3.4 Road Inventory and Condition Survey

3.4.1 Road Inventory

The Road Inventory is conducted to assess and list out the existing features of the project corridor and to validate that project road is conforming to the requirements of CA. It covers all the existing physical features such as terrain, land use, carriageway surfacing type, shoulder width, junctions, water bodies, roadside arboriculture, general drainage conditions, etc. It was carried out in accordance with the guidelines given in IRC: SP 19-2001, generally by visual means, and supplemented by simple tape measurement.

The road inventory data collected for the project highway is presented in the **Annexure 3.1.**

3.4.2 Terrain

The project highway falls in plain terrain.

3.4.3 Land Use

The land along the project highway is predominantly agricultural followed by built up, barren, forest, residential and commercial areas. Details of land use are given in the Table 3.2.

Table 3-2: Land Use

Description	Anandapuram to Anakapalle			
	Length (km)		%age	
	LHS	RHS	LHS	RHS
Agriculture	30.62	30.876	63.00%	63.52%
Built-Up Area (Residential/Commercial/ Industrial)	17.315	17.379	35.62%	35.76%
Others (Water Bodies/ Forest etc.)	0.67	0.35	1.38%	0.72%
Total	**48.605**	**48.605**	**100%**	**100%**

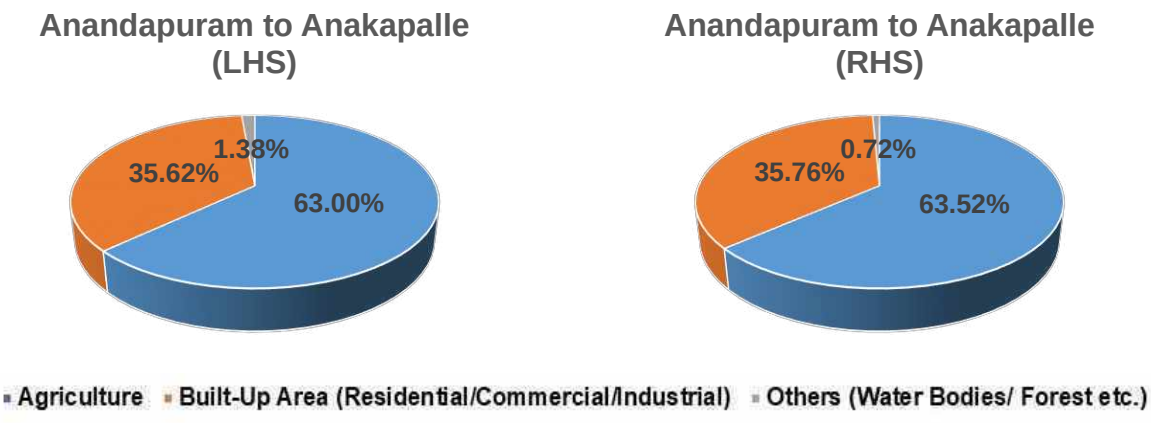

Figure 3-2: Land Use

3.4.4 Main Carriageway

Most of the length of the project highway is a 6-lane divided carriageway with paved shoulder configuration. The carriageway width is 11.0m (with kerb shyness) with 1.5m wide paved shoulder at rural area, 11.0m (with kerb shyness) with 2.0m wide paved shoulder at urban area and 11.0m (with kerb shyness) with 2.5m wide paved shoulder at underpasses location all along the project corridor except at toll plaza, bridges and ROBs.

Details are show in **Table 3.3** and **Figure 3.3** below.

Table 3-3: Main Carriageway

S. No.	Section	Chainage (km)		Length (km)	Lane	Type of Pavement	Remarks
		From	To

16	727+054	728+854	1.800	Both Side	Sankaram

3.4.7 Major and Minor Junctions

3.4.7.1 Major Junction

Provision of grade separation in the form of underpasses (CUPs, PUPs, LVUPs, VUPs and Flyovers) are there at all major junctions for the entire project section. All access to the project highway is through the Service/Slip Road.

There are 11 nos. of Major Junction. Details of the major junction are given in the **Table 3.6** below:

Table 3-6: List of Major Junction

Sr. No.	Chainage (Km)	Type of Junction	Cross Road leads to	
			LHS	RHS
Anandapuram to Anakapalle Section				
1	683+080	X	Anakapalle	Anandapuram
2	691+115	Y	-	Vizianagaram
3	696+260	Y	Simhachalam	-
4	699+670	Y	Pendurthi	
5	703+900	X	Pendurthi	Srungavarapu kota
6	706+360	Y	Pendurthi	-
7	708+070	X	Vepagunta	Mallinaidu Palem
8	711+645	Y	-	Sabbavaram
9	716+430	X	Lankelapalem	Sabbavaram
10	729+000	Y	-	Anakapalli
11	730+820	X	Vishakapatnam	Anakapalli

3.4.7.2 Minor Junction

There are 13 nos. minor junctions all along the project road. Other village or town road are connected with service / slip road and the road users are coming through service / slip road to connect with main carriageway. Summary of the minor junctions are given in the **Table 3.7** below:

Table 3-7: Summary of Minor Junction

Sr. No.	Type of Junction	Anandapuram to Anakapalle Section
1	T Junction	6
2	Y Junction	3
3	X Junction	4

3.4.8 Median

Median width is predominantly 4.0m-4.5m (excluding shyness). However, narrow median is observed at few locations due to ROW constraints or in built-up stretches. Details of sections with narrow median width are given in the **Table 3.8** below:

Table 3-8: Details of Narrow Median (Width < 4.5m)

Chainage (km)		Width (m)	Section	Remarks
FROM	TO			
691+200	700+544	1.2 - 1.5	Anandapuram to Vishakhapatnam	Kambalakonda Wildlife Sanctuary /Built-up Area

3.4.9 Earthen / Hard Shoulder

Earthen shoulders are provided on the outer side of the main carriageway. The width of these shoulders is 1.5m to 2.5m.

3.4.10 Drainage

Cover Drains are provided with service and slip road in entire of project road. Median cut drains are provided at super-elevated portion for efficiently draining out rainwater. Package wise details of Drainage are given in the **Table 3.9** and shown in **Figure 3.5.**

Table 3-9: Drainage System

Description	Anandapuram to Anakapalle Section
Covered lined Drain (km)	89.505
Open Lined Drain (km)	0.260

General observation of drainage conditions during the site reconnaissance are:

- Cleaning and maintenance of roadside drainage needs improvement. Cover at drain is missing at few locations.
- Provision of chute drain at high embankment location is observed. Water is draining off from the main carriageway to drain through the service road. This will adversely affect the pavement of service road.
- Though there were considerable rains during the time of inventory survey, no overtopping of road was observed at any location. It was further confirmed by the locals also.

Cover Drain at Service Road Location

Cut Drain from Main Carriageway to Service Road

Figure 3-5: Drainage System

3.4.11 Road Furniture

3.4.11.1 W-Beam Crash Barrier, Concrete Crash Barrier and Pedestrian Guardrail

W-Beam Crash Barrier

W-beam Crash Barrier is provided at high embankment location, Separator (in between main carriageway and service road), near major structures and at outer side of sharp curves in the entire project road. Package wise length of W-Beam Crash Barrier are given in the **Table 3.10** and shown in **Figure 3.6.**

Table 3-10: W-Beam Crash Barrier

Description	Anandapuram to Anakapalle Section
W-Beam Crash Barrier (km)	89.505

Figure 3-6: W-Beam Crash Barrier near High Embankment and Separator

Concrete Crash Barrier

Concrete Crash Barrier is provided at approaches of ROBs, Flyovers and Underpasses almost all through the project road. Length of CC barrier are given in Table **3.11** and shown in **Figure 3.7.**

Table 3-11: Concrete Crash Barrier

Description	Anandapuram to Anakapalle Section
Concrete Crash Barrier (km)	39.025

Figure 3-7: Concrete Crash Barrier

Pedestrian Guardrails

Pedestrian guard rail is there between main carriageway and service road. Length of Pedestrian Guardrails are given in the Table 3.12 and shown in Figure 3.8.

Table 3-12: Pedestrian Guardrails

Description	Anandapuram to Anakapalle Section
Pedestrian Guardrail (km)	44.895

Figure 3-8: Pedestrian Guardrails

3.4.11.2 Sign Boards and Gantry

There are adequate number of signboards along the project road and most of them are in good condition. There are many variable message signs (VMS), overhead and cantilever gantry signs as well. Location of gantry signs are shown in **Table 3.14** and **Figure 3.10** below.

Table 3-13: Variable Message Signs (VMS) / Cantilever & Overhead Gantry

Figure 3-9: VMS and Gantry Signboards

In general, these appurtenances are in good condition.

3.4.11.3 5 km / Km / Hectometer Stones

5Km, Km & Hectometer stones are observed at shoulder & median. Most of the stones are in good condition.

Figure 3-10: Kilometer & Hectometer Stones

3.4.12 Project Facilities

3.4.12.1 Bus Bays and Shelters

As main carriageway is access controlled, Bus bays/shelters are at service/slip roads. It is observed that few shelters are of tin shade and are in poor condition. There are three types of facilities for boarding the bus by the road users. There are bus bay with shelters,

only bus bay without shelters and only shelters without bays. Package-wise number of these facilities are given in **Table 3.15** and shown in **Figure 3.12** below.

Table 3-14: Bus Bays and Shelters

10	730+820	1	LHS	Junction
11	731+530	1	Median	College

3.5 Toll Plaza

The purpose of the Toll Plaza is to collect toll from road users of the Project highway with transparency in the system. There are two toll plazas along the project road. Booths are available for all lanes. Administrative buildings are there at both Toll Plazas.

3.5.1 Dukkavanipalem Toll Plaza (TP-3)

Dukkavanipalem Toll Plaza (TP-3) is located at km 686+530, Anandapuram to Anakapalle stretch which has 11 lanes (5 LHS & 6 RHS). Outermost lanes are the extra wide lanes in both direction.

Figure 3-14: Dukkavanipalem Toll Plaza

3.5.2 Marripalem Toll Plaza (TP-4)

Marripalem Toll Plaza (TP-4) is located at km 722+160, Anandapuram to Anakapalle stretch which also has 11 lanes (6 LHS & 5 RHS). Extra wide lanes are the outermost lanes in both the direction.

3.5.3 Toll Plaza Administration Building

The Plaza administration building serves as the support structure for the operation and maintenance of the toll plaza. It is from here that utilities are distributed and controlled,

employee amenities are maintained, the toll collection process overseen, revenues are processed & audited. Sale of local passes and recharge is done at Plaza building. Transfer of funds from toll booth to plaza building and from plaza building to bank are being facilitated/managed by administration and financial management functions are also conducted in the building.

Administration Buildings at Dukkavanipalem Toll Plazas

Administration Buildings at Marripalem Toll Plazas

3.6 Structure Inventory and Condition Survey

This section mainly presents the Site Inventory and Condition Survey of all existing Structures likes Culverts, Minor bridges & Major bridges, Flyovers/ Viaducts, VUP, LVUP, PUP, RUB and ROBs along the project roads. The aim of the section is to present the details of existing structures condition of existing structures and functioning of structures. The structure inventory has been done on the basis of visual assessment of each structure. MBIU has been used for visual assessment inspection of major structures having length greater than 60m.

Number of existing structures along the Project roads are given in the following table. Detailed inventory and condition data is presented in **Annexures – 3.2** and **3.3**.

Table 3-19: Number of Structures

Section 4: Surveys and Investigations

4.1 Visual Observation

i) In general, pavement condition is good to fair.

ii) The rigid pavement has got lost the surface texture in most of the locations

iii) Few of the locations found with high severity longitudinal and transverse cracks, widened joints and level difference among the panels

iv) Rectification measures such as stitching was in progress in some of the locations towards Anakapalli..

v) The service road condition is fair to poor. The distresses like shoving, corrugations are observed in significant length.

vi) The Main Carriageway of 3-lanes on RHS from km 703+400 to km 704+300 has not been constructed due to LA issues. The 3-lanes, which are constructed on LHS is being used for both directional traffic at the moment..

Availability of 3L & LHS SR only from 703+400 to 704+300

Stitching in progress

Rigid Pavement Distress

Rigid Pavement Distress

Figure 4-1: Visual Observations

4.2 Network Survey Vehicle (NSV)

The Network Survey Vehicle is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools. The survey vehicle is used for automatic data collection pertains to pavement condition and road inventory data, required for preparation of pavement maintenance and management proposals. It allows

all the data to be collected in a single pass consequently minimising the time needed to complete the data collection. The measurement of surface distresses like cracking, ravelling, patching and potholes etc. is done using the calibrated image processing methods. The description of NSV and the methodology adopted is provided in **Annexure-4.1.**

The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. The data has been collected separately for each lane of the Carriageway. NSV Vehicle at the site is shown below.

Figure 4-2: NSV survey

4.2.1 Evaluation of Pavement Condition

NSV survey has been conducted for assessment of pavement condition and its distresses. The pavement surface images captured by NSV were processed in Survey board and all the images are geotagged with corresponding co-ordinates and chainage. By manual intervention with Survey Board, it was mapped/ identified various distresses showing distress type, location, magnitude and severity.

Flexible Pavement Distresses

The following Pavement distresses are considered for assessing the flexible pavement condition as per IRC: 82-2015 “Code of Practice for Maintenance of Bituminous Road Surfaces”.

- Cracking
  - Longitudinal cracks

Strip chart showing the observed pavement distresses is provided in **Annexure 4.2** separately for LHS and RHS directions along with roughness. Based on the pavement condition, suitable repair and rehabilitation strategy has been suggested and same shall be presented under the section of Major Maintenance of this report.

4.2.2 Pavement Roughness

The roughness data was collected at 100m interval using NSV on each lane in-terms of IRI (International Roughness Index) value. In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 “Guidelines on Measuring Road Roughness and Norms” with the following equation;

$BI = 630*(IRI)^{1.12}$

Where

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data of Flexible & Rigid Pavement (Toll Plaza Section) was collected through Digital Laser Profilers System (DLP) and the same is presented in **Annexure 4.3**. The summary of Roughness values is presented in tables below

Table 4-1: Anandapuram - Anakapalli Section: Summary of Pavement Roughness

Condition as per IRC SP:83-2018 Table 4.2	Unevenness (mm/Km)	LHS						RHS					
		L1		L2		L3		R1		R2		R3	
		Length (Km)	Length (%)	Length (Km)	Length (%)	Length (Km)	Length (%)	Length (Km)	Length (%)	Length (Km)	Length (%)	Length (Km)	Length (%)
Rigid Pavement													
Good	<2000	40.48	82.3	38.88	79.1	40.08	81.5	38.2	79.3	37.8	78.5	15	31.1
Fair	1800-2400	6.2	12.6	7.5	15.3	6.9	14.0	7.58	15.7	7.28	15.1	19.3	40.1
Poor	>2400	2.5	5.1	2.8	5.7	2.2	4.5	2.4	5.0	3.1	6.4	13.88	28.8
Length (Km)		49.2	100.0	49.2	100.0	49.2	100.0	48.2	100.0	48.2	100.0	48.2	100.0

4.2.3 Test Pit Investigations

Test pit investigations have been planned to conduct at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). However, the project is partially access control throughout the length, thereby no earthen shoulder has been found and thus test pits were taken at the locations where feasible to dug at the edge of the paved and earthen shoulder. The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 4-2: Summary of Existing Pavement Crust Thickness

Date of Sampling	Location of Trial Pit	Lanes	Pavement Composition (mm)						
			BT	PQC	DLC	WMM	Cemented layer	GSB	SUBGRADE
Anandapuram-Anakapalli Section									
04.08.24	686+700LHS	6	-	290	110	-	-	170	500
04.08.24	710+960LHS	6	-	290	130	-	-	140	500
04.08.24	703+520RHS	6	-	250	110	-	-	170	500

Observations and Conclusions:

- Anandapuram-Anakapalli has been found with Rigid type for the total length.
- The pavement type for service road is flexible type and has been designed for 10MSA traffic.
- Throughout the project road, rigid pavement thickness of PQC as 290mm. Since these test pits locations were taken at a larger intervals and thus it can be considered as indicate thicknesses for the compistion as found from the trail pits. .

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in below sections.

Test Results: Anandapuram-Anakapalli Section

Location of Trial Pit	Nature of Soil (Visual Identification)	Sieve Analysis by % of passing			Sand Content %	Atterberg Limits			FSI %	MDD g/CC	OMC %	FDD g/CC	FMC %	CBR (4Days Soaked) %	Field CBR (DCPT) %	Depth of Water Table below Subgrade
		4.75mm	0.425mm	0.075mm		LL%	PL %	PI %								
694+700LHS	GP-GM (Poorly Graded Gravel Mixed with Silty Gravel)	38.0	26.0	10.8	27.2	22.1	13.5	8.6	Nil	2.12	7.8	1.86	8.0	15.0	21.0	Not found
698+900LHS	GC (Clayey Gravel)	43.5	25.1	15.3	28.2	25.6	13.6	12.0	10.0	2.11	8.2	1.68	8.0	15.0	21.0	Not found
683+700RHS	GC (Clayey Gravel)	42.5	29.5	14.8	27.7	24.3	14.8	9.5	10.0	2.13	8.1	1.82	9.0	14.5	22.0	Not found
690+700RHS	GC (Clayey Gravel)	37.0	22.8	12.9	24.1	23.9	12.8	11.1	10.0	2.10	8.0	1.78	7.0	13.5	21.0	Not found

Observations and Conclusions

The subgrade soils are generally consistent throughout the project road and CBR values are in compliance with the design CBR as adopted during the 6-lane works. Further, it has been observed during the site visit that most of the soils in the region found to be red soil having CBR values more than 10% and this is one the reason for better performance of the pavement of the project highways.

4.3 Axle Load Survey

Vehicle axle loading has a significant effect on pavement design and its impact on performance of the pavement. Therefore, an axle load survey has been conducted from 26th July-2024 to 02nd Aug-2024 in compliance with IRC 37 2018 and such survey was conducted for 24 hours in both directions at each of the existing 4 No's toll plaza locations along the project highway from Narsannapeta-Anakapalli.

The type of vehicle considered for axle load survey along with its axle configurations are presented in below. Few of the survey photographs were shown in Photos as below:

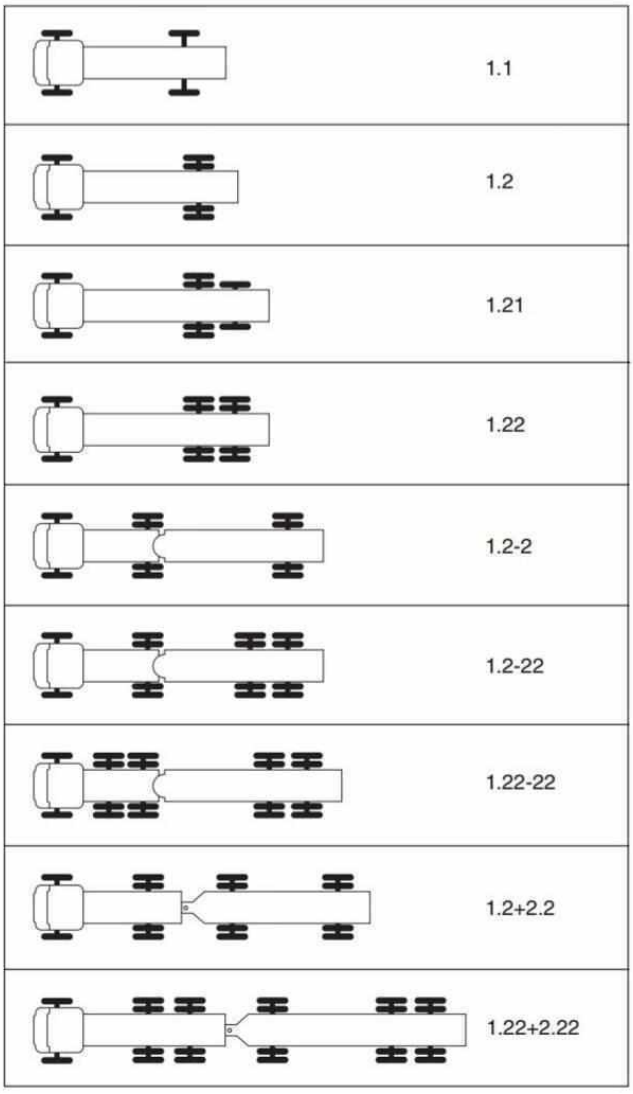

Figure 4-3: Axle Load Survey

The VDF analysis was carried as per procedure given IRC: 37-2018 based on the collected axle load data. The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC:37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions;

- Single axle with single wheel on either side = {axle load in kN / 65}4
- Single axle with dual wheel on either side = {axle load in kN / 80}4
- Tandem axle with single wheel on either side = {axle load in kN /148}4
- Tridem axle with dual wheel on either side = {axle load in kN /224}4

With the stated above procedure, the Vehicle Damage Factor for each class of commercial vehicle on both the directions were calculated separately for empty and loaded vehicles. The Axle load data format and VDF analysis are presented in **Annexure 4.5** and obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 4-3: Vehicle Damage Factors (VDF)

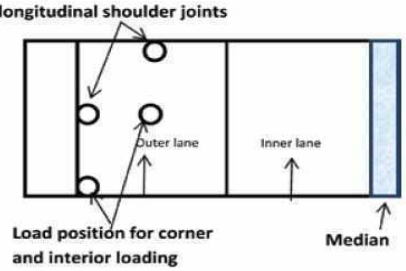
S. No	Toll plaza	Dukkavanaipalem		Marripalem	
		Km 686+540		Km 722+154	
	Vehicle Type	LHS	RHS	LHS	RHS
1	Bus	-	-	-	-
2	LCV	1.59	2.27	2.45	1.64
3	2-Axle	2.39	2.95	3.56	2.61
4	3-Axle	3.8	5.43	2.14	4.41
5	MAV	4.67	9.48	6.15	8.03

There is a significant difference between the axle loads of commercial vehicles flying in both directions of traffic, due in inconsistent commodity pattern generating from different locations along the project highway and thus, separate factors have been considered for traffic assessment. Further, 7-day axle load survey has been conducted to validate the above inconstancy and found that VDF values as obtained from these 7-day survey is less than 24 hours' survey and hence adopted the above values in the present due diligence study.

4.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique" to determine the remaining life of the pavement structure.

The principle and description of FWD and its methodology is provided in **Annexure 4.6.**



FWD deflection measurement has been carried out for each direction and the measurement has been carried out at a test point along outer wheel path of each direction which is at an offset of 1m from the outer edge of outer lane as specified in section 5.4.5 of IRC: 115-2014. At every measurement location, four drops were made, such that the first drop was the '**seating drop'** and with the remaining three drops deflections were recorded. Field survey photographs is shown below.

Figure 4-4: FWD Survey at Project Site

The deflection testing has been carried out on the existing pavement as per IRC Codes at the rate of 5 points per km as stipulated in TOR of the Consultant.

Adopted deflection measurement scheme is as under.

Adopted Measurement Scheme	Maximum Spacing(m) for test points along selected wheel path (Flexible Pavement)	Rigid Pavement
(i) measurement along outer wheel paths of outer lanes (3 points)	200	Load position for transverse and longitudinal shoulder joints  Load position for corner and interior loading
(ii) measurement along the outer wheel path of inner lane (2 points)	400	

4.4.1 Back-calculation of Layer Moduli for Flexible Pavement

Layer moduli have been back calculated using KGPBACK program. The pavement has been modelled as a three-layer system with bituminous layer, granular layer and subgrade. The following inputs have been provided for back analysis.

i) Single wheel load 40 kN and contact pressure 0.56 MPa
ii) No. of deflection sensors: 9
iii) Radial Distances of the Geophones i.e., 0,200, 300,450, 600, 900 and 1500mm
iv) Measured Surface Deflections normalized to 40kN in mm
v) Pavement Layer Thicknesses (as measured from Trial Pits)
vi) Poisson's ratio for different layers i.e., 0.35 for bituminous, granular and subgrade
vii) Range of Possible modulus value (Min.- Max.) of bituminous layer, granular layer and subgrade.

Ranges of different layer moduli have been given as input to KGPBACK for back-calculation. These ranges have been selected judiciously by experienced pavement engineering taking into considerations the approximate age of pavement, visual assessment of the condition of bituminous layer, climatic conditions prevailing at the time of deflection measurements and information available from test pits, and laboratory tests conducted as detailed below:

Range of modulus value of existing subgrade:

The range of moduli of existing subgrade is taken based on the subgrade CBR values for the analysis.

Range of modulus value of existing granular layers i.e., base and subbase:

The range of moduli of existing granular layers is based on Appendix III.8.4 of IRC 115-2014.The range for combined (base and sub-base) is taken as 100-500 MPa.

Range of modulus value of existing thick bituminous layers:

The range of moduli of existing thick bituminous layer has been determined on the basis of condition data. If the road condition is good the range is considered as 750 MPa to 3000 MPa, for sections with pavement condition is Fair- Poor, the range specified for thick bituminous layer 400 MPa to 1500 MPa as stipulated in Appendix III.8.4 of IRC: 115-2014 has been taken into consideration.

4.4.1.1 Correction for Temperature

Back-calculated moduli values of the bituminous layers evaluated by FWD survey are influenced by the pavement temperature. The standard pavement temperature for India is recommended as 35°C, hence the back-calculated moduli obtained at temperatures other than the identified standard temperature will have to be corrected using a suitable correction factor using equations 4 and 5 of IRC:115-2014 and the same is extracted below for ready reference.

$$E_{T1} = \lambda E_{T2} \ldots\ldots \textbf{(4)}$$

Where,

λ temperature correction factor, is given as

$$\lambda = \frac{(1-0.238 \ln T_1)}{(1-0.238 \ln T_1)} \ldots\ldots \textbf{(5)}$$

Where,

E_{T1} = Back-calculated modulus (MPa) at temperature $T_1^0\ C$

E_{T2} = Back-calculated modulus (MPa) at temperature $T_2^0\ C$

However, in few sections, after applying the temperature correction the E value of bituminous layers are coming more than 3000MPa. As the project road was constructed with VG-30/VG-40 grade bitumen, it is restricted to keep the maximum E value of 3000MPa, wherever it is exceeding. In these locations, the temperature correction factor was applied as 1.

4.4.1.2 Correction for Seasonal Variation

Moisture content affects the strength of subgrade and granular sub base/base layers. Therefore, the back-calculated moduli of subgrade and granular layers should be taken from field moduli using seasonal corrections. Seasonal correction equations 7 and 8 of IRC: 115-2014 has been extracted below for ready reference.

$$E_{sub_mon=}\ 3.351 * \left(E_{sub_win}\right)^{0.7688} - 28.9 \ldots (6)$$

$$E_{sub_mon} = 0.8554 * (E_{sub_sum}) - 8.461 \ldots (7)$$

where,

E $_{sub_mon}$ = subgrade modulus in monsoon (MPa)

E $_{sub_sum}$ = subgrade modulus in Summer (MPa)

E $_{sub_win}$ = subgrade modulus in Winter (MPa)

$$E_{gran_mon=}\ -0.0003 * \left(E_{gran_sum}\right)^2 + 0.9584 * \left(E_{gran_sum}\right) - 32.989 \ldots (8)$$

$$E_{gran_mon=}\ 10.5523 * \left(E_{gran_win}\right)^{0.624} - 113.857 \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (9)$$

where,

E $_{gran_mon}$ = granular layer modulus in monsoon (MPa)

E $_{gran_sum}$ = granular layer modulus in Summer (MPa)

E $_{gran_win}$ = granular layer modulus in Winter (MPa)

Since the deflection measurements have been carried out in the month of December hence seasonal correction factor is applicable.

The 15th percentile value (as the same has been recommended by IRC: 115-2014 for purpose of design) of back-calculated & corrected layer moduli of each identified homogeneous sub-sections of both directions separately are presented next.

4.4.1.3 FWD data Analysis for Rigid Pavement

As per IRC: 117-2015, the collected FWD data for the rigid pavement has been analysed to determine the following parameters.

- Modulus of subgrade reaction k (MPa/m)
- Elastic modulus of concrete E_c (MPa)
- Flexural Strength of concrete f_{mr} (MPa)
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of the parameter for PQC and Load Transfer Efficiency is presented in **Annexure 4.7** for both LHS and RHS directions respectively.

From the test results the observations were draw-down. The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table **below**.

Table 4-4: Outcome of FWD Data Analysis for Rigid Pavement

Side		LHS					RHS

- The PQC concrete slab has adequate strength with average flexural strength of more than 4.2MPa for the above rigid pavement project sections.

- Load Transfer Efficiency (LTE) for Transverse joints is more than 50% for both LHS & RHS direction and thus, joints are in good condition.
- Load Transfer Efficiency (LTE) for Longitudinal joints is more than 40% for both LHS & RHS direction so, the joint system is adequate in load transfer.

4.5 Mobile Bridge Inspection Unit (MBIU)

4.5.1 Specification

The Mobile Bridge Inspection Unit (referred as (MBIU) is an electro-mechanically driven articulated structure mounted on a vehicle (a truck) as an aid towards proper inspection of bridges or similar infrastructures by enabling an inspection team of 2-3 persons carrying instruments access to the underside of bridge decks overflowing rivers or gorges. The present version is the truck mounted system. As per TOR condition survey of existing structures greater than 60m shall be carried using MBIU.

The overall objective of the condition survey is to identify the need for structural maintenance, rehabilitation and replacement. Signs of distress such as spalling, scaling, cracking, leaching, excessive deflection, inadequate cover, settlement, exposed reinforcement, corrosion in the reinforcement; shear cracks etc. are identified during this exercise. Special emphasis is given on expansion joints and bearing. Also the condition of the Approaches, water way and bed protection is examined. The survey identify the bridges which are more distressed and require testing for their evaluation and rehabilitation measures. Also bridges which require general measures for rehabilitation. Inspection report is prepared in accordance with IRC: SP-35. The report provides recommendation whether a bridge is acceptable to continue in use, whether it can be repaired and/or modified e.g. widened or a new structure.

The structure inventory and condition assessment are given in **Annexure 3.2.** The following structures have been inspected using MBIU machine.

Table 4-5: List of Inspected Structures using MBIU

Sr. No.	Chainage (Km)	Side		Remark
		LHS	RHS	
Anandapuram – Anakappali Section				
1	683+067	LHS	RHS	Flyover
2	701+783	LHS	RHS	Major Bridge
3	705+290	LHS	RHS	Major Bridge
4	709+692	LHS	RHS	Major Bridge
5	709+692	LHS (SR)	-	Major Bridge
6	712+544	LHS	RHS	Major Bridge
7	730+212	LHS	RHS	ROB

4.5.2 Working Principle

The work of condition survey requires use of Mobile Bridge Inspection Unit at the various bridge sites on the National Highways to overcome the accessibility problems. MBIU increases the accessibility for inspection of underside of high-level bridge decks and helps in continuous

inspection of throughout the span of bridge. It has five folded arms. All of them are electro-mechanically operated.

Once the platform is erected by certified person, Inspection and maintenance experts can inspect underside of bridge, note observations as per IRC SP-35 & IRC SP-52 and take photographs for reference.

4.5.3 Advantages

- A large operating range
- A high level of working comfort
- Maximum operational safety
- The shortest possible setting up and dismantling times
- Full mobility in inspection operation without stabilizer supports
- An optimum weight/performance ratio

Figure 4-5: MBIU Survey

4.6 Drone Videography of Entire Stretch

Videography of entire Project Stretch is captured through Drone cameras flown at about 50m above ground. This shall be useful for observing various features of Project Stretch from bird's eye level.

Figure 4-6: Drone Videography

Section 5: Review of Documents

5.1 General

Technical Consultant (TC), since the start of technical due diligence study, has requested for various documents from the Client. A list of documents required were shared with the Client before TC team started the study which was appended with few more queries after the conclusion of the site visit once the project site is appraised. Most of the queries were also discussed with the Client in many meetings. This section of the report deals with the documents requested by TC and its review along with highlighting major issues found during this review.

5.2 Documents Collected and Reviewed

List of documents requested, received and reviewed are given below:

S. No.	List of Documents	Status of Documents	Remarks on Review
DOCUMENTS RELATED TO CURRENT ACQUISITION			
1.	Concession Agreement	Partially Available	Technical Schedules A, B, C and F are made available to the Consultant. These schedules are modified from the standard provisions given in manual as below: Sch A: Existing features Sch B: Scope of Work including facilities to be provided Sch C: Specifications and Standards Sch F: Maintenance Requirements Table 1 of Sch F provides maintenance criteria for pavements which has performance parameter, desirable and acceptable level of service, frequency of inspection and time limit for rectification/repair. Sch F specifies roughness value as 2000 mm/km desirable and 2400mm/km acceptable for flexible pavement. These values are 2200mm/km and 2400 mm/km respectively for rigid pavement. Sch B states that the concessionaire shall carry out the periodic maintenance in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc. either in every sixth year or in the year in which roughness index exceeds the limit as given in schedule F whichever comes earlier. Further, it was clarified in the pre-bid queries reply that periodicity of 6-year overlay will be applicable from O&M handover date. Though draft CA is not available, Consultant has referred the CA of earlier roads wherever required presuming that there shall not be any change in Contract Conditions.
2.	Detailed Project Report/ Technical Due Diligence Report	Available	Report done by M/s Chaitanya Projects Consultancy Pvt Ltd for NHAI in October – 2024.

S. No.	List of Documents	Status of Documents	Remarks on Review
			Report is used as reference for inventory & condition of the assets and improvement proposals. Cost estimates are provided for immediate maintenance which are under the obligation of existing HAM Concessionaires. The report also provides for the O&M cost during the concession period starting from the O&M handover date. However, Invit Concessionaire has to do toll plaza maintenance and accordingly TMS maintenance cost should be there from the Appointed Date which is not shown in this report.
3.	FWD data	Available	The reports of FWD were available as a reference document for TC.
4.	Latest MPRs	Available	Consultant collected the IE-MPRs for April, May & June – 24 from the NHAI – PIU during the site visit. Reports provide details about the Project Road and key maintenance activities undertaken by the HAM Concessionaires during that period.
5.	Maintenance History	Not available	There is no maintenance history available for the Project Road.
6.	NSV data	Available	The reports of NSV are available as a reference documents for TC.
7.	AADT for each section and Growth rate	Available	AADT along with traffic projections for the project roads have been provided by Client.
8.	Concession Period	Not available	TC has adopted 20 years concession period with reference to the CA of earlier roads.
9.	Projected Escalation factor	Not available	In absence of projected escalation factor, all cost are given at the present rate as per the direction of the Client.

5.3 Key Technical Issues

5.3.1 Damaged Bearings

Problems with the bearings are observed in the form of tilting, cracking, not properly placed and compressed. Affected structures are

MJBR: @ 709+692
Flyover: @ 683+063
ROB @ 730+272
It is presumed that existing HAM Concessionaires will fix all these bearings before handing over.

5.3.2 Pavement

The service road pavement is distressed at many locations, may be due to higher traffic loading being the project partially access control with limited number of entry and exit to main carriageway from the service and hence the locally generated commercial traffic using service roads predominantly to access the main carriageway. Rigid pavement on the main carriageway has also been observed with cracks, joint operation in few of the locations and texture loss in most of the locations which may requires retexturing.

Longitudinal cracking filled with epoxy

Poor Condition of SR

5.3.3 Incomplete Construction

It is noticed that constructions are not completed for main carriageway of 3-lanes on RHS from km 703+400 to km 704+300, may be due to LA issues. It is also noticed that construction of interchanges at Pendurthi and Sabbavaram are not done though same was in the scope of the HAM concessionaire.

Availability of 3L & LHS SR only, from 703+400 to 704+300

Incomplete Pendurthi Interchange

Section 6: Capital Expenditure Requirement

6.1 Improvement Works as per Schedule B

Schedule B of each stretch specifies the requirements of improvement works which the concessionaire has to construct as per the completion schedule specified in Schedule B. Major works and reference used to quantify these construction requirements are listed below:

- Approach slabs reconstruction: Ref Cl 3.2 III of Sch B.
- Junction improvement: Ref Cl 4 of Sch B.
- Curve improvement/ Minor Jn improvement: Additional signages and studs are considered as per Cl 6 of Sch-B.
- Truck lay bye: Sewage disposal system as per Cl 9.2 of Sch B
- Landscaping and median plantation: Cl 9.4 of Sch B
- Transverse bar marking: Cl 10.3 of Sch B
- Antiglare: Cl 10.7 of Sch B
- Kerb stones: Cl 10.9 of Sch B

Improvement Scope specified for each stretch is tabulated below:

Table 6-1: Schedule B improvement requirements

S. No.	Description	Unit	Quantum
1	Approach slabs reconstructed	Nos.	4
2	Junction improvement	Nos.	29
3	Curve improvement: Additional signages and studs are considered as per Sch-B.	Nos.	50
4	Truck lay bye: Sewage disposal system	Nos.	2
5	Landscaping and median plantation	km	14.4
6	Transverse Bar Marking	Nos.	22
7	Antiglare	Km	4
8	Kerb stone	Lm.	14,581

Time to complete above construction works in within 3/6 months from the Handover Date based on completion schedule for improvement proposals given in Schedule B.

6.2 Immediate Maintenance Requirements

Thes section is under HAM (Annuity) concession up to 2037. So, obligation for immediate repair requirements do not lie with InvIT Concessionaire. However, toll plaza renovation cost and TMS replacement cost has been considered for existing toll plaza.

6.3 Capital Expenditure (CapEx)

Cost of capital expenditure (CapEx), worked out as explained above, are presented below.

Table 6-2: Immediate Maintenance

Description	Cost in Crore (INR)
Toll plaza improvement	5.90
TCMS	8.14
Total	**14.04**

Table 6-3: Improvement Works as per Schedule – B

Description	Cost in Crore (INR)
Initial Improvement as per Schedule B	4.06

Section 7: Operation & Maintenance

7.1 General

The O & M requirements for the project facilities are normally specified in the Concession Agreement (CA). Though Schedule F is made available to the Consultant, CA is not yet available. Hence Consultant has taken reference from the CA of Round 3 roads presuming there is no change in the Contract conditions. Maintenance requirements are referred mainly under following Articles/ Schedules:

- Article 15 - Operation and Maintenance
- Article 16 - Monitoring and supervising during Operations
- Article 17 – Traffic Regulation
- Article 18 and Schedule H – Safety Requirements
- Schedule F- Maintenance Requirements

7.2 Requirement as per Concession Agreement

Schedule F of the Concession Agreement sets out the Operation and Maintenance requirements for the Project. As per this schedule, scope for Operation and Maintenance includes but not limited to following obligations:

- ✓ **Improvement** – This includes improvement of the existing assets as per requirement of this Agreement and safety audit.
- ✓ **Maintenance of Civil Works and Assets**- this includes maintenance of civil works and all assets as per requirement of this agreement.
- ✓ **Road Maintenance** –This includes routine maintenance, preventive maintenance, periodic maintenance as per IRC:82-2015, Design overlay as per Manual of 4-laning/6-laning, disaster maintenance, exigencies, and inspections.
- ✓ **Traffic Management** – This includes enforcement of regulations together with the relevant authorities. This also includes hazard response, information gathering and dissemination, Road patrols and ATMS surveillance etc.
- ✓ **Safety**– This includes accident prevention, after care, user education, enforcement, data collection and analysis.
- ✓ **Facility Management** – This includes periodic inspections, routine maintenance, Rehabilitation, and expansion planning.
- ✓ **Road property management** –This includes management of access, encroachment, and ribbon development.
- ✓ **General responsibilities** –This includes budgeting, compliance with legal and accounting requirements, and public relations.
- ✓ Maintaining public relations unit to interface with and attend to suggestions from users of the highway, the media, Govt. agencies and other external agencies.

Routine Maintenance: These are maintenance needs required on daily, weekly, monthly and annual basis for the smooth and efficient running of traffic and includes the activities of minor repairs of all project elements, cleaning of road furniture, replacement of consumables,

horticulture maintenance, keeping the project site /project facilities clean, tidy and orderly condition free of litters and debris, preventing unauthorized entry and exit including any encroachment etc.

Preventive Maintenance: Preventive maintenance shall include the activities related to each element and the system as a whole of the Project Highway to ensure that during the Concession Period and at its end is in sound, durable and functional condition. In other words Preventive maintenance are a planned strategy of cost-effective treatments to an existing roadway system and its appurtenances that preserves the system, retards future deterioration, and maintains or improves the functional condition of the system (without significantly increasing the structural capacity).

Periodic Maintenance/Programmed Maintenance: These are maintenance needs required on periodic basis. The periodic maintenance can be further divided into two sub heads namely (i) functional overlay to improve the riding quality and (ii) structural overlay to improve the structural strength of the pavement in the case of flexible pavement and programmed maintenance involving work activities such as resealing the defective joint, cross stitching, full depth slab replacement repairs and diamond grinding to remove the faults in the rigid pavement and grooving for restoring surface texture.

Factor influencing periodic maintenance: performance parameter for flexible pavement in terms of roughness as given in Schedule F is 2000 mm/km and 2400 mm/km respectively as desirable and acceptable limits whereas for rigid pavement the range would be 2200-2400mm/km. the specified roughness ranges applicable after a functional overlay when the roughness exceeds the value of 2750mm/km. Schedule B also specified that this roughness value of 2750mm'km to be maintained by existing HAM concessionaire before handing over to InVIT concessionaire and after handing over the InVIT concessionaire shall maintain highway within 2750mm/km during the operation phase. Clause 4 (III) of Schedule B states that periodic maintenance/Programmed maintenance shall be carried out in full length of the project stretch including main carriageway, service/slip road and at facilities etc. either in every six years or in the year in which roughness index exceeds the limit given in schedule F, whichever comes earlier. It is also

7.3 O&M Cost Estimation

7.3.1 Routine maintenance

This is a day-to-day work that is necessary to preserve and keep a pavement as close to as constructed condition and to ensure smooth and functional conditions all the times. The item in this subhead includes maintenance of earthen shoulder, restoration of rain cuts, maintenance of slope protection works, cleaning of road side drains, cleaning of carriageway, maintenance of structures, repairs of road surface such as filling of potholes, repairing of cracks, sealing and patch works, carrying out of Road roughness survey, FWD test etc.

7.3.2 Repair/Maintenance

Repair/maintenance covers the minor repair which are required on day-to-day maintenance to maintain the assets in good condition. This is sub-divided in two categories as below:

a) **Preventive Maintenance:** The preventive maintenance is required to be done for further improve or extend the functional life of pavement surface whist in fair to good condition. Any of the treatment under preventive maintenance does not significantly increasing the structural capacity of pavement rather which decreases rate of surface deterioration, which may result in saving of pavement from leading to poor condition where major maintenance could be inevitable.

   Future preventive maintenance on the project road depends largely on routine inspection of the pavement with careful observation of specific distress and to take a decision at that time and suitable type of preventive maintenance treatment and its timing. All the narrow and wide surface cracks must be arrested immediately after identification with fog/slurry seals as the most recommend preventive type maintenance measure for the in-service flexible pavement.

   Based on the condition and distress identification survey as explained above paragraph, preventive maintenance treatments have to be taken up immediately to reduce rate of further damage to the surface and for enhance the pavement performance to the condition similar to non-distressed surface condition.

b) **Road Property Maintenance:** The item in this subhead covers the plantation/ maintenance of shrubs, turfing, replacement/ repair of damaged railing, crash barrier, kerbs, road delineators, signage, Road marking and painting etc.

7.3.3 Toll Management System

Cost estimate for Toll Management System was worked out by TC. Same was presented and deliberated during the investor meet, after that it was decided to adopt the rationalised cost finalized by IM.

7.3.4 Corridor Management

Incident Management: The items in this subhead include minimize the effects of incident and restore normal capacity and safety levels to all affected road facilities as efficiently as possible and repair/ replacement of removing the dead animals & broken-down vehicles etc.

7.4 Major Maintenance

The pavement deteriorates with time caused by traffic movement and weather conditions. The rate of deterioration depends on the original design, type of maintenance being done/undertaken and time of application. Therefore, timely and appropriate maintenance involving replacement of PQC panels, joint repairs and rectification surface defects in the case of rigid pavement and bituminous surface using suitable materials for flexible pavement, is essential to increase the pavement service life to a greater extent. Any delay in maintenance of the pavement substantially increases severity of the distresses, which results into poor condition of pavement, leads to increased maintenance costs due to requirements of major rehabilitation for the poorly rated pavement. Therefore, timely maintenance of the pavement is

required for its satisfactory performance both in terms of functionally and structurally during the pavement service life.

Schedule F of the Concession Agreement set out the maintenance requirements in the Project. The performance parameters are indicated in schedule F descripting the nature of defect/deficiency along with time limits for repair/rectification for roads and bridges.

Schedule F, Pavement Roughness Value: As per schedule B, the roughness value of <2750mm/km shall be maintained by the existing HAM concessionaire prior to handing over to INVIT and after taking over of the asset by InVIT concessionaire, the same level of roughness<2750mm/km should be maintained and when it exceeds, then periodic maintenance is required to be provided during the service life of the pavement to bring the roughness value below the prescribed limit of 2000mm/km for flexible pavement and 2200mm/km for rigid pavement as per schedule F of the concession agreement. .

Pavement Strengthening (Structural Overlay): When the pavement is structurally deficient having high severity alligator/fatigue cracks, rutting and other associated distresses, then the strengthening treatments may be required to be provided to enhance the service life of the pavement/survivability to cater for the anticipated design traffic. The pavement strengthening may be required when the

- Remaining life of the in-service pavement as evaluated using Falling Weight Deflectometer (FWD) is less the design traffic as calculated till end of the concession in the case of flexible pavement and load transfer efficiency for joints and strength of PQC is found to be inadequate

7.4.1.1 Review of Major Maintenance History

As per the review of available reports and discussions with IE during O&M that no major maintenance/rehabilitation that has been carried out in the project being the 6-construction works were completed recently. The routine maintenance consists of rectification of surface defects and repair of cracked concrete panels in progress by the existing HAM Concessionaire.

7.4.1.2 Design Traffic during the Concession Period

The design traffic in terms of MSA during the concession period has been calculated based on the current traffic pattern and data shared by the NHIIPL. The Vehicle Damage Factors (VDF) has been adopted as obtained from the present survey. The summary of design traffic during the concession period is as under.

Table 7-1: Summary of Design Traffic during Concession Period

Project Stretch	Direction	Design Traffic in MSA	
		10 years (FY35)	20 years (FY45)
Anandpuram to Anakapalli-Dukkavanipalem Plaza	LHS	32	82
	RHS	58	148
Anandpuram to Anakapalli Marripalem Plaza	LHS	37	95
	RHS	46	116

Figure 7-1: Design Traffic in MSA (Ranasthalam to Anandpuram Section)

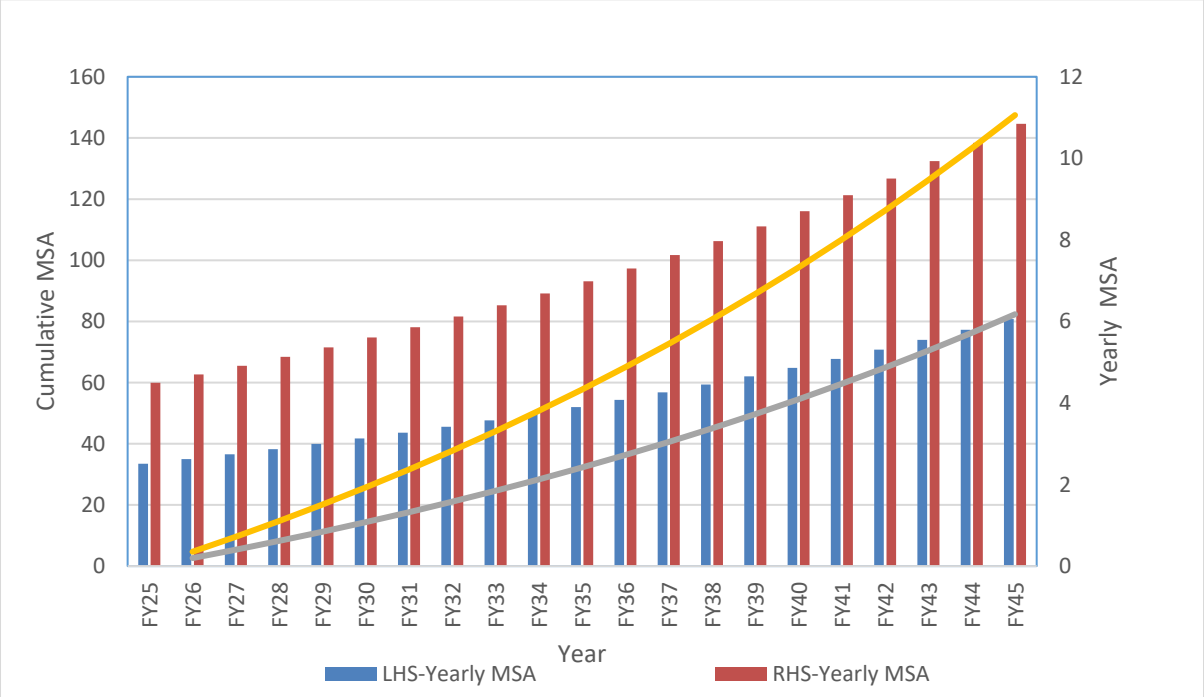

Figure 7-2: Design Traffic in MSA (Anandpuram to Anakapalli section- Dukkavanipalem Plaza)

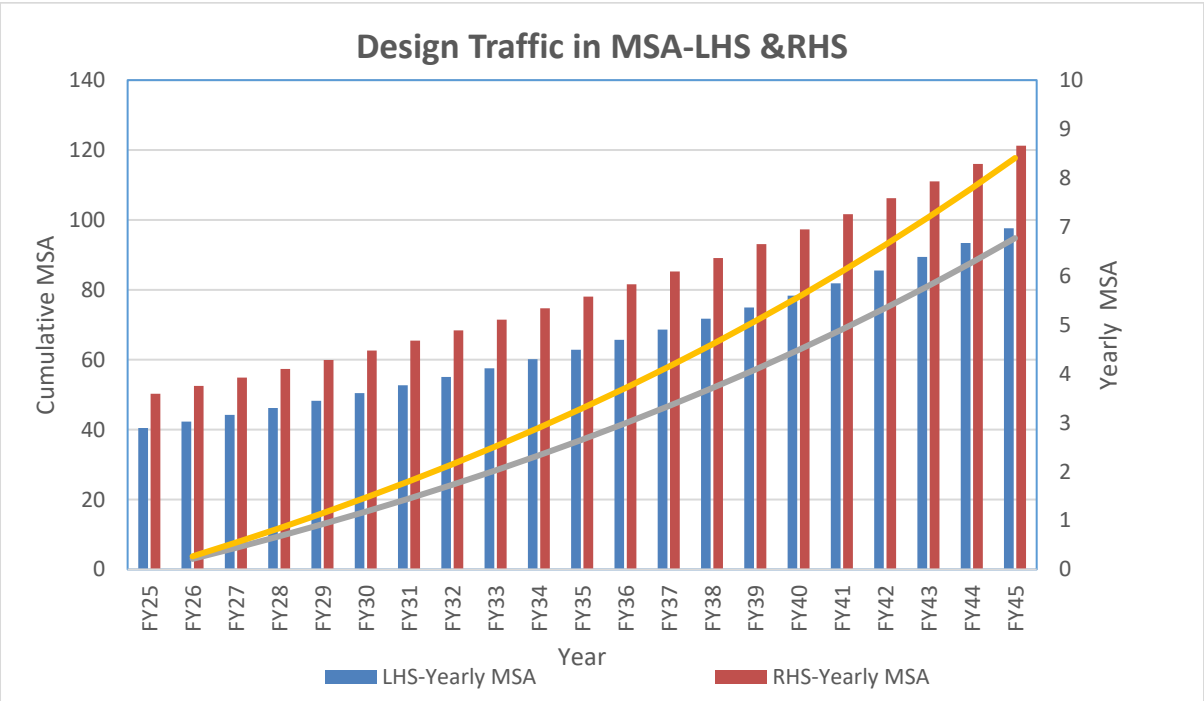

Figure 7-3: Design Traffic in MSA (Anandpuram to Anakapalli section- Marripalem Plaza)

In combination of above anticipated design traffic patterns, remaining life of the existing pavement as explained under surveys and investigation chapter, the pavement condition for distresses and roughness, the existing pavement is requiring repair and rehabilitation to be carried out by the TOT concessionaire to bring the pavement surface to the desired level of serviceability.

From the remaining life analysis as explained under surveys and investigation chapter, it is found that most of the pavement sections having remaining life more than the projected design traffic on LHS & RHS. Hence functional repair in terms of retexturing, replacement of joint and 2% of panel replacement at the end of every 6th year from the date of O&M handover date for the Main Carriageway and 40mm BC for service roads to extend the life of the pavement and improve and maintain the road roughness levels during O&M phase of the InvIT Concessionaire.

7.4.1.3 Immediate and Future Major Maintenance Requirement

Major maintenance is required to comply with provisions of concession agreement and to maintain performance levels as defined in schedule F throughout the operation and maintenance period.

As per schedule B, the TOT concessionaire shall carryout the periodic maintenance in full length of the project stretch including main carriageway, service roads and facilities in every 6th year or the year in which roughness index exceeds the limits given in schedule F, whichever comes earlier.

Therefore, considering the initial pavement design period and crust, remaining life data, anticipated traffic loading during the concession period, and in compliance to the provisions of schedule B, the following cycle of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

Table 7-2: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)				
	CAPEX	Routine Maintenance	Periodic Maintenance	ATMS & TMS Replacement	Toll Operation & Admin Cost
Anandapuram-Anakapalli	Toll plaza renovation cost TMS (all the existing defects to be rectified by HAM Concessionaire)	**Till O&M Handover**: Manpower cost for clearing considered **After Handing Over**: Regular	**FY37-** Revalid. Survey, Improvement works as per Sch.-B & road marking **FY38-** ***Structure***: Replacement of Wearing coat, expansion Joint and 40% of total Bearings **FY41-** ***MCW***: 40BC on flexible portion of proposed interchange to be constructed by NHAI ***SR***: 40BC, 50DBM for 10% length, ***Rigid***: Retexturing, replacement of joint sealant and 2.0% of panel. **FY45**- Road Marking ***Structure***: Replacement of wearing coat & painting	**FY30**-New TMS for interchange **FY33-** 50% TMS **FY37-** 50% TMS interchange **FY41-** 100% TMS 40% ATMS **FY44-** 100% TMS interchange	01.04.2025

7.4.1.4 Cost of Operation & Routine Maintenance

Cost of Operation & Routine Maintenance per annum are presented below.

Table 7-3: Cost of Operation & Routine Maintenance (per annum)

Description	Cost (Crore INR)
Tolling & TMS Operations (Varies) Min-Max	11.65-21.92
ATMS Operation	2.12
Incident Management	5.05
Admin Expenses (Varies) Min-Max	3.56-5.05
Insurance (Varies) Min-Max	0.10-1.86
Power cost excl. Toll Plaza	2.48
RAMS, BMS & Survey	1.25-2.49

7.4.2 Cost Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of Initial Improvement, MMR and O&M are given below

Table 7-4 : Cost Estimate (Initial Improvement, MMR and O&M)

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenace Cost (in INR Cr.)								
			Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	14.04					0.60					11.98	0.10		3.56

Total		**14.04**	**141.48**	**31.83**	**7.73**	**30.98**	**42.01**	**22.57**	**19.12**	**45.42**	**24.39**	**345.43**	**17.87**	**13.64**	**88.49**

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

Section 8: Conclusion

The project highway is a partially access controlled consists of 6-lane divided carriageway with service roads on both sides with minimum number of merging and diversion points on the highway for access to service roads. The 6-lane project has been completed on HAM mode and at present toll is being collected by Toll Collection Agency appointed by NHAI.

The pavement type as adopted in the project are rigid and flexible for main carriageway and service roads respectively. The performance of the pavement is satisfactory in terms of pavement roughness and surface quality without having major distresses. However, low severity shoving/corrugations has been observed on the surface of flexible type along the service roads, whereas low-medium severity cracks were observed on the PQC for which rectification works are in progress by the existing HAM Concessionaire in the form of cross stitching, sealant repairs etc. Some of the location observed with faulting and loss of texture for which rectification to be done as part of programmed maintenance works for rigid pavement to improve the serviceability. As part of present study, the required Engineering Investigations along with site visual observations were made for evaluation of the asset condition and accordingly established the required maintenance and rehabilitation measures/decisions for the concession period. The periodic maintenance by functional/structural overlays for flexible type are required at every 6th year as per the CA would be sufficient to keep the project stretch in good condition and suitable number of high severities PQC panels may be replaced along with joint rectification etc. Considering the asset visual assessment, condition and evaluation studies, the suitable major maintenance strategy has been recommended to improve the service life during the concession period.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report it is concluded that most of the structures are in sound condition and no major repair is required in near future. However, there are issues with the bearings for few structures. As the entire road sections are in HAM, these defects are to be rectified by the existing Concessionaires. It is to be ensured that asset quality assessment is done thoroughly at the time of taking over so that these defects and any other defects occur during the remaining HAM concession period is rectified.

The assessment of estimated cost of such repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

.

NATIONAL HIGHWAYS INFRA INVESTMENT MANAGERS PRIVATE LIMITED

FINAL REPORT

Tolling, Operation, Maintenance & Transfer of Four Lane Gundugolanu – Kovvuru Section (km 15.320 to km 85.204 of NH 16) in the State of Andhra Pradesh

LIST OF ABBREVIATIONS AND SYMBOLS

AADT	-Average Annual Daily Traffic
AE	-Authority Engineer
AMC	-Annual Maintenance Contract
ATMS	-Advanced Traffic Management System
BC	-Bituminous Concrete
BOQ	-Bill of Quantities
BOT	-Build, Operate & Transfer
CA	-Concession Agreement
CBR	-California Bearing Ratio
CCB	-Concrete Crash Barrier
CCR	-Cement Concrete Railing
COD	-Commercial Operation Date
COS	-Change of Scope
CPI	-Consumer Price Index
CUP	-Cattle Underpass
CVC	-Classified Volume Count
CVPD	-Commercial Vehicles per Day
DBM	-Dense Bituminous Concrete
DPR	-Detailed Project Report
ECB	-Emergency Call Box
EPC	-Engineering, Procurement and Construction
ESI	- Employees' State Insurance
FDD	-Filed Dry Density
FOB	-Foot Over Bridge
FRL	-Finished Road Level
FSI	-Free Swell Index
FWD	-Falling Weight Deflectometer
FY	-Financial Year
GOI	- Government of India
GR	-Growth Rates
GS	-Grade Separated
GSB	-Granular Sub Base
GST	-Goods and Services Tax
HCPT	-Half cell Potential Test
HPC	-Hume Pipe Culvert
HR	- Human Resources
HTMS	-Highway Traffic Management Systems
IE	-Independent Engineer
IRC	- Indian Roads Congress
IRC SP	- Indian Roads Congress Special Publications

IRI	-International Roughness Index
Km	-kilometer
LHS	-Left Hand Side
LL	-Liquid Limit
LS	-Lumpsum
m	-Meter
MBIU	-Mobile Bridge Inspection Unit
MCB	-Metal Beam Crash Barrier
MCS	-Micro Surfacing
MCW	-Main Carriageway
MDD	-Maximum Dry Density
MHR	-Metallic Hand Rail
MJB	-Major Bridge
mm	-Millimeter
MM	-Major Maintenance
MNB	-Minor Bridge
MoRTH	- Ministry of Road Transport & Highways
Mpa	-Mega Pascal
MR	-Resilient Modulus
MSA	-Million Standard Axle
NDT	-Non-Destructive Testing
NHAI	- National Highways Authority of India
NSV	-Network survey Vehicle
O&M	- Operation and Maintenance
OL	-Overlay
PF	-Provident Fund
PGR	-Pedestrian Guard Rail
PI	-Plasticity Index
PL	-Plastic Limit
PM	-Periodic Maintenance
PUP	-Pedestrian Under pass
R&R	-Repair and Rehabilitation
RCC	-Reinforced Cement Concrete
RE Wall	-Reinforced Earth Wall
RHS	-Right Hand Side
RHT	-Rebound Hammer Test
RI	-Roughness Index
RM	-Routine Maintenance
ROB	-Road Over Bridge
RPO	-Route Patrol Officer
RUB	-Road Under Bridge
SDBC	-Semi-Dense Bituminous Concrete

SPV	-Special Purpose Vehicle
SR	-Service Road
SWB	-Static Weigh Bridge
TCS	-Typical cross Section
TDRT	-Transient Dynamic Response test
TMS	-Toll Management System
UPVT	-Ultra Pulse Velocity test
VDF	-Vehicle Damage Factor
VG	-Viscosity Grade
VUP	-Vehicular Underpass
WBM	-Water Bound Macadam
WMM	-Wet Mix Macadam
WPI	-Wholesale Price Index

CHAPTER 1. INTRODUCTION

1.1 INTRODUCTION

National Highways Authority of India ("NHAI"/ "Authority") is an autonomous body of the Government of India ("GoI") under the Ministry of Road Transport and Highways ("MoRTH") and was constituted on June 15, 1989 by an Act of Parliament titled - The National Highways Authority of India Act, 1988 ("NHAI Act"). NHAI was operationalized in February 1995 with the appointment of full time Chairman and other Members. The functioning of NHAI is governed by NHAI Act and rules, and regulations framed thereunder.

NHAI has set up an Infrastructure Investment Trust Namely **National Highways Infra Trust ("InvIT")** and is acting as its Sponsor to the said InvIT.

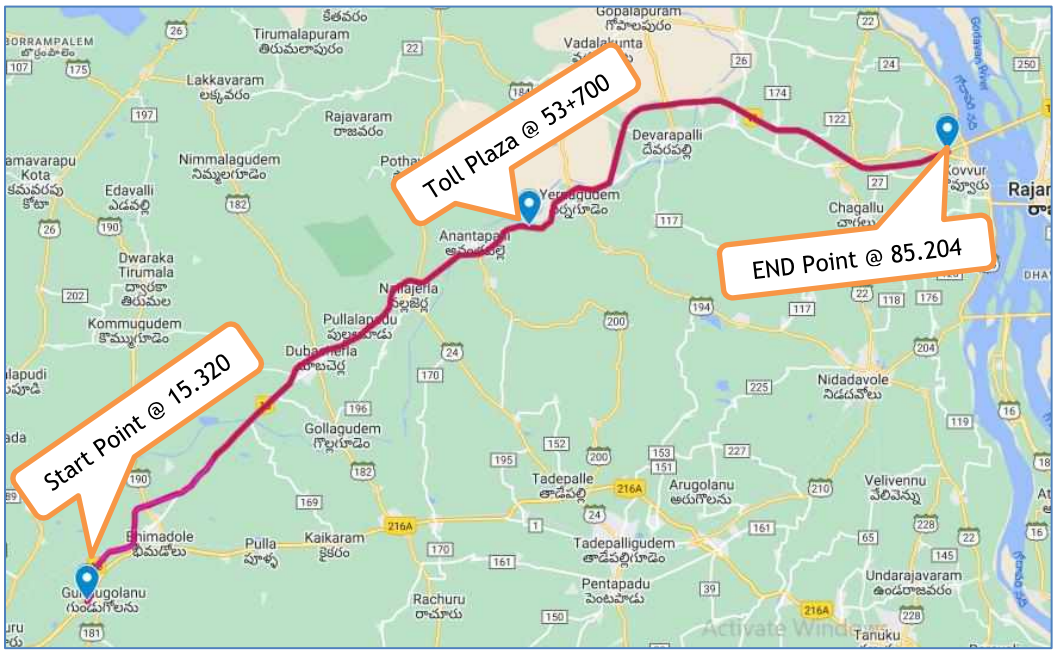
National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT. Accordingly, Investment Manager has awarded the following works to M/s SAMARTH INFRAENGG Technocrats Pvt Ltd vide their letter ref: NHIIMPL/FY2024-25/RFP/Technical Consultant/LOA/02 dated 15.07.2024.

Project	Length (km)	No. of Plazas	Lane km
Gandhidham (Kandla) Mundra Port (Gujarat)	71.400	1	285.600
Gundugolanu-Devarapalli-Kovvuru (Andhra Pradesh)	**69.884**	**1**	**356.800**

Presently, the project stretch, "Gundugolanu-Devarapalli-Kovvuru" is under Operation and Maintenance period maintained by HAM Concessionaire. The fee is being collected from Toll Plaza at Km 53+700 near Veravalli village for a length of 69.884 km.

The concession period is 20 years commencing from Appointed Date for TOT Concessionaire to demand and collect appropriate Fee, operate, manage and maintain the Project Highway.

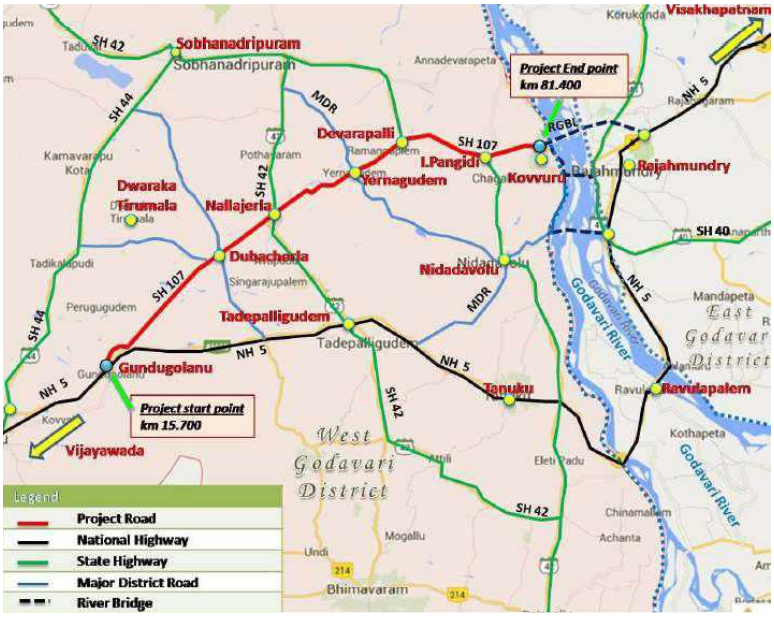
M/s SAMARTH INFRAENGG Technocrats Pvt Ltd has undertaken Technical Due Diligence study for the said project to estimate initial capex including improvements and immediate requirements for repair & rehabilitation of various elements of project highway and also to make an assessment of Major maintenance requirements and Operation & Maintenance costs for entire concession period.



This report highlights the findings of "Technical Due Diligence Services of Four Lane Gundagolanu – Kovvuru Section (Km 15.320 to Km 85.204 of NH 16) in the State of Andhra Pradesh.

1.2 PROJECT AT A GLANCE

Project road is a four-lane divided Project Highway starts at Km 15+320 and ends at Km 85+204 of NH-16. The total length of the project highway is 69.884Km.



National Highway 16 (NH 16) also known as Kolkata - Chennai Highway and runs along east coast of West Bengal, Odisha, Andhra Pradesh, and Tamil Nadu. The Project Road is a part NH-16 falling in Andhra Pradesh State.

The Highway connects several cities and town such as Bhimadole, Ghanatavari Gudem, Nallajerla, Ananthapalli, Yernagudem, Devarapalli in the state of Andhra Pradesh.

Map Showing the Project Corridor

This route is considered to Shortest Route between two major cities i.e., Vijayawada & Rajahmundry

The start and end of the project chainage system with respect to CA and Site are as presented below.

Table 1: Project Corridor Chainage System

Referencing system	Start Point (km)	End Point (km)	Length (km)	Remarks
As per CA Chainage	15.320	85.204	69.884	NH-16
As per Site	15.320	85.204	69.884	NH-16

Photograph showing the start and end point of the project road are presented below:

A view of the Start Point of Project Road at km 15.320

A view of the End Point of Project Road at km 85.204

1.3 OBJECTIVE AND SCOPE OF SERVICES

The main objective of the study is to review the current status of project corridor including details pertaining to its construction and maintenance and to provide requisite technical information for processing the acquisition of said project by client. Objective of the study can be broadly defined with following tasks:

A) Review of Project Document

- ✓ Review of DPRs/ draft CA/ Schedules pertaining to the scope of work and understand the Sch-B requirements for improvement works for the assessment of capex and Opex during the concession period.
- ✓ Review of Asbuilt drawings and Designs
- ✓ Collection of relevant records and documents and review of same
- ✓ Review of correspondences with IE, if any, on technical issues.
- ✓ Review of EPC, Operation, Maintenance and Systems Contracts
- ✓ Review of Progress Reports, if any Prepare head of terms (highlight the key commercial, technical terms of the contracts) for the reviewed Contracts - EPC, O&M, Asset Management, Operational Agreements (if any), CAs (key technical items) etc.

- ✓ Review of Asset Management Contracts to understand the maintenance of asset from the Concession agreement perspective
- ✓ Review the technical approvals / consents from IE or another agency required under the CA

B) Field Investigations

- ✓ Undertake detailed reconnaissance to appreciate the project corridor characteristics
- ✓ Undertake field investigations to collect first-hand information on present condition of project road and establish the requirements for rehabilitation and up gradation
- ✓ Carrying out inventory and condition surveys for Project Road;
- ✓ Carrying out Inventory and detailed condition surveys for bridges & cross drainage structures (along with Photographs thereof) including recommendation for either strengthening/rehabilitation or reconstruction; Identify requirements of NDT tests if any (to be executed if required and commissioned by client with separate mutually agreed payments).
- ✓ For Major Structures (length of structure>60m), detailed Visual inspection shall be undertaken with MBIU.
- ✓ Video-graphic survey of the entire Project corridor/s.
- ✓ Axle load survey for 7 days in both directions of traffic at toll plaza location (7-day traffic count to be provided by client).
- ✓ Test pits required @ every 5 km interval (staggered) along the Project corridor to record pavement thicknesses and carry out necessary laboratory tests to determine the CBR value of the subgrade materials.
- ✓ Carrying out deflection test by Falling Weight Deflect meter (FWD) for existing pavement as per relevant IRC code at the rate of 5 points in km in each direction making it 10 points for both directions.
- ✓ Carrying out Roughness Survey on each lane of Project Corridors using NSV. S Availability of construction materials.
- ✓ Assess drainage adequacy: Review of available hydrological reports and assess the availability and condition of existing road side drainage along the corridors.
- ✓ The outputs of investigations are basically used to identify the strengthening requirements for project sections and also used to form the inputs for deterioration modelling.

C) Validation of Executed Works and Assessment of Improvement Works

- ✓ Validation of executed works with respect to Schedule A of the CA by physical verification at site
- ✓ Assess the present status of the projects with relevant standards and confirm that works are meeting the requirements and have been accepted by the authorities.

- ✓ Understand the scope requirements for Improvement works from the Sch-B of the [draft] CA
- ✓ Where project stretch / structures / service roads / ancillary works are pending and if not covered in the Sch-B scope of the draft CA, then assessment of details relating to land acquisition, approvals, timelines for completion, etc. along with cost forecast
- ✓ Cost estimates for any missing items and all works included in the Sch-B of the draft CA
- ✓ Make an assessment of any risks associated with already executed works

D) Quality Audit

- ✓ Review quality of construction based on available data, available design and drawings.
- ✓ Review of Quality of materials from Laboratory testing for aggregates & soil
- ✓ Check compaction and quality of subgrade material used vide test pits
- ✓ Visual inspection of bridges for any visible distress and anomalies. Identify requirements of NDT testing based on same.
- ✓ Examine Expansion joints and bridge bearings condition and assess requirements for replacements
- ✓ Shall be examining expansion joints visually to the extent possible. Shall use high binoculars/ pictures from accessible points. Shall review all photographs closely and come to a conclusion on same.
- ✓ Identify any critical issues / red flags in relation to the quality or condition of the projects; Identify any structural integrity issues that require rectification / re-mediation;

E) Rehabilitation Plans & Designs

- ✓ Check the adequacy of designs carried out for execution based on available reports
- ✓ Undertake designs for immediate rehabilitation requirements based on CA specifications using FWD data and condition assessment surveys
- ✓ Assess the requirements of rehabilitation to bridges/CD structures by structure based on visual inspections and compare with Sch-B requirements of the draft CA
- ✓ Assess the requirements including BOQ and cost estimates of repair and replacements for various elements and ancillary works

F) Major Maintenance

- ✓ Review of current maintenance system.
- ✓ Preparation of the maintenance costs to be incurred over the period of the concession keeping in mind the maintenance requirements of the Concession Agreement.
- ✓ Detailed assessment of maintenance cycles for pavements using HDM4 analysis and estimation of maintenance cost for the concession period

- ✓ To understand the current maintenance strategy for each of the project and review the BOQ to be provided by the DPR consultant for adequacy in relation to Major Maintenance work of Highways, structures, Road Furniture and other site-specific requirements as per respective CA
- ✓ Minor maintenance will be included in routine maintenance and estimated year wise based on assumed percentages based on present condition.
- ✓ Identify any impacts on revenue due to Major Maintenance.
- ✓ Maintenance requirements for approachesA/OP/Underpass forming part of CA would also be assessed.

G) Cost of Improvement Works and Operations

- ✓ Preparation of O&M cost for the concession period.
- ✓ Assess the adequacy of costs assumed in the vendor model are adequate to meet the major maintenance, stage construction and routine maintenance requirements.
- ✓ Independently develop a bottom-up forecast of Operating expenses for project, with detailed break-up of each type of operating expense, along with underlying assumptions

H) BOQ and Cost Estimates

- ✓ Preparation of BOQ & Cost for Improvement works as per Sch-B of the CA
- ✓ Preparation of BOQ and Costs for Major Maintenance
- ✓ Preparation of BOQ and cost for Routine maintenance and Route Patrolling
- ✓ Preparation of BOQ and Cost for Operations
- ✓ Preparation of year-by-year O&M cost
- ✓ The costs would be provided till the end of the concession period including any expected extension of Concession periods as informed by the Client.
- ✓ Benchmarking of costs against other similar Indian toll roads where available (using available data)
- ✓ Historical trend analysis on the maintenance program based on the existing pavement condition and review of all relevant maintenance plans/ documents of NHAI or its concessionaires or contractors.

Review and comment on the current organizational structure from an O&M perspective at each asset. Also suggest an indicative organization structure based on project / CA requirements

1.4 DATA COLLECTION AND REVIEW

In brief, following were covered

- ✓ Review of Concession Agreement & Schedules,
- ✓ Review of Detailed Project Report prepared by NHAI
- ✓ Review of As-built drawings, Plan and profiles, Structural drawings & Detailed Project Reports and Designs where available
- ✓ Review of O&M costs as presented in DPR reports
- ✓ Review of MPR provided by NHAI
- ✓ Review of Latest NSV and FWD data provided by PIU, NHAI

1.5 KEY PROJECT DETAILS

Following Table highlights the important timelines of the project corridor at a glance:

Name of Project:	Four Lanning of Gundugolanu - Devarapalli- Kovvuru Section of NH-16 (old SH- 108) from Design Ch:15+320 (Existing Km 15.700) to Design Ch.85+204 (Existing Km 81.400) in the state of Andhra Pradesh
NH No	NH-16
Mode	Hybrid Annuity Mode (HAM)
Length	69.884 Km
HAM Concessionaire	M/s. GR Gundugolanu Devarapalli Highway Pvt.Ltd.
EPC Contractor	GR INFRAPROJECTS LIMITED
Appointment Date	22.10.2018
Scheduled Project Completion Date	910 days from Appointed Date, 18.04.2021
Concession Period in Years	Construction Period plus a fixed period of 15 years of Operation & Maintenance Period from the COD
Provisional Completion/ Completion Certificate	10-07-2021 For 64 kms 30.09.2022 for 69.884 km
End of HAM Concession (OR) O&M Handover Date to InVIT	10.07.2036 i.e., FY 2037

The project stretches will be handed over to the InVIT Concessionaire from the date of appointment for Toll Collection, TMS and works mentioned as per Clause11 of Schedule-B. InVIT Concessionaire shall be responsible for carrying out smooth toll operations (w.e.f. Appointed Date), without attracting any financial/ contractual obligation towards NHAI.

After completion of the concession period of existing HAM Annuity concessionaires/ DLP of EPC Contractor, the Project stretch shall be handed over to the InVIT Concessionaire to operate and maintain until the end of INVIT concession period.

1.6 O&M REQUIREMENTS

Few important O&M requirements as per schedules/manuals are described as below.

- ✓ Applicable Manual is IRC: SP:84-2019
- ✓ Applicable Schedule for O&M period is Schedule-F.
- ✓ As per clause 3.1 (iii) of Schedule-B, the periodic maintenance in every **six years** in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc
- ✓ As per clause 3.1 (iii), under Note of Schedule-B, Roughness of <2750 mm/Km shall be maintained by the existing HAM concessionaire prior to handing over to InVIT Concessionaire. After handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2750mm/Km, however after a functional overlay or structural overlay provided in any particular stretch length then that particular length shall be maintained at a roughness level as per Schedule-F (2400 mm/Km) after that overlay.
- ✓ Schedule-F, performance parameters indicate the desirable limit of Roughness values should not exceed 2000 mm/km, whereas its acceptable limits Is 2400 mm/km and needs to be corrected within 180 days. Roughness Surveys shall be carried out Bi-Annually.
- ✓ Schedule-F, performance parameters indicate the desirable limit of Pavement Condition Index (PCI) values should be above 85, whereas its acceptable limits is 70 and needs to be corrected within 180 days. Condition Surveys shall be carried out Bi-Annually.
- ✓ Schedule-F, performance parameters indicate the FWD survey shall be carried out Annually as per IRC: 115-2014 for flexible pavement and needs to be corrected within 180 days
- ✓ No specific Handing Over (Divestment) requirements are mentioned under CA. It shall be same as Schedule-F.

1.7 REVIEW OF REPORTS

The Concessionaire's made available report for the month of July 2024 has reviewed and some critical issues found are as presented below.

s. No.	Description of Claim	Letter Ref. No.	Amount submitted in claim (in Rs.)	Remarks
1	Additional costs incurred by the Concessionaire on royalty payments of aggregate & earth due to enhanced rates Consideration rates & premier amount of Seigniors Fee w.e|.f 11.02.2020 & 07.06.2021 under Article 35 (Change in Law)	GRGDHPL /2022/GU-DP/2003 dated 29.11.2022	5,25,34,859	(for 2020-21 FY & 2021-22 FY)
2	Additional costs incurred by the Concessionaire towards procurement of sand under Article 35 (Change in Law)	GRGDHPL /2022/GU-DP/2003 dated 29.11.2022	9,21,94,163	(for 2020-21 FY & 2021-22 FY)
	Total		14,47,29,022	Rs 14.47 Crores
3	Withheld/pending payment against GST, etc.	GRGDHLP/2023/GUDP/ 2362 dated 10.01.2024	18,59,07,789/-	GST Change As per NHAI Circular 3.3.27/2022 dated 03 Dec 2022, Annexure -IV

Further it is noted that there are no issues related to Land acquisition and Encroachments.

