site is appraised. Most of the queries were also discussed with the Client in many meetings. This section of the report deals with the documents requested by TC and its review along with highlighting major issues found during this review.

5.2 Documents Collected and Reviewed

List of documents requested, received and reviewed are given below:

S. No.	List of Documents	Status of Documents	Remarks on Review
DOCUMENTS RELATED TO CURRENT ACQUISITION			
1.	Concession Agreement	Partially Available	Technical Schedules A, B, C and F are made available to the Consultant. These schedules are modified from the standard provisions given in manual as below: Sch A: Existing features Sch B: Scope of Work including facilities to be provided Sch C: Specifications and Standards Sch F: Maintenance Requirements Table 1 of Sch F provides maintenance criteria for pavements which has performance parameter, desirable and acceptable level of service, frequency of inspection and time limit for rectification/repair. Sch F specifies roughness value as 2000 mm/km desirable and 2400mm/km acceptable for flexible pavement. These values are 2200mm/km and 2400 mm/km respectively for rigid pavement. Sch B states that the concessionaire shall carry out the periodic maintenance in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc. either in every sixth year or in the year in which roughness index exceeds the limit as given in schedule F whichever comes earlier. Further, it was clarified in the pre-bid queries reply that periodicity of 6-year overlay will be applicable from O&M handover date. Though draft CA is not available, Consultant has referred the CA of earlier roads wherever required presuming that there shall not be any change in Contract Conditions.
2.	Detailed Project Report/ Technical Due Diligence Report	Available	Report done by M/s Chaitanya Projects Consultancy Pvt Ltd for NHAI in October – 2024 is made available.

S. No.	List of Documents	Status of Documents	Remarks on Review
			Report is used as reference for inventory & condition of the assets and improvement proposals. Cost estimates are provided for immediate maintenance which are under the obligation of existing HAM Concessionaires. The report also provides for the O&M cost during the concession period starting from the O&M handover date. However, Invit Concessionaire must do toll plaza maintenance and accordingly TMS maintenance cost should be there from the Appointed Date which is not shown in this report.
3.	FWD data	Available	The reports of FWD were available as a reference document for TC.
4.	Latest MPRs	Available	Consultant collected the IE-MPRs for April, May & June – 24 from the NHAI – PIU during the site visit. Reports provide details about the Project Road and key maintenance activities undertaken by the HAM Concessionaires during that period.
5.	Maintenance History	Not available	There is no maintenance history available for the Project Road.
6.	NSV data	Available	The reports of NSV are available as a reference documents for TC.
7.	AADT for each section and Growth rate	Available	AADT along with traffic projections for the project roads have been provided by Client.
8.	Concession Period	Not available	TC has adopted 20 years concession period with reference to the CA of earlier roads.
9.	Projected Escalation factor	Not available	In absence of projected escalation factor, all cost are given at the present rate as per the direction of the Client.

5.3 Key Technical Issues

5.3.1 Reinforced Earth Wall (RE Wall)

Bulging and cracks are observed in RE wall panels in Narsannapeta – Ranasatalam section at the approaches of flyovers and underpasses. Affected approximate number of panels are provided below:

- VUP @ 581+330: 20 panels
- LVUP @ 582+478: 11 panels
- VUP @ 588+620: 35 panels
- VUP @ 597+725: 05 panels
- Flyover @ 608+780: 08 panels

The Project is under HAM till 15th February 2038. Existing HAM Concessionaire has done nailings to address these bulging. It may be safely assumed that if the stability of RE wall sustains till the end of existing concession terms, wall shall be further stabilised. However, a detailed study may be done to ascertain the reasons for these bulging and its remedial measures.

Bulging of RE wall panel

Nailing in RE wall panel

5.3.2 Damaged Bearings

Problems with the bearings are observed in the form of tilting, cracking, not properly placed and compressed. Affected structures are

MJBR: @ 590+750, @ 605+523

Tilting of Bearing RHS_MCW_A1 of MJBR@ 590+ 750.

Cracks on sealing material of bearing

It is presumed that existing HAM Concessionaires will fix all these bearings before handing over.

Section 6: Capital Expenditure Requirement

6.1 Improvement Works as per Schedule B

Schedule B of each stretch specifies the requirements of improvement works which the concessionaire has to construct as per the completion schedule specified in Schedule B during O&M. Major works and reference used to quantify these construction requirements are listed below:

- Approach slabs reconstruction: Ref Cl 3.2 III of Sch B.
- Junction improvement: Ref Cl 4 of Sch B.
- Curve improvement/ Minor Jn improvement: Additional signages and studs are considered as per Cl 6 of Sch-B.
- Truck lay bye: Sewage disposal system as per Cl 9.2 of Sch B
- Landscaping and median plantation: Cl 9.4 of Sch B
- Transverse bar marking: Cl 10.3 of Sch B
- Antiglare: Cl 10.7 of Sch B
- Kerb stones: Cl 10.9 of Sch B

Improvement Scope specified for each stretch is tabulated below:

Table 6-1: Schedule B improvement requirements

S. No.	Description	Unit	Quantum
1	Approach slabs reconstructed	Nos.	17
2	Junction improvement	Nos.	30
3	Curve improvement: Additional signages and studs are considered as per Sch-B.	Nos.	50
4	Truck lay bye: Sewage disposal system	Nos.	3
5	Landscaping and median plantation	km	16.2
6	Transverse Bar Marking	Nos.	17
7	Antiglare	Km	2.51
8	Kerb stone	Lm.	10,760

Time to complete above construction works in within 3/6 months from the Handover Date based on completion schedule for improvement proposals given in Schedule B.

6.2 Immediate Maintenance Requirements

Thes section is under HAM (Annuity) concession up to 2037. So, obligation for immediate repair requirements do not lie with InvIT Concessionaire. However, toll plaza renovation cost and TMS replacement cost has been considered for existing toll plaza.

6.3 Capital Expenditure (CapEx)

Cost of capital expenditure (CapEx), worked out as explained above, are presented below.

Table 6-2: Immediate Maintenance

Description	Cost in Crore (INR)
Toll plaza improvement	1.82
TCMS	5.63
Total	**7.45**

Table 6-3: Improvement Works as per Schedule – B

Description	Cost in Crore (INR)
Initial Improvement as per Schedule B	4.12

Section 7: Operation & Maintenance

7.1 General

The O & M requirements for the project facilities are normally specified in the Concession Agreement (CA). Though Schedule F is made available to the Consultant, CA is not yet available. Hence Consultant has taken reference from the CA of Round 3 roads presuming there is no change in the Contract conditions. Maintenance requirements are referred mainly under following Articles/ Schedules:

- Article 15 - Operation and Maintenance
- Article 16 - Monitoring and supervising during Operations
- Article 17 – Traffic Regulation
- Article 18 and Schedule H – Safety Requirements
- Schedule F- Maintenance Requirements

7.2 Requirement as per Concession Agreement

Schedule F of the Concession Agreement sets out the Operation and Maintenance requirements for the Project. As per this schedule, scope for Operation and Maintenance includes but not limited to following obligations:

- ✓ **Improvement** – This includes improvement of the existing assets as per requirement of this Agreement and safety audit.
- ✓ **Maintenance of Civil Works and Assets**- this includes maintenance of civil works and all assets as per requirement of this agreement.
- ✓ **Road Maintenance** –This includes routine maintenance, preventive maintenance, periodic maintenance as per IRC:82-2015, Design overlay as per Manual of 4-laning/6-laning, disaster maintenance, exigencies, and inspections.
- ✓ **Traffic Management** – This includes enforcement of regulations together with the relevant authorities. This also includes hazard response, information gathering and dissemination, Road patrols and ATMS surveillance etc.
- ✓ **Safety**– This includes accident prevention, after care, user education, enforcement, data collection and analysis.
- ✓ **Facility Management** – This includes periodic inspections, routine maintenance, Rehabilitation, and expansion planning.
- ✓ **Road property management** –This includes management of access, encroachment, and ribbon development.
- ✓ **General responsibilities** –This includes budgeting, compliance with legal and accounting requirements, and public relations.
- ✓ Maintaining public relations unit to interface with and attend to suggestions from users of the highway, the media, Govt. agencies and other external agencies.

Routine Maintenance: These are maintenance needs required on daily, weekly, monthly and annual basis for the smooth and efficient running of traffic and includes the activities of minor repairs of all project elements, cleaning of road furniture, replacement of consumables,

horticulture maintenance, keeping the project site /project facilities clean, tidy and orderly condition free of litters and debris, preventing unauthorized entry and exit including any encroachment etc.

Preventive Maintenance: Preventive maintenance shall include the activities related to each element and the system as a whole of the Project Highway to ensure that during the Concession Period and at its end is in sound, durable and functional condition. In other words Preventive maintenance are a planned strategy of cost-effective treatments to an existing roadway system and its appurtenances that preserves the system, retards future deterioration, and maintains or improves the functional condition of the system (without significantly increasing the structural capacity).

Periodic Maintenance: These are maintenance needs required on periodic annual basis. The periodic maintenance can be further divided into two sub heads namely (i) functional overlay to improve the riding quality and (ii) structural overlay to improve the structural strength of the pavement.

Factor influencing periodic maintenance: performance parameter for flexible pavement in terms of roughness as given in Schedule F is 2000 mm/km as desirable and 2400 mm/km as acceptable. Clause 4 (III) of Schedule B states that periodic maintenance shall be carried out in full length of the project stretch including main carriageway, service/slip road and at facilities etc. either in every six years or in the year in which roughness index exceeds the limit given in schedule F, whichever comes earlier.

7.3 O&M Cost Estimation

7.3.1 Routine maintenance

This is a day-to-day work that is necessary to preserve and keep a pavement as close to as constructed condition and to ensure smooth and functional conditions all the times. The item in this subhead includes maintenance of earthen shoulder, restoration of rain cuts, maintenance of slope protection works, cleaning of road side drains, cleaning of carriageway, maintenance of structures, repairs of road surface such as filling of potholes, repairing of cracks and patch works, carrying out of Road roughness survey, FWD test etc.

7.3.2 Repair/Maintenance

Repair/maintenance covers the minor repair which are required on day-to-day maintenance to maintain the assets in good condition. This is sub-divided in two categories as below:

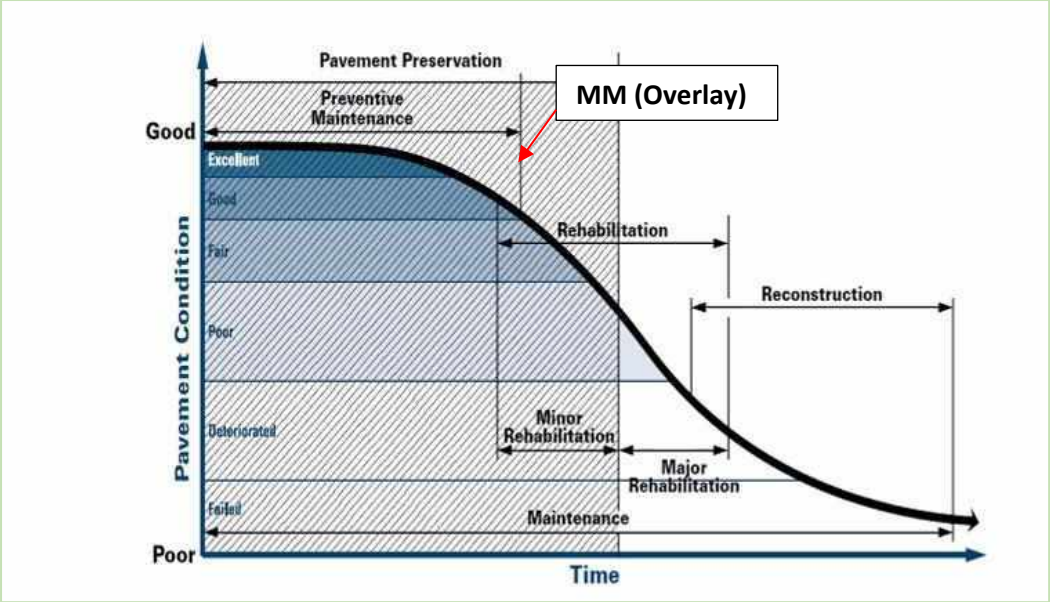
a) **Preventive Maintenance:** The preventive maintenance is required to be done for further improve or extend the functional life of pavement surface whist in fair to good condition. Any of the treatment under preventive maintenance does not significantly increasing the structural capacity of pavement rather which decreases rate of surface deterioration, which may result in saving of pavement from leading to poor condition where major maintenance could be inevitable.

Future preventive maintenance on the project road depends largely on routine inspection of the pavement with careful observation of specific distress and to take a decision at that time and suitable type of preventive maintenance treatment and its timing. All the narrow and wide surface cracks must be arrested immediately after identification with fog/slurry seals as the most recommend preventive type maintenance measure for the in-service flexible pavement.

Based on the condition and distress identification survey as explained above paragraph, preventive maintenance treatments have to be taken up immediately to reduce rate of further damage to the surface and for enhance the pavement performance to the condition similar to non-distressed surface condition.

b) **Road Property Maintenance:** The item in this subhead covers the plantation/ maintenance of shrubs, turfing, replacement/ repair of damaged railing, crash barrier, kerbs, road delineators, signage, Road marking and painting etc.

7.3.3 Toll Management System



Cost estimate for Toll Management System was worked out by TC. Same was presented and deliberated during the investor meet, after that it was decided to adopt the rationalised cost finalized by IM.

7.3.4 Corridor Management

Incident Management: The items in this subhead include minimize the effects of incident and restore normal capacity and safety levels to all affected road facilities as efficiently as possible and. repair/ replacement of removing the dead animals & broken-down vehicles etc.

7.4 Major Maintenance

The pavement deteriorates with time caused by traffic movement and weather conditions. The rate of deterioration depends on the original design, type of maintenance being done/undertaken and time of application. Therefore, timely and appropriate maintenance of bituminous surface using suitable materials is essential to increase the pavement service life to a greater extent. Any delay in maintenance of the pavement substantially increases severity of the distresses, which results into poor condition of pavement as depicted in figure below and thereby increase in maintenance costs to bring the surface to a good condition.

Therefore, timely maintenance of the pavement is required for its satisfactory performance both in terms of functionally and structurally during the pavement service life.

Schedule F of the Concession Agreement set out the maintenance requirements in the Project. The performance parameters are indicated in schedule F descripting the nature of defect/deficiency along with time limits for repair/rectification for roads and bridges.

Schedule F, Pavement Roughness Value (Functional Overlay): The Periodic maintenance is required to be provided as and when performance parameters in terms of cracking, roughness and rutting etc. exceeded the limits as indicated in the schedule F anytime during the service life of the pavement. As per the provisions of Concession agreement, Surface roughness value is the major governing factor for selection of an appropriate pavement maintenance treatment required to bring the roughness value below the prescribed limit of 2000mm/km.

Pavement Strengthening (Structural Overlay): When the pavement is structurally deficient having high severity alligator/fatigue cracks, rutting and other associated distresses, then the structural overlay is required to be provided for strengthening of the pavement to cater for the anticipated design traffic. The pavement strengthening may be required when the

- Remaining life of the in-service pavement as evaluated using Falling Weight Deflectometer (FWD) is less the design traffic as calculated till end of the concession.
- Before expiry of initial design traffic as adopted at the time of asset construction.

7.4.1.1 Review of Major Maintenance History

As per the review of available reports and discussions with IE during O&M that no major maintenance/rehabilitation that has been carried out in the project being the 6-construction works were completed recently. The routine maintenance consists of rectification of rutting and repair of cracked concrete panels in progress by the existing HAM Concessionaire.

7.4.1.2 Design Traffic during the Concession Period

The design traffic in terms of MSA during the concession period has been calculated based on the current traffic pattern and data shared by the NHIIPL. The Vehicle Damage Factors (VDF) has been adopted as obtained from the present survey. The summary of design traffic during the concession period is as under.