1.8 KEY FINDINGS

The key finding of the Project are as follows

- The capacity augmentation is envisaged in FY 2035& FY2036 for the project on EPC mode with DLP of 5 years until FY2041
- Bulging is observed in RE walls
- Submergence of LHS side Carriageway at Km 34+850 at Unidirectional Flyover for a small length in 2023, Requirement of additional culvert for Main Carriageway at this location
- Insufficient Freeboard observed for Major Bridges on Pond & River at couple of locations.
- Safety Hazards at 10 Uni-directional flyover Approaches, Requirement of Traffic Impact Attenuators
- Safety Hazard at a Culvert Location on exit ramp deceleration lane at Km 60+800, Required to Construct gap in Culvert left before
- Safety at Sharp Entry Exit at few locations, Requirement of improved safety measures
- Approach Slab settlements observed at many of structures, already overlaid
- Outfall for Open Lined Drains required to be provided to avoid ponding of water on Carriageway
- Stagnation of Water on Structures Observed. Requires improved drainage measures
- Lighting Requirement at Approaches of Underpasses
- Improved Cleaning and Routine Maintenance is required to avoid vegetation growth in Drains and RE Walls

- General Condition of Structures: Debris observed on Abutment & pier cap, Expansion joints are filled with debris, wearing coat, Drainage spouts are clogged at couple of locations.
- General Condition of Structures: Structural distress is observed at couple of locations viz. Cracks, Honeycombs, spalling of concrete, Reinforcement exposed etc.
- Retained Major Bridges: The Condition of the Retained Major bridges is fair. Only Minor distresses observed

Sl. No.	Site Chainage (Km)	Type of Str.	Side	Structure on	Age of Structure	Span Arrangement (No x Length)	Remarks
1	31+658	MJB	RHS	MCW	Old	6 x 21	Retain structure
2	48+194	MJB	RHS	MCW	Old	10 x 15.5	Retain structure
3	59+770	MJB	RHS	MCW	Old	8 x 15.5	Retain structure

- Bulging is observed in RE wall approaches. It is observed only at 3 out of 20 plus approaches Soil Nailing has been done to rectify the same. Additional soil nailing would be required at those locations to avoid further bulging of RE Panels.
    - ROB at 18+750 Major Bulging observed on Cross wall behind A2 abutment
    - Flyover approach at Km 15.5 minor Bulging On LHS RE Wall
    - Flyover Approach at Km 27+800, Bulging on A2 side RHS
    - Near Km 79+300 A2 side on Both Sides
- Back fill material erosion occurred on RE panel behind abutment A1 side at km 79+277 Flyover LHS.
- Submergence at Km 34+850: From the local enquiry and discussions with NHAI Team, it is understood that, Flooding on LHS Carriageway near Km 34+850 occurred in the last year during heavy rains. At This location, Unidirectional Carriageway exists for Traffic moving from Kovvuru towards Gundugolanu side. Additional Pipe or Box Culvert may be required at this location to avoid the submergence of the LHA Carriageway at this location
- There are 10 Uni Directional Flyovers along the project corridor, In LHS 2 Uni Directional Flyovers and in RHS 8 Uni Directional Flyovers.
- Undivided 4 Lane Carriageway exists below for one direction. Median for separation is indicated with Road Marking
- At all the Unidirectional flyover locations, Traffic Impact Attenuators along with two-way hazard markers would be required
- There is severe safety Hazard Issue near exit at K 60+800 on RHS (Most of exit lane width is occupied by Culvert and all of a sudden creating a bottle neck). The Exit location shall be shifted to suit the site condition or the culvert required to be widened.
- At Couple of Locations, the Exist and Entry are very narrow, Total 30 No of Sharp Entry & Exits are present along the project corridor in that 16 No's in LHS and 14 No's in RHS Direction.

- At couple of locations, Approach slab settled an the same has been rectified by providing the BC Overlays, at such locations, additional maintenance may be required during O&M Period
- At couple of locations, the outfall for Open lined drain built between the Main Carriageway and Service Road are missing, because of this water stagnating in the drain and even the excess water is standing near the earthen drain portion.

- In Approaches locations Highway lighting brackets are provided but the light poles are not installed in many locations along the project corridor.
- Huge Amount of street lighting would be required at approaches since the availability of lighting on site is very minimal. (At underpasses, lighting is not provided in approaches).

- Regular Cleaning of Median, Median Plantation, Carriageway and importantly Drain cleaning is required (at few locations even grass is seen on the deposited soil in the Open lined drain portion)
- Cracks and damages observed on pedestals at couple of locations
- Excessive vibrations observed & No gap between pedestals and seismic arrestors at km 31+658 MJB
- Cracks & leaching observed on soffit of deck slab at km 68+742 & km 61+933

CHAPTER 2. SURVEYS AND INVESTIGATIONS

2.1 INTRODUCTION

The main objective of undertaking Surveys and Investigations is to appreciate the existing engineering features along the project corridor and to understand the present condition of the various elements of the project road and to prepare required inputs for various rehabilitation and maintenance strategies.

Following Survey and Investigations have been undertaken as a part of study with an objective to understand the present condition of the road and there by access the quality of construction and as well to prepare requisite rehabilitation/corrective designs where necessary.

- Road Inventory Surveys
- Pavement Condition using NSV
- FWD Surveys
- Roughness Surveys using NSV
- Pavement Composition surveys (Test Pits)
- Subgrade Investigations & Laboratory testing
- Material Investigations
- Axle Load Survey
- Structure Inventory and Condition Surveys

2.2 ROAD INVENTORY

The project corridor features a 4-lane/6lane divided carriageway for most of its length. Generally, the carriageway width of flexible pavement is 7.25m/10.75m wide, including shyness, and is flanked by 1.5m paved shoulders and 0 to 2 meters of earthen shoulders on each side of the median. These widths vary at structure locations and approaches to major junctions. At Toll Plaza location rigid pavement is provided. The 4lane/6-lane lengths as available.

Lane		LHS, km	RHS, km	LHS+RHS, km
2-Lane	Actual Length	34.95	34.83	69.78
	Lane length	69.9	69.66	139.56
3-Lane	Actual Length	27.084	32.564	59.648
	Lane length	81.25	97.69	178.94
4-lane	Actual Length	7.08	1.72	8.8
	Lane length	28.32	6.88	35.2
Toll Plaza	Actual Length	0.77	0.77	1.54
	Lane length	1.54	1.54	3.08
Total lane Kms		181.012	175.772	356.8

In general, the median width is 4m all along the project road except at median openings associated with storage lane (median width is 1m).

The project corridor generally runs in plain to rolling terrain. The land use along the project road is mostly Agricultural. It passes through urban settlements like Bhimadole, Ghanatavari Gudem, Nallajerla, Ananthapalli, Yernagudem, Devarapalli.

In general, road embankments are in the range of 0.5m-2.5m height. Embankment heights higher than 2.5m are observed mainly in the approaches of CD-Structures and Underpass locations.

Typical View of Project Road is shown below:

A view of the Project Road at km 24.000

A view of the Project Road at km 22.000

A view of the Project Road at km 51.600

A view of the Project Road at km 20.400

The Project Road has 70 Nos. of junctions. Photographs showing the Major Junctions and minor junctions are presented below:

Major Junction at km 60.150 RHS

Major Junction at km 51.500 LHS

Junction at km 15.780 RHS

Junction at km 36.400-LHS

There are 18 Nos. of High masts provided near Rest Area and Toll Plaza locations. Whereas, Highway lighting is provided for length of 21.860 kms near built-up sections, Bus bays and Truck lay-bye location. Few photos showing High mast and highway lighting are presented below:

A view of High Mast Lighting at km 33.500 RHS

A view of Double arm Lighting at Km 54.400 Median

A view of Lights not installed at approach location at Km 61.900

A view of Single arm lighting @ Km 18.500 BHS

Project Road consists of 19 Nos. of Bus bays with shelters, 33 Nos. of Bus shelter. Few photos taken at the Bus Bays and Bus Shelters are presented below:

Bus Bay with Shelter at km 26.000

Bus Shelter with toilet block @ Km 54.750 LHS-SR

There are 4 Nos. of Truck lay byes provided along the project corridor with Flexible pavement. The condition of the pavement appears to be fair. A Separator is provided in between main carriageway and Truck lay-bye portion.

Few photos depicting the Truck lay-bye portion are presented below:

A view Truck Lay bye at Km 40.000 RHS

A view Truck Layby at Km 16.500 LHS

The Project Road has 1 No. of Toll Plaza at Km 53+700(Veravalli plaza). Rigid pavement exists at toll plaza location and condition appears to be fair. It has 7+1 lanes on each side at Varavalli plaza 4 Nos. of High mast lighting have been provided at location.

A view of the Toll Plaza near km 53.700

A view of the Toll Plaza near km 53.700

A view of the admin building at km 53.700

A view of Weigh bridge at km 53.700

Service/slip roads are provided with varying carriageway widths from 5.5m to 8.75m with Flexible pavement for a length of 103.538km (including tapers) along the Project Corridor. Photos depicting

the service road pavement surface type, Condition and the other associated features like drain. Few photos taken at service/slip road locations are presented below.

Slip Road 7 m width @ km 27.800 RHS

Slip Road 5.5 m width @ km 18.800 LHS

Slip Road 8.5m width @ km 15.800 LHS

Service Road 7 m width @ km 28.300 LHS

The collected Road Inventory Data is presented in **Appendix 1** of this Report

2.3 PAVEMENT CONDITION SURVEYS

The collected Pavement Condition Data using NSV surveys for main carriageway is presented in **Appendix 2** of this Report.

The photographs showing the pavement condition of the Project Road is presented below.

 Fair condition @ km 52.700 LHS	 Potholes @ km 31.800 LHS	 Fair condition @ km 62.700 BHS
 Delamination @ Km-101.800 RHS	 Bleeding at Km-102.400 RHS	 Full Damage Km 103.700 LHS
 Fair condition @ km 36.000 LHS	 Raveling @ km 71.700 RHS	 Fair condition @ km 32.000 RHS
 Fair condition @ km 41.900 LHS	 Delamination @ Km 72.400 LHS	 Rutting @ Km 40.500 RHS

2.4 FALLING WEIGHT DEFLECTOMETER (FWD) SURVEYS

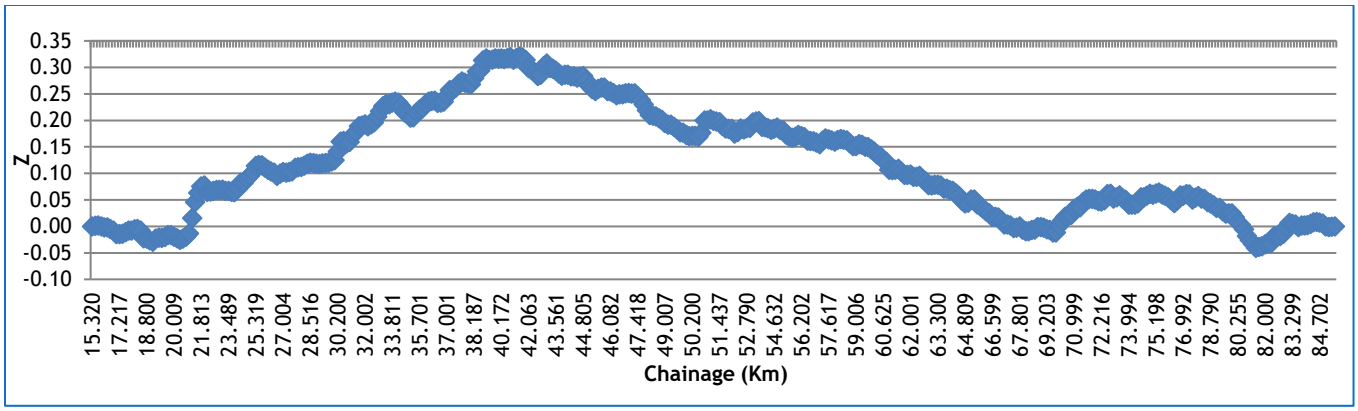
2.4.1 Falling Weight Deflectometer Survey (Flexible Pavement)

In order to evaluate the structural strength of the existing pavement, Falling Weight Deflectometer (FWD) survey has been carried out along the project road in line with IRC: 115-2014.

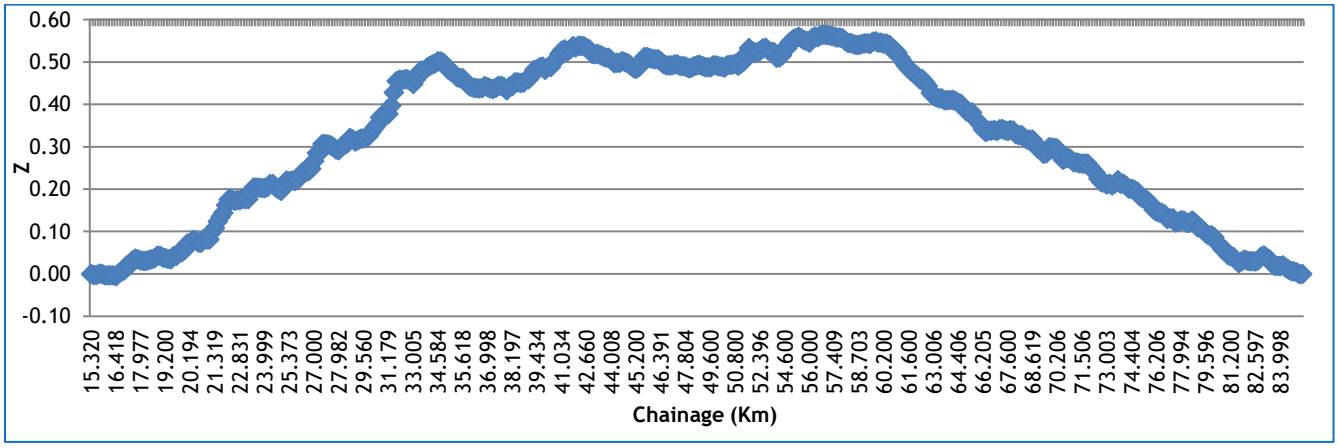
- ✓ Prior to the start the surveys, Load repeatability tests are performed on each day
- ✓ The target Peak Load of 40 KN (+/- 4 KN) is maintained during survey.
- ✓ At Regular intervals of time Pavement temperature is noted.
- ✓ For every 1 Km of stretch 5 test Points (2 pts- Outer, 3 pts-inner) were taken on Main Carriageway in each direction. Further at extra-lane observed locations additional FWD points were also considered.
- ✓ Temperature correction equation is applied for back calculated modulus of BT and no seasonal correction factor is applied as test performed in monsoon season (July month) for the back calculated modulus of granular and Subgrade.

The collected FWD Data and Analysis is presented in **Appendix 3** of this Report.

Few photos taken during the progress of FWD Surveys are presented below:



FWD Survey



FWD Survey

Cumulative Difference Approach (CDA) has been used for the identification of homogeneous sections on the basis of Surface Curvature Index (SCI). SCI is calculated as the difference between D_0 and D_{300}, where D_0 and D_{300} are the peak deflections (mm) measured at the center of loading plate and at a radial distance of 300mm

The homogenous sections in each direction of traffic (i.e., LHS & RHS) for the project stretch have been identified for Main carriageway and service Road are presented in graphical representation of followed by tables.

Delineation of Homogeneous Section – LHS

Delineation of Homogeneous Section - RHS

Based on the above graphs, the flexible pavement section has been sub-divided into homogeneous section for LHS and RHS direction as given below.

Table 2: FWD Data - Summary of Homogenous Section of Main Carriageway – LHS

S.No	From (km)	To (km)	Length (Km)	Remarks
1	15.320	18.225	2.91

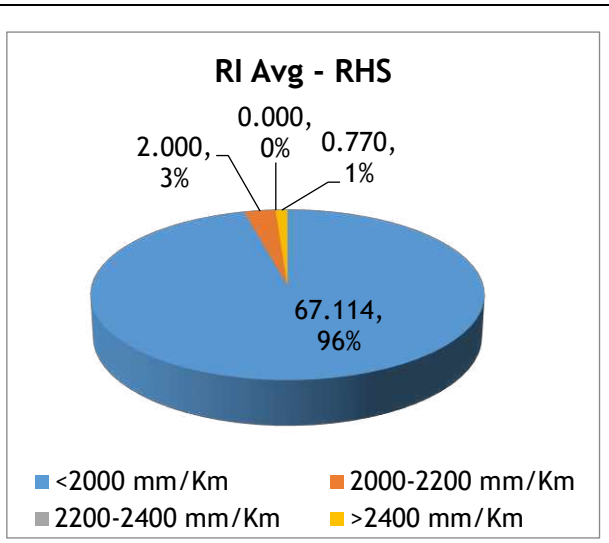
27	81.794	85.204	3.41	
	Total Length		**69.884**	



2.5 ROUGHNESS SURVEYS

The Roughness data has been collected using **Network Survey Vehicle** and analyzed in terms of International Roughness Index (IRI), separately for each lane, for both direction of travel. Pavement Roughness data collection and computation of IRI for each km length in each direction is presented in **Appendix 4** of this Report.

As per Schedule-F of TOT, the desirable level of service for Roughness values for bituminous pavement surface is considered to less than 2000 mm/Km and the acceptable limits are less than 2400mm/Km.

Average Roughness Index (RI) values along the corridor were grouped in to four categories, Pie chart showing the range of RI values in each carriageway of the project road have been presented below:

Note: Roughness>2400mm/km is observed is at Toll Plaza Location in a length of 770m.
It can be seen from the above pie charts, that about 98% in LHS & 96% in RHS of the length of the Project Road has good riding quality (RI<2000 mm/km) respectively.

2.6 PAVEMENT COMPOSITION SURVEYS (TEST PITS)

The composition of the existing pavement crust has been noted from test pit surveys. Thus, a total of 18 Nos. of pits have been dug along the corridor and its pavement composition has been noted.

Results of the test pit survey showing average thickness of pavement layers are presented in the Table below.

Table 4: Pavement Composition of Existing Pavement along Project Road

S. No	Test Pit Number	Design Chainage	Direction	BT	WMM	PQC	DLC	GSB	Dust	Total
1	GK-TP-1	16+000	LHS	130	250			200	150	730

2.7 SUBGRADE INVESTIGATIONS & LABORATORY TESTING

Sub-grade Investigations have been carried out to examine the subgrade soil characteristics along the project road. A total 18 Nos. of test pits have been carefully dug from the pavement surface up to sub-grade level. Out of 18 nos',15 nos are done on main carriageway and remaining 2nos are done in Service Road, 1nos are done in Toll Plaza. Field density tests have been conducted for subgrade samples and a small quantity of sample has also been collected in airtight containers for determining the field moisture content. Upon completion of the field density test, representative sample of sub-grade soil has been collected in bulk, in gunny bags from each test pit for laboratory testing.

The soil samples collected have been tested for the following properties to assess the existing sub-grade soil properties.

- Sieve analysis
- Atterberg limits
- Heavy compaction
- Four (4) days soaked CBR as per IS standards at 97% of MDD as applicable for sub-grade (Heavy Compaction)
- Free swelling index

Few sample photos of the test pit locations where the subgrade samples collected are as presented below.

2.8 BORROW AREAS

Potential borrow area identified at 7 Nos. of locations for the use of embankment/subgrade construction works within economic haulage leads. The sources identified as potential borrow areas

along with certain useful information such as distance from the project road, location, village name, etc., have also been presented in this table below.

Table 5: Borrow Area Samples Details

S. No	Borrow Area No	Chainage	Side	Offset	Village and contact person	Quantity	Rate	Remarks	Co-ordinate
1	GK-BP-1	27+600	RHS	1.0 KM	Vill-Gopalapuram Name-Jalaparthi.Raghavulu Mob no.9701223188	10Acres* 5 feet	Not told	Pvt. Land	16.850239 81.292136

Soil samples from these borrow sources have been collected in bulk by excavating test pits down up to 1.0m depth from the existing ground surface. The top organic soil layer of approximately 150mm thickness was removed before sampling. The samples collected from these identified borrow pits/ gravel quarries have been tested for the suitability of utilizing them as embankment fill/ sub-grade. Few sample photos of borrow area locations are as presented below.

2.11 AXLE LOAD SURVEYS

Traffic loading has a significant impact on pavement performance and design. This is because the damage that vehicles create to a road depends very strongly on the axle loads of the vehicles. The exact relationship is influenced by the type of road structure and the way the road deteriorates but a "fourth power" damage law gives a good approximation.

Axle load study has been conducted using portable axle load pads near toll plaza at km 53+700 on date 13.08.2024 for initial 24 hrs. Further, seven more days surveys have been done from 25.09.2024 onwards. The survey has been conducted in both the directions and data captured on random sampling basis. The collected axle load data and analysis is presented in **Appendix 5** of this Report. The vehicle damage factors have been calculated using the standard axle loadings given in IRC: 37-2018. The standard axle loadings adopted have been presented in the following table.

Details of Standard Axles Used

Axle Configuration	Standard Axle load (Tonnes)*/ KN	Remarks
Single Wheel, Single Axle	6.60/65	As per IRC 37-2018
Dual Wheel, Single Axle	8.16/80	As per IRC 37-2018
Dual Wheel, Tandem Axle group	15.10/148	As per IRC 37-2018
Dual Wheel, Tridem Axle group	22.90/224	As per IRC 37-2018

Few photographs illustrating the survey locations and axle load measurements are presented below.

LCV	1.53	0.53

CHAPTER 3. VALIDATION OF EXECUTED WORKS

3.1 ROAD WORKS

The project road has been closely inspected to verify the executed works on ground. The scope works to be executed by the Concessionaire/Contractor as envisaged in CA is compared with the executed work on the Ground. As a part of the validation, the available as-built drawings and the inventory data received from the Concessionaire were also referred. Each structure has been inspected to note down its structural configuration and condition. The following table highlights the scope comparison of the executed works on ground.

The project corridor appears to have been constructed with the cross-sectional elements matching to those given in the manual at the time of execution. The carriageway width varying from 7.0m to 10.5m plus paved shoulders of 1.5m and a shyness of 0.25m has been provided over the entire length except at structures. Earthen shoulders of 0m to 1m on either side of carriageway have also been provided.

Table 9: Scope Comparison of Executed works

In the project stretch, the Service/Slip Roads having 5.5m to 8.75m carriageway width with an overall both side length of 103.538 km has been observed. Location wise details of service roads and slip roads presented in **Appendix 6** are listed as below:

Table 10: Summary of Service Roads/Slip Roads along Project Road

Description	LHS			RHS			Total
	Flexible	Rigid	Earthen	Flexible	Rigid	Earthen	
Units	**Kms**	**Kms**	**Kms**	**Kms**	**Kms**	**Kms**	**Kms**
Service Road	51.244	0	0	52.294	0	0	103.538

RCC Lined Covered drains are provided in a length of 6.840 km at various locations and open lined drains are provided in a length of 31.370 Km and Median drain are provided in a length of 11.960 km respectively along the Project corridor, the location and condition of the same are presented in **Appendix 6**. The summary of the same is tabulated below.

Table 11: Summary of Drains along the project road

Drains	As per Schedule A	LHS	RHS	Median	Total
		As per Site			
	Kms	Kms	Kms	Kms	Kms
RCC Cover Drain	6.67	3.86	2.98	-	6.84
RCC Open Lined Drain	31.23	16.21	15.16	-	31.37
Median Drain	8.47	-	-	11.96	11.96

RE walls and Stone Masonry are found in approaches to the grade separator locations, high embankment locations and at CD-structures locations along the Project Corridor which account for a total length of 48.000 Km the details list are presented in **Appendix 6**. The summary of the slope protection table was presented below:

Table 12: Summary of Slope Protection along Project Road

S.no	Slope Protection Type	LHS	RHS	Total
		Kms	Kms	Kms
1	RE Wall	23.67	23.67	47.34
2	Stone Masonry	0.46	0.20	0.66

A total of 3 median openings were observed on-site, consisting of reserved lanes. For median openings with a reserved lane provision, the 4.5m median width is reduced to 1.0 meter. The location wise details are presented in **Appendix 6**. The summary of the openings is presented below.

Table 13: Summary of Median Openings along Project Road

Median Openings	As per Schedule A	As per site
		Nos
Reserve lane	3	3

The project road has a total of 70 junctions. A comprehensive list of major and minor junctions is provided in **Appendix 6** of this report.

Safety barriers have been provided along the project road at high embankments and at sharp curve locations, at approaches of grade separated and cross drainage Structures. Details of safety barriers provided along the corridor include the following.

- Single face w-barrier is observed for a length of 30.101 Kms along the project corridor. Details of Metal Beam Crash Barrier are provided in the **Appendix 6** of this report.
- Concrete crash barrier (CCB) and Concrete Railing are observed at Structure locations along the project corridor. Length of Concrete crash barrier is about 58.566 Kms and Concrete railing are about 2.87 kms. Details of Metal handle railing (MHR) is about 2.46 Kms are provided in the **Appendix 6** of this report.
- Pedestrian Guard Rails (PGR) are observed for a length of 4.86 Kms on service road and Fencing is observed at MCW Sholder on BHS expect at Str location along the project corridor for a length of 43.49 Kms. Details are presented in the **Annexure-6** of this report.

Table 14: Summary of Safety Barriers

Safety Barriers	Length	Damage
	Kms	m
CCB	58.566	-

The project road has total 19 Nos. of Bus Bays with shelter, 33 Nos. are bus shelters on both sides of Highway. The details are presented in **Appendix 6** of this report.

Table 17: Bus Bays with Shelters

Description	Units	As per Site		
		LHS	RHS	Total
Bus Bay with Bus Shelter	No	10	9	19
Bus Shelter	No	17	16	33

The Project Road has 4 Nos. of Truck laybys along the Highway. The truck layby has been provided with Flexible pavement and the condition appears to be fair. Separator is provided between main carriageway and truck lay bye portion.

The rest areas are of 4 Nos are provided in the project highway.

3.2 STRUCTURES

List of all Structures found during the inventory surveys along the corridor are as follows:

Table 18: Summary of Structures

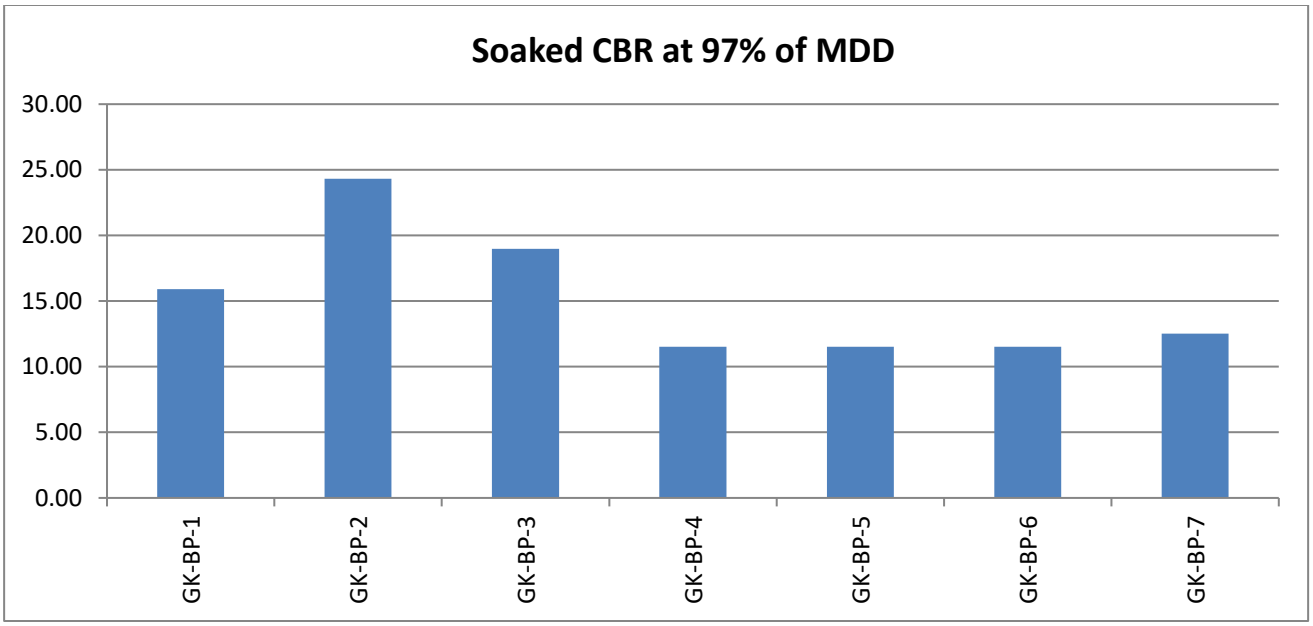
4.1 EMBANKMENT & SUBGRADE



The embankment for project road has been constructed with available soils from nearby areas. The soil appears to be Coarse grained type in nature and embankment appears to be in good condition over the entire length of project. No major settlements or depressions have been noted even at high embankment locations. Out of 7 samples 5 samples belongs to SC type of soil, 1 sample belongs to SM type of soil and 1 sample belongs to SM-SC type of soil.

Summary of the test results carried out on these samples are presented in the following tables whilst the complete details are presented as an **Appendix 7** of this report.

Table 24: Test Results of Borrow area Samples Details

Lab Sample No	Site Identification		Grain Size Analysis					Atterberg Limits (%)			Soil Class	MDD (gm/cc)	OMC (%)	Dry Density at 97% MDD	Soaked CBR 97% MDD	Free Swelling Index (%)

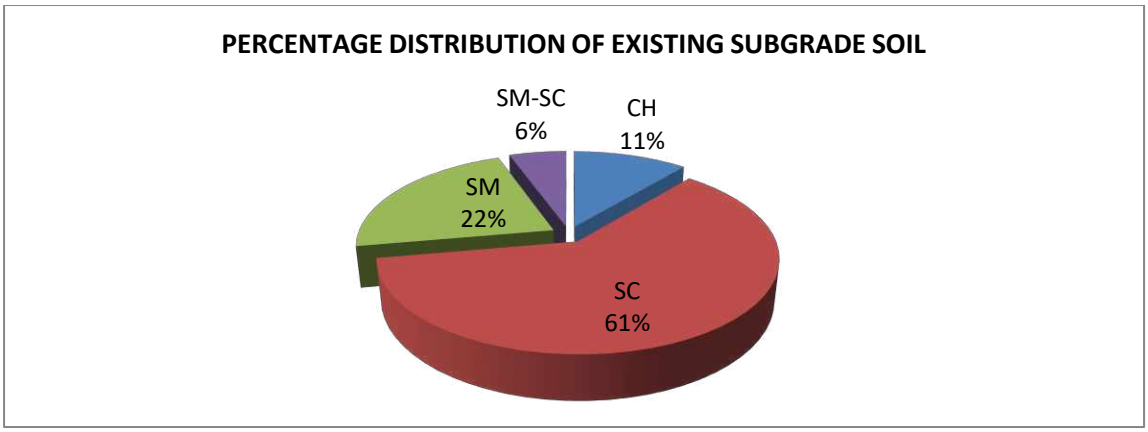
- **SUBGRADE**

The subgrade samples collected from the test pits taken from project road appears to be in fair condition as revealed by test pit investigations. Soil classification has been done according to IS Classification of Soils (ISC) as detailed in IS 1498 - 1978.

Pie Chart showing the percentage distribution of soil classification of existing subgrade sample is presented below:



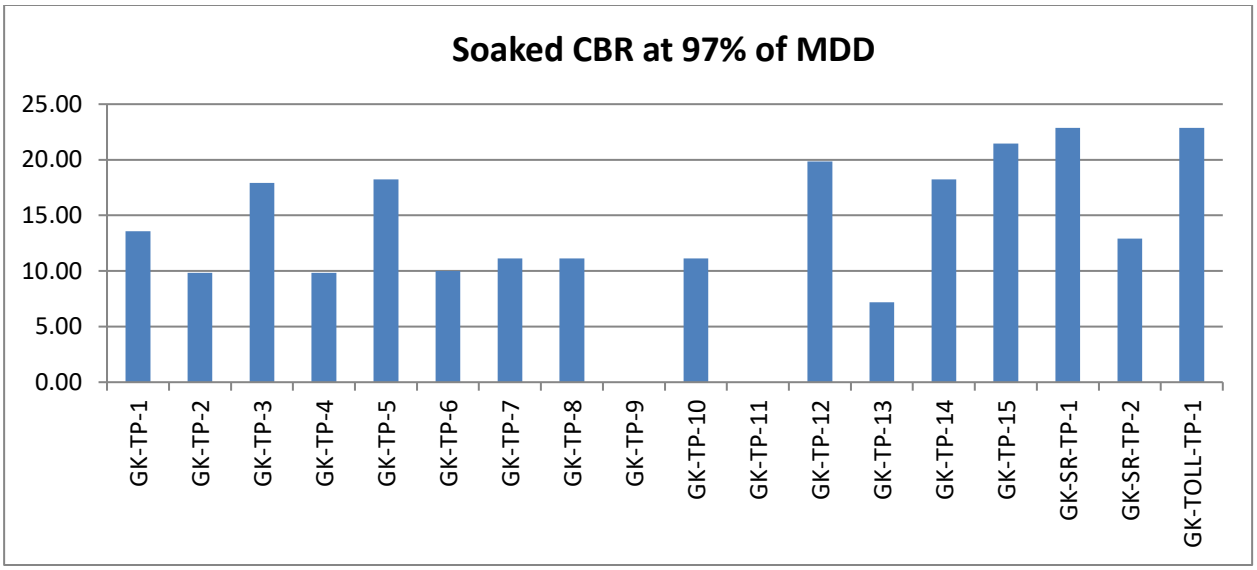


Table 25: Test results of Existing Subgrade Soils

Laboratory test results indicate that majority of the Subgrade soil samples collected belongs to Coarse Grained Soil out of 18 Nos. of samples 2 Nos. of samples belongs to CH type of soil, 4 Nos. of sample belongs to SM type of soil,11 Nos of samples belongs to SC type and 1 Nos of samples belongs to SM-SC type of soils.

The following observations can be made from the above test results conducted on of existing subgrade samples

- Liquid Limit are in the range of 0% to 44% satisfying LL<50% criteria except 2 sample.
- Liquid Limit are in the range of 0% to 24% satisfying PI<25 criteria except 1 sample.
- Maximum Dry Density for all subgrade samples varies between 1.64 and 2.21 gm/cc. 2 Nos of samples not satisfying the MDD criterion and remaining 16 Nos of samples satisfying MDD criterion (MDD>=1.75 gm/cc).
- OMC for existing subgrade samples varies in between 8.50% to 22.0%.
- Free Swelling Index for existing subgrade samples varies in between 0% to 36%. only 2 Nos of Sample not satisfying the FSI criterion and remaining 16 Nos of samples satisfying the FSI criterion (FSI<=50%)
- CBR Values are varying from 6.42% to 22.87%.

Majority of Subgrade samples are satisfying the MORTH specification criteria.

Material related tests reports are provided in **Appendix-7** of this report.

Aggregates to be used for sub-base, base, surface courses and concrete works have been collected from the crushers under operation from the existing quarries. All samples have been tested for Aggregate Impact Value (AlV), water absorption and specific gravity tests. The Table below represents the test results of the Aggregate and Sand Samples.

Table 26: Test Results of Aggregate Samples

S No	Sample	Location (km)	Up/Dn	A.I. V (%)	Water Absorption (%)	Specific Gravity (%)
1	GK-TP-1	74+000	RHS	16	3.41	2.70
2	GK-TP-2	74+000	RHS	15	3.22	2.67
3	GK-TP-3	79+300	RHS	16	2.88	2.72
4	GK-TP-4	79+300	RHS	14	2.98	2.74

Note: The most the above Aggregates samples are satisfying MoRTH requirements i.e., AIV (max. limit is 24% for BC-layer) and Water Absorption max. limit is 2%, But the above 4 sample results exceeded water absorption limit. The crusher vendors informed that the material source will change for road works and will supply accordingly.

Table 27: Test Results of Sand Samples

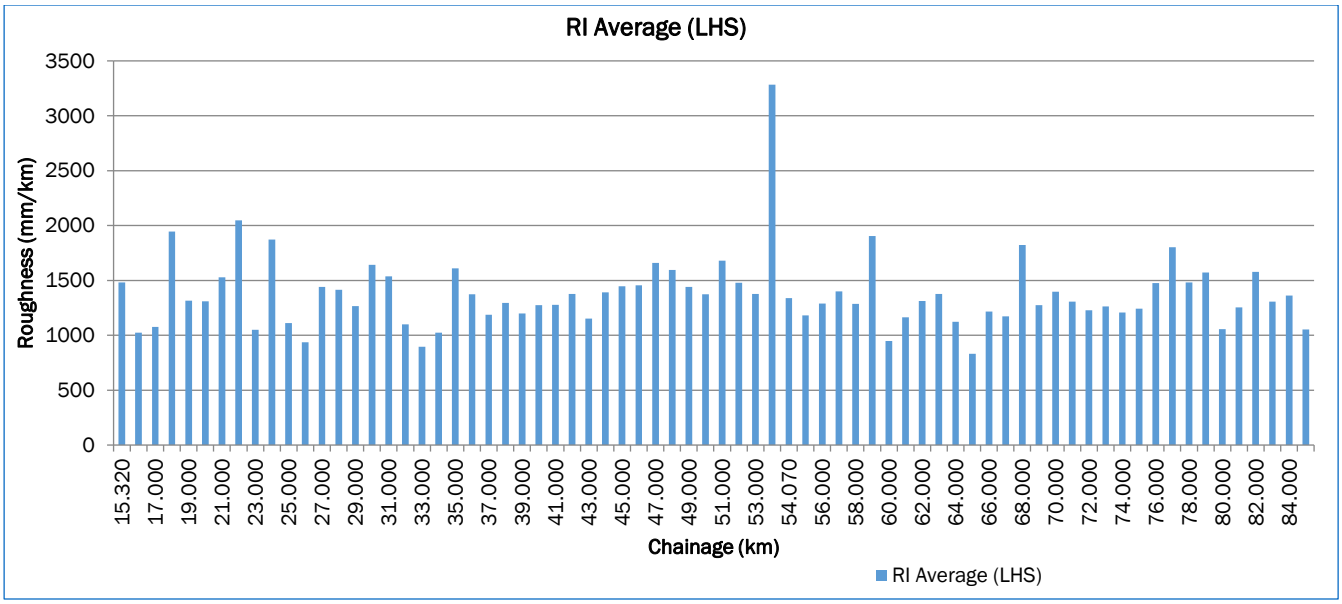
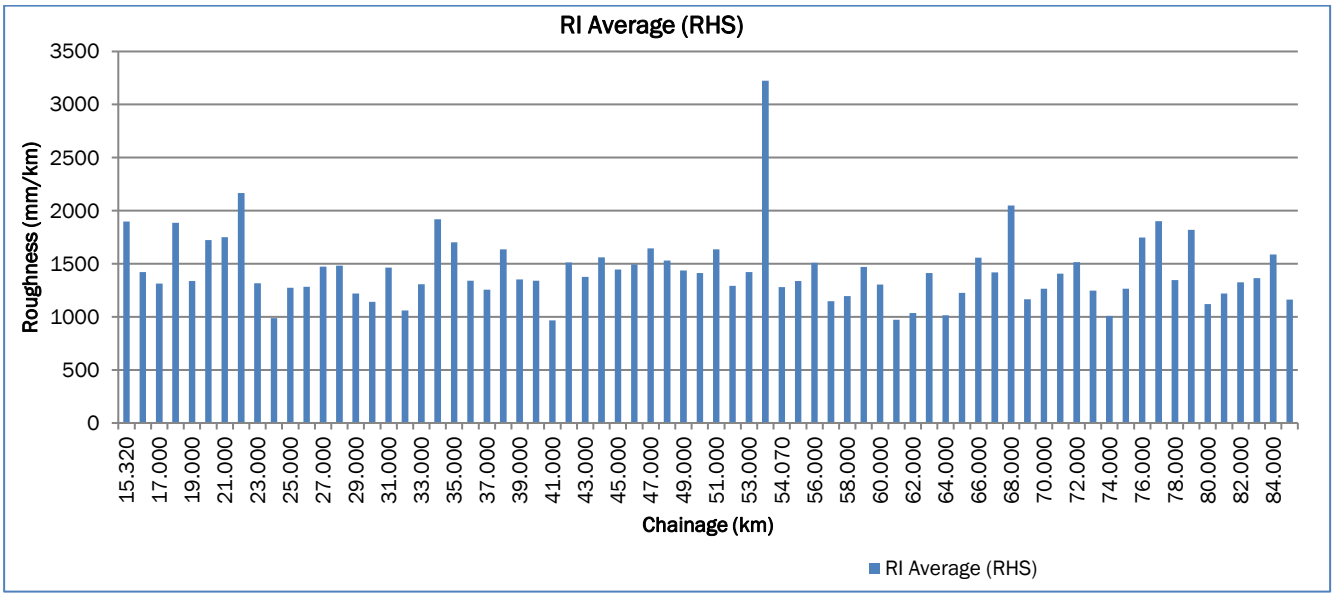
4.2 PAVEMENT CONDITION

The distresses in bituminous surface have been captured on Main carriageway for each lane separately by NSV survey. Pavement Condition rating (PCI) as per IRC:82-2023 from the data collected for each km length in each direction has been presented in the **Annexure-2** of this report.

The project corridor has been provided with flexible pavement over entire length and even on service roads also. Rigid pavement is only provided at Toll Plaza. The present surface condition appears to be fair and at isolated locations it is fair to poor. The type of distresses observed are cracking, Raveling, Patching, Rutting and Delamination.



The Pavement condition rating is presented in Pie-chart from Excellent to Fail are as below:



The Pavement condition is rated as Excellent to satisfactor from the above chart.

4.3 ROUGHNESS

The km-wise roughness values are presented in bar chart are as follows

Note: The high-value noted is at Toll Plaza location in Rigid pavement area

Note: The high-value noted is at Toll Plaza location in Rigid Pavement Area

Based on the above, considering the Km-stone reference system the summary of direction-wise km lengths having varying roughness values are as presented below.

>=Roughness (mm/km)	<Roughness (mm/km)	LHS (Km)	RHS (Km)	Remarks
	2000	68.114	67.114	
2000	2200	1.000	2.000	
2200	2400	0.000	0.000	
2400		0.770	0.770	Toll Plaza

It can be noted from the above that, the no roughness values are greater than Schedule-F, specified limit of 2400mm/km and hence no requirement of functional overlay. Sections between 2200-2400 range may also require a roughness correction course within short period of time. Thus, it is imperative to consider roughness correction layer for such sections also. However, no cost has been considered as the HAM Concessionaire shall maintain the project Road until FY2037.

4.4 FWD ANALYSIS

4.4.1 FWD ANALYSIS AND ASSESSMENT OF OVERLAY REQUIREMENT

By looking at the age and condition and performance of the pavement following different set of ranges have been used while finalizing the modulus values:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	750-3000	100-500	50-100

Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35ºC using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). For this FWD results, no seasonal correction factor is applied for granular and subgrade layer. The design moduli (15th percentile moduli) of in-service layers for each homogenous section are given in table below.

Table 28: Summary of Design Moduli of different layers – LHS CW

S.No	Side	From (km)	To (km)	Length (Km)	15th Percentile MR values		
					MR for BT (Mpa)	MR for Granular (Mpa)	MR for Subgrade (Mpa)
1	LHS	15.32	18.23	2.91	2493	357	100

Total Length, km				69.884			

Observations on FWD Results

It can be noticed from the above table that the layer moduli for the three layers are varying along the length and direction. The MR value for BT layer is 2955 MPa to 1461 MPa in LHS Carriageway & 3090 MPa to 2046 MPa in RHS Carriageway. The MR value for Granular Layers is 487 MPa to 132 MPa in LHS Carriageway & 408 MPa to 109 MPa in RHS Carriageway. Similarly, the MR value for Subgrade Layer is 100 MPa in LHS Carriageway and 100 MPa in RHS Carriageway.

4.5 PAVEMENT RATING CHART

Pavement is rated for Roughness/PCI as good, fair and poor based on the following criteria along with strip-chart is presented as below:

Condition		Roughness	Pavement Condition
	Poor	>2400 mm/Km	PCI ≤ 40
	Fair	2000 - 2400 mm/Km	PCI of 40 to 80
	Good	≤ 2000 mm/Km	PCI > 80

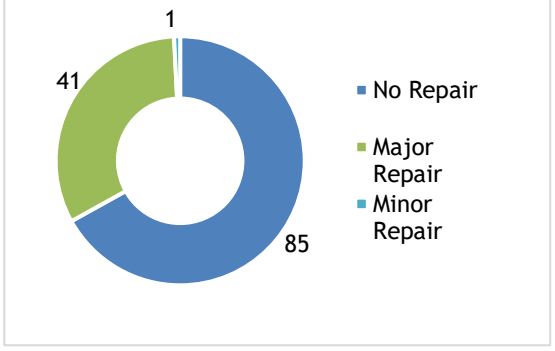
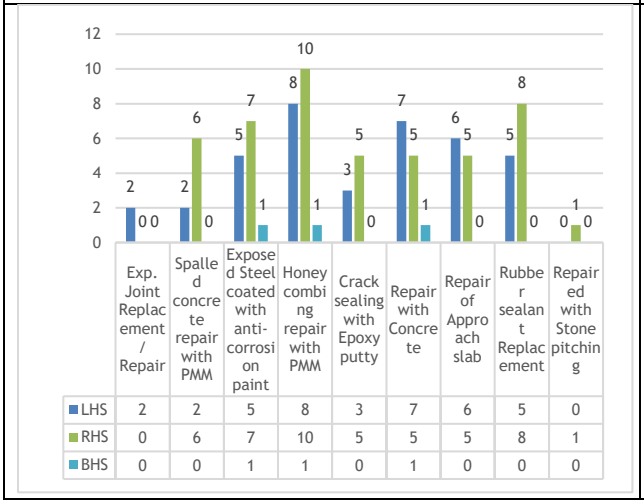
Note: As the present concessionaire is maintain the corridor until FY 2037, No FWD overlay is considered.

4.6 STRUCTURES

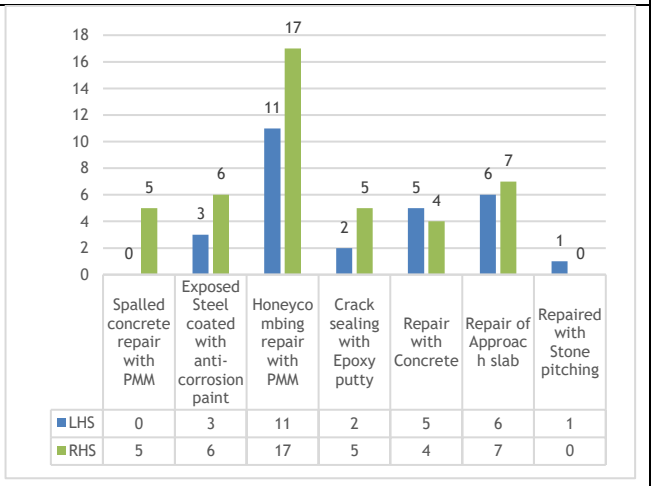


Inventory and asset condition of all the existing structures falling within project road have been verified as per IRC: SP-35 procedures and guidelines with following field surveys

- Inventory of existing highway bridges / structures
- Visual condition survey of existing highway bridges / structures



Each and every structure has been verified at site and detailed inventory and condition survey is presented in **Appendix-8** of this report.



Maintenance of major structures (Length >60m)

Maintenance of minor structures (Length <60m)

Overall condition of few of the major structures are presented on sample basis of below. However, each and every structure details are presented in **Appendix-8** of this report.

Chainage: 18+668
General Description
LHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 25.10 + 3 x 47.10 + 25.10 m
- Total length of Structure : 191.5 m
- Total deck width of Structure : 16 m
- Type of Foundation : Not Visible
- Type of Substructure (Abutment & Pier) : RCC Wall
- Type of Superstructure : RCC Girder & Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash Barrier & Hand Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- ✓ Concrete portion damage on girder G3 in Span S5.
- ✓ Approach slab settlement observed at A1 & A2 side.
- ✓ RE Panels bulging observed behind abutment A1 & A2 side.
- ✓ Soiling nailing done for RE Panels at A2 side.

Chainage: 18+668
General Description
RHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 25.10 + 3 x 47.10 + 25.10 m
- Total length of Structure : 191.5 m

Pipe Culvert at Km 17+840

4.7 DRAINAGE AND SLOPE PROTECTION

- ✓ Lined Covered drains observed at urban locations and at service road Locations along the corridor.
- ✓ No major damages observed at covered drain locations.

4.8 TRAFFIC SAFETY AND ROAD FURNITURE

- ✓ Metal beam crash barriers provided along the project road appear to be intact over entire length except for few locations where it got damaged.
- ✓ Pedestrian guard rails installed on the median, Separator & appear to be intact over entire length except for few locations where it got damaged.
- ✓ Median Opening locations appear to be in good condition. The width of the existing standing lane median openings was observed for a width of 1.0m.
- ✓ Solar blinkers in Fair condition observed at median openings in the entire project corridor.
- ✓ Street lightings and High masts are observed at urban locations, Toll Plaza & Junction Locations. At few locations street lightings are got damaged/ not functioning well and those items are addressed in the initial cost.

4.9 ROAD USER FACILITIES

- ✓ The Bus Bay with Shelters and Truck lay byes were provided along the corridor.

CHAPTER 5. REHABILITATION PLANS AND DESIGNS

5.1 DESIGN TRAFFIC LOADING

Design Traffic loading has been estimated by considering the latest traffic numbers (FY2025) as supplied by client, VDFs as estimated from the latest axle load survey data and with 5% growth rates for 10 years, 15 years and 20 years design period as below:

Table 31: Traffic Volume (AADT)

Vehicle/Mode	Toll Plaza-1 Km 53+700	
	LHS (No.)	RHS (No.)
BUS	285	285
2A truck	666	666
3A truck	552	552
MAV truck	1156	1156
LCV	296	296

Note: The given AADT of 2-axle data is combination of buses and 2-axle trucks, thus, it is considered as 30% for buses and the rest for 2axle trucks.

Considering traffic scenario in project corridor, two sections have been considered i.e., Section-1: Gundagolanu to Devarapalli (Km15-km64) and Section-2: Devarapalli to Kovvuru (Km64-km85). Based on the input from the Traffic Consultants, for Section-2, MSAs have been increased to 1.6 times as additional traffic from Devarapalli is coming onto Section-2.

Table 32: Estimated Design traffic loading

Homogeneous Section – 1: (Km15-km64)		
Design Period	Gundugolanu to Kovvuru	Kovvuru to Gundugolanu
10 Years	82	54
15 Years	140	92
20 Years	215	141

Homogeneous Section – 2 (Km64-km85).		
Design Period	Gundugolanu to Kovvuru	Kovvuru to Gundugolanu
10 Years	131	86
15 Years	224	147
20 Years	344	225

The computation of traffic loadings is presented in **Appendix 9** of this Report. Design traffic corresponding to 10 years period has been considered for overlay design.

5.2 PAVEMENT REHABILITATION AND STRENGTHENING

5.2.1 Flexible Pavement Strengthening

For Design the Overlay Thickness the following method as suggested in IRC: 115 has been used

- The existing pavement is considered as a 3-layer system consisting of subgrade, granular and bituminous layer. The remaining life of exiting pavement in terms of Fatigue and Rutting life (MSA) are estimated
- The remaining life is compared with design traffic loading. An overlay with assumed thickness is considered on exiting pavement where required.
- The Total system including the proposed Overlay (Trial thickness) is assumed as a four-layer system and considered the relevant MR values for all the four layers namely New BT layer, existing bituminous surface, total existing Granular layers and Subgrade layers.
- The MR value for the New BT is assumed as 3000 MPA (considering VG40 Bituminous grade) for Main Carriageway and for all the remaining three layers, the MR Values derived and finalized from the FWD Analysis are considered
- Critical Tensile strains and Vertical strains are found out by using the IIT PAVE Software at the bottom of existing bituminous layer and at the top of the subgrade layer respectively.
- The Fatigue and Rutting equations (equation given in the IRC: 115 have been used to estimate the Fatigue and Rutting Life of The Pavement system.
- The Obtained Fatigue and Rutting Life are compared with the required life for the assumed trial overlay thickness.

Remaining life of the existing pavement from the above analysis is presented in the following tables:

Table 33: Remaining life of the existing pavement on LHS Carriageway

S.No	Side	From	To	Length (Km)	15th Percentile MR values			Average Existing Crust		Total Crust (mm)	Adopted MR for BT (Mpa)	Strains From IITPAVE		Remaining Life as per IRC - 115 Equations for 90% Reliability			Remarks
					MR for BT (Mpa)	MR for Granular (Mpa)	MR for Subgrade (Mpa)	BT (mm)	Granular (mm)			Vertical strain at bottom, epZ	Tangential strain at top, epT	Nf-Fatigue life, mSA	Rutting life,mSA	Target MSA

Total Length				**69.884**													

From the above, it is to note that if the target MSA (10yr design MSA) is more than obtained remaining life of the existing pavement, then it is required to provide an overlay to ensure the life after over lay should be more than design MSA. Accordingly, based on this criterion, an overlay is warranted for a length of 52.463 km in LHS and 40.191 km in RHS.

The overlay required sections should be analyzed as per IRC: 37 guidelines with assumed overlay thicknesses to obtain the strains (vertical and horizontal) and then fatigue and rutting life in terms of MSAs. In this process, it is to be ensure that the obtained remaining life (MSA) of the existing pavement should be always more than calculated 10yrs design MSA.

Further the proposed overlay thicknesses in LHS and RHS directions, have not been worked out considering the HAM Concessionaire shall maintain the project Road until FY2037.

Input data used and the output from the IIT Pave software has been presented as screen shots for ready reference as **Appendix 10** of this Report.

5.3 STRUCTURAL REHABILITATION

All the structure found to be in fair condition except minor treatment like repair of stone pitching, cleaning of drainage spouts, cleaning of vegetation etc. may be required. Detailed structural rehabilitation quantities have been worked out based on the prevailing condition of existing structures. This methodology describes in detail the procedure for the execution of each item of rehabilitation work of the Existing Bridges of the project.

The scope of this methodology covers the items mentioned below for rehabilitation work of all the existing Bridges.

- Repair/ Replacement of Existing Bearings
- Repair / Replacement of Existing Expansion Joints
- Repair / Replacement of Existing Wearing Coat
- Profile Correction for Existing Deck Slab by Cement Concrete
- Sealing of Cracks for Bridges by Epoxy Resin
- Replacement of Spalled Concrete of ECW by Epoxy Mortar
- Cement Grouting for Repair of Existing Bridges
- Guniting / Shotcrete for Repair of Existing Bridges
- Providing & Fixing of Drainage Spouts
- Repair of Substructure Component
- Repair / Replacement of Railing & Crash Barrier
- Epoxy Bonding between New and Old Concrete.

5.4 EPC COST ITEMS

Even though, project stretch is under HAM until FY2037. The following items are worked out under safety point of view:

- Safety Hazards at 11 Uni-directional flyover Approaches, Requirement of Traffic Impact Attenuators
- Safety at Sharp Entry Exit at few locations, Requirement of improved safety measures
- Safety Hazard at a Culvert Location on exit ramp deceleration lane at Km 60+800, Required to Construct gap in Culvert left before
- Outfall for Open Lined Drains required to be provided to avoid ponding of water on Carriageway
- Submergence of LHS side Carriageway at Km 34+850 at Unidirectional Flyover for a small length in 2023, Requirement of additional culvert for Main Carriageway at this location
- Lighting Requirement at Approaches of Underpasses
- Missing Gantry Signs

Each of the above item is as explained below.

Traffic impact attenuator locations

- There are 10 Uni Directional Flyovers along the project corridor, In LHS 2 Uni Directional Flyovers and in RHS 8 Uni Directional Flyovers.
- Undivided 4 Lane Carriageway exists below for one direction. Median for separation is indicated with Road Marking

At all the Unidirectional flyover locations, Traffic Impact Attenuators along with two-way hazard markers would be required

Sharp entry/exit ramps

At Couple of Locations, the Exist and Entry are very narrow, Total 30 No of Sharp Entry & Exits are present along the project corridor in that 16 No's in LHS and 14 No's in RHS Direction

Sharp entry exit at km 70+800 RHS

Box Culvert at 60+800

There is severe safety Hazard Issue near exit at K 60+800 on RHS (Most of exit lane width is occupied by Culvert and all of a sudden creating a bottle neck). The Exit location shall be shifted to suit the site condition or the culvert required to be widened

Submergence at 34+850

From the local enquiry and discussions with NHAI Team, it is understood that, Flooding on LHS Carriageway near Km 34+850 occurred in the last year during heavy rains. At This location, Unidirectional Carriageway exists for Traffic moving from Kovvuru towards Gundugolanu side. Additional Pipe or Box Culvert may be required at this location to avoid the submergence of the LHA Carriageway at this location

Drain Outfalls

At couple of locations, the outfall for Open lined drain built between the Main Carriageway and Service Road are missing, because of this water stagnating in the drain and even the excess water is standing near the earthen drain portion

Water Stagnation in Shoulder Drain at UDF at Km 65.800 BHS

Lighting

In Approaches locations Highway lighting brackets are provided but the light poles are not installed in many locations along the project corridor.

Huge Amount of street lighting would be required at approaches since the availability of lighting on site is very minimal. (At underpasses, lighting is not provided in approaches).

Light Poles were not installed in service road at Km 61.940 LHS

Missing Gantries

About 13 locations there is a requirement of additional overhead gantries as per site condition to guide the traffic.

All these items are quantified in BOQ under EPC cost prior to issuance of Schedules. However, the same are not considered as project is under HAM until FY 2037 and then Capacity augmentation envisaged in FY2035.

CHAPTER 6. OPERATION AND MAINTENANCE

6.1 INTRODUCTION

Looking at the contractual requirements of maintaining project road under specified level of roughness it is felt that roughness is the most important criterion for finalizing the O&M schedule for the project. Accordingly, the methodology adopted by present consultants includes predicting the roughness year by year under the traffic using a well acknowledged HDM-4 model developed for developing countries like India after lot of research by World Bank. The said model is widely prescribed by MORTH and NHAI during the preparation of detailed project reports for several projects in doing economic analysis for the projects. The economic analysis mainly consists of two parts:

1. Predicting the road deterioration and estimating VOC
2. Estimating Benefits

Considering its importance and present use in India, consultants felt prudent to use the first part, i.e estimating road deterioration and predicting roughness in HDM 4 model to finalize the O&M schedule for the project. This approach is more scientific as it does not assume hypothetical deflection values at 10^{th} and 20^{th} year and includes main criterion of maintaining roughness at 2400mm/Km as per Schedule F.

6.2 CA SPECIFICATIONS FOR MAJOR MAINTENANCE

Schedule F prescribe the maintenance standards to be adopted for project. Summary of same is presented below.

- Appliable Manual: Four lane manual IRC SP 84-2019 published by IRC
- Applicable Schedule for O&M: Schedule-F and Manual
- As per clause 3.1 (iii) of Schedule-B, The periodic maintenance in every six years in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc
- As per clause 3.1 (iii), under Note of Schedule-B, Roughness of <2750 mm/Km shall be maintained by the existing HAM concessionaire prior to handing over to InVIT Concessionaire. After handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2750mm/Km, however after a functional overlay or structural overlay provided in any particular stretch length then that particular length shall be maintained at a roughness level as per Schedule-F (2400 mm/Km) after that overlay.
- Maximum Roughness Allowed: 2400mm/km
- Frequency of Roughness Test: 2 times per year
- Frequency of FWD Test: once in a year

6.3 INPUTS FOR M&M SCHEDULE

6.3.1 Project Sections

Considering traffic scenario, project road has been divided into two sections viz.,

Section-1: km15.320 to 64.200
Section-2: km64.200 to 85.204

Further, no Overlay sections and Overlay sections have been considered from the FWD analysis were again sub-divided in to four cases, taking the consideration of roughness values as a key criterion for major maintenance as below:

- Case 1: Roughness value <2000 mm/Km
- Case 2: Roughness values >2000<2200 mm/Km
- Case 3: Roughness>2200<2400 mm/Km
- Case 4: Roughness>2400 mm/Km

Direction wise analysis has been done separately for LHS (UP)/RHS (DN) and each direction length has been divided into sections based on above.

6.3.2 Traffic (AADT)

The following traffic data has been used in the analysis is as below:

Vehicle/Mode	Toll Plaza-1 Secton-1		Toll Plaza-1 Secton-2	
	LHS	RHS	LHS	RHS
BUS	285	285	456	456
2A truck	666	666	1065	1065
3A truck	552	552	883	883
MAV truck	1156	1156	1849	1849
LCV	296	296	473	473

6.3.3 Vehicle Damage Factors (VDF)

VDF values as obtained from axle load surveys are used for various sections are as given below:

Vehicle Type	Toll plaza (53+700)	
	UP	DN
BUS	0.76	1.81
2-Axle	2.29	1.81
3-Axle	5.08	4.36
M Axle	15.23	9.10
LCV	1.53	0.53

6.3.4 HDM Inputs

FWD and Roughness values are used as obtained from surveys and investigations as below:

6.3.5 Options for MM Schedule

Based on the requirements of CA, various options have been considered to be used as responsive overlays triggered at specified level of roughness of 2400mm/km. Micro surfacing has also been considered to examine its feasibility for major maintenance.

Following options were considered in the analysis:

- ✓ Base Case: MCS at Roughness of 2400mm/Km with regular maintenance
- ✓ Opt-1: Responsive Mill & Overlay of 40mm BC whenever roughness is >2400mm/KM with regular maintenance
- ✓ Opt-2: Responsive Mill & Overlay of 50mm BC whenever roughness is >2400mm/KM with regular maintenance

6.4 ROUHGNESS PROGRESSION

Roughness progression for each section under each alternative maintenance option has been done using the deterioration models in HDM-4. Following sample graphs represents the roughness progression for each alternative:

HDM-4 HIGHWAY DEVELOPMENT & MANAGEMENT

Average Roughness by Section (Graph)

Study Name: GDK LHS_Imp
Run Date: 13-12-2024

Section Details:

ID: GDK LHS1<2000_NO OL
Description: GDK LHS1<2000_NO OL
Road Class: Primary or Trunk
Length: 15.88km
Width: 8.75m
Rise + Fall: 1.00m/km
Curvature: 3.00deg/km

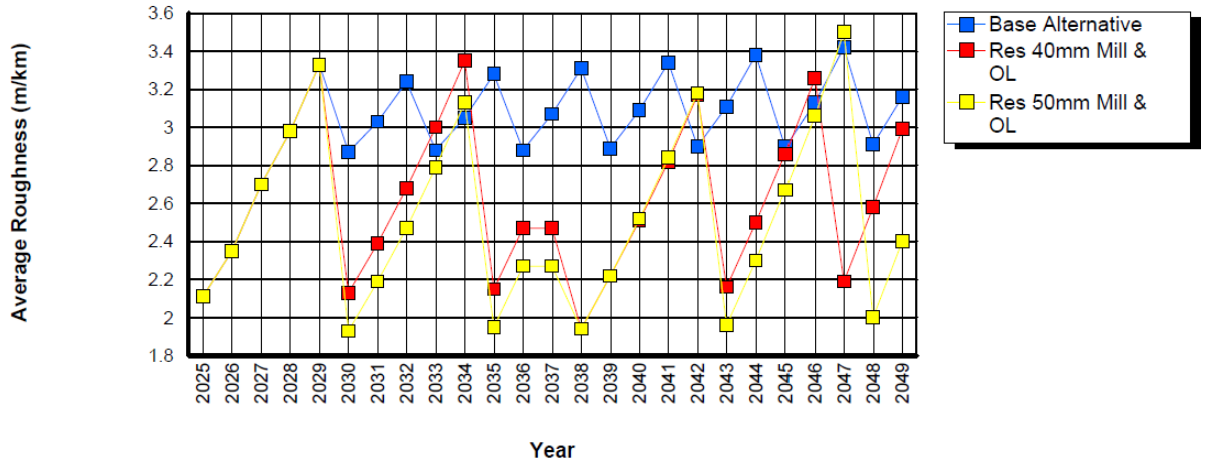

Figure 1: Average Roughness in LHS (UP) Carriageway (Sec-1) No OL<2000

HDM-4 Average Roughness by Section (Graph)

Section Details:

ID: GDK LHS2<2000_OL
Description: GDK LHS2<2000_OL
Road Class: Primary or Trunk
Length: 21.00km
Width: 8.75m
Rise + Fall: 1.00m/km
Curvature: 3.00deg/km

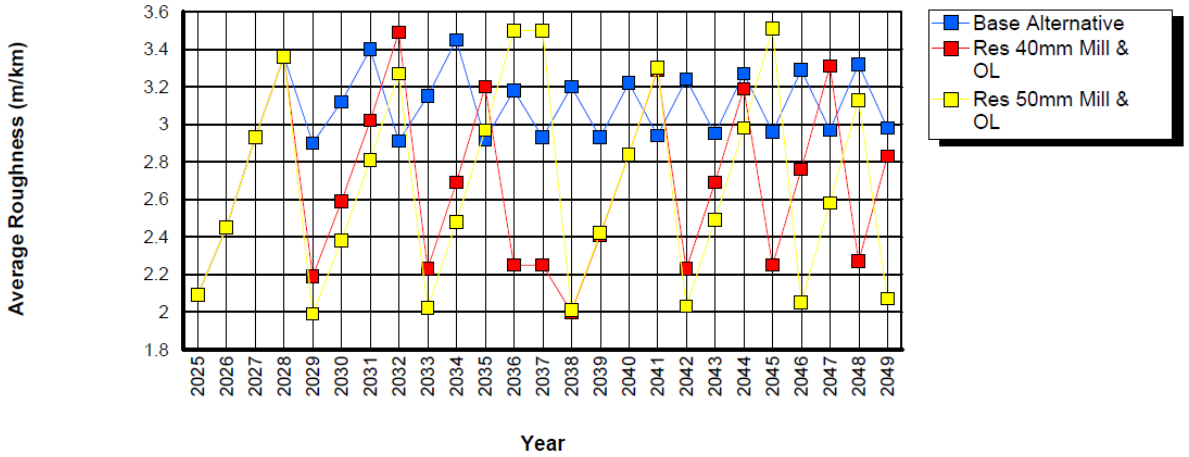

Figure 2: Average Roughness in LHS (UP) Carriageway (Sec-2) Overlay<2000

H D M - 4 **Average Roughness by Section (Graph)**

Section Details:

ID: GDK RHS1<2000_OL
Description: GDK RHS1<2000_OL
Road Class: Primary or Trunk
Length: 25.59km
Width: 8.75m
Rise + Fall: 1.00m/km
Curvature: 3.00deg/km

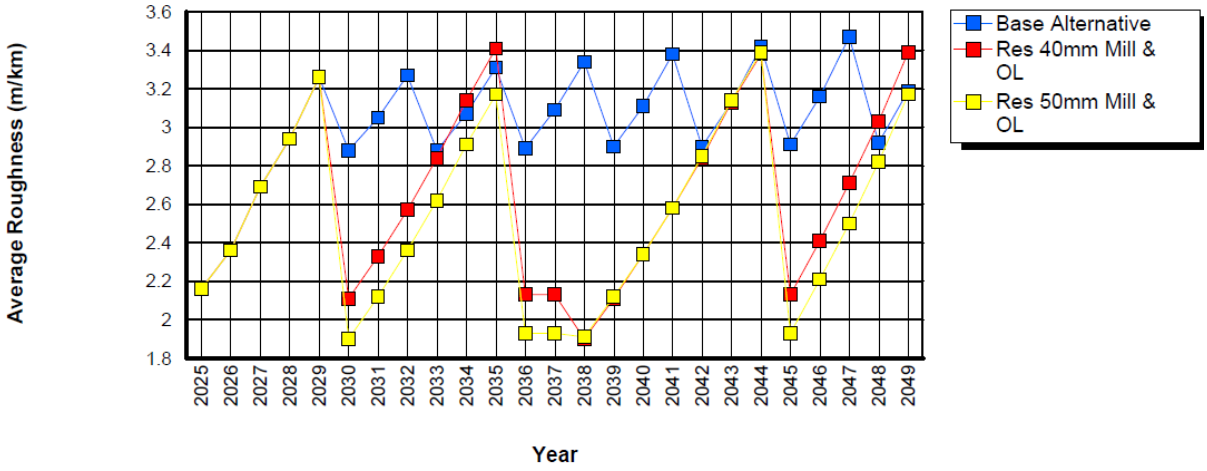

Figure 3: Average Roughness in RHS (DN) Carriageway (Sec-1) No OL<2000

H D M - 4 **Average Roughness by Section (Graph)**

Section Details:

ID: GDK RHS2<2200_OL
Description: GDK RHS2<2200_OL
Road Class: Primary or Trunk
Length: 1.39km
Width: 8.75m
Rise + Fall: 1.00m/km
Curvature: 3.00deg/km

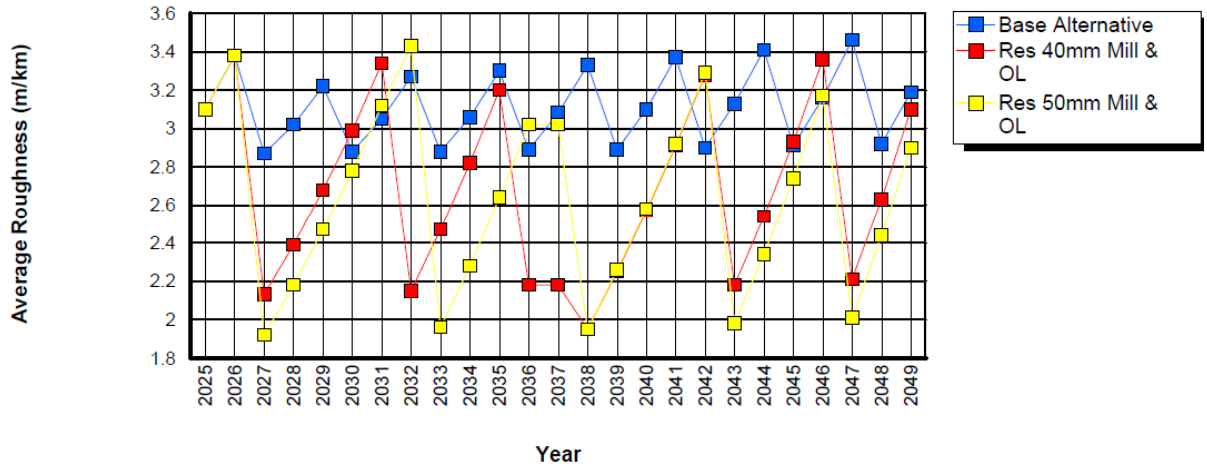

Figure 4: Average Roughness in RHS (DN) Carriageway (Sec-2) OL<2200

6.5 M&M SCHEDULE

The project stretch shall be maintained by existing HAM operator until July,2036 and further considering the traffic projections 6-lane capacity augmentation is envisaged in FY2035, it is felt prudent to consider the 40mm OL as the preferred option, with certain percentage of additional DBM for the balance period after DLP. Adopted MM schedule for the project is as below:

Table 35: Adopted MM schedule for the project for LHS & RHS

Note: For both LHS & RHS, only 1-cycle has been considered in FY2043(LHS)/FY2044(RHS) with 40mm BC along with 50mm DBM in 5% length in view of 6-laning in FY35 and DLP upto FY2041.

6.6 STRUCTURAL PERIODIC MAINTENANCE STRATEGY

Expansion joints:

- Visual inspection is carried out to check for seal breakages, Armor angle, Weld failures, cracks between deck & Expansion joints concrete and Joints filled with debris. Such joints replaced immediately.
- Joint buried with debris shall be inspected for any distress, if any distress is shown it shall be replays immediately.
- During visual inspection it is seen that some Expansion joints are bad where as some are not showing any defects.
- Due to this it is considered provident to change the Expansion joints which are visibly damaged in initial stage.
- In the absence of records pertaining to Expansion joint replacements it is highly difficult to predict the date of replacement needed for compliance to IRC codal requirements. Balance joints which are not replaced initially will be replaced as on when defects are shown in the joints. This aspect is considered in BOQ.

Bearings:

- In order to identify the bearings requiring immediate replacement, the following strategy is adopted.
- Girder Bridges showing diagonal cracks at support, distress in the Pedestals and any form of distress in support location is regarded as a candidate for replacement. By visual inspection there are only a handful of such situations.
- Wherever pedestals are damaged either by cracking or spalling poisons confinement is proposed by Jacketing/MS plate bonding such procedure is very effective and common.
- All Metallic Bearings need to be taken up for servicing.

Wearing Coat:

It is necessary to replace the wearing coat at every 15years interval, as wearing coat is a very weak component of the bridge structure which is subjected to severe deterioration due to loading, environment etc. As of now, we have considered sealing of cracks by Fog Seal and for which does not show any distress other than cracking by viz. Pot holes, abrading etc. Based on this aspect, this cost has been considered in highway O&M cost.

Periodic Maintenance strategy for Replacement of Bearings & Expansion joint:

Below strategy has been considered for periodic major maintenance of the structures.

S No	Description	Bridge components
1	Old structure	Structures which are older than 15-years as of now
2	New Structure	Structures which are Not older than 15-years as of now

Age	Description	Item	structures-Assumption-MMR
			% of Replacement of Major components
			2044
New	Super structure lifting with Pot bearings	Pot	20%
New	Super structure lifting with Elastomeric bearings	Ela	20%
New	Super structure lifting with Rocker bearings	Rocker	0%
Old	Super structure lifting with Pot bearings	Pot	20%
Old	Super structure lifting with Elastomeric bearings	Ela	20%
Old	Super structure lifting with Rocker bearings	Rocker	0%
New	Pot bearing cost	Pot	20%
New	Elastomeric bearing cost	Ela	20%
New	Rocker bearing cost	0	0%
Old	Pot bearing cost	Pot	20%
Old	Elastomeric bearing cost	Ela	20%
Old	Rocker bearing cost	0	0%
New	Expansion joint Replacement	0	20%
Old	Expansion joint Replacement	0	20%
New	Others	0	20%
Old	Others	0	20%

Cost Component for various items and activities have been worked out by considering the Best Industry practice and most appropriate methods. Detailed quantities for work items have been estimated based on the details presented in previous chapters for various heads.

The gist of the cost components considered are presented below:

- Immediate Repair's Cost
- Routine Maintenance Cost
- Incident Management Cost
- Periodic Maintenance Cost
- Operations Cost
- Year by Year total O&M Costs

7.1 RATE ANALYSIS

Detailed rate analysis has been carried out based on MORTH guidelines to arrive at the unit rates of various items. Material rates and their leads from the project corridor are considered as per the material investigations done on the project road. Summary of unit rates arrived at are presented in table below:

Table 36: Unit Rates of Basic Material

S No	Description	Units	Source	Basic rate excluding Transportation & GST	Lead in Kms
1	VG-40 (CAPEX)	MT	Visakhapatnam	52,960	260
2	VG-40 (MMR) *	MT	Visakhapatnam	47,147	260
3	Good earth	Cu.m	BA	139	9
4	40 mm	Cu.m	Crusher	1,002	33
5	20 mm	Cu.m	Crusher	1,533	33
6	12 mm	Cu.m	Crusher	1,259	33
7	6 mm	Cu.m	Crusher	1,259	33
8	Dust	Cu.m	Crusher	679	33
9	M sand	Cu.m	Crusher	585	33
10	SS1	MT	Visakhapatnam	50,000	260
11	Steel	MT	Rajahmundry	54,000	55
12	HTS Strands	MT	Rajahmundry	75,000	55
13	Cement	MT	Rajahmundry	7,600	55

Note: *For future asphalt pavement rehabilitation works, a normative standardized cost for Bitumen (VG-40) has been determined based on historical bitumen rates from August 2020 to December 2024

Table 37: Unit Rates of Major Material excluding GST

Sl.no	Item	Unit	Rate (INR) Excluding GST
1	Embankment - borrow	Cum	641
2	Embankment - Excavation	Cum	105

20	DLC	Cum	5,146
21	BC - G1-VG40/ CRMB-MMR	Cum	12,242

Note: Item Rates considered for Small Projects

Labour: Central Minimum Wages as on Oct'2024 for "C Area" Category of construction workers

7.2 Initial improvement works (SCHEDULE-B)

Costs associated with initial improvements are estimated based on the detailed asset inventory and condition assessment surveys, Pavement condition and structural condition assessment surveys. Items which are not executed as part of scope or in damaged condition have been considered for immediate costs as a part of 1-year capex. Following items are mainly considered for Initial Improvement costs:

- Scope given in schedule-B
- Scope which is not executed
- Road work items
- Bridge Work Items
- Pavement Rehabilitation works
- Structural Rehabilitation works
- Drainage Works
- Slope Protection works
- Safety Works

On review of the contemporary records and on ground assessment the cost to complete is given below.

Table 38: CAPEX Cost FY26

S.no	Description	Unit	Amount (Rs.)
1	TMS	LS	4,77,35,686
2	Toll plaza renovation cost including replacement of Office Furniture, all building, Canopy, all misc. items etc.	LS	1,53,85,073
Total			6,31,20,759
Total including GST @18%			7,44,82,495
Total EPC Cost including GST in Crores			7.45

Note: The TMS cost arrived are based quotes obtained by NHIT, from different vendors such as Comvision, Devaditya and Efkon.

The cost considered in MMR in the year FY2042 under Flexible Road works.

S.no	Description	Unit	Amount (Rs.)
1	Revalidation surveys	LS	66,38,168
2	Safety improvement cost at handing over as per client	LS	1,50,00,000
Total			2,16,38,168
Total including GST @18%			2,55,33,038
Total EPC Cost including GST in Crores			2.55

7.3 ROUTINE MAINTENANCE & INCIDENT MANAGEMENT COSTS

Routine maintenance costs include general maintenance costs of road elements, bridge elements and road furniture and appurtenances. This can be mainly divided into two parts as:

- ✓ General Maintenance of Works
- ✓ Repairs to Highway & Bridge Elements

7.3.1 General Routine Maintenance

General Routine Maintenance of Roads generally include following items:

- Cleaning of Project facilities
- Structures cleaning,
- Cleaning of ROW
- Cleaning and Maintenance of Toll Plaza
- Unlined Drain Maintenance
- Lined Drain Maintenance
- Maintenance of Highway Lighting at Toll Plaza and other project locations
- Median Plantation maintenance & Avenue plantation maintenance:
- Maintenance of Road Furniture
- Maintenance of Road Safety Items

The above items are estimated by considering the detailed break-up of following items:

- Manpower including Managers/Labour etc.
- Vehicles for Labour Transport/Water Tankers/Sweeping Machines etc.
- Resources/Equipment's such as grass cutters, tools, jet sprayers, hydraulic trimmers etc.

7.3.2 Repairs to Highway & Bridge Works

Repairs to highway and bridge works have been estimated based on the assumed quantities (Percentage basis) of execution for every year.

These items include the following:

1	Providing treatment for sealing of road surface / isolated cracks at scattered locations
	i) Covered with 6.7 mm size stone chipping @ 0.1 cum/ 10 sqm.
	ii) covered with dry coarse sand passing through 2.36 mm sieve and retained on 180 micron sieve @ 0.03 cum/10 sqm heated to 600 C
	iii) filling discrete cracks with slow curing bitumen emulsion as per Technical Specification Clause 3004.3.3
2	Providing treatment to bleeding bituminous surface at scattered locations
3	Providing localized repair to rutted portion and edge breaking of bituminous surface
4	Providing treatment and repair to pot-holes and patch work
5	Providing and laying dense bituminous macadam using bitumen grade VG 40 complete as per Technical Specification Clause 507
6	Proving and laying bituminous concrete (asphaltic concrete)
	(a) Using bitumen (VG-40) as per IRC: SP: 53
7	Road Roughness survey
8	Turfing on embankment slopes and at all other Project Facilities
9	Providing repair to stone pitching/apron at scattered locations
10	Rain Cuts Maintenance: Restoration of rain cuts soil, moorum, gravel or a mixture of these
11	Providing and laying apron/ stone pitching on slopes of guide bunds/ road embankment / other location
12	Providing and laying stone aggregate filter material (150 mm compacted thickness) underneath pitching
13	Unlined drain
14	Filling in median island with approved materials with all leads and lifts complete as per TS Clause No. 407
15	Replacing damaged / broken railing with new pre-cast / cast-in-situ, concrete railing to match with existing design and pattern.
24	Carrying out repair to road signs including strengthening resetting or otherwise repairing signs and delineators
	a) Road sign board mounted on single post
	b) Road sign board mounted on double post
	c) Overhead/ Gantry Sign boards
	d) Delineator
25	Supplying and fixing at site retro-reflectorized type **sign boards/signs**
	90cm Equilateral triangle
	60cm circular
	90 cm circular
	90cm high octagon
	80cm x 60cm rectangle
	Chevron signs 60cm x 45cm
	Place identification signs (Fig 15.7 of IRC 67)

	Providing and fixing Object Markers
	Providing and fixing of retro-reflectorized Route Marker signs (size 450mm x 600mm)
26	**Hazard Marker Sign :**
	a) size 90 x 30 cm
	b) size 30cm triangular side cluster of red reflectors (screen printed)
27	Cats Eyes/Raised pavement marker (NMC Nails Less)
28	Painting two coats on old surface after minor repairs to give an even and smooth surface and printing letters and figures with synthetic enamel paint
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
29	Providing painting lettering and fixing of distance measurement stones including dismantling of old damaged/ broken ones, confirming to TS Clause 804
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
30	Providing and fixing road delineators conforming to TS Clause No. 805 as directed by the Engineer.
31	Repainting the kerb stones and separation barrier with first quality synthetic enamel paint of approved brand
32	Painting all types of pavement markings including lines, dashes, arrows etc. on roads as per relevant IRC/MOST standards after cleaning the surface complete in all respects as directed by the Engineer.
	a) Hot applied Thermoplastic compound
	(i) Lane / Centre Line / Edge Line
	(ii) Direction Arrows
	(iii) Diagonal Chevrons Markings
33	Supplying and laying cast-in-situ cement concrete kerb without channel section
	a) by Manual/machine including formwork
34	Major repair / replacement of metal beam crash barrier (W profile guard rails)
35	Providing and fixing chain link/ welded mesh fencing / square bars fencing
36	Dismantling the old damaged chain link/welded mesh / square bars fencing and replacing it with new chain link/ welded mesh/square bars fencing
37	Provision of rumble strips
38	Shoulder Maintenance:
39	synthetic enamel paint of approved brand on metal pedestrian guard rail
40	Dismantling of wearing course

B. Structures

1. Wearing coat comprising of 50 mm thick BC.
2. Cleaning and adding rubber sealant near expansion joints.
3. Modular Expansion joints.
4. Replacement of Damaged Concrete Railing all complete as per Technical specifications and as directed by the Engineer
5. Provision of an RCC crash barrier (0.35sqm cross sectional area) constructed with M-40 grade concrete including reinforcement
6. Cleaning of rocker & roller bearing using high pressure water jet, free from rust scales, re-setting & greasing the bearings using graphite grease including cost of materials, labour etc., complete.

7. POT PTF Bearings greasing and maintaining (sand plastering).
8. Elastomeric Bearings and maintaining.
9. Cutting of groove of 15 mm x 15 mm along crack and sealing the same with epoxy putty including cost of material, labour etc.
10. Carrying out 50 to 60 mm thick shortsheeting using a mix proportion of 1:2:2 (cement: sand:6 mm down aggregate) added with Polypropylene fibers at a dosage rate of 125 gms/bag of cement including cost of labour, material, scaffolding, equipment etc complete.
11. Repair of Floor Aprons, pitching and other protection works
12. Cleaning of Drainage Spouts
13. M-25 Concrete

7.3.3 Incident Management Cost

Incident Management & Safety items include the following:

- ✓ ATMS control room operations,
- ✓ Regular patrolling & reaching accident/incident site,
- ✓ providing relief to injured persons including taking them to nearest hospital and attending to the safety requirements at the location (putting cones, safely guide & manage the traffic using signs, safety barricades, etc.),
- ✓ removal of accident /breakdown vehicles, removing of dead animals/birds lying on the highway and loading, unloading, transportation & disposal of surplus material left over by accidental vehicle or otherwise lying on road (on carriageway) and
- ✓ Encroachment prevention & removal with all lead & lifts complete with proper communication equipment,
- ✓ consumables, materials, suitable Towing vehicles, Ambulance, patrolling vehicles and manpower like drivers, helpers, para-medical staff, labour including deployment of crane and all works shall be done as per requirement and as directed by Client representative and as per Relevant Specifications as applicable.

7.4 OPERATIONS COSTS

In addition to the above-mentioned General Routine maintenance, Repair & Rehabilitation cost for Road and structures, Incident management cost the following the Cost towards Operations include:

- Electricity Charges
- Toll Plaza Operation cost
- Insurance Charges
- Road Asset Management System (RAMS), Bridge Management System (BMS) & Surveys
- Other Office Expense (Admin, SPV, IE and Other)

Table 39: O&M Cost for various Years in Crores (including GST)

S.No.	FY	Operation & Maintenance Cost (in INR Cr.)								
		Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	0.60	-	-	-	2.47	6.30	0.11	-	3.46

19	2040-2044	5.14	3.68	3.31	5.27	4.97	5.08	3.61	1.68	5.58
20	2040-2045	5.14	3.68	3.31	5.27	4.97	5.08	3.61	1.68	5.58
Total		**30.09**	**14.73**	**13.23**	**21.08**	**59.44**	**108.25**	**33.67**	**8.60**	**89.63**

Note: **1)** The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation.

2) All other remaining costs are based on FY 2025 with GST and without escalation.

3) The amount is Crores inclusive of GST and without escalation,

7.5 PERIODIC MAINTENANCE COSTS

Cost towards major maintenance include following:

- ✓ Cost of Periodic maintenance of Pavement based on Finalized MM schedule
- ✓ Cost of Periodic Maintenance of Structures
- ✓ Cost of Periodic replacement of Toll Equipment's & Software

Table 40: Major Maintenance Cost

FY	Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS
2025-2026	-	-	-	-
2026-2027	-	-	-	-
2027-2028	-	-	-	-
2028-2029	-	-	-	-
2029-2030	-	-	-	-
2030-2031	-	-	-	-
2031-2032	-	-	-	2.82
2032-2033	-	-	-	-
2033-2034	-	-	-	-
2034-2035	-	-	-	-
2035-2036	-	-	-	-
2036-2037	-	-	-	-
2037-2038	-	-	-	-
2038-2039	-	-	-	5.63
2039-2040	-	-	-	-
2040-2041	-	-	-	-
2041-2042	2.55	-	-	-
2042-2043	90.63	-	-	-
2043-2044	86.48	9.26	12.03	-
2044-2045	-	-	-	-
Total	**179.66**	**9.26**	**12.03**	**8.45**

Note: The amount is Crores inclusive of GST and without escalation, considering FY2025 rates

7.6 CAPACITY AUGMENTATION

The capacity augmentation is envisaged in FY 2035& FY2036 for the project on EPC mode with DLP of 5 years until FY2041.

- Only one cycle of MMR has been considered in FY2043 (for LHS) and FY2044 (for RHS) with 40mm BC and 50mm DBM in 5% of the project length for MCW and for Service Road 30mm BC is considered.
- Even though Structural Overlay requirement is there as per FWD test and the same is not considered as the HAM Concessionaire will maintain until FY2037.
- The capacity augmentation is envisaged in FY 2035& FY36 for the project road with DLP of 5 years until FY2041.
- Minimum Central Wages for labour is considered for Category "C" as of OCt'2024 with 0% escalation considered.
- Overheads and Contractor's profits are considered from MORTH Standard data book -2019 for "Small Project" category.
- The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. Whereas, all other remaining costs are based on FY 2025 with GST and without escalation. The Cost is given in Crores inclusive of GST and without escalation, considering FY2025.

1. EXECUTIVE SUMMARY

1.1 Ramboll Scope

NATIONAL HIGHWAYS INFRA INVESTMENT MANAGERS PRIVATE LIMITED have entrusted Ramboll India Private Limited for technical due diligence study of 61.128 km long National Highway corridor comprising six lane section of NH-140 between Chittor to Mallavaram in the State of Andhra Pradesh. Accordingly, Ramboll team has undertaken the work of preparing advisory report based on study of project related reports and documents, visual inspections, and field investigations.

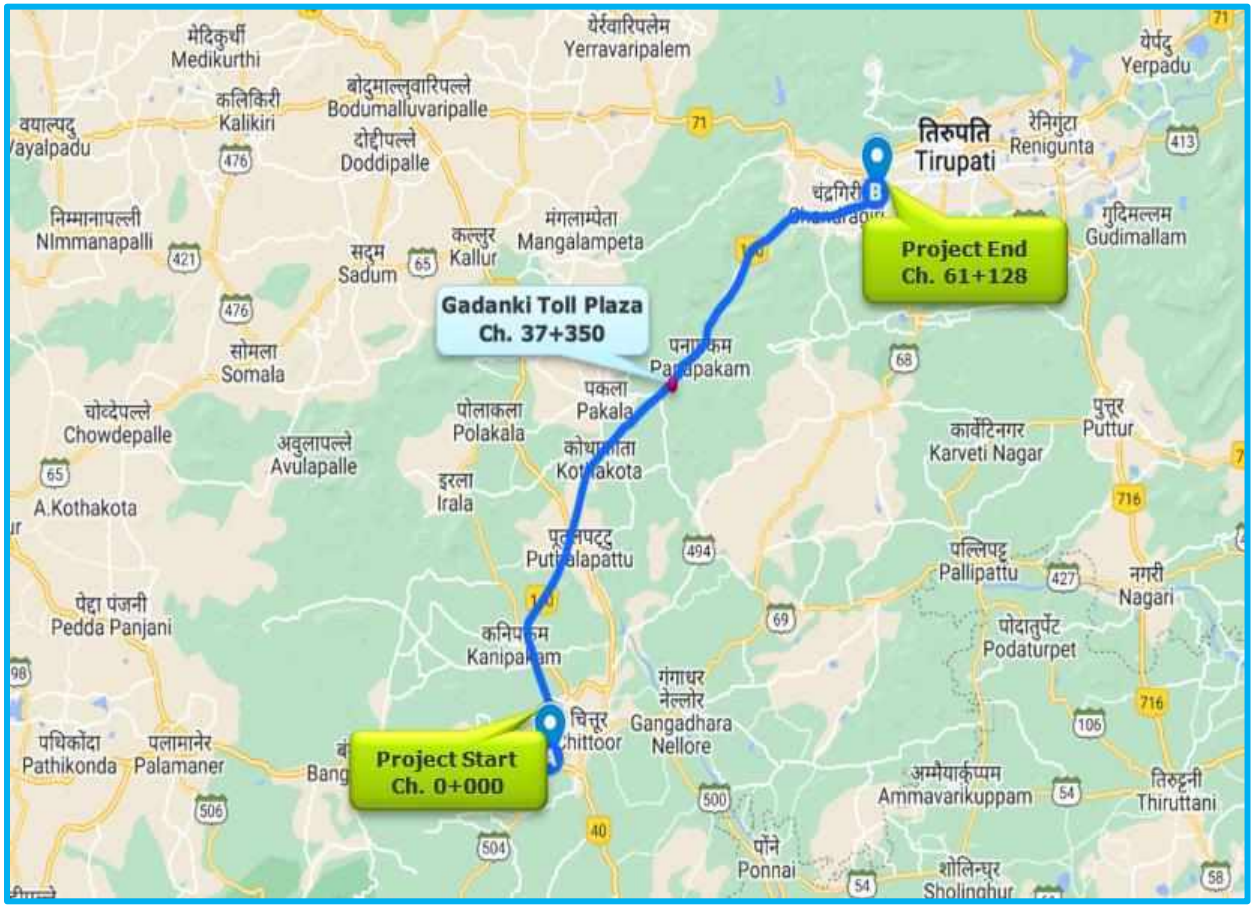
1.2 Project Introduction

The Government of India had entrusted to National Highways Authority of India (NHAI) the development, maintenance, and management of National Highway No. 140 which includes.

> Six laning of NH-140 from Chittor (Design km 0.000/Existing km 158.000 of NH-4) to Mallavaram (Design km 61.128/Existing km 41.800 of NH-140) (Design Length = 61.128 km) under Bharatmala Pariyojana on Hybrid Annuity Mode.

The Authority had invited proposals by its Request for Proposal for the above package. After evaluation of the bids received, the Authority had accepted the bid of the selected bidder and issued its Letter of Award No. NHAI/Tech/ AP/NH-140/Cht-Mal/2017-18/115166 dated 26.03.2018 for the package.

Provisional Completion Certificate of the project is achieved on 10 May 2021.



Completion certificate of the project is issued on 08 June 2021.

Project Highway is under Operation and Maintenance as per provisions of the existing HAM Concession Agreement. Existing Concessionaire shall operate and maintain the project up to O&M Handover date, 10 May 2036, pursuant to and in accordance with the existing HAM Concession agreement.

1.3 Project Description

The project road is in the administrative location of Tirupati district in the state of Andhra Pradesh. The project traverse's major settlement areas such as Patnam, Natthapachenu, Chigarapalle, Kothakota, Rangampet, Konapareddypalli, Thotapalli, Nendragunta, Pakalavaripalli, Panapakam, Thurupupalli, Kodandaramapuram, Mattampalli.

Project Location Map

The project starts on NH 140 at Km 0+000 at Chittoor and ends at km 61+128 at Mallavaram intersection.

Particulars	Project
Project Name	Six laning of NH-140 from Chittor (Design km 0.000/ Existing km 158.000 of NH-4) to Mallavaram (Design km 61.128/ Existing km 41.800 of NH-140) (Design Length = 61.128 km)
Mode of the Execution (BOT Toll/ BOT Annuity/ EPC/ HAM/ Others)	Hybrid Annuity Mode under Bharatmala Pariyojana
Project Phase	Tolling, Operation, Maintenance and Transfer
No. of Lanes/ Configuration	6 Lane divided carriageway
Length of the Project (in Km)	61.128 km
Client	NHAI
NHAI NH No.	NH-140

Particulars	Project
EPC Contractor / Concessionaire	KNR Tirumala Infra Private Limited
Total Project Cost	INR 1730.07 Crores
Independent Engineer (O&M Phase)	Lion Engineering Consultants Private Limited in association with Synergy Engineers Group Pvt. Ltd.
LOA	26 March 2018
Date of Signing of CA	09 May 2018
Appointed Date	04 January 2019
PCOD	10 May 2021
Completion Certificate	08 June 2021
End Date of Concession period / Maintenance obligation for Latest EPC Contract	15 Years commencing from COD
O&M Handover date	10 May 2036
No. of Toll Plazas (Number and Location)	Toll Plaza : Gadanki Toll Plaza

1.4 Scope of work

Broadly the Scope of services encompasses the following:

- Review of available documents and site visit
- Field inspection, investigations, and Analysis
- Operations and Maintenance assessment
- Major Maintenance strategy and assessment
- Estimation of Opex and CapEx.
- Preparation of presentation and project report

1.5 Assessment of Project Assets

Projects asset inventory and their condition assessment is prepared through visual inspection during site visits, review and analysing the reports shared by the client, by field investigations validating the findings and by NSV survey. All the elements and components pertaining to project asset are reported in subsequent Chapter 5, 6 & 7 of this report and their assessment is used to prepare the strategy for preventive, routine, and periodic maintenance. The overall condition of the project and its assets are satisfactory. Detailed asset inventory and pavement evaluation is provided separately in Annexure I & II to this main report.

S.No.	Item - Features	Units	Project
1	**Service Road**	km	115.691
2	**Bypasses**	km	24.235

S.No.	Item - Features	Units	Project
3	Major Intersections	Nos.	4
4	Minor Intersection	Nos.	61
5	Bus bay & Bus Shelters	Nos.	26
6	Truck Lay Bye	Nos.	4
7	Rest Area	Nos.	0
8	Toll Plaza	Nos.	1
	Toll Plaza lane	Nos.	12
9	Median Opening	Nos.	5
10	Street Light Poles	Nos.	448
11	High mast Lights	Nos.	15
12	Solar Blinkers	Nos.	13
13	Avenue Plantation	km	9.202
14	Median Plantation	km	52.612
15	Fuel station	Nos.	13
16	Sign Boards	Nos.	911
17	Gantry Sign Board	Nos.	20
18	Pedestrian Guard Rail	km	3.528
19	Rigid Concrete Barrier	km	36.577
20	W Beam Crash Barrier	km	17.684
21	Shoulder/Separator Drain	km	113.448
22	Earthen Drain/ Chute Drain	km	0.437
23	Median Longitudinal Drain	km	8.598
24	CCTV	Nos.	31
25	VMS	Nos.	4
26	Delineators	Nos.	1630
27	Object Hazard Marking	Nos.	898
28	Chevrons	Nos.	165
29	Road Studs	Nos.	14258
30	Foot Path	km	43.911

S.No.	Item - Features	Units	Project
31	**Entry/ Exit**	Nos.	20
32	**5th Kilometer Stones**	Nos.	22
33	**Km Stones/Ordinary KM stones**	Nos.	96
34	**Hectometer Stones**	Nos.	411
35	**Kerb**	km	225.974

1.6 Assessment of Structures

Site data is collected and analysed for condition and inventory of Major bridges, and Grade separators using the Mobile Bridge Inspection Unit (MBIU). Comprehensive visual inspection is carried out for assessing the minor bridges, underpasses, overpasses, and culverts of the entire project stretch of 61.128 kms. During the inspection and condition survey no major failure/Distresses is observed however minor cracks, exposed reinforcement at parapet, honeycombing repairs at structural components, clogged drainage spout, debris found under culvert and waterways and vegetation found on superstructures with unwanted material found around the bearings.

Total nos. of structures on the Project Highway are given in the table below

Sl. No.	Item	Project
1	Major Bridges	6
2	Minor Bridges	23
3	RUB	1
4	ROB	-
5	Overpass	-
6	VUP	10
7	LVUP	5
8	PUP/CUP	-
9	FOB	2
10	HP Culvert	15
11	Box Culvert	100
12	Slab Culvert	-

1.7 Toll Management System (TMS)

The project has one toll plaza comprising of hybrid ETC lane infrastructure of combined 12 lanes. Gadanki TP - is a straight toll plaza and equipped with 12 Hybrid lanes, however 10 lanes are operational. No separate two-wheeler lanes are provided adjacent to the extra-wide lanes in any of these two plazas.

Further it is also found that none of the directions of the toll plaza are equipped with Static Weigh Bridges.

At Gadanki TP Medium Speed Weigh in Motion systems are installed in 10 lanes but were found to be nonfunctional and needs to be refurbished and recalibrated, currently no vehicle weight is being captured in the TMS. Stamping and calibration works are yet to be undertaken by the vendor

At Gadanki toll plaza toll equipment is being maintained in fairly good condition. The AVC systems are functional, and all lane controllers are found working in proper condition.

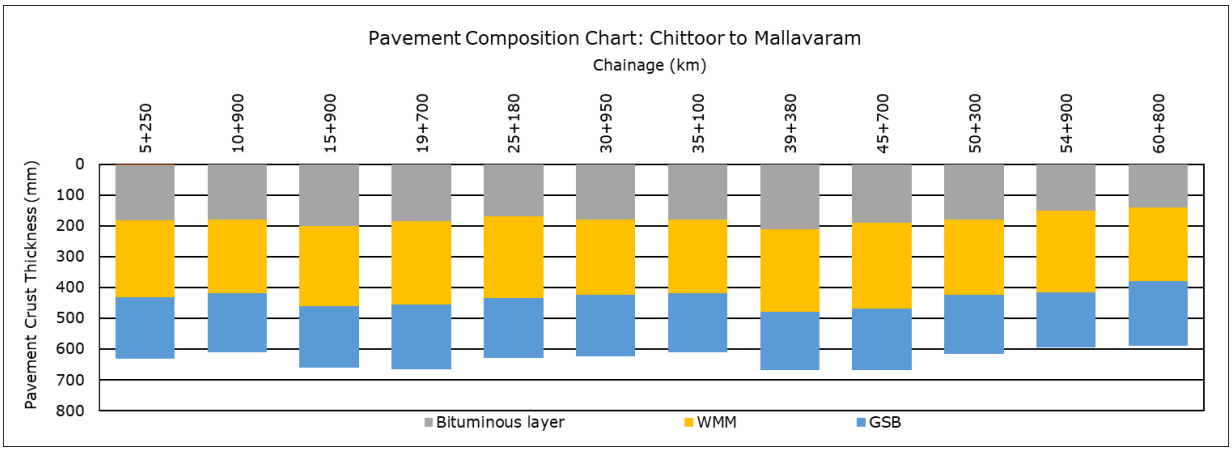
HTMS hardware is found installed and functional in this section of the highway.

1.8 Soil and Material investigation

Soil and Material investigation are done with the samples collected from pit investigation and the results are narrated in Chapter 9.

Subsoil is generally consistent throughout the project road and is predominantly Silty Sand and Clayey sand soils.

Summary of strength parameters in the soil investigation is shown below.

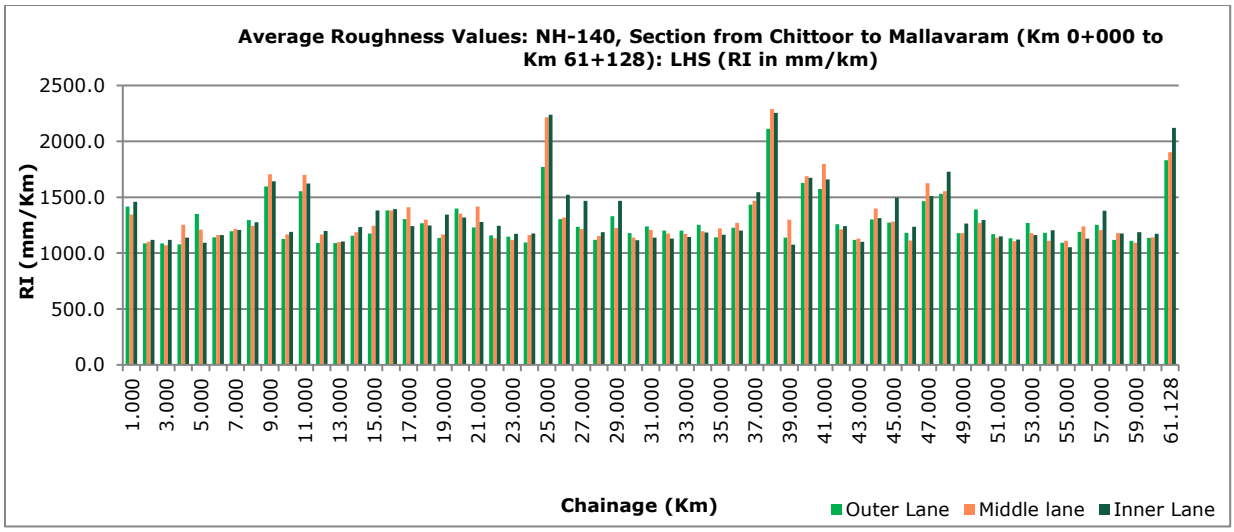


Description	Liquid Limit	Plasticity Index	Free Swell Index	4-days soaked CBR	Degree of compaction
Project - NH-140, Chittor to Mallavaram: Km 0+000 to Km 61+128	17%-29%	Max 9%	Max 20%	12.6%-28.1%	92.3%-96.7%
MoRTH Limits	**<50%**	**<25%**	**<50%**		

*Variance between MDD and FDD is converted in-terms of degree of compaction

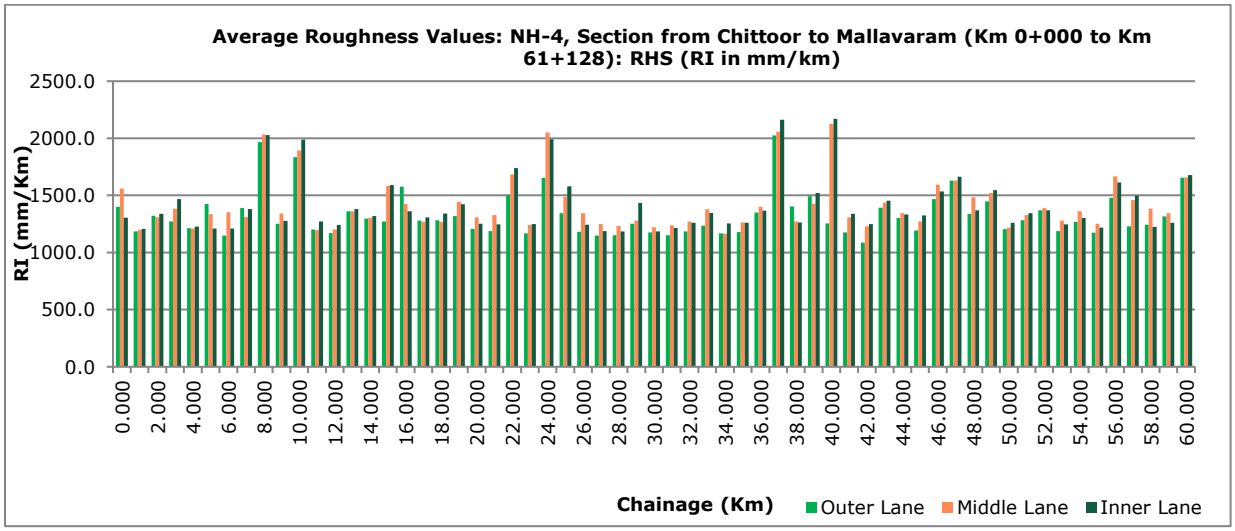
All the measured LL, PI and FSI values are within the acceptable limits as per MoRTH guidelines.

The existing pavement along the project corridor is flexible in nature. The pavement



composition comprises of bituminous layer, granular base over the granular sub-base. Summary of existing pavement crust thickness is presented in an illustrative bar graph below.

1.9 Pavement Evaluation



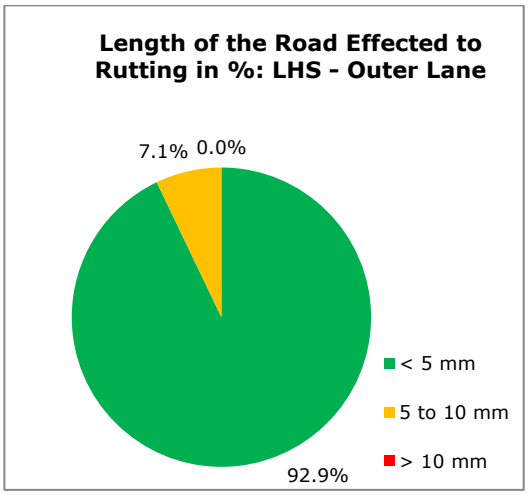
Pavement condition survey was carried out on each lane of each carriage way with NSV. The obtained lane wise Roughness summary in terms of BI (mm/km) is illustrated below and in Chapter 10 for Main carriage way LHS and RHS respectively

Confidential

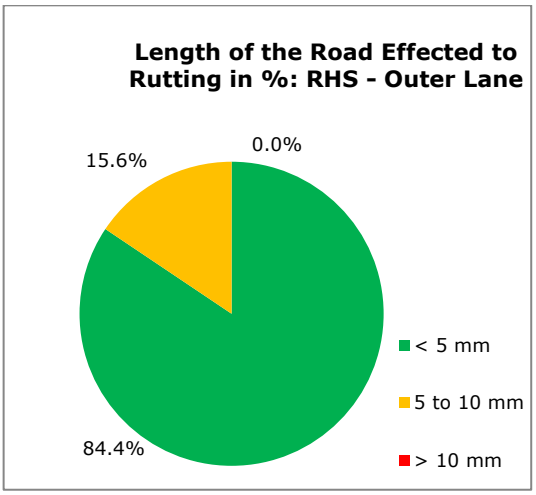
From Km 39+450 to Km 40+700, due to land availability issues survey was not carried out

Illustrative summary of roughness for LHS direction

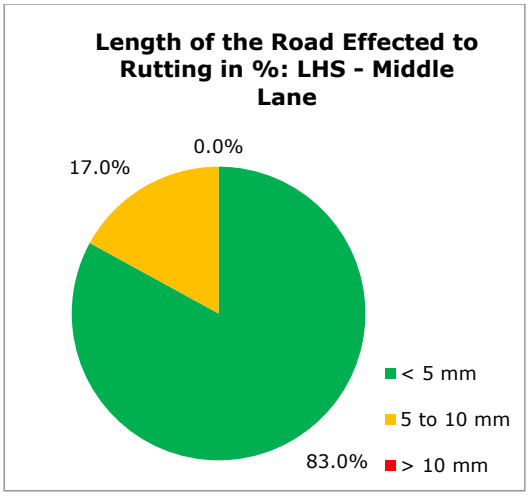
From Km 39+450 to Km 40+700, due to land availability issues survey was not carried out.



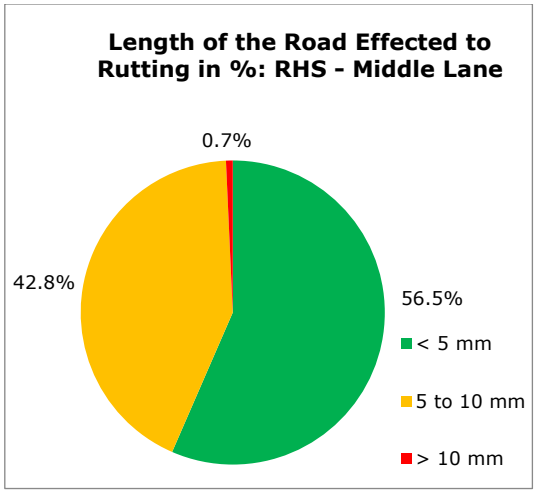
Illustrative summary of roughness for RHS direction



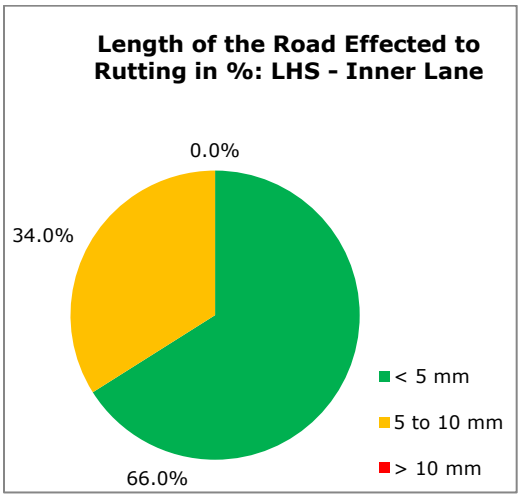
As per Schedule-B of TOT Schedule clause 3.1 (III) Repair and Rehabilitation of Pavement - a Roughness of <2750 mm shall be maintained by the existing HAM Concessionaire prior to handing over to InVIT Concessionaire. After O&M handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2750mm, however after a functional overlay (Roughness exceeding 2750 mm) or structural overlay (FWD Test) is provided in any particular stretch length then that particular length shall be maintained at a roughness level mentioned in Schedule F after that overlay. For clarification, InVIT concessionaire shall maintain a roughness level (mentioned in Schedule F) in a stretch length where overlay (Structural or Functional) has been provided by InVIT concessionaire.



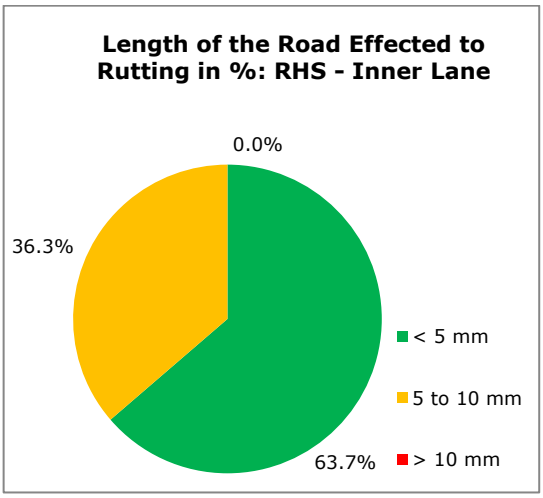
Rutting data of flexible pavement section for MCW is also collected through Digital Laser Profilers System (DLP). The obtained lane wise rutting summary is graphically represented for both LHS & RHS direction



Confidential



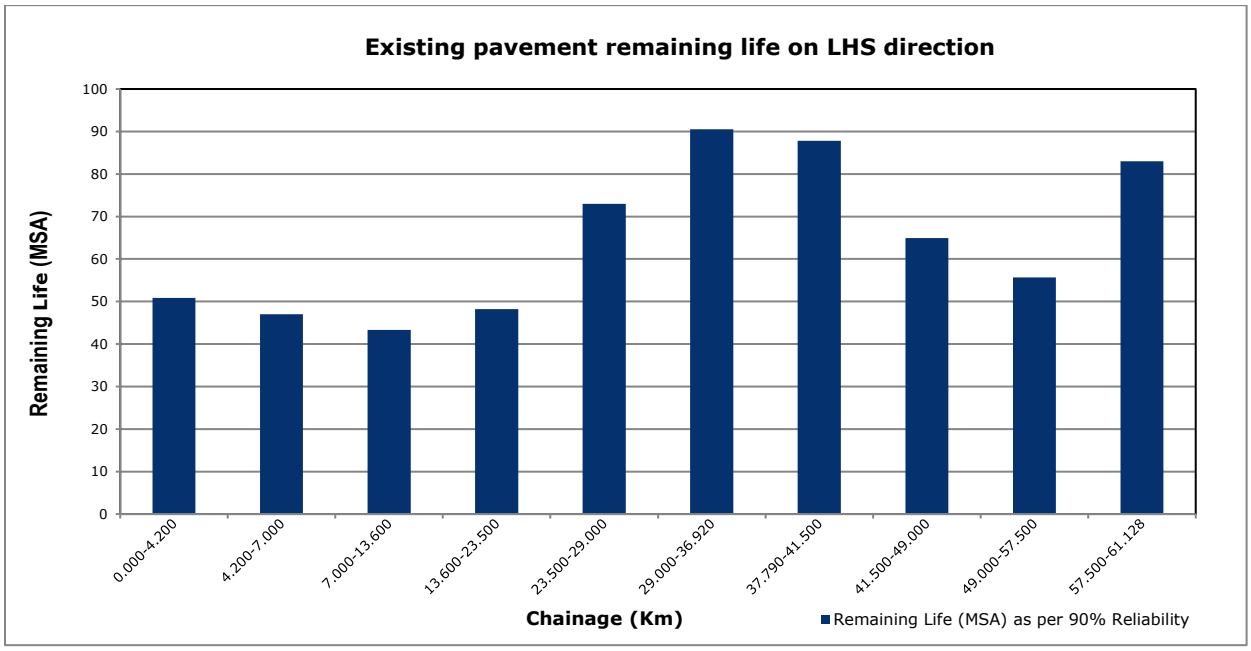
as below and detailed in Chapter 10. In LHS direction rutting value is within desirable limit only (not more than 10mm) and in RHS middle lane direction a length of 0.420km rutting is more than 10mm.



**From Km 39+450 to Km 40+700, due to land availability issues survey was not carried out.*

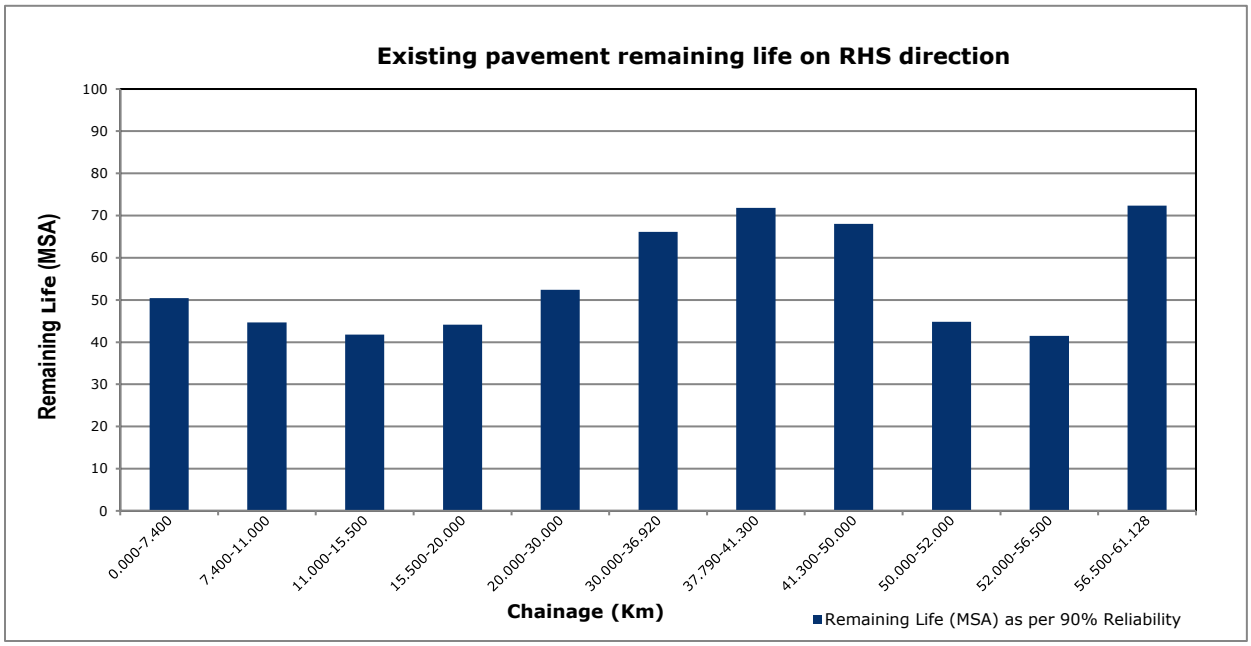
Confidential

Illustrative summary of rutting for Chittoor to Mallavaram



In Main Carriageway, on RHS direction at few location rutting and cracks were observed, apart from this overall section is good. The rigid pavement at RUB and Toll plaza is good, few slabs have cracks and spalling as observed. In Service Road, pavement condition is good in both directions.

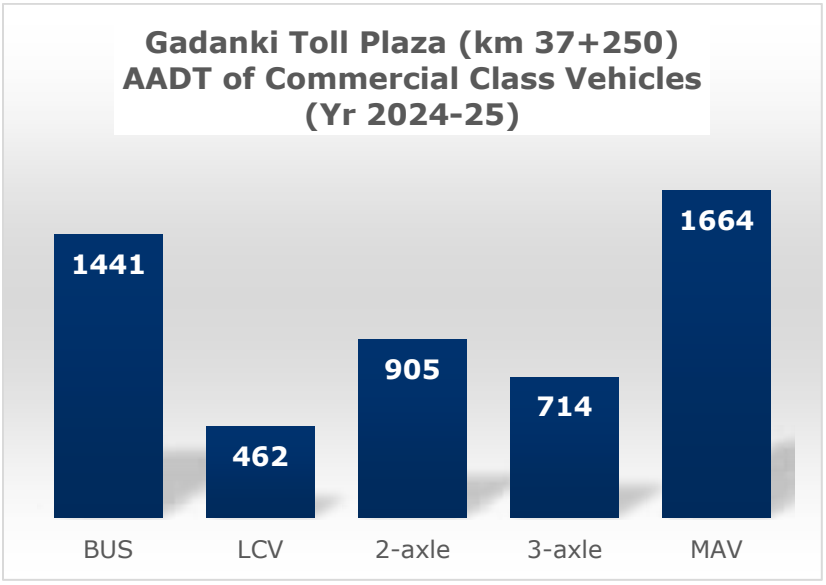
FWD deflection measurement has been carried out for each carriageway to evaluate the pavement structural strength and analysis of remaining life of project is carried out in conformity with IRC: 115-2014 and presented in Chapter 10 of this report.



Analysis of Flexible Pavement and graphical presentation:

FWD deflection measurement has been carried out for each carriageway to evaluate the pavement structural strength and analysis of remaining life of project in conformity with IRC: 115-2014. The in-service three-layer pavement system has been analysed with the back-calculated corrected layer moduli and layer thicknesses. From the performance criteria equations, the residual/remaining rutting and fatigue life have been estimated. Remaining life and required overlay are calculated as per 90% reliability.

The detailed analysis is presented direction wise in Chapter 10 and the obtained remaining life are graphically presented below:



Confidential

Illustrative summary of remaining life of 6 lane pavement for Chittoor to Mallavaram

Team for Technical Due Diligence conducted a 7 days axle load survey at the toll plaza location. The Annual Average Daily Traffic (AADT) of all commercial class vehicles as provided by the client is shown below

VDF values are obtained as per the analysis of 7 days axle load survey are presented below:

Location/ Vehicle Type		BUS	LCV	2axle	3axle	MAV
NH-140: (Gadanki Toll Plaza-37+320)	LHS	1.175	0.818	3.343	3.943	8.221
	RHS	1.210	0.629	2.676	6.812	10.620

Confidential

AADT was provided by client and 5% growth rates are considered on year, and the design traffic was projected for next 10 years (YR 2035-36). Design traffic for flexible pavement design is computed and shown below

Location	Design Traffic (MSA) up to YR 2035-36	
	LHS	RHS
NH-140: Chittoor to Mallavaram (Km 0+000 to Km 61+128)	31	39

The Remaining life of existing pavement is more than the design traffic hence, overlay is not considered in any flexible pavement section of Chittoor to Mallavaram.

1.10 Operation and Maintenance Requirements and Strategy

The Contractor and concessionaire shall always maintain that during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule K (the "Maintenance Requirements" of HAM Concession Agreement) and in Schedule F (the "Maintenance Requirements" of TOT Concession Agreement)

A. Schedule K of the HAM CA
B. Schedule F of the TOT CA

Distresses develop in flexible pavements are described with severity index, and repairing measures are given in Chapter 11. All appropriate technical and contractual parameters are careful reviewed to formulate the strategy of immediate repair and rehabilitation for the existing distresses and roughness. The quantities estimated for each lane are presented in Chapter 11.

The Major Maintenance Strategy is assessed in 2 scenarios based on engineering practice and HDM-4 model. The recommended Major Maintenance Strategy till the end of TOT concession period is presented below and also elaborated in Chapter 11.

Major/Periodic Maintenance Strategy

Flexible Pavement

NH-140, Section from Chittoor to Mallavaram (Km 0+000 to Km 61+128)			
Year	**Description**	**Main Carriageway**	**Service Roads**
YR 2036 (10.05.2036 Handover Date)	-	Maintenance by the on-going concessionaire	
YR 2040-2041 & YR 2041-2042	1st Renewal Layer	40mm BC in 100% length in Both direction 50mm DBM in 10% length on both direction with milling.	30mm BC in 100% length and 50mm DBM in 10% length on both direction with milling.
YR 2044-2045	2nd Renewal Layer	Micro surfacing in 100% length in Both direction	

1. Modified bitumen is recommended for BC overlay works on Main Carriageway.
2. VG-40 grade bitumen is recommended for DBM rehabilitation works on Main Carriageway.
3. VG-40 grade bitumen is recommended for service roads

1.11 Cost Estimate

The cost estimate is worked out for expenses on Immediate Works (CAPEX) and expenses on operations and maintenance (OPEX) at present rates considering 2024-25 as the base year and is detailed in Chapter 12. The costs for Admin, SPV, IE, and other office expenses are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation. Cost Estimate is worked out for expenses on

i. The costs for the restoration / improvement of the Toll Plaza (civil cost) is accounted for Capex (Initial Improvement works). Installation/restoration of Sign Board, Thermoplastic / Transverse Bar Marking on pavement, Installation/restoration of 5th, KM, HM, Boundary Stone, Painting of Kerb Stone, etc. are taken as Preventive Maintenance which is to be executed by TOT Concessionaire
ii. Highway Lighting, Tolling operations, Survey, Insurance Charges, Administrative Expenses, Incident management, AMC cost for TMS & ATMS – is included as Operational cost for TOT Concessionaire.
iii. Routine Maintenance and Repairs – to be done by HAM Concessionaire till their end of HAM concession period, and thereafter by TOT Concessionaire till FY 2044-45 (End of Concession period of TOT Concessionaire).
iv. Periodic Maintenance - to be executed by HAM Concessionaire till their end of HAM Concession, and then by TOT Concessionaire till FY 2044-45 (handing over of the project).
v. Immediate repair of pavement & structures– not included in the cost estimate as it is to be executed by HAM concessionaire as per the maintenance requirements stipulated in their Agreement.
vi. Bitumen has been assumed to be sourced from IOCL Chennai Refinery. The distance (to & fro) from the midpoint of Project Highway is taken as 182 km. Modified Bitumen and VG-40 grade bitumen is considered in cost estimate.

Initial improvement works is estimated as INR 6.55 Crore.

Periodic Maintenance is estimated as INR 251.51 Cr.

Routine maintenance cost is INR 47.69 Cr.

Operational cost till end of concession for this 61.128 km stretch is INR 389.37 Cr.

Capex, Periodic Maintenance and Opex for this 6-lane corridor is estimated till end FY 2044-45 as INR 647.43 Cr.

2. INTRODUCTION, APPROACH AND METHODOLOGY

National Highways Infra Investment Managers Private Limited have entrusted Ramboll India Private Limited for conducting technical due diligence study for 61.128 km long National Highway corridor comprising six lane section of NH-140 between Chittor to Mallavaram in the State of Andhra Pradesh.

Accordingly, Ramboll team has undertaken the work of preparing Technical Due Diligence Report based on study of project related reports and documents, visual inspections, and field investigations.

2.1 Scope of Work and Compliances

The scope of work agreed with National Highways Infra Investment Managers Private Limited for conducting the technical due diligence study is presented in Table 2-1. The table also presents the chapters of the Technical Due Diligence Report where different items of scope of work are covered.

Table 2-1: Scope of Work and Compliances

SN	Scope of Work	Discussed At
1	**Site Visit and Pavement condition Survey – Visual Assessment** Site visit will be undertaken by Highway and Structural Engineers, Pavement Expert, Quantity Survey Experts, TMS & HTMS Expert and engineers to have visual assessment done for the project stretch. Observations will be recorded and critical issues for the Project will be identified and red flagged. Project Structural integrity issues that require rectification / re-mediation will be observed and recorded along with possible risk mitigation strategy & costing thereof. The Consultant shall carry out a detailed reconnaissance of the project area and shall record and highlight important features and point out any issue that may be of importance to the Client in terms of operation and maintenance of the project.	Chapter 3, 5, 6, 7
2	**Conducting inventory, condition surveys and Field Investigations for Project Road** Inventory and detailed condition surveys will be conducted for project highway, bridges & cross drainage structures, project assets, safety appurtenances, TMS & ATMS system including recommendation for either strengthening / rehabilitation or reconstruction / replacement. *Requirements for NDT tests will be identified and informed. Based on the preliminary investigations and walk-through along the stretch, the Consultant shall prepare a project road map indicating the following elements Inventory of existing project assets Existing pavement condition – kilometer-wise (along with Photographs thereof) Intersecting/Crossroads (along with Photographs thereof); Inventory and condition assessment of CD structures (along with Photographs thereof). Condition assessment of pavement.	Chapter 3, 5, 6, 7, 9

SN	Scope of Work	Discussed At
	Condition assessment of structures. Review the extent of balance work. The Consultant should prepare a photo-documentation (Soft copy) of the mentioned areas and any other important findings. The Consultant shall assess the adequacy of Operations &Maintenance, Toll Management System and Advanced Toll Management system. The following field investigations will be carried out for the project stretch. Falling Weight Deflectometer (FWD) Surveys NSV Survey Test Pit investigations. Axle Load Surveys Bridge Inspection by MBIU (For Major Structures - length of structure >60m)	
3	**Review of available Project Documents and Reports** The available reports (Concession Agreements, Approved Pavement design report, Monthly Progress Reports, As-built Drawings, Correspondences of stake holders, Asset Management Contracts, Maintenance Manuals, Maintenance history etc) will be reviewed. The Consultant shall assess the completion status of work Vis-à-vis compared with schedule B, C and Schedule D	Chapter 3, 4, 5, 6, 7, 8
4	**Review of construction material and quality, Rehabilitation Plans by Developing strategy for immediate/periodic maintenance.** The Consultant should review of Quality of construction and compaction based on available data and from Laboratory testing of samples collected from trial pits. The Consultant should conduct visual inspection of expansion joints and bearings etc of the structures to assess the condition and requirements for its repair, replacements and / or rehabilitation. The pavement stretches along with the type of distresses will be identified analysing NSV and FWD data. The Consultant should assess maintenance cycles for pavements using HDM analysis. Repair techniques will be suggested for stretches requiring immediate rehabilitation measures. Pavement maintenance strategy (functional overlay/ structural overlay) will be developed for the entire concession period to bring back riding quality of each lane of the carriageway to maximum permissible as stipulated in the Concession Agreement.	Chapter 5, 6, 7, 9, 10, 11
5	**Preparation of BoQ and Cost Estimate**	Chapter 12

SN	Scope of Work	Discussed At
	Bill of Quantities will be prepared for Immediate repairs, Routine maintenance, Periodic/major maintenance, O&M Cost, and Improvement works as per Schedule B of the CA. O&M cost will involve Routine maintenance and Incident Management, Tolling Operations, Admin Expenses and Preventive Maintenance. The Consultant should provide cost till the end of the concession period including any expected extension of Concession periods as informed by the Client. For assessing the cost, Ramboll will use rates available in the market or from the inhouse data base.	

2.2 Deliverables and Timelines

The deliverables and the timelines for the study are as under:

SN	Deliverables	Time period
1	Submission of Red Flag Report /critical issues	Within 14 days from commencement of site visit.
2	Submission of Draft Report	Within 6-7 Weeks from the date of receipt of LOA or all data whichever is later
3	Submission of Final Report	Within one week from the date of receipt of comments from Client or within two weeks from the date of submission of draft report

The above timelines assume that all project related data are available at the start of work.

2.3 Structure of the Report

In line with the requirements of agreed scope of work, this Technical Due Diligence Report is being submitted. The report is organised in the following fashion.

Chapter 1	**Executive Summary:** The chapter presents an overview of the project after review & study of documents, site investigations and estimates for maintenance.
Chapter 2	**Introduction, Approach and Methodology:** The chapter presents a brief approach and methodology adopted for carrying out the Due Diligence Study.
Chapter 3	**Project Description:** The chapter summarises the project features based on Concession Agreement requirements.

Chapter 4	**Review of Existing HAM Concession Agreement:** This chapter contains a short review of the existing HAM CA of the package.
Chapter 5	**Assessment of Project Assets - Highway:** The chapter presents the details of various essential features of the project highway recorded through reconnaissance survey and data obtained through NSV Survey.
Chapter 6	**Assessment of Project Assets - Structures:** The chapter presents the details of various essential features of the structures recorded through visual inspection and by using MBIU.
Chapter 7	**Assessment of Project Assets – Toll Management Systems:** The chapter presents the details of various essential features of the Toll Plaza Systems and associated facilities recorded through visual inspection.
Chapter 8	**Review of Existing O&M Contracts and Maintenance Manuals:** The chapter contains a short review of the O&M obligations of existing HAM Concessionaire.
Chapter 9	**Soil and Material Investigation:** This chapter discusses the results of soil and material tests carried out for the project stretch.
Chapter 10	**Pavement Evaluation Studies:** This chapter describes the tests carried for pavement evaluation and analyses of the test results.
Chapter 11	**Development of O&M Strategy:** The chapter presents the details of O&M strategy developed based on the Pavement evaluation studies and analysis described in Chapter 10.
Chapter 12	**Cost Estimate:** The chapter outlines the key assumption considered for cost estimate and provides details of cost estimates under various heads viz immediate, O&M and major maintenance for the concession period.

2.4 List of Shared Documents of the project.

Documents shared by National Highways Infra Investment Managers Private Limited for Technical Due Diligence of the project and Ramboll gathered data during site inspection from PIU - Tirupati, IE and contractors site office of this project under guidance of National Highways Infra Investment Managers Private Limited.

- Concession Agreement of the projects
- Technical schedule of Tolling, Operation, Maintenance & Transfer of the projects
- Projects under INVIT Round 4 - Prebid replies.

- Technical Due Diligence Report of the projects for effective implementation of asset Monetization program under TOT & InvIT with BOQ and cost estimate.
- As built drawings
- Letter on COD, PCOD
- Monthly maintenance Reports of IE
- Monthly Progress Report
- Asset Inventory
- MBIU survey Report
- FWD & NSV Report
- Safety Audit Report
- KMZ file
- Black Spot Report

2.5 Approach and Methodology

Our approach and methodology to address the requirements defined in terms of reference are briefly presented below.

- Identification of objectives of Client through detailed study of scope of work and discussions with the Client.
- Identification of Assignment specific team of professionals covering all the skills and specializations required and involving with the assignment from day one.
- A Team Leader is assigned to coordinate various events / activities of various team members.
- Assessment of data / information required is made at the time of Proposal / Engagement letter and the list is shared with the Client.

2.6 Study

The following briefly presents the process followed for the present study.

- The data available for the project are collected from site offices of PIU – NHAI and of respective Independent Engineers of three packages.
- The data is reviewed by the study team and information collated in different categories e.g., asset inventory, contracts, change of scope, communications from NHAI, maintenance strategy and maintenance costs etc.
- Data gaps are identified through the above process and communicated to the Client.
- Detailed review of all the available data is carried out.
- Site visit is made by team of experts to understand the project features and observations are recorded.
- Field tests are carried out as per agreed scope of work.
- The test results are analysed in detail and maintenance strategies are developed.

- Inferences are made on various items of scope of work based on the available data and compared with the requirements of existing concession Agreement. Issues are flagged wherever required.
- The costs associated with the project under various head (immediate, routine operation and maintenance and Major Maintenance) are worked out in accordance with the requirements of existing Concession Agreement under current scenario.
- Finally, a comprehensive report is prepared covering all aspects of the agreed scope of work.

2.7 Delivery

Delivery follows the following flow:

- Formats of agreed deliverables are formalized and shared with Client, wherever required.
- Deliverables are shared with the Client within agreed timelines.

2.8 Feedback

Regular and end-of-the-assignment feedback are obtained from the client for further enhancing the quality of service.

3. PROJECT DESCRIPTION

The Government of India had entrusted to National Highways Authority of India (NHAI) the development, maintenance, and management of National Highway No. 4 and 140 (Old NH-4) which includes.

> Six laning of NH-140 from Chittor (Design km 0.000/Existing km 158.000 of NH-4) to Mallavaram (Design km 61.128/Existing km 41.800 of NH-140) (Design Length = 61.128 km) under Bharatmala Pariyojana on Hybrid Annuity Mode.

The Authority had invited proposals by its Request for Proposal for above package. After evaluation of the bids received, the Authority had accepted the bid of the selected bidder and issued its Letter of Award No. NHAI/Tech/ AP/NH-140/Cht-Mal/2017-18/115166 dated 26.03.2018 for the package.

Provisional Completion Certificate of the project is achieved on 10 May 2021.

Completion certificate of the project is issued on 08 June 2021.

Project Highway is under Operation and Maintenance as per provisions of the existing HAM Concession Agreement. Existing Concessionaire shall operate and maintain the project up to O&M Handover date, 10 May 2036, pursuant to and in accordance with the existing HAM Concession agreement

Further, National Highways Authority of India (NHAI) has setup InvIT to monetize its completed and operational national highways projects with the objective of mobilizing additional resources through capital markets. Accordingly, National Highways Authority of India (NHAI) ("the Sponsor") set up National Highways Infra Trust ("the Trust") as an irrevocable infrastructure trust. The Investment objectives of the Trust are to carry on the activities of, and to make investments, as an Infrastructure Investment Trust. National Highways Infra Investment Managers Private Limited ("NHIIMPL") is a Private Limited Company set up to act as the Investment Manager to the Infrastructure Investment Trust ("InvIT") and is the Investment Manager of the National Highways Infra Trust ("NHIT" or "Trust"). NHIIMPL is, responsible for all the decisions in relation to the day-to-day management and administration of InvIT assets and the investments of the trust as may be incidental or necessary for the advancement or fulfilment of the investment objectives of the trust in accordance with the InvIT Regulations. NHIPMPL or "Project Manager" was incorporated as a private limited company as a wholly owned subsidiary of NHAI. The Project Manager (will undertakes operations and maintenance of the Assets, including making arrangements for maintenance of the assets held by the Trust.

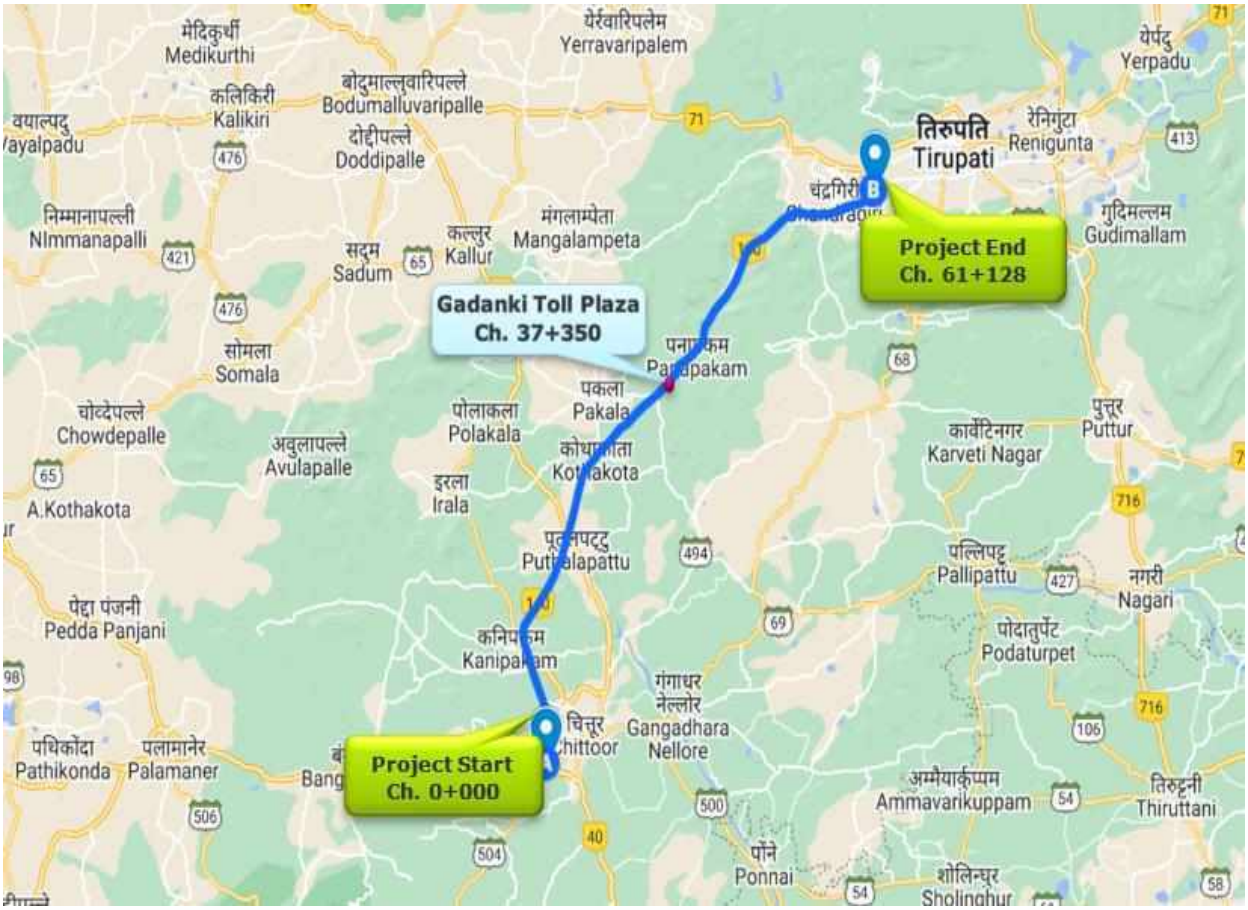


Figure 3-1: Location Map of Project Stretch

3.1 Terrain

The project road generally passes through plain terrain. The land use along the project stretch is mixed type with agricultural land and built up areas having few commercial zones. The project falls under seismic zone 2.

3.2 Right of Way

The right of way (RoW) available in the project is 60m as specified in Schedule A & B of the agreement.

3.3 Administrative Details of the Project

Administrative details of the project are listed below.

Table 3-1: Administrative Details of the Project

Particulars	Project
Project Name	Six laning of NH-140 from Chittor (Design km 0.000/ Existing km 158.000 of NH-4) to Mallavaram (Design km 61.128/ Existing km 41.800 of NH-140) (Design Length = 61.128 km)
Mode of the Execution (BOT Toll/ BOT Annuity/ EPC/ HAM/ Others)	Hybrid Annuity Mode under Bharatmala Pariyojana
Project Phase	Tolling, Operation, Maintenance and Transfer
No. of Lanes/ Configuration	6 Lane divided carriageway
Length of the Project (in Km)	61.128 km
Client	NHAI
NH No.	NH-140
EPC Contractor / Concessionaire	KNR Tirumala Infra Private Limited
Total Project Cost	INR 1730.07 Crores
Independent Engineer (O&M Phase)	Lion Engineering Consultants Private Limited in association with Synergy Engineers Group Pvt. Ltd.
LOA	26 March 2018
Date of Signing of CA	09 May 2018
Appointed Date	04 January 2019
PCOD on	10 May 2021
Completion Certificate	08 June 2021
End Date of Concession period / Maintenance obligation for Latest EPC Contract	15 Years commencing from COD
O&M Handover date	10 May 2036
No. of Toll Plazas (Number and Location)	Toll Plaza: Gadanki Toll Plaza

3.4 Salient Features of the Project and Scope of Work

The salient features of the project and scope of work in accordance with Schedules B and C are presented in Table 3-2.

Table 3-2: Salient Features of the Project and Scope of Work

S.No.	Item - Features	Units	Section
1	Service Road	km	115.691

3.5 Specification and Standards

For 6 lanes on NH 140 from Km 0+000 at Chittoor to km 61+128 at Mallavaram intersection.

Six - Laning of the Project shall conform to the Manual of Specifications and Standards for Six - Laning of Highways through Public Private Partnership published by the IRC (IRC: SP: 87 -2013).

Deviations from the Manual

Notwithstanding anything to the contrary contained in the aforesaid Manual, the following Specifications and Standards shall apply to the construction of the Project Highway, and for purposes of this agreement, the aforesaid manual shall be deemed to be amended to the extent set forth below:

Table 3-3: Deviation and Reference for Package

Sl. No.	Clause as given in the Manual	Description	Provision as per Manual	Deviations / Modified Provision
(i)	2.17	Typical cross section for 6-lane divided highway in open country in plain/ rolling terrain with service roads on both sides and with raised median for a new 6-lane construction	Fig. 2.5	Fig. 2.5A

4. REVIEW OF EXISTING HAM CONCESSION AGREEMENT

SIX LANNING OF NH-140 FROM CHITTOOR (DESIGN KM 0.000/EXISTING KM 158.000 OF NH-4) TO MALLAVARAM (DESIGN KM 61.128/EXISTING KM 41.800 OF NH-140) DESIGN LENGTH = KM 61.128 IN THE STATE OF ANDHRA PRADESH UNDER - BHARATMALA PARIYOJANA ON HYBRID ANNUITY MODE

4.1 Brief Review of Concession Agreement

It may be noted that existing HAM Concession Agreement is primarily divided into Six parts and various Schedules that are available at the end of the CA. Contents of each of the Six parts and the Schedule is briefly mentioned below.

Part I Definitions and Interpretations

Addresses - the Definition and Interpretation, measurements and arithmetic conventions priority of agreements, clauses and schedules.

Part II The Concession

Scope of the Project: Scope of the Project

Grant of Concession: The Concession

Conditions Precedent: Conditions Precedent, damages for delay by the authority, damages for delay by the concessionaire comma commencement of concession period comma deemed termination upon delay.

Obligations of the Concessionaire: Obligations of the Concessionaire, obligations relating to project agreements, obligations relating to change in ownership obligations relating to employment of foreign nationals, obligations relating to employment of trained personnel, facilities or differently abled and elderly persons comma branding of project comma sole purpose of the concessionaire.

Obligations of the Authority: Obligations of the Authority, maintenance obligations prior to appointed date, obligations related to refinancing.

Representations and Warranties: Temptations and warranties of the concessionaire, representations and warranties of the authority, disclosure.

Disclaimer: Disclaimer

Part III Development and Operations

Performance Security: Performance security appropriation of performance security, release of performance security, reference to performance security, additional performance security, appropriation and release of additional performance security.

Right of Way: The site, licenses, access and right of way, procurement of site, site to be free from encumbrances, protection of sight from encumbrances, special temporary right of way, access to authority and independent engineer, geological and archaeological finding, land for wayside amenities.

Utilities, Associated Roads and Trees: existing utilities and roads, shifting of obstructing utilities, new utilities and roads, felling of trees.

Construction of project: Obligations prior to commencement of construction, drawings construction of the project, maintenance during construction.,

Monitoring of Construction: Monthly progress reports, inspection, tests, delays during construction, suspension of unsafe construction works, video recording.

Completion Certificate: Tests, completion certificate, provisional certificate completion of punch list items, withholding of provisional or completion certificate, rescheduling of tests.

Entry into Commercial Service: Commercial operation date, damages for delay.

Change of Scope: Change of scope procedure for change of scope, payment for change of scope, restrictions on certain works, power of authority to undertake works, reduction in scope of work, effect of change in scope on the O&M costs.

Operation and Maintenance: O&M obligations of the concessionaire, maintenance requirements, maintenance manual, maintenance program, safety, breakdowns and accidents, decommissioning due to emergency, project closure, damages for breach of maintenance obligations, authorities right to take remedial measures, overriding powers of the authority, restoration of loss of damage of property, modifications to the project, excused from performance of obligation, installation of operation of CCTV, advertising on the site.

Safety Requirements: Safety Requirements, expenditure on safety requirements.

Monitoring of Operations & Maintenance: monitoring status reports, inspection, tests, remedial measures, reports of unusual occurrence.

Regulation and Management: Traffic regulation by the concessionaire, police assistance, buildings for traffic aid posts, medical aid posts, buildings for medical aid posts, computer systems and network, recurring expenditure on police assistance, recurring expenditure on medical aid post.

Independent Engineer: Aappointment of independent engineer, duties and functions, remuneration, termination of appointment, authorized signatories, dispute resolution, interim arrangement.

Part IV Financial Covenants

Financial Close: Financial close, termination due to failure to achieve financial clause.

Payment of Bid Project Cost: Big project cost, adjust bid project cost, payment of bid project cost, payment during construction., bonus on early completion, annuity payments during operation., O&M payments, mobilization advance, treatment of incomplete works.

Escrow Account: escrow account, deposits into escrow account, withdrawals during concession., withdrawals up to termination.

Insurance: Insurance during concession., insurance cover, notices to the authority, evidence of insurance cover, remedy for failure of to ensure, waiver for subrogation, concessionaires' waiver, application of insurance proceeds, compliance with conditions of insurance policies.

Account and Audit: Audited accounts, appointment of auditors, certification of claims by statutory auditors, set off, dispute resolution.

Part V Force Majeure and Termination

Force Majeure: Force majeure, non-political event, indirect political event, political event, duty to report force measure event, effect of force measure event on the concession, allocation of costs arising out of force measure, termination notice for force measure event, termination payment for false measure event, dispute resolution, excuse from performance of obligations.

Compensation for Breach of Agreement: compensation for default of the concessionaire compensation for default of the authority comma mitigation of costs and damage.

Suspension of Concessionaire's Rights: suspension upon concessionaire default, authority to act on behalf of concessionaire, revocation of suspension, substitution of concessionaire, termination.

Termination: Termination for concessionaire default termination for authority default comma termination payment comma certain limitations on termination payment comma other rights and obligations of the authority comma survival of rights.

Divestment of Rights and Interest: Divestment requirements, inspection and cure, cooperation and assistance on transfer of project, vesting certificate, divestment cost etc.

Defects Liability after Termination: Liability for defects after termination retention in escrow account.

Part VI Other Provisions

Addresses - Assignment and Charges, Change in Law, Liability and Indemnity, Rights and Title Over the Site, Dispute Resolution, Disclosure, Redressal of Public Grievances, Miscellaneous and Definitions.

Schedules

A. Site of the Project,
B. Development of the Project Highway,
C. Project Facilities,
D. Specifications and Standards,
E. Applicable Permits,
F. Performance Security,
G. Project Completion Schedule,
H. Drawings,
I. Tests,
J. Completion Certificate,
K. Maintenance Requirements,
L. Safety Requirements,
M. Selection of Independent Engineer,
N. Terms of Reference for Independent Engineer,
O. Escrow Agreement,
P. Panel of Chartered Accountants,
Q. Vesting Certificate,
R. Substitution Agreement.

4.2 Operation and Maintenance

Operation and Maintenance as described under Article 17 and Schedule K need to be addressed during O&M period.

Article 17 – Operation and Maintenance

O&M obligations of the Concessionaire, Maintenance Requirement, Maintenance Manual, Maintenance Programme, Safety, breakdowns and accidents, De-commissioning due to Emergency, Project closure, Damages for breach of maintenance obligations, Authority's right to take remedial measures, Overriding powers of the Authority, Restoration of loss or damage to Project Highway, Modifications to the Project

Highway, Excuse from performance of obligations, Installation and operation of CCTV , Advertising on the Site.

Schedule K - Maintenance Requirements

Maintenance Requirements, Repairs of Defects and Deficiencies, Other defects and deficiencies, Extension of time limit, Emergency repairs/restoration, Daily inspection by the Concessionaire, Divestment Requirements, Display of Schedule – K, Repair/rectification of Defects and Deficiencies

5. ASSESSMENT OF PROJECT ASSETS – HIGHWAY

5.1 Service Roads/ Slip Roads

At 6-lane section of Chittoor–Mallavaram

The project includes service roads and slip roads constructed as flexible pavements. These roads are generally in good condition. However, there are some locations with pending land acquisition (LA) issues that are hindering the completion of construction work on the service roads.

Pavement markings are present on the service roads, but they are faded in some areas. The total length of service roads within this project package is 115.691 kilometers.

A detailed list of service and slip roads associated with the project highway can be found in Annexure 5.2.

Figure 5-1: Service roads. at 6-lane section of Chittoor–Mallavaram

5.2 Bypass

At 6-lane section of Chittoor–Mallavaram

There are two Bypasses (length 24.235 Km) in this package which are already constructed. Condition of the bypasses are good. Details of bypasses are listed in Annexure 5.3 and some photographs of the bypass are given below.

Figure 5-2: Bypass. at 6-lane section of Chittoor–Mallavaram

5.3 Intersections

At 6-lane section of Chittoor–Mallavaram

There are 65 junctions along this package. Out of these, 04 are major junctions and 61 are minor junctions. All the junctions in this package are designed with flexible pavement, ensuring durability, enhanced performance, and reduced maintenance requirements over time. Comprehensive details about the major junctions are provided in Annexure 5.4, while information about the minor junctions is included in Annexure 5.5. Additionally, some photographs showcasing the condition and layout of the junctions are presented below for visual reference. These images help illustrate the status of the junctions along the stretch.

Confidential

Figure 5-3: Major Intersections at 6-lane section of Chittoor–Mallavaram

Figure 5-4: Minor Intersections at 6-lane section of Chittoor–Mallavaram

5.4 Bus bay and Bus Shelter

At 6-lane section of Chittoor–Mallavaram

Along this project stretch, there are a total of 26 bus shelters, which serve as essential infrastructure for public transportation. These shelters provide waiting areas for passengers and are strategically placed to meet the needs of commuters. Out of these 26 bus shelters, only 03 are equipped with dedicated bus bays. The bus bays ensure safe boarding and alighting of passengers while reducing the impact on the flow of traffic. The pavement condition of these bus bays has been observed to be satisfactory. However, it is important to note that none of the bus bay locations are equipped with lighting, which is a significant concern for passenger safety and convenience, especially during nighttime operations. Detailed information regarding the Bus Shelters and Bus Bays is provided in Annexure 5.6. To provide additional clarity, representative photographs showcasing the condition and features of these facilities are presented below.

Figure 5-5: Bus Bay and Bus Shelter at 6-lane section of Chittoor–Mallavaram

5.5 Truck lay bye

At 6-lane section of Chittoor–Mallavaram

There are 04 Truck lay byes, and all are operational on both side in good condition. Only 02 Truck lay byes have the facilities like lighting, Toilet block, water kiosk etc. The remaining 02 Truck Lay-byes lack these essential amenities, which could impact the comfort and utility for truck operators and drivers. Photographs showcasing the current condition of the Truck Lay-byes are included below for reference. The detailed locations of all Truck Lay-byes are provided in Annexure 5.7.

Figure 5-6: Truck Lay bye at 6-lane section of Chittoor–Mallavaram

Confidential

5.6 Toll Plaza

At 6-lane section of Chittoor–Mallavaram

As per the Concession Agreement, the project stretch includes 01 Toll Plaza, located at km 37.350, known as the Godanki Toll Plaza. This Toll Plaza is operational and serves as a key facility for revenue collection and traffic management.

The Toll Plaza is equipped with 6+6 lanes, configured as 5 regular lanes + 1 reversible lane on each side, ensuring efficient handling of traffic flow. The presence of reversible lanes provides flexibility to manage traffic volume during peak hours effectively. The Toll Plaza is operational with a Hybrid ETC (Electronic Toll Collection) system, enhancing the convenience of cashless toll transactions and reducing congestion. Facilities available at the Toll Plaza include:

- Canopy lighting for clear visibility.
- High mast lighting to ensure the plaza is well-lit during nighttime.
- Administrative building for operational management.
- Toilet blocks for staff and commuters.
- Tow-away cranes for clearing stranded or broken-down vehicles.
- Corridor management vehicles for quick response to emergencies or maintenance needs.
- Paramedical booth and ambulance services to address medical emergencies promptly.

The overall condition of the Toll Plaza is observed to be good, with all facilities functioning as intended. Detailed information regarding the Toll Plaza is provided in Annexure 5.9 and in Chapter 7 of this report. Some photographs of the Toll Plaza are included below to illustrate its status.

Figure 5-7: Toll Plaza At 6-lane section of Chittoor–Mallavaram

Confidential

5.7 Median opening

At 6-lane section of Chittoor–Mallavaram

Median openings have been provided along the project highway in accordance with the scope stipulated in the Concession Agreement (CA) and based on the requirements of local authorities and dwellers residing along the corridor. These median openings are strategically placed to ensure accessibility while maintaining the safety and functionality of the highway. Currently, most of the median openings are temporarily closed using Concrete Jersey Barriers to manage traffic effectively and reduce the risk of accidents. This temporary closure may be reviewed and adjusted as per traffic flow and local requirements. A total of 05 median openings have been identified along the project stretch during the inspection. Details of all median openings, including their locations and specifications, are provided in Annexure 5.10. Some photographs illustrating the median openings, and their current status are presented below for reference.

Figure 5-8: Median Opening at 6-lane section of Chittoor–Mallavaram

5.8 Drainage System

At 6-lane section of Chittoor–Mallavaram

Adequate drainage arrangements have been provided along the project corridor to ensure proper water management and prevent waterlogging, which could potentially impact road safety and pavement durability. However, during the inspection, it was observed that at a few locations, the drainage systems—both roadside drains along the highway and lined drains at the median and shoulder—require appropriate maintenance. Specific issues include - accumulation of debris and blockages in the drainage channels, overgrowth of vegetation, obstructing water flow inefficient outlets, which need to be cleared or improved to ensure proper functionality of the drainage system.

Timely cleaning and maintenance of these drainage systems are essential to keep them fully operational and effective. Despite these localized issues, the overall condition of the drainage systems is assessed to be good. A detailed list of the Drainage Systems, including their locations and specific observations,

is provided in Annexure 5.11. Additionally, illustrative photographs showcasing the current status of the drainage arrangements are presented below for reference.

Figure 5-9: Drainage system.at 6-lane section of Chittoor–Mallavaram

5.9 Traffic Signage

At 6-lane section of Chittoor–Mallavaram

Road signs along the project highway are an integral part of traffic management and safety. These include a variety of sign types strategically placed to guide, warn and inform road users. Traffic signs- Installed along the shoulders of the highway for easy visibility. Overhead Gantry Mounted signs- Positioned above the road to convey critical information to all lanes. Kerb-mounted signs- Located at the road edges for local guidance. Median signs- Installed along the median to provide additional information and visibility to drivers.

In total, there are: 911 Sign Boards installed along the stretch, 06 Overhead Gantry Mounted Signs, placed at key locations, 14 Cantilever Gantry Signs, designed for directional and warning purposes. Most of these signs are physically in good condition, effectively serving their purpose. However, periodic inspections and maintenance are essential to ensure their continued effectiveness, especially regarding visibility and structural stability.

Detailed information about the Sign Boards is available in Annexure 5.12, while details of the Overhead Gantry Signs and Cantilever Gantry Signs are provided in Annexure 5.13. Additionally, photographs illustrating the various types of signage along the highway are included below for reference.

.

Figure 5-10: Traffic Signs Boards at 6-lane section of Chittoor–Mallavaram

5.10 Highway lighting

At 6-lane section of Chittoor–Mallavaram

Street lighting has been installed at various locations along the project stretch, focusing on built-up areas (urban regions), VUPs (Vehicle Underpasses), Truck Lay-byes, Bus Bays, Toll Plazas, and Major Junctions as stipulated in the concession agreement. This lighting system is crucial for ensuring visibility, safety, and efficient traffic management, particularly during nighttime or adverse weather conditions. The streetlights are mounted on 10-meter high single or double-arm posts, equipped with LED lights, known for their energy efficiency and long lifespan. Additionally, Canopy lighting and High Mast lighting are provided at strategic locations such as Toll Plazas and major junctions to ensure proper illumination across the entire area. These lighting systems have been properly maintained and are currently in good working condition, effectively fulfilling their role in enhancing safety and visibility along the highway. Details of the Highway / Street Lighting system, including locations, are provided in Annexure 5.15 to Annexure 5.16 in tabular form. Photographs of the street lighting installations are also included below for reference.

In addition to the streetlights, Solar Blinker Signals have been installed at Foot Over Bridge (FOB) locations, Railway Underpasses (RUBs), junctions and at the Project Start-End points. These signals are designed to improve visibility and alert drivers to critical locations, ensuring better safety, especially at these high-risk points. A comprehensive list of the Solar Blinker Signals on the project stretch is provided in Annexure 5.17, with detailed information on their locations and operational status. Photographs of the solar blinker signals are included below to illustrate their placement and functionality.