Table 7-1: Summary of Design Traffic during Concession Period

Project Stretch	Direction	Design Traffic in MSA	
		10 years (FY35)	20 years (FY45)
Narasenpetta to Ranasthalam Section	LHS	62	159
	RHS	49	125

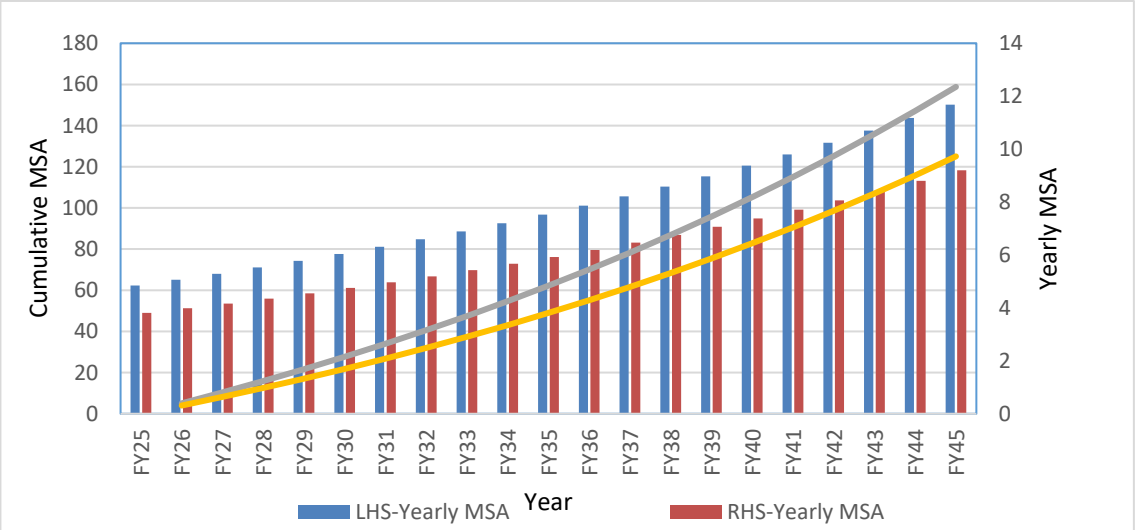


Figure 7-1: Design Traffic in MSA (Narasenpetta to Ranasthalam Section)

In combination of above anticipated design traffic patterns, remaining life of the existing pavement as explained under surveys and investigation chapter, the pavement condition for distresses and roughness, the existing pavement is requiring repair and rehabilitation to be carried out by the TOT concessionaire to bring the pavement surface to the desired level of serviceability.

From the remaining life analysis as explained under surveys and investigation chapter, it is found that most of the pavement sections having remaining life more than the projected design traffic on LHS & RHS. Hence functional overlay in terms of bituminous overlay of 40mm BC at the end of every 6th year from the date of O&M handover date for the Main Carriageway and 40mm BC for service roads to extend the life of the pavement and improve and maintain the road roughness levels during O&M phase of the InvIT Concessionaire.

7.4.1.3 Immediate and Future Major Maintenance Requirement

Major maintenance is required to comply with provisions of concession agreement and to maintain performance levels as defined in schedule F throughout the operation and maintenance period.

As per schedule B, the TOT concessionaire shall carryout the periodic maintenance in full length of the project stretch including main carriageway, service roads and facilities in every 6th year or the year in which roughness index exceeds the limits given in schedule F, whichever comes earlier.

Therefore, considering the initial pavement design period and crust, remaining life data, anticipated traffic loading during the concession period, and in compliance to the provisions of schedule B, the following cycle of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

Table 7-2: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)				
	CAPEX	Routine Maintenance	Periodic Maintenance	ATMS & TMS Replacement	Toll Operation & Admin Cost
Narsannapeta-Ranastalam	Toll plaza renovation cost TMS (all the existing defects to be rectified by HAM Concessionaire)	**Till O&M Handover**: Manpower cost for clearing considered **After Handing Over**: Regular	**FY37-** Revalidation of Survey **FY38**- Improvement works as per Sch.-B & road marking **FY42-** ***MCW:*** 40BC, 50DBM for 10% length ***SR:*** 40BC, 50DBM for 10% length ***Rigid***: Retexturing, replacement of joint sealant and 2.0% of panel ***Structure***: Replacement of wearing coat, expansion Joint, Bearing replacement for 40% of total number **FY45**-Road marking, Micro surfacing	**FY33** 50% TMS **FY40**- 100%TMS 40% ATMS	01.04.2025

7.4.1.4 Cost of Operation & Routine Maintenance

Cost of Operation & Routine Maintenance per annum are presented below.

Table 7-3: Cost of Operation & Routine Maintenance (per annum)

Description	Cost (Crore INR)
Tolling & TMS Operations (Varies) Min-Max	5.07-6.30
ATMS Operation	2.27
Incident Management	4.73
Admin Expenses (Varies) Min-Max	3.99-6.69
Insurance (Varies) Min-Max	0.11-1.76
Power cost excl. Toll Plaza	2.13
RAMS, BMS & Survey	1.36-2.30

7.4.1.5 Cost Estimate (Initial Improvement, MMR and O&M)

Year-wise Cost estimate of Initial Improvement, MMR and O&M are given below

Table 7-4: Cost Estimate (Initial Improvement, MMR and O&M)

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)

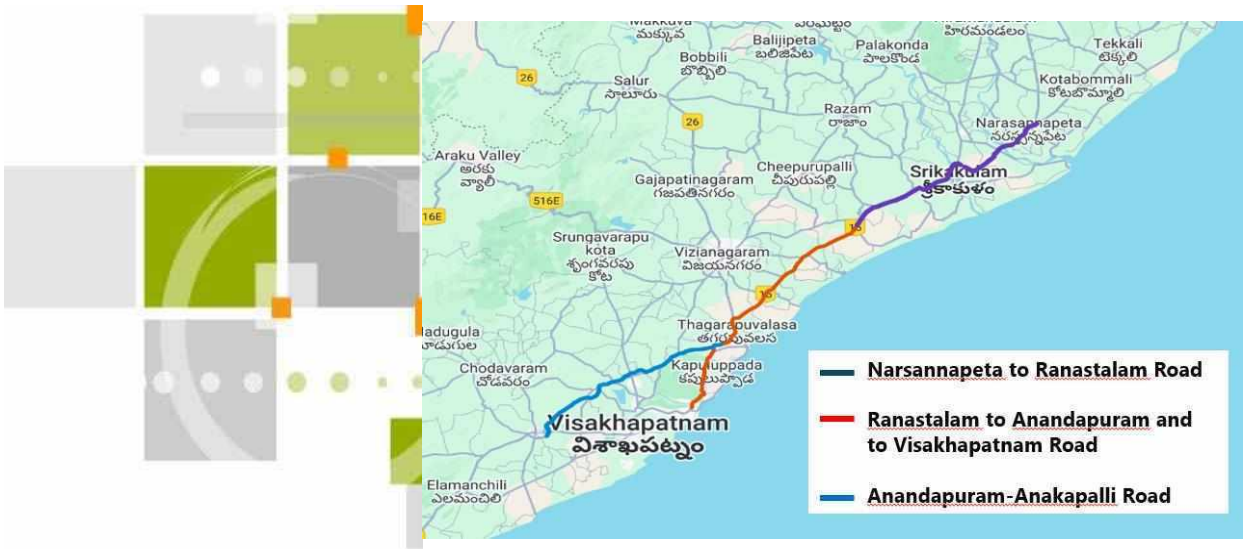
Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

Section 8: Conclusion

The project highway is a partially access controlled consists of 6-lane divided carriageway with service roads on both sides with minimum number of merging and diversion points on the highway for access to service roads. The 6-lane project has been completed on HAM mode and at present toll is being collected by Toll Collection Agency appointed by NHAI. The project highway is also having 4-lane divided carriageway at Ranastalam built-up area (part of project from Narsannapeta-Ranastalam), for which improvement proposals have been undertaken by NHAI in the form of construction of 6-lane elevated corridor. The performance of the pavement, is satisfactory in terms of pavement roughness and quality of the pavement surface without having major distresses. However, few of the locations noted with low severity rutting for which rectification measures in progress for flexible pavement. As part of present study, the required Engineering Investigations along with site visual observations were made for evaluation of the asset condition and accordingly established the required maintenance and rehabilitation measures/decisions for the concession period. The period maintenance by functional/structural overlays are required at every 6th year as per the CA would be sufficient to keep the project stretch in good condition and hence suitable major maintenance strategy has been recommended to improve the service life during the concession period.



Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report it is concluded that most of the structures are in sound condition and no major repair is required in near future. However, there are issues with the bearings for few structures and bulging in RE wall. As the entire road sections are in HAM, these defects are to be rectified by the existing Concessionaires. It is to be ensured that asset quality assessment is done thoroughly at the time of handing over so that these defects and any other defects occur during the remaining HAM concession period is rectified.

The assessment of estimated cost of such repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

.

FINAL TECHNICAL DUE-DILIGENCE REPORT

Technical Consultant Services for National Highways Infra Trust for Ranasthalam to Anandapuram and Anandapuram to Hanumanthavaka (Visakhapatnam) Sections of NH-16 in the State of Andhra Pradesh

Section 1: Executive Summary

1.1 Introduction

1.1.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 15th July 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 1-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	NH No.	Lane	Length (km)
1	Narasannapeta to Ranastalam	Madapam	NH-16	4/6 Lane	53.799
2	**Ranastalam to Anandapuram via Kopperla**	**Nathavalasa**	**NH-16**	**6 Lane**	**48.980**
	Anandapuram to Hanumanthavaka	**-**	**Old NH-16**	**4 Lane**	**17.564**
3	Anandapuram to Anakapalle via Pendurthi	Dukkavanipalem & Marripalem	NH-16	6 Lane	48.605
Total					**168.948**

1.1.2 Objectives

The main objective of the present assignment is to

1. review project documents and understanding schedule B and schedule F requirements for improvement works for the assessment of Capex and Opex during the concession period.
2. conduct field investigations to assess the existing asset condition and future deterioration.
3. validate executed works with respect to schedule A and assessment of improvement Works
4. review quality of construction based on available data, design and drawings.
5. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.

6. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

1.2 Site Visit

The Technical Consultant visited site from 25th July 2024 to 11th August 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road.

1.2.1 Salient Features

Table 1-2: Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length	Lane Configuration	Pavement Type	Date of COD	O&M Handover Date to InVIT	Concessionaire / Remarks
			From	To	(km)

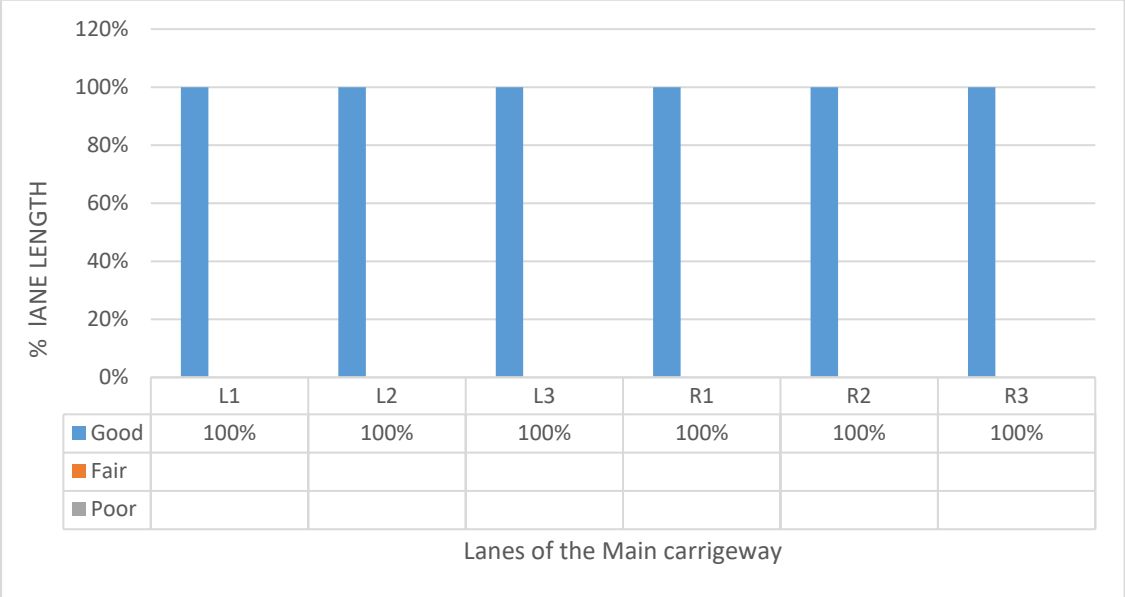
1.3 Surveys and Investigations

1.3.1 Network Survey Vehicle (NSV)

The Network Survey Vehicle, which is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools, is used for automatic data collection pertains to pavement condition and road inventory data. The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. Summary of findings of NSV survey is given in preceding sections.

$^{\beta}$There are many bus shelters along the project road which are constructed by local civic bodies. All these shelters within the ROW is considered as existing bus bay/shelters by the Consultant.

$^{\#}$ All underpasses are considered as LVUP however few of them are classified as PUP/CUP depending upon their vertical clearance.



1.3.1.1 Pavement Type

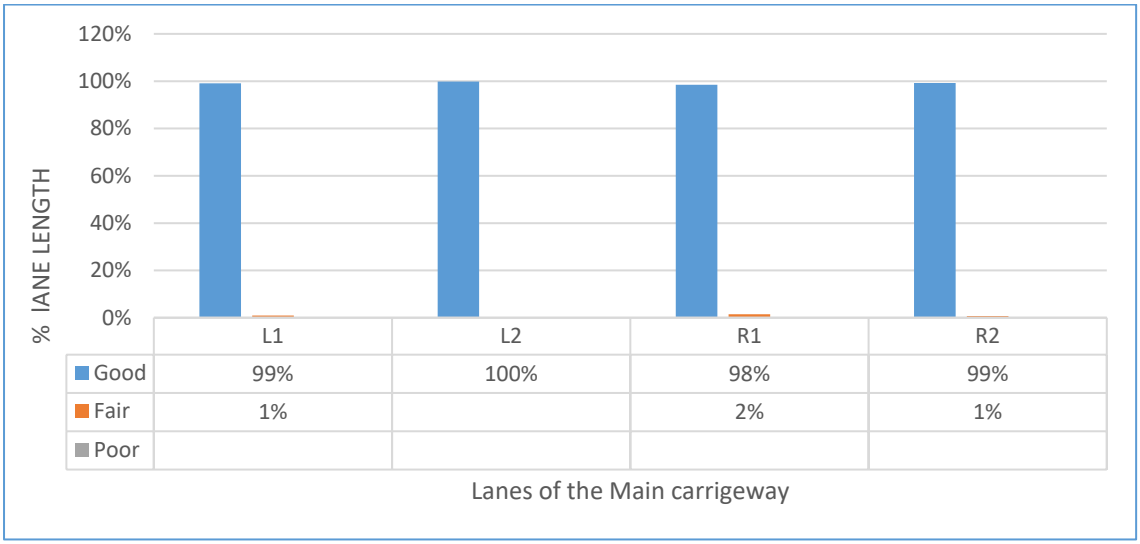
Narsannapeta – Anandapuram and Anandapuram – Hanumanthavaka are having flexible pavement except at toll plaza where it is rigid pavement.