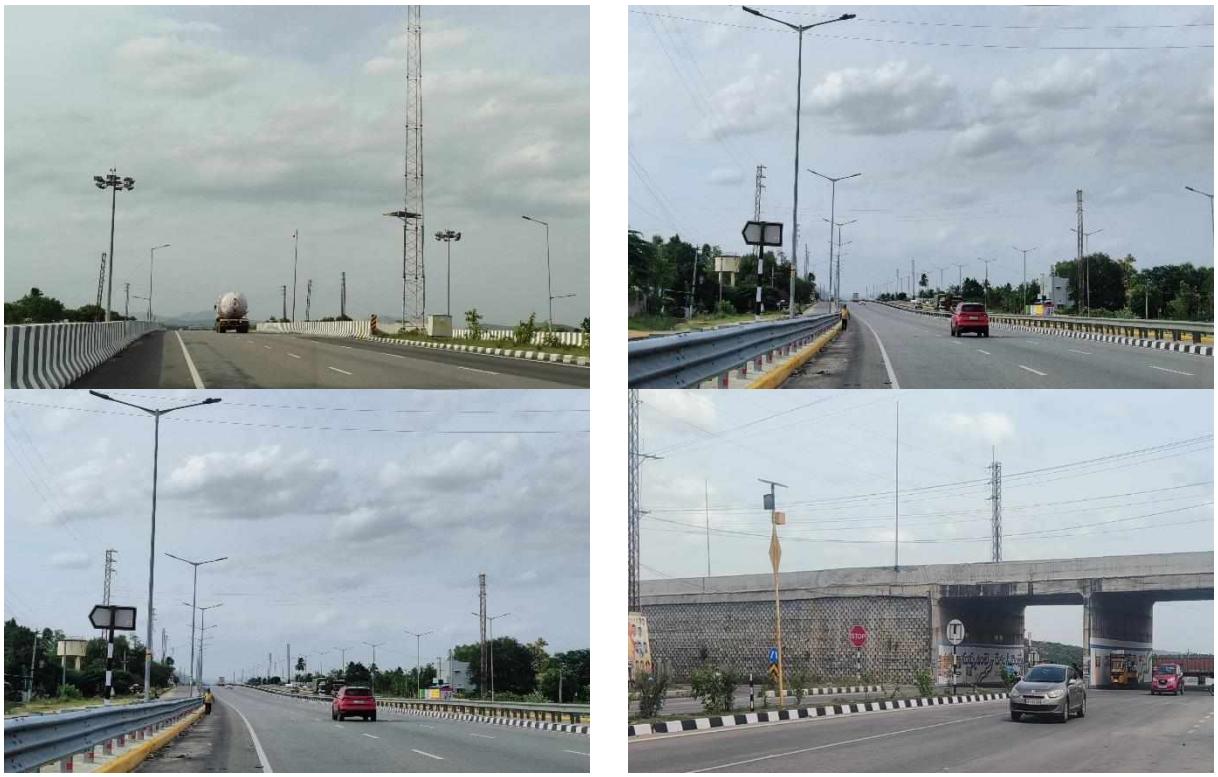

Figure 5-11: Highway Lighting at 6-lane section of Chittoor–Mallavaram

5.11 Plantation (Median/Avenue)

At 6-lane section of Chittoor–Mallavaram

The Avenue Plantation along the project highway has been observed to be inadequate, with plantation found only at a few locations intermittently along the stretch. This may require further development or enhancement in certain areas to improve the aesthetic value, environmental benefits, and overall green cover along the highway. On the other hand, Median Plantation is present along the entire project highway and consists of a variety of plants, providing both functional and aesthetic value. The median plantation serves to enhance the visual appeal of the highway while also contributing to environmental sustainability. The condition of the median plantation across the entire stretch is found to be good, with the plants appearing healthy and well-maintained. A detailed list of the Plantation along the project stretch, including both Avenue and Median Plantation, is provided in Annexure 5.18 (for Avenue Plantation) and Annexure 5.19 (for Median Plantation). Some photographs showcasing the plantation areas are presented below for reference.

Figure 5-12: Plantation (Median/Avenue) at 6-lane section of Chittoor–Mallavaram

5.12 Metal Beam Crash Barriers

At 6-lane section of Chittoor–Mallavaram

Metal Beam Crash Barriers have been installed at various critical locations along the project stretch to enhance road safety and prevent accidents. These barriers are provided at the main carriageway, ensuring protection for vehicles and pedestrians, Underpasses, where there is potential for high-speed traffic and limited visibility, approaches to structures, including intersections to minimize the chances of vehicle collisions, locations with high embankments on the Service Road inner side where vehicles are more likely to veer off course. It is also observed that Thrie-beam Crash Barriers have been installed at built-up locations, providing additional safety features to accommodate higher traffic volumes and ensure better protection for road users.

A detailed list of all the Metal Beam Crash Barriers installed along the project stretch is provided in Annexure 5.20. Below are some photographs of the Metal Beam Crash Barriers, showing their locations and condition along the stretch.

Figure 5-13: Metal Beam Crash Barriers at 6-lane section of Chittoor–Mallavaram

5.13 Fuel Station

At 6-lane section of Chittoor–Mallavaram

Fuel stations along the Project Stretch and access arrangement for the same has been captured during Visual Inspection Inventory survey. The details are listed in Annexure 5.25. Photographs are presented below.

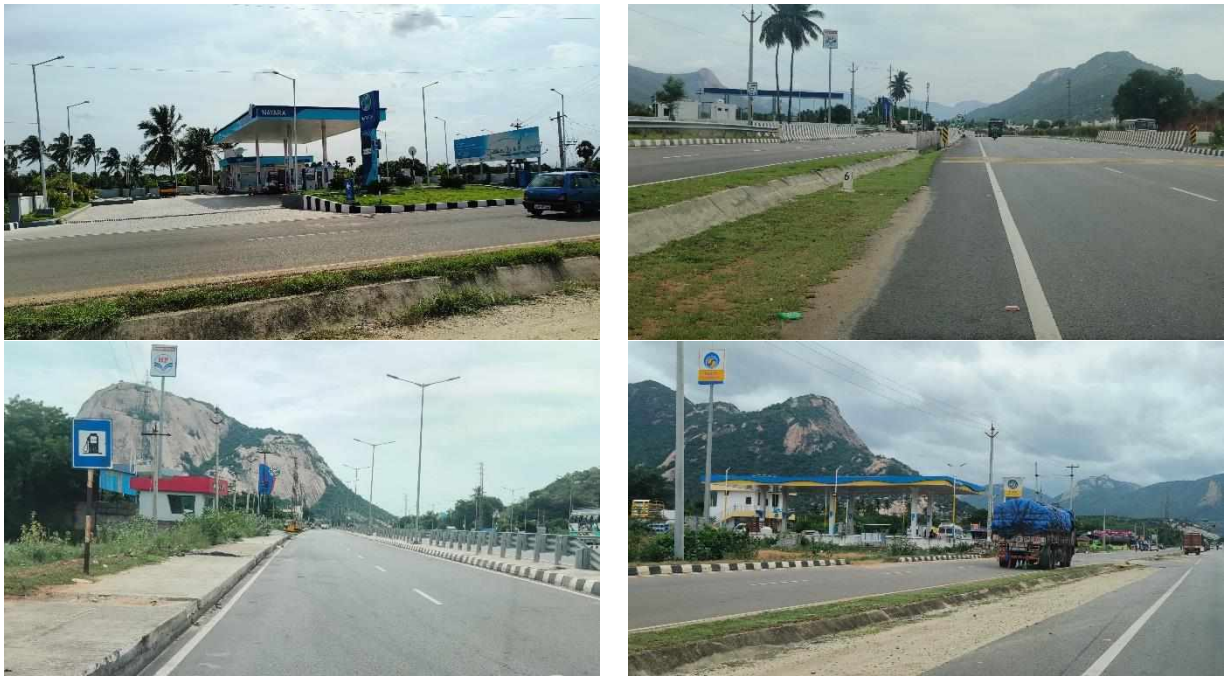

Figure 5-14: Fuel stations at 6-lane section of Chittoor–Mallavaram

5.14 Kilometre stone/Hectometre stones

At 6-lane section of Chittoor–Mallavaram

Kilometre 5th Stones, Kilometre Stone and hectometre stones are visible along the stretch and are in good condition. However, some of the hectometre stones are found uprooted / script is faded which requires repaint. The existing stones obtained from site visit are presented in the Annexure 5.28 and Annexure 5.29 and photographs are shown below.

Figure 5-15: KM & HM Stone at 6-lane section of Chittoor–Mallavaram

6. ASSESSMENT OF PROJECT ASSETS – STRUCTURES

6.1 General

The project comprises of 61.128 Km of six-lane section of NH-140 between Chittor to Mallavaram in the State of Andhra Pradesh. The various structures comprising the project are given in Table 6-1.

6.2 Structural Inventory

The visual condition survey of all the structures is carried out by Structural Expert/Bridge Engineer of the consultant team with an inspection is aimed at identifying and quantifying deterioration, which may be caused by applied loads and factors such as deadload, live load, wind load and physical (e.g. wear, abrasion) / chemical (e.g. corrosion due to environmental exposure) influences. Apart from inspection of bridge damage caused by unpredictable natural phenomena (e.g. earthquake, flood) or collision by vehicles or vessels, inspection is also needed to identify or follow up the effect of any built-in imperfections. Inspection can also provide insights into the structural condition to address issues proactively, helps in devising necessary remedial measures to enhance safety and performance, contributes to extending the service life of bridges through timely intervention and maintenance strategies.

Table 6-1: Summary of Structures

No.	Item	Package-iii as per site inspection	Qty. as per TOT Technical Schedule
1	Major Bridges	6	6
2	Minor Bridges	23	23
3	VUP	10	10
4	LVUP	5	5
5	VOP	-	-
6	ROB	-	-
7	RUB	1	1
8	FOB	2	2
9	HPC	15	15
10	Box Culvert	100	100
11	Slab culvert	-	-

The collection and analysis of Major bridges, RUBs and Grade separators condition and inventory data is done using the Mobile Bridge Inspection Unit (MBIU) and comprehensive visual inspection is carried out for assessing the minor bridges, underpasses, overpasses, and culverts of the entire project stretch of 61.128 kms. During the inspection and condition survey no major failure/Distresses is observed however minor cracks, exposed reinforcement at parapet, honeycombing repairs at structural components, clogged drainage spout, debris found under culvert and waterways and vegetation found on superstructures with unwanted material found around the bearings. The return walls are inspected to locate any separation of these from the abutment. Any unusual differential settlement which gives rise to cracks in the return or wing walls are inspected along with condition of stone pitching for all the bridges.

Following codes are used for the condition rating of the structural members.

Code	Description
N	NOT APPLICABLE
9	EXCELLENT CONDITION
8	VERY GOOD CONDITION - no problems noted
7	GOOD CONDITION – some minor problems
6	SATISFACTORY CONDITION - structural elements show some minor deterioration
5	FAIR CONDITION - all primary structural elements are sound but may have minor section loss, cracking, spilling or scour
4	POOR CONDITION - advanced section loss, deterioration, Spalling or scour
3	SERIOUS CONDITION - loss of section, deterioration, spelling or scour have seriously affected primary structural components Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present
2	CRITICAL CONDITION - advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken
1	IMMINENT' FAILURE CONDITION - major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic, but corrective action may put back in light service.
0	FAILED CONDITION - out of service - beyond corrective action

6.3 Major Bridges

There are 06 nos. of Major Bridge. These Major Bridge are in sound condition with no distresses with fair state of maintenance. Cleaning of expansion joint, bearings and drainage spouts is required.

Details of major bridge structures on the Project Highway are as per Table 6-2.

Table 6-2: Details of Major Bridges

S.No.	Design Chainage (Km)	Side	Type of Structure	Structure on	Deck Width (m)	Span Arrangement (m)	Steel Bearings (nos)	Elastomeric bearing (nos)	Type of expansion joint	Expansion joint (nos)	Type of Superstructure

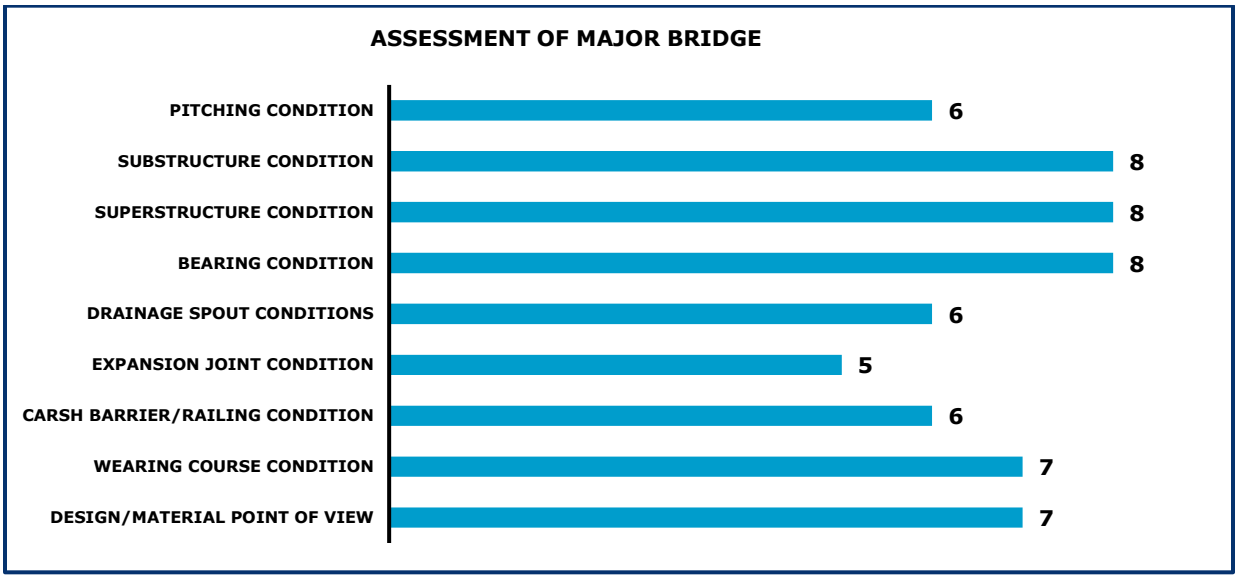

Figure 6-1: Comparative condition assessment of Major Bridges

There are 6 nos of major structures found on this project stretch. These bridges are in sound condition with no major distresses. Routine maintenance like cleaning & repair of expansion joint and drainage spout are required. Some of the Major bridge where sealing material of the expansion joint has been found to be damaged needs to be replaced. Unwanted material like concrete material, silt and debris which are deposited near bearings needs to be removed. Drainage spout not found on Service Road major bridge at Ch. 60+500. Honey combing found on soffit of girder at MJB Ch. 49+145. On major Bridge at Ch. 10+250 minor cracks found at the end of girder near abutment A-2 of RHS Major bridge Ch. 10+250. Major bridge list is mentioned in below table.

MJB at Ch. 8+300

MJB at Ch. 8+300

Expanoion joint damged at MJB Ch. 8+300

unwanted concerete material found around the bearings at MJB Ch. 8+300

MJB on Ch. 8+800

Sealing material damaged at expansion joint at MJB Ch. 8+800

Minor crack found in girder of span S-20 near abutment A-2 RHS at MJB -10 +250

MJB at Ch. 10+250

MJB at ch. 20+200

Sealing material damaged at expansion joint at MJB Ch. 20+200

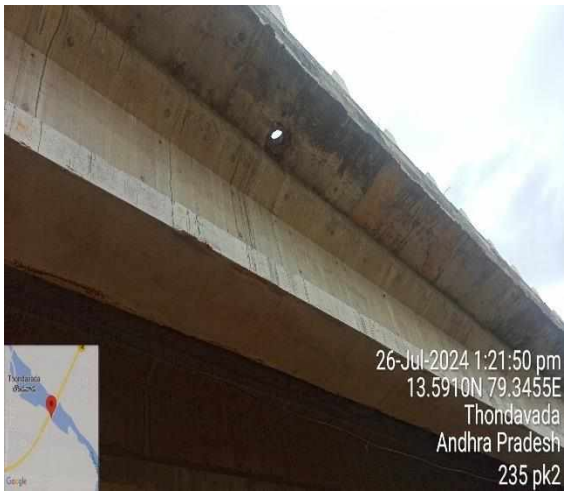
Unwanted concrete material found between girder and pedestal at RHS main Carriageway structure on MJB Ch. 49+145

Honey combing found in girder soffit on MJB Ch. 49+145

Old Existing Major bridge Ch. 49+145

Old Existing Major bridge Carriageway Ch. 49+145

Expansion joint is in good condition at Ch. 49+145



To clean drainage spout at Ch. 49+145

Modular strip seal expansion joint (E-1) damaged at old existing MJB at Ch. 60+500

Drainage spout not found on RHS service road Major bridge at Ch. 60+500

Unwanted concerete material found around the bearing at Ch. 60+500

Figure 6-2: Site Photographs of Major Bridges

6.4 Minor Bridges

There are 23 nos. of Minor Bridge on project stretch. Maintenance of these minor bridges are in fair condition. Minor repairs are required like cleaning of carriageway, waterway, and repair of leakage in wall and top slab.

Details of minor bridge structures on the Project Highway are as per Table 6-3 given below.

Table 6-3: Details of Minor Bridges

		RHS	SR	11	4x 2.5	0	0	0	

* All expansion joints are strip seal type

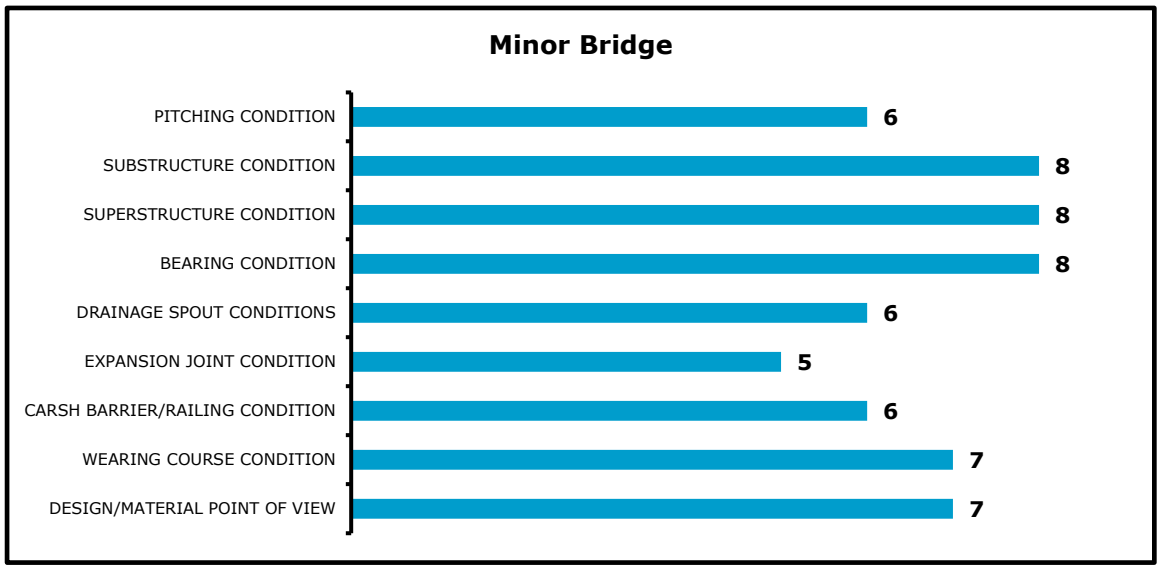

Figure 6-3: Comparative condition assessment of Minor Bridges

There are a total of 23 minor bridges. Upon inspection, it has been observed that all of these bridges are in overall sound structural condition. However, some of them have damaged stone pitching, and erosion of the side slopes has been noted at a few of the Minor Bridges (MNB). Additionally, the access road to the minor bridge at chainage 39+645 (both main and service road) and at chainage 47+495 (service road approach toward Tirupati) has not been constructed due to unresolved land acquisition issues.

MNB at Ch. 4+215

MNB at Ch. 17+955

Stone pitching not found on one side of bridge at Ch. 27+560

Stone pitching not found on one of bridge at Ch. 6+600

Approach was not construct due to land issue at Ch. 39+645

Stone pitching not found on MNB at Ch. 44+327

Approach not constructed due to land issue on RHS service road at Ch. 47+495

Stone pitching not found at Ch. 48+555

Pitching damaged and bank erosion observed at RHS of MNB 50+520

crash barrier on footpath side not yet constructed at LHS service road MNB Ch.51+155

Pitching work not found at ch.52+185

Vegetation present at ch.52+185

MNB at Ch. 28+090

Figure 6-4: Typical Site Photographs of Minor Bridges

6.5 RUB (Railway Under bridge)

There is 1 no. of RUB on project stretch. This RUB is in satisfactory state of maintenance.

Table 6-4: RUB details

S.NO	Type of Structure	Side	Str On	Deck Width (m)	Span Arrangement (m)	Type of Superstructure
1	RUB	LHS	MCW	14.96	1 X 12.5	Box type
		LHS	SR	14.96	1 X 12.5	Box type
		LHS	MCW (existing)	7.5	1 X 8.2	RCC T- Beam Girder
		RHS	MCW	14.96	1 X 12.5	Box type
		LHS	SR	14.96	1 X 12.5	Box type
		RHS	MCW (existing)	7.5	1 X 8.2	RCC T- Beam Girder

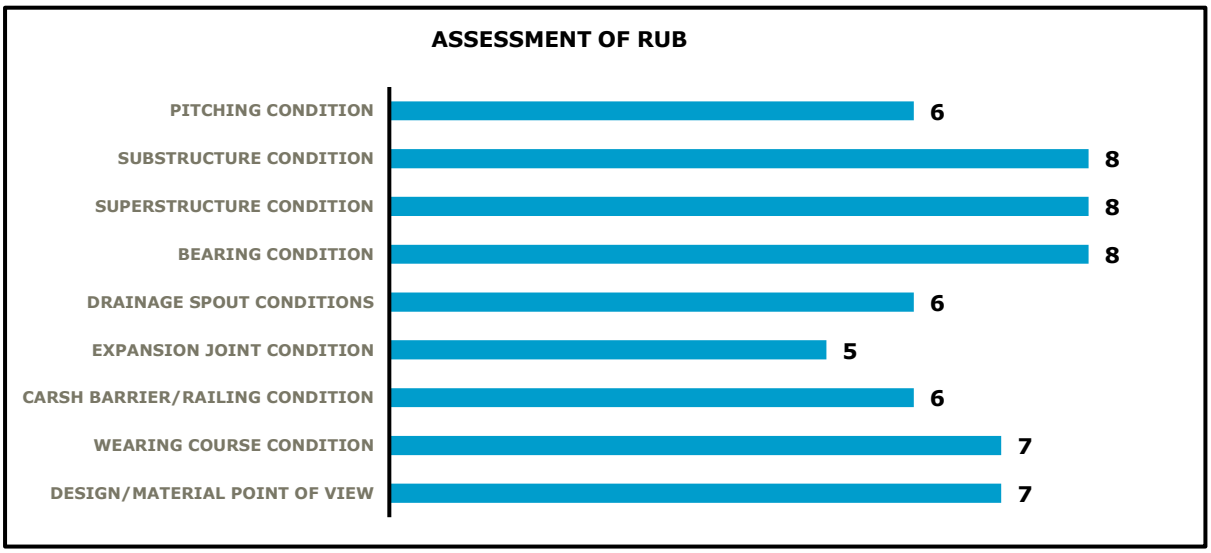

Figure 6-5: Comparative condition assessment of RUB.

RUB at Ch. 24+600 on both side

RUB at Ch. 24+600 Leaching, water stain and vegetation found on super structure of existing RUB

Figure 6-6: Typical Site Photographs of RUB

6.6 Vehicular Underpass (VUP)

There are 10 nos. of VUP on project stretch. Minor repairs like cracks in RCC substructure, replacement of expansion joints is required with repairs in approach slabs at few locations. Cleaning of vegetation growth and clogged vents is required through routine maintenance. Overall structural condition is good for these underpasses.

Table 6-5: Vehicular Underpass details

No.	Design Chainage (Km)	Side	Str. On	Deck Width (m)	Span Arrangement (m)	Steel Bearings (Nos)	Elastomeric bearing (Nos)	Expansion joint (Nos)	Type of Super structure

6.7 Light Vehicular Underpass (LVUP)

There are only 5 nos. of LVUPs in this Package. Structural condition of these structures is good. List of these LVUPs is given in the table below with their configuration.

Table 6-6: Light Vehicular Underpass

S.NO	Design Chainage (Km)	Side	Str On	Deck Width (m)	Span Arrangement (m)	Type of Superstructure
1	4+681	LHS	MCW	14.5	1 X 12	Solid slab
		RHS	MCW	14.5	1 X 12

5	59+442	LHS	MCW	14.5	1 X 12	Solid slab

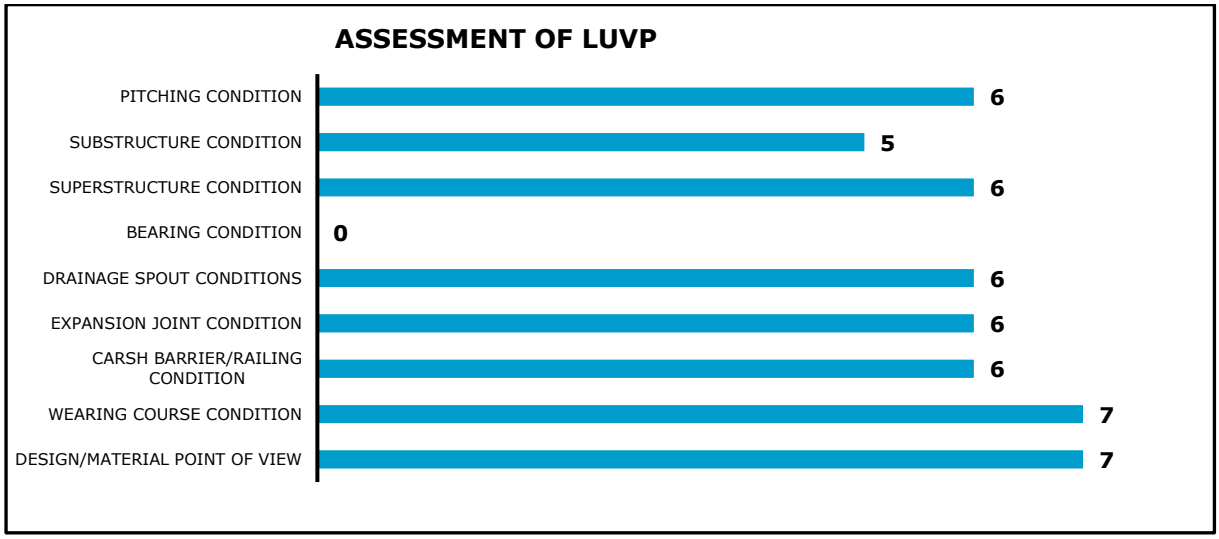

Figure 6-9: Comparative condition assessment of LVUP.

These 5 nos of LVUP's are in sound condition. Routine maintenance like cleaning of expansion joint and drainage spout are required.

LVUP at Ch. 59+540

LVUP at Ch. 4+640

6.8 Culverts

There are 115 nos. of culvert which includes RCC box type culverts, Slab culverts, and Hume pipe culverts. Structural condition of these culverts is satisfactory but requires maintenance for scours,

cleaning of waterway, cleaning of vegetations and repair of slope pitching. The details of the culverts across different packages are explained in the sections below,

Figure 6-10: Typical Site Photographs of Culverts

Erosion of soil observed due to stone pitching not found at Box culvert Ch. 12+643

stone pitching not found at Box culvert Ch. 53+582

stone pitching absent at one side of culvert Ch. 44+071

Box culvert Ch. 44+071

Box culvert Ch. 12+643

Box culvert Ch. 53+582

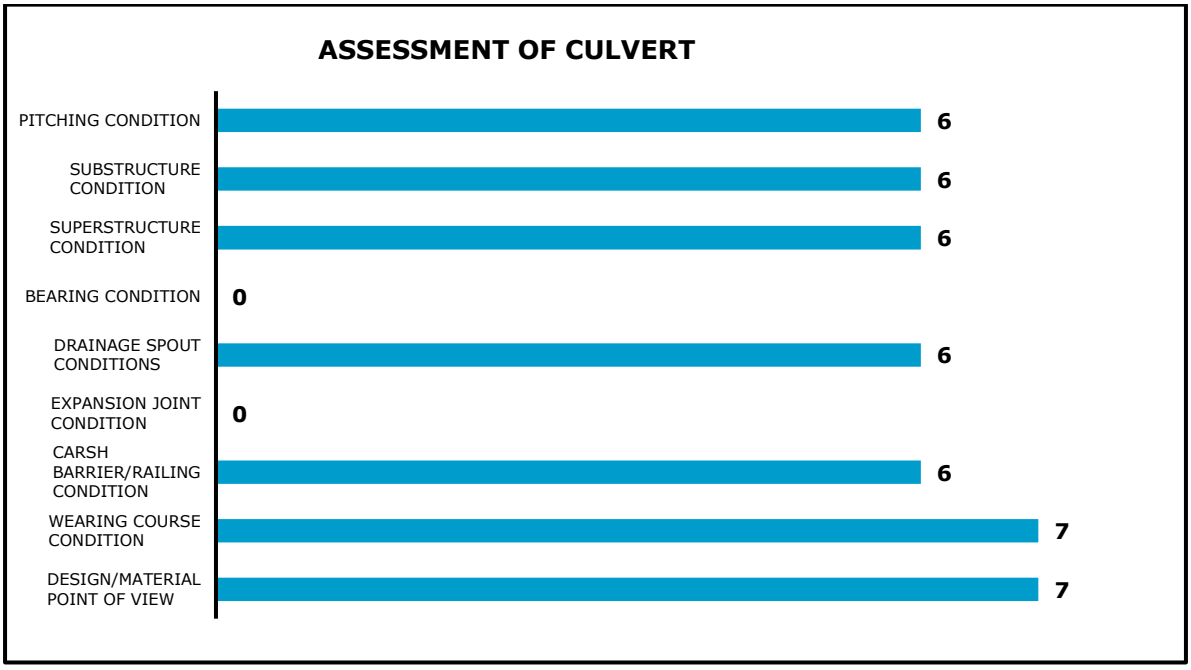

Figure 6-11: Comparative assessment of Culverts

6.9 General Observations

All the structures are visually inspected to find any cracking, spalling, staining, deformation, leaching, exposed reinforcement, honeycombing, condition of expansion joints, wearing coat, approach slabs, drainage, and damaged railing etc. Major Structures like Major Bridges, ROBs are inspected by MBIU and are reported in Annexure to Main Report.

The damages witnessed at the structures are due to irregularities in routine / preventive maintenance of these structures. There is no major distress in any structure of these packages. General observations are summarised as under:

- Vegetation growth on structure and waterway area
- clogged drainage spout of structures.
- cracks on crash barrier.
- Disturbed Quadrant pitching
- scour & bulging observed in protection work.
- exposed reinforcement at parapet of culvert.
- honeycombing at parapet of culvert.
- worn out & Potholes on wearing.
- debris found under culvert due to non-maintenance of waterway.

In general, the structures are found to be in structurally sound condition except for certain aspects requiring immediate repairs as under:

- Repair of Protection work by proper channelling of water flow.
- Minor crack repairs & honeycombing repairs at structural components
- Improving the drainage on the deck slab

7. ASSESSMENT OF PROJECT ASSETS - TOLL SYSTEMS

7.1 General

Technical Due Diligence of the TMS (Toll Management System), ATMS, ETC (Electronic Toll Collection System) and WIM (Weigh-in-Motion) System (as available) along 6 lane Chittoor to Mallavaram section of NH-140 in the state of Andhra Pradesh is done through site visits, site surveys, interactions at site and review of documents and reports.

7.2 Project Information

Toll Plaza 1 - Gadanki TP - Km 37+350 (NH 140)

No. of Lanes at each Toll Plaza

- Gadanki TP – It is a straight toll plaza and equipped with 12 Hybrid lanes at the toll plaza, no separate two-wheeler lanes are provided adjacent to the extra-wide lanes.

7.3 Gadanki TP - Toll System Maintenance

TMS maintenance is currently being undertaken by M/s Metro Infrasys at Gadanki toll plaza they are maintaining the toll equipment in good condition. The AVC systems are functional, and all lane controllers are found working in proper condition.

7.4 Gadanki TP - WIM system

WIM (Medium Speed Weigh in Motion) systems are installed in all 12 lanes by M/s Ashbee systems but were found to be nonfunctional and needs to be refurbished and recalibrated, currently no vehicle weight was being captured in the TMS. Stamping and calibration works are yet to be undertaken by the vendor.

7.5 Gadanki TP - SWB (Static Weigh Bridge)

Toll plaza is not equipped with Static Weigh Bridges

7.6 ATMS System

ATMS hardware was found installed and functional in this section of the highway, presented below in the table, however a detailed of the required quantity as per the Schedule A of the CA is tabulated further below in the next table separately.

Table 7-1: Installed HTMS / ATMS Equipment at NH 140

#	Parameter	Established Qty.
1	Video Surveillance System (CCTV PTZ Dome / Fixed Cameras)	12 (All Functional)
2	VIDS (ANPR Camera)	05 (All Functional)
3	Variable Message Signs	02 (All Functional)
4	Met Station	1 (Functional)
5	ATCC	1 (Not Functional)
6	Mobile Radio Communication System	Not Installed
7	Communication System utilizing Optic Fiber, GSM / GPRS and WiFi Communications linked to ATMS Control Centre	Functional through RF & GSM
8	Central Control Room with Workstations	1 No. (At Gadanki TP)

9	Fiber Optic Cable (48 Core)	All damaged, alternately RF connectivity is under commissioning.
10	Emergency Call Boxes	60 (All Functional)

Schedule A mentions the scope of ATMS as a part of Project Facilities on NH 140 as below.

Table 7-2: Scope of ATMS As per Tech schedule at NH 140

#	Equipment Description	Qty to be Installed
1	ECB	32
2	MET	1
3	MRCS	1
4	VMS	2
5	ATCC	1

7.7 Review and Assessment of TMS (incl. AVCC Systems)

1. At Gadanki toll plaza in Section 3, the TMS is under maintenance by M/s Metro Infrasys, with open tolling technology, installation is independent of any other toll plaza on the highway stretch and integration with MS-WIM is pending due to non-functional equipment, post the repairs, the TMS should be ready to identify the vehicles carrying over load, however to collect the penalty on account of overloaded vehicle, there is a necessity of installation of Static Weigh Bridges in both directions of the toll plazas which has not been undertaken yet.
2. The AVCC hardware is working fine with an average accuracy of 96% which is fair, the equipment is maintained and functioning in proper condition, the validation is happening through inputs from AVCC and Incident Cameras installed in each lane, critical components required to check the vehicle classification e.g. AVC, cameras are functional and are as per standard industry requirements, automatic barriers are working but are in a bad shape.
3. The installed MS-WIM at the toll plazas is not found in functional and needs to be re-furbished and requires integration with minor civil works around the WIM area to maintain the proper slope and accuracy of detection of weight.
4. The site is using ILL connectivity through a BSNL for processing of all fastag transactions.

7.8 Assessment of Toll Operation and integration with TMS

The operations of the toll are being managed through a third-party agency at both sections, the site team is fully conversant with the given TMS functionalities and can generate all required reports as per the interaction with the site teams.

The LSDU i.e. Lane Status Display Unit to monitor the entire hardware of each lane is not provided which is an essential part for monitoring of the toll equipment on day-to-day basis and generating all alerts.

The back office of Gadanki Toll Plaza is functioning fairly with complete inputs from the lane hardware.

7.9 Backoffice TMS review

a. The TMS is controlled through the control room which is housed with the validator performing real time transaction validations with consolidated inputs of vehicle count and classification as per TC / RFID Antenna & AVC. There is no separate room for performing cashup function and all toll collectors come to the control room to deposit the collected money.

b. LSDU as stated above is not provided and equipment status / failures are not known to the shift supervisor until informed manually by the TC or found by the IT technician.

c. There was no device found for performing daily backups

d. As per the guidelines of IHMCL, the plaza server has to be installed with a hot-standby server arrangement however no hot-standby server was found to be installed.

e. No fake note detectors installed in the lane to detect counterfeit currency

7.10 Conclusion

The TMS at Gadanki toll plaza is performing fairly well and only certain equipment like MS-WIM, Automatic Boom Barriers etc needs to be refurbished / replaced under AMC.

8. REVIEW OF MAINTENANCE REQUIREMENTS OF HAM CONCESSION AGREEMENT

		Project
	Agreement / Contract	Six Lanning of NH-140 from Chittoor (Design KM 0.000/Existing KM 158.000 of NH-4) to Mallavaram (Design KM 61.128/Existing KM 41.800 of NH-140) Design Length KM 61.128 in the State of Andhra Pradesh under Bharatmala Pariyojana on Hybrid Annuity Mode
1	Contracts	HAM Concession Agreement
2	O&M Manual	Can be reviewed when documents are available

8.1 Operation and Maintenance Obligations

As per Clause 17.1 of the existing CA, the Concessionaire shall operate and maintain the Project in accordance with this agreement either by itself, or through O&M Contractor and if required, modify, repair or otherwise make improvements to the Project Highway to comply with the provisions of this Agreement, Applicable Laws and Applicable Permits and conform to Specifications and Standards, and Good Industry Practice. The obligations of the concessionaire hereunder shall include:

- Procuring and ensuring safe, smooth and uninterrupted flow of traffic on the Project Highway during normal operating conditions.
- Minimising disruption to traffic in the event of accidents or other incidents affecting the safety and use of the Project Highway by providing a rapid and effective response and maintaining liaison with emergency services of the state.
- Carrying out periodic preventive maintenance of the Project Highway.
- Undertaking routine maintenance including prompt repairs of potholes, cracks, concrete joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices.
- Undertaking major maintenance such as resurfacing of pavements, repairs to structures, and repairs and refurbishment of tolling system, hardware and other equipment;
- Preventing, with the assistance of concerned law enforcement agencies, any unauthorised entry to and exit from of the Project;
- Preventing, with the assistance of the concerned law enforcement agencies, any encroachments on the Project;
- Protection of the environment and provision of equipment and materials thereof;
- Operating and maintenance of all communication, control and administrative systems necessary for the efficient operation of the Project;
- Maintaining a public relations unit to interface with and attend to suggestions from the Users, of the Project Highways, the media, Government Agencies, and other external agencies; and
- Complying with Safety Requirements in accordance with Article 18.

Note: Compliance to existing CA conditions for O&M can be ascertained once the requisite documentation is provided or made available.

9. SOIL AND MATERIAL INVESTIGATION

9.1 General

As a part of soil and material investigation report preparation, the consultants have conducted tests on subgrade soils along the project corridor.

9.2 Field investigation – sampling and testing

Field tests were conducted on the subgrade soils and required pavement materials were collected for testing. Table 9-1 presents the sampling criteria, tests and testing procedures adopted for various field and laboratory tests.

Table 9-1: Site sampling and testing criteria

S. No.	Type of Soil Sample	Sampling Criteria	Testing Criteria	
			Description of Test	Standard Code Applicable
Existing subgrade and pavement materials				
i)	**Subgrade Strength Test Pits**	Minimum of one subgrade soil sample was obtained at an interval directed by the client & Material Engineer based on site condition.	In-situ Density	IS 2720 (Part – 29)
			In-situ moisture content	IS 2720 (Part – 2)
			Soil Classification	IS 1498
			Sieve Analysis	IS 2720 (Part – 4)
			Atterberg Limits	IS 2720 (Part – 5)
			Laboratory Compaction Test (using heavy compaction)	IS 2720 (Part – 8)
			Field Compaction	IS 2720 (Part-29)
			4-days soaked CBR	IS 2720 (Part – 16)
			Free swell Index	IS 2720 (Part-40)

9.3 Investigations on subgrade soils

Subgrade investigations were carried out to know the strength properties of the existing soil. It is ensured to dig subgrade strength test pits at an interval as directed by the client & material engineer based on the site condition. Various in-situ tests and laboratory tests are conducted on soil samples, as summarized in Table 9-1. The pavement composition details (pavement course, material type, and thickness) are also recorded at every test pit.

The test results and discussion are described in the section below.

Field tests were conducted as per the project requirement to determine the subgrade characteristics and strength. The field testing for subgrade soil includes:

- In-situ density determination at possible location of each test pit
- Field moisture content determination at possible location of each test pit

In-situ density (field density) and moisture content were determined as per the standards enlisted in Table 9-1. Field density is used to evaluate the degree of compaction and existing subgrade CBR at field density state. 50kg of samples were collected in damp proof bags for testing. Required laboratory testing as specified in Table 9-1 were conducted the details of field dry density and field moisture content test results are furnished in Annexure 9.1 and Table 9-2 presents a summary of

the test results for the entire project section. The field investigation photographs are shown in Figure 9-1.

Figure 9-1: Field Investigations sample photographs

Table 9-2: Summary of Subgrade Test Results

Observations and Conclusions

Soil Classification and Distribution

From Table 9-2, it is evident that subsoil is generally consistent throughout the project road and is predominantly Silty Sand and Clayey sand soils.

Summary of strength parameters in the soil investigation is shown below.

Variance between MDD and FDD is converted in-terms of degree of compaction.

Description	Liquid Limit	Plasticity Index	Free Swell Index	4-days soaked CBR	Degree of compaction
NH-140, Chittor to Mallavaram: Km 0+000 to Km 61+128	17%-29%	Max 9%	Max 20%	12.6%-28.1%	92.3%-96.7%
MoRTH Limits	**<50%**	**<25%**	**<50%**		

- All the measured LL, PI and FSI values are within the acceptable limits as per MoRTH guidelines.

9.4 Existing pavement composition

Existing pavement composition (pavement course, material type, and thickness) were recorded at an interval directed by the client & material engineer based on the site condition along the project road.

The summary of existing pavement crust thickness is presented in a tabular form as well as an illustrative bar graph in Table 9-3 and Figure 9-3 respectively and the pavement crust thickness photographs are shown in Figure 9-2.

Table 9-3: Summary of pavement crust along the project corridor

S. No.	Existing Chainage (Km.)	Side (LHS/ RHS)	Pavement Composition (mm)			
			Bituminous	WMM	GSB	Total Thickness
1	5+250	LHS	180	250	200	630
2	10+900	RHS	180	240	190	610
3	15+900	LHS	200	260	200	660
4	19+700	RHS	185	270	210	665
5	25+180	LHS	170	265	195	630
6	30+950	RHS	180	245	200	625
7	35+100	LHS	180	240	190	610

11	54+900	LHS	150	265	180	595
12	60+800	RHS	140	240	210	590

Figure 9-2: Sample Pavement Crust Thickness measuring photographs

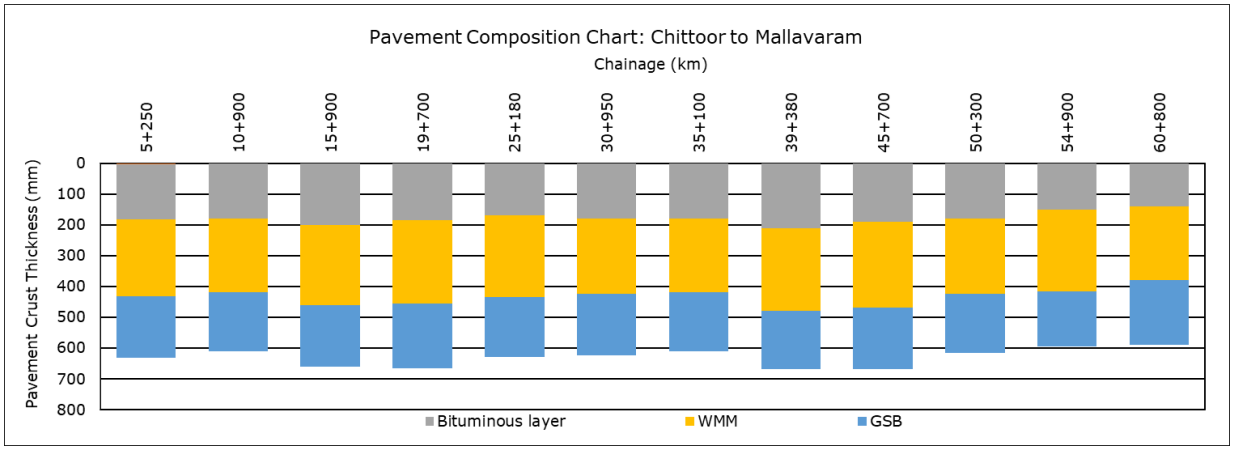

Figure 9-3: Existing Pavement Crust Summary along the project road.

Observations and Conclusions:

Chittoor to Mallavaram (Km 0+000 to Km 61+128):

6-Lane Flexible Pavement Section

- The existing pavement along the project corridor is flexible in nature. The pavement composition comprises of bituminous layer, granular base over the granular sub-base.
- Throughout the project road it possesses consistent bituminous/ granular layer thickness with an average of 179mm bituminous layer over the average Granular course of 452mm were observed.

10. PAVEMENT EVALUATION STUDIES

10.1 Pavement condition survey with Network Survey Vehicle

10.1.1 Network Survey Vehicle Description

Road Runner NSV was used for collection of condition data for this assignment. Road Runner (NSV) is multi-faceted road survey equipment which could be configured to collect a wide range of pavement condition data and asset data.

Road Runner NSV is capable of collecting roughness, rutting, pavement distresses, assets along with GPS coordinates and project chainage.

The main components which are integrated into Road Runner NSV are.

1. Digital Laser Profilers (DLP) -Road roughness and rutting.
2. Digital Imaging System (DIS) -Pavement distresses and road assets data.
3. Differential Global Positioning System (DGPS).
4. High Resolution Distance Measuring Instrument (HRDMI).

1. Digital Laser Profiler (DLP)

- DLP is integrated into the NSV consisting of eleven lasers to collect Road Roughness and Rutting.
- This inertial profiler is capable of recording the data continuously along each wheel path.

(a) Roughness

Road Runner NSV equipment fitted with dual wheel path laser profilometer to collect the roughness data. The roughness data was collected and reported for 100 m interval.

The outputs of the lasers and accelerometers located in each wheel path (750 mm either side of the Centre line of the vehicle) are sampled every 25 mm of longitudinal travel and used to calculate the longitudinal profile of the road.

The profile is then passed through the quarter car model to calculate the International Roughness Index (IRI) lane roughness as per the methodologies specified in the ASTM E-950.

(b) Rutting

Rutting will be measured and reported through DLP, and the data will be recorded at every 100m interval on both the wheel paths.

2. Digital Imaging System (DIS)

Digital Imaging System (DIS) in Network Survey Vehicle (NSV) consist of 5 high resolution roof mounted cameras to capture pavement distresses and road assets data. These cameras are oriented in a certain configuration to ensure that the information of interest, such as inventory or pavement condition, is being recorded in the camera field of view. Three cameras are forward facing and mounted

on front side of vehicle (Left corner, Centre and Right corner), covers 160° angle images and are set to sample at every 10m interval. Another two cameras are mounted on back side of the vehicle (Left corner, Right corner) to capture the distress image of pavement 10m*4m (length*width) i.e., captures at 10m interval.

Digital image system is capable of

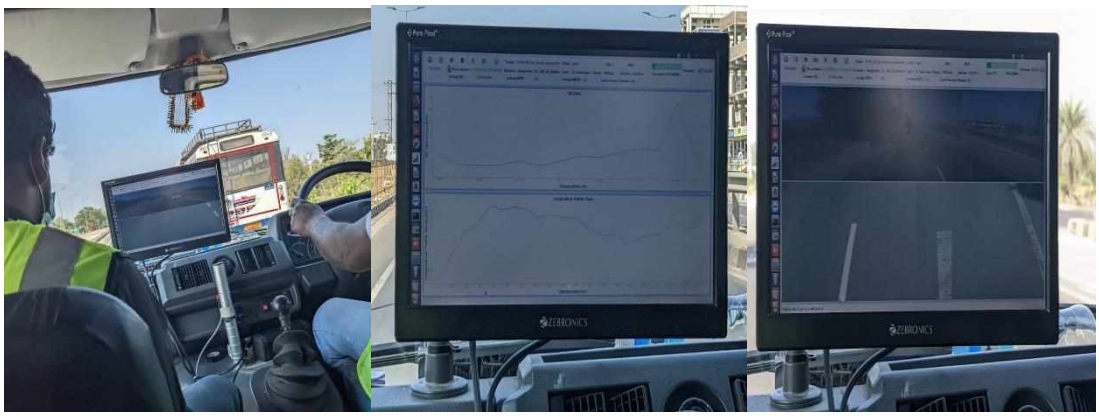
- Collecting real time digital images.
- Achieving a sampling rate of at least one set per 2.5 meters for Distress camera's and one set per 10 meters for Asset cameras.
- Incorporating real time differentially corrected GPS (DGPS).
- Capturing & recording at highway speeds.
- Providing real time on-screen displays for operator verification during collection.
- Storing images straight to PC's / NAS (Network Attached Storage).
- Linking into the client's referencing system via distance and GPS.

3. Geo Referencing (DGPS Data)

Road Runner NSV is equipped with DGPS system, and it do collect all the data and images with geo-reference. Reference that image against GPS co-ordinates by logging the latitude, longitude of the specific image.

4. Distance Measuring Instrument (DMI)

Road Runner NSV is equipped with DMI, and it is fitted to rear tyre of the network survey vehicle. The distance and speed measurement performed by the distance measuring instrument, which is a distance transducer and it's highly accurate providing GPS distance and speed.



10.2 Methodology for NSV Field Testing

Usually, 4 members are assigned for site to collect the field data. Two of the trained/ experienced field engineers and two drivers during the collection phases of projects. During the survey, engineer is responsible for operating the vehicle's acquisition systems. Road Runner NSV dashboard tool is used to for data acquisition.

The survey will be carried out by lane wise, and the following steps will be followed during the survey.

- Engineer will setup the equipment and check the data collection system prior to the survey.
- Prior to the survey field engineer do set the project name, direction, lane number and starting chainage with increasing or decreasing (as per direction) details.
- The vehicle will run in middle of the lane and collects data up to a vehicle running speed of 80 Kmph.
- Digital Laser Profiler (DLP), Digital Imaging System (DIS) collect the data with GPS co-ordinates and chainage reference.
- Field Engineer will review the data collection and specifies any remarks/ details in observation column.
- At the end of project chainage, engineer will stop that particular survey and save all the recorded and the same process is followed for all other lanes of the project stretch.

10.3 Analysis of NSV Survey Data

Pavement condition survey was carried out on each lane of each carriage way with NSV. The NSV survey was conducted on the project corridor from 29/07/2024 to 31/07/2024, data was processed, analyzed, and presented in 100m interval. Detailed NSV data is presented in the following Annexures and summary of it presented as below.

10.3.1 Roughness

As stated in the earlier section, NSV collected the roughness data at 100m interval on each lane in terms of IRI (International Roughness Index) value.

In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 "Guidelines on Measuring Road Roughness and Norms" with the following equation.

$BI = 630*(IRI)^{\wedge 1.12}$

Where,

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data of the pavement is collected through Digital Laser Profilers System (DLP) and the same is presented in Annexure 10.1 at an interval of 100 mts for each section. The obtained lane wise kilometer Roughness summary in terms of BI (mm/km) is presented in Table 10-1 for 6-lane flexible section (km 0+000 to km 61+128). The graphical representation of roughness data for LHS and RHS directions are presented in Figure 10-1 and Figure 10-2 respectively.

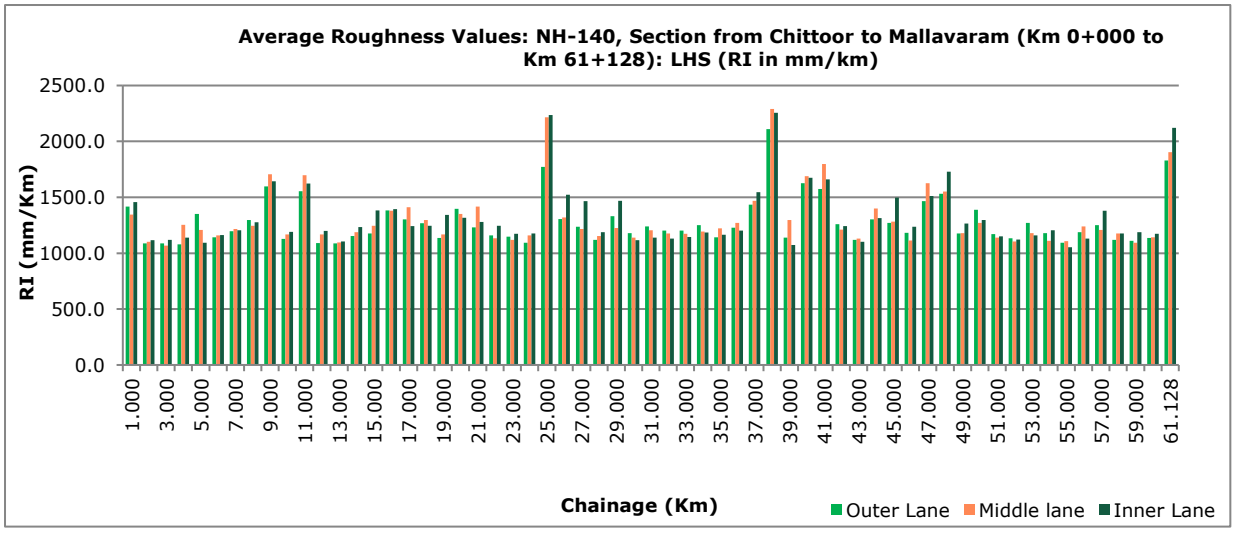


Table 10-1: Summary of roughness data on both directions (6- Lane Section) – Flexible pavement

Chainage (km)		LHS Direction				RHS Direction			
		Avg. BI (mm/km)				Avg. BI (mm/km)			
From	To	Outer Lane	Middle Lane	Inner Lane	Average	Outer Lane	Middle Lane	Inner Lane	Average

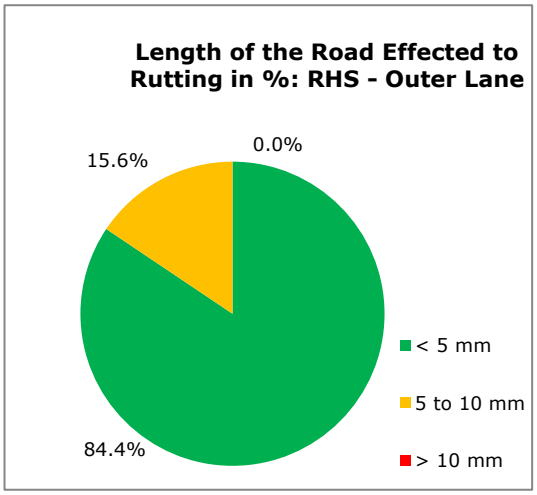
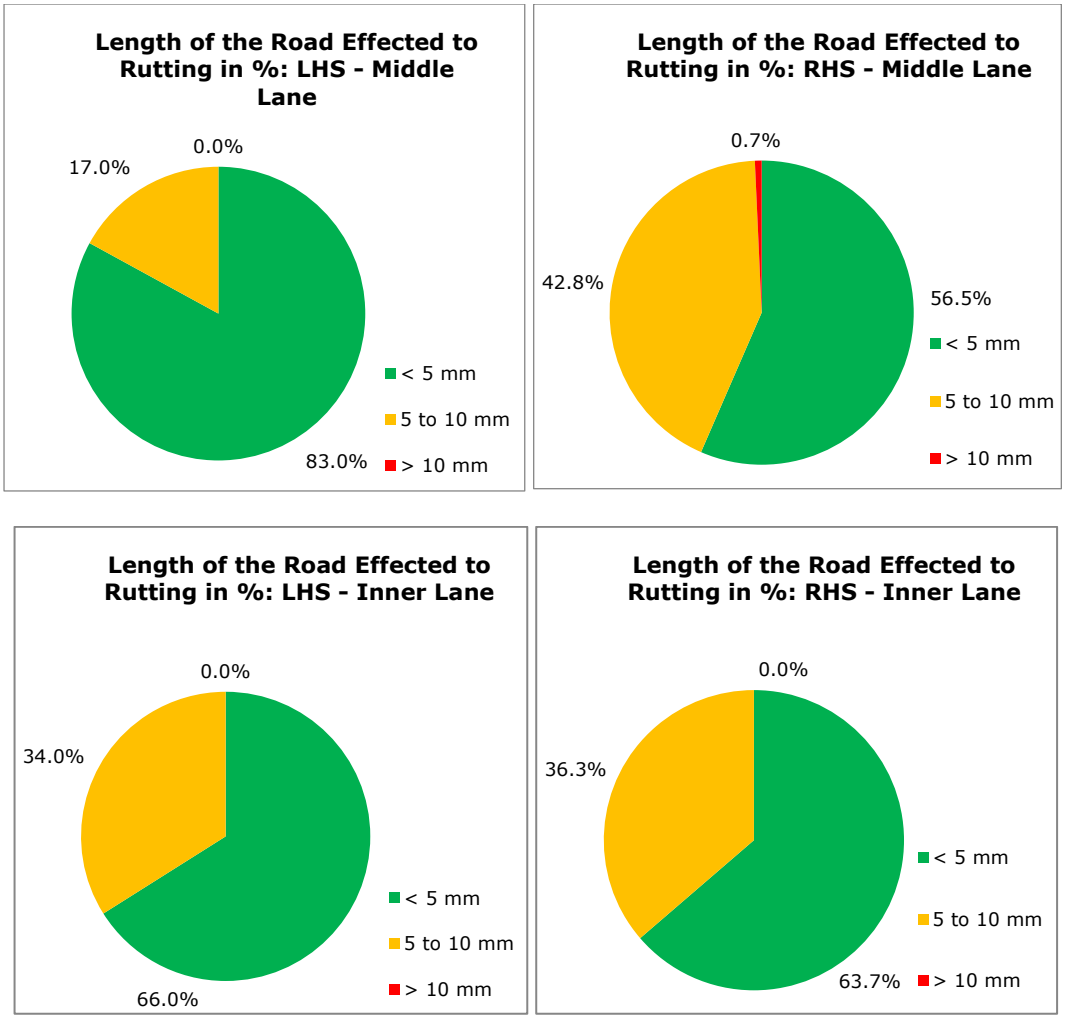
10.3.2 Rutting



Rutting data of flexible pavement section is collected through digital laser profilers' system and the same is presented in Annexure 10.2 at an interval of 100mts. The obtained lane wise rutting summary is presented in Table 10-3 for both LHS and RHS directions. The graphical representation of rutting data is presented in Figure 10-3 for both LHS & RHS direction.



Confidential

Figure 10-3: Illustrative summary of rutting for Chittoor to Mallavaram

Observations:

- In LHS direction rutting value is within desirable limit only. (not more than 10mm)
- In RHS middle lane direction a length of 0.420km rutting is more than 10mm.

10.3.3 Pavement distress data of Rigid Pavement

The following Pavement distresses are considered for assessing the rigid pavement condition as per IRC SP: 83-2018 (Guidelines for Maintenance, Repair and Rehabilitation of Cement concrete pavements);

- Cracking
  - Longitudinal cracks
  - Transverse cracks/ Diagonal Cracks
  - Corner cracks/ Corner breaks
  - Multiple cracks
- Spalling of Joints
- Joint seal defects
- Joint Faulting/ Stepping

Confidential

- Joint Separation
- Blow up/ Buckling
- Ravelling/ Scaling
- Potholes/ Pop outs

All the above pavement distresses will be provided at 10 m interval.

The existing distresses are measured in five level distress rating system as specified in IRC: SP: 83-2018. The five-level distress rating system is given in Table 10-4 below.

Table 10-4: Five-level distress rating system for Rigid Pavement

Distress Rating	Slab Condition	Severity (Defects) Rating
0	Excellent	No Discernible
1	Very Good	Minor
2	Good/Average	Moderate
3	Fair	Major
4	Poor	Extreme
5	Very Poor	Unsafe/ Unserviceable

The condition survey of the rigid pavement was carried out by observing all the listed distresses as specified in IRC: SP: 83-2018 in conformity with Proforma given code. Type of distresses and assessment rating as given in Table 4.5 of IRC: SP: 83-2018 is followed and the same is listed in Table 10-5 below.

Table 10-5: Type of distresses and its assessment rating

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
1	**CRACKING**			
	Single Discrete Cracks Not interaction with Any joint	w=width of crack L=length of crack d=depth of crack D=depth of slab	0	Nil, not discernible
			1	w<0.2 mm, hair cracks
			2	w= 0.2 -0.5 mm, discernible from slow-moving car
			3	w=0.5-1.5 mm, discernible from fast-moving car
			4	w=1.5-3.00 mm
			5	w>3 mm
2	Single Transverse (or Diagonal) Crack intersecting with one or more joints	w=width of crack L=length of crack d=depth of crack D=depth of slab	0	Nil, not discernible
			1	w<0.2 mm, hair cracks
			2	w=0.2 -0.5 mm, discernible from slow vehicle
			3	w=0.5-3.0 mm, discernible from fast vehicle
			4	w=3.0-6.0 mm
			5	w>6mm, usually associated with spalling, and/or slab rocking under traffic
3	Single Longitudinal Crack intersecting with	w=width of crack L=length of crack d=depth of	0	Nil, not discernible
			1	w<0.5 mm, discernible from slow vehicle
			2	w= 0.5 -3.0 mm. discernible from fast vehicle

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
	one or more joints	crack D=depth of slab	3	w=3.0-6.0 mm
			4	w=6.0-12. mm
			5	w>12mm, usually associated with spalling, and/or slab rocking under traffic
4	Multiple Cracks Intersecting with one or more joints or cracks	w=width of crack	0	Nil, not discernible
			1	w<0.2 mm, hair cracks
			2	w=0.2 - 0.5 mm, discernible from slow vehicle
			3	w=0.5-3.0 mm, discernible from fast vehicle
			4	w=3.0 - 6.0 mm panel broken into 2 or 3 pieces
			5	w > 6 mm and/or panel broken into more than 4 pieces
5	Corner Break	w=width of crack L=length of crack	0	Nil, not discernible
			1	w<0.5 mm only one corner broken
			2	w< 1.5 mm, L<0.6 m, only one corner broken
			3	w< 1.5 mm. L <0.6 m, two corners broken
			4	w>1.5 mm, L >0.6 m, or Three corners broken
			5	Three or four corners broken
6	Punchout (Applicable to CRCP only)	w=width of crack L=length (m/m^2)	0	Nil, not discernible
			1	w< 0.5 mm; L< 3 m/m^2
			2	either w>0.5 mm or L<3 m/m^2
			3	w> 1.5 mm and L< 3 m/m^2
			4	w>3 mm, L<3 m/m^2 and deformation
			5	w>3 mm, L>3 m/m^2 and deformation
7	**SURFACE DEFECTS**			
	Ravelling or Honey comb type surface	r= area damaged surface / total surface of slab (%) h=maximum depth of damage	0	Nil, not discernible
			1	r < 2 %
			2	r =2-10%
			3	r=10-25%
			4	r=25-50%
			5	r >50% and h>25 mm
8	Scaling	r= area damaged surface / total surface of slab (%) h=maximum depth of damage	0	Nil, not discernible
			1	r < 2 %
			2	r =2-10%
			3	r=10-20%
			4	r=20-30%
			5	r >30% and h>25 mm
9			0	

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
	Polished Surface/ Glazing	t=texture depth sand patch test	1	t > 1mm
			2	t=1-0.6 mm
			3	t=0.6-0.3 mm
			4	t=0.3-0.1 mm
			5	t<0.1 mm
10	Pop out (small Hole), Pothole Refer Para 8.4	n=number/m2 d=diameter h= maximum depth		
			0	d<50 mm; h<25 mm; n <1 per 5 m^2
			1	d=50-100 mm: h<50 mm: n<1 per 5 m^2
			2	d=50-100 mm: h>50 mm: n<1 per 5 m^2
			3	d=100-300 mm: h<100 mm: n<1 per 5 m^2
			4	d=100-300 mm: h>100 mm: n<1 per 5 m^2
			5	d>300 mm: h>100 mm: n>1 per 5 m^2
	JOINT DEFECTS			
11	Joint Seal Defects	Loss or damage L=Length as % total joint length	0	Difficult to discern.
			1	Discernible, L<25% but of little immediate consequence eighth regard to ingress of water or trapping incompressible material.
			3	Notable, L>25% insufficient protection against ingress of water and trapping in incompressible material.
			5	Severe; w>3 mm negligible protection against ingress of water and trapping in incompressible material.
12	Spalling of Joints	w= width on either side of the joint L= Length as % total joint length	0	Nil, not discernible
			1	w<10 mm
			2	w=10-20 mm, L<25%
			3	w=20-40 mm, L >25%
			4	w=40-80mm, L >25%
			5	w>80mm, and L>25%
13	Faulting (or stepping) in Cracks or Joints	f=difference of level	0	Not discernible, f< 1 mm
			1	f< 3 mm
			2	f=3-6 mm
			3	f=6-12 mm
			4	f=12-18 mm
			5	f>18 mm
14	Blow up or buckling	h=vertical displacement from normal profile	0	Nil, not discernible
			1	h< 6 mm
			2	h=6-12 mm
			3	h=12-25 mm
			4	h>25 mm

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
			5	shattered slabs, i.e., 4 or more pieces
15	Depression	h= negative vertical displacement from profile L= Length	0	Nil, not discernible, h<5 mm
			1	h=5-15 mm
			2	h=15-30 mm. Nos < 20% joints
			3	h=30-50 mm
			4	h>50mm or >20% joints
			5	h>100 mm
16	Heave	h= positive vertical displacement from profile L= Length	0	Nil, not discernible, h<5 mm
			1	h=5-15 mm
			2	h=15-30 mm. Nos < 20% joints
			3	h=30-50 mm
			4	h>50 mm or >20% joints
			5	h>100 mm
17	Bump	h=vertical displacement from normal profile	0	h<4 mm
			1	h=4-7 mm
			3	h= 7 - 15 mm
			5	h>15 mm
18	Lane to Shoulder Dropoff	f=difference of level	0	Nil, not discernible f<5 mm
			1	f=3-10 mm
			2	f=10-25 mm.
			3	f=25-50 mm
			4	f=50-75 mm
			5	f >75 mm
19	**DRAINAGE**			
	Pumping	quantity of fines and water expelled through open joints and cracks Nos/ 100 m stretch	0	Not discernible
			1 to 2	slight / occasional Nos <10%
			3 to 4	appreciable / Frequent 10-25%
			5	Abundant, crack development>25%
20	Ponding	Ponding on slabs due to blockage of drains	0-2	No discernible problem
			3 to 4	Blockages observed in drains, but water flowing
			5	Ponding, accumulation of water observed

Rigid Pavement distresses for Chittoor to Mallavaram section (km 0+000 to km 61+128) the rigid pavement distress summary is presented in Annexure 10.3. The rigid pavement condition summary of each section in lane wise is presented from Table 10-6.

Table 10-6: Rigid Pavement Distress Summary (6-Lane Section):

Rigid Pavement Distress Summary Based on Depth & Severity (Length in Km)																							
Severity	**Single discrete cracks**		**Longitudinal Cracks**		**Transverse/ Diagonal Cracks**		**Multiple Cracks**		**Corner Cracks/ Breaking**		**Joint Spalling/ Joint Damage**	**Joint Seal defects**	**Joint Separation**	**Faulting/ Stepping**	**Blow Up/ Buckling**	**Punchout**	**Ravelling**	**Scaling**	**Pothole/ Popout**	**At Structures/ Flexible Overlay Location**

Pavement Distresses data for flexible pavement

The NSV software will process and geotag with corresponding co-ordinates and chainage, which will further categories the distress type, location, magnitude and severity.

Pavement distress data of Flexible pavement- Main carriageway

The following Pavement distresses are considered for assessing the flexible pavement condition as per IRC: 82-2023 "Code of Practice for Maintenance of Bituminous Road Surfaces".

- Cracking
  - Longitudinal cracks
  - Transverse cracks
  - Alligator cracks/ Crocodile cracks
  - Multiple cracks
- Ravelling
- Shoving
- Bleeding
- Slippage/ Delamination
- Potholes
  - Area: Surface Area of the Pothole.
  - Numbers
- Edge break
- Patching
- Settlements, Depressions

All the above pavement distress will be provided at 100 m interval.

The detailed pavement condition analysis and distress rating is carried out as per Table 5.1 given in IRC 82:2023. The detailed pavement distresses data of LHS and RHS directions are presented in Annexure 10.4(a) and Annexure 10.4(b). The pavement distress summary is presented in Table 10-7 for LHS and RHS directions. Few Sites investigation photographs in Figure 10-4 below.

Table 10-7: Summary of Flexible pavement distresses on both directions (6- Lane Section-Main CW)

Distress	Severity (% of Area)	Length of the Road Effected						Length of the Road Effected					
		LHS						RHS					
		Inner Lane		Middle Lane		Outer Lane		Inner Lane		Middle Lane		Outer Lane

**From Km 39+450 to Km 40+700, due to land availability issues survey was not carried out.*

Figure 10-4: Field testing photographs captured during the NSV survey

Pavement Observations:

Chittoor to Mallavaram Section (km 0+000 to km 61+128)

Main Carrigeway:

- The overall pavement condition is good, only milid rutting is oberved.
- In RHS direction few location Rutting and cracks were observed, apart from this overall section is good.
- The rigid pavement at RUB and Toll plaza is good, few slabs have a cracks and spalling were obsevred

Confidential

Service Roads:

- The service roads in both direction is good, in a few location ravelling and bleeding were observed.

Confidential

Critical Issues:

- On the LHS section after RUB location Ch.24+800 the drainage water to be diverted to other low point as here water is dripping from top earthen layers near Gangamma temple-SRIPURAM due to obligatory point there might me some land acquisition issue. This water leakage is stripping the asphalt layer and need patch repair after sorting drainage issue.
- At km 43+800, in LHS direction the drainage blocked, and water is starts flowing on to the service roads.

The Service roads visual pavement condition summary is provided in the Table 10-8 below,

Confidential

Table 10-8: Service Roads visible condition summary from Km 0+000 to Km 61+128

Service Roads visual pavement condition summary

10.4 Structural Evaluation of Flexible Pavement by Using FWD (Km 0+000 to Km 61+128)

10.4.1 Equipment Description and Test Methodology

Principle of Pavement Evaluation Using FWD

Performance of flexible pavements can be evaluated by applying loads on the pavements that simulate the actual traffic loading conditions, The recording of such responses is made by measuring the elastic deflection under such loads. The collected deflection data from survey is duly analysed considering the factors influencing the performance of pavement such as subgrade strength, thickness and quality of each of the pavement layers, drainage conditions, pavement surface temperature etc.
Among the equipment available for structural evaluation of pavements, the Falling Weight Deflectometer (FWD) is extensively used world-wide because it simulates, to a large extent, the actual loading conditions of the pavement. When a moving wheel load passes over the pavement it produces load pulses. Normal stresses (vertical as well as horizontal) at a location in the pavement will increase in magnitude from zero to a peak value as the moving wheel load approaches the location. The time taken for the stress pulse to vary from zero to peak value is termed as 'rise time of the pulse'. As the wheel moves away from the location, magnitude of stress reduces from peak value to zero. The time period during which the magnitude of stress pulse varies from 'zero-to-peak-to-zero' is the pulse duration. Peak load and the corresponding pavement responses are of interest for pavement evaluation.
The resulting load-deflection data can be interpreted through appropriate analytical techniques, such as back calculation technique, to estimate the elastic moduli of the pavement layers. The computed moduli are, in turn, used for (i) the strength evaluation of different layers of in-service pavements (ii) the estimation of the remaining life of in-service pavement (iii) determination of strengthening requirement, if any and (iv) evaluation of different rehabilitation alternatives (overlay, recycling, partial reconstruction, etc

Brief Description of Falling Weight Deflectometer (FWD)

Falling Weight Deflectometer is an impulse-generating device with a guide system. This device allows a variable weight to be dropped from a variable height. The apparatus has a loading plate which is used for uniform force distribution on the test layer. When the weight affects this plate, this loading plate ensures that the resulting force is applied perpendicularly to the test layer's surface. It also has a load cell for measuring the actual applied impulse. It also has one or more deflection sensors. (Note: Deflection basin tests require at least seven sensors). It also has a system for collecting, processing, and storing deflection data. Structural evaluation of pavements involves application of a standard load to the pavement and measuring its response in terms of stress, strain or deflection.

The basic working principle of the impulse loading equipment is to drop a mass on the pavement to produce an impulse load and measure the surface deflections. The mass is dropped on a spring system, which in turn transmits the load to the pavement through a loading plate. The resulting deflection bowl characteristics are observed and used in the back calculation of pavement material properties. The principle is illustrated in Figure 10-5

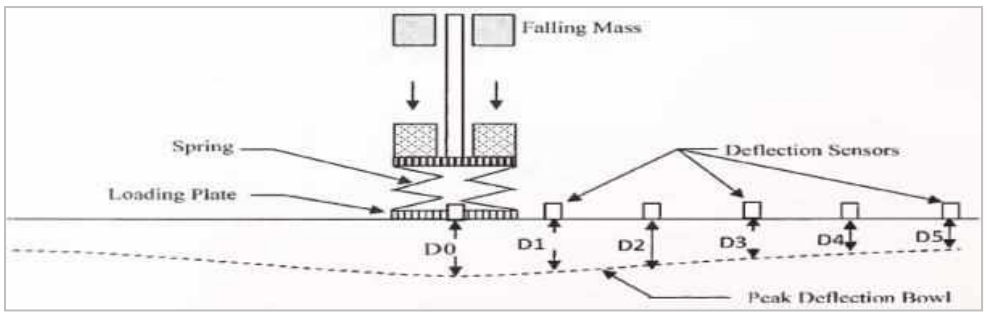

Figure 10-5: Working Principle of FWD

FWD Instrument Used for the Deflection Survey: DYNATEST 8002 FWD

For the purpose of conducting FWD survey on the project road DYNATEST 8002 FWD Fully Automatic Vehicle-mounted FWD and ERAY FWD Fully Automatic Vehicle-mounted FWD were used. The FWD machines can apply a loading in the range of 12-150 kN, enabling them to simulate all type of vehicle loads on pavement surface. These models are equipped with a battery back-up and vehicle mounted set-up with all other accessories required for evaluation of pavement.

Moreover, this particular instruments mostly outperforms or matches all the criteria given in the IRC: 115-2014. Following Table 10-9 summarizes the technical specifications of the instruments against the specifications of FWD mentioned by IRC: 115-2014.

Table 10-9: Comparison between IRC and DYNATEST 8002 FWD Specifications

No	FWD Components	IRC :115-2014	DYNATEST 8002 FWD	Remarks
1	Plate Diameter	300/450 mm	300 mm	300 mm dia plate is recommended
2	Mass System	Single Mass	Single Mass	Matched
3	Falling Weight Mass	50kg to 700kg	50kg to 350kg	Matched
4	Height of fall	100mm to 600 mm	Variable	Matched
5	Target peak load	40kN	40-150kN	Matched
6	Load Cell Accuracy	+ 2 %	+ 1 %	Matched
7	Number of Deflection Transducers	6 to 9	7	Matched
8	Deflection Sensor Types	Geophones	Geophones	Matched
9	Reading Resolution of Deflection Transducers	Min 1 µm	1 µm	Matched
10	Deflection Transducers Accuracy	± 2 %	± 1 %	Matched

Testing Procedure and Methodology

The detailed test methodology and procedure was described in IRC: 115-2014 "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique". However, as per the client's requirement the sampling procedure was customized in this project. In adherence to the same, structural evaluation of the existing 'pavement and subgrade system' by measuring its response in terms of deflection was carried out using FWD for the project road in the month of July 2024 (27/07/2024 to 29/07/2024).

Evaluation of pavement structural strength is carried out in accordance with requirements of TOR and IRC: 115-2014.

(a) Testing Equipment

The equipment used for the testing is:

- **DYNATEST 8002 FWD** Vehicle Mounted Falling Weight Deflectometer with 1 loading plate and 7 numbers of geophones placed at the spacing of 0, 300, 600, 900, 1200, 1500 and 1800mm from the centre of the loading plate.

- Air Temperature and Pavement Surface Temperature sensors as part of the FWD instrument.
- Glycerol and digital thermometer.
- Red flags and red cones and flashing lamps for traffic arrangement.

(b) Testing Frequency – as per IRC:115-2014

The entire length has been classified into section of uniform performance. As it is inexpedient to change the sample size for deflection measurement at frequent intervals, the minimum length of uniform section has been kept as 1.0km. The interval at which deflection measurements has been carried out was calculated by using the following formula of equation 1 of IRC: 115-2014 and the same are extracted for ready reference:

$n = ((z * CV)^2)/ (ME^2)$

Were,

n =sample size

z =standard normal deviate, 1.285 corresponding to 90 per cent (two-sided) confidence level

ME =10 per cent acceptable margin of error (as percentage of mean)

CV=Coefficient of variation of deflection (standard deviation/mean) expressed as percentage; 15 percent, 30percent and 45 percent for good, fair and poor condition respectively.

Though the length of uniform section divided by calculated sample size results the interval of FWD test, however the deflection measurement scheme depends upon the type of carriageway, number of lanes and the measurement along a lane. The same is detailed in Table 2 of IRC 115-2014 and the same is presented in Table 10-10 below.

Table 10-10: Guidelines for selection of deflection measurement scheme for 6-lane divided carriageway.

Recommended Measurement Scheme	Maximum Spacing(m) for test points along selected wheel path for pavements of different classification		
	Poor	Fair	Good
(i)measure along outer wheel paths of outermost lanes	30	65	250
(ii)measure along the outer wheel path of more distressed inner lane	60	130	500
(iii)measure along the centre line of paved shoulder (in case of widening projects)	120	260	500

Courtesy: Table 2 of IRC: 115-2014
Note: As per Scope of work we collected 4 points in Inner, 2 points in Middle and 2 points in Outer lanes per kilometre.

FWD Deflection Testing Points and Measurement

FWD deflection measurement has been carried out for each lane in both directions. FWD deflection measurement has been carried out at a test point along outer wheel path of each lane which is at an offset of 0.75m from the outer edge of outer lane, at 4.2m from the outer edge of outer lane for central lane and at 5.2m from the outer edge of outer lane as specified in section 5.4.5 of IRC: 115-2014. At every measurement location, four drops were made, such that the first drop is neglected as 'seating drop' and the rest three drops' deflections are recorded. Photographs of FWD test under progress at some locations are shown in Figure 10-6.

Figure 10-6: Photographs showing FWD survey under progress

Also, during survey pavement temperature of bituminous layer was recorded as per the procedure specified in section 5.4.7, xiii of IRC: 115-2014.

The following steps are carried out for measuring deflections at a test point:

i. Mark the test point on the pavement

ii. Centre the load plate over the test point

iii. Lower the loading plate onto the pavement ensuring there should be no standing water on the pavement surface. The loading plate should be in proper contact with pavement surface. The longitudinal and transverse slope of the pavement should not exceed 10 percent at the test location.

iv. Lower the frame holding the geophones so that the transducers are in contact with pavement surface.

v. Raise the mass to a pre-determined height required for producing a target load of 40 kN (+10%).

vi. Drop one seating load. The load and deflection data for this seating load is not recorded.

vii. Raise the mass and drop. Record the load and deflection data into the computer through data acquisition system. While peak load and peak deflections at different selected radial positions must be recorded. At least 2 drops should be made at one location for precision.

viii. If, during previous 2 steps, the deflections measured are giving variations or the deflections/load pulses are not proper, repeat the test drop.

ix. Raise the geophone frame and load plate and move to the next test location

x. Deflection measurements should not be made when the pavement temperature is more than 45°C.

10.4.2 Existing Pavement Composition Details

During test pit investigation, the existing pavement composition details are obtained at the interface of outer lane to earthen shoulder. For analysis purposes, along with the TDD consultant test pits investigation data, seller data also considered. The same test pits details are presented in Table 10-11.