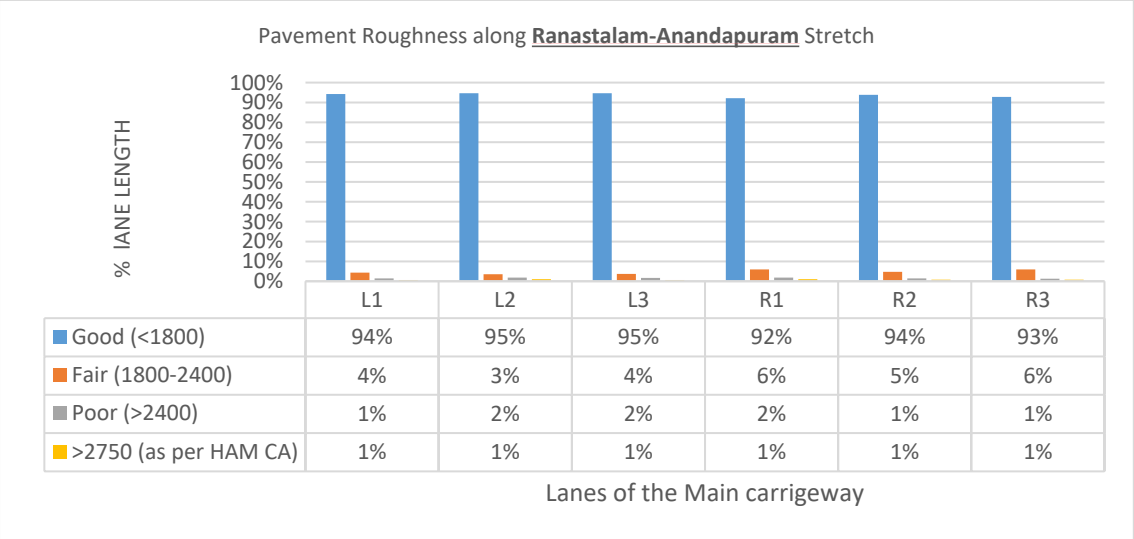
1.3.1.2 Pavement Distresses

The summary of pavement distresses for each lane of main carriageway in terms of percentage length are presented below:

Ranastalam - Anandapuram

Anandapuram – Hanumanthavaka





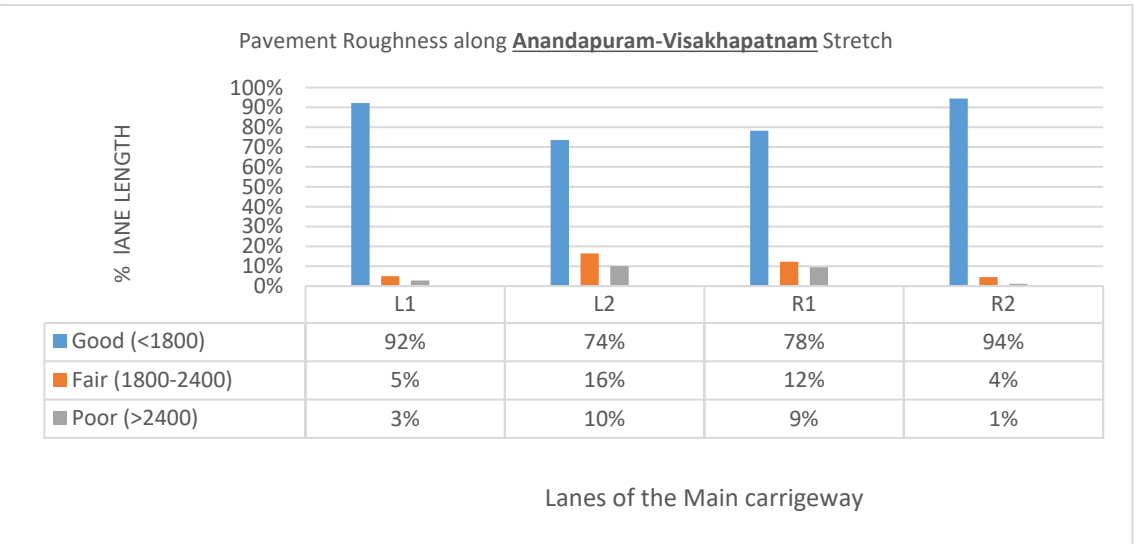


Figure 1-1: Summary of Pavement Distress

1.3.1.3 Pavement Roughness

Roughness value measured for each lane of main carriageway using NSV. The summary of direction-wise roughness distribution for each lane in term of percentage length are presented below.

	L1	L2	L3	R1	R2	R3
Good (<1800)	94%	95%	95%	92%	94%	93%
Fair (1800-2400)	4%	3%	4%	6%	5%	6%
Poor (>2400)	1%	2%	2%	2%	1%	1%
>2750 (as per HAM CA)	1%	1%	1%	1%	1%	1%

	L1	L2	R1	R2
Good (<1800)	92%	74%	78%	94%
Fair (1800-2400)	5%	16%	12%	4%
Poor (>2400)	3%	10%	9%	1%

Figure 1-2:Pavement Roughness Charts

Km-wise pavement condition and distress in the form of strip chart is included in **Annexure - 4.2**.

1.3.2 Test Pit Investigations

Test pit investigations have been planned to conduct at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). However, the project is partially access control throughout the length, thereby no earthen shoulder has been found and thus test pits were taken at the locations where feasible to dug at the interface of the paved and earthen shoulder. The summary of existing pavement crust

thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 1-4:Summary of Existing Pavement Crust Thickness

Date of Sampling	Location of Trial Pit	Lanes	Pavement Composition (mm)						
			BT	PQC	DLC	WMM	Cemented layer	GSB	SUBGRADE
Ranastalam-Anandapuram									
05.08.24	659+700LHS	6	180	-	-	100	150	200	500
05.08.24	640+350RHS	6	110	-	-	100	160	200	500
05.08.24	648+700RHS	6	100	-	-	100	155	200	500
Anandapuram-Vishakhapatnam									
08.08.24	694+700LHS	4	130	-	-	150	-	170	500
08.08.24	698+900LHS	4	180	-	-	130	-	150	500
08.08.24	683+700RHS	4	110	-	-	130	-	210	500
08.08.24	690+700RHS	4	180	-	-	160	-	150	500

Observations and Conclusions:

- The project of Ranastalam-Anandapuram has been built with flexible type throughout the length except toll plaza location where it is found with rigid. The thickness as obtained are predominantly matching the design thicknesses.
- The pavement type for service road in all the above project section is flexible type and has been designed for 10MSA traffic.
- Throughout the project road, it is found that consistent bituminous/ cemented/ granular layer thickness.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in below sections.

Table 1-5: Test Results: Anandapuram- Hanumanthavaka Section (City Side)

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade
		4.75mm	0.425mm	0.075mm		LL %	PL %	PI %

710+960LHS	GC (Clayey Gravel)	53.9	38.1	25.6	28.3	31.5	15.4	16.1	10.0	2.12	8.0	2.049	7.0	12.9	18.0	Not found
703+520RHS	GC (Clayey Gravel)	45.8	32.1	20.3	25.5	26.9	16.4	10.5	10.0	2.13	8.5	2.073	8.0	13.5	15.0	Not found

Observations and Conclusions

The subgrade soils are generally consistent throughout the project road and CBR values are in compliance with the design CBR as adopted during the 6-lane works. Further, it has been observed during the site visit that most of the soils in the region found to be red soil having CBR values more than 10% and this is one the reason for better performance of the pavement of the project highways.

1.3.3 Axle Load Survey

Axle load survey has been conducted in compliance with IRC 37 2018 for 24 hours in both directions at the existing toll plaza locations. Obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 1-6: Vehicle Damage Factors (VDF)

Toll Plaza	Direction *	Vehicle Damage factors				
		Bus	LCV	2-Axle	3-Axle	MAV
Natavalasa Toll Plaza (km 656+704)	LHS	1.07	2.11	2.77	1.71	5.15
	RHS	0.92	1.91	3.11	7.66	9.90

** LHS: Srikakulam to Anakapalli RHS: Anakapalli to Srikakulam*

There is a significant difference between the axle loads of commercial vehicles flying in both directions of traffic, due in inconsistent commodity pattern generating from different locations along the project highway and thus, separate factors have been considered for traffic assessment. Further, 7-day axle load survey values are lower than one days and hence adopted the above values in the study.

1.3.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique” to determine the remaining life of the pavement structure.

The detailed remaining life analysis is done using 90 percent reliability equation of IRC: 115-2014 is presented in tables below for LHS and RHS carriageway.

Table 1-7:Section-wise Pavement Remaining life

S.No	Homogeneous sections			Existing Thickness, mm		Total Crust	Remaining Life @ 90% Reliability

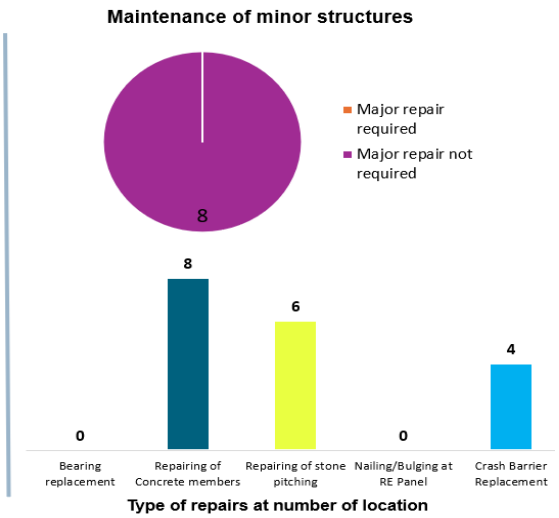
1.3.5 Structure Inventory and Condition Survey

There are deficiencies noted in the structures and relevant repair-rehabilitation measures are suggested. Requirement of immediate repairs for major structures (length > 60m) and minor structures are presented below.

ASSESSMENT OF STRUCTURES (RANASTALAM TO ANANDAPURAM SECTION)



ASSESSMENT OF STRUCTURES (ANANDAPURAM TO VISAKHAPATNAM SECTION)

Maintenance of major structures (Length >60m)

No Major repair required
at any of the Major Structure

1.4 Key Technical Issues

1.4.1 Damaged Bearings

Problems with the bearings are observed in the form of tilting, cracking, not properly placed and compressed. Affected structures are

MJBR: @ 655+573 and @ 675+164
Flyover: @ 641+230
It is presumed that existing HAM Concessionaires will fix all these bearings before handing over.

1.4.2 Pavement

Pavement at service road is distressed at many locations, may be due to higher traffic loading. It is also noticed that most of the panels of Rigid Pavement at Natavalasa Toll Plaza got damaged with high severity of longitudinal, transverse, multiple cracks, corner breaks. Joint sealing needs immediate replacement.

1.5 Capital Expenditure Requirement

1.5.1 Improvement Works as Per Schedule B

Schedule B of each stretch specifies the requirements of initial improvement which the concessionaire has to construct within 3/6 months of Handover Date.

Improvement Scope specified for each stretch is tabulated below:

Table 1-8: New Construction Requirements

S. No.	Description	Unit	Ranasatalam-Anandapuram	Ranasatalam-Hanumantvaka
1	Approach slabs reconstructed	Nos.	12	2
2	Junction improvement	Nos.	60	44
3	Curve improvement: Additional signages and studs are considered as per Sch-B.	Nos.	50	25
4	Truck lay bye: Sewage disposal system	Nos.	3	0
5	Landscaping and median plantation	Km	13.2	5,34
6	Transverse Bar Marking	Nos.	4	26
7	Antiglare	Km	5	-
8	Kerb stone	Lm.	17,143	17,564

1.5.2 Immediate Maintenance Requirements

The sections are under HAM (Annuity) concession up to 2036/37 and under PBMC up to 2030. So, obligation for immediate repair requirements do not lie with InvIT Concessionaire. However, toll plaza renovation cost and TMS replacement cost has been considered for existing toll plazas.

1.6 O&M Cost Estimation

1.6.1 Recommended MM Cycles for Pavement

Considering the initial pavement design period and crust, remaining life data, anticipated traffic loading during the concession period, and in compliance to the provisions of schedule B, the following cycles of Major maintenance is proposed for satisfactory performance of the pavement during operation period to serve both functional and structural requirements.

Table 1-9: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)				
	CAPEX	Routine Maintenance	Periodic Maintenance	ATMS & TMS Replacement	Toll Operation & Admin Cost
Ranastalam-Anandapuram	Toll plaza renovation cost TMS (all the existing defects to be rectified by HAM Concessionaire)	**Till O&M Handover**: Manpower cost for clearing considered **After Handing Over**: Regular	**FY36**-Revalid. Survey **FY37**- Improvement as per Sch.-B & road marking **FY42**- ***MCW & SR***: 40BC, 50DBM for 10% length, ***Rigid***: Retexturing, replacement of joint sealant and 0.5% of panel replacement, ***Structure***: Replacement of wearing coat, expansion Joint, Bearing replacement for 40% of total number **FY45**-Road marking+ Micro Surfacing	**FY33** 50% TMS **FY41**- 100%TMS 40%ATMS	01.04.2025
Anandapuram-Hanumantvaka	NIL (all the defects to be rectified by Existing Performance based contractor)	After Handing Over	**FY30**-Revalid. Survey, Improvement as per Sch.-B & road marking **FY32**- **MCW & SR**: 40BC, 50DBM for 10% length, ***Structure***: Replacement of wearing coat, 50% of expansion Joint and Bearing replacement for 50% of total number **FY35**-Road marking **FY38**- ***MCW & SR***: 40BC, 50DBM for 10% length, ***Structure***: Replacement of wearing coat, 50% of expansion Joint and Bearing replacement for 50% of total number **FY41**-Road marking **FY44**- ***MCW & SR***: 40BC, 50DBM for 10% length, ***Structure***: Replacement of wearing coat & painting	**FY36** – 40% ATMS **FY43**- 60% ATMS	No toll Operations as there is no toll plaza.

1.6.2 Estimate (Initial Improvement, MMR and O&M)

Cost of capital expenditure (Initial Improvement, MMR and O&M) are presented below.

Table 1-10: Cost Estimate (Initial Improvement, MMR and O&M) Ranastalam-Anandapuram and Anandapuram - Visakhapatnam

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	7.96					0.60					5.74	0.13		4.27

Total		**7.96**	**281.04**	**23.90**	**16.31**	**7.51**	**57.27**	**37.36**	**33.66**	**81.14**	**31.56**	**98.45**	**21.30**	**23.14**	**105.56**

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

1.7 Conclusion

The project highway is a partially access controlled consists of 6-lane divided carriageway with service roads on both sides with minimum number of merging and diversion points on the highway for access to service roads. The 6-lane project has been completed on HAM mode and at present toll is being collected by Toll Collection Agency appointed by NHAI. The project highway is also having 4-lane divided carriageway from Anandapuram - Hanumanthavaka (Towards Visakhapatnam city), for which Performance based Contract for maintenance of city side section. The performance of the pavement is satisfactory in terms of pavement roughness and quality of the pavement surface without having major distresses. As part of present study, the required Engineering Investigations along with site visual observations were made for evaluation of the asset condition and accordingly established the required maintenance and rehabilitation measures/decisions for the concession period. The periodic maintenance by functional/structural overlays are required at every 6th year as per the CA would be sufficient to keep the project stretch in good condition and hence suitable major maintenance strategy has been recommended to improve the service life during the concession period.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report, it is concluded that most of the structures are in sound condition and no major repair is required in near future. As the entire road sections are in HAM/PBMC, the defects identified during this study and future defects occur during the remaining HAM/PBMC concession/contract are to be rectified by the existing Concessionaire. It is to be ensured that asset quality assessment is done thoroughly at the time of handing over so that these defects and any other defects occur during the remaining HAM/PBMC concession period is rectified.

The assessment of estimated cost of such repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

Section 2: Introduction

2.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 15th July 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 2-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	NH No.	Lane	Length (km)
1	Narasannapeta to Ranastalam	Madapam	NH-16	4/6 Lane	53.799
2	**Ranastalam to Anandapuram via Kopperla**	**Nathavalasa**	**NH-16**	**6 Lane**	**48.980**
	Anandapuram to Hanumantavaka	**-**	**Old NH-16**	**4 Lane**	**17.564**
3	Anandapuram to Anakapalle via Pendurthi	Dukkavanipalem & Marripalem	NH-16	6 Lane	48.605
Total					**168.9488**

This report pertains to Ranastalam to Anandapuram via Kopperla and Anandapuram to Hanumantvaka sections.

2.2 Objectives

The main objective of the present assignment is to

review project documents and understanding schedule B requirements for improvement works for the assessment of Capex and Opex during the concession period.

1. conduct field investigations to assess the existing asset condition and future deterioration.
2. validate executed works with respect to schedule A and assessment of improvement works
3. review quality of construction based on available data, design and drawings.
4. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.

5. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

2.3 Technical Consultant Team

The Technical Consultant commenced its services from 15th July 2024 and the team comprising of Highway, Pavement & Structure Engineers and Experts have conducted site visit from 25th July 2024 to 11th August 2024 to appreciate the project corridor characteristics. This report highlights the findings from visual assessment, available documents shared with the consultant, discussion with NHAI officials involved with the maintenance and operation of project road at site and other local enquiries. Analysis of data as obtained from various survey and investigations conducted at site are present in this report.

Date-wise various field activities at site are shown below in bar chart form in **Figure 2.1.**

2.4 Disclaimer

The information and documents received from the Client are being reviewed by the Consultant and have been used for preparing this report. Due care has been taken while reproduction of the information where required to avoid typographical or other errors.

2.5 Structure of the Report

The report has been structured into nine sections as follows:

Section 1: Executive Summary
Section 2: Introduction
Section 3: Inventory and Condition Assessment

Section 4: Surveys and Investigations
Section 5: Review of Documents
Section 6: Capital Expenditure (CapEx) Requirement
Section 7: Operation & Maintenance
Section 8: Analysis & Comparisons with Seller Data
Section 9: Conclusions

Section 3: Inventory and Condition Assessment

3.1 General

The Technical Consultant visited site from 25th July 2024 to 11th August 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road. This chapter elaborates various findings of these surveys and studies conducted by the Technical Consultant team in different sections.

3.2 Project Corridor

The project stretches details are listed below:

Table 3-1: Detail of Project Stretches

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length (km)
			From	To	
1	Ranastalam to Anandapuram via Kopperla	Nathavalasa	634+000	682+980	48.980

3.4 Road Inventory and Condition Survey

3.4.1 Road Inventory

The Road Inventory is conducted to assess and list out the existing features of the project corridor and to validate that project road is conforming to the requirements of CA. It covers all the existing physical features such as terrain, land use, carriageway surfacing type, shoulder width, junctions, water bodies, roadside arboriculture, general drainage conditions, etc. It was carried out in accordance with the guidelines given in IRC: SP 19-2001, generally by visual means, and supplemented by simple tape measurement.

The road inventory data collected for the project highway is presented in the **Annexure 3.1.**

3.4.2 Terrain

The project highway falls in plain terrain.

3.4.3 Land Use

The land along the project highway is predominantly agricultural followed by built up, barren, forest, residential and commercial areas. Details of land use are given in the **Table 3.2**.

All underpasses are considered as LVUP however few of them are classified as PUP/CUP depending upon their vertical clearance.

Table 3-2: Land Use

Description	Ranastalam to Anandapuram				Anandapuram to Hanumantvaka			
	Length (km)		%age		Length (km)		%age	
	LHS	RHS	LHS	RHS	LHS	RHS	LHS	RHS

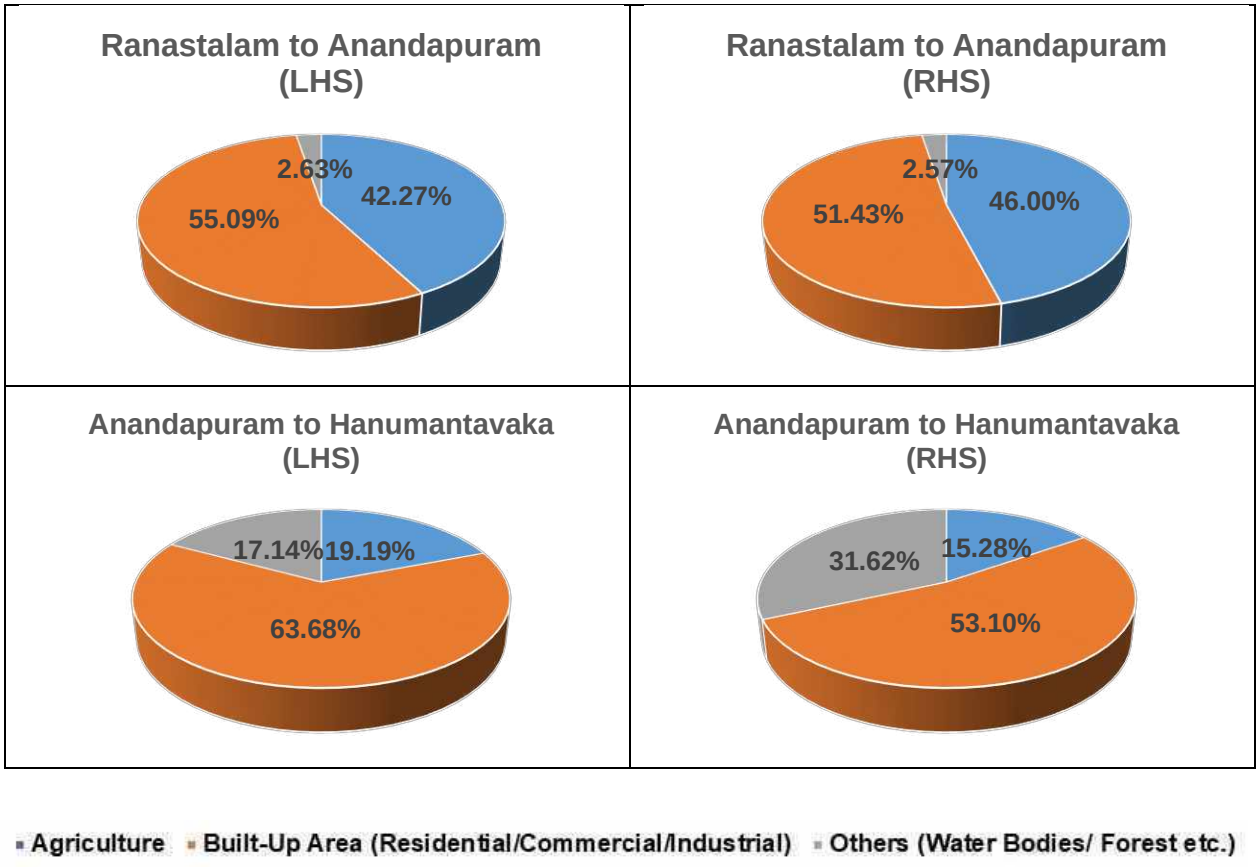

Figure 3-2: Land Use

3.4.4 Main Carriageway

Most of the length of the project highway is a 6-lane divided carriageway with paved shoulder configuration. The carriageway width is 11.0m (with kerb shyness) with 1.5m wide paved shoulder at rural area, 11.0m (with kerb shyness) with 2.0m wide paved shoulder at urban area and 11.0m (with kerb shyness) with 2.5m wide paved shoulder at underpasses location all along the project corridor except at toll plaza and bridges.

There are four lanes with paved shoulder configuration for Anandapuram – Hanumantvaka section. Carriageway width for these sections is 7.25m (including kerb shyness) with 1.5m wide paved shoulder on either side on main carriageway.

Details are show in **Table 3.3** and **Figure 3.3** below.

Table 3-3: Main Carriageway

S. No.	Section	Chainage (km)		Length (km)	Lane	Type of Pavement	Remarks

3.4.5 Service Road/Slip Roads

Total linear length (both side length) of service/slip road length for the project road is 81.750 km in Ranastalam to Anandapuram section and 7.990 km in Anandapuram to Hanumantava section. Flexible pavement is there for the service roads at all the locations. Details of service road are given below.

Table 3-4: Service Road

2	696+000	697+200	1.200	LHS	Urban Section (Visakhapatnam)
3	699+500	700+544	1.044	Both Side	Urban Section (Visakhapatnam)

3.4.7 Major and Minor Junctions

3.4.7.1 Major Junction

Provision of grade separation in the form of underpasses (CUPs, PUPs, LVUPs, VUPs and Flyovers) are there at all major junctions for the entire project road except for the 4-lane sections for Anandapuram- Hanumantvaka stretch. All access to the project highway is through the Service/Slip Road.

There are 8 nos. of Major Junction. Details of the major junction are given in the **Table 3.6** below:

Table 3-6: List of Major Junction

Sr. No.	Chainage (Km)	Type of Junction	Cross Road leads to	
			LHS	RHS
Ranastalam to Anandapuram Section				
1	635+780	Y	Kosta Koyyam Road	-
2	647+615	T	Chintapally Vizianagram Road	
3	656+020	T	-	Vizianagram Nathavalasa Road
4	660+340	X	Vizianagram Mukkam Road	Bhogapuram Village
5	672+420	Y	-	Vizianagaram
Anandapuram to Hanumantvaka Section				
1	628+980	X	Vemulavalasa	Anandapuram
2	684+490	T	Bheemunipatnam	-
3	686+080	T	Chepalappada	-

3.4.7.2 Minor Junction

There are 26 nos. minor junctions all along the project road. Other village or town road are connected with service / slip road and the road users are coming through service / slip road to connect with main carriageway. Summary of the minor junctions are given in the **Table 3.7** below:

Table 3-7: Summary of Minor Junction

Sr. No.	Type of Junction	Ranastalam to Anandapuram Section	Anandapuram to Hanumantvaka Section
1	T Junction	6	4
2	Y Junction	4	6
3	X Junction	6	-

3.4.8 Median

Median width is predominantly 4.0m-4.5m (excluding shyness). However, narrow median is observed at few locations due to ROW constraints or in built-up stretches. Details of sections with narrow median width are given in the **Table 3.8** below:

Table 3-8: Details of Narrow Median (Width < 4.5m)

Chainage (km)		Width (m)	Section	Remarks
From	To			
650+800	651+900	1.2 - 1.5	Ranastalam to Anandapuram	ROW constraints
691+200	700+544	1.2 - 1.5	Anandapuram to Hanumantvaka	Kambalakonda Wildlife Sanctuary /Built-up Area

3.4.9 Earthen / Hard Shoulder

Earthen shoulders are provided on the outer side of the main carriageway. The width of these shoulders is 1.5m to 2.5m.

3.4.10 Drainage

Cover Drains are provided with service and slip road in entire of project road. Median cut drains are provided at super-elevated portion for efficiently draining out rainwater. Package wise details of Drainage are given in the **Table 3.9** and shown in **Figure 3.5.**

Table 3-9: Drainage System

Description	Ranastalam to Anandapuram Section	Anandapuram to Hanumantvaka Section
Covered lined Drain (km)	75.515	7.195
Open Lined Drain (km)	5.360	8.095

General observation of drainage conditions during the site reconnaissance are:

- Cleaning and maintenance of roadside drainage needs improvement. Cover at drain is missing at few locations.
- Provision of chute drain at high embankment location is observed. Water is draining off from the main carriageway to drain through the service road. This will adversely affect the pavement of service road.
- Though there were considerable rains during the time of inventory survey, no overtopping of road was observed at any location. It was further confirmed by the locals also.

Cover Drain at Service Road Location

Drain at separator near RE Wall

Figure 3-5: Drainage System

3.4.11 Road Furniture

3.4.11.1 W-Beam Crash Barrier, Concrete Crash Barrier and Pedestrian Guardrail

W-Beam Crash Barrier

W-beam Crash Barrier is provided at high embankment location, Separator (in between main carriageway and service road), near major structures and at outer side of sharp curves in the entire project road. Package wise length of W-Beam Crash Barrier are given in the **Table 3.10** and shown in **Figure 3.6.**

Table 3-10: W-Beam Crash Barrier

Description	Ranastalam to Anandapuram Section	Anandapuram to Hanumantvaka Section
W-Beam Crash Barrier (km)	75.515	7.195

Figure 3-6: W-Beam Crash Barrier near High Embankment and Separator

Concrete Crash Barrier

Concrete Crash Barrier is provided at approaches of ROBs, Flyovers and Underpasses almost all through the project road. Length of CC barrier are given in the **Table 3.11** and shown in **Figure 3.7.**

Table 3-11: Concrete Crash Barrier

Description	Ranastalam to Anandapuram Section	Anandapuram to Visakhapatnam Section
Concrete Crash Barrier (km)	32.180	1.215

Figure 3-7: Concrete Crash Barrier

Pedestrian Guardrails

Pedestrian guard rail is there between main carriageway and service road. Length of Pedestrian Guardrails are given in the Table 3.12 and shown in Figure 3.8.

Table 3-12: Pedestrian Guardrails

Description	Ranastalam to Anandapuram Section	Anandapuram to Visakhapatnam Section
Pedestrian Guardrail (km)	1.780	3.833

Figure 3-8: Pedestrian Guardrails

Wire Rope Safety Barrier

Wire Rope Safety Barrier is provided at separator (in between MCW & S/R) in the section of Ransatalam to Anandapuram. Length of Wire Rope Safety Barrier are given in the **Table 3.13** and shown in **Figure 3.9.**

Table 3-13: Wire Rope Safety Barrier

Description	Ranastalam to Anandapuram Section	Anandapuram to Visakhapatnam Section
Wire Rope Safety Barrier (km)	17.400	-

Figure 3-9: Wire Rope Safety Barrier

3.4.11.2 Sign Boards and Gantry

There are adequate number of signboards along the project road and most of them are in good condition. There are many variable message signs (VMS), overhead and cantilever gantry signs as well. Location of gantry signs are shown in **Table 3.14** and **Figure 3.10** below.

Table 3-14: Variable Message Signs (VMS) / Cantilever & Overhead Gantry

Figure 3-10: VMS and Gantry Signboards

In general, these appurtenances are in good condition.

3.4.11.3 5 km / Km / Hectometer Stones

5Km, Km & Hectometer stones are observed at shoulder & median. Most of stones are in good condition.

Figure 3-11: Kilometer & Hectometer Stones

3.4.12 Project Facilities

3.4.12.1 Bus Bays and Shelters

As main carriageway is access controlled, Bus bays/shelters are at service/slip roads. It is observed that few shelters are of tin shade and are in poor condition. There are three types of facilities for boarding the bus by the road users. There are bus bay with shelters, only bus bay without shelters and only shelters without bays. Package-wise number of these facilities are given in **Table 3.15** and shown in **Figure 3.12** below.

Table 3-15: Bus Bays and Shelters

3.5 Toll Plaza

The purpose of the Toll Plaza is to collect toll from road users of the Project highway with transparency in the system. There are four toll plazas along the project road. Booths are available for all lanes. Administrative buildings are there at all four Toll Plazas.

3.5.1 Nathavalasa Toll Plaza (TP-2)

Nathavalasa Toll Plaza (TP-2) is located at km 656+760, Ranastalam - Anandapuram stretch which has 14 lanes (7 + 7 lanes).

Figure 3-15: Nathavalasa Toll Plaza

3.5.2 Toll Plaza Administration Building

The Plaza administration building serves as the support structure for the operation and maintenance of the toll plaza. It is from here that utilities are distributed and controlled, employee amenities are maintained, the toll collection process overseen, revenues are processed & audited. Sale of local passes and recharge is done at Plaza building. Transfer of funds from toll booth to plaza building and from plaza building to bank are being facilitated/managed by administration and financial management functions are also conducted in the building.