Table 10-11: Summary of pavement crust details along the project corridor

S. No.	Chainage (Km)	Side (LHS/ RHS)	Pavement Composition (mm)		
			Bituminous layer	Granular Layer	Total Thickness
1	5+250	LHS	180	450	630
2	10+900	RHS	180	430	610
3	15+900	LHS	200	460	660
4	19+700	RHS	185	480	665
5	25+180	LHS	170	460	630
6	30+950	RHS	180	445	625
7	35+100	LHS	180	430	610
8	39+380	RHS	210	460	670
9	45+700	LHS	190	480	670
10	50+300	RHS	180	435	615
11	54+900	LHS	150	445	595
12	60+800	RHS	140	450	590

10.4.3 Pavement Condition

During the FWD survey the pavement surface is observed in good condition on the entire project road**.**

10.4.4 In-put Data for BACK Calculation Analysis

(a) Processing of Load and Deflection data

The FWD test data collected from different drops at each test point primarily consists of peak load and peak deflections at different radial locations. Unrealistic deflection values and obviously erroneous data must be removed.

Average values of load and deflections are calculated from the three drop test data collected. FWD tests were carried out using 40 kN impulse load. However, since the FWD equipment does not impart exactly the same load at every test point, normalization of all measured deflections was carried out to a common test load of 40 kN. Such 'normalization' of the data was carried out using the following formula:

$D_n = 40kN/L_m \times D_m$

where,

D_n = Normalized Deflection;

L_m = Imparted Load and

D_m = Measured Deflection

The "normalized deflection data" was then used for determining deflections, deflection bowl and finally in framing of homogeneous sections and calculation of overlay requirements. FWD normalised deflection data is presented in Annexure 10.6 for both LHS & RHS direction.

(b) Back-calculation of Layer Moduli

Layer moduli have been backcalculated using KGPBACK program. The pavement has been modelled as a three-layer system with bituminous layer, granular layer and subgrade. The following inputs have been provided for back analysis.

- Single wheel load 40 kN and contact pressure 0.56 MPa
- No. of deflection sensors: 7 (DYNATEST)
- Radial Distances of the Geophones i.e., 0, 300, 600, 900, 1200, 1500 and 1800mm (DYNATEST)
- Measured Surface Deflections normalized to 40kN in mm
- Pavement Layer Thicknesses (as measured from Trial Pits)
- Poisson's ratio of 0.5, 0.4 and 0.4 is considered for bituminous, granular and subgrade layers.
- Range of Possible modulus value (Lower and Upper limits) of bituminous layer, granular layer and subgrade

Range of different layers moduli given as input to KGPBACK for back-calculation. These ranges selected judiciously by an experienced pavement engineer taking into considerations about approximate age of pavement, visual assessment of the condition of bituminous layer, prevailing climatic conditions during deflection measurements and also based on information available from test pits, laboratory tests conducted as detailed in the sections below:

(c) Range of modulus for existing subgrade:

The range of moduli of existing subgrade layers is based on clause III.8.4 of IRC 115-2014.The range is taken as 20-100 MPa.

(d) Range of modulus value of existing granular layers i.e., base and subbase:

The range of moduli of existing granular layers is based on clause II.8.4 of IRC 115-2014.The range for combined (base and sub-base) is taken as 100-500 MPa.

(e) Range of modulus value of existing bituminous layers:

The range of moduli of existing thick bituminous layer has been determined on the basis of condition data. If the road condition is good the range is considered as 750MPa to 3000MPa, for sections with pavement condition is Fair- Poor, the range specified for thick bituminous layer 400 MPa to 1500 MPa as stipulated in section III.8.4 of IRC: 115-2014 has been taken into consideration.

10.4.5 Correction for data analysis

Correction for Temperature

Back-calculated moduli values of the bituminous layers evaluated by FWD survey are influenced by the pavement temperature. The standard pavement temperature for India is recommended as 35°C, hence the back-calculated moduli obtained at temperatures other than the identified standard temperature will have to be corrected using a suitable correction factor using equations 4 and 5 of IRC:115-2014 and the same is extracted below for ready reference.

ET1 = λ ET2

Were,

λ, temperature correction factor, is given as

λ = (1-0.238 lnT1) / (1-0.238 lnT2)

Were,

ET1 = Back-calculated modulus (MPa) at temperature T1 (°C)

ET2 = Back-calculated modulus (MPa) at temperature T2 (°C)

Correction for Seasonal Variation

Moisture content affects the strength of subgrade and granular sub base/base layers. The below equations are provided for Summer and Winter Seasonal reference.

$$E_{sub_mon} = 3.351 * \left(E_{sub_win}\right)^{0.7688} - 28.9 \ldots (6)$$

$$E_{sub_mon} = 0.8554 * (E_{sub_sum}) - 8.461 \ldots (7)$$

were,

E $_{sub_mon}$ = subgrade modulus in monsoon (MPa)

E $_{sub_sum}$ = subgrade modulus in Summer (MPa)

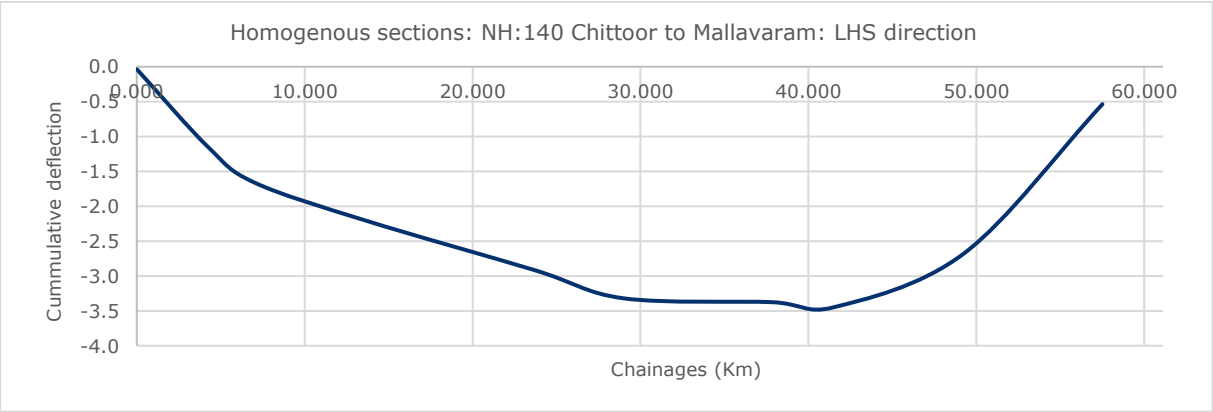
E $_{sub_win}$ = subgrade modulus in Winter (MPa)

$$E_{gran_mon=} -0.0003 * (E_{gran_sum})^2 + 0.9584 * (E_{gran_sum}) - 32.989 \ldots (8)$$

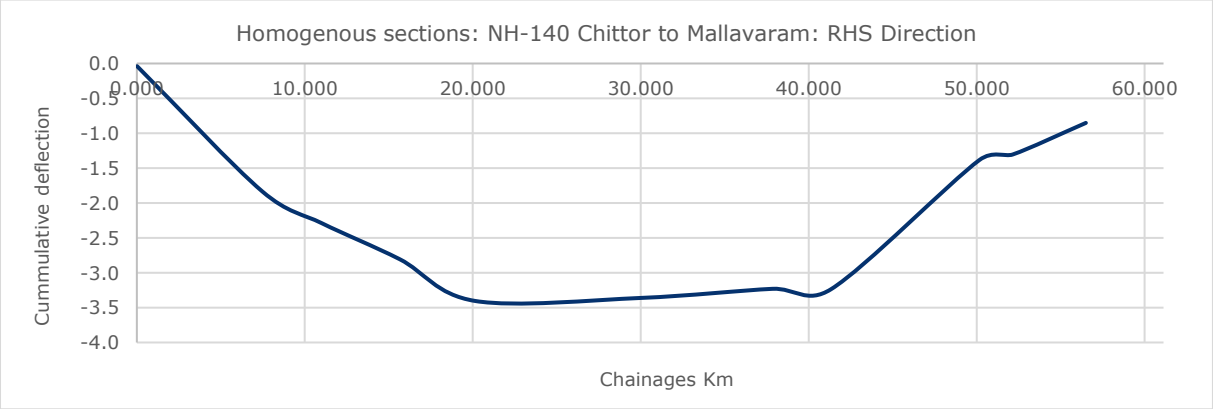
$$E_{gran_mon=} 10.5523 * (E_{gran_win})^{0.624} - 113.857 \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots (9)$$

were,

E $_{gran_mon}$ = granular layer modulus in monsoon (MPa)



E $_{gran_sum}$ = granular layer modulus in Summer (MPa)



E $_{gran_win}$ = granular layer modulus in Winter (MPa)

Since the deflection measurements have been carried out in the month of July during Monsoon, hence seasonal correction factor is not applicable.

10.4.6 Results of 15th Percentile E Moduli Value of Pavement Layers

The Homogenous sections are identified by Cumulative difference approach. Cumulative difference graphs are drawn by using D0 deflection values and are presented below.

The summary of back calculated E values is presented in Annexure 10.7 for both LHS & RHS direction. The summary of 15th percentile elastic moduli is presented in Table 10-12 and Table 10-13 for LHS and RHS respectively.

Table 10-12: 15th percentile elastic moduli of pavement layers in LHS direction

Chainage (km)		15th percentile E values in LHS Direction		
From	To	Bituminous Layer	Granular Layer	Subgrade
0.000	4.200	1988.13	253.05	100.00

10.5 Remaining life estimation

The in-service three-layer pavement system has been analysed with the back-calculated corrected layer moduli and layer thicknesses. The critical strains have been calculated by IITPAVE program. From the performance criteria equations, the residual/remaining rutting and fatigue life have been estimated.

Performance Criteria

The layer moduli of in-service pavement back calculated from FWD deflection data are used to analyses the pavement for critical strains which are indicators of pavement performance in terms of rutting and fatigue cracking. The following approach is proposed for design of bituminous overlays for existing flexible pavements. The mechanistic criteria (fatigue and rutting) adopted in the Indian Roads

Congress guidelines (IRC:115-2014) for design of flexible pavements forms the basis for the overlay design method. Performance models adopted in these guidelines are given below.

a) Fatigue in Bituminous layer:

As it specified in IRC:115-2014, the fatigue model for 90 percent reliability was used as below;

$$N_f = 0.711 * 10^{-04} x [1/\varepsilon_t]^{3.89} * [1/M_R]^{0.854}$$

Were,

N_f = fatigue life in cumulative standard axle load repetitions, in msa

ε_t = Maximum Tensile strain at the bottom of the bituminous layer;

M_R= resilient modulus of the bituminous layer, in MPa

b) Rutting in Subgrade:

Rutting model for 90 percent reliability level as specified in IRC:115-2014, was used as below;

$$N= 1.41 x 10^{-08} [1/\varepsilon_v]^{4.5337}$$

Were,

N=Subgrade rutting life in cumulative standard axle load repetitions, in MSA

ε_v= Maximum Vertical strain in the subgrade

The detailed analysis was presented in Annexure 10.7 for both LHS & RHS direction, and the obtained remaining life are presented in Table 10-14 and Table 10-15 for LHS & RHS directions respectively, and the graphical representations are given in Figure 10-7**.**

Table 10-14: Obtained remaining life of existing pavement on LHS direction

Chainage (km)		Remaining life as per 90% reliability
From	To	
0.000	4.200	51
4.200	7.000	47

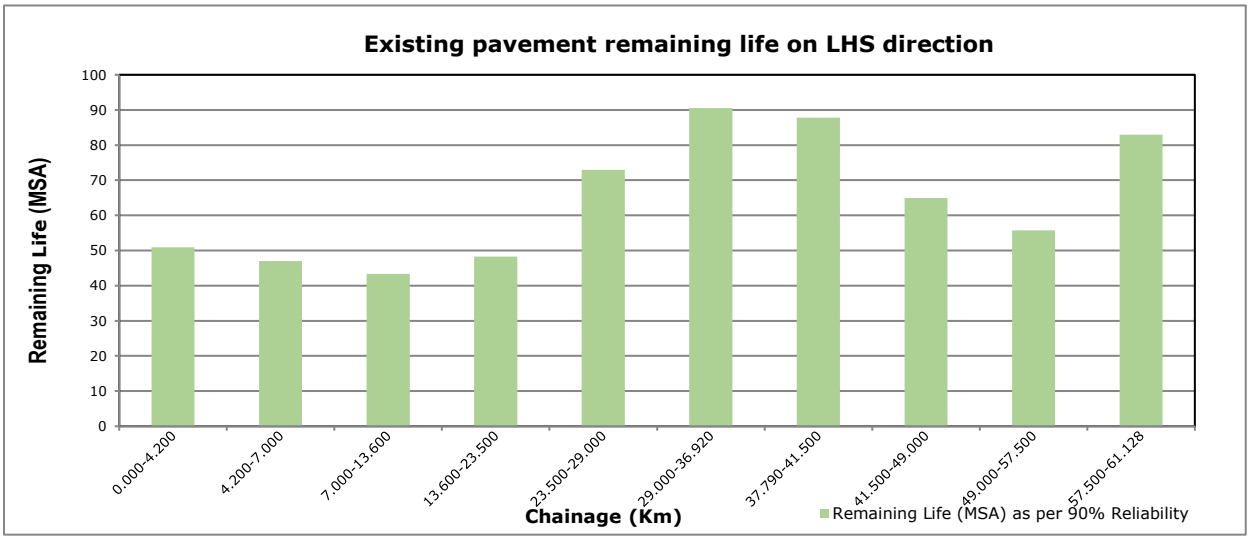

Figure 10-7: Illustrative summary of remaining life on both Directions (for 6- Lane)

10.6 Traffic Survey and Analysis

Axle load survey of 7 days has been conducted at the Toll Plaza Location. AADT and growth rates required for the further computations are provided by the client.

10.6.1 Annual Average Daily Traffic

The Annual Average Daily Traffic (AADT) in the FY 2025 are presented in Table 10-16**.**

Table 10-16: AADT of commercial class vehicles at toll plaza locations for both directions (year 2024-2025)

Location/ Vehicle Type	BUS	LCV	2-axle	3-axle	MAV
Gadanki Toll Plaza (km 37+250)- 6 lane section	1441	462	905	714	1664

*For MSA calculation purposes, a direction distribution of 50% is considered for both LHS and RHS direction.

10.6.2 Vehicle Damage Factor

The axle load survey was conducted at toll plaza location Km 37+320: Gadanki Toll Plaza; the number of equivalent 8.16 t standard axles for the different categories of commercial vehicles have been determined on the basis of the axle load surveys.

The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC: 37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions.

- Single axle with single wheel on either side = {axle load in kN / 65}^{4}
- Single axle with dual wheel on either side = {axle load in kN / 80}^{4}
- Tandem axle with single wheel on either side = {axle load in kN /148}^{4}
- Tridem axle with dual wheel on either side = {axle load in kN /224}^{4}

Referring to section 4.4.3 of IRC 37-2018, some tandem axles have only one (single) wheel on each side of the axle. In such cases, each axle of the tandem axle set may be considered as two separate single axles (with single wheels). Similarly, if the axle spectrum has a tridem axle with single wheels, it may be considered as three separate single axles having single wheels.

VDF values are obtained as per the analysis of 7 days axle load surveys are presented in Annexure 10.8 for Gadanki toll plaza, the summary presented in Table 10-17. The sample photographs axle load survey is shown in Figure 10-8.

Table 10-17: Summary of Vehicle Damage Factor (VDF)

Location/ Vehicle Type		BUS	LCV	2axle	3axle	MAV
NH-140: (Gadanki Toll Plaza-37+320)	LHS	1.175	0.818	3.343	3.943	8.221
	RHS	1.210	0.629	2.676	6.812	10.620

Figure 10-8: Photographs showing Axle load Survey

10.6.3 Design Traffic (Cumulative Number of Standard Axles)

The traffic loading in terms of the cumulative number of standard axles for the given period has been computed using the following relationship as given in IRC: 37-2018.

$$N = \frac{365 \times \left\{(1+r)^n - 1\right\}}{r} \times A \times D \times F$$

Were,

Confidential

N = Cumulative number of standard axles to be catered for the design life in terms of MSA.

r = Annual growth rate of commercial vehicles

n = Design life in years

A = Initial traffic in the year of completion of construction in terms of number of commercial vehicles per day exceeding 3 ton

D = Lane distribution factor

F = Vehicle Damage Factor

Based on the preceding discussions, the traffic loading in terms of cumulative number of equivalent 8.16 t standard axle loads, the AADT was provided by concessionaire and 5% growth rates are considered on year on year, and the design traffic was projected for next 10 years (FY YR 2035). Design traffic for flexible pavement design is computed and summarized in Table 10-18. The design MSA calculations are furnished from Annexure 10.9.

Table 10-18: Design traffic (MSA) in terms of ESAL for next 10years

Location	Design Traffic (MSA) up to FY- YR 2035	
	LHS	RHS
NH-140: Chittoor to Mallavaram (Km 0+000 to Km 61+128)	31	39

The Remaining life of existing pavement is more than the design traffic hence, no need of overlay in any of the flexible pavement section (Chittoor to Mallavaram).

11. DEVELOPMENT OF O&M STRATEGY

11.1 General

The Concessionaire is responsible for Operation & Maintenance of the Project Highway in accordance with the provisions of Article-17 of Concessionaire agreement for 6-lane section.

11.2 Salient Features

The important salient features in terms of project dates pertaining to project are provided in Table 3-1.

11.3 Review of Concession Agreement and Pavement Design report of Chittoor to Mallavaram (Km 0+000 to Km 61+128)

11.3.1 Concession Agreement: KNR Tirumala Infra Pvt ltd.- YR 2018

Schedule-B of Concession Agreement is a mandatory requirement prior to any formulation of design to be applied to the project during the execution.

a. Type of Carriageway:

- Flexible pavement is proposed for the entire project except at toll plaza location rigid pavement is provided.

b. Design Traffic (MSA):

- The contractor shall design for minimum design traffic of 100msa for main carriageway and 10msa for service roads. Minimum CVPD of 7405 is recommended for rigid pavement at toll plaza location.

c. Design Period:

- Design period is not specified.

d. Design CBR:

- Minimum design CBR is not specified.

e. Minimum Crust Thickness:

- As per schedule-B, the following minimum crust thickness are provided.

Carriageway Type	Type of layer	Thickness
Main Carriageway	BC (mm)	50
	DBM (mm)	110
	WMM (mm)	250
	GSB (mm)	200
Rigid Pavement	PQC (mm)	300
	DLC (mm)	150
	GSB (mm)	200
Service road	BC (mm)	40
	DBM (mm)	50
	WMM (mm)	250

	GSB (mm)	200

f. Specifications and Standards for the project:

- As per Schedule-D "Manual of specifications and standards for Six laning of highway through public private partnership published by the IRC: SP: 87-2013".

g. Maintenance requirements:

The concessionaire shall always procure that during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule K (the "Maintenance Requirements")

Schedule K of the CA is presented in Table 11-1**.**

Repair / rectification of defects and deficiencies specified in Schedule K within time limit set forth hereunder

Table 11-1: Maintenance requirements with timelines

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
	Project Highway	
(a)	**Carriageway**	
(i)	Breach or blockade	Time Limit: Temporary restoration of traffic within 24 hours; permanent restoration within 15 (fifteen) days.
(ii)	Roughness value Exceeding 2,750 mm in a stretch of 1 km (as measured by a calibrated bump integrator)	Time Limit: 180 (One Hundred and Eighty) days
(iii)	Potholes	Time Limit: 48 hours
(iv)	Cracking in more than 5% of road surface in a stretch of 1 Km	Time Limit: 30 days
(v)	Rutting exceeding 10mm in more than 2% of the road surface in a stretch of 1 km	Time Limit: 30 days
(vi)	Bleeding / Skidding	Time Limit: 7 (Seven) days
(vii)	Ravelling / Stripping of Road surface exceeding 10 sq.m road	Time Limit: 15 (Fifteen) days.
(viii)	Damages to Pavement edges exceeding 10 cm	Time Limit: 15 (Fifteen) days.
(ix)	Removal of debris	Time Limit: 6 hours
(b)	**Hard / earth shoulders, side slopes, drains and culverts.**	
(i)	Variation by more than 2% in the prescribed slope of camber / cross fall	Time Limit: 30 (Thirty) days.
(ii)	Edge drop at shoulders exceeding 40 mm	Time Limit: 7 (Seven) days

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
(iii)	Variation by more than 15% in the prescribed side (embankment) slopes	Time Limit: 30 (Thirty) days
(iv)	Rain cuts / gullies in slope	Time Limit: 7 (Seven) days
(v)	Damage to or silting of culverts and side drains during and immediately preceding the rainy season	Time Limit: 7 (Seven) days
(vi)	Desilting of drains in urban / semi-urban areas	Time Limit: 48 hours
(C)	**Roadside furniture including road signs and pavement marking**	
(i)	Damage to shape or position, poor visibility or loss of retro-reflectivity	Time Limit: 48 hours
(d)	**Street lighting and telecom (ATMS)**	
(i)	Any major failure of the system	Time Limit: 24 hours
(ii)	Faults and minor failures	Time Limit: 8 hours
(e)	**Trees and plantation**	
(i)	Obstruction in a minimum headroom of 5 m above carriageway or obstruction in visibility of road signs	Time Limit: 24 hours
(ii)	Deterioration in health of trees and bushes	Time Limit: Timely watering and treatment
(iii)	Trees and bushes requiring replacement	Time Limit: 90 days
(iv)	Removal of vegetation affecting sight line and road structures	Time Limit: 15 (Fifteen) days
(f)	**Rest areas**	
(i)	Cleaning of toilets	Time Limit: Every 4 hours
(ii)	Defects in electrical, water and sanitary installations	Time Limit: 24 hours
(g)	**Other Project Facilities and Approach roads**	
(i)	Damage in approach roads, pedestrian facilities, truck laybys, bus-bays, cattle crossings, (Traffic Aid Posts, Medical Aid Posts) and service road	Time Limit: 15 (Fifteen) days.
	Bridges	
(a)	**Superstructure**	*Cracks* Temporary measures Time Limit: Within 48 Hours

Confidential

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
		Permanent measures Time Limit: Within 45 days *Spalling / Scaling* Time Limit: Within 15 days
(b)	**Foundations**	Scouring and/or cavitation Time Limit: 15 (Fifteen) days
(c)	**Piers, abutments, return walls and wing walls**	*Cracks and damages including settlement and tilting* Time Limit: 30 (Thirty) days
(d)	**Bearings (metallic) of bridges**	*Deformation* Time Limit: 15 (Fifteen) days;
(e)	**Joints in bridges**	*Loosening and malfunctioning of joints* Time Limit: 15 (Fifteen) days
(f)	**Other items relating to Bridges**	
(i)	Deforming of pads in elastomeric bearings	Time Limit: 7 (Seven) days
(ii)	Gathering of dirt in bearings and joints; or clogging of spouts, weep holes and vent-holes	Time Limit: 3 (Three) days
(iii)	Damage or deterioration in kerbs, parapets, handrails and crash barriers	Time Limit: 3 (Three) days.
(iv)	Rain-cuts or erosion of banks of the side slopes of approaches	Time Limit: 15 (Fifteen) days
(v)	Damage to wearing coat	Time Limit: 15 (Fifteen) days
(vi)	Damage or deterioration in approach slabs, pitching, apron, toes, floor or guide bunds	Time Limit: 30 (Thirty) days.
(vii)	Growth of vegetation affecting the structure or obstructing the waterway	Time Limit: 15 (Fifteen) days

Observations on schedule B/D/K:

- Minimum CBR value was not specified in the schedules. Hence, concessionaire has an opportunity to explore good borrow areas and utilize the soils with good CBR value.
- Schedule -D has specified that the design standards of the project in accordance with 'Manual of Specifications and Standards for Six Laning of National Highways through Public Private Partnership (IRC: SP:87-2013)'.
- In Schedule -K, it has specified the intervention of concessionaire when the roughness value exceeds 27500 mm/km (as measured by a standard rough meter/bump integrator). However, the frequency/interval of testing the roughness was not specified.

11.3.2 Pavement design report: KNR Tirumala Infra Pvt ltd.- YR 2018

For the purposes of review and evaluation the pavement design report is not available. As per the concessionaire June-2024 MPR, the following crust thickness is adopted.

Table 11-2: Design thickness of Flexible pavement

Carriageway Type	Type of layer	Thickness (mm)
Main carriageway	BC	50
	DBM	110
	WMM	250
	GSB	200
Service road	BC	40
	DBM	50
	WMM	250
	GSB	200

Table 11-3: Design thickness of Rigid pavement

Type of layer	Thickness
PQC (mm)	300
DLC (mm)	150
GSB (mm)	200

11.4 Review of Technical Schedules

A) Chittoor to Mallavaram section NH 140 from Km 0+000 to Km 61+128

Schedule-B of Concession Agreement is a mandatory requirement prior to any formulation of design to be applied to the project during the execution.

a. Repair and Rehabilitation of Pavement

- As per Section 3.1.III of schedule-B, the periodic maintenance in every sixth years in full length of project stretch including main carriageway, service/slip Road, ramps and at facilities etc.
- A Roughness of <2750 mm shall be maintained by the existing HAM Concessionaire prior to handing over to InVIT Concessionaire. After O&M handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2750mm, however after a functional overlay (Roughness exceeding 2750 mm) or structural overlay (FWD Test) is provided in any particular stretch length then that particular length shall be maintained at a roughness level mentioned in Schedule F after that overlay. For clarification, InVIT concessionaire shall maintain a roughness level (mentioned in Schedule F) in a stretch length where overlay (Structural or Functional) has been provided by InVIT concessionaire.

b. Specifications and Standards for the project:

- As per Schedule-C "Manual of specifications and standards for Six laning of highway through public private partnership published by the IRC: SP: 87-2019".

B) Maintenance requirements as per TOT schedule-F

The concessionaire shall procure that at all times during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule F (the "Maintenance Requirements")

Repair / Rectification of defect and deficiencies for six lane section specified in schedule-F with in time limit set are represented in Table 11-4**.**

Table 11-4: Maintenance requirement as per TOT schedules-F

a) Maintenance criteria for Flexible Pavement

Assert Type	Performance Parameter	Level of Service (LOS)		Frequency of Inspection	Tools/ Equipment	Standards and References for Inspection and Data Analysis	Time limit for Rectification/Repair	Maintenance Specification
		Desirable	Acceptable					
Flexible Pavement (Pavement of MCW, Service Road, approaches of Grade structure, approaches of connecting roads, slip roads, lay byes etc. as applicable)	Potholes	Nil	<0.1 % of area and subject to limit of 10 mm in depth	Daily	Length Measurement Unit like Scale, Tape, Odometer etc.	IRC:82-2015 and Distress Identification Manual for Long Term Pavement Performance Program, FHWA 2003	24-48 hours	MORT&H Specification 3004.2
	Cracking	Nil	<5 % subject to limit of 0.5 sqm for any 50m length	Daily			7-15 days	MORT&H Specification 3004.3
	Rutting	Nil	<10mm	Daily	Straight Edge		15-30 days	MORT&H Specification 3004.2
	Corrugations and Shoving	Nil	<0.1 % of area	Daily	Length Measurement Unit like Scale, Tape, Odometer etc.		2-7 days	IRC:82-2015
	Bleeding	Nill	<1 % of area	Daily			3-7 days	MORT&H Specification 3004.4
	Ravelling/Stripping	Nil	<1 % of area	Daily			7-15 days	IRC 82-2015 read with IRC Sp-81
	Edge Deformation / Breaking	Nil	<1m for any 100m section and width <0.1m at any location, restricted to 30cm from the edge	Daily			7-15 days	IRC 82-2015
	Roughness BI	2000mm/Km	2400mm/Km	Bi-Annually			180 days	IRC 82-2015

b) Maintenance criteria for Rigid Pavement

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
1	Cracking					
	Single Discrete Cracks Not	w = width of crack, L = length of	0	Nil not discernible	No Action	Not Applicable
			1	w < 0.2 mm. hair cracks		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
	intersecting with any joint	crack, d = depth of crack, D = depth of slab	2	w = 0.2 - 0.5 mm, discernible from slow-moving car	Seal without delay	Full Depth Repair Dismantle and reconstruct affected portion - See Para 5.4, within 15 days
			3	w = 0.5 - 1.5 mm, discernible from fast-moving car		
			4	w = 1.5 - 3.0 mm	Seal and stitch if L > 1m. Within 7 days	
			5	w > 3 mm.		
2	Single Transverse (or Diagonal) Crack intersecting with one or more joints	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil, not discernible	No Action	
			1	w < 0.2 mm, hair cracks	Route and seal with epoxy. Within 7 days	Seal Staple within 15days & Cross stich
			2	w = 0.2 - 0.5 mm, discernible from slow Car		
			3	w = 0.5 - 3.0 mm, discernible from fast car	Route, Seal, and stitch, if L > 1m. Within 7 days	Full Depth Repair Dismantle and reconstruct affected portion with norms & Specifications - See Para 5.5 &refer chapter 9 of IRC: SP: 83-2018, within 15 days.
			4	w = 3.0 - 6.0 mm	Not applicable	Staple or Dowel Bar Retrofit within 15 days
			5	w > 6 mm, usually associated with spalling, and/ or slab rocking under traffic	Not Applicable (full depth crack)	Staple or Dowel Bar Retrofit within 15 days
3	Single Longitudinal Crack intersecting with one or more joints	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil, not discernible	No Action	
			1	w < 0.5 mm, discern able from slow moving vehicle	Seal and stich if L >l m within 7 days	Seal and Cross-Stich or Staple within 15 days
			2	w = 0.5 - 3.0 mm, discernible from fast vehicle		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			3	w = 3.0 - 6.0 mm	Staple, if L > 1m. Within 15 days	Partial Depth Repair with or without dowel bar retrofit within 15 days or
			4	w = 6.0 - 12.0 mm, usually associated with spalling	Not Applicable	
			5	w > 12 mm, usually associated with spalling, and/or slab rocking under traffic	Not Applicable, (Rocking/ Spalling indicates full depth crack)	Full Depth Repair Dismantle and reconstruct affected portion - See Fig 5.6 and Chapter 9 of IRC: SP:83-2018, within 15 days
4	Multiple Cracks intersecting with one or more joints or cracks	w = width of crack	0	Nil, not discernible	No Action	-
			1	w < 0.2 mm, hair cracks	Seal, and stitch if L > 1m. Within 15 days	
			2	w = 0.2 - 0.5 mm. discernible from slow vehicle		
			3	w = 0.5 - 3.0 mm, discernible from fast vehicle	Full depth repair within 15 days	Dismantle, Reinstate subbase, Reconstruct whole slab as per specification within 30 days
			4	w = 3.0 - 6.0 mm panel broken into 2 or 3 pieces		
			5	w > 6 mm and/or panel broken into more than 4 pieces		
5	Corner Break	w = width of crack, L = length of crack	0	Nil, not discernible	No Action	-
			1	w < 0.5 mm; only 1 corner broken	Seal with low viscosity epoxy to secure broken parts within 7 days	
			2	w < 1.5 mm; L < 0.6 m, only one corner broken		
			3	w < 1.5 mm; L < 0.6 m, two corners broken	Partial Depth (Refer Figure 8.3 of IRC: SP:83-2018) within 15 days	Full depth repair within 30 days.
			4	w > 1.5 mm; L > 0.6 m or three corners broken		
			5	three or four corners broken		Reinstate sub-base, and reconstruct the slab as per norms & Specifications within 30 days.
6	Punchout (Applicable to Continuous Reinforced Concrete Pavement (CRCP) only)	w = width of crack, L = length (m/m2)	0	Nil, not discernible		
			1	w < 0.5 mm; L < 3 m/m2	Not Applicable, (Punch- out is full depth Distress)	Seal with low viscosity epoxy to secure broken parts Within 15 days
			2	either w > 0.5 mm or L < 3 m/m2		
			3	w > 1.5 mm and L < 3 m/m2		Full depth repair - Cut out and replace damaged area taking care not to damage reinforcement. Within 30 days.

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			4	w > 3 mm, L < 3 m/m2 and deformation		
			5	w > 3 mm, L > 3 m/m2 and deformation		
Surface Defects						
7	Ravelling or Honeycomb type surface	r = area damaged surface / total surface of slab (%) h = maximum depth of damage	0	Nil, not discernible	Short Term	Long Term
					No action.	Not Applicable
			1	r < 2 %	Local repair of areas damaged and liable to damage. Within 15 days	
			2	r = 2 - 10 %		
			3	r = 10-25%	Bonded Inlay 2 or 3 slabs if affecting. Within 30 days	
			4	r = 25 - 50 %		
			5	r > 50% and h > 25 mm	Reconstruct slabs 4 or more slabs if affecting. Within 30 days	
8	Scaling	r = damaged surface / total surface of slab (%) h = maximum depth of damage	0	Nil, not discernible	Short Term	Long Term
					No action.	Not Applicable
			1	r < 2 %	Local repair of areas damaged and liable to be damaged. Within 7 days	
			2	r = 2 - 10 %		
			3	r = 10 - 20%	Bonded Inlay Within 15 days	
			4	r = 20 - 30 %		
			5	r > 30 % and h > 25 mm	Reconstruct slab Within 30 days	
9	Polished Surface/ Glazing	t = texture depth, sand patch test	0		No action.	Not Applicable
			1	t > 1 mm		
			2	t = 1 - 0.6 mm	Monitor rate of deterioration	
			3	t = 0.6 - 0.3 mm		
			4	t = 0.3 - 0.1 mm		
			5	t < 0.1 mm	Diamond Grinding if affecting 50% or more slabs in a continuous stretch of minimum 5 km. Within 30 days	

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
10	Popout (Small Hole), Pothole Refer Para 8.4	n = number / m2,	0	d < 50 mm; h < 25 mm; n < 1 per 5 m2	No action.	Not Applicable
		d = diameter,	1	d = 50 - 100 mm: h < 50 mm; n < 1 per 5 m2	Partial depth repair 65 mm deep Within 15 days	
		h = maximum depth	2	d = 50 - 100 mm; h > 50 mm; n < 1 per 5 m2		
			3	d = 100 - 300 mm; h < 100 mm n < 1 per 5 m2	Partial depth repair 110mm i.e 10 mm more than the depth of the hole. Within 30 days	
			4	d = 100 - 300 mm; h > 100 mm; n < 1 per 5 m2		
			5	d > 300 mm; h > 100 mm: n > 1 per 5 m2	Full depth repair. Within 30 days	
Joint Defect						
11	Joint Seal Defects	loss or damage L = Length as % total joint length	0	Difficult to discern.	Short Term	Long Term
					No action.	Not Applicable
			1	Discernible, L< 25% but of little immediate consequence with regard to ingress of water or trapping incompressible material.	Clean joint, inspect later.	
			3	Notable. L > 25% insufficient protection against ingress of water and trapping incompressible material.	Clean and reapply sealant in selected locations. Within 7 days	
			5	Severe; w > 3 mm negligible protection against ingress of water and trapping incompressible material.	Clean, widen and reseal the joint. Within 7 days	
12	Spalling of Joints	w = width on either side of the joint, L = length of spalled portion (as % joint length)	0	Nil, not discernible	No action.	Not Applicable
			1	w < 10 mm	Apply low viscosity epoxy resin/ mortar in cracked portion Within 7 days	
			2	w = 10 - 20 mm, L < 25%		
			3	w = 20 - 40 mm, L > 25%	Partial Depth Repair Within 15 days	
			4	w = 40 - 80 mm, L > 25%	30-50 mm deep, h= w + 20% of w Within 30 days	
			5	w > 80 mm, and L > 25%	50 - 100 mm deep repair. H = w + 20% of w Within 30 days	
13		f = difference of level	0	not discernible, < 1 mm	No action.	
			1	f < 3 mm		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
	Faulting (or Stepping) in Cracks or Joints		2	f = 3 - 6 mm	Determine cause and observe	
			3	f = 6 - 12 mm	Diamond Grinding within 15 days	
			4	f= 12 - 18 mm	Raise sunken slab.	
			5	f> 18 mm	Strengthen subgrade and sub-base by grouting, within 30 days	
14	Blowup or buckling	h = vertical displacement from normal profile	0	Nil, not discernible	No action.	
			1	h < 6 mm		
			2	h = 6 - 12 mm	Install Signs to Warn Traffic Within 24 hours	
			3	h = 12 - 25 mm		
			4	h > 25 mm	Full Depth Repair Within 30 days	
			5	shattered slabs, i.e 4 or more pieces	Replace broken slabs. Within 30 days	
15	Depression	h = negative vertical displacement from normal profile L =length	0	Not discernible, h < 5 mm	No action.	
			1	h = 5 - 15 mm		
			2	h = 15-30 mm, Nos <20% joints	Install Signs to Warn Traffic within 24 hours	
			3	h = 30 - 50 mm		
			4	h > 50 mm or > 20% joints	Strengthen subgrade. Reinstate pavement at normal level if length L < 20 m. within 30 days	
			5	h > 100 mm		
16	Heave	h = positive vertical displacement from normal profile, L = length	0	Not discernible. h < 5 mm	No action.	
			1	h = 5 - 15 mm	Follow up.	
			2	h = 15 - 30 mm, Nos <20% joints	Install Signs to Warn Traffic within 24 hours	
			3	h = 30 - 50 mm		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			4	h > 50 mm or > 20% joints	Stabilise subgrade. Reinstate pavement at normal level within 30 days	
			5	h > 100 mm		
17	Bump	h = vertical displacement from normal profile	0	h < 4 mm	No action.	
			1	h = 4 - 7 mm	Grind, in case of new construction within 7 days	
			3	h = 7 - 15 mm	Grind in case of Ongoing maintenance within 15 days	
			5	h > 15 mm		
18	Lane to Shoulder Dropoff	f = difference of level	0	Nil, not discernible < 3mm	No action.	-
			1	f = 3 - 10 mm	Spot repair of shoulder. Within 3 days	-
			2	f = 10 - 25 mm		-
			3	f = 25 - 50 mm	Fill up shoulder Within 7 days	-
			4	f = 50 - 75 mm		For any 100 m stretch Reconstruct shoulder, if affecting 25% or more of stretch Within 30 days
			5	f > 75 mm		
Drainage						
19	Pumping	Quantity of fines and water expelled through open joints and cracks Nos/100 m stretch	0	not discernible	No Action	
			1 to 2	Slight/occasional Nos < 10%	Repair cracks and joints without delay	Inspect and repair sub-drainage at distressed sections and upstream.
			3 to 4	Appreciable/ Frequent 10-25%	Lift or jack slab within 30 days	
			5	Abundant, crack development >25%	Repair distressed pavement sections. Strengthen subgrade and subbase. Replace slab. Within 30 days	
20	Ponding	Ponding on slabs due to blockage of drains	0-2	No discernible problem	No action	
			3 to 4	Blockages observed in drains, but water flowing	Clean drains etc., follow up, deep grooving in transverse direction to remove water, within 7 days	Action required to stop water damaging foundation within 15 days.
			5	Ponding accumulation of water observed	Deep grooving in transverse direction to remove water-hydro planning within 7 days	

11.5 Traffic Survey and Analysis

Due diligence conducted a 7 day axle load survey at the two existing toll plaza's locations. All other required input parameters like AADT & growth rates are provided by the client. For the design traffic was assed till the end of concessionaire period. All the calculations and analysis are presented in Chapter-10. The summary of VDF and design MSA is presented below.

The VDF values obtained based on the 7 days axle load survey is presented below table.

Location/ Vehicle Type		BUS	LCV	2axle	3axle	MAV
NH-140: (Gadanki Toll Plaza-37+320)	LHS	1.175	0.818	3.343	3.943	8.221
	RHS	1.210	0.629	2.676	6.812	10.620

The AADT was provided by the concessionaire and 5% growth rates are considered on year on year, and the design traffic was projected for next 10 years (FY YR 2035). Design traffic for flexible pavement design is computed and summary is presented below table.

Location	Design Traffic (MSA) up to FY- YR 2035	
	LHS	RHS
NH-140: Chittoor to Mallavaram (Km 0+000 to Km 61+128)	31	39

11.6 Immediate Repairs

Immediate repair of flexible/ rigid pavement is recommended based on the un-acceptable condition of the pavement surface and roughness. For 6-lane section roughness >2750mm/km is considered as limiting value.

11.6.1 Immediate repair in 6-lane section (Chittoor to Mallavaram)

According to Article 3 of the existing HAM Concession Agreement, the operation period is 15 years, starting from the date of the completion certificate (achieved in YR 2023). Hence, this section is not considered for any immediate repairs.

11.7 O & M Strategy

The Periodic maintenance strategy of each section is presented below.

Table 11-5: Periodic & Major maintenance strategy of 6 lane section (Chittoor to Mallavaram)- Flexible Pavement

NH-140, Section from Chittoor to Mallavaram (Km 0+000 to Km 61+128)			
Year	**Description**	**Main Carriageway**	**Service Roads**
YR 2036 (10.05.2036 Handover Date)	-	Maintenance by the on-going concessionaire	
YR 2040-41 & YR 2041-42	1st Renewal Layer	40mm BC in 100% length in Both direction 50mm DBM in 10% length in Both direction	30mm BC in 100% length and 50mm DBM in 10% length on both direction with milling.
YR 2044-45	2nd Renewal Layer	Micro Surfacing in 100% length in Both direction	
Modified bitumen is recommended for BC overlay works on Main Carriageway. VG-40 grade bitumen is recommended for DBM rehabilitation works on Main Carriageway. VG-40 grade bitumen is recommended for Service roads			

12. COST ESTIMATE

12.1 General

Cost Estimates have been worked out for expenses on Immediate Works (CAPEX) and expenses on operations and maintenance (OPEX). The cost estimates have been worked out at present rates considering 2024-25 as the base year.

12.2 Assumptions

The cost estimates are based on the following assumptions:

(a) Bitumen has been assumed to be sourced from IOCL Chennai Refinery. The distance (to & fro) from the midpoint of Project Highway is taken as 182 km. Modified Bitumen and VG-40 grade bitumen is considered in our cost estimate.

(b) Hire charges for the Machinery have been considered in accordance with CSR Andhra Pradesh 2023-24 and escalation have been considered 5% every year. Rates for various items of works have been arrived at based on 'Standard Data Book for Analysis of Rates' published by MORT&H.

(c) Manpower rates have been taken from Minimum Wages for Office of the Labour commissioner Odisha effective from 1 October 2024.

(d) Material Rates are obtained from CSR Andhra Pradesh 2023-24 and escalation have been considered 5% every year.

(e) Sand and Aggregate are considered to be sourced from the nearest quarry located on project highway at approximately 30 km form the mid-point of Project Highway.

(f) Cement is considered to be procured from the nearest local market.

(g) Rate of steel is taken from SAIL December-2024

(h) Some of the rates are based on Consultant's experience on the similar ongoing projects in adjacent locations.

(i) Overheads and profits have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

12.3 CAPEX

Details of CAPEX are worked out under the following categories.

- Immediate maintenance / defect rectification.
- O&M maintenance

12.3.1 Immediate Maintenance

As per site investigation we have considered for immediate maintenance. A few items noticed are covered under routine maintenance.

However, it is to be noted that some of the equipment installed at Mahasamudram & Gadanki Toll Plaza are quite old and will require replacement for proper functioning during O&M period.

12.4 O&M Estimates

Operation and Maintenance estimates have been worked out under the following heads:

(a) Preventive Maintenance / Routine Maintenance

(b) Operations

(c) Major Maintenance

12.4.1 Routine Maintenance - Categories

Routine Maintenance covers all activities required to maintain the road in traffic worthy condition to provide desired comforts to the road users. Routine Maintenance can be classified into following three categories:

(a) Routine or day to day maintenance

(b) Pre-monsoon maintenance

(c) Post monsoon maintenance

12.4.1.1 Routine or day to day maintenance

Routine maintenance is required continuously on the road stretch and structures and covers the following activities:

(a) Cleaning of the Road

(b) Pavement maintenance to include crack sealing and pothole repairs

(c) Shoulder repairs

(d) Maintenance of avenue plantation, horticulture, and median plantation

(e) Maintenance of signage, gantry boards and road furniture.

(f) Maintenance of culverts, bridge drainage spouts, expansion joints, side slopes and verges

(g) Surface cleaning, dust or vegetation control, sand removal from structures

(h) Reporting any damage caused to bridges by traffic accidents

(i) Maintenance of guard rails and crash barrier etc.

12.4.1.2 Pre-monsoon Maintenance

This is carried out prior to the monsoons and includes the following:

(a) Inspection of channels/streams to ensure that there are no accumulation of logs, trees and other debris in the vicinity of piers and abutments.

(b) Cleaning of roadside / median drains.

(c) Removal of vegetation growth on sub structures.

(d) Cleaning of culverts.

12.4.1.3 Post-monsoon Maintenance

This includes maintenance that is carried out immediately after the monsoons and includes the following:

(a) Inspection of all structures for any damages and taking appropriate actions.

(b) Cleaning of roadside drains, culverts etc.

12.5 Operations Estimates

12.5.1 Toll Plaza

This cost includes the following:

(a) Maintenance of Toll Plaza building, booths, and tolling equipment.

(b) Security of the booths, lanes, and toll plazas.

(c) Collection of toll and handling of cash till bank deposit.

(d) Provision of IT in-charge, IT supervisor, other staff at Toll Plaza location.

(e) Administration and essential facilities for the staff and road users.

(f) Maintenance of Toll Plaza equipment and replacement of expendable and short life items.

(g) Electricity cost including standby generator.

12.5.2 Highway

This cost includes the following:

(a) Providing one patrolling vehicle including operating cost for round-the-clock patrolling of the Project Highway.

(b) Providing of one ambulance at Toll Plaza for accident victims.

(c) Provision of one crane with 30 MT and tow truck facilities for clearing the highway and evacuating the breakdown vehicles at Toll Plaza.

(d) Provision of one Broomer for cleaning of the highway.

(e) Expenditure on medical aid and provision of nursing staff.

(f) Cost of tests and surveys.

12.5.3 Energy

As per the Concession agreement, electrification is to be provided at the toll plaza and priority intersections. Streetlight luminaries, high mast lights with electricity tariff, provision of standby Genset are considered in the cost estimate.

12.5.4 Miscellaneous

(a) We have taken IE cost as per Industry norms.

(b) Insurance expenses have been taken as per Industry norms.

12.6 Summary of Cost on Initial Improvement Works

Summary of Cost on Initial Improvement Works are given in Table 12-1.

Table 12-1: Initial Improvement Works Cost

S. No.	Particulars	Cost
		NHIT
1	**Restoration/Improvement works of Toll Plaza**	5.55
	(A) Civil Cost	**5.55**
	GST 18 % on (A)	1.00
	(B) Total Civil Cost including GST 18%	**6.55**

12.7 Year Wise Summary of CAPEX & OPEX

Year-wise summary of CAPEX & OPEX for the balance concession period till FY 2044-45 is estimated and presented in Table 12-2:

Table 12-2: Summary of Year wise CAPEX & OPEX (0+000 to 61+128)

Sl. No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW, SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	6.55	-	-	-	-	0.60	-	-	-	-	5.54	0.30	-	4.48

1. EXECUTIVE SUMMARY

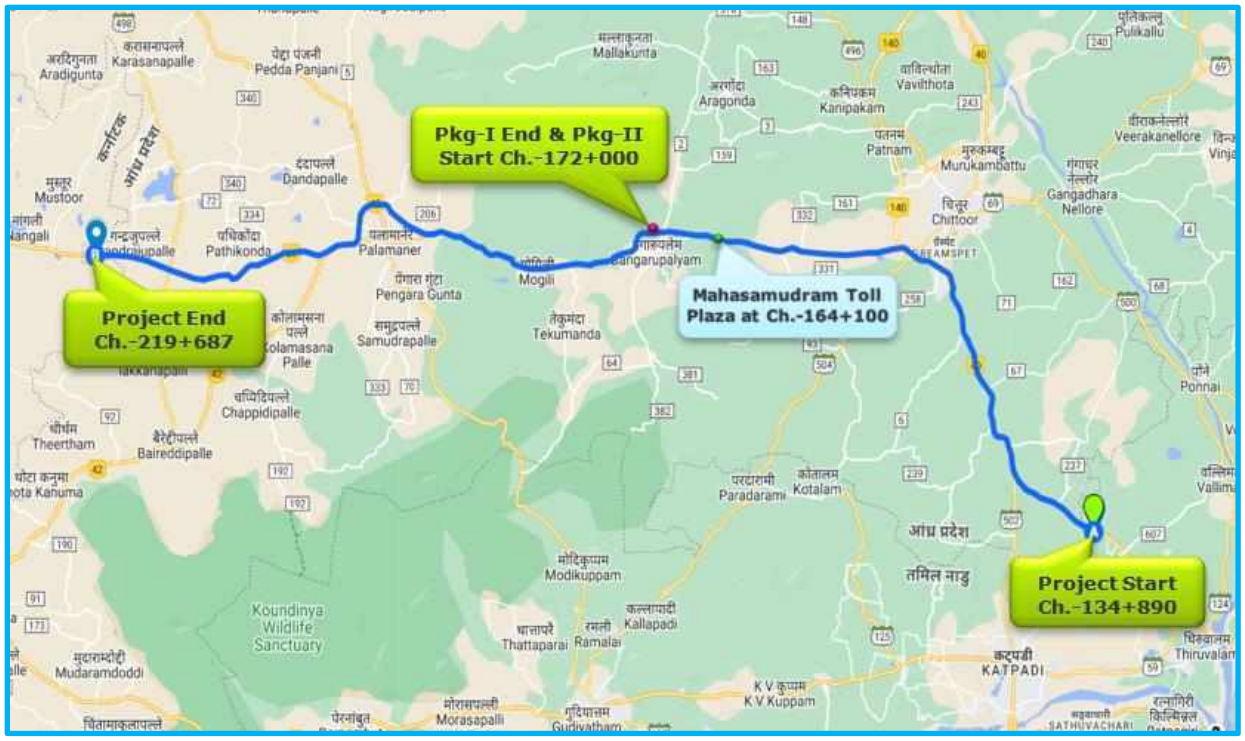
1.1 Ramboll Scope

NATIONAL HIGHWAYS INFRA INVESTMENT MANAGERS PRIVATE LIMITED have entrusted Ramboll India Private Limited for technical due diligence study of 84.797 km long National Highway corridor comprising four lane section of NH-4 from Tamil Nadu / AP border to Nalagampalli to Karnataka Border in the State of Andhra Pradesh. Accordingly, Ramboll team has undertaken the work of preparing advisory report based on study of project related reports and documents, visual inspections, and field investigations.

1.2 Project Introduction

The Government of India had entrusted to National Highways Authority of India (NHAI) the development, maintenance, and management of National Highway No. 04 and 140 which includes.

Project i Rehabilitation and Upgradation of NH-4 from Km 133.360 to km 171.590 (Andhra Pradesh / Tamil Nadu Border to Nalagampalli Village) to four lanes with paved shoulder under NHDP-IV on EPC mode. (Project-1)



Project ii Rehabilitation and Upgradation of NH-4 from Nalagampalli (Existing Km.171.590/Design Km.172.00) to AP/Karnataka Border (Existing Km.216.912/Design Km.219.687) to four lanes with paved shoulders (Design length = 47.687 Km) under NHDP-IV on EPC mode.

The Authority had invited proposals by its Request for Proposal for above three Projects. After evaluation of the bids received, the Authority had accepted the bid of the selected bidder and issued its Letter of Acceptance No. (i) RW/NH-37015/13/2016-NHDP-IVA dated 24.06.2016; (ii) NHAI/NH-4/Nalagampalli/2016-17/264 dated 30.03.2017 respectively for the two Projects.

Further, for Project (i) after termination of the EPC Contractor for the project – "Rehabilitation and Upgradation of NH-4 from Km 133.360 to km 171.590 (Andhra Pradesh / Tamil Nadu Border to Nalagampalli Village) to four lane with paved shoulder", National Highways Authority of India resolved to rehabilitate and augment the "Construction of 1 No's ROB, 2 No's VUPs, Service roads, provision of lighting and construction of other miscellaneous works at various stretches including maintenance of existing section of NH-4 from AP /Tamil Nadu Boarder (Km. 134.890) to Nalagampalli village (Km.172.000) under EPC mode in the state of Andhra Pradesh" on Engineering, Procurement, Construction ("EPC") basis.

Accordingly, the Authority accordingly invited the proposals from the eligible bidders for the balance works of the Project, including maintenance. After evaluation of the bids received, the Authority accepted the bid of the selected bidder and issued its Letter of Acceptance No. NHAI/ ROVJA/P25015/NLGPALK/2019/734 dated 13.04.2023 for balance work of the Project including its maintenance.

Project (ii) had achieved COD and the projects are now under maintenance. DLP of Project (ii) is expected to be completed by January 2025.

Project Location Map

1.3 Project Description

The project road is in the administrative location of Chittoor district in the state of Karnataka. The project traverse's major settlement areas such as Bomma Samudram, Vasanthapuram, Gudipala, Ramapuram, Kothapalli, Gangasagram, Iruvaram, Prasanth Nagar, Lakshmaiahkandiga, Mahasamudram, Nalagam palli, Palamakulapalle, Palamaner, Vepanapalle, Pakalavaripalli, Ithepalli.

Project i - The project starts at Tamilnadu/Andhra Pradesh Border at Km 134+890 and ends at km 172+000 at Nalagampalli on NH-4.

Project ii - The project starts at km 172+000 at Nalagampalli on NH-4 and ends at km 219+687 at Andhra Pradesh / Karnataka Border.

Particulars	Project i	Project ii
Project Name	Rehabilitation and Upgradation of NH-4 from Km 133.360 to km 171.590 (Andhra Pradesh / Tamil Nadu Border to Nalagampalli Village) to four lanes with paved shoulder / Construction of 1 No's ROB, 2 No's VUPs, Service roads, provision of lighting and construction of other miscellaneous works at various stretches including maintenance of existing section of NH-4 from AP /Tamil Nadu Boarder (Km. 134.890) to Nalagampalli village (Km.172.000)	Rehabilitation and Upgradation of NH-4 from Nalagampalli (Existing Km.171.590 /Design Km.172.00) to AP/Karnataka Border (Existing Km.216.912 /Design Km.219.687) to four lanes with paved shoulders (Design length = 47.687 Km)
Mode of the Execution (BOT Toll/ BOT Annuity/ EPC/ HAM/ Others)	EPC Mode under NHDP Phase – IV / EPC Mode	EPC Mode under NHDP Phase - IV
Project Phase	Partially under construction with Tolling, Operation, Maintenance	Operation and Maintenance
No. of Lanes/ Configuration	4 Lane divided carriageway	4 Lane divided carriageway
Length of the Project (in Km)	37.110 km	47.687 km
Client	NHAI	
NH No.	NH-4	NH-4
EPC Contractor / Concessionaire	Gayatri Projects Ltd / SD Infra	Dilip Buildcon Ltd
Total Project Cost	INR 306 Crores / INR 149.77 Crores	INR 959.06 Crores
Independent Engineer (O&M Phase)	Aarvee Associates Architects Engineers & Consultants Pvt. Ltd.	Aarvee Associates Architects Engineers & Consultants Pvt. Ltd.
LOA	13 March 2023	30 March 2017
Date of Signing of CA	18 May 2023	02 November 2017
Appointed Date	19 June 2023	15 November 2017
Scheduled Completion date for EPC Contract	550th day from appointment date i.e. 19 December 2024	
Completion Certificate	19.01.2025 (expected), remaining 1.43 km ROB expected 31.07.2025	31 July 2019
End Date of Concession period / Maintenance obligation for	Defect liability period 10 years after COD	Defect liability period 4 years after

Particulars	Project i	Project ii
Latest EPC Contract		COD
O&M Handover date	18 December 2034	DLP extended till rectification of defects (expected to complete by 31.01.2025)
No. of Toll Plazas (Number and Location)	Toll Plaza 1: Mahasamudram Toll Plaza	-

1.4 Scope of work

Broadly the Scope of services encompasses the following:

- Review of available documents and site visit
- Field inspection, investigations, and Analysis
- Operations and Maintenance assessment
- Major Maintenance strategy and assessment
- Estimation of Opex and CapEx.
- Preparation of presentation and project report

1.5 Assessment of Project Assets

Projects asset inventory and their condition assessment is prepared through visual inspection during site visits, review and analysing the reports shared by the client, by field investigations validating the findings and by NSV survey. All the elements and components pertaining to project asset are reported in subsequent Chapter 5, 6 & 7 of this report and their assessment is used to prepare the strategy for preventive, routine, and periodic maintenance. The overall condition of the project and its assets are satisfactory. Detailed asset inventory and pavement evaluation is provided separately in Annexure I & II to this main report.

S.No.	Item - Features	Units	Project i	Project ii	Total
1	**Service Road**	km	13.018	51.906	64.924

1.6 Assessment of Structures

Site data is collected and analysed for condition and inventory of Major bridges, and Grade separators using the Mobile Bridge Inspection Unit (MBIU). Comprehensive visual inspection is carried out for assessing the minor bridges, underpasses, overpasses, and culverts of the entire project stretch of 84.797 kms. During the inspection and condition survey no major failure/Distresses is observed however minor cracks, exposed reinforcement at parapet, honeycombing repairs at structural components,

clogged drainage spout, debris found under culvert and waterways and vegetation found on superstructures with unwanted material found around the bearings.

Total nos. of structures on the Project Highway are given in the table below

Sl. No.	Item	Project i	Project ii	Total
1	Major Bridges	-	1	1
2	Minor Bridges	6	6	12
3	RUB	-	-	0
4	ROB	1	-	1
5	Overpass	3	-	3
6	VUP	4	12	16
7	LVUP	-	-	0
8	PUP/CUP	-	-	0
9	FOB	-	-	0
10	HP Culvert	44	10	54
11	Box Culvert	31	41	72
12	Slab Culvert	13	-	13

1.7 Toll Management System (TMS)

The project has one toll plaza comprising of hybrid ETC lane infrastructure of combined 10 lanes. Mahasamudram TP - is a staggered toll plaza and equipped with 5+5 Hybrid lanes in each direction installed at 260 meters between them. No separate two-wheeler lanes are provided adjacent to the extra-wide lanes in any of these two plazas.

Further it is also found that none of the directions of the toll plaza are equipped with Static Weigh Bridges.

At Mahasamudram TP Medium Speed Weigh in Motion systems are installed in all 10 lanes and are found to be in good condition as it is relatively a new installation. Old software's are noticed to under replacement. Integration of the MS-WIMs is not done and no vehicle weight is being captured in the TMS. Stamping and calibration works are yet to be undertaken by the vendor.

Regarding TMS functionality, at Mahasamudram toll plaza the old hardware are being replaced, currently none of the AVC systems are functional and all lane controllers are found with doors unlocked and not in proper condition. Installation team is in process of replacing only partial hardware, which is essential to manage the show, therefore calculation of equipment ageing cannot be done. However, the TMS is not being maintained in proper shape.

In Project i & ii, no HTMS hardware is found installed, however a detailed working of the required HTMS / ATMS is presented in chapter 7.

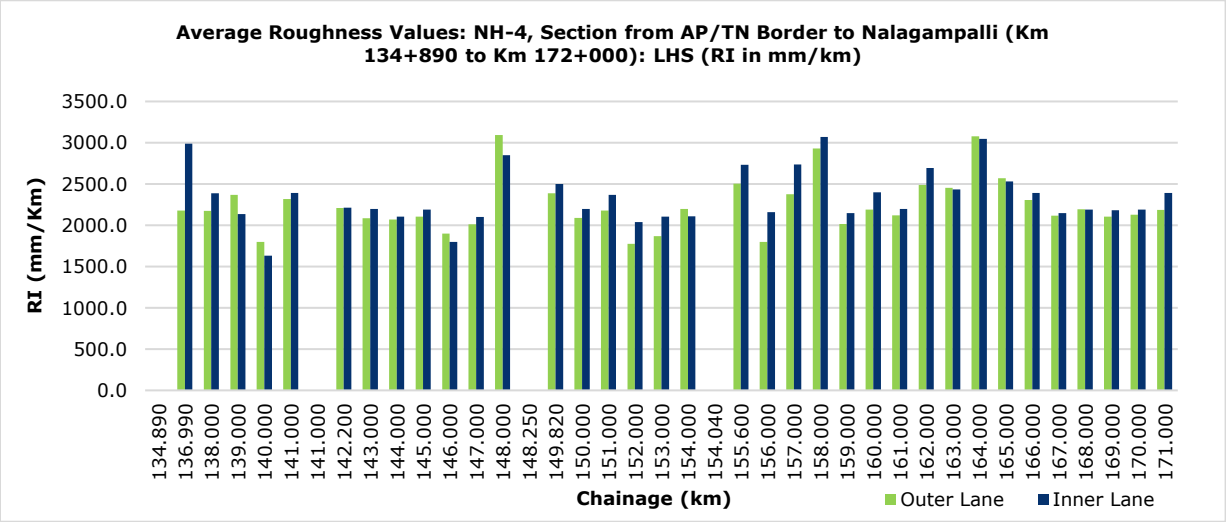
1.8 Soil and Material investigation

Soil and Material investigation are done with the samples collected from pit investigation and the results are narrated in Chapter 9.

Subsoil is generally consistent throughout the project road and is predominantly Silty Sand and Clayey sand soils.

Summary of strength parameters in the soil investigation is shown below.

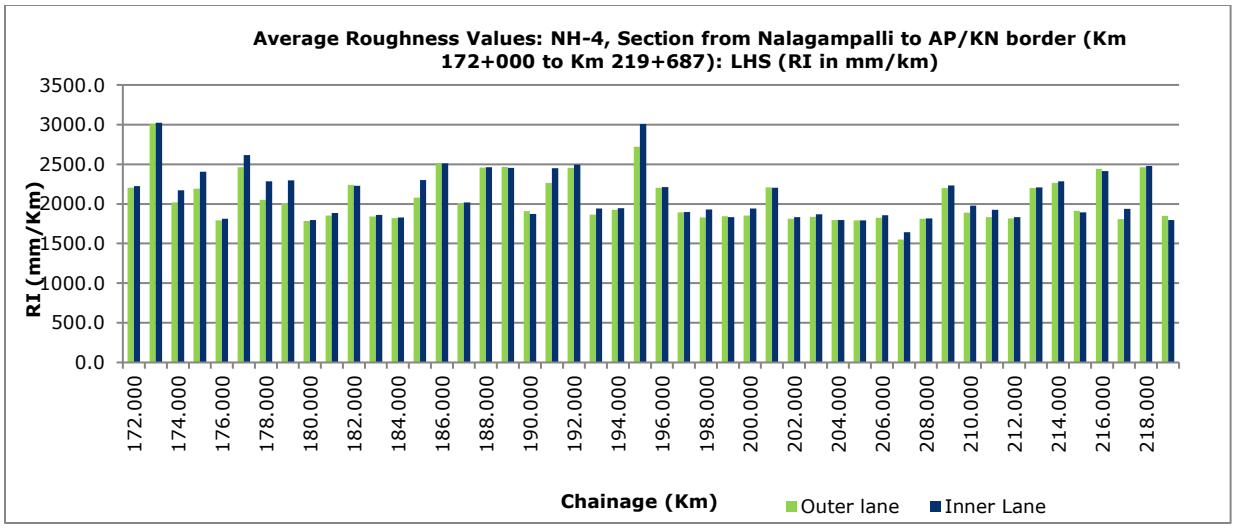
Description	Liquid Limit	Plasticity Index	Free Swell Index	4-days soaked CBR	Degree of compaction
Project (i) - NH-4, AP/ TN Border to Nalagampalli: Km 134+890 to Km 172+000	17%-28%	Max 7%	Max 15.2%	11.3%-27.1%	92.0%-96.5%
Project (ii) - NH-4: Nalagampalli to AP/ KA Border: Km 172+000 to Km 219+687	19%-33%	Max 13%	Max 25.1%	10.3%-16.1%	92.1%-98.5%
MoRTH Limits	**<50%**	**<25%**	**<50%**		



*Variance between MDD and FDD is converted in-terms of degree of compaction

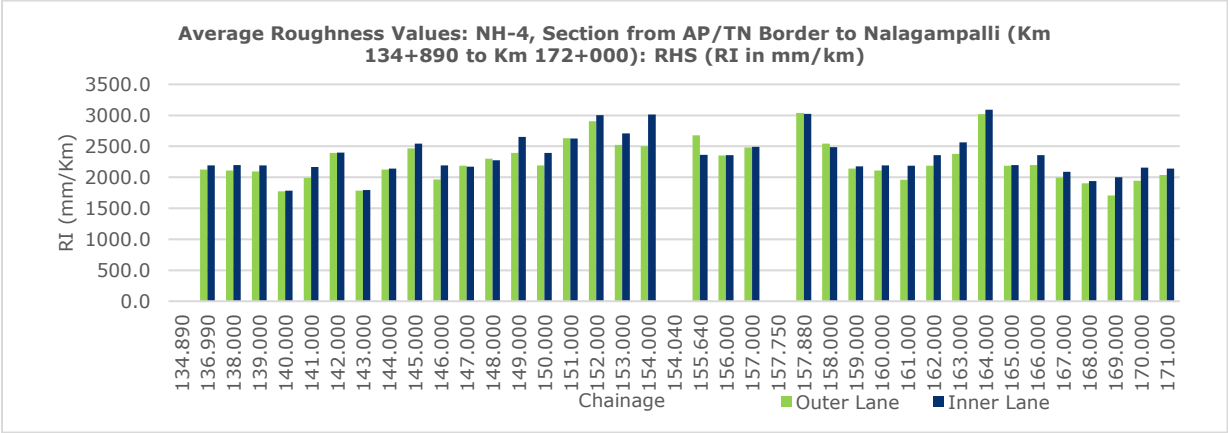
All the measured LL, PI and FSI values are within the acceptable limits as per MoRTH guidelines.

Project (i) & (ii) - The existing pavement along the project corridor is rigid in nature. The pavement composition comprises of PQC, DLC and granular sub-base.

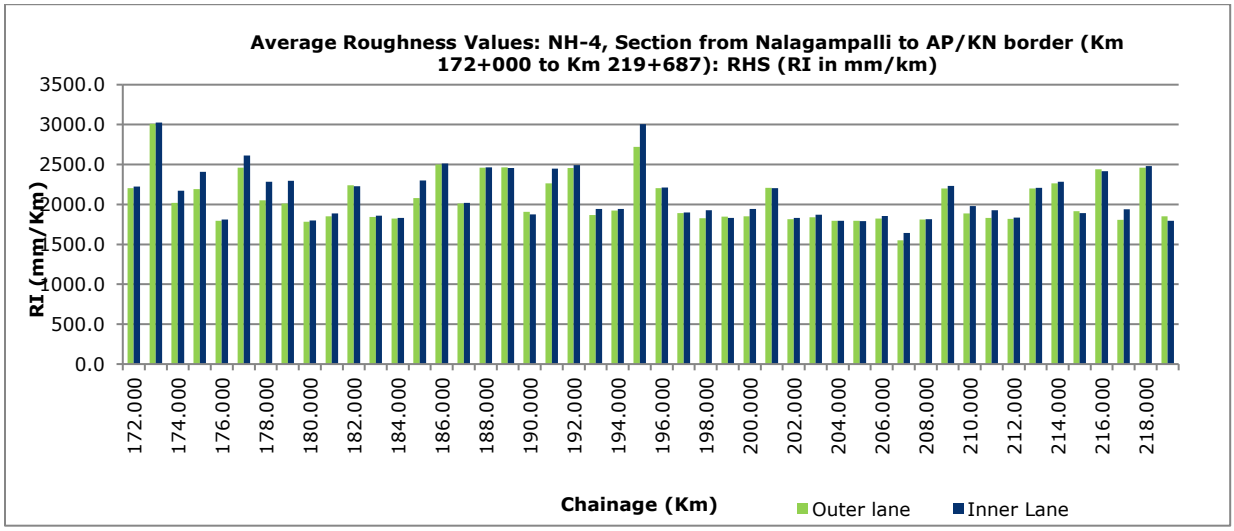


1.9 Pavement Evaluation

Pavement condition survey was carried out on each lane of each carriage way with NSV. The obtained lane wise Roughness summary in terms of BI (mm/km) is illustrated below and in Chapter 10 for Main carriage way LHS and RHS respectively for Projects (i) & (ii).



Km 134+890 to Km 158+800, Isolated sections are not surveyed



Confidential

Illustrative summary of roughness for LHS direction of both Projects

**Km 134+890 to Km 158+800, Isolated sections are not surveyed due to Work in progress.*

Illustrative summary of roughness for RHS direction of both Projects

Confidential

For Project (i) and (ii)

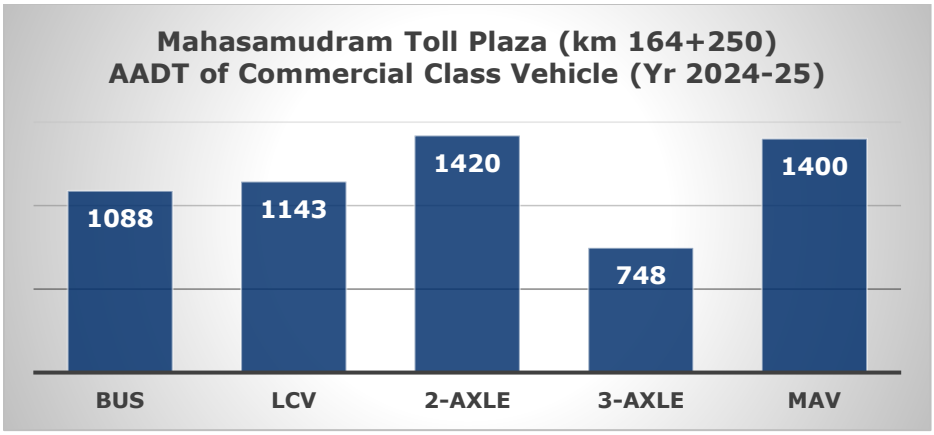
As per Schedule-B of TOT Schedule clause 3.1 (III) Repair and Rehabilitation of Pavement - a Roughness of <2400 mm shall be maintained by the existing EPC Contractor prior to handing over to InVIT Concessionaire. After O&M handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2400mm (mentioned in Schedule F) including in stretches where overlay (Structural or Functional) / panel replacement / joint repair / any type of repair to panels has been provided by InVIT concessionaire.

Pavement Observations:

For Project (i) – in Main Carriageway, few slabs on both direction has severe cracks, joint spalling and failed patch repairs. Due to structural issues, the sections has many corner breaks. In Service Road, majority of the service roads are under construction.

For Project (ii) - in Main Carriageway, due to structural issues, the sections has many corner breaks. Major bridges have wearing surface issues, it is in Fair to Poor condition, and majorly in tapered lane joints are opening, along with plant saplings growing in the joint gaps. Lot of sealed cracks are observed. Section where there are deceleration lanes at the junctions for the Mainline carriageway the joint opening is more common. In both directions, failed patch repairs, cracking, pavement dip and joint spalling are observed in the stretch. From Km 192+000 to km 219+687, the pavement condition is good in LHS and RHS direction and compared to the other sections, major distressess are not observed. In Service Road, overall pavement condition is fair, few of service roads have cracks, potholes and ravelling. At structures approaches, pavement is detorated.

FWD deflection measurement has been carried out for each carriageway to evaluate the pavement structural strength and analysis of remaining life of project is carried out in conformity with IRC: 115-2014 and presented in Chapter 10 of this report.



Analysis of Rigid Pavements and observations:

As per IRC: 117-2015, the rigid pavement analysis is carried out to determine the following PQC parameters, Evaluation of subgrade modulus, elastic modulus of concrete and flexural strength of concrete pavement. Detection of possible locations of voids underneath the rigid pavement Load Transfer Efficiency (LTE) of Joints (%).

For Project (i) - it is understood that around 66.10% of testing points in LHS direction and around 54.50% of testing points in RHS direction of the rigid pavement having E value >30000 MPa in Main Carriage way. Similarly, around 41.90% of testing points in LHS direction and 43.90% of testing points in RHS direction of the of the rigid pavement having flexural strength >4.5Mpa in Main Carriage way.

For Project (ii) - it is understood that around 81.90% of testing points in LHS direction and around 67.90% of testing points in RHS direction of the rigid pavement having E value >30000 MPa in Main Carriage way. Similarly, around 72.20% of testing points in LHS direction and 60.50% of testing points in RHS direction of the of the rigid pavement having flexural strength >4.5MPa in Main Carriage way. Load Transfer Efficiency (LTE) for Transverse joints and Longitudinal joints is more than 50% for both LHS & RHS direction for Main Carriage way.

Team for Technical Due Diligence conducted a 48 hrs axle load survey at the toll plaza location. The Annual Average Daily Traffic (AADT) of all commercial class vehicles as provided by the client is shown below

VDF values are obtained as per the analysis of 7 days axle load survey are presented below:

Location/ Vehicle Type		BUS	LCV	2axle	3axle	MAV
NH-4: (Mahasamudram Toll Plaza-164+250)	LHS	1.085	0.633	2.901	4.402	10.017
	RHS	1.080	0.688	2.598	4.926	8.115

AADT was provided by client and 5% growth rates are considered on year, and the design traffic was projected for next 10 years (YR 2035-36).

In the rigid pavement section from AP/TN border to AP/KN border (Project i & ii) no overlay requirement is analysed in general, hence no MSA calculations are done in this section.

1.10 Operation and Maintenance Requirements and Strategy

The Contractor and concessionaire shall always maintain that during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule E, Article 14 and 17 of EPC Contract Agreement and in Schedule F (the "Maintenance Requirements" of TOT CA).

A. Schedule E of EPC Contract
B. Schedule F of the TOT CA

Distresses develop in rigid pavements (in Project i & ii) are described with severity index, and repairing measures are given in Chapter 11. All appropriate technical and contractual parameters are careful reviewed to formulate the strategy of immediate repair and rehabilitation for the existing distresses and roughness. The quantities estimated for each lane are presented in Chapter 11.

The Major Maintenance Strategy is assessed in 2 scenarios based on engineering practice and HDM-4 model. The recommended Major Maintenance Strategy till the end of TOT concession period is presented below and also elaborated in Chapter 11.

Major/Periodic Maintenance Strategy

Project i – Rigid Pavement

NH-4, Section from Chittoor to Nalagampalli (Km 134+890 to Km 172+000)			
Year	**Description**	**Main carriageway (Rigid Pavement)**	**Service Roads (Flexible Pavement)**
YR 2034 (Hand over date: 18.12.2034)		Maintenance by the Existing O&M contractor	
YR 2035-2036	1st Renewal Layer	2.00% of total surface area of panel repair/replacement	30mm BC in 100% project length and 50mm DBM with milling on 10% project length.
		0.50% surface area grouting with a depth of 50mm	
		100% of joints cleaning and replacement of joint seal	
		100% of project length for Re-texturing.	
VG-40 grade bitumen is recommended for Service roads. Capacity augmentation of this stretch is envisaged in FY 2039-40 and FY 2040-41			

Project ii – Rigid Pavement

NH-4, Section from Nalagampalli to Chittoor (Km 172+000 to Km 219+687)			
Year	**Description**	**Main carriageway (Rigid Pavement)**	**Service Roads (Flexible Pavement)**
YR 2025 (Expecting Hand over)	Immediate Repair/ Rehabilitation	Maintenance by the Existing EPC contractor	30mm BC is considered in 20% affected length. (Existing EPC Contractor already performing pavement rectification at site).
		10% of total affected length given in NSV test (Existing EPC Contractor already performing pavement rectification at site)	
		10% of joints cleaning and replacement of joint seal out of total affected length (Existing EPC Contractor already performing pavement rectification at site)	
YR 2032-2033 & YR 2033-2034	1st Renewal Layer	2.00% of total surface area of panel repair/replacement	30mm BC in 100% project length and 50mm DBM with milling on 10% project length.
		0.50% surface area grouting with a depth of 50mm.	
		100% of joints cleaning and replacement of joint seal	
		100% of project length for Re-texturing.	

NH-4, Section from Nalagampalli to Chittoor (Km 172+000 to Km 219+687)			
Year	**Description**	**Main carriageway (Rigid Pavement)**	**Service Roads (Flexible Pavement)**
VG-40 grade bitumen is recommended for Service roads. Capacity augmentation of this stretch is envisaged in FY 2039-40 and FY 2040-41			

1.11 Cost Estimate

The cost estimate is worked out for expenses on Immediate Works (CAPEX) and expenses on operations and maintenance (OPEX) at present rates considering 2024-25 as the base year and is detailed in Chapter 12. Capacity augmentation of Project i and ii is envisaged in FY 2039-40 and FY 2040-41. The costs for Admin, SPV, IE, and other office expenses are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation. Cost Estimate is worked out for expenses on

i. The costs for the restoration and improvement of the Toll Plaza and the Toll Management System (TMS) are included in Capex. Initial improvements work like Rectification of Rigid Pavement, repair and rehabilitation of RE wall bulging in Project ii, Installation of Damaged Sign Board, Thermoplastic/Transverse Bar Marking on pavement, Installation of 5th, KM, HM, Boundary Stone, Painting of Kerb Stone, Incident Management, AMC cost for TMS & HTMS etc. are to be executed by TOT Concessionaire.
ii. Lighting, Tolling operations, Revalidation survey, Insurance Charges, Administrative Expenses – is included as Operational cost for TOT Concessionaire.
iii. Routine Maintenance and Repairs – to be done by EPC Contractor till end of DLP and thereafter by TOT Concessionaire till FY 2044-45 (End of Concession period of TOT Concessionaire).
iv. Periodic Maintenance - to be executed by EPC Contractor till end of DLP and then by TOT Concessionaire till FY 2044-45.
v. Bitumen has been assumed to be sourced from IOCL Chennai Refinery. The distance (to & fro) from the midpoint of Project Highway is taken as 182 km. Modified Bitumen and VG-40 grade bitumen is considered in cost estimate.

Initial improvement works is estimated as INR 20.13 Crore.

Periodic Maintenance is estimated as INR 172.73 Cr.

Routine maintenance cost is INR 67.71 Cr.

Operational cost till end of concession for this 84.797 km stretch is INR 505.47 Cr.

Capex, Periodic Maintenance and Opex for this 4-lane corridor is estimated till end FY 2044-45 as INR 698.33 Cr.

2. INTRODUCTION, APPROACH AND METHODOLOGY

National Highways Infra Investment Managers Private Limited have entrusted Ramboll India Private Limited for conducting technical due diligence study for 84.797 km long National Highway corridor comprising four lane section of NH-4 from Tamil Nadu / AP border to Nalagampalli to Karnataka Border in the State of Andhra Pradesh.

Accordingly, Ramboll team has undertaken the work of preparing Technical Due Diligence Report based on study of project related reports and documents, visual inspections, and field investigations.

2.1 Scope of Work and Compliances

The scope of work agreed with National Highways Infra Investment Managers Private Limited for conducting the technical due diligence study is presented in Table 2-1. The table also presents the chapters of the Technical Due Diligence Report where different items of scope of work are covered.