Figure 3-17: Toll Plaza Administration Buildings

3.6 Structure Inventory and Condition Survey

This section mainly presents the Site Inventory and Condition Survey of all existing Structures likes Culverts, Minor bridges & Major bridges, Flyovers/ Viaducts, VUP, LVUP, PUP, RUB and ROBs along the project roads. The aim of the section is to present the details of existing structures condition of existing structures and functioning of structures. The structure inventory has been done on the basis of visual assessment of each structure. MBIU has been used for visual assessment inspection of major structures having length greater than 60m.

Number of existing structures along the Project roads are given in the following table. Detailed inventory and condition data is presented in **Annexures – 3.2 .**

Table 3-20: Number of Structures

S. No.	Description		Ranastalam to Anandapuram	Anandapuram to Hanumantvaka

Section 4: Surveys and Investigations

4.1 Visual Condition Assessment

i) In general, pavement condition is good throughout the length of main carriageway. However, condition of service road is poor in urban section.

ii) It is noted that few of the sections got rectified the rutting by HAM concessionaire about 5 lane km (2% of the lane length)

iii) Cement treated base (CTB) layer executed in 6-lane widening works.

iv) Condition of Rigid Pavement at Toll Plaza is very poor with high severity of longitudinal, transverse, multiple cracks, corner breaks. Joint sealing needs immediate replacement.

v) Wire roping has got damaged. Upon enquiry with IE team, repairs will be getting delayed due to non-availability of vendors to repair these short length

Poor condition of SR in Urban Section

Rigid Pavement Condition at Natavalasa toll plaza

Figure 4-1: Existing Distresses

4.2 Network Survey Vehicle (NSV)

The Network Survey Vehicle is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools. The survey vehicle is used for automatic data collection pertains to pavement condition and road inventory data, required for preparation of pavement maintenance and management proposals. It allows all the data to be collected in a single pass consequently minimising the time needed to complete the data collection. The measurement of surface distresses like cracking, ravelling, patching and potholes etc. is done using the calibrated image processing methods. The description of NSV and the methodology adopted is provided in **Annexure-4.1.**

The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. The data has been collected separately for each lane of the Carriageway. NSV Vehicle at the site is shown below.

Figure 4-2: NSV survey

4.2.1 Evaluation of Pavement Condition

NSV survey has been conducted for assessment of pavement condition and its distresses. The pavement surface images captured by NSV were processed in Survey board and all the images are geotagged with corresponding co-ordinates and chainage. By manual intervention with Survey Board, it was mapped/ identified various distresses showing distress type, location, magnitude and severity.

Flexible Pavement Distresses

The following Pavement distresses are considered for assessing the flexible pavement condition as per IRC: 82-2015 “Code of Practice for Maintenance of Bituminous Road Surfaces”.

- Cracking
  - Longitudinal cracks
  - Transverse cracks
  - Alligator cracks/ Crocodile cracks
  - Multiple cracks
- Ravelling
- Shoving
- Bleeding
- Slippage/ Delamination
- Potholes
  - Area: Surface Area of the Pothole;
  - Numbers
- Edge break
- Patching

- Settlements, Depressions

Strip chart showing the observed pavement distresses is provided in **Annexure 4.2** separately for LHS and RHS directions along with roughness. Based on the pavement condition, suitable repair and rehabilitation strategy has been suggested and same shall be presented under the section of Major Maintenance of this report.

4.2.2 Pavement Roughness

The roughness data was collected at 100m interval using NSV on each lane in-terms of IRI (International Roughness Index) value. In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 "Guidelines on Measuring Road Roughness and Norms" with the following equation;

$BI = 630*(IRI)^{\wedge 1.12}$

Where

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data of Flexible & Rigid Pavement (Toll Plaza Section) was collected through Digital Laser Profilers System (DLP) and the same is presented in **Annexure 4.3**. The summary of Roughness values is presented in tables below

Table 4-1: Ranastalam-Anandapuram Section: Summary of Pavement Roughness

Condition as per IRC:82-2023, Table 5.1	Unevenness (mm/Km)	LHS						RHS

4.2.3 Rutting

Rutting data of Flexible Pavement has been collected through Digital Laser Profilers System (DLP) of NSV and the same is presented in **Annexure 4.4**. Some of the sections of the project highway has been noted with low-medium severity rutting for which, the existing HAM concessionaire has already done the repair works in removal of such observed wheel path ruts. The section wise observations are as under.

Project section is in good condition with low severity rutting of less than 10mm as noticed earlier by IE and the same has been repaired. At the time of consultant site visit no such rutting failures noted.

4.2.4 Test Pit Investigations

Test pit investigations have been planned to conduct at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). However, the project is partially access control throughout the length, thereby no earthen shoulder has been found and thus test pits were taken at the locations where feasible to dug at the edge of the paved and earthen shoulder. The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 4-3: Summary of Existing Pavement Crust Thickness

Date of Sampling	Location of Trial Pit	Lanes	Pavement Composition (mm)						
			BT	PQC	DLC	WMM	Cemented layer	GSB	SUBGRADE

08.08.24	690+700RHS	4	180	-	-	160	-	150	500

Figure 4-3: Pavement Composition & Thickness Measurement

Observations and Conclusions:

- The project section of Ranastalam to Anandapuram has been built with flexible type throughout the length except toll plaza location where it is found with rigid. The thickness as obtained are predominantly matching the design thicknesses.
- The pavement type for service road is flexible type and has been designed for 10MSA traffic.
- Throughout the project road, it is found that consistent bituminous/ Cemented/granular layer thickness.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in below sections.

Test Results: Ranastalam-Anandapuram Section

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade

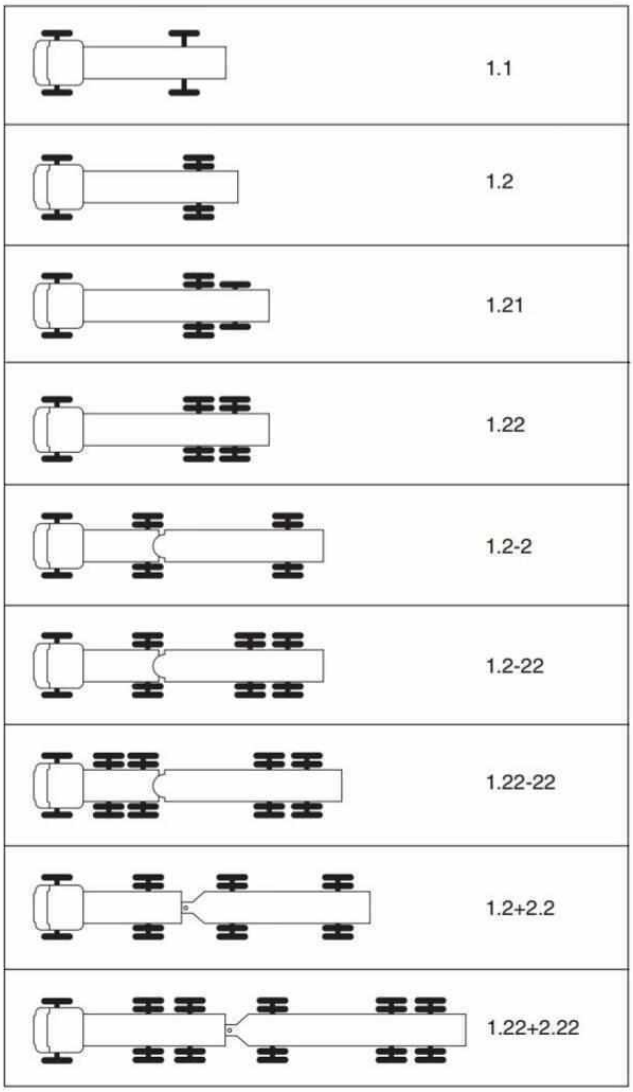
Test Results: Anandapuram- Hanumantvaka Section (City Side)

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade
		4.75mm	0.425mm	0.075mm		LL%	PL %	PI %								
686+700LHS	GC (Clayey Gravel)	58.3	41.6	28.1	30.2	34.5	18.3	16.2	10.0	2.03	9.2	1.73	9.0	11.0	17.0	Not found
710+960LHS	GC (Clayey Gravel)	53.9	38.1	25.6	28.3	31.5	15.4	16.1	10.0	2.12	8.0	2.049	7.0	12.9	18.0	Not found
703+520RHS	GC (Clayey Gravel)	45.8	32.1	20.3	25.5	26.9	16.4	10.5	10.0	2.13	8.5	2.073	8.0	13.5	15.0	Not found



Observations and Conclusions

The subgrade soils are generally consistent throughout the project road and CBR values are in compliance with the design CBR as adopted during the 6-lane works. Further, it has been observed during the site visit that most of the soils in the region found to be red soil having CBR values more than 10% and this is one the reason for better performance of the pavement of the project highways.

4.3 Axle Load Survey

Vehicle axle loading has a significant effect on pavement design and its impact on performance of the pavement. Therefore, an axle load survey has been conducted from 26th July-2024 to 02nd Aug-2024 in compliance with IRC 37 2018 and such survey was conducted for 24 hours in both directions at each of the existing 4 No's toll plaza locations along the project highway from Narsannapeta-Anakapalli.

The type of vehicle considered for axle load survey along with its axle configurations are presented in below. Few of the survey photographs were shown in Photos as below:

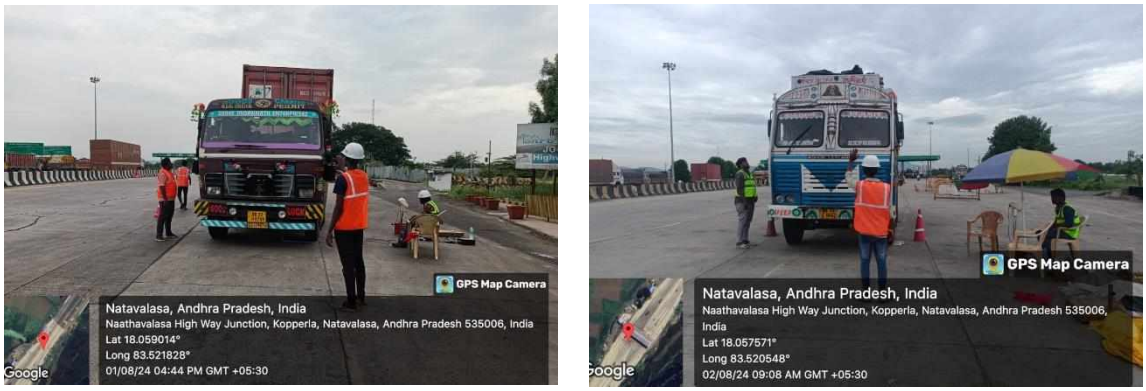


Figure 4-4: Axle Load Survey

The VDF analysis was carried as per procedure given IRC: 37-2018 based on the collected axle load data. The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC:37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions.

- Single axle with single wheel on either side = {axle load in kN / 65}4
- Single axle with dual wheel on either side = {axle load in kN / 80}4
- Tandem axle with single wheel on either side = {axle load in kN /148}4
- Tridem axle with dual wheel on either side = {axle load in kN /224}4

With the stated above procedure, the Vehicle Damage Factor for each class of commercial vehicle on both the directions were calculated separately for empty and loaded vehicles. The Axle load data format and VDF analysis are presented in **Annexure 4.5** and obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 4-4: Vehicle Damage Factors (VDF)

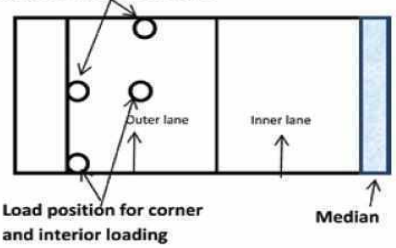
S. No	Toll plaza	Nathavalasa	
		Km 656.704	
	Vehicle Type	LHS	RHS
1	Bus	1.07	0.92
2	LCV	2.11	1.91
3	2-Axle	2.77	3.11
4	3-Axle	1.71	7.66
5	MAV	5.15	9.9

There is a significant difference between the axle loads of commercial vehicles flying in both directions of traffic, due in inconsistent commodity pattern generating from different locations along the project highway and thus, separate factors have been considered for traffic assessment. Further, 7-day axle load survey has been conducted to validate the above inconstancy and found that VDF values as obtained from these 7-day survey is less than 24 hours' survey and hence adopted the above values in the present due diligence study.

4.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique" to determine the remaining life of the pavement structure.

The principle and description of FWD and its methodology is provided in **Annexure 4.6.**



FWD deflection measurement has been carried out for each direction and the measurement has been carried out at a test point along outer wheel path of each direction which is at an offset of 1m from the outer edge of outer lane as specified in section 5.4.5 of IRC: 115-2014. At every measurement location, four drops were made, such that the first drop was the '**seating drop'** and with the remaining three drops deflections were recorded. Field survey photographs is shown below.

Figure 4-5: FWD Survey at Project Site

The deflection testing has been carried out on the existing pavement as per IRC Codes at the rate of 5 points per km as stipulated in TOR of the Consultant.

Adopted deflection measurement scheme is as under.

Adopted Measurement Scheme	Maximum Spacing(m) for test points along selected wheel path (Flexible Pavement)	Rigid Pavement
(i) measurement along outer wheel paths of outer lanes (3 points) (ii) measurement along the outer wheel path of inner lane (2 points)	200 400	Load position for transverse and longitudinal shoulder joints 

4.4.1 Back-calculation of Layer Moduli for Flexible Pavement

Layer moduli have been back-calculated using KGPBACK program. The pavement has been modelled as a three-layer system with bituminous layer, granular layer and subgrade. The following inputs have been provided for back analysis.

i) Single wheel load 40 kN and contact pressure 0.56 MPa
ii) No. of deflection sensors: 9
iii) Radial Distances of the Geophones i.e., 0,200, 300,450, 600, 900 and 1500mm
iv) Measured Surface Deflections normalized to 40kN in mm
v) Pavement Layer Thicknesses (as measured from Trial Pits)
vi) Poisson's ratio for different layers i.e., 0.35 for bituminous, granular and subgrade
vii) Range of Possible modulus value (Min.- Max.) of bituminous layer, granular layer and subgrade.

Ranges of different layer moduli have been given as input to KGPBACK for back-calculation. These ranges have been selected judiciously by experienced pavement engineering taking into considerations the approximate age of pavement, visual assessment of the condition of bituminous layer, climatic conditions prevailing at the time of deflection measurements and information available from test pits, and laboratory tests conducted as detailed below:

Range of modulus value of existing subgrade:

The range of moduli of existing subgrade is taken based on the subgrade CBR values for the analysis.

Range of modulus value of existing granular layers i.e., base and subbase:

The range of moduli of existing granular layers is based on Appendix III.8.4 of IRC 115-2014.The range for combined (base and sub-base) is taken as 100-500 MPa.

Range of modulus value of existing thick bituminous layers:

The range of moduli of existing thick bituminous layer has been determined on the basis of condition data. If the road condition is good the range is considered as 750 MPa to 3000 MPa, for sections with pavement condition is Fair- Poor, the range specified for thick bituminous layer 400 MPa to 1500 MPa as stipulated in Appendix III.8.4 of IRC: 115-2014 has been taken into consideration.

4.4.1.1 Correction for Temperature

Back-calculated moduli values of the bituminous layers evaluated by FWD survey are influenced by the pavement temperature. The standard pavement temperature for India is recommended as 35°C, hence the back-calculated moduli obtained at temperatures other than the identified standard temperature will have to be corrected using a suitable correction factor using equations 4 and 5 of IRC:115-2014 and the same is extracted below for ready reference.

$$E_{T1} = \lambda E_{T2} \ldots\ldots \textbf{(4)}$$

Where,

λ temperature correction factor, is given as

$$\lambda = \frac{(1-0.238 \ln T_1)}{(1-0.238 \ln T_1)} \ldots\ldots \textbf{(5)}$$

Where,

E_{T1} = Back-calculated modulus (MPa) at temperature $T_1^0\ C$

E_{T2} = Back-calculated modulus (MPa) at temperature $T_2^0\ C$

However, in few sections, after applying the temperature correction the E value of bituminous layers are coming more than 3000MPa. As the project road was constructed with VG-30/VG-40 grade bitumen, it is restricted to keep the maximum E value of 3000MPa, wherever it is exceeding. In these locations, the temperature correction factor was applied as 1.

4.4.1.2 Correction for Seasonal Variation

Moisture content affects the strength of subgrade and granular sub base/base layers. Therefore, the back-calculated moduli of subgrade and granular layers should be taken from field moduli using seasonal corrections. Seasonal correction equations 7 and 8 of IRC: 115-2014 has been extracted below for ready reference.

$$E_{sub_mon=}\ 3.351 * \left(E_{sub_win}\right)^{0.7688} - 28.9 \ldots (6)$$

$$E_{sub_mon} = 0.8554 * (E_{sub_sum}) - 8.461 \ldots (7)$$

where,

E $_{sub_mon}$ = subgrade modulus in monsoon (MPa)

E $_{sub_sum}$ = subgrade modulus in Summer (MPa)

E $_{sub_win}$ = subgrade modulus in Winter (MPa)

$$E_{gran_mon=}\ -0.0003 * \left(E_{gran_sum}\right)^2 + 0.9584 * \left(E_{gran_sum}\right) - 32.989 \ldots (8)$$

$$E_{gran_mon=}\ 10.5523 * \left(E_{gran_win}\right)^{0.624} - 113.857 \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (9)$$

where,

E $_{gran_mon}$ = granular layer modulus in monsoon (MPa)

E $_{gran_sum}$ = granular layer modulus in Summer (MPa)

E $_{gran_win}$ = granular layer modulus in Winter (MPa)

Since the deflection measurements have been carried out in the month of December hence seasonal correction factor is applicable.

The 15th percentile value (as the same has been recommended by IRC: 115-2014 for purpose of design) of back-calculated & corrected layer moduli of each identified homogeneous sub-sections of both directions separately are presented next.

4.4.1.3 Results of Back Calculated Modulii (E) of Pavement Layer

The summary of back calculated E values is presented in **Annexure 4.7**.

4.4.1.4 Remaining Life Estimation for Flexible Pavement

The in-service three-layer pavement system has been analysed with the back-calculated corrected layer moduli and layer thicknesses. The critical strains have been calculated by IITPAVE program. From the performance criteria equations, the residual/remaining rutting and fatigue life have been estimated.

Performance Criteria

The layer moduli of in-service pavement back calculated from FWD deflection data are used to analyse the pavement for critical strains which are indicators of pavement performance in terms of rutting and fatigue cracking. The following approach is proposed for design of bituminous overlays for existing flexible pavements. The mechanistic criteria (fatigue and rutting) adopted in the IRC:37-2018 “Guidelines for the Design of Flexible Pavements”, forms the basis for the overlay design method. Performance models adopted in these guidelines are given below.

a) Fatigue in Bituminous layer:

As it specified in IRC: 115-2014, the fatigue model for 90 percent reliability was used as below

$$N_f = 0.711 * 10^{-04} \times [1/\varepsilon_t]^{3.89} * [1/M_R]^{0.854}$$

As it specified in IRC: 37-2012, the fatigue model for 80 percent reliability was used as below

$$N_f = 2.21 * 10^{-04} \times [1/\varepsilon_t]^{3.89} * [1/M_R]^{0.854}$$

Where,

N_f = fatigue life in number of standard axles,

ε_t = Maximum Tensile strain at the bottom of the bituminous layer

M_R= resilient modulus of the bituminous layer.

b) Rutting in Subgrade:

Rutting model for 90 percent reliability level as specified in IRC: 115-2014 was used as below;

$$N = 1.41 \times 10^{-08} [1/\varepsilon_v]^{4.5337}$$

As it specified in IRC: 37-2012, the rutting model for 80 percent reliability was used as below

$$N = 4.1656 \times 10^{-08} [1/\varepsilon_v]^{4.5337}$$

Where,

N= Number of cumulative standard axles, and

ε_v= Vertical strain in the subgrade

The detailed remaining life analysis is done using 90 percent reliability equation of IRC: 115-2014 is presented in tables below for LHS and RHS carriageway.

Table 4-5: Section-wise Pavement Remaining life

S.No	Homogeneous sections			Existing Thickness, mm		Total Crust	Remaining Life @ 90% Reliability

4.5 Mobile Bridge Inspection Unit (MBIU)

4.5.1 Specification

The Mobile Bridge Inspection Unit (referred as (MBIU) is an electro-mechanically driven articulated structure mounted on a vehicle (a truck) as an aid towards proper inspection of bridges or similar infrastructures by enabling an inspection team of 2-3 persons carrying instruments access to the underside of bridge decks overflowing rivers or gorges. The present version is the truck mounted system. As per TOR condition survey of existing structures greater than 60m shall be carried using MBIU.

The overall objective of the condition survey is to identify the need for structural maintenance, rehabilitation and replacement. Signs of distress such as spalling, scaling, cracking, leaching, excessive deflection, inadequate cover, settlement, exposed reinforcement, corrosion in the reinforcement; shear cracks etc. are identified during this exercise. Special emphasis is given on expansion joints and bearing. Also, the condition of the Approaches, water way and bed protection is examined. The survey identifies the bridges which are more distressed and require testing for their evaluation and rehabilitation measures. Also bridges which require general measures for rehabilitation. Inspection report is prepared in accordance with IRC: SP-35. The report provides recommendation whether a bridge is acceptable to continue in use, whether it can be repaired and/or modified e.g. widened or a new structure.

The structure inventory and condition assessment are given in **Annexure 3.2.** The following structures have been inspected using MBIU machine.

Table 4-6: List of Inspected Structures using MBIU

		LHS	RHS	
3	655+573	LHS	RHS	Major Bridge
4	675+164	LHS	RHS	Major Bridge

4.5.2 Working Principle

The work of condition survey requires use of Mobile Bridge Inspection Unit at the various bridge sites on the National Highways to overcome the accessibility problems. MBIU increases the accessibility for inspection of underside of high-level bridge decks and helps in continuous inspection of throughout the span of bridge. It has five folded arms. All of them are electro-mechanically operated.

Once the platform is erected by certified person, Inspection and maintenance experts can inspect underside of bridge, note observations as per IRC SP-35 & IRC SP-52 and take photographs for reference.

4.5.3 Advantages

- A large operating range
- A high level of working comfort
- Maximum operational safety
- The shortest possible setting up and dismantling times
- Full mobility in inspection operation without stabilizer supports
- An optimum weight/performance ratio

Figure 4-6: MBIU Survey

4.6 Drone Videography of Entire Stretch

Videography of entire Project Stretch is captured through Drone cameras flown at about 50m above ground. This shall be useful for observing various features of Project Stretch from bird's eye level.

Figure 4-7: Drone Videography

Section 5: Review of Documents

5.1 General

Technical Consultant (TC), since the start of technical due diligence study, has requested for various documents from the Client. A list of documents required were shared with the Client before TC team started the study which was appended with few more queries after the conclusion of the site visit once the project site is appraised. Most of the queries were also discussed with the Client in many meetings. This section of the report deals with the documents requested by TC and its review along with highlighting major issues found during this review.

5.2 Documents Collected and Reviewed

List of documents requested, received and reviewed are given below:

S. No.	List of Documents	Status of Documents	Remarks on Review
DOCUMENTS RELATED TO CURRENT ACQUISITION			
1.	Concession Agreement	Partially Available	Technical Schedules A, B, C and F are made available to the Consultant. These schedules are modified from the standard provisions given in manual as below: Sch A: Existing features Sch B: Scope of Work including facilities to be provided Sch C: Specifications and Standards Sch F: Maintenance Requirements Table 1 of Sch F provides maintenance criteria for pavements which has performance parameter, desirable and acceptable level of service, frequency of inspection and time limit for rectification/repair. Sch F specifies roughness value as 2000 mm/km desirable and 2400mm/km acceptable for flexible pavement. These values are 2200mm/km and 2400 mm/km respectively for rigid pavement. Sch B states that the concessionaire shall carry out the periodic maintenance in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc. either in every sixth year or in the year in which roughness index exceeds the limit as given in schedule F whichever comes earlier. Further, it was clarified in the pre-bid queries reply that periodicity of 6-year overlay will be applicable from O&M handover date. Though draft CA is not available, Consultant has referred the CA of earlier roads wherever required presuming that there shall not be any change in Contract Conditions.
2.	Detailed Project Report/ Technical Due Diligence Report	Available	This report is used as reference for inventory & condition of the assets and improvement proposals. Estimated cost of engineering and

S. No.	List of Documents	Status of Documents	Remarks on Review
			safety improvements in this report does not assign any cost for Invit Concessionaire. O&M cost estimated in this report is 197.94 Cr for operation expenses, 49.74 Cr for routine maintenance expenses and 260.48 Cr for periodic maintenance for the entire concession period at 2024 prices.
3.	FWD data	Available	The reports of FWD were available as a reference document for TC.
4.	Latest MPRs	Available	Consultant collected the IE-MPRs for April, May & June – 24 from the NHAI – PIU during the site visit. Reports provide details about the Project Road and key maintenance activities undertaken by the HAM Concessionaires during that period.
5.	Maintenance History	Not available	There is no maintenance history available for the Project Road.
6.	NSV data	Available	The reports of NSV are available as a reference documents for TC.
7.	AADT for each section and Growth rate	Available	AADT along with traffic projections for the project roads have been provided by Client.
8.	Concession Period	Not available	TC has adopted 20 years concession period with reference to the CA of earlier roads.
9.	Projected Escalation factor	Not available	In absence of projected escalation factor, all cost are given at the present rate as per the direction of the Client.

5.3 Key Technical Issues

5.3.1 Damaged Bearings

Problems with the bearings are observed in the form of tilting, cracking, not properly placed and compressed. Affected structures are

MJBR: @ 655+573 and @ 675+164

Flyover: @ 641+230

It is presumed that existing HAM Concessionaires will fix all these bearings before handing over.

5.3.2 Pavement

Pavement at service road is distressed at many locations, may be due to higher traffic loading. It is also noticed that most of the panels of Rigid Pavement at Natavalasa Toll Plaza got damaged with high severity of longitudinal, transverse, multiple cracks, corner breaks. Joint sealing needs immediate replacement.

Natavalasa Toll Plaza-Rigid Pavement Distresses.

Poor Condition of SR in Urban Section

Section 6: Capital Expenditure Requirement

6.1 Improvement Works as per Schedule B

Schedule B of each stretch specifies the requirements of improvement which the concessionaire has to construct as per the completion schedule specified in Schedule B. Major works and reference used to quantify these construction requirements are listed below:

- Approach slabs reconstruction: Ref Cl 3.2 III of Sch B.
- Junction improvement: Ref Cl 4 of Sch B.
- Curve improvement/ Minor Jn improvement: Additional signages and studs are considered as per Cl 4 of Sch-B.
- Truck lay bye: Sewage disposal system as per Cl 8.2 of Sch B
- Landscaping and median plantation: Cl 8.4 of Sch B
- Transverse bar marking: Cl 9.3 of Sch B
- Antiglare: Cl 9.5 of Sch B
- Kerb stones: Cl 9.6 of Sch B

Improvement Scope specified for each stretch is tabulated below:

Table 6-1: New Construction Requirements

S. No.	Description	Unit	RA	AH
1	Approach slabs reconstructed	Nos.	12	2
2	Junction improvement	Nos.	60	44
3	Curve improvement: Additional signages and studs are considered as per Sch-B.	Nos.	50	25
4	Truck lay bye: Sewage disposal system	Nos.	3	0
5	Landscaping and median plantation	km	13.2	5,34
6	Transverse Bar Marking	Nos.	4	26
7	Antiglare	Km	5	-
8	Kerb stone	Lm.	17,143	17,564

RA: Ranastalam – Anandapuram

AH: Anandapuram - Hanumantvaka

Time to complete above construction works in within 3/6 months from the Handover Date based on completion schedule for improvement proposals given in Schedule B.

6.2 Immediate Maintenance Requirements

The sections are under HAM (Annuity) concession up to 2035/36 and under PBMC up to 2030. So, obligation for immediate repair requirements do not lie with InvIT Concessionaire. However, toll plaza renovation cost and TMS replacement cost has been considered for existing toll plaza.

6.3 Capital Expenditure (CapEx)

Cost of capital expenditure (CapEx), worked out as explained above, are presented below.

Table 6-2: Immediate Maintenance

Description	Ranastalam-Anandapuram
Toll plaza improvement	2.95
TCMS	5.01
Total	**7.96**

Table 6-3: Improvement Works as per Schedule – B

Description	Ranastalam-Anandapuram	Ranastalam-Hanumanthavaka
Initial Improvement as per Schedule B	3.91	3.97

Section 7: Operation & Maintenance

7.1 General

The O & M requirements for the project facilities are normally specified in the Concession Agreement (CA). Though Schedule F is made available to the Consultant, CA is not yet available. Hence Consultant has taken reference from the CA of Round 3 roads presuming there is no change in the Contract conditions. Maintenance requirements are referred mainly under following Articles/ Schedules:

- Article 15 - Operation and Maintenance
- Article 16 - Monitoring and supervising during Operations
- Article 17 – Traffic Regulation
- Article 18 and Schedule H – Safety Requirements
- Schedule F- Maintenance Requirements

7.2 Requirement as per Concession Agreement

Schedule F of the Concession Agreement sets out the Operation and Maintenance requirements for the Project. As per this schedule, scope for Operation and Maintenance includes but not limited to following obligations:

- ✓ **Improvement** – This includes improvement of the existing assets as per requirement of this Agreement and safety audit.
- ✓ **Maintenance of Civil Works and Assets**- this includes maintenance of civil works and all assets as per requirement of this agreement.
- ✓ **Road Maintenance** –This includes routine maintenance, preventive maintenance, periodic maintenance as per IRC:82-2015, Design overlay as per Manual of 4-laning/6-laning, disaster maintenance, exigencies, and inspections.
- ✓ **Traffic Management** – This includes enforcement of regulations together with the relevant authorities. This also includes hazard response, information gathering and dissemination, Road patrols and ATMS surveillance etc.
- ✓ **Safety**– This includes accident prevention, after care, user education, enforcement, data collection and analysis.
- ✓ **Facility Management** – This includes periodic inspections, routine maintenance, Rehabilitation, and expansion planning.
- ✓ **Road property management** –This includes management of access, encroachment, and ribbon development.
- ✓ **General responsibilities** –This includes budgeting, compliance with legal and accounting requirements, and public relations.
- ✓ Maintaining public relations unit to interface with and attend to suggestions from users of the highway, the media, Govt. agencies and other external agencies.

Routine Maintenance: These are maintenance needs required on daily, weekly, monthly and annual basis for the smooth and efficient running of traffic and includes the activities of minor repairs of all project elements, cleaning of road furniture, replacement of consumables,

horticulture maintenance, keeping the project site /project facilities clean, tidy and orderly condition free of litters and debris, preventing unauthorized entry and exit including any encroachment etc.

Preventive Maintenance: Preventive maintenance shall include the activities related to each element and the system as a whole of the Project Highway to ensure that during the Concession Period and at its end is in sound, durable and functional condition. In other words Preventive maintenance are a planned strategy of cost-effective treatments to an existing roadway system and its appurtenances that preserves the system, retards future deterioration, and maintains or improves the functional condition of the system (without significantly increasing the structural capacity).

Periodic Maintenance: These are maintenance needs required on periodic annual basis. The periodic maintenance can be further divided into two sub heads namely (i) functional overlay to improve the riding quality and (ii) structural overlay to improve the structural strength of the pavement.