Table 2-1: Scope of Work and Compliances

SN	Scope of Work	Discussed At
1	**Site Visit and Pavement condition Survey – Visual Assessment** Site visit will be undertaken by Highway and Structural Engineers, Pavement Expert, Quantity Survey Experts, TMS & HTMS Expert and engineers to have visual assessment done for the project stretch. Observations will be recorded and critical issues for the Project will be identified and red flagged. Project Structural integrity issues that require rectification / re-mediation will be observed and recorded along with possible risk mitigation strategy & costing thereof. The Consultant shall carry out a detailed reconnaissance of the project area and shall record and highlight important features and point out any issue that may be of importance to the Client in terms of operation and maintenance of the project.	Chapter 3, 5, 6, 7
2	**Conducting inventory, condition surveys and Field Investigations for Project Road** Inventory and detailed condition surveys will be conducted for project highway, bridges & cross drainage structures, project assets, safety appurtenances, TMS & ATMS system including recommendation for either strengthening / rehabilitation or reconstruction / replacement. *Requirements for NDT tests will be identified and informed. Based on the preliminary investigations and walk-through along the stretch, the Consultant shall prepare a project road map indicating the following elements Inventory of existing project assets Existing pavement condition – kilometer-wise (along with Photographs thereof) Intersecting/Crossroads (along with Photographs thereof); Inventory and condition assessment of CD structures (along with Photographs thereof).	Chapter 3, 5, 6, 7, 9

SN	Scope of Work	Discussed At
	Condition assessment of pavement. Condition assessment of structures. Review the extent of balance work. The Consultant should prepare a photo-documentation (Soft copy) of the mentioned areas and any other important findings. The Consultant shall assess the adequacy of Operations & Maintenance, Toll Management System and Advanced Toll Management system. The following field investigations will be carried out for the project stretch. Falling Weight Deflectometer (FWD) Surveys NSV Survey Test Pit investigations. Axle Load Surveys Bridge Inspection by MBIU (For Major Structures - length of structure >60m)	
3	**Review of available Project Documents and Reports** The available reports (EPC Contracts, Approved Pavement design report, Monthly Progress Reports, As-built Drawings, Correspondences of stake holders, Asset Management Contracts, Maintenance Manuals, Maintenance history etc) will be reviewed. The Consultant shall assess the completion status of work Vis-à-vis compared with schedule B, C and Schedule D	Chapter 3, 4, 5, 6, 7, 8
4	**Review of construction material and quality, Rehabilitation Plans by Developing strategy for immediate/periodic maintenance.** The Consultant should review of Quality of construction and compaction based on available data and from Laboratory testing of samples collected from trial pits. The Consultant should conduct visual inspection of expansion joints and bearings etc of the structures to assess the condition and requirements for its repair, replacements and / or rehabilitation. The pavement stretches along with the type of distresses will be identified analysing NSV and FWD data. The Consultant should assess maintenance cycles for pavements using HDM analysis. Repair techniques will be suggested for stretches requiring immediate rehabilitation measures. Pavement maintenance strategy (functional overlay/ structural overlay) will be developed for the entire concession period to bring back riding quality of each lane of the carriageway to maximum permissible as stipulated in the Concession Agreement.	Chapter 5, 6, 7, 9, 10, 11

SN	Scope of Work	Discussed At
5	**Preparation of BoQ and Cost Estimate** Bill of Quantities will be prepared for Immediate repairs, Routine maintenance, Periodic/major maintenance, O&M Cost, and Improvement works as per Schedule B of the CA. O&M cost will involve Routine maintenance and Incident Management, Tolling Operations, Admin Expenses and Preventive Maintenance. The Consultant should provide cost till the end of the contract period including any expected extension of Concession periods as informed by the Client. For assessing the cost, Ramboll will use rates available in the market or from the inhouse data base.	Chapter 12

2.2 Deliverables and Timelines

The deliverables and the timelines for the study are as under:

SN	Deliverables	Time period
1	Submission of Red Flag Report /critical issues	Within 14 days from commencement of site visit.
2	Submission of Draft Report	Within 6-7 Weeks from the date of receipt of LOA or all data whichever is later
3	Submission of Final Report	Within one week from the date of receipt of comments from Client or within two weeks from the date of submission of draft report

The above timelines assume that all project related data are available at the start of work.

2.3 Structure of the Report

In line with the requirements of agreed scope of work, this Technical Due Diligence Report is being submitted. The report is organised in the following fashion.

Chapter 1	**Executive Summary:** The chapter presents an overview of the project after review & study of documents, site investigations and estimates for maintenance.
Chapter 2	**Introduction, Approach and Methodology:** The chapter presents a brief approach and methodology adopted for carrying out the Due Diligence Study.
Chapter 3	**Project Description:** The chapter summarises the project features based on Concession Agreement requirements.

Chapter 4	**Review of Existing EPC Contract:** This chapter contains a short review of existing contract of the Projects.
Chapter 5	**Assessment of Project Assets - Highway:** The chapter presents the details of various essential features of the project highway recorded through reconnaissance survey and data obtained through NSV Survey.
Chapter 6	**Assessment of Project Assets - Structures:** The chapter presents the details of various essential features of the structures recorded through visual inspection and by using MBIU.
Chapter 7	**Assessment of Project Assets – Toll Management Systems:** The chapter presents the details of various essential features of the Toll Plaza Systems and associated facilities recorded through visual inspection.
Chapter 8	**Review of Existing O&M Contracts and Maintenance Manuals:** The chapter contains a short review of the Operation and Maintenance Obligations of the EPC Contractor.
Chapter 9	**Soil and Material Investigation:** This chapter discusses the results of soil and material tests carried out for the project stretch.
Chapter 10	**Pavement Evaluation Studies:** This chapter describes the tests carried for pavement evaluation and analyses of the test results.
Chapter 11	**Development of O&M Strategy:** The chapter presents the details of O&M strategy developed based on the Pavement evaluation studies and analysis described in Chapter 10.
Chapter 12	**Cost Estimate:** The chapter outlines the key assumption considered for cost estimate and provides details of cost estimates under various heads viz immediate, O&M and major maintenance for the concession period.

2.4 List of Shared Documents of the project.

Documents shared by National Highways Infra Investment Managers Private Limited for Technical Due Diligence of the project and Ramboll gathered data during site inspection from PIU - Tirupati, IE and Concessionaire's site office of this Project, under guidance of National Highways Infra Investment Managers Private Limited.

-
- Concession Agreement of the projects
- Technical schedule of Tolling, Operation, Maintenance & Transfer of the projects

- Projects under INVIT Round 4 - Prebid replies.
- Technical Due Diligence Report of the projects for effective implementation of asset Monetization program under TOT & InvIT with BOQ and cost estimate.
- Pavement design Report (Project 1, 2)
- As built drawings (for Project 2)
- Letters on COD (Project 2)
- Monthly maintenance Reports of IE (Project 2)
- Monthly Progress Report (Project 1)
- Pavement Design Report (Project 2)
- Operation & Maintenance Manual (Project 2)
- Insurance Policy
- Asset Inventory (Project 1, 2)
- MBIU survey Report (Project 2)
- NSV Report (Project 2)
- Safety Audit Report (Project 2)
- KMZ file
- Electrical details (Project 2)
- Existing stage Audit report (Project 1)

2.5 Approach and Methodology

Our approach and methodology to address the requirements defined in terms of reference are briefly presented below.

- Identification of objectives of Client through detailed study of scope of work and discussions with the Client.
- Identification of Assignment specific team of professionals covering all the skills and specializations required and involving with the assignment from day one.
- A Team Leader is assigned to coordinate various events / activities of various team members.
- Assessment of data / information required is made at the time of Proposal / Engagement letter and the list is shared with the Client.

2.6 Study

The following briefly presents the process followed for the present study.

- The data available for the project are collected from site offices of PIU – NHAI and of respective Independent Engineers of three Projects.
- The data is reviewed by the study team and information collated in different categories e.g., asset inventory, contracts, change of scope, communications from NHAI, maintenance strategy

and maintenance costs etc.

- Data gaps are identified through the above process and communicated to the Client.
- Detailed review of all the available data is carried out.
- Site visit is made by team of experts to understand the project features and observations are recorded.
- Field tests are carried out as per agreed scope of work.
- The test results are analysed in detail and maintenance strategies are developed.
- Inferences are made on various items of scope of work based on the available data and compared with the requirements of concession Agreement. Issues are flagged wherever required.
- The costs associated with the project under various head (immediate, routine operation and maintenance and Major Maintenance) are worked out in accordance with the requirements of existing EPC Contract under current scenario.
- Finally, a comprehensive report is prepared covering all aspects of the agreed scope of work.

2.7 Delivery

Delivery follows the following flow:

- Formats of agreed deliverables are formalized and shared with Client, wherever required.
- Deliverables are shared with the Client within agreed timelines.

2.8 Feedback

Regular and end-of-the-assignment feedback are obtained from the client for further enhancing the quality of service.

3. PROJECT DESCRIPTION

The Government of India had entrusted to National Highways Authority of India (NHAI) the development, maintenance, and management of National Highway No. 4 which includes.

Project i - Rehabilitation and Upgradation of NH-4 from Km 133.360 to km 171.590 (Andhra Pradesh / Tamil Nadu Border to Nalagampalli Village) to four lanes with paved shoulder under NHDP-IV on EPC mode.

Project ii - Rehabilitation and Upgradation of NH-4 from Nalagampalli (Existing Km.171.590/Design Km.172.00) to AP/Karnataka Border (Existing Km.216.912/Design Km.219.687) to four lanes with paved shoulders (Design length = 47.687 Km) under NHDP-IV on EPC mode.

The Authority had invited proposals by its Request for Proposal for above two Projects. After evaluation of the bids received, the Authority had accepted the bid of the selected bidder and issued its Letter of Acceptance No. (i) RW/NH-37015/13/2016-NHDP-IVA dated 24.06.2016; (ii) NHAI/NH-4/Nalagampalli/2016-17/264 dated 30.03.2017 respectively for the two Projects.

After termination of the EPC Contractor for the project (i) – "Rehabilitation and Upgradation of NH-4 from Km 133.360 to km 171.590 (Andhra Pradesh / Tamil Nadu Border to Nalagampalli Village) to four lane with paved shoulder", National Highways Authority of India resolved to rehabilitate and augment the "Construction of 1 No's ROB, 2 No's VUPs, Service roads, provision of lighting and construction of other miscellaneous works at various stretches including maintenance of existing section of NH-4 from AP /Tamil Nadu Boarder (Km. 134.890) to Nalagampalli village (Km.172.000) under EPC mode in the state of Andhra Pradesh" on Engineering, Procurement, Construction ("EPC") basis.

Accordingly, the Authority accordingly invited the proposals from the eligible bidders. After evaluation of the bids received, the Authority accepted the bid of the selected bidder and issued its Letter of Acceptance No. NHAI/ROVJA/P25015/NLGPALK/2019 /734 dated 13.04.2023 for balance work of the Project including its maintenance.

Project (i) work is expected to be completed by Jan 2025 and DLP of this project is 10 years whereas, Project (ii) and (iii) had achieved COD and the projects are now under maintenance. DLP of Project (ii) is expected to be completed by January 2025.

Further, National Highways Authority of India (NHAI) has setup InvIT to monetize its completed and operational national highways projects with the objective of mobilizing additional resources through capital markets. Accordingly, National Highways Authority of India (NHAI) ("the Sponsor") set up National Highways Infra Trust ("the Trust") as an irrevocable infrastructure trust. The Investment objectives of the Trust are to carry on the activities of, and to make investments, as an Infrastructure Investment Trust. National Highways Infra Investment Managers Private Limited ("NHIIMPL") is a Private Limited Company set up to act as the Investment Manager to the Infrastructure Investment Trust ("InvIT") and is the Investment Manager of the National Highways Infra Trust ("NHIT" or "Trust"). NHIIMPL is, responsible for all the decisions in relation to the day-to-day management and administration of InvIT assets and the investments of the trust as may be incidental or necessary for the advancement or fulfilment of the investment objectives of the trust in accordance with the InvIT Regulations. NHIPMPL or "Project Manager" was incorporated as a private limited company as a wholly owned subsidiary of NHAI. The Project Manager (will undertakes operations and maintenance of the Assets, including making arrangements for maintenance of the assets held by the Trust.

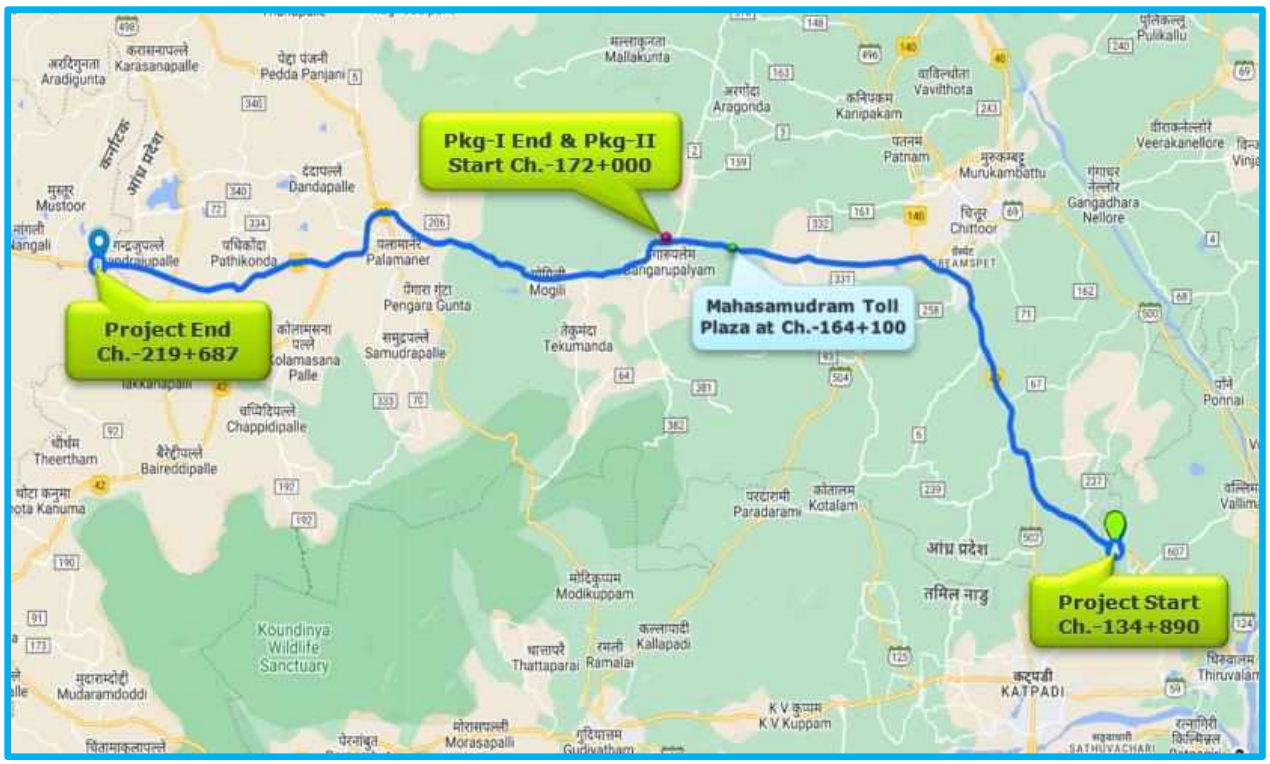


Figure 3-1: Location Map of Project Stretch

3.1 Terrain

The project road generally passes through plain terrain. The land use along the project stretch (i) and (ii) is mostly residential and commercial with built-up areas and remaining is mostly agricultural land, whereas project. The project falls under seismic zone 2.

3.2 Right of Way

The right of way (RoW) available in the projects are 45m to 60 m for 4 lane projects (i) and (ii) as specified in Schedule A & B of the existing EPC Contract Agreements of these two Projects.

3.3 Administrative Details of the Project

Administrative details of the project are listed below.

Table 3-1: Administrative Details of the Project

Particulars	Project i	Project ii
Project Name	Rehabilitation and Upgradation of NH-4 from Km 133.360 to km 171.590 (Andhra Pradesh / Tamil Nadu Border to Nalagampalli Village) to four lanes with paved shoulder / Construction of 1 No's ROB, 2 No's VUPs, Service roads, provision of lighting and construction of other miscellaneous works at various stretches including maintenance of existing section of NH-4 from AP /Tamil Nadu Boarder (Km. 134.890) to Nalagampalli village (Km.172.000)	Rehabilitation and Upgradation of NH-4 from Nalagampalli (Existing Km.171.590 /Design Km.172.00) to AP/Karnataka Border (Existing Km.216.912 /Design Km.219.687) to four lanes with paved shoulders (Design length = 47.687 Km)
Mode of the Execution (BOT Toll/ BOT Annuity/ EPC/ HAM/ Others)	EPC Mode under NHDP Phase – IV / EPC Mode	EPC Mode under NHDP Phase - IV
Project Phase	Partially under construction with Tolling, Operation, Maintenance	Operation and Maintenance
No. of Lanes/ Configuration	4 Lane divided carriageway	4 Lane divided carriageway
Length of the Project (in Km)	37.110 km	47.687 km
Client	NHAI	
NH No.	NH-4	NH-4
EPC Contractor / Concessionaire	Gayatri Projects Ltd / SD Infra	Dilip Buildcon Ltd
Total Project Cost	INR 306 Crores / INR 149.77 Crores	INR 959.06 Crores
Independent Engineer (O&M Phase)	Aarvee Associates Architects Engineers & Consultants Pvt. Ltd.	Aarvee Associates Architects Engineers & Consultants Pvt. Ltd.
LOA	13 March 2023	30 March 2017
Date of Signing of CA	18 May 2023	02 November 2017
Appointed Date	19 June 2023	15 November 2017
Scheduled Completion date for EPC Contract	550th day from appointment date i.e. 19 December 2024	

Particulars	Project i	Project ii
Completion Certificate	19.01.2025 (expected), remaining 1.43 km ROB expected 31.07.2025	31 July 2019
End Date of Concession period / Maintenance obligation for Latest EPC Contract	Defect liability period 10 years after COD	Defect liability period 4 years after COD
O&M Handover date	18 December 2034	DLP extended till rectification of defects (expected to complete by 31.01.2025)
No. of Toll Plazas (Number and Location)	Toll Plaza 1: Mahasamudram Toll Plaza	-

3.4 Salient Features of the Project and Scope of Work

The salient features of the project and scope of work in accordance with Schedules B and C are presented in Table 3-2.

Table 3-2: Salient Features of the Project and Scope of Work

S.No.	Item - Features	Units	Project i	Project ii	Total
1	**Service Road**	km	13.018	51.906	64.924
2	**Bypasses**	km	1.04	13.09	14.13
3	**Major Intersections**	Nos.	6	4	10
4	**Minor Intersection**	Nos.	41	33	74
5	**Bus bay & Bus Shelters**	Nos.	43	32	75
6	**Truck Lay Bye**	Nos.	2	6	8
7	**Rest Area**	Nos.	0	0	0
8	**Toll Plaza**	Nos.	1	0	1
	Toll Plaza lane	Nos.	10	0	10
9	**Median Opening**	Nos.	30	11	41
10	**Street Light Poles**	Nos.	160	1710	1870
11	**High mast Lights**	Nos.	11	0	11
12	**Solar Blinkers**	Nos.	36	63	99
13	**Avenue Plantation**	km	9.975	35.911	45.886
14	**Median Plantation**	km	15.248	34.797	50.045
15	**Fuel station**	Nos.	9	11	20

S.No.	Item - Features	Units	Project i	Project ii	Total
16	Sign Boards	Nos.	490	352	842
17	Gantry Sign Board	Nos.	5	28	33
18	Pedestrian Guard Rail	km	0.34	0.319	0.659
19	Rigid Concrete Barrier	km	2.309	26.578	28.887
20	W Beam Crash Barrier	km	11.278	36.587	47.865
21	Shoulder/Separator Drain	km	7.572	14.865	22.437
22	Earthen Drain/ Chute Drain	km	41.524	66.543	108.067
23	Median Longitudinal Drain	km	10.956	5.103	16.059

12	Slab Culvert	13	-	13

3.5 Specification and Standards

For Project (i) – 4 lanes from Km 134+890 at Tamil Nadu / Andhra Pradesh Border to Nalagampalli at Km 172.00 on NH-4.

Four - Laning of the Project Highway shall conform to the Manual of Specifications and Standards for Four-Laning of Highways published by the IRC (IRC: SP: 84-2019) respectively. However, certain deviation from IRC-SP-84-2019 as listed in Schedule D of the CA is given below.

Deviations from the Manual

The terms "Concessionaire", "Independent Engineer" and "Concession Agreement" used in the Manual shall be deemed to be substituted by the terms "Contractor", "Authority's Engineer" and "Agreement" respectively.

Table 3-3: Deviation and Reference for Project i

Sl. No.	Clause as per Manual	Description	Provision as per Manual	Deviations / Modified Provision
1.	2.6	Width of paved shoulder	2.5 m	1.5 m
2.	2.6	Width of earthen shoulder	1.5 m	2 m
3.	2.17	4-lane Divided Highway with service roads and with raised median	Fig. 2.5	TCS-11I, IIIA, IIIB, IIIC, IIID, IIIE
4.	2.17	4-lane Divided Highway without service roads and with raised median	Fig. 2.4	TCS-I, IA, II
5.	7.3	Cross-Section of Grade Separated Structure Vehicular Underpass and Elevated Section	Fig. 7.8	TCS-VI, VIA
6.	7.3	Typical Cross Section of Bridge/ROB at Deck level with footpath	Fig. 7.2A	TCS- VII
7.	-	Typical Cross Section for 4 ane VUP/LVUP/Flyover approach section with Slip roads on both sides	-	TCS-IV, IVA, IVB, V

For Project (ii) – 4 lanes from Km 172.000 at Nalagampalli to km 219.687 at Andhra Pradesh / Karnataka Border on NH-4

All Materials, works and construction operations shall conform to the Manual of Specifications and Standards for Four -Laning of Highways (IRC: SP:84-2014), referred to as the Manual, and MORTH

Specifications for Road and Bridge Works. Where the specification for a work is not given, Good Industry Practice shall be adopted to the satisfaction of the Authority's Engineer

Deviations from the Manual

The terms "Concessionaire", "Independent Engineer" and "Concession Agreement" used in the Manual shall be deemed to be substituted by the terms "Contractor", "Authority's Engineer" and "Agreement" respectively.

Table 3-4: Deviation and Reference for Project ii

Sl. No.	Item	Description of Deviation	Clause reference
1.	Minimum width of proposed ROW should be 60m for development of 4 lane highway.	The proposed ROW has been restricted to 45m except for the proposed bypasses at Bangarupalayam of length 5.545 km, Palamaner Town of length 7.545 km & Realignments at Mogili and at few curves for length of 2.14 km, where 60m ROW has been proposed.	2.3
2.	Intermediate Sight Distance shall be adopted throughout.	Stopping Sight Distance Considered in the design of Summit Curves.	2.9.5
3.	The width of the service road shall be 7.0m wide carriageway and I.5 m wide Earthen Shoulders	Service Road of 7.5m / Slip Road of 5.5m at approaches of Vehicular Underpasses.	2.12.2.1
4.	Wherever service roads are provided, provision shall be made for proper entry and exit ramps between the main highway and the service roads, duly keeping in view future widening of main highway to six-lanes. The layout shall be as per Figure 2.1 A to 2.1 B.	The service roads have been connected to the main highway through slip ins and slip outs.	2.12.2.3
5.	Minimum width of the Footpath of 1.5m	Footpath of 1.5 m including metallic crash barrier has been provided.	2.15
6.	The median width is 5m (including 0.5m shyness on either side) in general and the minimum width proposed at built up stretches is 2.5m including shyness.	For 6 lane cross section with slip roads of 5.5m at approaches of Underpasses, 1.5m median (Comprising 0.5m RCC crash barrier +0.5m kerb shyness on either side) is provided	2.5
The cart track in stretches given in para 2.8 of Schedule-B shall be provided in addition to the features as per typical cross sections given in para 2.11 of Schedule-B.			

4. REVIEW OF EXISTING EPC CONTRACT AGREEMENTS

REHABILITATION AND UPGRADATION OF NH-4 FROM KM 134.890 TO KM 172.00 (ANDHRA PRADESH/ TAMIL NADU BORDER TO NALAGAMPALLI VILLAGE) TO FOUR LANE PAVED SHOULDERS (TOTAL LENGTH 37.11 KM) IN THE STATE OF ANDHRA PRADESH UNDER NHDP-IV IN THE ON-EPC MODE

PROJECT i

This chapter contains a short review of the Contract Agreement for the above-mentioned Project

4.1 Brief Review of Contract Agreement

It may be noted that The Contract Agreement is primarily divided into Six parts and various Schedules that are available at the end. Contents of each of the Six parts and the Schedule is briefly mentioned below.

Part I Definitions and Interpretations

Addresses - the Definition and Interpretation, measurements and arithmetic conventions, priority of agreements and errors/discrepancies.

Part II Scope of the Project

Scope of the Project: Scope of the Project.

Obligations of the Authority: Obligations of the Authority, maintenance obligations prior to the appointed date, environmental clearances, deemed termination upon delay.

Obligations of the contractor: Obligations of the contractor, obligations relating to subcontractors and any other agreements, employment of foreign nationals, contractor's personnel, advertisement on project highway, contractors care for the works, electricity water and other services, unforeseeable difficulties, coordination of the works, environmental measures, site data, sufficiency of contract price, clearance of the site.

Representations and warranties: Representation and warranties of the contractor, representations and warranties of the authority, disclosure.

Disclaimer: Disclaimer.

Part III Construction and maintenance

Performance security: Performance security, extension of performance security and additional performance security, appropriation of performance security, release of performance security, retention money.

Right of way: The site, procurement of the site, damages for delay in handing over the site, site to be free from encumbrances, protection of sight from encroachments, special temporary right of way, access to authority and the authorities engineer, geological and archaeological findings.

Utilities and trees: Existing utilities and roads, shifting of obstructing utilities, new utilities, felling of trees, dismantling of structures, development.

Design and construction of project highway: Obligations prior to commencement of works, design and drawings, construction of the project highway, maintenance during construction., extension of time for completion, incomplete works, maintenance manual, as built records, contractors use of authority's documents.

Quality assurance monitoring and supervision: Quality of materials and workmanship, quality control system, methodology, inspection and technical audit by the authority, external technical audit, inspection of construction records, monthly progress reports, inspection, samples, tests, examination of works before covering up, rejection, remedial work, delays during construction, quality control records and documents, video recording, suspension of unsafe construction work, staff and labour.

Completion certificate: Test on completion, completion certificate, rescheduling of tests,

Change of scope: Change of scope, procedure for change of scope, payment for change of scope, restrictions on change of scope, power of authority to undertake works.

Maintenance: Maintenance obligations of the contractor, maintenance requirements, maintenance program, safety, vehicle breakdowns and accidents, linked closure, reduction of payment for non-performance of maintenance obligations, authorities right to take remedial measures, restoration of loss more damage of property project highway, overriding powers of authority, taking over certificate.

Supervision and monitoring during maintenance, inspection by the Contractor, inspection and payments, tests, reports of unusual occurrence.

Traffic regulation: Traffic regulation by contractor.

Defects liability: Defects liability. Remedying defects, cost of remedying defects, contractors' failure to rectify defects, extension of defects liability.

Authority engineer: Appointment of authority engineer, duties and authority of authority engineer, delegation by authority engineer, instructions of the authority engineer, determination by authorities engineer, remuneration of the authorities engineer, termination of the authorities engineer.

Part IV Financial Covenants

Payments: Payments, contract price, advance payment, procedure for estimating the payments for the works, stage payment statement for works, stage payment for works, monthly maintenance statement of the project highway, payment for maintenance of project highway, payment of damages, time of payment and interest, price adjustment for works, restrictions on price adjustment, price adjustment for maintenance of project highway, final payment statement, discharge, final payment certificate, final payment statement for maintenance, change in law, correction of interim payment certificates, authorities claims, bonus for early completion.

Insurance: Insurance, insurance that works and maintenance, notice to authority, evidence of insurance cover, remedy for failure to ensure, waiver for subrogation, contractors' waiver, cross liabilities, accident or injury to workmen, insurance against accident to workman, application of insurance proceeds, compliance with policy conditions, general requirements of insurance policies.

Part V Force Majeure and Termination

Force Majeure: Force Majeure, non-political event, indirect political event, political event, duty to report force measure event, effect of force measure event on the agreement, termination notice for force majeure event, termination payment for force your event, dispute resolution, excuse from performance of obligations

Suspension of contractor's rights: suspension upon contractors' default, authority to act on behalf of contractor, revocation of suspension.

Termination: termination for contractor default termination for authority default, termination for authorities Indians, requirements after termination, valuation of unpaid works, termination payment, other rights and obligations of the parties, survival of rights, foreclosure with mutual consent.

Part VI Other Provisions

Assignment and charges: Restrictions on assignment and charges, hypothecation of materials or plant.

Liability and indemnity: General indemnity, indemnity by the contractor, notice and contest of claims, defense of claims, survival on termination.

Dispute resolution: Conciliation, arbitration, adjudication by regulatory authority, tribunal or Commission,

Miscellaneous: Governing law and jurisdiction, waiver of immunity, delayed payments, waiver liability for review of documents and drawings, exclusion of implied warranties etc, survival, entire agreement, severability, no partnership, third parties, successors and assigns, notices, language, counterparts, confidentiality, copyright and intellectual property rights, limitation of liability, care and supply of documents, authorities use of contractors documents, contractors use of authorities documents, access to site by others, term, amendments, representation and bribes, no agency.

REHABILITATION AND UPGRADATION OF NH-4 FROM NALAGAMPALLI (EXISTING KM 171.560/ DESIGN KM 172.000) TO AP/KARNATAKA BORDER (EXISTING KM 216.912/ DESIGN KM 219.687) TO FOUR LANE WITH PAVED SHOULDER (DESIGN LENGTH = 47.687) UNDER NHDP-IV IN THE STATE OF ANDHRA PRADESH ON EPC MODE

PROJECT ii

This chapter contains a short review of the Contract Agreement for the above-mentioned Project

4.2 Brief Review of Contract Agreement

It may be noted that The Contract Agreement is primarily divided into Six parts and various Schedules that are available at the end. Contents of each of the Six parts and the Schedule is briefly mentioned below.

Part I Definitions and Interpretations

Addresses - the Definition and Interpretation, measurements and arithmetic conventions, priority of agreements and errors/discrepancies, joint and several liability.

Part II Scope of the Project

Scope of the Project: Scope of the Project.

Obligations of the contractor: Obligations of the contractor, obligations relating to subcontractors and any other agreements, employment of foreign nationals, contractor's personnel, advertisement on project highway, contractors care for the works, electricity water and other services, unforeseeable difficulties.

Obligations of the Authority: Obligations of the Authority, maintenance obligations prior to the appointed date, environmental clearances.

Representations and warranties: Representation and warranties of the contractor, representations and warranties of the authority, disclosure.

Disclaimer: Disclaimer.

Part III Construction and maintenance

Performance security: Performance security, extension of performance security and additional performance security, appropriation of performance security, release of performance security, retention money.

Right of way: The site, procurement of the site, damages for delay in handing over the site, site to be free from encumbrances, protection of sight from encroachments, special temporary right of way, access to authority and the authorities engineer, geological and archaeological findings,

Utilities and trees: Existing utilities and roads, shifting of obstructing utilities, new utilities, felling of trees.

Design and construction of project highway, Obligations prior to commencement of works, design and drawings, construction of the project highway, maintenance during construction., extension of time for completion, incomplete works, maintenance manual.

Quality assurance monitoring and supervision: Quality of materials and workmanship, quality control system, methodology, inspection and technical audit by the authority, external technical audit,

inspection of construction records, monthly progress reports, inspection, samples, tests, examination of works before covering up, rejection, remedial work, delays during construction, quality control records and documents, video recording, suspension of unsafe construction work, staff and labour.

Completion certificate: Test on completion, provisional certificate, completion of remaining works, completion certificate, rescheduling of tests.

Change of scope: Change of scope, procedure for change of scope, payment for change of scope, restrictions on change of scope, power of authority to undertake works.

Maintenance: Maintenance obligations of the contractor, maintenance requirements, maintenance program, safety, vehicle breakdowns and accidents, linked closure, reduction of payment for non-performance of maintenance obligations, authorities right to take remedial measures, restoration of loss more damage of property project highway, overriding powers of authority.

Supervision and monitoring during maintenance, Inspection by the Contractor, inspection and payments, tests, reports of unusual occurrence.

Traffic regulation: Traffic regulation by contractor.

Defects liability: Defects liability. Remedying defects, cost of remedying defects, contractors' failure to rectify defects, extension of defects liability.

Authority engineer: Appointment of authority engineer, duties and authority of authority engineer, delegation by authority engineer, instructions of the authority engineer, determination by authorities engineer, remuneration of the authorities engineer, termination of the authorities engineer.

Part IV Financial Covenants

Payments: Payments, contract price, advance payment, procedure for estimating the payments for the works, stage payment statement for works, stage payment for works, monthly maintenance statement of the project highway, payment for maintenance of project highway, payment of damages, time of payment and interest, price adjustment for works, restrictions on price adjustment, price adjustment for maintenance of project highway, final payment statement, discharge, final payment certificate, final payment statement for maintenance, change in law, correction of interim payment certificates, authorities claims, bonus for early completion.

Insurance: Insurance, insurance that works and maintenance, notice to authority, evidence of insurance cover, remedy for failure to ensure, waiver for subrogation, contractors' waiver, cross liabilities, accident or injury to workmen, insurance against accident to workman, application of insurance proceeds, compliance with policy conditions, general requirements of insurance policies.

Part V Force Majeure and Termination

Force Majeure: Force Majeure, non-political event, indirect political event, political event, duty to report force measure event, effect of force measure event on the agreement, termination notice for force majeure event, termination payment for force your event, dispute resolution, excuse from performance of obligations.

Suspension of contractor's rights: Suspension upon contractors' default, authority to act on behalf of contractor, revocation of suspension.

Termination: Termination for contractor default termination for authority default, termination for authorities Indians, requirements after termination, valuation of unpaid works, termination payment, other rights and obligations of the parties, survival of rights.

Part VI Other Provisions

Assignment and charges: restrictions on assignment and charges, hypothecation of materials or plant.

Liability and indemnity: General indemnity, indemnity by the contractor, notice and contest of claims, defense of claims, survival on termination.

Dispute resolution: Dispute resolution, conciliation, arbitration, adjudication by regulatory authority, tribunal or Commission.

Miscellaneous: Governing law and jurisdiction, waiver of immunity, delayed payments, waiver liability for review of documents and drawings, exclusion of implied warranties etc, survival, entire agreement, severability, no partnership, third parties, successors and assigns, notices, language, counterparts, confidentiality, copyright and intellectual property rights, limitation of liability.

5. ASSESSMENT OF PROJECT ASSETS – HIGHWAY

5.1 Service Roads/ Slip Roads

At 4-lane section of AP/TN Border to 172+000

Within this project, service roads and slip roads are being constructed using flexible pavement techniques. Construction is currently underway at multiple locations along the project stretch. The project team is committed to completing the work efficiently while maintaining high-quality standards.

The total length of service roads included in this Project is 13.081 kilometers, spanning various sections of the project area. For a comprehensive overview of service and slip roads, including details on the locations where construction is in progress, please refer to Annexure 5.2.

To further illustrate the current status and progress of service road construction, photographs are included below.

Figure 5-1: Service roads. at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

Within this project, service roads and slip roads have been constructed utilizing flexible pavement techniques. An assessment of the overall pavement condition reveals a generally good state. However, it's observed that pavement markings, while present in some areas, are faded in certain locations.

The total length of service roads encompassed within this project Project is 51.906 kilometers. For a comprehensive overview of service and slip roads, including their specific locations within the project highway, please refer to Annexure 5.2.

Figure 5-2: Service roads. at 4-lane section of 172+000 to AP/ KA Border

5.2 Bypass

At 4-lane section of AP/TN Border to 172+000

M/s. SD Infra is doing the balance works to complete this 4-lane Project. In Schedule A Clause 16 there is one bypass from Km 166.770 to km 167.810 (length 1.040 km). This KG Satram bypass is now constructed. Details of bypasses are listed in Annexure 5.3.

At 4-lane section of 172+000 to AP/ KA Border

Two Bypasses are constructed in this Project (length 13.090 Km). Condition of the bypasses is good. Details of bypasses are listed in Annexure 5.3 and some photographs of the bypass are given below.

Figure 5-3: Bypass. at 4-lane section of 172+000 to AP/ KA Border

5.3 Intersections

Figure 5-4: Minor Intersections

At 4lane section of AP/TN Border to 172+000

There are 20 junctions in this Project. Out of these, there are 03 major junctions and 17 minor junctions. Junctions are with flexible pavement provided. The details of major junctions are given the Annexure 5.4 and minor junctions are given the Annexure 5.5.

Figure 5-5: Major Intersections at 4-lane section of AP/TN Border to 158+800

Figure 5-6: Minor Intersections at 4-lane section of AP/TN Border to 158+800

At 4-lane section of 172+000 to AP/ KA Border

There is total 61 junctions along the project road. Out of these, there are 07 major junctions and 54 minor junctions. Junctions are with flexible pavement provided. The details of major junctions are given the Annexure 5.4 and minor junctions are given the Annexure 5.5.

Figure 5-7: Major Intersections at 4-lane section of 172+000 to AP/ KA Border

Figure 5-8: Minor Intersections at 4-lane section of 172+000 to AP/ KA Border

5.4 Bus bay and Bus Shelter

At 4lane section of AP/TN Border to 172+000

There are 43 numbers of bus shelters along the project road, out of these 06 bus shelters are under construction. Lighting is not provided at any bus bay locations. Pavement condition of bus bays is satisfactory. Details of Bus Bay and bus Shelters are presented in Annexure 5.6. Some photographs are shown below**.**

Figure 5-9: Bus Bay and Bus Shelter at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

There are 32 numbers of bus shelters along this project road, out of these 01-bus shelter do not have bus bay. Pavement condition of bus bays is satisfactory. Details of Bus Bay and bus Shelters are presented in Annexure 5.6. Representative photographs are shown below**.**

Figure 5-10: Bus Bay and Bus Shelter at 4-lane section of 172+000 to AP/ KA Border

Confidential

5.5 Truck lay bye

At 4lane section of AP/TN Border to 172+000

There are 04 Truck lay byes and are operational on both sides. These Truck lay byes don't have the essential facilities like lighting, Toilet block, drinking water, rest room etc. Truck lay bye's locations are given in Annexure 5.7 with some photographs below.

Figure 5-11: Truck Lay bye at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

There are 06 Truck Lay-byes on this stretch, and they are currently in good condition. However, none of these Truck Lay-byes are equipped with essential facilities like Toilet block, Drinking water, rest room etc. Truck lay byes locations are given in Annexure 5.7 with some photographs below.

Figure 5-12: Truck Lay bye at 4-lane section of 172+000 to AP/ KA Border

5.6 Toll Plaza

At 4lane section of AP/TN Border to 172+000

The Toll Plaza at km 164+100, known as the Mahasamudram Toll Plaza, is located on NH-4 and is currently operational. This is a staggered toll plaza, designed to manage traffic efficiently across both directions. The toll plaza is equipped with 5+5 lanes, which include reversible lanes to optimize traffic flow, particularly during peak hours or emergencies. This lane configuration ensures smooth vehicle movement and minimizes delays for commuters. Key facilities available at the Mahasamudram Toll Plaza include:

- Canopy to provide shade and shelter for vehicles passing through the toll lanes.
- High mast lighting to ensure proper illumination, enhancing safety and visibility during nighttime operations.
- Toilet blocks to serve the needs of toll plaza staff and travelers.
- Operational management of toll plaza is being done from the office constructed over the canopy of the plaza.

The details of the Toll Plaza, including its features and operational setup, are provided in Annexure 5.9 and in Chapter 7 of this report. Additionally, photographs of the Mahasamudram Toll Plaza are included below to provide a visual representation of its layout and current condition.

Figure 5-13: Toll Plaza at 4-lane section of 172+000 to AP/ KA Border

At 4-lane section of 172+000 to AP/ KA Border

This stretch doesn't have any Toll Plaza.

5.7 Median opening

At 4lane section of AP/TN Border to 172+000

Median openings are provided as per scope stipulated in the CA and according to the requirement of local authority and residents along the project highway. In most places work is under progress. 30 Nos. Median opening is found at site. List of median openings on Project Stretch are given in Annexure 5.10. Photographs of median openings are shown below.

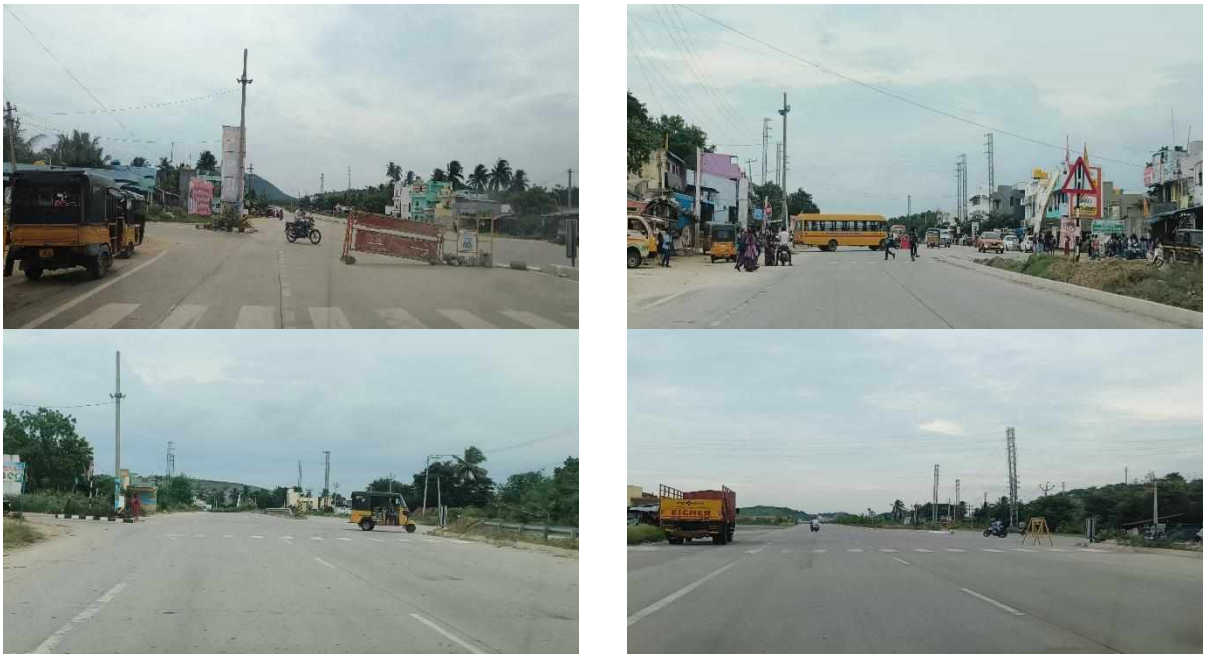

Figure 5-14: Median Opening at 4-lane section of AP/TN Border to 158+800

At 4-lane section of 172+000 to AP/ KA Border

Median openings are provided as per scope stipulated in the contract and according to the requirement of local authority and residents along the project highway. 11 Nos. Median openings are found during visual inspection. List of median openings on Project Stretch are given in Annexure 5.10. with some photographs below.

Confidential

Figure 5-15: Median Opening at 4-lane section of 172+000 to AP/ KA Border

5.8 Drainage System

At 4lane section of AP/TN Border to 172+000

Drainage arrangements are provided in the project, but lined and unlined drains need proper maintenance by cleaning debris and vegetations to make the arrangement working. At few locations drainage work is under construction. List of Drains with their locations are provided in Annexure 5.11. Illustrative photographs are presented below**.**

Figure 5-16: Drainage system at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

Drainage arrangements are provided in the project. Efficient Drainage arrangements have tried along the corridor in the form of Covered RCC Drain, open lined drain, Median lined drain, earthen drain. Debris, vegetations and blockages at different locations are seen during site inspection which requires regular maintenance to make the drainage system effective. List of locations showing this Drainage system is provided in Annexure 5.11. Illustrative photographs are presented below**.**

Figure 5-17: Drainage system. at 4-lane section of 172+000 to AP/ KA Border

5.9 Traffic Signage

At 4-lane section of AP/TN Border to 172+000

Road signs including traffic signs, overhead Gantry Mounted signs, Kerb mounted signs and median signs are available along the Project Highway. There are about 490 sign boards, 01 Overhead Gantry signs boards and 04 Cantilever Gantry Signs boards on Project Stretch, most of the sign boards are physically in good condition. Work on the project is still ongoing. The details of all traffic signs are provided in Annexure 5.12 & 5.13 respectively for Sign Boards and Overhead Gantry Signs. Few Photographs are illustrated below.

Confidential

Figure 5-18: Traffic Signs Boards at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

Road signs including traffic signs, overhead Gantry Mounted signs, Kerb mounted signs and median signs are available along the Project Highway. There are about 352 sign boards, 08 Overhead Gantry signs boards and 20 Cantilever Gantry Signs boards on Project Stretch, most of the sign boards are physically in good condition. The details of all traffic signs are provided in Annexure 5.12 & 5.13 respectively for Sign Boards, Overhead Gantry Signs and Cantilever Gantry Signs. Photographs are shown below.

Confidential

Figure 5-19: Traffic Signs Boards at 4-lane section of 172+000 to AP/ KA Border

5.10 Highway lighting

At 4-lane section of AP/TN Border to 172+000

Highway / Street Lighting work is undergoing in this project stretch, currently light poles have been installed only at some locations. List of Highway / Street lighting work in progress on Project Stretch are given in Annexure 5.14 to Annexure 5.15 in tabular form. and Photographs are presented below.

Solar Blinker lights are provided at median openings and at-grade intersections. Work is under progress in this project stretch, due to which temporary blinkers have been installed also at some locations. List of solar blinkers on Project Stretch are also given Annexure 5.16 respectively and Photographs are presented below.

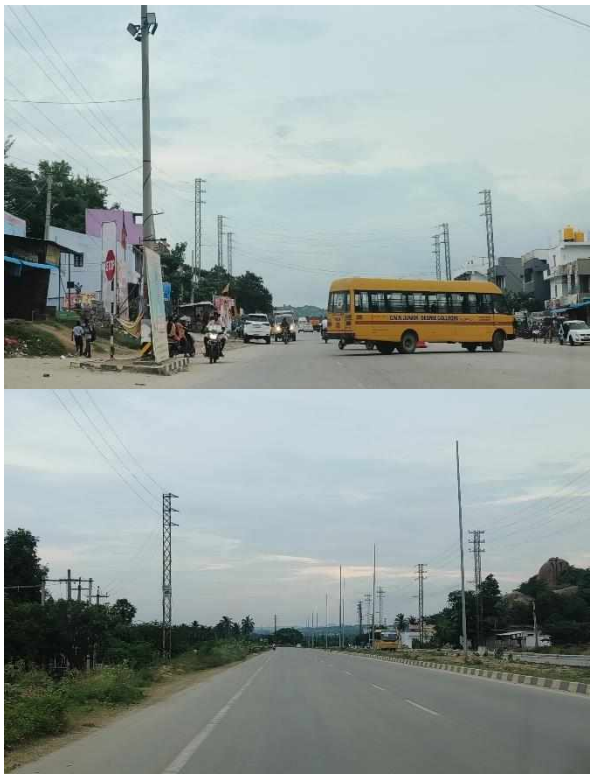

Figure 5-20: Highway Lighting at 4-lane section of 172+000 to AP/ KA Border

At 4-lane section of 172+000 to AP/ KA Border

Confidential

Highway / Street lighting is found at Built-up Locations / Urban areas, VUP's, Truck Lay byes, Bus Bays, Major Junctions. Streetlights are provided with 10m high single / double arm posts. Streetlights, and High Mast lighting is also provided at Toll Plazas. These lights are properly maintained and are in good condition. List of Highway / Street lighting on Project Stretch are given in Annexure 5.14 to Annexure 5.15 and Photographs are presented below.

Solar Blinker lights are provided at median openings and at-grade intersections. List of solar blinkers on Project Stretch are also given Annexure 5.16 respectively and Photographs are presented below.

Figure 5-21: Highway Lighting at 4-lane section of 172+000 to AP/ KA Border

5.11 Plantation (Median/Avenue)

At 4-lane section of AP/TN Border to 172+000

Landscaping and avenue plantation is visible along the road but sparsely available. Shrubs and flowering plants are also intermittently placed in the median along the project highway with limited varieties. median plantation is observed along the road. Median Plantation is available intermittently along the project highway with variety of plants. There are too many weeds and vegetation in the median it needs to be cleared. A list of Plantation on Project Stretch is given in Annexure 5.17 and. Annexure 5.18 respectively and photographs are shown below.

Figure 5-22: Plantation (Median/Avenue) at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

Landscaping avenue Plantation is visible along the road but sparsely available. Shrubs and flowering plants are also intermittently placed in the median along the project highway with limited varieties. median plantation is observed along the road but again it is available intermittently along the project highway with limited varieties of plants. A list of Plantation on Project Stretch is given in Annexure 5.17 and. Annexure 5.18 respectively and photographs are shown below.

Figure 5-23: Plantation (Median/Avenue) at 4-lane section of 172+000 to AP/ KA Border

Confidential

5.12 Metal Beam Crash Barriers

At 4-lane section of AP/TN Border to 172+000

Metal Beam Crash Barriers have provided at main Carriageway for high embankment and curves. MBCB is installed at many places however work is under progress at few locations. It is observed that Crash Barrier are in fair condition which can be reinstated through routine maintenance activities. List of metal Beam Crash Barriers on Project Stretch are given in Annexure 5.19. Following are some photographs of Metal beam crash barrier.

Figure 5-24: Metal Beam Crash Barriers at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

Metal Beam Crash Barriers are provided at main Carriageway, at underpasses, at structure approaches along the project and at locations of high embankment on Shoulder side. MBCB have been found in poor condition and damage at some locations. These damaged MBCB can be reinstated through routine maintenance activities. List of metal Beam Crash Barriers on Project Stretch are given in Annexure 5.19. Following are some photographs of Metal beam crash barrier.

Figure 5-25: Metal Beam Crash Barriers at 4-lane section of 172+000 to AP/ KA Border

5.13 Fuel Station

At 4-lane section of AP/TN Border to 172+000

Fuel stations along the Project Stretch and access arrangement for the same has been captured during Visual Inspection Inventory survey. The details are listed in Annexure 5.23. Photographs are presented below.

Confidential

Figure 5-26: Fuel stations at 4-lane section of AP/TN Border to 172+000

At 4-lane section of 172+000 to AP/ KA Border

Fuel stations along the Project Stretch and access arrangement for the same has been captured during Visual Inspection Inventory survey. The details are listed in Annexure 5.24. Photographs are presented below.

Figure 5-27: Fuel stations at 4-lane section of 172+000 to AP/ KA Border

5.14 Kilometre stone/Hectometre stones

At 4-lane section of AP/TN Border to 172+000

5th Kilometre Stones, Kilometre Stone and hectometre stone work is in progress in this project stretch.

At 4-lane section of 172+000 to AP/ KA Border

Kilometre 5th Stones, Kilometre Stone and hectometre stones are visible along the stretch. Some of them found uprooted / damaged or script is faded which requires routine maintenance. The existing stones obtained from site visit are presented in the Annexure 5.26 and Annexure 5.27 and photographs are shown below.

Confidential

Figure 5-28: KM & HM Stone at 4-lane section of 172+000 to AP/ KA Border

6. ASSESSMENT OF PROJECT ASSETS – STRUCTURES

6.1 General

The project comprises of 84.797 Km stretch including in the Project i & ii. These Projects include the four-lane section of NH-4 from Tamil Nadu / AP border to Nalagampalli to Karnataka Border in the State of Andhra Pradesh. The various structures comprising the project are given in Table 6-1.

6.2 Structural Inventory

The visual condition survey of all the structures is carried out by Structural Expert/Bridge Engineer of the consultant team with an inspection is aimed at identifying and quantifying deterioration, which may be caused by applied loads and factors such as deadload, live load, wind load and physical (e.g. wear, abrasion) / chemical (e.g. corrosion due to environmental exposure) influences. Apart from inspection of bridge damage caused by unpredictable natural phenomena (e.g. earthquake, flood) or collision by vehicles or vessels, inspection is also needed to identify or follow up the effect of any built-in imperfections. Inspection can also provide insights into the structural condition to address issues proactively, helps in devising necessary remedial measures to enhance safety and performance, contributes to extending the service life of bridges through timely intervention and maintenance strategies.

Table 6-1: Summary of Structures

No.	Item	Project-i as per site inspection	Qty. as per TOT Technical Schedule	Project-ii as per site inspection	Qty. as per TOT Technical Schedule	Total
1	Major Bridges	-	-	1	1	1
2	Minor Bridges	6	6	6	6	12
3	VUP	4	4	12	12	16
4	LVUP	-	-	-	-	-
5	VOP	3	3	-	-	3
6	ROB	1	1	-	-	1
7	RUB	-	-	-	-	-
8	FOB	-	-	-	-	-
9	HPC	46	9	10	10	56
10	Box Culvert	30	30	41	41	71
11	Slab culvert	13	13	-	-	13

Note:1, In Project i, there are total 46 nos of HPC to be constructed out of which 9 HPC's are constructed as mentioned in TOT Sch-A. Remaining culverts are to be constructed by SD Infra which are in their scope of work.

The collection and analysis of Major bridges, RUBs and Grade separators condition and inventory data is done using the Mobile Bridge Inspection Unit (MBIU) and comprehensive visual inspection is carried out for assessing the minor bridges, underpasses, overpasses, and culverts of the entire project stretch of 84.797 kms. During the inspection and condition survey no major failure/Distresses is observed however minor cracks, exposed reinforcement at parapet, honeycombing repairs at structural components, clogged drainage spout, debris found under culvert and waterways and vegetation found

on superstructures with unwanted material found around the bearings. The return walls are inspected to locate any separation of these from the abutment. Any unusual differential settlement which gives rise to cracks in the return or wing walls are inspected along with condition of stone pitching for all the bridges.

Following codes are used for the condition rating of the structural members.

Code	Description
N	NOT APPLICABLE
9	EXCELLENT CONDITION
8	VERY GOOD CONDITION - no problems noted
7	GOOD CONDITION – some minor problems
6	SATISFACTORY CONDITION - structural elements show some minor deterioration
5	FAIR CONDITION - all primary structural elements are sound but may have minor section loss, cracking, spilling or scour
4	POOR CONDITION - advanced section loss, deterioration, Spalling or scour
3	SERIOUS CONDITION - loss of section, deterioration, spelling or scour have seriously affected primary structural components Local failures are possible. Fatigue cracks in steel or shear cracks in concrete may be present
2	CRITICAL CONDITION - advanced deterioration of primary structural elements. Fatigue cracks in steel or shear cracks in concrete may be present or scour may have removed substructure support. Unless closely monitored it may be necessary to close the bridge until corrective action is taken
1	IMMINENT' FAILURE CONDITION - major deterioration or section loss present in critical structural components or obvious vertical or horizontal movement affecting structure stability. Bridge is closed to traffic, but corrective action may put back in light service.
0	FAILED CONDITION - out of service - beyond corrective action

6.3 Major Bridges

There are 01 no. of Major Bridge. The Major Bridge is in sound condition with no distresses with fair state of maintenance. Cleaning of expansion joint, bearings and drainage spouts is required.

Details of major bridge structures on the Project Highway are as per Table 6-2.

Table 6-2: Details of Major Bridges

S.No.	Design Chainage (Km)	Side	Type of Structure	Structure on	Deck Width (m)	Span Arrangement (m)	Steel Bearings (nos)	Elastomeric bearing (nos)	Type of expansion joint	Expansion joint (nos)	Type of Superstructure

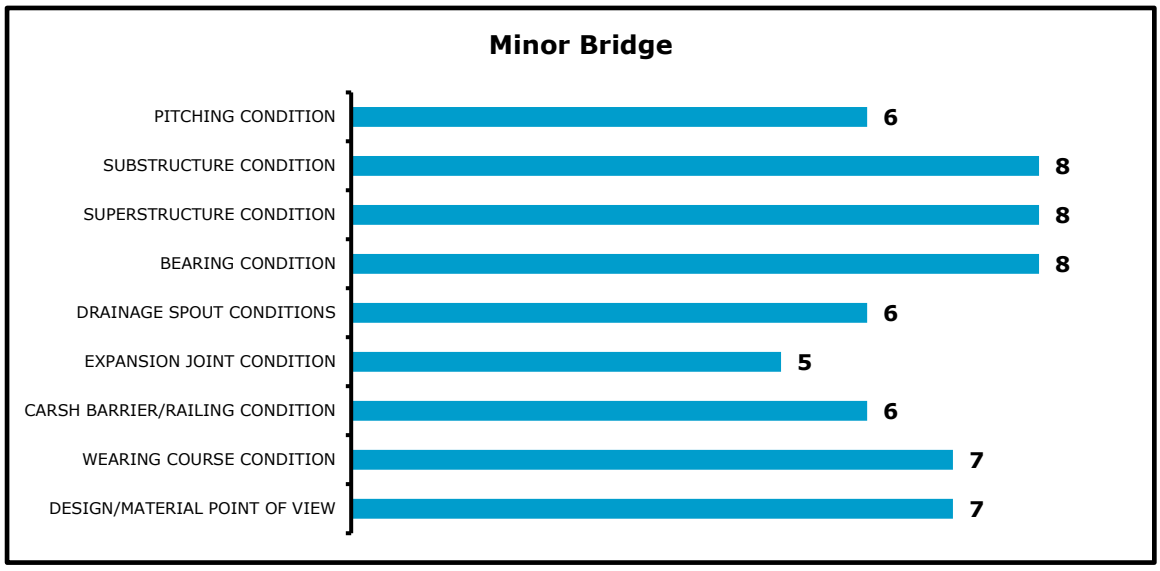
* All expansion joints are strip seal type



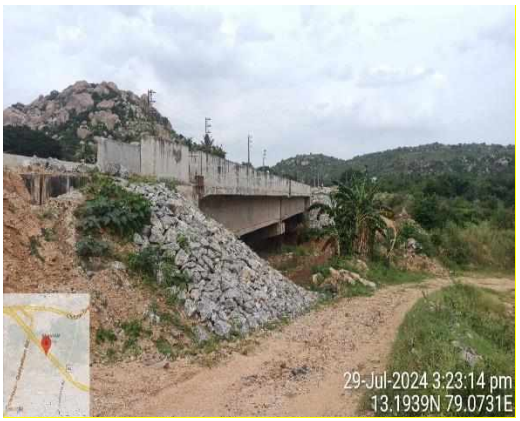


Figure 6-3: Comparative condition assessment of Minor Bridges

In **Project i**, there are 6 nos of minor bridges. These bridges are in sound condition with no major distresses. Stone pitching work in progress on all the minor bridges. Routine maintenance like cleaning & repair of expansion joint and drainage spout are required.

At Ch.158+563, the Left-side new minor bridge has been built and Right-side existing minor bridge is under repair and strengthening work. Three types of bearings have been used on left side new minor bridge structure like elastomeric bearing, rocker bearing and POT-PTFE bearing.

6.5 ROB (Railway Over Bridge)

In **Project i**, there is 1 no. of ROB on project stretch. This ROB is under construction by EPC Contractor, M/s. S.D Infra. During inspection it was observed that foundation work is in progress.

Table 6-4: ROB

S.No	Design Chainage (Km)	Type of Structure	Side	Str On	Deck Width (m)	Span Arrangement (m)	Type of Superstructure
11	136+350	ROB	LHS	MCW	12.3	1 X 25 + 1 x 37.2 + 1 x 25	Steel & RCC Girder
			RHS	MCW	12.3	1 X 25 + 1 x 37.2 + 1 x 25	Steel & RCC Girder

Note: As per TOT Sch A clause 5f, ROB shall be provided at the following location, length 872m. Pile foundation work in progress during site inspection.

Foundation work in progress of ROB structure at Ch.201+619

Figure 6-6: Site Photographs of ROB during site visit

6.6 Vehicular Underpass (VUP)

There are 26 nos. of VUP on project stretch. Minor repairs like cracks in RCC substructure, replacement of expansion joints is required with repairs in approach slabs at few locations. Cleaning of vegetation growth and clogged vents is required through routine maintenance. Overall structural condition is good for these underpasses.

Table 6-5: Vehicular Underpass details

VUP at Ch. 194+045

6.7 Vehicular Overpass (VOP)

There are only 03 nos. of VOP, and all are in Project i. Construction of all three VOPs are in progress during site inspection. Some photographs are presented below.

Another expressway crossed over NH-4 with VOP at Ch. 151+500

Another expressway crossed over NH-4 with VOP at Ch. 146+050 & 147+950

6.8 Culverts

There are 139 nos. of culvert which includes RCC box type culverts (72 nos.), Slab culverts (13 nos.), and Hume pipe culverts (54 nos.). Structural condition of these culverts is satisfactory but requires maintenance for scours, cleaning of waterway, cleaning of vegetations and repair of slope pitching. The details of the culverts across different Projects are explained in the sections below,

In **Project i**, there are 88 nos of culverts (31 no. Box culvert, 13 no. Slab culvert and 44 no. of HPC). Construction of some culverts are in progress at site as noticed during site inventory and inspection. Few photographs of culverts under construction are given below.

Figure 6-9: Site Photographs of Culverts in Project i

1. Box culvert work in progress at Ch. 135+890.
2. Culvert has been built on main carriageway and Right-side service road.
3. Culvert is under construction at left side service road.

1. Box culvert Work in progress at Ch. 136+100.
2. Box culvert has been built on Right side carriageway of service road.
3. Culvert is under construction at main carriageway and left side service road.

1. Box culvert Work in progress at Ch. 136+600.
2. Box culvert has been built on Left side carriageway of service road.
3. Culvert is under construction at main carriageway and right-side service road.

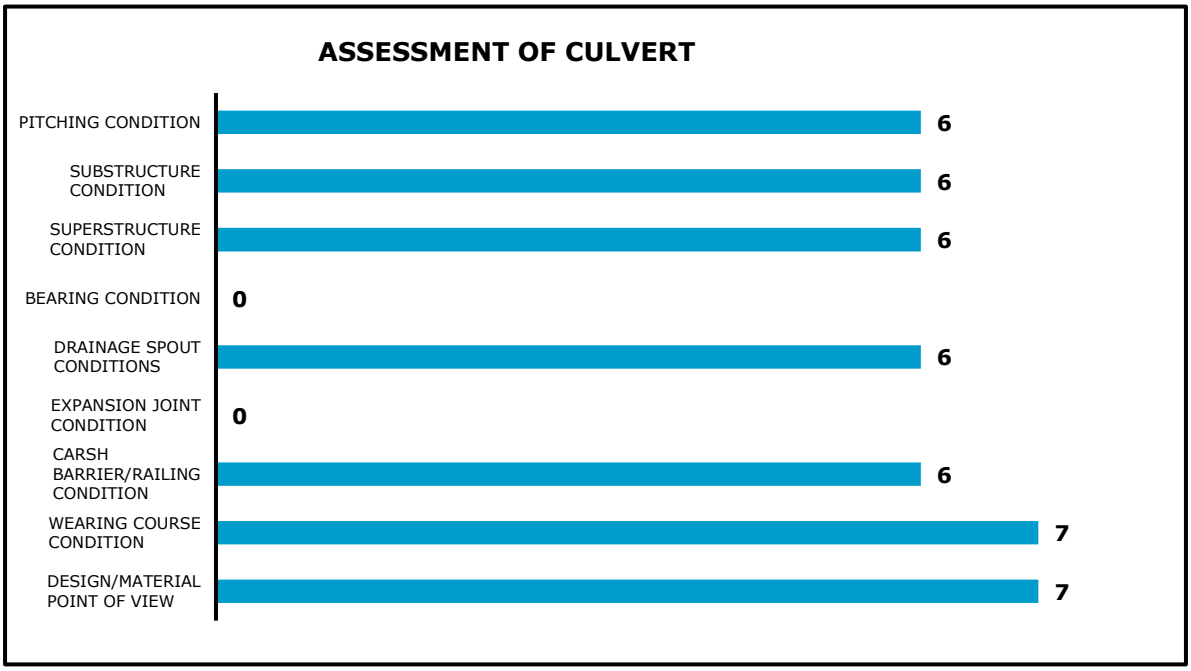

Figure 6-11: Comparative assessment of Culverts

6.9 General Observations

All the structures are visually inspected to find any cracking, spalling, staining, deformation, leaching, exposed reinforcement, honeycombing, condition of expansion joints, wearing coat, approach slabs, drainage, and damaged railing etc. Major Structures like Major Bridges, ROBs are inspected by MBIU and are reported in Annexure to Main Report.

The damages witnessed at the structures are due to irregularities in routine / preventive maintenance of these structures. There is no major distress in any structure of these Projects. General observations are summarised as under:

- Vegetation growth on structure and waterway area
- clogged drainage spout of structures.
- cracks on crash barrier.
- Disturbed Quadrant pitching
- scour & bulging observed in protection work.
- exposed reinforcement at parapet of culvert.
- honeycombing at parapet of culvert.
- worn out & Potholes on wearing.
- debris found under culvert due to non-maintenance of waterway.

In general, the structures are found to be in structurally sound condition except for certain aspects requiring immediate repairs as under:

- Repair of Protection work by proper channelling of water flow.
- Minor crack repairs & honeycombing repairs at structural components
- Improving the drainage on the deck slab
- Expansion joints of VOP at chainage 258+800 and Major bridge need repair.

6.10 RE Wall (RE Panel Wall) Repair Strategy in Project ii

The RE panels have been bulged significantly and it is clearly visible to naked eye. May be due to loss of grip between geogrid connection to RE panel and soil for which panel is deflected. This cause slippage of geogrid outwardly in soil. The reason due to improper compaction in embankment, behind the wall.

Cracks have been developed at most of the RE Panels. This may be due to poor concrete at the tile of precast and soil earth pressure. The interlocking edge of some RE Panels has been cracked and damaged. At Ch. 216+300 to 216+600 towards AP/KA border Nailing has been done at RE panels.

It is observed that the existing EPC Contractor is rectifying all these defects, and few defects are already rectified as of now.

Table 6-6: RE Wall Observation

RE Wall						
S.NO	Chainage (km)		Side	Length (m)	Height (m)	Observation
	From	To				
1	193450	192550	BHS	900	8	Local bulging
2	195500	194990	BHS	510	8	Local bulging
3	197400	197000	BHS	400	8	Global bulging
4	210580	210450	BHS	130	8	Global bulging
5	214000	213700	BHS	300	8	Global bulging
6	216600	216300	BHS	300	8	Local bulging
Total length (m)				**2540**		

6.11 Routine maintenance and minor repair

Spalling of concrete requiring patching is usually caused by corrosion of steel reinforcement. Honeycomb is the effect of inadequate compaction of concrete while being cast. Patching is a temporary repair measure unless all the chloride-contaminated concrete is removed before the deck is patched. Spalling of width less than 300 mm and depth less than 50mm have been dealt with here. The repair comprises application of polymer cement repair mortar on the spalled portion of concrete after treating the area with suitable bonding agent and after applying anticorrosion paint on the surfaces of the corroded rebar, if any. The work requires adequate curing. Work sequence of Epoxy Coating is as shown Figure.

During the Bridge service life, several components of bridges get unclean due to deposition of foreign materials. Materials that collect on the deck surface flow with the rainwater towards the drainage spouts which may choke the outlets and affect drainage. Also, the materials that collect on the deck and carried by the rainwater towards the expansion joints can pass through any opening present therein and accumulate on the pier cap, abutment caps and around the bearings. Such debris accumulation can cause malfunction of bearings/corrosion in metal bearing since debris tend to hold water. Also, growth of vegetation such as grass, shrubs, and other plants on the components of bridges is very common.

Table 6-7: Remedial Measure Methods

S. No.	Defect/Deficiency	Remedial measure
1	Debris accumulation	Cleaning
2	Water flow obstruction	Removing obstructions
3	Material loss from stone pitching	Repairing of stone pitching

4	Spalling and minor honeycombing	Epoxy/patching/cement grouting
5	Minor corrosion of steel	Painting
6	Abnormal bituminous pavement	Partial repair of pavement

7. ASSESSMENT OF PROJECT ASSETS - TOLL SYSTEMS

7.1 General

Technical Due Diligence of the TMS (Toll Management System), ATMS, ETC (Electronic Toll Collection System) and WIM (Weigh-in-Motion) System (as available) along 4 lane Tamil Nadu/Andhra Pradesh Border to Nalagampalli to Andhra Pradesh/Karnataka Border Section of NH 4 from Km 134+890 to Km 219+687 in the State of Andhra Pradesh is done through site visits, site surveys, interactions at site and review of documents and reports.

7.2 Project Information

Toll Plaza 1 - Mahasamudram TP - Km 164+100 LHS & Km 164+360 RHS (Staggered) (NH 4)

No. of Lanes at each Toll Plaza

- Project 1 TP – Mahasamudram TP – It is a staggered toll plaza and equipped with 5+5 Hybrid lanes in each direction installed at 260 meters between them, no separate two-wheeler lanes are provided adjacent to the extra-wide lanes.

7.3 Mahasamudram TP - Toll System Maintenance

The TMS maintenance is currently being undertaken by M/s Vaaan Infra at Mahasamudram toll plaza they are replacing the old hardware which was originally installed by M/s Arya Omnitalk, currently none of the AVC systems are functional and all lane controllers are found with doors unlocked and not in proper condition, the installation team is in process of replacing only partial hardware which is essential to manage the show, therefore calculation of equipment ageing cannot be done. However, the TMS is not being maintained in proper shape duly explained in this report.

7.4 Mahasamudram TP - Weigh In Motion (WIM) system.

Medium Speed Weigh In Motion systems are installed in all 10 lanes by M/s Appalto and are found to be in good condition as it is relatively a new installation done through M/s Arya Omnitalk. However since M/s Vaaan Infra is replacing the old software, the integration of the MS-WIMs is not done and no vehicle weight was being captured in the TMS. Stamping and calibration works are yet to be undertaken by the vendor.

7.5 Mahasamudram TP - Static Weigh Bridge (SWB)

At this Toll Plaza Static Weigh Bridge is not installed for any direction of traffic.

7.6 Project (i) & (ii) - ATMS System

No ATMS hardware was found installed in this section of the highway.

Schedule A mentions about the scope of ATMS as a part of Project Facilities on the project highway. As there is no existing ATMS in the project stretch, a detailed working of the required HTMS / ATMS has been done as per Schedule A of TOT Technical Schedule and is presented separately in the cost chapter.

Table 7-1: ATMS scope as per Tech Schedule at NH - 4

#	Equipment Description	Qty to be Installed
1	ECB	0
2	MET	1
3	MRCS	0
4	VMS	3
5	ATCC	1

6	**PTZ**	**31**
7	**VIDS**	**6**
8	**VASD**	**8**
9	**Servers**	**1**
10	**Terminals**	**3**
11	**N/W Switch**	**2**
12	**TTES**	**0**
13	**Software**	**1**
14	**UPS**	**1**
15	**Control Room**	**1**
16	**Display**	**1**

7.7 Review and Assessment of TMS (incl. AVCC Systems)

1. At Mahasamudram toll plaza, TMS is under maintenance by M/s VaaaN Infra, with open tolling technology, installation is independent of any other toll plaza on the highway stretch and integration with MS-WIM is pending, post that integration, the TMS should be ready to identify the vehicles carrying over load, however to collect the penalty on account of overloaded vehicle, there is a necessity of installation of Static Weigh Bridges in both directions of the toll plazas which has not been undertaken yet.
2. Lane hardware is faulty and under replacement by M/s VaaaN Infra, most of the equipment is either faulty or not working in proper condition, the equipment in extreme lanes i.e. Lane 1 & 10 has been removed or put off and the lanes have been made to use for passing non-tollable / VIP / Exempt vehicles, the validation is happening through CCTV cameras, critical components required to check the vehicle classification e.g. AVC in all lanes is not functional, the validator for performing the validation function in through CCTV cameras which is not a standard industry practice, automatic barriers are working but are in a bad shape.
3. The installed MS-WIM at the toll plazas is found in good condition and can be re-used and requires integration with minor civil works around the WIM area to maintain the proper slope and accuracy of detection of weight.
4. The site is using ILL connectivity through Airtel for processing of fastag transactions.

7.8 Assessment of Toll Operation and integration with TMS

The operations of the toll are being managed through a third-party agency at both sections, the site team is fully conversant with the given TMS functionalities and can generate all required reports as per the interaction with the site teams.

The LSDU i.e. Lane Status Display Unit to monitor the entire hardware of each lane is not provided which is an essential part for monitoring of the toll equipment on day-to-day basis and generating all alerts.

In the absence of any input from the incident camera and AVC, the TMS is working like a ticketing system at Mahasamudram Toll plaza with no checks / controls in place, the validator is blindly accepting all transactions by accepting the TC class and has no clue if the TC is correctly classifying the vehicles or if the Fastag vehicle is crossing with the correct tag.

There is no reconciliation of the revenue collected through the fastag vehicles at the toll plaza and no review of all rejected transactions by the acquirer bank / NPCI.

It would be pertinent to mention that the revenue of the Mahasamudram toll plaza is not assured for appropriate collection.

7.9 Backoffice TMS review

a. The TMS is controlled through the control room which is housed with the validator performing real time transaction validations without any control mechanism, there is no separate room for performing cashup function and all toll collectors come to the control room to deposit the collected money.

b. LSDU as stated above is not provided and equipment status / failures are not known to the shift supervisor until informed manually by the TC or found by the IT technician.

c. There was no device found for performing daily backups

d. As per the guidelines of IHMCL, the plaza server has to be installed with a hot-standby server arrangement however no hot-standby server was found to be installed.

e. No fake note detectors installed in the lane to detect counterfeit currency.

7.10 Conclusion

The TMS at Mahasamudram toll plaza in Project i was in a bad shape and was currently getting replaced through M/s Vaaan Infra under AMC, the same needs an immediate overhaul / immediate replacement with proper backoffice functionality to control and audit the toll operations process.

8. REVIEW OF MAINTENANCE REQUIREMENTS OF EPC CONTRACT AGREEMENTS

		Project i	Project ii
	Agreement / Contract	Rehabilitation and Upgradation of NH-4 from km 134.890 to km 172.00 (Andhra Pradesh/ Tamil Nadu Border to Nalagampalli village) to four lane paved shoulders (Total Length 37.11 km) in the State of Andhra Pradesh under NHDP-IV in the on-EPC mode	Rehabilitation and Upgradation of NH-4 from Nalagampalli (Existing Km 171.560/ Design Km 172.000) to AP/Karnataka Border (Existing Km 216.912/ Design Km 219.687) to four Lane with paved shoulder (Design Length = 47.687) under NHDP-IV in the State of Andhra Pradesh on EPC mode
1	Contracts	EPC Contract Agreement	EPC Contract Agreement
2	O&M Manual	No O&M Manual received	No O&M Manual received

Project i

8.1 Supervision and Monitoring During Maintenance (Project i)

As per Clause 15.1 of EPC Contract Agreement, the EPC Contractor shall undertake regular Inspections, Regulate Traffic and shall be responsible for rectifications of Defects and Deficiencies during the Defects Liability Period. The obligations of the EPC Contractor are summarised hereunder:

- **Inspection by the contractor:**

  Detailed pre-monsoon inspection of all bridges, culverts and drainage system in accordance with the guidelines contained in IRC SP 35.

  The contractor shall prepare a maintenance manual, and a maintenance program.

  The contractor shall carry out maintenance in accordance to the maintenance manual and the maintenance program approved by the authority engineer.

  The contractor shall carry out tests as per instructions of authority engineer for the maintenance of the asset.

  The contractor shall prepare reports of unusual occurrences.

- **Traffic Regulation by Contractor:**

  The contractor shall take all required measures for the safety of users during the construction and maintenance of the project.

  The contractor shall provide, erect and maintain all such barricades, signs, markings, flags and lights as may be required as per good industry practice for the safety of traffic passing through the section under construction or maintenance.

  Where necessary the contractor shall make temporary diversions to allow safe flow of traffic on part with of the carriageway. This shall be with the prior approval of the authority engineer.

- **Defects Liability Period**

  The contractor shall repair or rectify all defects and deficiencies observed by the authority engineer during the defect's liability period.

  The cost of remedying defects shall be to the risk and cost of the contractor.

The authority engineer may instruct the contractor to examine the cause of any defect in the works or part thereof before the expiry of the defect's liability. The contractor is liable for the cost of repairs for defects attributable to the contractor.

Note: - The EPC contractor for this Project is presently carrying out the construction works to be completed by 2034. Currently there are no O&M or asset management sub-contracts.

Project ii

8.2 Supervision and Monitoring During Maintenance (Project ii)

As per Clause 15.1 of EPC Contract Agreement, the EPC Contractor shall undertake regular Inspections, Regulate Traffic and shall be responsible for rectifications of Defects and Deficiencies during the Defects Liability Period. The obligations of the EPC Contractor are summarised hereunder:

- **Inspection by the contractor:**

  Detailed pre-monsoon inspection of all bridges, culverts and drainage system in accordance with the guidelines contained in IRC SP 35.

  The contractor shall prepare a maintenance manual, and a maintenance program pulse stop

  The contractor shall carry out maintenance in accordance to the maintenance manual and the maintenance program approved by the authority engineer.

  The contractor shall carry out tests as per instructions of authority engineer for the maintenance of the asset.

  The contractor shall prepare reports of unusual occurrences.

- **Traffic Regulation by Contractor:**

  The contractor shall take all required measures for the safety of users during the construction and maintenance of the project.

  The contractor shall provide, erect and maintain all such barricades, signs, markings, flags and lights as may be required as per good industry practice for the safety of traffic passing through the section under construction or maintenance.

  Where necessary the contractor shall make temporary diversions to allow safe flow of traffic on part with of the carriageway. This shall be with the prior approval of the authority engineer.

- **Defects Liability Period**

  The contractor shall repair or rectify all defects and deficiencies observed by the authority engineer during the defect's liability period.

  The cost of remedying defects shall be to the risk and cost of the contractor.

  The authority engineer may instruct the contractor to examine the cause of any defect in the works or part thereof before the expiry of the defect's liability. The contractor is liable for the cost of repairs for defects attributable to the contractor.

Note: - The EPC contractor for this Project is expected to complete the works by April 2025. Currently there are no O&M or asset management sub-contracts.

9. SOIL AND MATERIAL INVESTIGATION

9.1 General

As a part of soil and material investigation report preparation, the consultants have conducted tests on subgrade soils along the project corridor.

9.2 Field investigation – sampling and testing

Field tests were conducted on the subgrade soils and required pavement materials were collected for testing. Table 9-1 presents the sampling criteria, tests and testing procedures adopted for various field and laboratory tests.

Table 9-1: Site sampling and testing criteria

S. No.	Type of Soil Sample	Sampling Criteria	Testing Criteria	
			Description of Test	Standard Code Applicable
Existing subgrade and pavement materials				
i)	**Subgrade Strength Test Pits**	Minimum of one subgrade soil sample was obtained at an interval directed by the client & Material Engineer based on site condition.	In-situ Density	IS 2720 (Part – 29)
			In-situ moisture content	IS 2720 (Part – 2)
			Soil Classification	IS 1498

9.3 Investigations on subgrade soils

Subgrade investigations were carried out to know the strength properties of the existing soil. It is ensured to dig subgrade strength test pits at an interval as directed by the client & material engineer based on the site condition. Various in-situ tests and laboratory tests are conducted on soil samples, as summarized in Table 9-1. The pavement composition details (pavement course, material type, and thickness) are also recorded at every test pit.

The test results and discussion are described in the section below.