Factor influencing periodic maintenance: performance parameter for flexible pavement in terms of roughness as given in Schedule F is 2000 mm/km as desirable and 2400 mm/km as acceptable. Clause 4 (III) of Schedule B states that periodic maintenance shall be carried out in full length of the project stretch including main carriageway, service/slip road and at facilities etc. either in every six years or in the year in which roughness index exceeds the limit given in schedule F, whichever comes earlier.

7.3 O&M Cost Estimation

7.3.1 Routine maintenance

This is a day-to-day work that is necessary to preserve and keep a pavement as close to as constructed condition and to ensure smooth and functional conditions all the times. The item in this subhead includes maintenance of earthen shoulder, restoration of rain cuts, maintenance of slope protection works, cleaning of road side drains, cleaning of carriageway, maintenance of structures, repairs of road surface such as filling of potholes, repairing of cracks and patch works, carrying out of Road roughness survey, FWD test etc.

7.3.2 Repair/Maintenance

Repair/maintenance covers the minor repair which are required on day-to-day maintenance to maintain the assets in good condition. This is sub-divided in two categories as below:

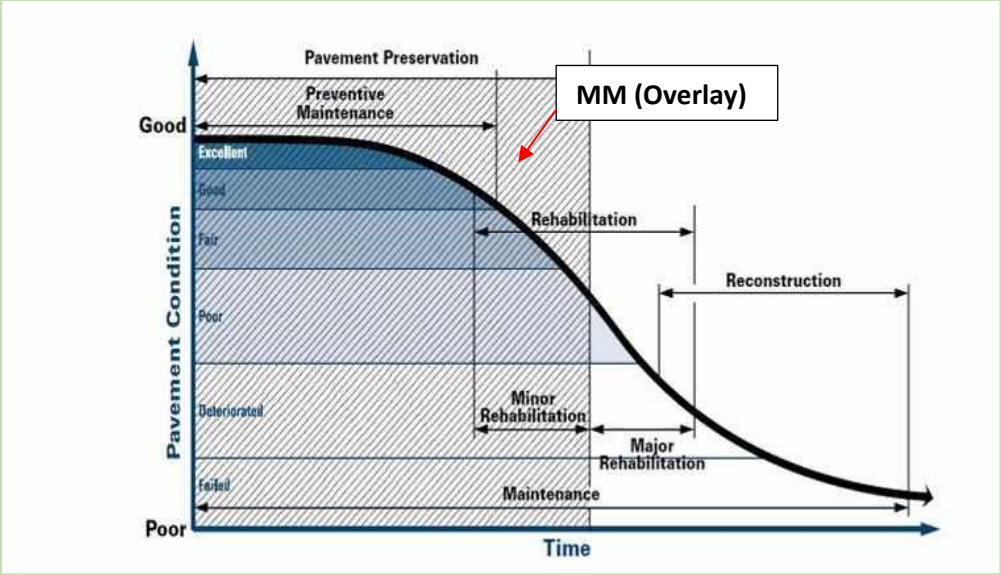
a) **Preventive Maintenance:** The preventive maintenance is required to be done for further improve or extend the functional life of pavement surface whist in fair to good condition. Any of the treatment under preventive maintenance does not significantly increasing the structural capacity of pavement rather which decreases rate of surface deterioration, which may result in saving of pavement from leading to poor condition where major maintenance could be inevitable.

Future preventive maintenance on the project road depends largely on routine inspection of the pavement with careful observation of specific distress and to take a decision at that time and suitable type of preventive maintenance treatment and its timing. All the narrow and wide surface cracks must be arrested immediately after identification with fog/slurry seals as the most recommend preventive type maintenance measure for the in-service flexible pavement.

Based on the condition and distress identification survey as explained above paragraph, preventive maintenance treatments have to be taken up immediately to reduce rate of further damage to the surface and for enhance the pavement performance to the condition similar to non-distressed surface condition.

b) **Road Property Maintenance:** The item in this subhead covers the plantation/ maintenance of shrubs, turfing, replacement/ repair of damaged railing, crash barrier, kerbs, road delineators, signage, Road marking and painting etc.

7.3.3 Toll Management System



Cost estimate for Toll Management System was worked out by TC. Same was presented and deliberated during the investor meet, after that it was decided to adopt the rationalised cost finalized by IM.

7.3.4 Corridor Management

Incident Management: The items in this subhead include minimize the effects of incident and restore normal capacity and safety levels to all affected road facilities as efficiently as possible and. repair/ replacement of removing the dead animals & broken-down vehicles etc.

7.4 Major Maintenance

The pavement deteriorates with time caused by traffic movement and weather conditions. The rate of deterioration depends on the original design, type of maintenance being done/undertaken and time of application. Therefore, timely and appropriate maintenance of bituminous surface using suitable materials is essential to increase the pavement service life to a greater extent. Any delay in maintenance of the pavement substantially increases severity of the distresses, which results into poor condition of pavement as depicted in figure below and thereby increase in maintenance costs to bring the surface to a good condition.

Therefore, timely maintenance of the pavement is required for its satisfactory performance both in terms of functionally and structurally during the pavement service life.

Schedule F of the Concession Agreement set out the maintenance requirements in the Project. The performance parameters are indicated in schedule F descripting the nature of defect/deficiency along with time limits for repair/rectification for roads and bridges.

Schedule F, Pavement Roughness Value (Functional Overlay): The Periodic maintenance is required to be provided as and when performance parameters in terms of cracking, roughness and rutting etc. exceeded the limits as indicated in the schedule F anytime during the service life of the pavement. As per the provisions of Concession agreement, Surface roughness value is the major governing factor for selection of an appropriate pavement maintenance treatment required to bring the roughness value below the prescribed limit of 2000mm/km.

Pavement Strengthening (Structural Overlay): When the pavement is structurally deficient having high severity alligator/fatigue cracks, rutting and other associated distresses, then the structural overlay is required to be provided for strengthening of the pavement to cater for the anticipated design traffic. The pavement strengthening may be required when the

- Remaining life of the in-service pavement as evaluated using Falling Weight Deflectometer (FWD) is less the design traffic as calculated till end of the concession.
- Before expiry of initial design traffic as adopted at the time of asset construction.

7.4.1.1 Review of Major Maintenance History

As per the review of available reports and discussions with IE during O&M that no major maintenance/rehabilitation that has been carried out in the project being the 6-construction works were completed recently. The routine maintenance consists of rectification of rutting and repair of cracked concrete panels in progress by the existing HAM Concessionaire.

7.4.1.2 Design Traffic during the Concession Period

The design traffic in terms of MSA during the concession period has been calculated based on the current traffic pattern and data shared by the NHIIPL. The Vehicle Damage Factors (VDF) has been adopted as obtained from the present survey. The summary of design traffic during the concession period is as under.

Table 7-1: Summary of Design Traffic during Concession Period

Project Stretch	Direction	Design Traffic in MSA	
		10 years (FY35)	20 years (FY45)
Ranasthalam to Anandpuram Section	LHS	40	103
	RHS	76	195

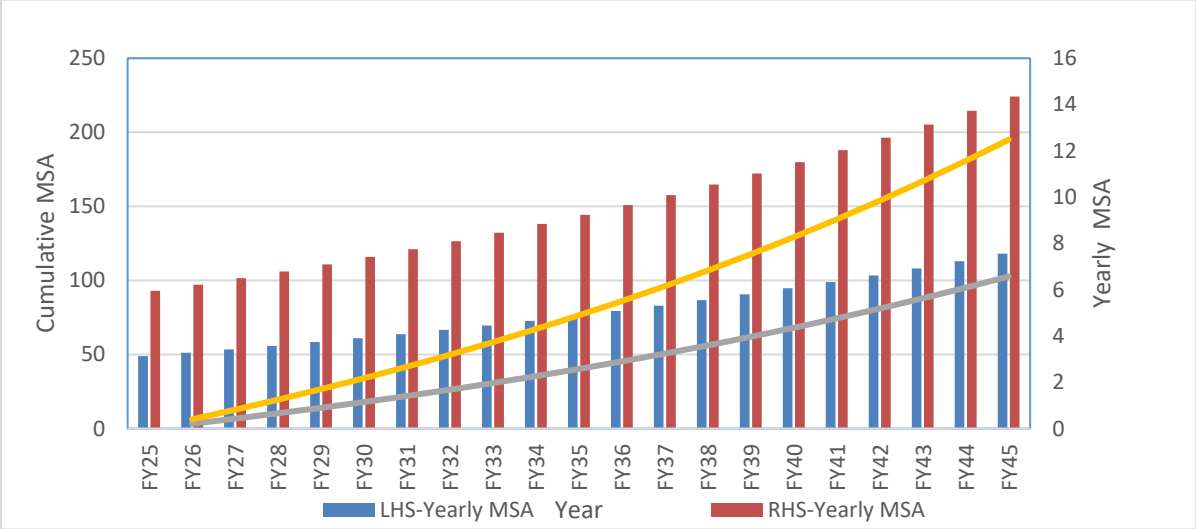


Figure 7-1: Design Traffic in MSA (Ranasthalam to Anandpuram Section)

In combination of above anticipated design traffic patterns, remaining life of the existing pavement as explained under surveys and investigation chapter, the pavement condition for distresses and roughness, the existing pavement is requiring repair and rehabilitation to be carried out by the TOT concessionaire to bring the pavement surface to the desired level of serviceability.

From the remaining life analysis as explained under surveys and investigation chapter, it is found that most of the pavement sections having remaining life more than the projected design traffic on LHS & RHS. Hence functional overlay in terms of bituminous overlay of 40mm BC at the end of every 6th year from the date of O&M handover date for the Main Carriageway and 40mm BC for service roads to extend the life of the pavement and improve and maintain the road roughness levels during O&M phase of the InvIT Concessionaire.

7.4.1.3 Immediate and Future Major Maintenance Requirement

Major maintenance is required to comply with provisions of concession agreement and to maintain performance levels as defined in schedule F throughout the operation and maintenance period.

As per schedule B, the TOT concessionaire shall carryout the periodic maintenance in full length of the project stretch including main carriageway, service roads and facilities in every 6th year or the year in which roughness index exceeds the limits given in schedule F, whichever comes earlier.

Therefore, considering the initial pavement design period and crust, remaining life data, anticipated traffic loading during the concession period, and in compliance to the provisions of schedule B, the following cycle of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

Table 7-2: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)				
	CAPEX	Routine Maintenance	Periodic Maintenance	ATMS & TMS Replacement	Toll Operation & Admin Cost

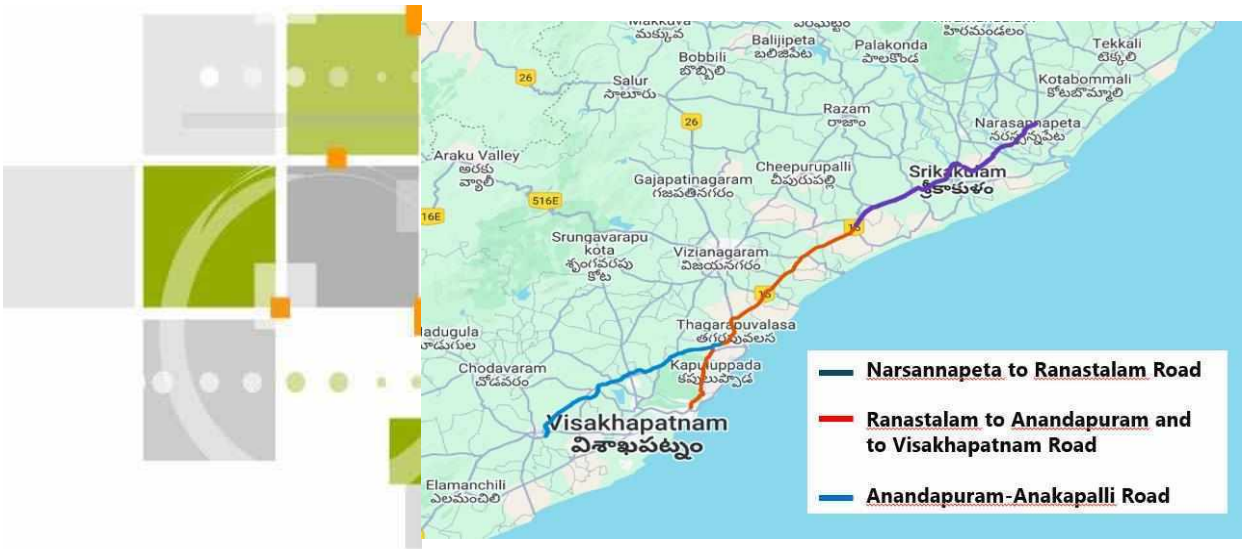
Section 8: Conclusion

The project highway is a partially access controlled consists of 6-lane divided carriageway with service roads on both sides with minimum number of merging and diversion points on the highway for access to service roads. The 6-lane project has been completed on HAM mode and at present toll is being collected by Toll Collection Agency appointed by NHAI. The project highway is also having 4-lane divided carriageway from Anandapuram - Hanumanthavaka (Towards Visakhapatnam city), for which Performance based Contract for maintenance of city side section. The performance of the pavement is satisfactory in terms of pavement roughness and quality of the pavement surface without having major distresses. As part of present study, the required Engineering Investigations along with site visual observations were made for evaluation of the asset condition and accordingly established the required maintenance and rehabilitation measures/decisions for the concession period. The periodic maintenance by functional/structural overlays are required at every 6th year as per the CA would be sufficient to keep the project stretch in good condition and hence suitable major maintenance strategy has been recommended to improve the service life during the concession period.



Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report, it is concluded that most of the structures are in sound condition and no major repair is required in near future. As the entire road sections are in HAM/PBMC, the defects identified during this study and future defects occur during the remaining HAM/PBMC concession/contract are to be rectified by the existing Concessionaire. It is to be ensured that asset quality assessment is done thoroughly at the time of handing over so that these defects and any other defects occur during the remaining HAM/PBMC concession period is rectified.

The assessment of estimated cost of such repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

Section 1: Executive Summary

1.1 Introduction

1.1.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 15th July 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 1-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	NH No.	Lane	Length (km)
1	Narasannapeta to Ranastalam	Madapam	NH-16	4/6 Lane	53.799
2	Ranastalam to Anandapuram via Kopperla	Nathavalasa	NH-16	6 Lane	48.980
	Anandapuram to Visakhapatnam	-	Old NH-16	4 Lane	17.564
3	**Anandapuram to Anakapalle via Pendurthi**	**Dukkavanipalem & Marripalem**	**NH-16**	**6 Lane**	**48.605**
Total					**168.948**

This report pertains to the stretch Anandapuram to Anakapalle via Pendurthi.

1.1.2 Objectives

The main objective of the present assignment is to

1. review project documents and understanding schedule B and schedule F requirements for improvement works for the assessment of Capex and Opex during the concession period.
2. conduct field investigations to assess the existing asset condition and future deterioration.
3. validate executed works with respect to schedule A and assessment of improvement Works

4. review quality of construction based on available data, design and drawings.
5. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
6. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

1.2 Site Visit

The Technical Consultant visited site from 25th July 2024 to 11th August 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road.

1.2.1 Salient Features

Table 1-2: Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length	Lane Configu-ration	Pavement Type	Date of COD	O&M Handover Date to InVIT	Concessionaire / Remarks
			From	To	(km)

1.3 Surveys and Investigations

1.3.1 Network Survey Vehicle (NSV)

The Network Survey Vehicle, which is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools, is used for automatic data collection pertains to pavement condition and road inventory data. The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. Summary of findings of NSV survey is given in preceding sections.

1.3.1.1 Pavement Type

Anandapuram – Anakapalli stretch is having rigid pavement.

1.3.1.2 Pavement Roughness

Roughness value measured for each lane of main carriageway using NSV. The summary of direction-wise roughness distribution for each lane in term of percentage length are presented below.