Field tests were conducted as per the project requirement to determine the subgrade characteristics and strength. The field testing for subgrade soil includes:

- In-situ density determination at possible location of each test pit
- Field moisture content determination at possible location of each test pit

In-situ density (field density) and moisture content were determined as per the standards enlisted in Table 9-1. Field density is used to evaluate the degree of compaction and existing subgrade CBR at field density state. 50kg of samples were collected in damp proof bags for testing. Required laboratory testing as specified in Table 9-1 were conducted the details of field dry density and field moisture content test results are furnished in Annexure 9.1 and Table 9-2 presents a summary of the test results for the entire project section. The field investigation photographs are shown in Figure 9-1.

Observations and Conclusions

Soil Classification and Distribution

From Table 9-2, it is evident that subsoil is generally consistent throughout the project road and is predominantly Silty Sand and Clayey sand soils.

Summary of strength parameters in the soil investigation is shown below.

Variance between MDD and FDD is converted in-terms of degree of compaction.

Description	Liquid Limit	Plasticity Index	Free Swell Index	4-days soaked CBR	Degree of compaction
NH-4, AP/ TN Border to Nalagampalli: Km 134+890 to Km 172+000	17%-28%	Max 7%	Max 15.2%	11.3%-27.1%	92.0%-96.5%
NH-4: Nalagampalli to AP/ KA Border: Km 172+000 to Km 219+687	19%-33%	Max 13%	Max 25.1%	10.3%-16.1%	92.1%-98.5%
MoRTH Limits	**<50%**	**<25%**	**<50%**		

- All the measured LL, PI and FSI values are within the acceptable limits as per MoRTH guidelines.

9.4 Existing pavement composition

Existing pavement composition (pavement course, material type, and thickness) were recorded at an interval directed by the client & material engineer based on the site condition along the project road.

The summary of existing pavement crust thickness is presented in a tabular form as well as an illustrative bar graph in Table 9-3 and Figure 9-3 respectively and the pavement crust thickness photographs are shown in Figure 9-2.

Table 9-3: Summary of pavement crust along the project corridor

Figure 9-2: Sample Pavement Crust Thickness measuring photographs

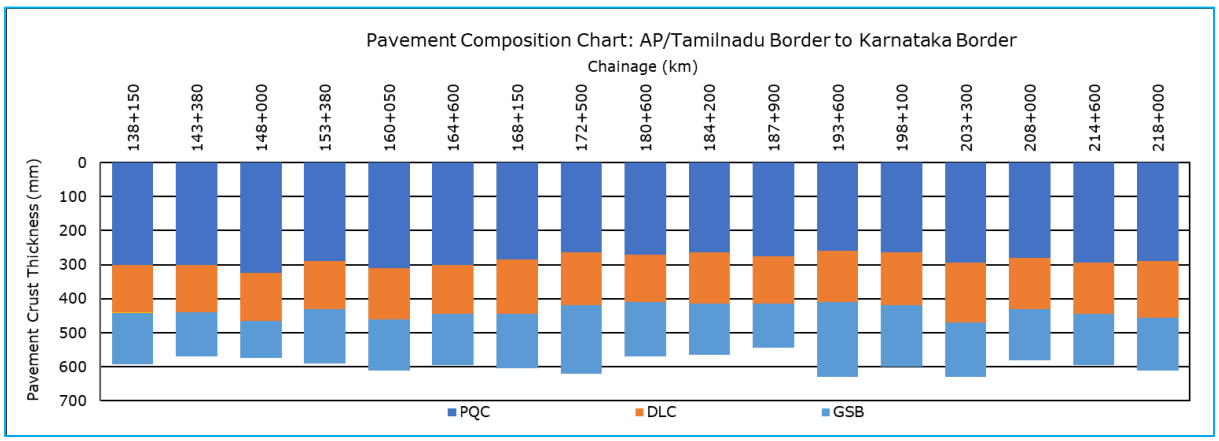

Figure 9-3: Existing Pavement Crust Summary along the project road.

Observations and Conclusions:

4-Lane Rigid Pavement Section

- The existing pavement along the project corridor is rigid in nature. The pavement composition comprises of PQC, DLC and granular sub-base.
- Throughout the project road it possesses consistent PQC, DLC and granular subbase layer thickness with the below average values presented below.

Chainages, Km	PQC	DLC	GSB
134+890 to 172+000	301mm	145mm	145mm
172+000 to 219+687	276mm	153mm	165mm

10. PAVEMENT EVALUATION STUDIES

10.1 Pavement condition survey with Network Survey Vehicle

10.1.1 Network Survey Vehicle Description

Road Runner NSV was used for collection of condition data for this assignment. Road Runner (NSV) is multi-faceted road survey equipment which could be configured to collect a wide range of pavement condition data and asset data.

Road Runner NSV is capable of collecting roughness, rutting, pavement distresses, assets along with GPS coordinates and project chainage.

The main components which are integrated into Road Runner NSV are.

1. Digital Laser Profilers (DLP) -Road roughness and rutting.
2. Digital Imaging System (DIS) -Pavement distresses and road assets data.
3. Differential Global Positioning System (DGPS).
4. High Resolution Distance Measuring Instrument (HRDMI).

1. Digital Laser Profiler (DLP)

- DLP is integrated into the NSV consisting of eleven lasers to collect Road Roughness and Rutting.
- This inertial profiler is capable of recording the data continuously along each wheel path.

(a) Roughness

Road Runner NSV equipment fitted with dual wheel path laser profilometer to collect the roughness data. The roughness data was collected and reported for 100 m interval.

The outputs of the lasers and accelerometers located in each wheel path (750 mm either side of the Centre line of the vehicle) are sampled every 25 mm of longitudinal travel and used to calculate the longitudinal profile of the road.

The profile is then passed through the quarter car model to calculate the International Roughness Index (IRI) lane roughness as per the methodologies specified in the ASTM E-950.

(b) Rutting

Rutting will be measured and reported through DLP, and the data will be recorded at every 100m interval on both the wheel paths.

2. Digital Imaging System (DIS)

Digital Imaging System (DIS) in Network Survey Vehicle (NSV) consist of 5 high resolution roof mounted cameras to capture pavement distresses and road assets data. These cameras are oriented in a certain configuration to ensure that the information of interest, such as inventory or pavement condition, is being recorded in the camera field of view. Three cameras are forward facing and mounted

on front side of vehicle (Left corner, Centre and Right corner), covers 160° angle images and are set to sample at every 10m interval. Another two cameras are mounted on back side of the vehicle (Left corner, Right corner) to capture the distress image of pavement 10m*4m (length*width) i.e., captures at 10m interval.

Digital image system is capable of

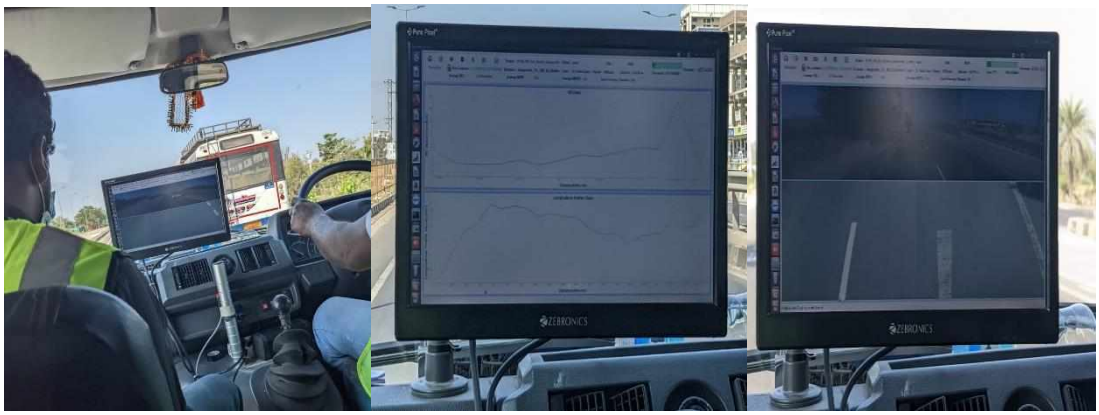
- Collecting real time digital images.
- Achieving a sampling rate of at least one set per 2.5 meters for Distress camera's and one set per 10 meters for Asset cameras.
- Incorporating real time differentially corrected GPS (DGPS).
- Capturing & recording at highway speeds.
- Providing real time on-screen displays for operator verification during collection.
- Storing images straight to PC's / NAS (Network Attached Storage).
- Linking into the client's referencing system via distance and GPS.

3. Geo Referencing (DGPS Data)

Road Runner NSV is equipped with DGPS system, and it do collect all the data and images with geo-reference. Reference that image against GPS co-ordinates by logging the latitude, longitude of the specific image.

4. Distance Measuring Instrument (DMI)

Road Runner NSV is equipped with DMI, and it is fitted to rear tyre of the network survey vehicle. The distance and speed measurement performed by the distance measuring instrument, which is a distance transducer and it's highly accurate providing GPS distance and speed.



10.2 Methodology for NSV Field Testing

Usually, 4 members are assigned for site to collect the field data. Two of the trained/ experienced field engineers and two drivers during the collection phases of projects. During the survey, engineer is responsible for operating the vehicle's acquisition systems. Road Runner NSV dashboard tool is used to for data acquisition.

The survey will be carried out by lane wise, and the following steps will be followed during the survey.

- Engineer will setup the equipment and check the data collection system prior to the survey.
- Prior to the survey field engineer do set the project name, direction, lane number and starting chainage with increasing or decreasing (as per direction) details.
- The vehicle will run in middle of the lane and collects data up to a vehicle running speed of 80 Kmph.
- Digital Laser Profiler (DLP), Digital Imaging System (DIS) collect the data with GPS co-ordinates and chainage reference.
- Field Engineer will review the data collection and specifies any remarks/ details in observation column.
- At the end of project chainage, engineer will stop that particular survey and save all the recorded and the same process is followed for all other lanes of the project stretch.

10.3 Analysis of NSV Survey Data

Pavement condition survey was carried out on each lane of each carriage way with NSV. The NSV survey was conducted on the project corridor from 29/07/2024 to 31/07/2024, data was processed, analyzed, and presented in 100m interval. Detailed NSV data is presented in the following Annexures and summary of it presented as below.

10.3.1 Roughness

As stated in the earlier section, NSV collected the roughness data at 100m interval on each lane in terms of IRI (International Roughness Index) value.

In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 "Guidelines on Measuring Road Roughness and Norms" with the following equation.

$BI = 630*(IRI)^{\wedge 1.12}$

Where,

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data of the pavement is collected through Digital Laser Profilers System (DLP) and the same is presented in Annexure 10.1(a) to Annexure 10.1(c) at an interval of 100 mts for each section. The obtained lane wise kilometer Roughness summary in terms of BI (mm/km) is presented in Table 10-1 and Table 10-2 for 4-lane rigid section (km 134+890 to km 172+000 & km 172+000 to km 219+687). The graphical representation of roughness data for LHS and RHS directions are presented in Figure 10-1 and Figure 10-2 respectively. Some of site survey pictures are in Figure 10-3.

Table 10-1: Summary of roughness data on both directions (4- lane section)- Rigid Pavement on LHS direction

10.3.2 Pavement distress data of Rigid Pavement

The following Pavement distresses are considered for assessing the rigid pavement condition as per IRC SP: 83-2018 (Guidelines for Maintenance, Repair and Rehabilitation of Cement concrete pavements);

- Cracking
  - Longitudinal cracks
  - Transverse cracks/ Diagonal Cracks
  - Corner cracks/ Corner breaks
  - Multiple cracks
- Spalling of Joints
- Joint seal defects
- Joint Faulting/ Stepping
- Joint Separation
- Blow up/ Buckling
- Ravelling/ Scaling
- Potholes/ Pop outs

All the above pavement distresses will be provided at 10 m interval.

The existing distresses are measured in five level distress rating system as specified in IRC: SP: 83-2018. The five-level distress rating system is given in Table 10-4 below.

Confidential

Table 10-4: Five-level distress rating system for Rigid Pavement

Distress Rating	Slab Condition	Severity (Defects) Rating
0	Excellent	No Discernible
1	Very Good	Minor
2	Good/Average	Moderate
3	Fair	Major
4	Poor	Extreme
5	Very Poor	Unsafe/ Unserviceable

The condition survey of the rigid pavement was carried out by observing all the listed distresses as specified in IRC: SP: 83-2018 in conformity with Proforma given code. Type of distresses and assessment rating as given in Table 4.5 of IRC: SP: 83-2018 is followed and the same is listed in Table 10-5 below.

Table 10-5: Type of distresses and its assessment rating

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
1	**CRACKING**			
	Single Discrete Cracks Not interaction with Any joint	w=width of crack L=length of crack d=depth of crack D=depth of slab	0	Nil, not discernible
			1	w<0.2 mm, hair cracks
			2	w= 0.2 -0.5 mm, discernible from slow-moving car
			3	w=0.5-1.5 mm, discernible from fast-moving car
			4	w=1.5-3.00 mm
			5	w>3 mm
2	Single Transverse (or Diagonal) Crack intersecting with one or more joints	w=width of crack L=length of crack d=depth of crack D=depth of slab	0	Nil, not discernible
			1	w<0.2 mm, hair cracks
			2	w=0.2 -0.5 mm, discernible from slow vehicle
			3	w=0.5-3.0 mm, discernible from fast vehicle
			4	w=3.0-6.0 mm
			5	w>6mm, usually associated with spalling, and/or slab rocking under traffic
3	Single Longitudinal Crack intersecting with one or more joints	w=width of crack L=length of crack d=depth of crack D=depth of slab	0	Nil, not discernible
			1	w<0.5 mm, discernible from slow vehicle
			2	w= 0.5 -3.0 mm. discernible from fast vehicle
			3	w=3.0-6.0 mm
			4	w=6.0-12. mm
			5	w>12mm, usually associated with spalling, and/or slab rocking under traffic
4	Multiple Cracks Intersecting with	w=width of crack	0	Nil, not discernible
			1	w<0.2 mm, hair cracks

Confidential

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
	one or more joints or cracks		2	w=0.2 - 0.5 mm, discernible from slow vehicle
			3	w=0.5-3.0 mm, discernible from fast vehicle
			4	w=3.0 - 6.0 mm panel broken into 2 or 3 pieces
			5	w > 6 mm and/or panel broken into more than 4 pieces
5	Corner Break	w=width of crack L=length of crack	0	Nil, not discernible
			1	w<0.5 mm only one corner broken
			2	w< 1.5 mm, L<0.6 m, only one corner broken
			3	w< 1.5 mm. L <0.6 m, two corners broken
			4	w>1.5 mm, L >0.6 m, or Three corners broken
			5	Three or four corners broken
6	Punchout (Applicable to CRCP only)	w=width of crack L=length (m/m^2)	0	Nil, not discernible
			1	w< 0.5 mm; L< 3 m/m^2
			2	either w>0.5 mm or L<3 m/m^2
			3	w> 1.5 mm and L< 3 m/m^2
			4	w>3 mm, L<3 m/m^2 and deformation
			5	w>3 mm, L>3 m/m^2 and deformation
7	**SURFACE DEFECTS**			
	Ravelling or Honey comb type surface	r= area damaged surface / total surface of slab (%) h=maximum depth of damage	0	Nil, not discernible
			1	r < 2 %
			2	r =2-10%
			3	r=10-25%
			4	r=25-50%
			5	r >50% and h>25 mm
8	Scaling	r= area damaged surface / total surface of slab (%) h=maximum depth of damage	0	Nil, not discernible
			1	r < 2 %
			2	r =2-10%
			3	r=10-20%
			4	r=20-30%
			5	r >30% and h>25 mm
9	Polished Surface/ Glazing	t=texture depth sand patch test	0	
			1	t > 1mm
			2	t=1-0.6 mm
			3	t=0.6-0.3 mm
			4	t=0.3-0.1 mm
			5	t<0.1 mm
10				

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
	Pop out (small Hole), Pothole Refer Para 8.4	n=number/m2 d=diameter h= maximum depth	0	d<50 mm; h<25 mm; n <1 per 5 m^2
			1	d=50-100 mm: h<50 mm: n<1 per 5 m^2
			2	d=50-100 mm: h>50 mm: n<1 per 5 m^2
			3	d=100-300 mm: h<100 mm: n<1 per 5 m^2
			4	d=100-300 mm: h>100 mm: n<1 per 5 m^2
			5	d>300 mm: h>100 mm: n>1 per 5 m^2
	JOINT DEFECTS			
11	Joint Seal Defects	Loss or damage L=Length as % total joint length	0	Difficult to discern.
			1	Discernible, L<25% but of little immediate consequence eighth regard to ingress of water or trapping incompressible material.
			3	Notable, L>25% insufficient protection against ingress of water and trapping in incompressible material.
			5	Severe; w>3 mm negligible protection against ingress of water and trapping in incompressible material.
12	Spalling of Joints	w= width on either side of the joint L= Length as % total joint length	0	Nil, not discernible
			1	w<10 mm
			2	w=10-20 mm, L<25%
			3	w=20-40 mm, L >25%
			4	w=40-80mm, L >25%
			5	w>80mm, and L>25%
13	Faulting (or stepping) in Cracks or Joints	f=difference of level	0	Not discernible, f< 1 mm
			1	f< 3 mm
			2	f=3-6 mm
			3	f=6-12 mm
			4	f=12-18 mm
			5	f>18 mm
14	Blow up or buckling	h=vertical displacement from normal profile	0	Nil, not discernible
			1	h< 6 mm
			2	h=6-12 mm
			3	h=12-25 mm
			4	h>25 mm
			5	shattered slabs, i.e., 4 or more pieces
15	Depression	h= negative vertical displacement from profile L= Length	0	Nil, not discernible, h<5 mm
			1	h=5-15 mm
			2	h=15-30 mm. Nos < 20% joints
			3	h=30-50 mm
			4	h>50mm or >20% joints

S. No	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating
			5	h>100 mm
16	Heave	h= positive vertical displacement from profile L= Length	0	Nil, not discernible, h<5 mm
			1	h=5-15 mm
			2	h=15-30 mm. Nos < 20% joints
			3	h=30-50 mm
			4	h>50 mm or >20% joints
			5	h>100 mm
17	Bump	h=vertical displacement from normal profile	0	h<4 mm
			1	h=4-7 mm
			3	h= 7 - 15 mm
			5	h>15 mm
			0	Nil, not discernible f<5 mm
18	Lane to Shoulder Dropoff	f=difference of level	1	f=3-10 mm
			2	f=10-25 mm.
			3	f=25-50 mm
			4	f=50-75 mm
			5	f >75 mm
19	**DRAINAGE**			
	Pumping	quantity of fines and water expelled through open joints and cracks Nos/ 100 m stretch	0	Not discernible
			1 to 2	slight / occasional Nos <10%
			3 to 4	appreciable / Frequent 10-25%
			5	Abundant, crack development>25%
20	Ponding	Ponding on slabs due to blockage of drains	0-2	No discernible problem
			3 to 4	Blockages observed in drains, but water flowing
			5	Ponding, accumulation of water observed

Rigid Pavement distresses were presented in Annexure 10.2 (a) for AP/TN border to Nalagampalli section (km 134+890 to km 172+000) and Nalagampalli to AP/KN border section (km 172+000 to km 219+687) is presented in Annexure 10.2 (b) for each lane in LHS & RHS directions. The rigid pavement condition summary of each section in lane wise is presented from Table 10-6.

Table 10-6: Rigid Pavement Distress Summary (4-Lane Sections):

Figure 10-3: Field testing photographs captured during the NSV survey

Pavement Observations:

AP/TN Border to Nalagampalli (km 134+890 to km 172+000) - 4 Lane Section

Main Carrigeway:

- In both directions in a few slabs has serve cracks, joint spalling and failed patch repairs were observed.
- Due to structural issues, the sections has many corner breaks.
- In both directions, failed patch repairs, cracking, pavement dip and joint spalling are observed in the stretch.

Service Roads:

- Majority of the service roads are under construction. The summary of the pavement condition is summarised below in the Table 10-7

Table 10-7: Service Roads visible condition summary from km 134+890 to km 172+000)

Service Roads visual pavement condition summary					
LHS Direction					
From	**To**	**Length**	**Condition**	**Distress Type**	**Remarks**
135.680	136.860	1.180			Service road Under Construction
154.500	156.150	1.650			Service road Under Construction
141.240	142.100	0.860	Good	No Major Distress	
158.880	159.840	0.960			Service road Under Construction
160.450	160.650	0.200			Service road Under Construction
167.800	168.000	0.200			Service road Under Construction
RHS Direction					
From	**To**	**Length**	**Condition**	**Distress Type**	**Remarks**
160.620	160.360	0.260			Service road Under Construction
159.830	159.320	0.510			Service road Under Construction

Nalagampalli to AP/KN Border (km 172+000 to km 219+687) - 4 Lane Section

Main Carrigeway:

- Due to structural issues, the sections has many corner breaks.
- Major bridges have wearing surface issues, it is in Fair to Poor condition, and majorly tapered lane, faulting, joints are opening, along with plant saplings growing in the joint gaps.
- Lot of sealed cracks are observed.
- Section where we have the deceleration lanes at the junctions for the Mainline carriageway the joint opening is more common.
- In both directions, failed patch repairs, cracking, pavement dip and joint spalling are observed in the stretch.
- From Km 192+000 to km 219+687, the pavement condition is good in LHS and RHS direction compare to the other section, no major distress are observed.

In structure locations, most of the bridges are damaged. As Dilip buildcon ltd site team verbally stated that, CRRI suggest to do the 50mm DBM & 50mm BC on existing pavement with geogrid membrane below.

Service Roads:

- Few service roads are under construction.
- The overall pavement condition is fair, because few of service roads have major cracks, potholes and ravelling. At structures approaches, pavement is detorated.

The Summary of Service roads visible condition is shwon below in the Table 10-8

Table 10-8: Service Roads visible condition summary from Km 172+000 to Km 219+687

Service Roads visual pavement condition summary

LHS Direction

184.040	182.070	1.970	Good to Fair	No Major distress	at Junction 182+600 condition is not good.
180.420	172.710	7.710	Fair to Poor	Major distresses	1. K m 179+110 to Km 179+050 Dip at the pavement. 2. Km 177+600 to Km 176+850 Pavement condition is poor. (Severe potholes & cracks) 3. Km 174+850 to Km 174+000 pavement has damaged

10.4 Structural Evaluation of Rigid Pavements using FWD (Km 134+890 to Km 219+687)

The structural evaluation was carried out in conformity with IRC: 117-2015, "Guidelines for The Structural Evaluation of Rigid Pavement by Falling Weight Deflectometer (FWD)".

10.4.1 Principle of Rigid pavement evaluation using FWD

Performance of Rigid pavements can be evaluated by applying loads on the pavements that simulate the traffic loading, recording the response to such loading by measuring the deflection under such loads, and analysing these data duly considering the factors influencing the performance such as PQC thickness and Load on the pavement.

Among the equipment available for structural evaluation of pavements, the Falling Weight Deflectometer (FWD) is extensively used worldwide because it simulates, to a large extent, the actual loading conditions of pavement.

The resulting load-deflection data can be interpreted through appropriate analytical techniques, to estimate the modulus of Subgrade reaction. The computed moduli are, in turn used for (i) the Elastic Modulus of Concrete and the Strength of Concrete (ii) the Flexural strength of the concrete slab of in-service pavements (iii) determination of Strengthening requirement, in the presence of voids if the deflections are much higher than normal and (iv) evaluation of different rehabilitation alternatives (Slab replacement etc.)

Structural evaluation exercise also includes Load transfer Efficiency at the transverse and longitudinal joints, (i) determination of Strengthening requirement, if any and (ii) evaluation of different rehabilitation alternatives (Retrofitting of Joints etc.)

10.4.2 Testing procedure & Methodology for Rigid pavements:

The detailed test methodology and procedure was described in IRC: 117-2015 "Guidelines for Structural Evaluation and Strengthening of Rigid Road Pavements Using Falling Weight Deflectometer (FWD) Technique". Deflection measurement points were taken as per the existing pavement condition. In adherence to the same, structural evaluation of the existing 'pavement and subgrade system' by measuring its response in terms of deflection. The survey was carried out using FWD for the project from 29/07/2024 to 01/08/2024.

Evaluation of pavement structural strength would be carried out in accordance with requirements of TOR and IRC: 117-2015.

(a) Testing Equipment

The equipment used for the testing is:

- DYNATEST 8002 FWD (for 4- Lane section) Vehicle Mounted Falling Weight Deflectometer with 1 loading plate and 7 numbers of geophones placed at the spacing of 0, 300, 600, 900, 1200, 1500 and 1800mm from the centre of the loading plate.
- GPS, Air Temperature and Pavement Surface Temperature sensors as part of the FWD instrument.
- Red flags and red cones and flashing lamps for traffic arrangement.

(b) Testing Frequency – as per IRC:117-2015

FWD deflection data may be collected at interiors, corners, transverse joints, and longitudinal joints, in the outer lanes at 500 m intervals. Heavy loads travel mostly in outer lanes and very often greater distresses also are found in the outer lanes. If there are distresses in the inner lanes also FWD test should be done in those lanes.

(c) Loading Positions – as per IRC:117-2015

The loading positions are presented in Figure 10-4**.**

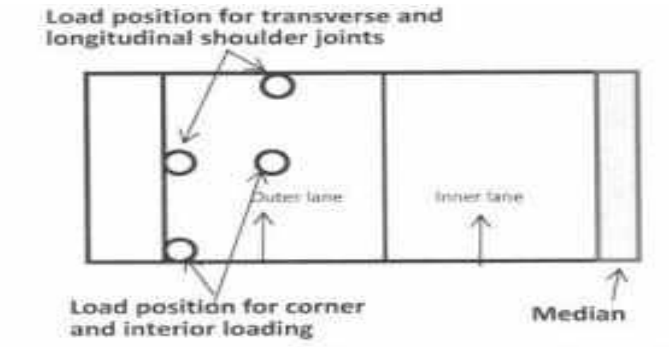

Figure 10-4: Load Positions for Corner, Interior, Transverse and Longitudinal Shoulder Joints

10.5 FWD Deflections points & measurement -Rigid pavement

As it is specified in IRC:117-2015 FWD deflection measurement has carried out for Corner, Interior, Transverse Joint and Longitudinal joint in the outer lane at an interval of 500 m. At every measurement location, four drops were made, such that the first drop was the 'seating drop' and with the remaining three drops deflections were recorded.

The following steps are carried out for measuring deflections at a test point:

i. Mark the test point on the pavement

ii. Centre the load plate over the test point

iii. Lower the loading plate onto the pavement ensuring there should be no standing water on the pavement surface. The loading plate should be in proper contact with pavement surface. The longitudinal and transverse slope of the pavement should not exceed 10 percent at the test location.

iv. Lower the frame holding the geophones so that the transducers are in contact with pavement surface.

v. The target peak load in the range of 40 kN to 60 kN or higher may be applied on concrete pavements to get a reasonable deflection. Since pavements of major highways are very stiff and a higher load may be required to get a deflection of about 0.15 mm.

vi. Drop one seating load, load and deflection data for which need not be recorded.

vii. Raise the mass and drop. Record the load and deflection data into the computer through data acquisition system. While peak load and peak deflections at different selected radial positions must be recorded. At least 2 drops should be made at one location for precision.

viii. If, during previous 2 steps, the deflections measured are giving variations or the deflections/load pulses are not proper, repeat the drop.

ix. Raise the geophone frame and load plate and move to the next test location.

x. Deflection measurements should not be made when the pavement temperature is more than 40°C.

Testing photographs of FWD test on rigid pavement at some locations are shown in Figure 10-5**.**

Figure 10-5: Photographs showing FWD survey under progress (Rigid Pavement)

10.6 Rigid pavement composition and Pavement condition

The adopted PQC crust thickness during construction stage is considered for analysis and the same is presented in below Table 10-9**.**

Confidential

Table 10-9: Average PQC crust thickness

Section	Chainages	Average PQC thickness in mm	
		LHS	RHS
AP/TN Border to Nalagampalli	(Km 134+890 to Km 172+000)	305	296
Nalagampalli to AP/KN Border	(Km 172+000 to Km 219+687)	276	276

10.7 Rigid pavement composition and Pavement condition

a) Processing of Area and Deflection data.

The FWD test should be done at 0mm, 300mm, 600mm, 900mm radial distances from the center of loading point should be measured.

The area of Deflection basin is calculated by

$$A=6(1+2(D_1/D_0)+2(D_2/D_0)+(D_3/D_0))$$

Where,

A=Area parameter of the deflection basin

D_0=Deflection at center of the loading plate in mm

D_1= Deflection in mm at 300mm from center of the loading plate

D_2= Deflection in mm at 600mm from center of the loading plate

D_3= Deflection in mm at 900mm from center of the loading plate

From the area of deflection basin, Radius of relativeness (l) can be evaluated from the charts given in IRC: 117 (Appendix V) and the normalized deflections are found.

b) Evaluation of Subgrade Modulus, Elastic Modulus of concrete, Strength of concrete, Flexural Strength of concrete.

Subgrade moduli value can be found for normalized deflections and average of all should be taken as subgrade modulus.

$$k_i = \frac{Pd_i}{l^2 D_i}$$

Where,

i=1,2,3,4

l=Radius of relative stiffness, mm

P=Load in KN

D_i=Measured deflections in mm at various radial distance

d_i=Normalized deflections in mm at various radial distances

Elastic Modulus (MPa) of concrete can be found by using the formulae

$$E_c = \frac{12(1-\mu_c)kl^4}{1000h^3}$$

Where,

μ_c= Poisson's Ratio of Concrete

h= Thickness of concrete layer in mm

l= Radius of relative stiffness in mm

k=modulus of subgrade reaction in MPa/m

E= Elastic modulus of concrete, MPa

Strength of concrete can be determined from the E_C from the following,

$$f_c = \sqrt{\left(\frac{E_C}{5000}\right)}$$

Flexural strength can be determined from the f_c of the concrete slab as given below:

$$f_{mr} = 0.7\sqrt{f_c}$$

Poisson's ratio for different layers i.e., 0.15 for concrete and 0.45 for subgrade.

c) Evaluation of Load Transfer Efficiency of Joints

Transverse as well as longitudinal joints deteriorate with traffic due to continuous loading. For a new pavement, the joint efficiency is nearly 100 percent since the deflections on either side of the joint under a wheel load are almost equal and the ratio decreases as the joints deteriorate under repeated loading.

When deflection sensors are the either side of a joint with deflections D1 and D2 on the loaded and unloaded sides. Deflections on the Loaded and Unloaded side at a Joint is presented in Figure 10-6.

$$LTE = 100\left(\frac{D_2}{D_1}\right)$$

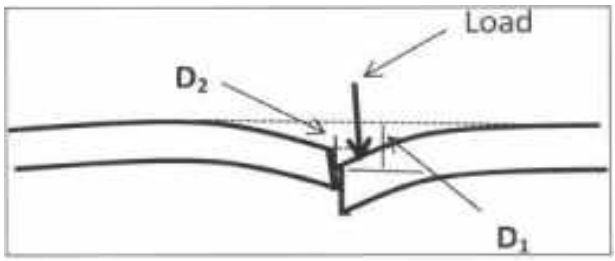

Figure 10-6: Deflections on the Loaded and Unloaded side at a Joint

For a new pavement, $D_1 = D_2$ but D_2 becomes less and less as the joints deteriorate.

If $D_2/D_1 < 0.5$ transverse joints in critical condition

If $D_2/D_1 < 0.4$ longitudinal joints in critical condition

Were,

Confidential

D_1 is the deflection on the loaded side of the slab

& D_2 is the deflection on the unloaded side of the slab

10.8 Analysis of Rigid pavements

As per IRC: 117-2015, the rigid pavement analysis was carried out to determine the following PQC parameters.

- Evaluation of subgrade modulus, elastic modulus of concrete and flexural strength of concrete pavement.
- Detection of possible locations of voids underneath the rigid pavement
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of PQC parameters and Load Transfer Efficiency of the rigid pavement are presented in Annexure 10.4 and Annexure 10.5 for AP/TN border to Nalagampalli and Nalagampalli to AP/KN border respectively.

10.8.1 Observations and findings

From the obtained test results the observations where draw-down. The range of Elastic Modulus and percentage of length is specified in Table 10-10 below;

Table 10-10: The range of Elastic Modulus and percentage of Project Road

Pavement Layer	Range	Percentage of Project Road				Percentage of Project Road			
		NH,4 Section from AP/TN Border to Nalagampalli: Km 134+890 to Km 172+000				NH,4 Section from Nalagampalli to AP/KN Border: Km 172+000 to Km219+687

	RHS	67.9%	69.1%	60.5%	59.9%	96.3%	0.0%	87.7%	0.0%

10.8.2 Possible air voids underneath of the pavement

Table 10-12: Possible air Voids underneath of the Rigid Pavement

Section	Parameter	Air Voids (Interior)		Air Voids (Corner)	
		LHS	RHS	LHS	RHS
NH,4 Section from AP/TN Border to Nalagampalli: Km 134+890 to Km 172+000	Average deflection (in Micron)	175.1	178.4	196.4	194.3
	Panels with Air Voids %	1.61%	3.03%	0.00%	6.06%
NH,4 Section from Nalagampalli to AP/KN Border: Km 172+000 to Km219+687	Average deflection (in Micron)	180.1	171.9	202.5	184.9
	Panels with Air Voids %	2.78%	6.17%	1.39%	2.47%

**To analyze the locations of possible air voids, statistical quartile outlier concept is used. Based on this analysis method in LHS direction the deflection more than 253.28 microns & deflection more than 244.13 micron in RHS direction for Interior, and deflection more than 290.14 microns in LHS direction & deflection more than 253.27 microns in RHS direction for Corner was considered as air voids under panels in AP/TN Border to Nalagampalli Section. In Nalagampalli to AP/KN Border Section the deflection more than 251.86 microns in LHS direction & deflection more than 208.16 microns in RHS direction for Interior, and deflection more than 269.01 microns in LHS direction & deflection more than 231.17 microns in RHS direction for Corner was considered as air voids under panels.*

Observations:

NH-4 AP/TN Border to Nalagampalli (Km 134+890 to Km 172+000):

- From the above, it is understood that around 66.10% of testing points in LHS direction and around 54.50% of testing points in RHS direction of the rigid pavement having E value >30000 MPa in Main Carriage way.
- Similarly, around 41.90% of testing points in LHS direction and 43.90% of testing points in RHS direction of the of the rigid pavement having flexural strength >4.5Mpa in Main Carriage way.
- Load Transfer Efficiency (LTE) for Transverse joints and Longitudinal joints is more than 50% for both LHS & RHS direction for Main Carriage way.

NH-4 Nalagampalli to AP/KN Border (Km 172+000 to Km 219+687):

- From the above, it is understood that around 81.90% of testing points in LHS direction and around 67.90% of testing points in RHS direction of the rigid pavement having E value >30000 MPa in Main Carriage way.
- Similarly, around 72.20% of testing points in LHS direction and 60.50% of testing points in RHS direction of the of the rigid pavement having flexural strength >4.5MPa in Main Carriage way.
- Load Transfer Efficiency (LTE) for Transverse joints and Longitudinal joints is more than 50% for both LHS & RHS direction for Main Carriage way.

10.9 Traffic Survey and Analysis

Axle load survey of 7 days has been conducted at Toll Plaza Locations. The AADT and growth rates required for the further computations are provided by the client.

10.9.1 Annual Average Daily Traffic

The Annual Average Daily Traffic (AADT) in the FY 2025 are presented in Table 10-13**.**

Table 10-13: AADT of commercial class vehicles at toll plaza locations for both directions (year 2024-2025)

Location/ Vehicle Type	BUS	LCV	2-axle	3-axle	MAV
Mahasamudram Toll Plaza (km 164+250)- 4 lane section)	1088	1143	1420	748	1400

*For MSA calculation purposes, a direction distribution of 50% is considered for both LHS and RHS direction.

10.9.2 Vehicle Damage Factor

The axle load survey was conducted at toll plaza locations (Km 164+250: Mahasamudram toll plaza); the number of equivalent 8.16 t standard axles for the different categories of commercial vehicles have been determined on the basis of the axle load surveys.

The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC: 37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions.

- Single axle with single wheel on either side = {axle load in kN / 65}^{4}
- Single axle with dual wheel on either side = {axle load in kN / 80}^{4}
- Tandem axle with single wheel on either side = {axle load in kN /148}^{4}
- Tridem axle with dual wheel on either side = {axle load in kN /224}^{4}

Referring to section 4.4.3 of IRC 37-2018, some tandem axles have only one (single) wheel on each side of the axle. In such cases, each axle of the tandem axle set may be considered as two separate

single axles (with single wheels). Similarly, if the axle spectrum has a tridem axle with single wheels, it may be considered as three separate single axles having single wheels.

VDF values are obtained as per the analysis of 7 days axle load surveys are presented in Annexure 10.4 for Mahasamudram toll plaza Annexure, the summary presented in Table 10-14. The sample photographs axle load survey is shown in Figure 10-7.

Table 10-14: Summary of Vehicle Damage Factor (VDF)

Location/ Vehicle Type		BUS	LCV	2axle	3axle	MAV
NH-4: (Mahasamudram Toll Plaza-164+250)	LHS	1.085	0.633	2.901	4.402	10.017
	RHS	1.080	0.688	2.598	4.926	8.115

In the rigid pavement section from AP/TN border to AP/KN border no overlay requirement is analysed in general, hence no MSA calculations are done in this section.

11. DEVELOPMENT OF O&M STRATEGY

11.1 General

The Concessionaire is responsible for Operation & Maintenance of the Project Highway in accordance with the provisions of Article-14 of the EPC Agreement for 4-lane section.

11.2 Salient Features

The important salient features in terms of project dates pertaining to project are provided in Table 3-1 of this report.

11.3 Review of EPC Agreement and Pavement Design report of AP/TN border to Nalagampalli (Km 134+890 to Km 172+000)

11.3.1 EPC Agreement: Gayatri Projects Limited (GPL)- YR 2017

Schedule-B of Concession Agreement is a mandatory requirement prior to any formulation of design to be applied to the project during the execution. The following details in CA are summarized below.

a. Type of Carriageway:

- Rigid Pavement was proposed for main carriageway for entire section and flexible pavement for service roads.

b. Design Traffic (MSA):

- The contractor shall design the pavement for design traffic of 2584 CVPD for section km 134+890 to km 141+000 and 8265 CVPD for section km 141+000 to km 172+000.

c. Design Period:

- Rigid pavement is designed for minimum design period of 30years, and flexible pavement designed for 15 years, and stage construction is not allowed.

d. Design CBR:

- Minimum design CBR is not specified.

e. Minimum Crust Thicknesses:

- The minimum crust composition given is detailed in the table below.

Description	From km 134+890 to km 141+000	From km 141+000 to km 172+000
CVPD	2584	8265
PQC Slab M40 Grade (mm)	300	320
DLC (mm)	150	150
GSB (mm)	150	150

f. Specifications and Standards for the project:

- As per Schedule-D "Manual of specifications and standards for four laning of highway through PPP IRC: SP: 84-2014".

g. Maintenance requirements:

- The concessionaire shall maintain the roughness value of 2200mm/km, set forth in Schedule E (the "Maintenance Requirements")

Observations on schedules B/D/E:

- Minimum CBR value was not specified in the Schedules. Hence, concessionaire has an opportunity to explore good borrow areas and utilize the soils with good CBR value.
- Schedule -D has specified that the design standards of the project shall be in accordance with 'Manual of Specifications and Standards for Four Laning of National Highways through Public Private Partnership (IRC: SP: 84-2014)'.
- In Schedule -E, it has specified the intervention of concessionaire when the roughness value exceeds 2200 mm/km.

11.3.2 Review of Pavement Design Report - YR 2018 (GPL)

Pavement Design Report (PDR) of 'Four Laning of AP/TN border to Nalagampalli of NH-4 from Km 134.890 to Km 158.800 in the state of Andhra Pradesh' describes the basis and design for pavement for main road. The existing road is with rigid pavement in main carriageway and flexible in service-roads.

a) Design life of Pavement

- Main carriageway is designed for 30 years, and flexible pavement is designed for 15 years design period.

b) Design traffic

- EPC Contractor conducts the CVC survey and axle load survey (24hrs) at km 135+000 and km 146+000.
- Based on traffic survey at km 135+000 CVPD of 2986 and km 146+000 CVPD of 9551 is obtained, same is considered for the design purposes
- A design traffic of 10msa has been considered for the service roads.

c) Design CBR

- For the design purposes 10% CBR was adopted.

d) Pavement Composition

As per the pavement design report, EPC contractor has divided the project stretch as two homogenous sections. The design pavement crust thickness of main carriageway is presented in Table 11-1 and service roads is presented in Table 11-2.

Table 11-1: Design thicknesses of main carriageway

Description	km 134+890 to km 141+000	km 141+000 to km 172+000
Panel Size	4.5m x 4.0m, 4.5m x 3.5m with 1.5m tied shoulder	
CVPD	2986	9551
PQC Slab M40 Grade (mm)	300	320
DLC (mm)	150	150
GSB (mm)	150	150
Dowel bar		
Dia (mm)	32	32
Length (mm)	450	450
Spacing (mm)	300	300
Tie bar		
Dia (mm)	12	12
Length (mm)	640	640
Spacing (mm)	460	430

Table 11-2: Design thicknesses of service roads

Description	Thickness in mm
BC (mm)	40
DBM (mm)	60
WMM (mm)	250
GSB (mm)	200

Observations on PDR (Pavement Design Report):

- Minimum CBR was not specified in agreement. Hence, contractor adopted a design CBR of 10%.
- The CVPD mentioned in schedule is less than the CVPD obtained from traffic survey, hence contractor considered the maximum CVPD for design proposes.
- The Rigid pavement was designed according to IRC:58-2015, and the design was cross-verified and found to be satisfactory.

11.3.3 EPC Agreement: SD Infra -YR 2023

Schedule-B of Concession Agreement is a mandatory requirement prior to any formulation of design to be applied to the project during the execution.

a. Type of Carriageway:

- The pavement shall be flexible for entire project highway except for widening of existing road where rigid pavement shall be provided.

b. Design Traffic (MSA):

- The contractor shall design for minimum design traffic of 50msa for main carriageway and 10msa for service roads. For widening portions, crust composition of existing pavement shall be adopted.

c. Design Period:

- The flexible pavement shall be designed for minimum design period of 20 years and rigid pavement is 30 years. Stage construction is not allowed.

d. Design CBR:

- Minimum design CBR was not specified.

e. Minimum Crust Thickness:

- The minimum crust composition was also not specified.

f. Specifications and Standards for the project:

- As per Schedule-D "Manual of specifications and standards for four laning of highway through IRC: SP: 84-2019".

g. Maintenance requirements:

The concessionaire shall procure that at all times during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule E (the "Maintenance Requirements")

Schedule E of the Agreement is represented in Table 11-3***.***

Repair / Rectification of Defects and deficiencies specified in Schedule E within time limit set forth hereunder.

Table 11-3: Maintenance requirement with timelines

a) Flexible Pavement

Assert Type	Performance Parameter	Level of Service (LOS)		Frequency of Inspection	Tools/ Equipment	Standards and References for Inspection and Data Analysis	Time limit for Rectification/Repair	Maintenance Specification
		Desirable	Acceptable					
Flexible Pavement (Pavement of MCW, Service Road, approaches of Grade structure, approaches of connecting roads, slip roads, lay byes etc. as applicable)	Potholes	Nil	<0.1 % of area and subject to limit of 10 mm in depth	Daily	Length Measurement Unit like Scale, Tape, Odometer etc.	IRC:82-2015 and Distress Identification Manual for Long Term Pavement Performance Program, FHWA 2003	24-48 hours	MORT&H Specification 3004.2
	Cracking	Nil	<5 % subject to limit of 0.5 sqm for any 50m length	Daily			7-15 days	MORT&H Specification 3004.3
	Rutting	Nil	<5mm	Daily	Straight Edge		15-30 days	MORT&H Specification 3004.2
	Corrugations and Shoving	Nil	<0.1 % of area	Daily	Length Measurement Unit like Scale, Tape, Odometer etc.		3-7 days	IRC:82-2015
	Bleeding	Nil	<1 % of area	Daily			3-7 days	MORT&H Specification 3004.4
	Ravelling/Stripping	Nil	<1 % of area	Daily			7-15 days	IRC 82-2015 read with IRC Sp-81
	Edge Deformation / Breaking	Nil	<1m for any 100m section and width <0.1m at any location, restricted to 30cm from the edge	Daily			7-15 days	IRC 82-2015
	Roughness BI	2000mm/Km	2400mm/Km	Bi-Annually	Class 1 Profilometer SCRIM (Sideway-force Coefficient Routine Investigation Machine or equivalent)	Class 1 Profilometer: ASTM E950(98):2004- Standard Test Method for measuring Longitudinal Profile of Travelled Surfaces with Accelerometer Established Inertial Profiling	180 days	IRC 82-2015
	Skid Number	60SN	50SN	Bi-Annually			180 days	IRC 7941-1:2006

b) Rigid Pavement

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
1	Cracking					
		w = width of crack, L = length of crack, d =	0	Nil not discernible	No Action	Not Applicable
			1	w < 0.2 mm. hair cracks		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
	Single Discrete Cracks Not intersecting with any joint	depth of crack, D = depth of slab	2	w = 0.2 - 0.5 mm, discernible from slow-moving car	Seal without delay	Seal and stitch if L > 1m. Within 7 days
			3	w = 0.5 - 1.5 mm, discernible from fast-moving car		
			4	w = 1.5 - 3.0 mm	Seal and stitch if L > 1m. Within 7 days	retrofit, FDR for affected portion within 15 days
			5	w > 3 mm.		
2	Single Transverse (or Diagonal) Crack intersecting with one or more joints	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil, not discernible	No Action	
			1	w < 0.2 mm, hair cracks	Route and seal with epoxy. Within 7 days	Staple or dowel bar retrofit. Within 15 days
			2	w = 0.2 - 0.5 mm, discernible from slow vehicle		
			3	w = 0.5 - 3.0 mm, discernible from fast vehicle	Route, Seal, and stitch, if L > 1m. Within 7 days	
			4	w = 3.0 - 6.0 mm	Dowel bar Retrofit Within 15 days	Dismantle and reconstruct affected portion with norms and specifications see para 5.5 & 9.2 Within 15 days
			5	w > 6 mm, usually associated with spalling, and/ or slab rocking under traffic	Not Applicable as it may be full depth	
3	Single Longitudinal Crack intersecting with one or more joints	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil, not discernible	No Action	
			1	w < 0.5 mm, discern able from slow moving vehicle	Seal with epoxy if L > 1m. Within 7 days	Staple or dowel bar retrofit. Within 15 days
			2	w = 0.5 - 3.0 mm, discernible from fast vehicle	Route, Seal and stitch, if L > 1m. Within 15 days	-
			3	w = 3.0 - 6.0 mm	Staple, if L > 1m. Within 15 days	Partial Depth Repair with stapling. Within 15 days
			4	w = 6.0 - 12.0 mm, usually associated with spalling	Not Applicable as it may be full depth	
			5	w > 12 mm, usually associated with spalling, and/or slab rocking under traffic		Full Depth Repair Dismantle and reconstruct affected portion as per norms

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
						and specifications see para 5.6.4
4	Multiple Cracks intersecting with one or more joints or cracks	w = width of crack	0	Nil, not discernible	No Action	-
			1	w < 0.2 mm, hair cracks	Seal, and stitch if L > 1m. Within 15 days	
			2	w = 0.2 - 0.5 mm. discernible from slow vehicle		
			3	w = 0.5 - 3.0 mm, discernible from fast vehicle	Full depth repair within 15 days	Dismantle, Reinstate subbase, Reconstruct whole slab as per specification within 30 days
			4	w = 3.0 - 6.0 mm panel broken into 2 or 3 pieces		
			5	w > 6 mm and/or panel broken into more than 4 pieces		
5	Corner Break	w = width of crack, L = length of crack	0	Nil, not discernible	No Action	-
			1	w < 0.5 mm; only 1 corner broken	Seal with low viscosity epoxy to secure broken parts Within 7 days	Seal with epoxy Within 7 days
			2	w < 1.5 mm; L < 0.6 m, only one corner broken		
			3	w < 1.5 mm; L < 0.6 m, two corners broken	Partial Depth (Refer Fig 8.3 of IRC: SP: 83:2008) Within 15 days	Full depth repair
			4	w > 1.5 mm; L > 0.6 m or three corners broken		
			5	three or four corners broken		Reinstate sub-base, and reconstruct the slab as per norms and specifications
6	Punchout (Applicable to Continuous Reinforced Concrete Pavement (CRCP) only)	w = width of crack, L = length (m/m2)	0	Nil, not discernible	-	No Action
			1	w < 0.5 mm; L < 3 m/m2	Not Applicable as it may be full depth	Seal with low viscosity epoxy to secure broken parts. Within 15 days
			2	either w > 0.5 mm or L < 3 m/m2		
			3	w > 1.5 mm and L < 3 m/m2		
			4	w > 3 mm, L < 3 m/m2 and deformation		Full depth repair - Cut out and replace damaged area taking care not to damage reinforcement. Within 30 days
			5	w > 3 mm, L > 3 m/m2 and deformation		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
Surface Defects						
7	Ravelling or Honeycomb type surface	r = area damaged surface / total surface of slab (%) h = maximum depth of damage	0	Nil, not discernible	Short Term No action.	Long Term Not Applicable
			1	r < 2 %	Local repair of areas damaged and liable to damage. Within 15 days	
			2	r = 2 - 10 %		
			3	r = 10-25%	Bonded Inlay 2 or 3 slabs if affecting. Within 30 days	
			4	r = 25 - 50 %		
			5	r > 50% and h > 25 mm	Reconstruct slabs 4 or more slabs if affecting. Within 30 days	
8	Scaling	r = damaged surface / total surface of slab (%) h = maximum depth of damage	0	Nil, not discernible	Short Term No action.	Long Term Not Applicable
			1	r < 2 %	Local repair of areas damaged and liable to be damaged. Within 7 days	
			2	r = 2 - 10 %		
			3	r = 10 - 20%	Bonded Inlay Within 15 days	
			4	r = 20 - 30 %		
			5	r > 30 % and h > 25 mm	Reconstruct slab Within 30 days	
9	Polished Surface/ Glazing	t = texture depth, sand patch test	0		No action.	
			1	t > 1 mm		
			2	t = 1 - 0.6 mm	Monitor rate of deterioration	
			3	t = 0.6 - 0.3 mm		
			4	t = 0.3 - 0.1 mm		
			5	t < 0.1 mm	Diamond Grinding if affecting 50% or more slabs in a continuous stretch of minimum 5 km. Within 30 days	
10	Popout (Small Hole), Pothole Refer Para 8.4	n = number / m2, d = diameter, h = maximum depth	0	d < 50 mm; h < 25 mm; n < 1 per 5 m2	No action.	Not Applicable
			1	d = 50 - 100 mm: h < 50 mm; n < 1 per 5 m2	Partial depth repair 65 mm deep Within 15 days	
			2	d = 50 - 100 mm; h > 50 mm; n < 1 per 5 m2		
			3	d = 100 - 300 mm; h < 100 mm n < 1 per 5 m2	Partial depth repair 110mm i.e 10 mm more than the depth of the hole. Within 30 days	
			4	d = 100 - 300 mm; h > 100 mm; n < 1 per 5 m2		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			5	d > 300 mm; h > 100 mm: n > 1 per 5 m2	Full depth repair. Within 30 days	
Joint Defect						
11	Joint Seal Defects	loss or damage L = Length as % total joint length	0	Difficult to discern.	Short Term No action.	Long Term Not Applicable
			1	Discernible, L< 25% but of little immediate consequence with regard to ingress of water or trapping incompressible material.	Clean joint, inspect later.	
			2			
			3	Notable. L > 25% insufficient protection against ingress of water and trapping incompressible material.	Clean and reapply sealant in selected locations. Within 7 days	
			4			
			5	Severe; w > 3 mm negligible protection against ingress of water and trapping incompressible material.	Clean, widen and reseal the joint. Within 7 days	
12	Spalling of Joints	w = width on either side of the joint, L = length of spalled portion (as % joint length)	0	Nil, not discernible	No action.	Not Applicable
			1	w < 10 mm	Apply low viscosity epoxy resin/ mortar in cracked portion Within 7 days	
			2	w = 10 - 20 mm, L < 25%		
			3	w = 20 - 40 mm, L > 25%	Partial Depth Repair Within 15 days	
			4	w = 40 - 80 mm, L > 25%	30-50 mm deep, h= w + 20% of w Within 30 days	
			5	w > 80 mm, and L > 25%	50 - 100 mm deep repair. H = w + 20% of w Within 30 days	
13	Faulting (or Stepping) in Cracks or Joints	f = difference of level	0	not discernible, < 1 mm	No action.	No Action
			1	f < 3 mm		
			2	f = 3 - 6 mm	Determine cause and observe take action for diamond grinding	Replace the slab as appropriate Within 30 days
			3	f = 6 - 12 mm	Diamond Grinding	
			4	f= 12 - 18 mm	Raise sunken slab.	

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			5	f> 18 mm	Strengthen subgrade and sub-base by grouting, raising sunken slab	Replace the slab as appropriate Within 30 days
14	Blowup or Buckling	h = vertical displacement from normal profile			SHORT TERM	LONG TERM
			0	Nil, not discernible	No action.	
			1	h < 6 mm		
			2	h = 6 - 12 mm	Install Signs to Warn Traffic Within 7 days	
			3	h = 12 - 25 mm		
			4	h > 25 mm	Full Depth Repair Within 30 days	
			5	shattered slabs, i.e 4 or more pieces	Replace broken slabs. Within 30 days	
15	Depression	h = negative vertical displacement from normal profile L =length	0	Not discernible, h < 5 mm	No action.	Not Applicable
			1	h = 5 - 15 mm		
			2	h = 15-30 mm, Nos <20% joints	Install Signs to Warn Traffic within 7 days	
			3	h = 30 - 50 mm		
			4	h > 50 mm or > 20% joints	Strengthen subgrade. Reinstate pavement at normal level if length L < 20 m. within 30 days	
			5	h > 100 mm		
16	Heave	h = positive vertical displacement from normal profile, L = length	0	Not discernible. h < 5 mm	Short Term	Long Term
					No action.	scrabble
			1	h = 5 - 15 mm	Follow up.	
			2	h = 15 - 30 mm, Nos <20% joints	Install Signs to Warn Traffic within 7 days	
			3	h = 30 - 50 mm		
			4	h > 50 mm or > 20% joints	Stabilise subgrade. Reinstate pavement at normal level if length < 20 m. within 30 days	
			5	h > 100 mm		
17	Bump	h = vertical displacement from normal profile	0	h < 4 mm	No action.	
			1	h = 4 - 7 mm	Grind, in case of new construction within 7 days	Construction Limit for New Construction
			2			

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			3	h = 7 - 15 mm	Grind in case of ongoing maintenance Within 15 days	Replace in case of new construction Within 30 days
			4			
			5	h > 15 mm	Full depth repair Within 30 days	Full depth repair Within 30 days
18	Lane to Shoulder Dropoff	f = difference of level	0	Nil, not discernible < 3mm	SHORT TERM	LONG TERM
					No action.	-
			1	f = 3 - 10 mm	Spot repair of shoulder. Within 7 days	-
			2	f = 10 - 25 mm		-
			3	f = 25 - 50 mm	Fill up shoulder Within 7 days	-
			4	f = 50 - 75 mm		For any 100 m stretch Reconstruct shoulder, if affecting 25% or more of stretch Within 30 days
			5	f > 75 mm		
Drainage						
19	Pumping	Quantity of fines and water expelled through open joints and cracks Nos	0	not discernible	No Action	
			1 to 2	Slight/occasional Nos < 10%	Repair cracks and joints without delay	Inspect and repair sub-drainage at distressed sections and upstream.
			3 to 4	Appreciable/ Frequent 10-25%	Lift or jack slab within 30 days	
		Nos/100 m stretch	5	Abundant, crack development >25%	Repair distressed pavement sections. Strengthen subgrade and subbase. Replace slab. Within 30 days	
20	Ponding	Ponding on slabs due to blockage of drains	0-2	No discernible problem	No action	
			3 to 4	Blockages observed in drains, but water flowing	Clean drains etc within 7 days follow up	Action required to stop water damaging foundation within 30 days.
			5	Ponding accumulation of water observed	-do-	

Observations on schedules B/D/E:

- Minimum CBR value was not specified in the Schedules. Hence, concessionaire has an opportunity to explore good borrow areas and utilize the soils with good CBR value.
- Minimum design traffic for main carriageway is specified as 50msa, while for service road it is specified as 10msa.
- Schedule -D has specified that the design standards of the project shall be in accordance with 'Manual of Specifications and Standards for Four Laning of National Highways through Public Private Partnership (IRC: SP:84-2019)'.
- In Schedule -E, it has specified the intervention of concessionaire when the roughness value exceeds 2400 mm/km.

11.3.4 Review of Pavement Design Report- YR 2023 (SD Infra)

Pavement Design Report (PDR) of 'Four Laning of AP/TN border to Nalagampalli of NH-4 from Km 134.890 to Km 172.000 in the state of Andhra Pradesh' describes the basis and design for pavement for main road. The pavement shall be flexible type for entire project highway except for widening of existing road where rigid pavement shall be provided and flexible in service-roads.

a) Design life of Pavement

- The flexible pavement is designed for 20 years and rigid pavement is designed for 30years.

b) Annual Average Daily Traffic (AADT)

- As per PDR, EPC Contractor conducts the traffic survey at km 148+400 in base year 2023, the AADT summary is presented below,

Direction	Mode of Traffic				
	BUS	LCV	2-Axle	3-Axle	MAV
LHS	367	348	306	272	283
LHS	400	256	240	262	317

c) Vehicle Damage Factor (VDF)

- As per PDR, EPC Contractor conducts the traffic survey at km 148+400, the VDF summary is presented below.

Direction	Mode of Traffic				
	BUS	LCV	2-Axle	3-Axle	MAV
LHS	1.181	0.693	3.264	3.019	5.133
LHS	1.665	0.698	3.118	3.197	5.157

d) Design Traffic

- As per PDR, the estimated design traffic of main carriageway is 44msa which is less than the msa specified in schedule-B. Hence, contractor consider a design traffic of 50msa.
- A design traffic of 10msa was considered for service roads.

e) Design CBR

- A design CBR of 10% was consider for flexible pavement in main carriageway.
- A design CBR of 8% was considered for widening of existing rigid pavement sections.
- All service roads are designed for design CBR of 8%.

f) Pavement Composition

As per the pavement design report, the following pavement crust thickness is considered.

Table 11-4: Design thicknesses of flexible pavement (MCW)

Description	From km 134+890 to km 172+000 Thickness in mm
BC (mm)	40
DBM (mm)	105
WMM (mm)	250
GSB (mm)	200

Table 11-5: Design thicknesses of rigid pavement (MCW)

Description	Details (km 138+490 to km 172+000)
Pannel Size	L X B (4.5m x 3.5m)
PQC Slab M40 Grade (mm)	300
DLC (mm)	150
GSB (mm)	150
Dowel bar	
Dia (mm)	38
Length (mm)	450
Spacing (mm)	300
Tie bar	
Dia (mm)	12
Length (mm)	640
Spacing (mm)	600

Table 11-6: Design thicknesses of service roads

Description	From km 134+890 to km 172+000 Thickness in mm
BC (mm)	30
DBM (mm)	50
WMM (mm)	250
GSB (mm)	200

Observations on PDR:

- The pavement shall be flexible except for widening of existing rigid pavement.
- Minimum CBR was not specified in agreement. Hence, contractor adopted the 8% and 10% CBR.
  - The mix design parameters used are Va = 3.5% and Vbe = 11.5%.
  - 90% reliability was considered for the flexible pavement design of main carriageway.

11.4 Review of Existing EPC Agreement and Pavement Design report of Nalagampalli to AP/KN Border (Km 172+000 to Km 219+687)

11.4.1 Existing EPC Agreement: Dilip Buildcon Ltd (DBL)- YR 2017

Schedule-B of Concession Agreement is a mandatory requirement prior to any formulation of design to be applied to the project during the execution.

a. Type of Carriageway:

- Rigid Pavement is proposed for main carriageway for entire section and flexible pavement for service roads.

b. Design Traffic (MSA):

- The design traffic for each homogeneous section was presented in below table.

S. No	Homogenous Section	Design traffic (CVPD)
1	Km 172+000 to Km 178+500	7914
2	Km 178+500 to Km 192+600	7562
3	Km 192+600 to Km 200+600	6578
4	Km 200+600 to Km 219+687	7562

- Service roads are designed for a minimum design traffic of 10msa.

c. Design Period:

- Rigid pavement shall be designed for minimum design period of 30years.

d. Design CBR:

- Minimum design CBR is not specified.

e. Minimum Crust Thickness:

- Minimum crust thickness is not specified.

f. Specifications and Standards for the project:

- As per Schedule-D "Manual of specifications and standards for four laning of highway through PPP IRC: SP: 84-2014".

g. Maintenance requirements:

The concessionaire shall procure that at all times during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule E (the "Maintenance Requirements")

Schedule E of the EPC Agreement is represented in Table 11-7**.**

Repair / Rectification of Defects and deficiencies specified in Schedule E within time limit set forth hereunder

Table 11-7: Maintenance requirement with timelines

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
	Project Highway	

Confidential

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
(a)	**Carriageway**	
(i)	Breach or blockade	Time Limit: Temporary restoration of traffic within 24 hours; permanent restoration within 15 (fifteen) days.
(ii)	Roughness value Exceeding 2,200 mm in a stretch of 1 km (as measured by a calibrated bump integrator)	Time Limit: 120 (One Hundred and Twenty) days
(iii)	Potholes	Time Limit: 24 hours
(iv)	Cracking in more than 5% of road surface in a stretch of 1 Km	Time Limit: 15 days
(v)	Rutting exceeding 10mm in more than 2% of the road surface in a stretch of 1 km	Time Limit: 30 days
(vi)	Bleeding / Skidding	Time Limit: 7 (Seven) days
(vii)	Any other defect/ distress on the road	Time Limit: 15 (Fifteen) days.
(viii)	Damages to Pavement edges	Time Limit: 15 (Fifteen) days.
(ix)	Removal of debris	Time Limit: 6 hours
(b)	**Granular earth shoulders, side slopes, drains and culverts.**	
(i)	Variation by more than 1% in the prescribed slope of camber / cross fall	Time Limit: 7 (Seven) days
(ii)	Edge drop at shoulders exceeding 40 mm	Time Limit: 7 (Seven) days
(iii)	Variation by more than 15% in the prescribed side (embankment) slopes	Time Limit: 30 (Thirty) days
(iv)	Rain cuts / gullies in slope	Time Limit: 7 (Seven) days
(v)	Damage to or silting of culverts and side drains during and immediately preceding the rainy season	Time Limit: 7 (Seven) days
(vi)	Desilting of drains in urban / semi-urban areas	Time Limit: 24 hours
(vii)	Ralling, parapets, crash barrier	Time Limit: 7 (Seven) days
(C)	**Roadside furniture including road signs and pavement marking**	
(i)	Damage to shape or position, poor visibility or loss of retro-reflectivity	Time Limit: 48 hours
(ii)	Painting of km stone, railing parapets, crash barrier	Time Limit: As and when required/ once every year
(iii)	Damaged/missing road signs required	Time Limit: 7 (Seven) days

Confidential

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
	replacement	
(iv)	Damaged to road mark ups	Time Limit: 7 (Seven) days
(d)	**Street lighting**	
(i)	Any major failure of the system	Time Limit: 24 hours
(ii)	Faults and minor failures	Time Limit: 8 hours
(e)	**Trees and plantation**	
(i)	Obstruction in a minimum headroom of 5 m above carriageway or obstruction in visibility of road signs	Time Limit: 24 hours
(ii)	Removal of fallen trees from carriageway	Time Limit: 4 hours
(iii)	Deterioration in health of trees and bushes	Time Limit: Timely watering and treatment
(iv)	Trees and bushes requiring replacement	Time Limit: 30 days
(v)	Removal of vegetation affecting sight line and road structures	Time Limit: 15 (Fifteen) days
(f)	**Rest areas**	
(i)	Cleaning of toilets	Time Limit: Every 4 hours
(ii)	Defects in electrical, water and sanitary installations	Time Limit: 24 hours
(g)	**Toll Plazas**	
(h)	**Other Project Facilities and Approach roads**	
(i)	Damage in approach roads, pedestrian facilities, truck laybys, bus-bays, cattle crossings, (Traffic Aid Posts, Medical Aid Posts) and service road	Time Limit: 15 (Fifteen) days.
(ii)	Damaged vehicle or debris on the road	Time Limit: 4 hours
(iii)	Malfunctioning of the mobile crane	Time Limit: 4 hours
	Bridges	
(a)	**Superstructure**	*Cracks* Temporary measures Time Limit: Within 48 Hours Permanent measures Time Limit: Within 15 days
(b)	**Foundations**	Scouring and/or cavitation Time Limit: 15 (Fifteen) days
(c)	**Piers, abutments, return walls and wing walls**	*Cracks and damages including settlement and tilting*

S. No.	Nature of Defect / Deficiency	Timelines for Repair/ Rectification
		Time Limit: 30 (Thirty) days
(d)	**Bearings (metallic) of bridges**	*Deformation* Time Limit: 15 (Fifteen) days;
(e)	**Joints in bridges**	*Loosening and malfunctioning of joints* Time Limit: 15 (Fifteen) days
(f)	**Other items relating to Bridges**	
(i)	Deforming of pads in elastomeric bearings	Time Limit: 7 (Seven) days
(ii)	Gathering of dirt in bearings and joints; or clogging of spouts, weep holes and vent-holes	Time Limit: 3 (Three) days
(iii)	Damage or deterioration in kerbs, parapets, handrails and crash barriers	Time Limit: 3 (Three) days.
(iv)	Rain-cuts or erosion of banks of the side slopes of approaches	Time Limit: 7 (Fifteen) days
(v)	Damage to wearing coat	Time Limit: 15 (Fifteen) days
(vi)	Damage or deterioration in approach slabs, pitching, apron, toes, floor or guide bunds	Time Limit: 30 (Thirty) days.
(vii)	Growth of vegetation affecting the structure or obstructing the waterway	Time Limit: 15 (Fifteen) days

Observations on schedules B/D/E:

- Minimum CBR value was not specified in the Schedules. Hence, concessionaire has an opportunity to explore good borrow areas and utilize the soils with good CBR value.
- Schedule -D has specified that the design standards of the project shall be in accordance with 'Manual of Specifications and Standards for Four Laning of National Highways through Public Private Partnership'.
- In Schedule -E, it has specified the intervention of concessionaire when the roughness value exceeds 2200 mm/km.

11.4.2 Review of Pavement Design Report- YR 2018 (DBL)

Pavement Design Report (PDR) of 'Four Laning of Nalagampalli to AP/KN border of NH-4 from Km 172.000 to Km 219.687 in the state of Andhra Pradesh' describes the basis and design for pavement for main road. The existing road is with rigid pavement in main carriageway and flexible in service-roads.

a) Design life of Pavement

- Main carriageway was designed for 30 years.

b) Design traffic

- EPC Contractor has conducted the traffic surveys at km 171+590, km 198+200 and at km 201+000, where the design traffic (CVPD) of 4661, 4777 and 3287 is achieved respectively.
- A design traffic of 10msa is considered for the service roads.

Confidential

c) Design CBR

- In the design 6% CBR is adopted for main carriageway and 9% CBR is considered for service roads. However, as per the IRC:58-2015, the minimum design CBR is 8%.

d) Pavement Composition

As per the pavement design report, EPC contractor has divided the project stretch as two homogenous sections. The adopted pavement crust thickness is of main carriageway is presented in Table 11-8 and service road is presented in Table 11-9**.**

Table 11-8: Design thicknesses of Main carriageway

Description	From km 172+000 to km 219+687	
PQC Slab M40 Grade (mm)	270	
DLC (mm)	150	
GSB (mm)	150	
Dowel bar (Expansion & Contraction joint)		
Dia (mm)	32	
Length (mm)	500	
Spacing (mm)	300	
Deformed tie bars		
Slab Dimensions	3.5m x 4.0m	3.5m x 4.25m
Dia (mm)	12	12
Length (mm)	640	640
Spacing (mm)	580	540

Table 11-9: Design thicknesses of Service roads

Description	From km 172+000 to km 219+687 Thickness in mm
BC (mm)	30
DBM (mm)	50
WMM (mm)	250
GSB (mm)	200

Observations:

- Minimum CBR is not specified in agreement. Hence, contractor adopted a design CBR of 6% for Main carriageway and 9% CBR for service roads.
- The Rigid pavement was designed according to IRC:58-2015, and the design was cross-verified and found to be satisfactory.

A) Maintenance requirements as per TOT schedule-F

The concessionaire shall procure that at all times during the Operation Period, the Project Highway conforms to the maintenance requirements set forth in Schedule F (the "Maintenance Requirements")

Repair / Rectification of defect and deficiencies for four lane section specified in schedule-F with in time limit set are represented in Table 11-10**.**

Table 11-10: Maintenance requirement as per TOT schedules-F

a) Maintenance criteria for Flexible Pavement

Assert Type	Performance Parameter	Level of Service (LOS)		Frequency of Inspection	Tools/ Equipment	Standards and References for Inspection and Data Analysis	Time limit for Rectification/Repair	Maintenance Specification
		Desirable	Acceptable					
Flexible Pavement (Pavement of MCW, Service Road, approaches of Grade structure, approaches of connecting roads, slip roads, lay byes etc. as applicable)	Potholes	Nil	<0.1 % of area and subject to limit of 10 mm in depth	Daily	Length Measurement Unit like Scale, Tape, Odometer etc.	IRC:82-2015 and Distress Identification Manual for Long Term Pavement Performance Program, FHWA 2003	24-48 hours	MORT&H Specification 3004.2

b) Maintenance criteria for Rigid Pavement

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
1	Cracking					
	Single Discrete Cracks Not intersecting with any joint	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil not discernible	No Action	Not Applicable
			1	w < 0.2 mm. hair cracks		
			2	w = 0.2 - 0.5 mm, discernible from slow-moving car	Seal without delay	Full Depth Repair Dismantle and reconstruct affected portion - See Para 5.4, within 15 days
			3	w = 0.5 - 1.5 mm, discernible from fast-moving car		
			4	w = 1.5 - 3.0 mm	Seal and stitch if L > 1m. Within 7 days	
			5	w > 3 mm.		
2	Single Transverse (or Diagonal) Crack intersecting with one or more joints	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil, not discernible	No Action	
			1	w < 0.2 mm, hair cracks	Route and seal with epoxy. Within 7 days	Seal Staple within 15days & Cross stich
			2	w = 0.2 - 0.5 mm, discernible from slow Car		
			3	w = 0.5 - 3.0 mm, discernible from fast car	Route, Seal, and stitch, if L > 1m. Within 7 days	Full Depth Repair Dismantle and reconstruct affected portion with norms & Specifications - See Para 5.5 &refer chapter 9 of IRC: SP: 83-2018, within 15 days.
			4	w = 3.0 - 6.0 mm	Not applicable	Staple or Dowel Bar Retrofit within 15 days

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			5	w > 6 mm, usually associated with spalling, and/ or slab rocking under traffic	Not Applicable (full depth crack)	Staple or Dowel Bar Retrofit within 15 days
3	Single Longitudinal Crack intersecting with one or more joints	w = width of crack, L = length of crack, d = depth of crack, D = depth of slab	0	Nil, not discernible	No Action	
			1	w < 0.5 mm, discern able from slow moving vehicle	Seal and stich if L >l m within 7 days	Seal and Cross-Stich or Staple within 15 days
			2	w = 0.5 - 3.0 mm, discernible from fast vehicle		
			3	w = 3.0 - 6.0 mm	Staple, if L > 1m. Within 15 days	Partial Depth Repair with or without dowel bar retrofit within 15 days or
			4	w = 6.0 - 12.0 mm, usually associated with spalling	Not Applicable	
			5	w > 12 mm, usually associated with spalling, and/or slab rocking under traffic	Not Applicable, (Rocking/ Spalling indicates full depth crack)	Full Depth Repair Dismantle and reconstruct affected portion - See Fig 5.6 and Chapter 9 of IRC: SP:83-2018, within 15 days
4	Multiple Cracks intersecting with one or more joints or cracks	w = width of crack	0	Nil, not discernible	No Action	-
			1	w < 0.2 mm, hair cracks	Seal, and stitch if L > 1m. Within 15 days	
			2	w = 0.2 - 0.5 mm. discernible from slow vehicle		
			3	w = 0.5 - 3.0 mm, discernible from fast vehicle	Full depth repair within 15 days	Dismantle, Reinstate subbase, Reconstruct whole slab as per specification within 30 days
			4	w = 3.0 - 6.0 mm panel broken into 2 or 3 pieces		
			5	w > 6 mm and/or panel broken into more than 4 pieces		
5	Corner Break	w = width of crack, L = length of crack	0	Nil, not discernible	No Action	-
			1	w < 0.5 mm; only 1 corner broken	Seal with low viscosity epoxy to secure broken parts within 7 days	
			2	w < 1.5 mm; L < 0.6 m, only one corner broken		
			3	w < 1.5 mm; L < 0.6 m, two corners broken	Partial Depth (Refer Figure 8.3 of IRC: SP:83-2018) within 15 days	Full depth repair within 30 days.
			4	w > 1.5 mm; L > 0.6 m or three corners broken		
			5	three or four corners broken		Reinstate sub-base and reconstruct the slab as per norms & Specifications within 30 days.
6	Punchout (Applicable to Continuous Reinforced Concrete Pavement (CRCP) only)	w = width of crack, L = length (m/m2)	0	Nil, not discernible		
			1	w < 0.5 mm; L < 3 m/m2	Not Applicable, (Punch- out is full depth Distress)	Seal with low viscosity epoxy to secure broken parts Within 15 days
			2	either w > 0.5 mm or L < 3 m/m2		
			3	w > 1.5 mm and L < 3 m/m2		Full depth repair - Cut out and replace damaged area taking care not to damage reinforcement. Within 30 days.
			4	w > 3 mm, L < 3 m/m2 and deformation		

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
			5	w > 3 mm, L > 3 m/m2 and deformation		
Surface Defects						
7	Ravelling or Honeycomb type surface	r = area damaged surface / total surface of slab (%) h = maximum depth of damage	0	Nil, not discernible	Short Term No action.	Long Term Not Applicable
			1	r < 2 %	Local repair of areas damaged and liable to damage. Within 15 days	
			2	r = 2 - 10 %		
			3	r = 10-25%	Bonded Inlay 2 or 3 slabs if affecting. Within 30 days	
			4	r = 25 - 50 %		
			5	r > 50% and h > 25 mm	Reconstruct slabs 4 or more slabs if affecting. Within 30 days	
8	Scaling	r = damaged surface / total surface of slab (%) h = maximum depth of damage	0	Nil, not discernible	Short Term No action.	Long Term Not Applicable
			1	r < 2 %	Local repair of areas damaged and liable to be damaged. Within 7 days	
			2	r = 2 - 10 %		
			3	r = 10 - 20%	Bonded Inlay Within 15 days	
			4	r = 20 - 30 %		
			5	r > 30 % and h > 25 mm	Reconstruct slab Within 30 days	
9	Polished Surface/ Glazing	t = texture depth, sand patch test	0		No action.	Not Applicable
			1	t > 1 mm		
			2	t = 1 - 0.6 mm	Monitor rate of deterioration	
			3	t = 0.6 - 0.3 mm		
			4	t = 0.3 - 0.1 mm		
			5	t < 0.1 mm	Diamond Grinding if affecting 50% or more slabs in a continuous stretch of minimum 5 km. Within 30 days	
10	Popout (Small Hole), Pothole Refer Para 8.4	n = number / m2,	0	d < 50 mm; h < 25 mm; n < 1 per 5 m2	No action.	Not Applicable
		d = diameter,	1	d = 50 - 100 mm: h < 50 mm; n < 1 per 5 m2	Partial depth repair 65 mm deep Within 15 days	
		h = maximum depth	2	d = 50 - 100 mm; h > 50 mm; n < 1 per 5 m2		
			3	d = 100 - 300 mm; h < 100 mm n < 1 per 5 m2	Partial depth repair 110mm i.e 10 mm more than the depth of the hole. Within 30 days	
			4	d = 100 - 300 mm; h > 100 mm; n < 1 per 5 m2		
			5	d > 300 mm; h > 100 mm: n > 1 per 5 m2	Full depth repair. Within 30 days	
Joint Defect						

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
11	Joint Seal Defects	loss or damage L = Length as % total joint length	0	Difficult to discern.	Short Term No action.	Long Term Not Applicable
			1	Discernible, L< 25% but of little immediate consequence with regard to ingress of water or trapping incompressible material.	Clean joint, inspect later.	
			3	Notable. L > 25% insufficient protection against ingress of water and trapping incompressible material.	Clean and reapply sealant in selected locations. Within 7 days	
			5	Severe; w > 3 mm negligible protection against ingress of water and trapping incompressible material.	Clean, widen and reseal the joint. Within 7 days	
12	Spalling of Joints	w = width on either side of the joint, L = length of spalled portion (as % joint length)	0	Nil, not discernible	No action.	Not Applicable
			1	w < 10 mm	Apply low viscosity epoxy resin/ mortar in cracked portion Within 7 days	
			2	w = 10 - 20 mm, L < 25%		
			3	w = 20 - 40 mm, L > 25%	Partial Depth Repair Within 15 days	
			4	w = 40 - 80 mm, L > 25%	30-50 mm deep, h= w + 20% of w Within 30 days	
			5	w > 80 mm, and L > 25%	50 - 100 mm deep repair. H = w + 20% of w Within 30 days	
13	Faulting (or Stepping) in Cracks or Joints	f = difference of level	0	not discernible, < 1 mm	No action.	
			1	f < 3 mm		
			2	f = 3 - 6 mm	Determine cause and observe	
			3	f = 6 - 12 mm	Diamond Grinding within 15 days	
			4	f= 12 - 18 mm	Raise sunken slab.	
			5	f> 18 mm	Strengthen subgrade and sub-base by grouting, within 30 days	
14	Blowup or buckling	h = vertical displacement from normal profile	0	Nil, not discernible	No action.	
			1	h < 6 mm		
			2	h = 6 - 12 mm	Install Signs to Warn Traffic Within 24 hours	
			3	h = 12 - 25 mm		
			4	h > 25 mm	Full Depth Repair Within 30 days	
			5	shattered slabs, i.e 4 or more pieces	Replace broken slabs. Within 30 days	

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
15	Depression	h = negative vertical displacement from normal profile L =length	0	Not discernible, h < 5 mm	No action.	
			1	h = 5 - 15 mm		
			2	h = 15-30 mm, Nos <20% joints	Install Signs to Warn Traffic within 24 hours	
			3	h = 30 - 50 mm		
			4	h > 50 mm or > 20% joints	Strengthen subgrade. Reinstate pavement at normal level if length L < 20 m. within 30 days	
			5	h > 100 mm		
16	Heave	h = positive vertical displacement from normal profile, L = length	0	Not discernible. h < 5 mm	No action.	
			1	h = 5 - 15 mm	Follow up.	
			2	h = 15 - 30 mm, Nos <20% joints	Install Signs to Warn Traffic within 24 hours	
			3	h = 30 - 50 mm		
			4	h > 50 mm or > 20% joints	Stabilise subgrade. Reinstate pavement at normal level within 30 days	
			5	h > 100 mm		
17	Bump	h = vertical displacement from normal profile	0	h < 4 mm	No action.	
			1	h = 4 - 7 mm	Grind, in case of new construction within 7 days	
			3	h = 7 - 15 mm	Grind in case of Ongoing maintenance within 15 days	
			5	h > 15 mm		
18	Lane to Shoulder Dropoff	f = difference of level	0	Nil, not discernible < 3mm	No action.	-
			1	f = 3 - 10 mm	Spot repair of shoulder. Within 3 days	-
			2	f = 10 - 25 mm		-
			3	f = 25 - 50 mm	Fill up shoulder Within 7 days	-
			4	f = 50 - 75 mm		For any 100 m stretch Reconstruct shoulder, if affecting 25% or more of stretch Within 30 days
			5	f > 75 mm		
Drainage						

S No.	Type of Distress	Measured Parameter	Degree of Severity	Assessment Rating	Repair Action	
					For the case d < D/2	For the case d > D/2
19	Pumping	Quantity of fines and water expelled through open joints and cracks Nos/100 m stretch	0	not discernible	No Action	
			1 to 2	Slight/occasional Nos < 10%	Repair cracks and joints without delay	Inspect and repair sub-drainage at distressed sections and upstream.
			3 to 4	Appreciable/ Frequent 10-25%	Lift or jack slab within 30 days	
			5	Abundant, crack development >25%	Repair distressed pavement sections. Strengthen subgrade and subbase. Replace slab. Within 30 days	
20	Ponding	Ponding on slabs due to blockage of drains	0-2	No discernible problem	No action	
			3 to 4	Blockages observed in drains, but water flowing	Clean drains etc., follow up, deep grooving in transverse direction to remove water, within 7 days	Action required to stop water damaging foundation within 15 days.
			5	Ponding accumulation of water observed	Deep grooving in transverse direction to remove water-hydro planning within 7 days	

11.5 Traffic Survey and Analysis

7 days axle load survey is conducted at the existing toll plaza location. All other required input parameters like AADT & growth rates are provided by the client. For the design traffic was assed till the end of concessionaire period. All the calculations and analysis are presented in Chapter 10. The summary of VDF and design MSA is presented below.