[2] Flyover on one of the proposed loop at Sabbhaabaram interchange is already constructed which is not mentioned in Sch A.

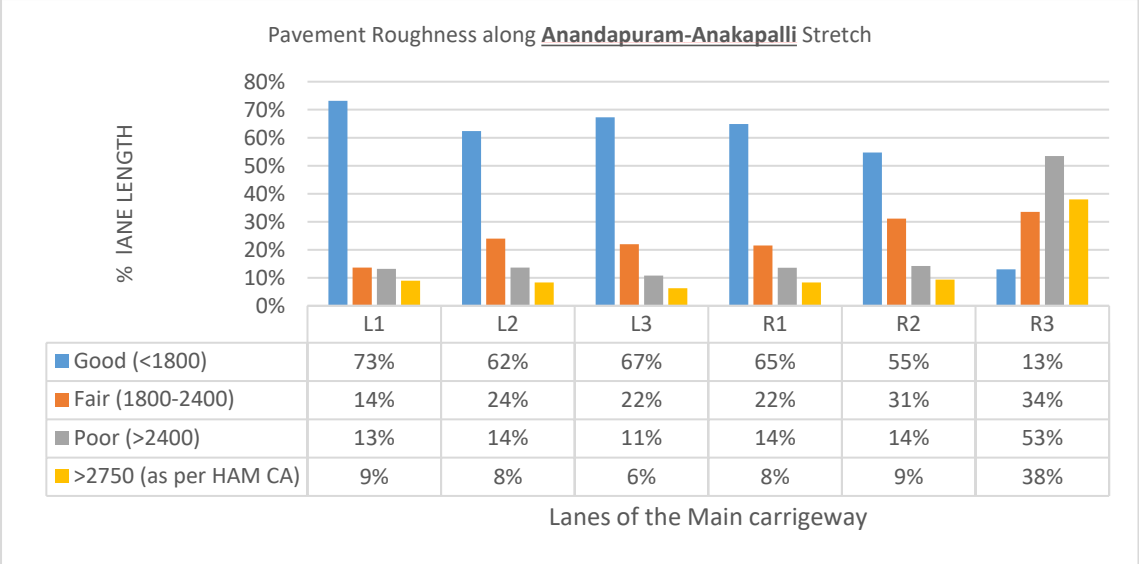

Figure 1-1:Pavement Roughness Charts

Km-wise pavement condition and distress in the form of strip chart is included in **Annexure - 4.2**.

1.3.2 Test Pit Investigations

Test pit investigations have been planned to conduct at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). However, the project is partially access control throughout the length, thereby no earthen shoulder has been found and thus test pits were taken at the locations where feasible to dug at the interface of the paved and earthen shoulder. The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 1-4:Summary of Existing Pavement Crust Thickness

Date of Sampling	Location of Trial Pit	Lanes	Pavement Composition (mm)						
			BT	PQC	DLC	WMM	Cemented layer	GSB	SUBGRADE
Anandapuram-Anakapalli Section									
04.08.24	686+700LHS	6	-	290	110	-	-	170	500
04.08.24	710+960LHS	6	-	290	130	-	-	140	500
04.08.24	703+520RHS	6	-	250	110	-	-	170	500

Observations and Conclusions:

- The project from Anandapuram - Anakapalli has been found with Rigid type for the total length.

- The pavement type for service road is flexible type and has been designed for 10MSA traffic.
- Throughout the project section, rigid pavement thickness of PQC is 290mm. Since these test pits locations were taken at a larger intervals and thus it can be considered as indicative thicknesses for the composition as found from the trial pits.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in below sections.

Test Results: Anandapuram - Anakapalli Section

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade
		4.75mm	0.425mm	0.075mm		LL%	PL %	PI %								
694+700LHS	GP-GM (Poorly Graded Gravel Mixed with Silty Gravel)	38.0	26.0	10.8	27.2	22.1	13.5	8.6	Nil	2.12	7.8	1.86	8.0	15.0	21.0	Not found
698+900LHS	GC (Clayey Gravel)	43.5	25.1	15.3	28.2	25.6	13.6	12.0	10.0	2.11	8.2	1.68	8.0	15.0	21.0	Not found
683+700RHS	GC (Clayey Gravel)	42.5	29.5	14.8	27.7	24.3	14.8	9.5	10.0	2.13	8.1	1.82	9.0	14.5	22.0	Not found
690+700RHS	GC (Clayey Gravel)	37.0	22.8	12.9	24.1	23.9	12.8	11.1	10.0	2.10	8.0	1.78	7.0	13.5	21.0	Not found

Observations and Conclusions

The subgrade soils are generally consistent throughout the project road and CBR values are in compliance with the design CBR as adopted during the 6-lane works. Further, it has been observed during the site visit that most of the soils in the region found to be red soil having CBR values more than 10% and this is one the reason for better performance of the pavement of the project highways.

1.3.3 Axle Load Survey

Axle load survey has been conducted in compliance with IRC 37 2018 for 24 hours in both directions at the existing toll plaza locations. Obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 1-5: Vehicle Damage Factors (VDF)

Toll Plaza	Direction *	Vehicle Damage factors				
		Bus	LCV	2-Axle	3-Axle	MAV
Dukkavanaipalem Toll Plaza (Km 686+540)	LHS	-	1.59	2.39	3.80	4.67
	RHS	-	2.27	2.95	5.43	9.48
Marripalem Toll Plaza (Km 722+154)	LHS	-	2.45	3.56	2.14	6.15
	RHS	-	1.64	2.61	4.41	8.03

** LHS: Srikakulam to Anakapalli RHS: Anakapalli to Srikakulam*

There is a significant difference between the axle loads of commercial vehicles flying in both directions of traffic, due in inconsistent commodity pattern generating from different locations along the project highway and thus, separate factors have been considered for traffic assessment. Further, 7-day axle load survey values are lower than one days and hence adopted the above values in the study.

1.3.4 Falling Weight Deflectometer (FWD)

As per IRC: 117-2015, the collected FWD data for the rigid pavement has been analysed to determine the following parameters.

- Modulus of subgrade reaction k (MPa/m)
- Elastic modulus of concrete E_c (MPa)
- Flexural Strength of concrete f_{mr} (MPa)
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of the parameter for PQC and Load Transfer Efficiency is presented in **Annexure 4.7** for both LHS and RHS directions respectively.

From the test results the observations were draw-down. The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table below.

Table 1-6: Outcome of FWD Data Analysis for Rigid Pavement

Side		LHS					RHS				
Chainage (Km)		Modulus of subgrade reaction k (MPa/m)	Elastic modulus of concrete Ec (MPa)	Strength of concrete fc (MPa)	Flexural Strength of concrete f_{mr} (MPa)	LTE (%)	Modulus of subgrade reaction k (MPa/m)	Elastic modulus of concrete Ec (MPa)	Strength of concrete fc (MPa)	Flexural Strength of concrete f_{mr} (MPa)	LTE (%)

- The PQC concrete slab has adequate strength with average flexural strength of more than 4.2MPa for the above rigid pavement project sections.

- Load Transfer Efficiency (LTE) for Transverse joints is more than 50% for both LHS & RHS direction and thus, joints are in good condition.
- Load Transfer Efficiency (LTE) for Longitudinal joints is more than 40% for both LHS & RHS direction so, the joint system is adequate in load transfer.

1.3.5 Structure Inventory and Condition Survey

There are deficiencies noted in the structures and relevant repair-rehabilitation measures are suggested. Requirement of immediate repairs for major structures (length > 60m) and minor structures are presented below.

1.4 Key Technical Issues

1.4.1 Damaged Bearings

Problems with the bearings are observed in the form of tilting, cracking, not properly placed and compressed. Affected structures are

MJBR: @ 709+692
Flyover: @ 683+063
ROB @ 730+272
It is presumed that existing HAM Concessionaires will fix all these bearings before handing over.

1.4.2 Pavement

Pavement at service road is distressed at many locations may be due to higher traffic loading. Rigid pavement has lost texturing in most of the locations in this section and requires retexturing.

1.4.3 Incomplete Construction

It is noticed that constructions are not completed for main carriageway of 3-lanes on RHS from km 703+400 to km 704+300, may be due to LA issues. It is also noticed that construction of interchanges at Pendurthi and Sabbavaram are not done though same was in the scope of the HAM concessionaire.

1.5 Capital Expenditure Requirement

1.5.1 Improvement Works as Per Schedule B

Schedule B of each stretch specifies the requirements of initial improvement which the concessionaire has to construct within 3/6 months of Handover Date.

Improvement Scope specified for each stretch is tabulated below:

Table 1-7: Improvement works as per Schedule B

S. No.	Description	Unit	Quantities
1	Approach slabs reconstructed	Nos.	4
2	Junction improvement	Nos.	29
3	Curve improvement	Nos.	50
4	Truck lay bye: Sewage disposal system	Nos.	2
5	Landscaping and median plantation	Km	14.4
6	Transverse Bar Marking	Nos.	22
7	Antiglare	Km	4
8	Kerb stone	Lm.	14,581

1.5.2 Immediate Maintenance Requirements

This section is under HAM (Annuity) concession up to 2036. So, obligation for immediate repair requirements does not lie with InvIT Concessionaire. However, toll plaza renovation cost and TMS replacement cost has been considered for existing toll plaza.

1.6 O&M Cost Estimation

1.6.1 Recommended MM Cycles for Pavement

Considering the initial pavement design period and crust, remaining life data, anticipated traffic loading during the concession period, and in compliance to the provisions of schedule B, the following cycles of Major maintenance is proposed for satisfactory performance of the pavement during operation period to serve both functional and structural requirements.

Table 1-8: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)				
	CAPEX	Routine Maintenance	Periodic Maintenance	ATMS & TMS Replacement	Toll Operation & Admin Cost
Anandapuram-Anakapalli	Toll plaza renovation cost TMS (all the existing defects to be rectified by HAM Concessionaire)	**Till O&M Handover**: Manpower cost for clearing considered **After Handing Over**: Regular	**FY37**- Revalid. Survey, Improvement works as per Sch.-B & road marking **FY38**- ***Structure***: Replacement of Wearing coat, expansion Joint and 40% of total Bearings **FY41**- ***MCW***: 40BC on flexible portion of proposed interchange to be constructed by NHAI ***SR***: 40BC, 50DBM for 10% length, ***Rigid***: Retexturing, replacement of joint sealant and 2.0% of panel. **FY45**- Road Marking ***Structure***: Replacement of wearing coat & painting	**FY30**-New TMS for interchange **FY33-** 50% TMS **FY37-** 50% TMS interchange **FY41-** 100% TMS 40% ATMS **FY44-** 100% TMS interchange	01.04.2025

1.6.2 Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of Initial Improvement, MMR and O&M are given below

Table 1-9: Cost Estimate (Initial Improvement, MMR and O&M)

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenace Cost (in INR Cr.)								
			Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	14.04					0.60					11.98	0.10		3.56
2	2026-2027						0.60					11.98	0.10		4.18
3	2027-2028						0.60					11.98	0.10		4.27
4	2028-2029						0.60					11.65	0.10		4.20
5	2029-2030					7.51	0.60					21.92	0.10		4.27

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

1.7 Conclusion

The project highway is a partially access controlled consists of 6-lane divided carriageway with service roads on both sides with minimum number of merging and diversion points on the highway for access to service roads. The 6-lane project has been completed on HAM mode and at present toll is being collected by Toll Collection Agency appointed by NHAI.

The pavement type as adopted in the project are rigid and flexible for main carriageway and service roads respectively. The performance of the pavement is satisfactory in terms of pavement roughness and surface quality without having major distresses. However, low severity shoving/corrugations has been observed on the surface of flexible type along the service roads, whereas low-medium severity cracks were observed on the PQC for which rectification works are in progress by the existing HAM Concessionaire in the form of cross stitching, sealant repairs etc. Some of the location observed with faulting and loss of texture for which rectification to be done as part of programmed maintenance works for rigid pavement to improve the serviceability. As part of present study, the required Engineering Investigations along with site visual observations were made for evaluation of the asset condition and accordingly established the required maintenance and rehabilitation measures/decisions for the concession period. The periodic maintenance by functional/structural overlays for flexible type are required at every 6th year as per the CA would be sufficient to keep the project stretch in good condition and suitable number of high severities PQC panels may be replaced along with joint rectification etc. Considering the asset visual assessment, condition and evaluation studies, the suitable major maintenance strategy has been recommended to improve the service life during the concession period.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report it is concluded that most of the structures are in sound condition and no major repair is required in near future. However, there are issues with the bearings for few structures. As the entire road sections are in HAM, these defects are to be rectified by the existing Concessionaires. It is to be ensured that asset quality assessment is done thoroughly at the time of taking over so that these defects and any other defects occur during the remaining HAM concession period is rectified.

The assessment of estimated cost of such repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

Section 2: Introduction

2.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 15th July 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 2-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	NH No.	Lane	Length (km)
1	Narasannapeta to Ranastalam	Madapam	NH-16	4/6 Lane	53.799
2	Ranastalam to Anandapuram via Kopperla	Nathavalasa	NH-16	6 Lane	48.980
	Anandapuram to Visakhapatnam	-	Old NH-16	4 Lane	17.564
3	**Anandapuram to Anakapalle via Pendurthi**	**Dukkavanipalem & Marripalem**	**NH-16**	**6 Lane**	**48.605**
Total					**168.948**

This report pertains to the stretch Anandapuram to Anakapalle via Pendurthi.

2.2 Objectives

The main objective of the present assignment is to

review project documents and understanding schedule B requirements for improvement works for the assessment of Capex and Opex during the concession period.

1. conduct field investigations to assess the existing asset condition and future deterioration.
2. validate executed works with respect to schedule A and assessment of improvement works
3. review quality of construction based on available data, design and drawings.
4. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
5. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

2.3 Technical Consultant Team

The Technical Consultant commenced its services from 15th July 2024 and the team comprising of Highway, Pavement & Structure Engineers and Experts have conducted site visit from 25th July 2024 to 11th August 2024 to appreciate the project corridor characteristics. This report highlights the findings from visual assessment, available documents shared with the consultant, discussion with NHAI officials involved with the maintenance and operation of project road at site and other local enquiries. Analysis of data as obtained from various survey and investigations conducted at site are present in this report.

Date-wise various field activities at site are shown below in bar chart form in **Figure 2.1.**

PROJECT STRETCHES	25-Jul	26-Jul	27-Jul	28-Jul	29-Jul	30-Jul	31-Jul	01-Aug	02-Aug	03-Aug	04-Aug	05-Aug	06-Aug	07-Aug	08-Aug	09-Aug	10-Aug	11-Aug

2.4 Disclaimer

The information and documents received from the Client are being reviewed by the Consultant and have been used for preparing this report. Due care has been taken while reproduction of the information where required to avoid typographical or other errors.

2.5 Structure of the Report

The report has been structured into nine sections as follows:

Section 1: Executive Summary
Section 2: Introduction
Section 3: Inventory and Condition Assessment
Section 4: Surveys and Investigations
Section 5: Review of Documents
Section 6: Capital Expenditure (CapEx) Requirement

Section 7: Operation & Maintenance

Section 8: Analysis & Comparisons with Seller Data

Section 9: Conclusions

Section 3: Inventory and Condition Assessment

3.1 General

The Technical Consultant visited site from 25th July 2024 to 11th August 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road. This chapter elaborates various findings of these surveys and studies conducted by the Technical Consultant team in different sections.

3.2 Project Corridor

The project stretche details are listed below:

Table 3-1: Detail of Project Stretches

Sr. No.	Name of Stretches	Toll Plaza	Chainage (Km)		Length (km)
			From	To	
1	Anandapuram to Anakapalle via Pendurthi	Dukkavanipalem & Marripalem	682+980	731+585	48.605