The VDF values obtained based on the 7 days axle load survey is presented below table.

Location/ Vehicle Type		BUS	LCV	2axle	3axle	MAV
NH-4: (Mahasamudram Toll Plaza-164+250)	LHS	1.085	0.633	2.901	4.402	10.017
	RHS	1.080	0.688	2.598	4.926	8.115

11.6 Immediate Repairs

Immediate repair of flexible/ rigid pavement is recommended based on the un-acceptable condition of the pavement surface and roughness. For 4-lane section a roughness>2400mm/km is considered as limiting value.

11.6.1 Immediate repair in 4-lane section (AP/TN Border to AP/KN Border)

a) AP/TN Border to Nalagampalli (km 134+890 to km 172+000)

According to the article of 14 of SD infra-EPC agreement the maintenance period is 10years from date of completion certificate. Hence, the section from km 134+890 to km 172+000 is not considered for any immediate repairs.

b) Nalagampalli to AP/KN Border (km 172+000 to km 219+687)

According to the article of 17 of DBL-EPC agreement the Defect Liability Period is 4 years from date of completion certificate (achieved in YR 2019). DLP period of Project ii ended on 30 July 2023 however it is extended till rectification of repairs are completed (which is estimated as 31 Jan 2025).

Functional evaluation of pavement is carried out as per the NSV equipment to assess the present condition of the road and it is found that a few distresses are observed on pavement and also at some locations roughness (BI) exceeding the limiting value (>2400mm/km) is considered for diamond grinding and the details are listed in Table 11-11.

The structural evaluation of the pavement is carried out as per the FWD survey. Based on the %air voids few slabs are requires grouting. The quantities are tabulated from Table 11-12 and Table 11-13 in LHS and RHS direction respectively. However, the detailed roughness data and condition data was presented in annexures of Chapter 10.

Existing EPC Contractor will rectify roughness, voids under panels and panel replacement works etc. of pavement before handover of the project to TOT Concessionaire however for safer side some provisional amount is kept for repairs whenever required.

Table 11-11: Locations recommended for Diamond grinding (BI>2400mm/km)

S. No.	Chainage (km)		Side	Lane	Avg. BI (mm/km)	
	From	To			Length (km)	Avg. BI (mm/km)
1	173.000	174.000	LHS	Inner	1.000	3023.9
2	175.000	176.000	LHS	Inner	1.000	2406.6

12. COST ESTIMATE

12.1 General

Cost Estimates have been worked out for expenses on Immediate Works (CAPEX) and expenses on operations and maintenance (OPEX). The cost estimates have been worked out at present rates considering 2024-25 as the base year.

12.2 Assumptions

The cost estimates are based on the following assumptions:

(a) Bitumen has been assumed to be sourced from IOCL Chennai Refinery. The distance (to & fro) from the midpoint of Project Highway is taken as 182 km. Modified Bitumen and VG-40 grade bitumen is considered in our cost estimate.

(b) Hire charges for the Machinery have been considered in accordance with CSR Andhra Pradesh 2023-24 and escalation have been considered 5% every year. Rates for various items of works have been arrived at based on 'Standard Data Book for Analysis of Rates' published by MORT&H.

(c) Manpower rates have been taken from Minimum Wages for Office of the Labour commissioner Odisha effective from 1 October 2024.

(d) Material Rates are obtained from CSR Andhra Pradesh 2023-24 and escalation have been considered 5% every year.

(e) Sand and Aggregate are considered to be sourced from the nearest quarry located on project highway at approximately 30 km form the mid-point of Project Highway.

(f) Cement is considered to be procured from the nearest local market.

(g) Rate of steel is taken from SAIL December-2024

(h) Some of the rates are based on Consultant's experience on the similar ongoing projects in adjacent locations.

(i) Overheads and profits have been considered based on MORT&H Standard Data Book. Applicable taxes have been considered in the Rate Analysis.

12.3 CAPEX

Details of CAPEX are worked out under the following categories.

- Immediate maintenance / defect rectification.
- O&M maintenance

12.3.1 Immediate Maintenance

As per site investigation we have considered for immediate maintenance. A few items noticed are covered under routine maintenance.

However, it is to be noted that some of the equipment installed at Mahasamudram Toll Plaza are quite old and will require replacement for proper functioning during O&M period.

12.4 O&M Estimates

Operation and Maintenance estimates have been worked out under the following heads:

(a) Preventive Maintenance / Routine Maintenance

(b) Operations

(c) Major Maintenance

12.4.1 Routine Maintenance - Categories

Routine Maintenance covers all activities required to maintain the road in traffic worthy condition to provide desired comforts to the road users. Routine Maintenance can be classified into following three categories:

(a) Routine or day to day maintenance

(b) Pre-monsoon maintenance

(c) Post monsoon maintenance

12.4.1.1 Routine or day to day maintenance

Routine maintenance is required continuously on the road stretch and structures and covers the following activities:

(a) Cleaning of the Road

(b) Pavement maintenance to include crack sealing and pothole repairs

(c) Shoulder repairs

(d) Maintenance of avenue plantation, horticulture, and median plantation

(e) Maintenance of signage, gantry boards and road furniture.

(f) Maintenance of culverts, bridge drainage spouts, expansion joints, side slopes and verges

(g) Surface cleaning, dust or vegetation control, sand removal from structures

(h) Reporting any damage caused to bridges by traffic accidents

(i) Maintenance of guard rails and crash barrier etc.

12.4.1.2 Pre-monsoon Maintenance

This is carried out prior to the monsoons and includes the following:

(a) Inspection of channels/streams to ensure that there are no accumulation of logs, trees and other debris in the vicinity of piers and abutments.

(b) Cleaning of roadside / median drains.

(c) Removal of vegetation growth on sub structures.

(d) Cleaning of culverts.

12.4.1.3 Post-monsoon Maintenance

This includes maintenance that is carried out immediately after the monsoons and includes the following:

(a) Inspection of all structures for any damages and taking appropriate actions.

(b) Cleaning of roadside drains, culverts etc.

12.5 Operations Estimates

12.5.1 Toll Plaza

This cost includes the following:

(a) Maintenance of Toll Plaza building, booths, and tolling equipment.

(b) Security of the booths, lanes, and toll plazas.

(c) Collection of toll and handling of cash till bank deposit.

(d) Provision of IT in-charge, IT supervisor, other staff at Toll Plaza location.

(e) Administration and essential facilities for the staff and road users.

(f) Maintenance of Toll Plaza equipment and replacement of expendable and short life items.

(g) Electricity cost including standby generator.

12.5.2 Highway

This cost includes the following:

(a) Providing one patrolling vehicle including operating cost for round-the-clock patrolling of the Project Highway.

(b) Providing of one ambulance at Toll Plaza for accident victims.

(c) Provision of one crane with 30 MT and tow truck facilities for clearing the highway and evacuating the breakdown vehicles at Toll Plaza.

(d) Provision of one Broomer for cleaning of the highway.

(e) Expenditure on medical aid and provision of nursing staff.

(f) Cost of tests and surveys.

12.5.3 Energy

Streetlight luminaries, high mast lights with electricity tariff, provision of standby Genset are considered in the cost estimate.

12.5.4 Miscellaneous

(a) We have taken IE cost as per Industry norms.

(b) Insurance expenses have been taken as per Industry norms.

12.6 Summary of Cost on Initial Improvement Works

Summary of Cost on Initial Improvement Works are given in Table 12-1.

Table 12-1: Initial Improvement Works Cost

S. No.	Particulars	Cost
		NHIT
1	**Bituminous and Rigid Pavement Courses**	5.17
2	**R&R of Bridges**	0.04
3	**R&R of Culverts**	0.02
4	**RE Wall Bulging**	0.87
5	**Revalidation Survey**	0.25
6	**Restoration/Improvement works of Toll Plaza**	6.45
7	**Approach slab cost (Settled)**	0.32
8	**Truck lay bye (Sewage disposal system)**	0.10

S. No.	Particulars	Cost
		NHIT
9	**Median & Avenue plantation**	0.16
10	**Installation of Damaged Sign Board**	0.24
11	**Thermoplastic/Transverse Bar Marking**	3.21
12	**Installation of 5th, KM, HM, Boundary Stone**	0.08
13	**Installation of Antiglare Screen**	0.02
14	**Painting of Kerb Stone**	0.14
	(A) Civil Cost	**17.06**
	GST 18 % on (A)	3.07
	(B) Total Civil Cost including GST 18%	**20.13**

12.7 Year Wise Summary of CAPEX & OPEX

Year-wise summary of CAPEX & OPEX for the balance concession period till FY 2044-45 is estimated and presented in Table 12-2.

Table 12-2: Summary of Year wise CAPEX & OPEX (km 134+890 to 219+689)

Sl. No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW, SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)

Note: The costs for Admin, SPV, IE, and other office expenses are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

DISCLAIMER

In preparing this report, Ramboll India Private Limited relied, in whole or in part, on data and information provided by Client, which information has not been independently verified by Ramboll and which Ramboll has assumed to be accurate, complete, reliable, and current. Therefore, while Ramboll has utilized its best efforts in preparing this Report, Ramboll does not warrant or guarantee the conclusions set forth in this Report which are dependent or based upon data, information, or statements supplied by third parties or the client.

This Report is intended for the Client's sole and exclusive use and is not for the benefit of any third party and may not be distributed to, disclosed in any form to, used by, or relied upon by, any third party, except as agreed between the Parties, without prior written consent of Ramboll, which consent may be withheld in its sole discretion.

Use of this Report or any information contained herein, if by any party other than the Client, shall be at the sole risk of such party and shall constitute a release and agreement by such party to defend and indemnify Ramboll and its officers, employees from and against any liability for direct, indirect, incidental, consequential or special loss or damage or other liability of any nature arising from its use of the Report or reliance upon any of its content. To the maximum extent permitted by law, such release from and indemnification against liability shall apply in contract, tort (including negligence), strict liability, or any other theory of liability.

NATIONAL HIGHWAYS INFRA INVESTMENT MANAGERS PRIVATE LIMITED

FINAL REPORT

Tolling, Operation, Maintenance and Transfer of Four-Lane Bareilly-Sitapur Section of NH-30 (old NH-24) from km 262 to km 419.590 in the State of Uttar Pradesh

SAMARTH INFRAENGG Technocrats Private Limited

February 2025

CHAPTER 1. INTRODUCTION

1.1 INTRODUCTION

National Highways Authority of India ("NHAI"/ "Authority") is an autonomous body of the Government of India ("GoI") under the Ministry of Road Transport and Highways ("MoRTH") and was constituted on June 15, 1989 by an Act of Parliament titled - The National Highways Authority of India Act, 1988 ("NHAI Act"). NHAI was operationalized in February 1995 with the appointment of full time Chairman and other Members. The functioning of NHAI is governed by NHAI Act and rules, and regulations framed thereunder.

NHAI has set up an Infrastructure Investment Trust Namely **National Highways Infra Trust ("InvIT")** and is acting as its Sponsor to the said InvIT.

National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT. Accordingly, with refence to Letter of Empanelment, (LOE ref: NHIIMPL/I&A/TC/2022/04 dtd 03 Nov 2022) by Investment Manager the following works are awarded to M/s SAMARTH INFRAENGG Technocrats Pvt Ltd vide their letter ref: NHIIMPL/FY2024-25/RFP/Technical Consultant/LOA/04 dated 16.08.2024.

Project	Length (km)	No. of Plazas
Muzaffarnagar – Haridwar (Uttarakhand) From km 130+560 to Km 209+120	78.560	2 (TP-1, Chhapar TP-2, Bahadrabad)
Bareilly-Sitapur (Uttar Pradesh) **From km 262 to km 419.590**	**157.59**	**2** (TP-1, Faridpur TP-2, Maigalgunj)

Presently the project stretch is under Operation and Maintenance stage and the fee is being collected from Toll Plaza-1 at Km 266.900 near Faridpur village for a length of 78.800 km and Toll Plaza-2 at km 372.160 Maigalgunj Village for a length of 78.790 km.

The concession period is 20 years commencing from Appointed Date for TOT Concessionaire to demand and collect appropriate Fee, operate, manage and maintain the Project Highway.

M/s SAMARTH INFRAENGG Technocrats Pvt Ltd has undertaken Technical Due Diligence study for the said project to estimate initial capex including improvements and immediate requirements for repair & rehabilitation of various elements of project highway and also to make an assessment of Major maintenance requirements and Operation & Maintenance costs for entire concession period.

This report highlights the findings of "Technical Due Diligence Services of Four-Lane Bareilly-Sitapur Section of NH-24 (new NH-30) from km 262 to km 419.590 in the State of Uttar Pradesh.

1.2 PROJECT AT A GLANCE

Project road is a four-lane divided Project Highway starts at Km 262.000 and ends at Km 419.590 of NH-30. The total length of the project highway is 157.590 km.

National Highway 30 (NH 30) NH 30 connects Sitarganj in Uttarakhand with Ibrahimpatnam, Vijayawada in Andhra Pradesh. The total length of this highway is 1,984.3 km. The highway passes through the states Uttarakhand, Chhattisgarh, Madhya Pradesh, Uttar Pradesh, Telangana & Andhra Pradesh.

The Project Road is a part NH-30 falling in Uttar Pradesh State. The Highway connects several cities and town such as Bareilly, Faridpur, Tilhar, Railway Settlement Roza, Jang Bahadur Ganj, Maigalganj, Maholi, Sitapur in the state of Uttar Pradesh.

Map Showing the Project Corridor

The start and end of the project chainage system with respect to CA and Site are as presented below.

Table 1: Project Corridor Chainage System

Referencing system	Start Point (km)	End Point (km)	Length (km)	Remarks
As per CA Chainage	262.000	419.590	157.590	NH-30
As per Site	262.000	419.590	157.590	NH-30

Photograph showing the start and end point of the project road are presented below:

	
A view of the Start Point of Project Road at km 262.000	**A view of the End Point of Project Road at km 419.590**

1.3 OBJECTIVE AND SCOPE OF SERVICES

The main objective of the study is to review the current status of project corridor including details pertaining to its construction and maintenance and to provide requisite technical information for processing the acquisition of said project by client. Objective of the study can be broadly defined with following tasks:

A) Review of Project Document

- ✓ Review of DPRs/ draft CA/ Schedules pertaining to the scope of work and understand the Sch-B requirements for improvement works for the assessment of capex and Opex during the concession period.
- ✓ Review of As-built drawings and Designs
- ✓ Collection of relevant records and documents and review of same
- ✓ Review of correspondences with IE, if any, on technical issues.
- ✓ Review of EPC, Operation, Maintenance and Systems Contracts
- ✓ Review of Progress Reports, if any Prepare head of terms (highlight the key commercial, technical terms of the contracts) for the reviewed Contracts - EPC, O&M, Asset Management, Operational Agreements (if any), CAs (key technical items) etc.
- ✓ Review of Asset Management Contracts to understand the maintenance of asset from the Concession agreement perspective
- ✓ Review the technical approvals / consents from IE or another agency required under the CA

B) Field Investigations

- ✓ Undertake detailed reconnaissance to appreciate the project corridor characteristics
- ✓ Undertake field investigations to collect first-hand information on present condition of project road and establish the requirements for rehabilitation and up gradation
- ✓ Carrying out inventory and condition surveys for Project Road;
- ✓ Carrying out Inventory and detailed condition surveys for bridges & cross drainage structures (along with Photographs thereof) including recommendation for either strengthening/rehabilitation or reconstruction; Identify requirements of NDT tests if any (to be executed if required and commissioned by client with separate mutually agreed payments).

- ✓ For Major Structures (length of structure>60m), detailed Visual inspection shall be undertaken with MBIU.
- ✓ Video-graphic survey of the entire Project corridor/s.
- ✓ Axle load survey for 24 Hrs. + 7days in both directions of traffic at toll plaza location (7-day traffic count to be provided by client).
- ✓ Test pits required @ every 5 km interval (staggered) along the Project corridor.
- ✓ Carrying out necessary laboratory tests to determine the CBR value of the sub grade materials.
- ✓ Carrying out deflection test by Falling Weight Deflect meter (FWD) for existing pavement as per relevant IRC code at the rate of 5 points in km in each direction making it 10 points for both directions.
- ✓ Carrying out Roughness Survey on each lane of Project Corridors using NSV Survey.
- ✓ Availability of construction materials.
- ✓ Assess drainage adequacy: Review of available hydrological reports and assess the availability and condition of existing road side drainage along the corridors.
- ✓ The outputs of investigations are basically used to identify the strengthening requirements for project sections and also used to form the inputs for deterioration modelling.

C) Validation of Executed Works and Assessment of Improvement Works

- ✓ Validation of executed works with respect to Schedule A of the CA by physical verification at site
- ✓ Assess the present status of the projects with relevant standards and confirm that works are meeting the requirements and have been accepted by the authorities.
- ✓ Understand the scope requirements for Improvement works from the Sch-B of the CA
- ✓ Where project stretch / structures / service roads / ancillary works are pending and if not covered in the Sch-B scope of the draft CA, then assessment of details relating to land acquisition, approvals, timelines for completion, etc. along with cost forecast
- ✓ Cost estimates for any missing items and all works included in the Sch-B of the CA
- ✓ Make an assessment of any risks associated with already executed works

D) Quality Audit

- ✓ Review quality of construction based on available data, available design and drawings.
- ✓ Review of Quality of materials from Laboratory testing for aggregates & soil
- ✓ Check compaction and quality of subgrade material used vide test pits
- ✓ Visual inspection of bridges for any visible distress and anomalies. Identify requirements of NDT testing based on same.
- ✓ Examine Expansion joints and bridge bearings condition and assess requirements for replacements
- ✓ Shall be examining expansion joints visually to the extent possible. Shall use high binoculars/ pictures from accessible points. Shall review all photographs closely and come to a conclusion on same.
- ✓ Identify any critical issues / red flags in relation to the quality or condition of the projects; Identify any structural integrity issues that require rectification / re-mediation;

E) Rehabilitation Plans & Designs

- ✓ Check the adequacy of designs carried out for execution based on available reports
- ✓ Undertake designs for immediate rehabilitation requirements based on CA specifications using FWD data and condition assessment surveys
- ✓ Assess the requirements of rehabilitation to bridges/CD structures by structure based on visual inspections and compare with Sch-B requirements of the draft CA

- ✓ Assess the requirements including BOQ and cost estimates of repair and replacements for various elements and ancillary works

F) Major Maintenance

- ✓ Review of current maintenance system.
- ✓ Preparation of the maintenance costs to be incurred over the period of the concession keeping in mind the maintenance requirements of the Concession Agreement.
- ✓ Detailed assessment of maintenance cycles for pavements using HDM4 analysis and estimation of maintenance cost for the concession period
- ✓ To understand the current maintenance strategy for each of the project and review the BOQ to be provided by the DPR consultant for adequacy in relation to Major Maintenance work of Highways, structures, Road Furniture and other site-specific requirements as per respective CA
- ✓ Minor maintenance will be included in routine maintenance and estimated year wise based on assumed percentages based on present condition.
- ✓ Identify any impacts on revenue due to Major Maintenance.
- ✓ Maintenance requirements for approaches to Underpass forming part of CA would also be assessed.

G) Cost of Improvement Works and Operations

- ✓ Preparation of O&M cost for the concession period.
- ✓ Assess the adequacy of costs assumed in the vendor model are adequate to meet the major maintenance, stage construction and routine maintenance requirements.
- ✓ Independently develop a bottom-up forecast of Operating expenses for project, with detailed break-up of each type of operating expense, along with underlying assumptions

H) BOQ and Cost Estimates

- ✓ Preparation of BOQ & Cost for Improvement works as per Sch-B of the CA
- ✓ Preparation of BOQ and Costs for Major Maintenance
- ✓ Preparation of BOQ and cost for Routine maintenance and Route Patrolling
- ✓ Preparation of BOQ and Cost for Operations
- ✓ Preparation of year-by-year O&M cost
- ✓ The costs would be provided till the end of the concession period including any expected extension of Concession periods as informed by the Client.
- ✓ Benchmarking of costs against other similar Indian toll roads where available (using available data)
- ✓ Historical trend analysis on the maintenance program based on the existing pavement condition and review of all relevant maintenance plans/ documents of NHAI or its concessionaires or contractors.
- ✓ Review and comment on the current organizational structure from an O&M perspective at each asset. Also suggest an indicative organization structure based on project / CA requirements

1.4 DATA COLLECTION AND REVIEW

In brief, following were covered

- ✓ Review of Concession Agreement & Schedules,
- ✓ Review of Detailed Project Report prepared by NHAI
- ✓ Review of As-built drawings, Plan and profiles, Structural drawings & Detailed Project Reports and Designs where available

- ✓ Review of O&M costs as presented in DPR reports
- ✓ Review of MPR provided by NHAI
- ✓ Review of Latest NSV and FWD data provided by PIU, NHAI

1.5 KEY PROJECT DETAILS

National Highways Authority of India (NHAI) terminated M/s ERA Infra Engineering Limited's contract for the Bareilly-Sitapur highway project NH-24 (now NH-30) largely due to extensive delays and project performance issues. Originally this project was awarded in 2011, and intended for completion within a few years but continued to face setbacks due to funding challenges, execution delays, and financial troubles within Era Infra. As a result, construction lagged well beyond the scheduled deadline, leading NHAI to cancel the contract and seek alternative avenues to complete the project efficiently. Accordingly, Era Infra's contract for the Bareilly-Sitapur project was terminated in the year 2019 Following ERA's removal, NHAI resumed and reissued parts of the project for bidding to other contractors to ensure completion.

Thus, the balance works were awarded in the year 2019 to consortium comprising of Raj Corporation Ltd., Siddarth Constructions, and Jagdish Saran with Raj Corporation as the lead member on item rate contract.

Following Table highlights the important timelines of the project corridor at a glance:

Type of work	**Balance work**	**ROB at Km. 314.630**	**3No: MJB/MNB 1 no-VUP, 1No.2Lane Cross FO**	**Overlay at Intermittent location**
Concessionaire/ Contractor:	**JV of Raj Corporation Ltd.**	**M/S Kaluwala Construction Private Ltd**	**M/S Jagadish Saran**	**M/S Atcon India Limited**
Contract Type:	**Bill of Quantity**	**EPC**	**EPC mode**	**Bill of Quantity (Item rate, Single% basis)**
LOA:	15.10.2019	20.06.2022	18.12.2023	19.01.2024
Agreement Date:	21.11.2019	30.08.2022	24.01.2024	25.01.2024
Appointed Date:			23.02.2024	12.02.2024
Actual Start date:	17.12.2019	24.10.2022	23.02.2024	12.02.2024
Schedule Completion date:	08.03.2024	23.10.2023		
EOT:	30.08.2024 But As per Sch-A (pg A-5) completed 12.04.2023			
Likely Completion:	31.08.2024	09.05.2023 (completed)	22.02.2025	11.02.2025
Maintenance period:	5 years	10 years	5 years	DLP: 5 years

Construction Activities observed at these locations during site visit by the respective contractors respectively

Under Constructions								
S.no	From	To	Package	Length	Type	Side	Remarks	Contractor
1	327.250	327.700	PKG-1	450	MJB	RHS	Not yet Completed	M/S Jagdish Saran
2	411.000	411.300	PKG-1	300	MNB	RHS	Not yet Completed	M/S Jagdish Saran
3	413.830	413.830	PKG-1	0	Cross Flyover		Not yet Completed	M/S Jagdish Saran
4	415.800	416.000	PKG-1	200	MNB	RHS	Not yet Completed	M/S Jagdish Saran
5	416.300	417.050	PKG-1	750	VUP	BHS	BC Laying in Progress	M/S Jagdish Saran

**Note:*

1. Ongoing Mill & Overlay works of DBM were observed on site by M/S Atcon Pvt Ltd with varying thicknesses as per FWD report approved by the Supervision Consultant and Authority. And BC overlay works are yet to be started.

1.6 O&M REQUIREMENTS

Few important O&M requirements as per schedules/manuals are described as below.

- ✓ Applicable Manual is IRC: SP:84-2019
- ✓ Applicable Schedule for O&M period is Schedule-F.
- ✓ Schedule-F, performance parameters indicate the desirable limit of Roughness values should not exceed 2000 mm/km, whereas its acceptable limits Is 2400 mm/km and needs to be corrected within 180 days. Roughness Surveys shall be carried out Bi-Annually.
- ✓ Schedule-F, performance parameters indicate the FWD survey shall be carried out Annually as per IRC: 115-2014 for flexible pavement and needs to be corrected within 180 days
- ✓ No specific Handing Over (Divestment) requirements are mentioned under CA. It shall be same as Schedule-F.

1.7 KEY OBSERVATIONS

General project Key observations are as presented below.

- Majority of Length is being overlaid with DBM and BC by M/S ATCON India Pvt Ltd. The recently laid DBM appears to be ravelled at some locations with coarser texture and big size aggregates in the mix. BC shall be laid to avoid further damage to DBM.
- Old Surface, where overlay is not done exhibits severe Ravelling, Dry Surface with cracks mostly in inner lane of the project. Whitish surface with stripping is also noticed Majority of approaches and urban areas where not overlaid are in a poor shape.
- Milling and Patching is mostly done for a width of 5m on median side which indicates more damage is observed in inner lanes.
- Rutting and shoving is observed on approaches of grade separators. Mostly these locations are milled and patched.

- More traffic is observed between Bareilly-Shajahanpur than Shajahanpur-Sitapur. It seems traffic loading is less in Section 2.
- Dense vegetation is seen on the slope at approaches of embankments. Geocell is also used on the slope for slope protection. However, there are slope erosions at several places along the corridor. It is likely to have erosions on such type of soils (Sandy Silts).
- Vegetation is also seen on the median and earthen shoulders all along the corridor. It is required to be cleaned as part of Routine maintenance.
- Long length of narrow median without any crash barrier is noticed along the corridor. Antiglare is also not provided. Natural vegetation grown in median is helping against light glare. This narrow median location requires safety improvements.
- Construction finish of RE walls and crash barriers are not up to the mark as line and level is not maintained properly. Poor Finish at New ROB at KM 413. Crash barrier appears to be bent on RHS side without line and Level, RE wall Bulging observed on RHS side.
- ROB at 334: Poor finish of Crash barrier/Median Drain, Rutting/Undulations in Approach. RE wall started to bulge.
- RE wall bulging is observed at some the structures. Major Bulging is noticed at new ROB at Km 403 on RHS A2 side. External reinforced wall is under construction at this location to protect RE Wall at the bottom.
- RE wall bulging at ROB KM 334.245- 334.310, 8 m height on LHS A1. Cracking/Crushing of panels also noted. Water stagnation adjacent RE wall on RHS side A2.
- Soil Nailing/RE wall bulging noted at VUP approach at Km 396 near Abutments on LHS&RHS
- RE wall Bulged/Damaged at ROB approach A2 at Km 403. External RCC wall is done by side of RE wall as protection/Support
- Mild Bulging of RE wall at approach RHS A1/A2 Km 407/2.
- RE wall at ROB@ km 413 RHS side started bulging.
- Low height crash barriers were constructed at several approaches. Pipe railing may be required to be installed on crash barriers.
- Water stagnation is observed at several super elevated (Curved) sections indicating poor drainage facilities. It is required to provide median drain at these locations to avoid ponding.
- Temple in Median at Km 300 & Km 412 & Tree on Paved Shoulder at Km 380 (RHS) safety hazards.
- Kerbed road is observed on approaches to Major Bridges where high embankment exist Chutes provided on slope require local pitching to avoid erosion.
- Narrow Approach (only 7 m) at Km 277-278 with narrow median. No crash barrier in narrow median. Unsafe approach safety hazard.
- Culvert Parapet at Km 281.250 has a Narrow carriageway posing Safety Hazard.
- Major Bridges under construction at Km 416, KM 411 in finishing stages. It may require 3-4 months for completion.

- Fencing Adjacent to Paved Shoulder near Bareilly (Km 268) for avenue plantation. This is posing Safety Hazard.
- KM 269-268 RHS: Slope Erosion observed.
- KM 282-283: Partial wall on Sloped Embankment Broken/Failed. Slope Failure may happen.
- KM 288-289: Both sides Approach slopes are noticed erosion. Geocell used but it is Damaged.
- KM 303-304 RHS: Approach slopes are noticed erosion. Needs chutes and protection
- Slope Erosion is noticed on Approach at 332/400 on LHS
- Slope erosion noticed on Approach at KM 365.3 on RHS Side for 10 m on A 1 side
- KM 369/3 on LHS Tree uprooted and formed big cavity towards Paved shoulder side.
- KM 376-377: Rain cuts & Slope erosion are noticed
- Rain Cut in Km 385 and also noticed Slope Erosion.
- 389.7-390.8: High Embankment with chutes at MJB approach, Require local protection for Chutes.
- Slope erosion on RHS at KM 392/600 RHS RAP Poured Need Chutes.
- Slope Erosion 394-391 at frequent intervals, Rain Cuts RHS
- During the MBIU surveys, at couple of locations damaged bearings are observed. These need to be replaced.
- MJB at km.289+250 LHS - Superstructure in span-2 slided approximately 100mm towards the shoulder side on pier P1 and all the bearings were damaged. Realignment by lifting of superstructure and bearings replacement is required as an immediate action to safeguard the structure from further damage.

CHAPTER 2. SURVEYS AND INVESTIGATIONS

2.1 INTRODUCTION

The main objective of undertaking Surveys and Investigations is to appreciate the existing engineering features along the project corridor and to understand the present condition of the various elements of the project road and to prepare required inputs for various rehabilitation and maintenance strategies.

Following Survey and Investigations have been undertaken as a part of study with an objective to understand the present condition of the road and there by access the quality of construction and as well to prepare requisite rehabilitation/corrective designs where necessary.

- Road Inventory Surveys
- Pavement Condition using NSV
- FWD Surveys
- Roughness Surveys using NSV
- Pavement Composition surveys (Test Pits)
- Subgrade Investigations & Laboratory testing
- Material Investigations
- Axle Load Survey
- Structure Inventory and Condition Surveys

These surveys have been performed in the month of August/September 2024.

2.2 ROAD INVENTORY

The project corridor features a 4-lane divided carriageway for most of its length. Generally, the carriageway width of flexible pavement is 7.5 meters wide, including shyness, and is flanked by paved shoulders (varying width from 0.5m to 4m) and 1 to 2 meters of earthen shoulders on each side of the median. These widths vary at structure locations and approaches to major junctions. At Toll Plaza location rigid pavement is provided.

The median is typically 4.5 meters wide for the majority of the corridor. At median openings, the width reduces to 1 meter to accommodate storage lanes. In built-up sections, 1-to-2-meter median is observed.

In general, road embankments heights are in the range of 0.5m-3m. However, embankment heights higher than 3m are observed mainly in the approaches to CD-Structures and Underpass locations.

The project corridor mainly traverses through plain terrain. The land use along the project road is predominantly agricultural and built-up areas. It passes through several urban settlements, including Bareilly, Faridpur, Tilhar, Railway Settlement Roza, Jang Bahadur Ganj, Maigalganj, Maholi, and Sitapur.

Typical View of Project Road is shown below:

A view of the Project Corridor at Km 293.000

A view of the Project Corridor at Km 315.540

A view of the Project Corridor at km 333.500

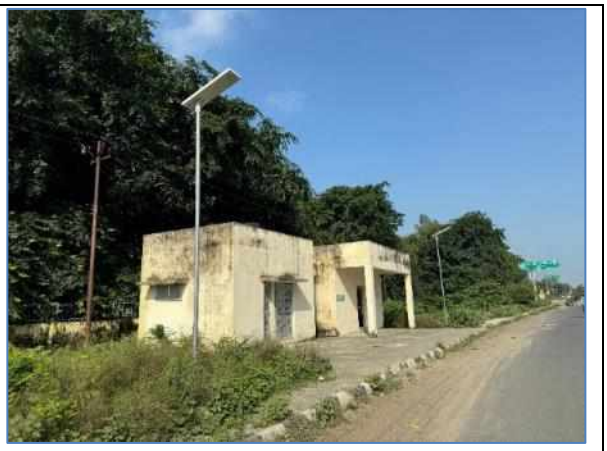
A view of the Project Corridor at Km 368.400

The Project Road has 26 Nos. of Major junctions and 284 Nos of Minor junctions. Photographs showing the Major Junctions and minor junctions are presented below:

Major Junction at km 271.950 RHS

Major Junction at km 309.700 LHS

Minor Junction at km 307.250 RHS



Minor Junction at km 371.500 LHS

There are 47 Nos. of High masts provided near Junctions and Toll Plaza locations. Whereas, Highway lighting is provided for length of 37.350 kms near built-up sections, Bus bays and Truck lay-bye location. Few photos showing High mast and highway lighting are presented below:

A view of High Mast Lighting at km 266.650

A view Solar Lighting at Km 306.100 RHS

A view of Double arm lighting at Km 314.500

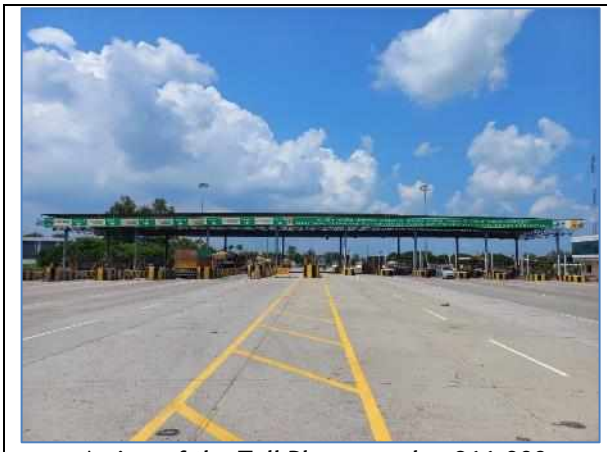
Project Road consists of 10 Nos. of Bus bays with shelters, 6 Nos. of Bus shelter. Few photos taken at the Bus Bays and Bus Shelters are presented below:

Bus Bay With Bus shelter @ Km 312.620 RHS

Bus Bay with Bus shelter @ Km 385.100 LHS

There are 4 Nos. of Truck lay byes provided along the project corridor with Flexible pavement. The condition of the pavement appears to be fair. A Separator is provided in between main carriageway and Truck lay-bye portion.

Few photos depicting the Truck lay-bye portion are presented below:



A view Truck Lay bye at Km 271.500 RHS

A view Truck Layby at Km 306.000 RHS

The Project Road has 2 No. of Toll Plazas at Km 266.900 (Faridpur plaza) and km 372.160 (Maigalganj Plaza) respectively. Rigid pavement exists at toll plaza location and condition appears to be fair. It has 7+1 lanes on each side. 12 Nos. of High mast lighting have been provided at TP-1 and 11 Nos. are at TP-2.

A view of the Toll Plaza near km 266.900

A view of the Toll Plaza near km 372.160

A view of the admin building at km 266.900

A view of Weigh bridge at km 372.160

Service/slip roads are constructed with flexible pavement and have varying carriageway widths ranging from 3.5 meters to 7 meters, covering a total length of 65.3 km. This length includes some extra-wide roads with paver blocks. Specially, narrow road width of 3.5m is observed at Land constraint locations. Photos depicting the surface type, condition, and other associated features such as drainage are included below.

7m wide service road at Km 283.200 LHS

7m wide service road at Km 295.390 RHS

	
7m wide service road at Km 305.410 RHS	7m wide service road at Km 408.300 LHS

The collected Road Inventory Data is presented in **Appendix 1** of this Report.

2.3 PAVEMENT CONDITION SURVEYS

The collected Pavement Condition Data using NSV surveys for main carriageway is presented in **Appendix 2** of this Report.

The photographs showing the pavement condition of the Project Road is presented below.

		
Wide Cracking at km-287+600 RHS	Ravelling at km-305+900 LHS	Patching cum Shoving at Km-312+450 RHS
		
Ravelling @ km 316.000 LHS	Rutting with Cracking at km-318+360 LHS	Rutting cum Shoving at km-330+000 LHS

		
Fair condition @ km 333.500 LHS	**Delamination at km-356+200 RHS**	**Alligator Cracking at km-382+050 LHS**

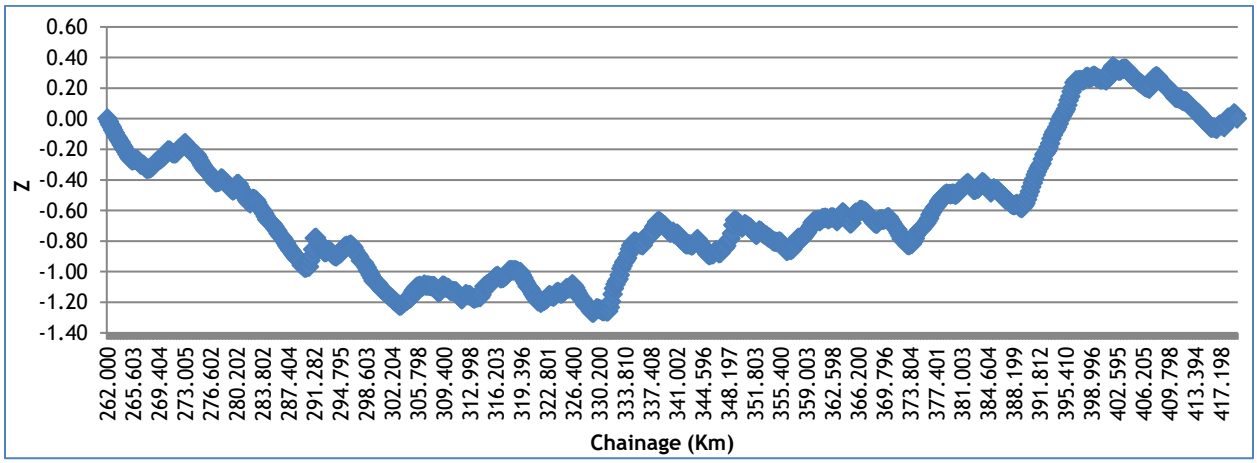
2.4 FALLING WEIGHT DEFLECTOMETER (FWD) SURVEYS

2.4.1 Falling Weight Deflectometer Survey (Flexible Pavement)

In order to evaluate the structural strength of the existing pavement, Falling Weight Deflectometer (FWD) survey has been carried out along the project road in line with IRC: 115-2014.

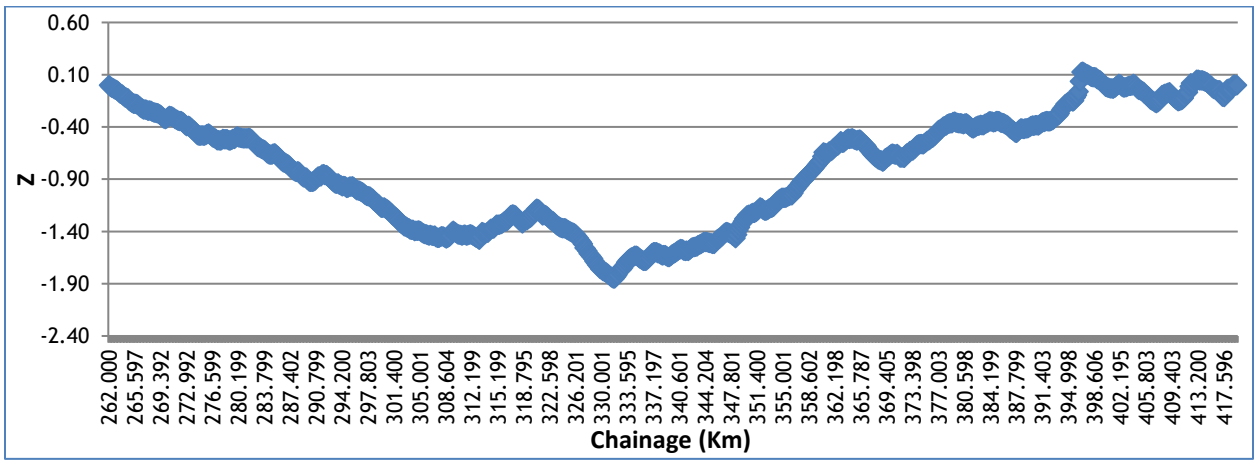
- ✓ Prior to the start the surveys, Load repeatability tests are performed on each day
- ✓ The target Peak Load of 40 KN (+/- 4 KN) is maintained during survey.
- ✓ At Regular intervals of time Pavement temperature is noted.
- ✓ For every 1 Km of stretch 5 test Points (2 pts- Outer, 3 pts-inner) were taken on Main Carriageway in each direction.
- ✓ Temperature correction equation is applied for back calculated modulus of BT and winter seasonal correction factor is applied as test performed in Aug/Sept month for the back calculated modulus of granular and Subgrade.

The collected FWD Data and Analysis is presented in **Appendix 3** of this Report.



Few photos taken during the progress of FWD Surveys are presented below:

	
FWD Survey in progress	**FWD Survey in progress**



Cumulative Difference Approach (CDA) has been used for the identification of homogeneous sections on the basis of Surface Curvature Index (SCI). SCI is calculated as the difference between D_0 and

D_{300}, where D_0 and D_{300} are the peak deflections (mm) measured at the center of loading plate and at a radial distance of 300mm

The homogenous sections in each direction of traffic (i.e., LHS & RHS) for the project stretch have been identified for Main carriageway are presented in graphical representation of followed by tables.

Delineation of Homogeneous Section – LHS

Delineation of Homogeneous Section - RHS

Based on the above graphs, the flexible pavement section has been sub-divided into homogeneous section for LHS and RHS direction as given below.

Table 2: FWD Data - Homogenous Section of MCW-LHS

Homo Sections	From (Km)	To (Km)	Length (Km)	Remarks
1	262.000	264.198	2.20

2.5 ROUGHNESS SURVEYS

The Roughness data has been collected using **Network Survey Vehicle** and analyzed in terms of International Roughness Index (IRI), separately for each lane, for both direction of travel. Pavement Roughness data collection and computation of IRI for each km length in each direction is presented in **Appendix 4** of this Report.

As per Schedule-F of TOT, the desirable level of service for Roughness values for bituminous pavement surface is considered to less than 2000 mm/Km and the acceptable limits are less than 2400mm/Km.

Average Roughness Index (RI) values along the corridor were grouped in to four categories, Pie chart showing the range of RI values in each carriageway of the project road have been presented below:

About 55% in LHS & 59% in RHS carriageway of the project length has good to fair riding quality respectively.

2.6 PAVEMENT COMPOSITION SURVEYS (TEST PITS)

The composition of the existing pavement crust has been noted from test pit surveys. Thus, a total of 36 Nos. of pits have been dug along the corridor and its pavement composition has been noted.

Results of the test pit survey showing average thickness of pavement layers are presented in the Table below.

Table 4: Pavement Composition of Existing Pavement along Project Road

S No	Test Pit Number	Chainage Km	Direction	BT (mm)	WMM (mm)	N.GSB (mm)	C.GSB (mm)	Brick Soling (mm)	PQC (mm)	DLC (mm)	Total (mm)

2.7 SUBGRADE INVESTIGATIONS & LABORATORY TESTING

Sub-grade Investigations have been carried out to examine the subgrade soil characteristics along the project road. A total 36 Nos. of test pits have been carefully dug from the pavement surface up to sub-grade level. Out of 36 nos,33 nos are done on main carriageway and remaining 2nos are done in Service Road, 1nos are done in Toll Plaza. Field density tests have been conducted for subgrade samples and a small quantity of sample has also been collected in airtight containers for determining the field moisture content. Upon completion of the field density test, representative sample of sub-grade soil has been collected in bulk, in gunny bags from each test pit for laboratory testing.

The soil samples collected have been tested for the following properties to assess the existing sub-grade soil properties.

- Sieve analysis
- Atterberg limits
- Heavy compaction
- Four (4) days soaked CBR as per IS standards at 97% of MDD as applicable for sub-grade (Heavy Compaction)
- Free swelling index

Few sample photos of the test pit locations where the subgrade samples collected are as presented below.

2.8 GSB Layer Investigations in Median

Investigations of the GSB (Granular Sub-Base) layer have been conducted to assess the continuity of the GSB layer thickness in the median along the project road. A total of 14 pits were carefully excavated in the median down to the top level of the sub grade.

Sl. No	Median No	Chainage	Side	Offset from Kerb	GSB Thickness	Test Pit Chainage	Side	Test Pit Thickness of GSB	Difference

2.9 BORROW AREAS

Potential borrow area identified at 16 Nos. of locations for the use of embankment/subgrade construction works within economic haulage leads. The sources identified as potential borrow areas along with certain useful information such as distance from the project road, location, village name, etc., have also been presented in this table below.

Table 5: Borrow Area Samples Details

Soil samples from these borrow sources have been collected in bulk by excavating test pits down up to 1.0m depth from the existing ground surface. The top organic soil layer of approximately 150mm thickness was removed before sampling. The samples collected from these identified borrow pits/ gravel quarries have been tested for the suitability of utilizing them as embankment fill/ sub-grade. Few sample photos of borrow area locations are as presented below.

2.12 AXLE LOAD SURVEYS

Traffic loading has a significant impact on pavement performance and design. This is because the damage that vehicles create to a road depends very strongly on the axle loads of the vehicles. The exact relationship is influenced by the type of road structure and the way the road deteriorates but a “fourth power” damage law gives a good approximation.

An axle load study has been conducted using portable axle load pads for 24 hrs near Toll Plaza-1 at km 266.900 on 26.08.2024 and at Toll Plaza-2 at km 372.160 on 28.08.2024. Further, again 7 days axle load survey has been conducted at the same locations from 18.10.2024 to 25.10.2024 The survey has been conducted in both the directions, and data captured on random sampling basis. The collected axle load data and analysis is presented in **Appendix 5** of this Report. The vehicle damage factors have been calculated using the standard axle loadings given in IRC: 37-2018. The adopted standard axle loadings are presented in the following table.

Table 8: Details of Standard Axles Used

Axle Configuration	Standard Axle load (Tonnes)*/ KN	Remarks
Single Wheel, Single Axle	6.60/65	As per IRC 37-2018
Dual Wheel, Single Axle	8.16/80	As per IRC 37-2018
Dual Wheel, Tandem Axle group	15.10/148	As per IRC 37-2018

Axle Configuration	Standard Axle load (Tonnes)*/ KN	Remarks
Dual Wheel, Tridem Axle group	22.90/224	As per IRC 37-2018

Few photographs illustrating the survey locations and axle load measurements are presented below.

Axle Load Survey

Axle Load Survey

Axle Load Survey

Axle Load Survey

The combined 24 hrs axle load data and 7-day axle load data are used to arrive VDF. The Direction wise VDF for each mode of commercial traffic has been estimated. Results of axle load surveys have been presented in the following table.

Table 9: VDF Values Estimated at the Toll Plaza

Vehicle Type	Faridpur Toll plaza (km 266.900)		Maigalganj Toll Plaza (km 372.160)

CHAPTER 3. VALIDATION OF EXECUTED WORKS

3.1 ROAD WORKS

The project road has been closely inspected to verify the executed works on ground. The scope works to be executed by the Concessionaire/Contractor as envisaged in CA is compared with the executed work on the Ground. As a part of the validation, the available as-built drawings and the inventory data received from the Concessionaire were also referred. Each structure has been inspected to note down its structural configuration and condition. The following table highlights the scope comparison of the executed works on ground.

The project corridor appears to have been constructed with the cross-sectional elements matching to those given in the manual at the time of execution. The carriageway width of 7.0m plus shyness of 0.5m flanked by paved shoulders of 0.5 to 4m and Earthen shoulders of 1-to-2-meter on either side of carriageway has been provided over the entire length except at structures.

Table 10: Scope Comparison of Executed works

The location-wise details of service roads and slip roads are presented in **Appendix 6** of this report. The summary of total length of these service/slip roads is provided below:

Table 11: Summary of Service Roads/Slip Roads along Project Road

Description	LHS		RHS		Total
	Flexible	Paver Block	Flexible	Paver Block	
Units	*Kms*	*Kms*	*Kms*	*Kms*	*Kms*
As Per Site					
Service Road	2.120	-	3.680	-	5.800
Slip Road	26.370	-	28.130	-	54.500
Extra wide Road	0.100	0.870	0.170	2.950	4.090
Toll office Road	0.910	-	-	-	0.910

RCC covered drains are installed over a length of 30.770 km at various locations along the project corridor. Additionally, open lined drains cover a length of 0.250 km, and median drains are provided for 2.150 km. The locations and conditions of these drains are detailed in **Appendix 6**, with a summary presented in the table below.

Table 12: Summary of Drains along the project road

Drains	LHS	RHS	Median	Total
	Kms	*Kms*	*Kms*	*Kms*
RCC Cover Drain	16.465	14.305	-	30.770
RCC Open Lined Drain	0.250	0.000	-	0.250
Median Drain	-	-	2.150	2.150

RE walls, RCC Wall full height and partial walls with soil embankments are found in approaches to the grade separator locations, high embankment locations and at CD-structures locations along the Project Corridor which account for a total length of 72.500 Km. The detailed list is presented in **Appendix 6** and its summary is presented below:

Table 13: Summary of Slope Protection along Project Road

Slope Protection Type	LHS	RHS	Total
Units	*Kms*	*Kms*	*Kms*
High Embankment(>6m)	20.090	16.370	36.460
RCC Wall Full Height	2.180	0.480	2.660
RCC Wall + Soil Emb	4.810	6.150	10.960
RE Wall Full Height (Panels)	10.810	11.610	22.420

A total of 63 median openings were observed on-site, consisting of 24 normal openings and 39 with reserved lanes. Additionally, 59 unauthorized openings were noted. For median openings with a reserved lane provision, the 4.5m median width is reduced to 1.0 meter. Detailed location-wise information is provided in **Appendix 6**, and a summary of the openings is presented below.

Table 14: Summary of Median Openings

Type Median Opening	Total
Units	*Nos*
Normal Lane	24
Reserve lane	39
Un-Authorized	59

The project road has a total of 310 junctions as observed in site. A comprehensive list of major and minor junctions is provided in **Appendix 6** of this report.

Safety barriers have been installed along the project road at high embankments, sharp curves and approaches of grade-separated and cross-drainage Structures. Details of safety barriers provided along the corridor are as follows:

- Single-Face W-barrier (MBCB): Observed in a length of 39.090 kms. Further details are provided in **Appendix 6** of this report.
- Concrete Crash Barrier (CCB) and Concrete Railing (CHR): Observed at Structure locations with CCB length of 41.485 kms and Concrete Railing length of 0.760 kms. Further details are provided in **Appendix 6** of this report.
- Pedestrian Guard Rails (PGR): Observed in a length of 15.270 kms. Further details are provided in **Appendix 6** of this report.

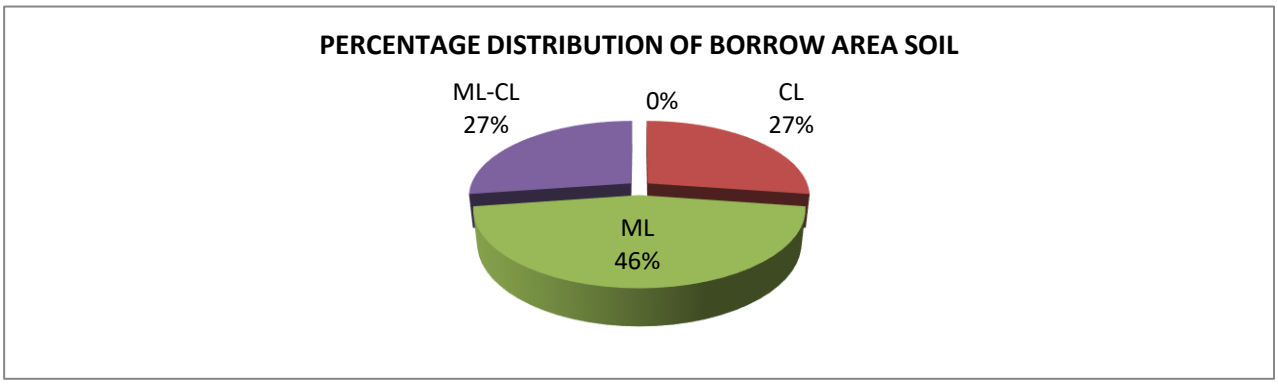
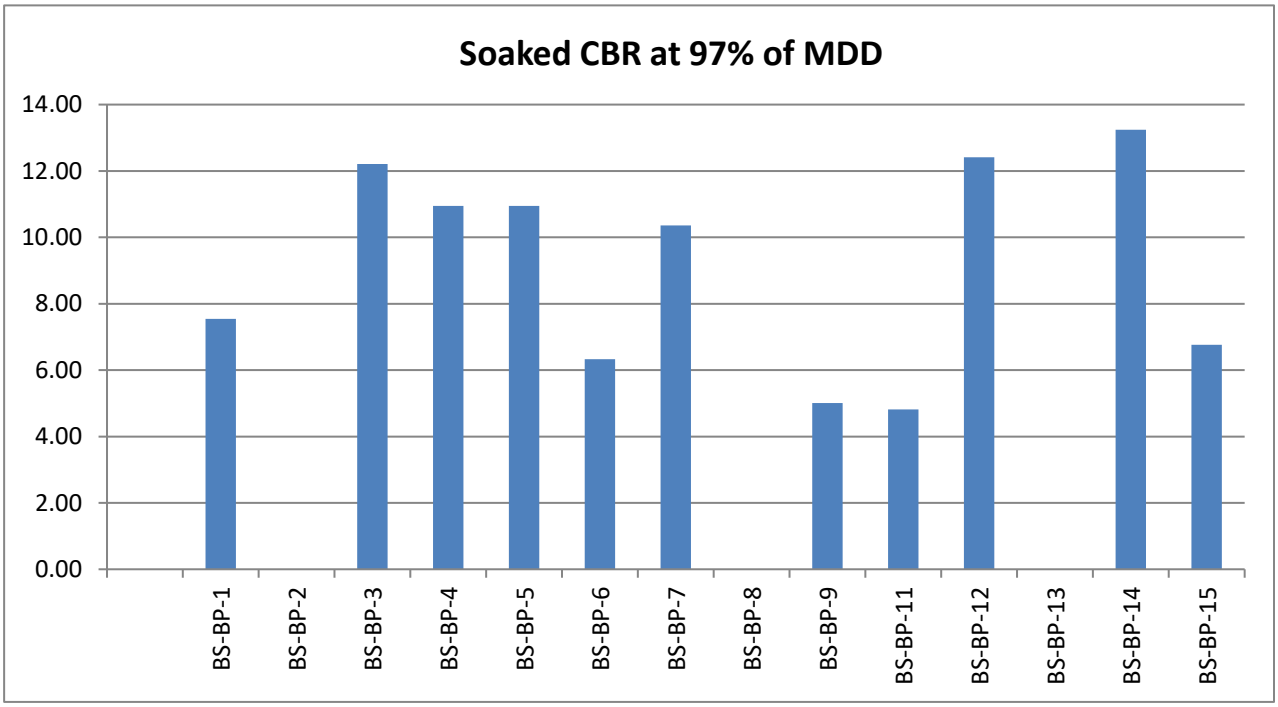
4.1 MATERIAL INVESTIGATION INFERENCES

4.1.1 EMBANKMENT & SUBGRADE



The embankment for project road has been constructed with available soils from nearby areas. The soil appears to be Coarse grained type in nature and embankment appears to be in good condition over the entire length of project. No major settlements or depressions have been noted even at high embankment locations. Out of 15 samples 5 samples belongs to ML type of soil, 4 sample belongs to SM type of soil, 3 sample belongs to CL type of soil and 3 sample belongs to ML-CL type of soil.



Summary of the test results carried out on these samples are presented in the following tables whilst the complete details are presented as an **Appendix 7** of this report.

➢ **SUBGRADE**

The subgrade samples collected from the test pits taken from project road appears to be in fair condition as revealed by test pit investigations. Soil classification has been done according to IS Classification of Soils (ISC) as detailed in IS 1498 - 1978.

Laboratory test results indicate that majority of the Subgrade soil samples collected belongs to Coarse Grained Soil. Out of 35 Nos. of samples 6 Nos. of samples belongs to CL type of soil, 9 Nos. of sample belongs to ML type of soil,12 Nos of samples belongs to SM type, 7 Nos of samples belongs to ML-CL type of soils and 1 Nos of sample belongs to SM-SC type of soils.

Pie Chart showing the percentage distribution of soil classification of existing subgrade sample is presented below:

The following observations can be made from the above test results conducted on of existing subgrade samples

- Liquid Limit are in the range of 19% to 34%, all the samples satisfying the criterion LL<50%.
- Plastic Limit are in the range of 15% to 22% satisfying PI<25 criteria.
- Maximum Dry Density for all subgrade samples varies between 1.73 and 2.05 gm/cc. 2 Nos of samples not satisfying the MDD criterion and remaining 33 Nos of samples satisfying MDD criterion (MDD>=1.75 gm/cc).
- OMC for existing subgrade samples varies in between 8.90% to 15.10%.
- Free Swelling Index for existing subgrade samples varies in between 0% to 25%. All the 35 Nos of samples satisfying the FSI criterion (FSI<=50%)
- CBR Values are varying from 4.57% to 14.31%.

Subgrade samples are satisfying the MORTH specification criteria.

Material related tests reports are provided in **Appendix-7** of this report.

4.1.2 AGGREGATES

Aggregates collected from the source have been tested for Aggregate Impact Value (AIV), water absorption and specific gravity tests. The Table below represents the test results of the Aggregate and Sand Samples.

Table 30: Test Results of Aggregate Samples

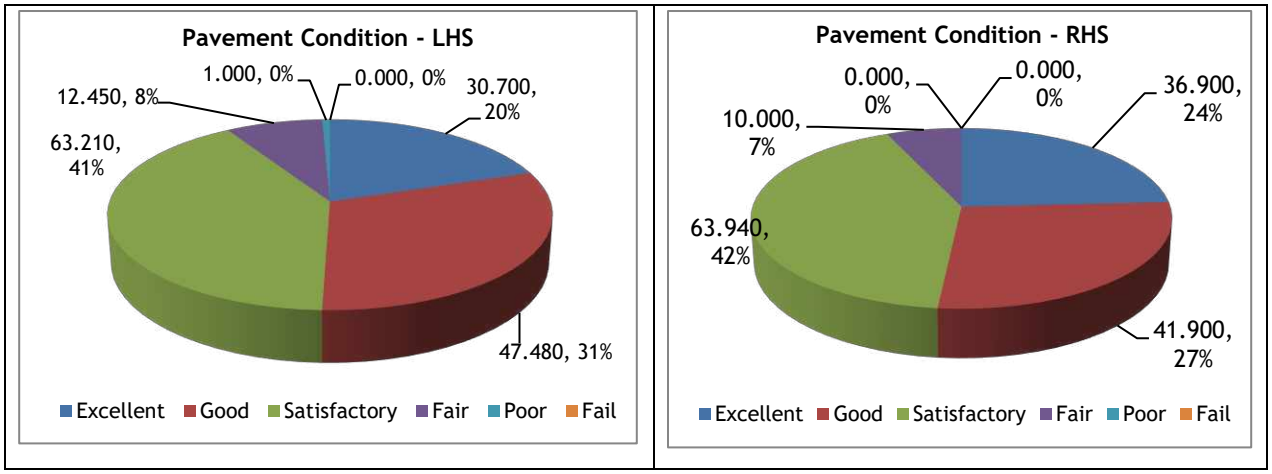
S. No	Sample	Location	Side	Size of Aggregate	AIV	Water Absorption	Specific Gravity	Remark
		Kms		*mm*	*%*	*%*		
1	BS-AQ-1	262+000	LHS	20 mm	9	0.50	2.81	

Note: The above Aggregate sample satisfying MoRTH requirements i.e., AIV (max. limit is 24% for BC-layer) and Water Absorption max. limit is 2%

4.1.3 SAND

The test results of the sand samples are as presented below.

Table 31: Test Results of Sand Samples



S. No	Sample No	Chainage	Side	10 mm Passing	4.75 mm Passing	2.36 mm Passing	1.18mm Passing	600mic Passing	300mic Passing	150mic Passing	FM	ZONE
		Kms		*%*	*%*	*%*	*%*	*%*	*%*	*%*	*%*	
1	BS-SQ-1	317+450	LHS	100	100	100	99.9	99.6	96.4	20.1	0.84	No Zone

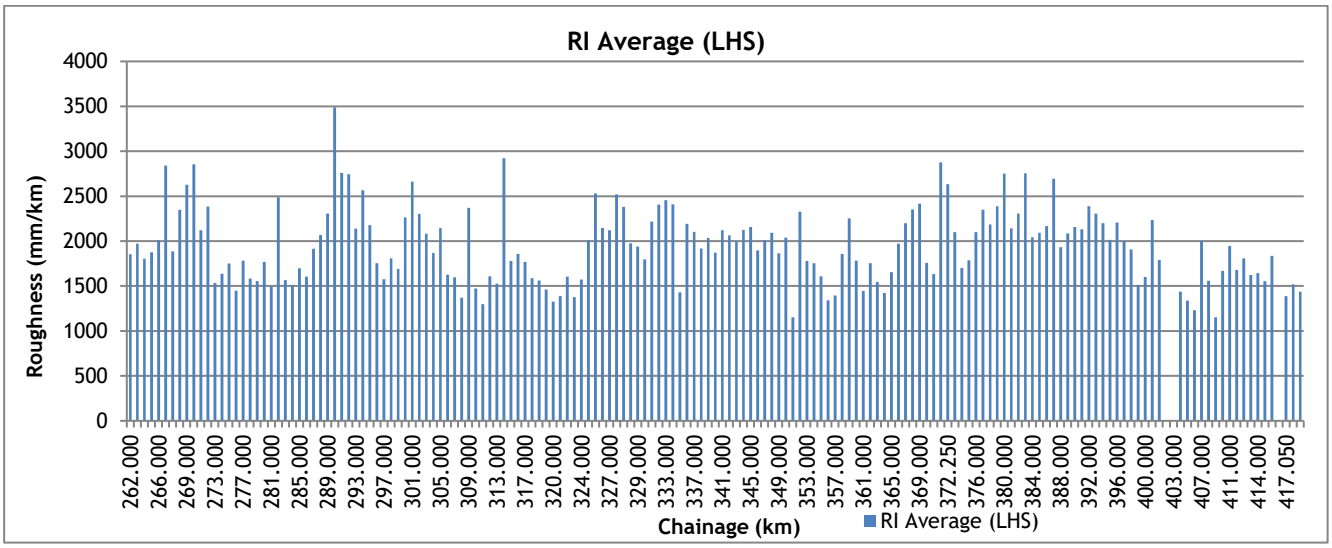
4.2 PAVEMENT CONDITION

The distresses in bituminous surface have been captured on Main carriageway for each lane separately by NSV survey. Pavement Condition rating (PCI) as per IRC:82-2023 from the data collected for each km length in each direction has been presented in the **Annexure-2** of this report.

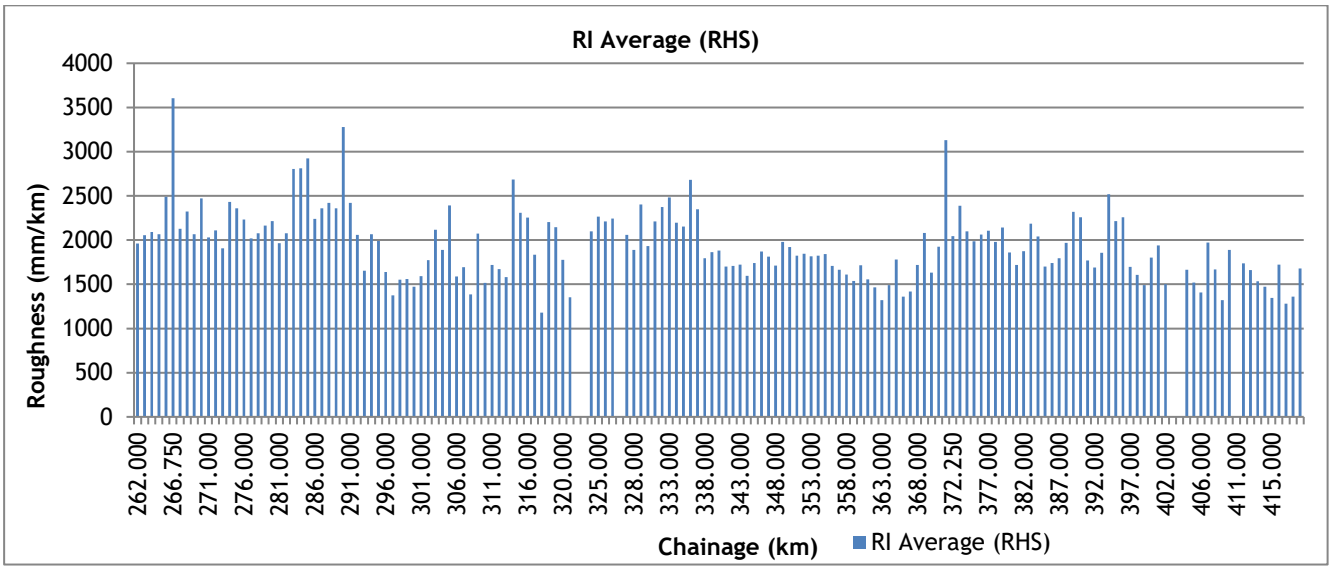
The project corridor has been provided with flexible pavement over entire length including service roads. Rigid pavement is only provided at Toll Plaza. Presently, overlay works are being done in bits and pieces by item rate contract to M/s Atcon India Pvt Ltd. The type of distresses observed are cracking, Raveling, Patching, Rutting and Delamination.

The Pavement condition rating is presented in Pie-chart from Excellent to Fail are as below:

The tabulated data is as presented below:



Overall PCI		Rating as per IRC 82	Length (km)	Length (km)
>	<=			
90	100	Excellent	30.700	36.900
80	90	Good	47.480	41.900
60	80	Satisfactory	63.210	63.940
40	60	Fair	12.450	10.000
20	40	Poor	1.000	0.000



Overall PCI		Rating as per IRC 82	Length (km)	Length (km)
>	<=			
0	20	Fail	0.000	0.000
No Data (due to diversions/Toll Plaza/Under construction)			2.750	4.850
Total Length			**157.590**	**157.590**

From NSV pavement condition analysis, an overlay, is warranted for a length of 76.6 kms in LHS and 73.9 kms in RHS for the rating satisfactory to Fail.

4.3 ROUGHNESS

The km-wise roughness values are presented in bar chart are as follows

Based on the above, considering the Km-stone reference system the summary of direction-wise km lengths having varying roughness values are as presented below.

Roughness (mm/km)		LHS (Km)	RHS (Km)
>=	<		
	2000	85.500	90.840
2000	2200	33.840	26.900
2200	2400	17.300	21.250
2400		18.800	14.350
No Data (due to diversions/Under construction)		2.150	4.250
Total Length		157.590	157.590

It can be noted from the above that, the 18.800 kms in LHS and 14.350 kms in RHS are having roughness values greater than Schedule-F, specified limit of 2400mm/km and thus warrants for functional overlay. Sections between 2200-2400 range may also require a roughness correction course within short period of time. Thus, it is imperative to consider roughness correction layer for such sections also.

4.4 FWD ANALYSIS

4.4.1 FWD ANALYSIS AND ASSESSMENT OF OVERLAY REQUIREMENT

By looking at the age and condition and performance of the pavement following different set of ranges have been used while finalizing the modulus values:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	750-3000 & 400 -1500	100-500	50-75

Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35ºC using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). For this FWD results, winter seasonal correction factor is applied for granular and subgrade layer. The design moduli (15th percentile moduli) of in-service layers for each homogenous section are given in table below.

Table 32: Design Moduli of different layers - LHS CW

S.No	Side	From	To	Length (Km)	15th Percentile MR values		
					MR for BT (Mpa)	MR for Granular (Mpa)	MR for Subgrade (Mpa)

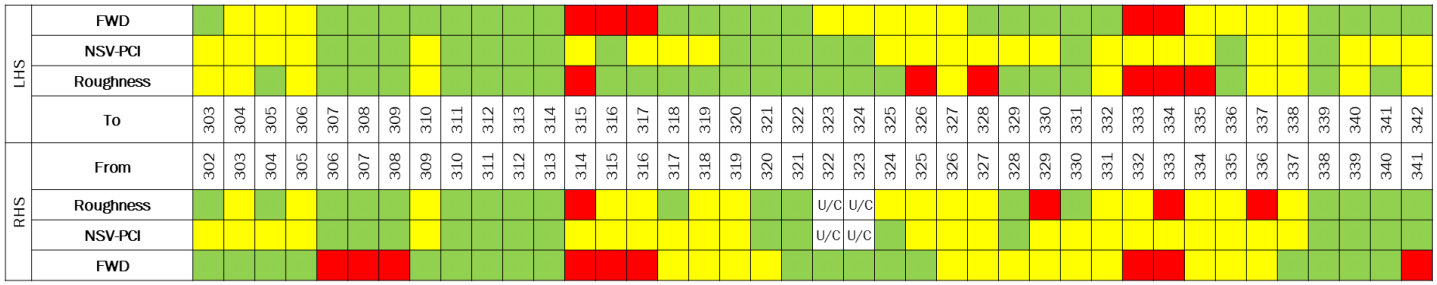
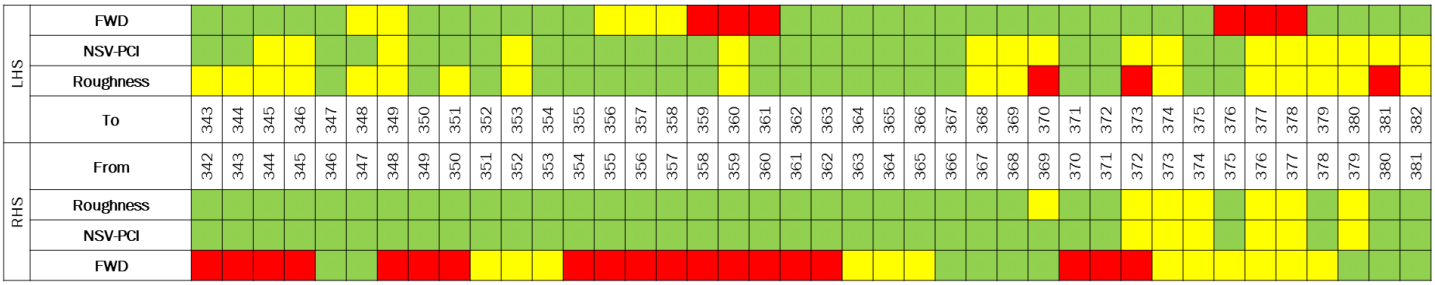
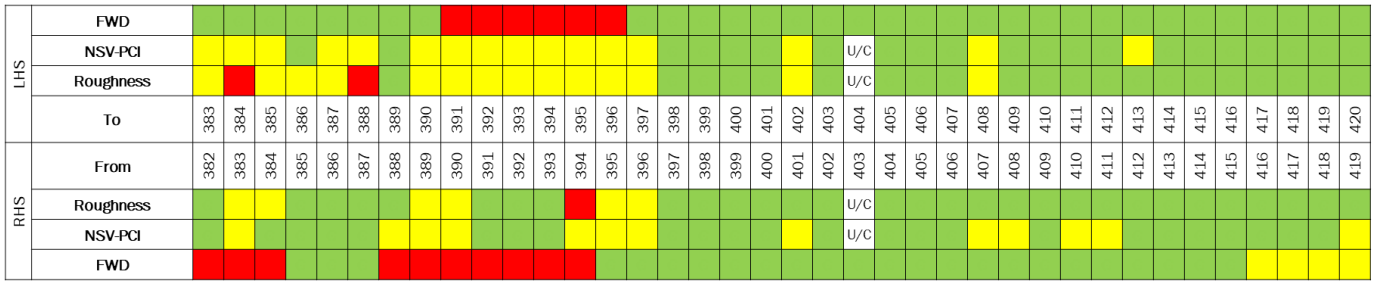
Observations on FWD Results



It can be noticed from the above table that the layer moduli for the three layers are varying along the length and direction. The MR value for BT layer is 382 MPa to 2902 MPa in LHS Carriageway & 597 MPa to 2944 MPa in RHS Carriageway. The MR value for Granular Layers is 73 MPa to 394 MPa in LHS Carriageway & 73 MPa to 393 MPa in RHS Carriageway. Similarly, the MR value for Subgrade Layer is 63 Mpa to 64 Mpa in both LHS & RHS Carriageways.

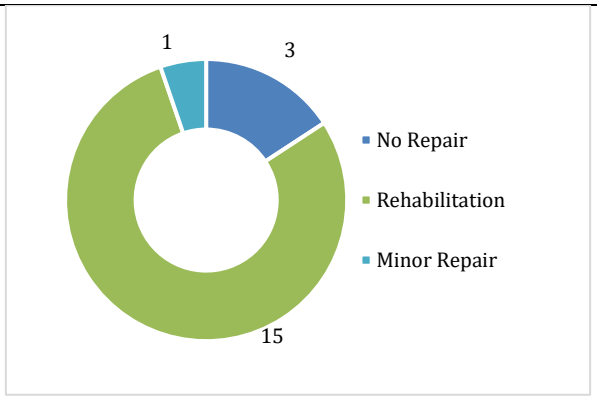


4.5 PAVEMENT RATING CHART

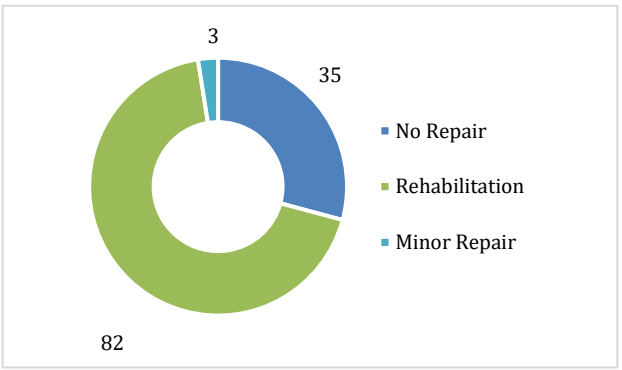


Pavement is rated for Roughness/PCI/FWD as good, fair and poor based on the following criteria along with strip-chart is presented as below:

Condition		FWD	Roughness	PCI
	Poor	OL Thick of 90mm and above	>2400 mm/Km	0 > PCI ≤ 40
	Fair	OL Thick of 50 mm	2000 - 2400 mm/Km	40 > PCI ≤ 80
	Good	No Overlay	≤ 2000 mm/Km	80 > PCI ≤ 100

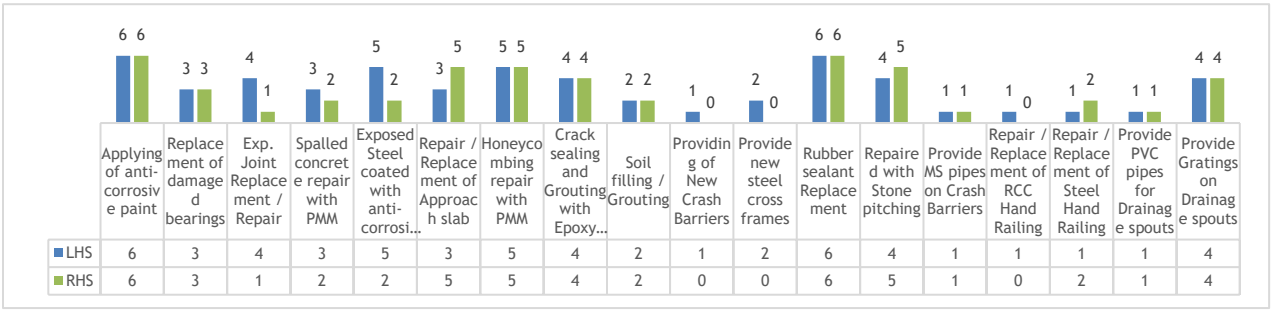


4.6 STRUCTURES



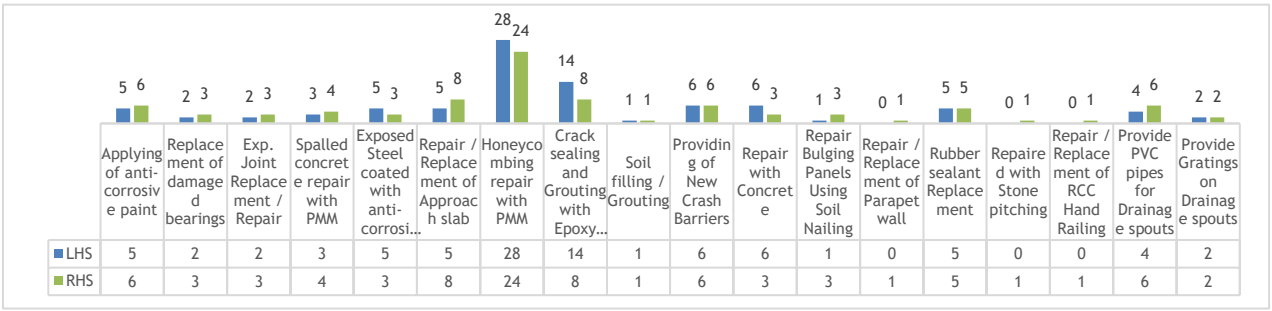
Inventory and asset condition of all the existing structures falling within project road have been verified as per IRC: SP-35 procedures and guidelines with following field surveys

- Inventory of existing highway bridges / structures
- Visual condition survey of existing highway bridges / structures
- MBIU investigation at inaccessible structures



Each and every structure has been verified at site and detailed inventory and condition survey is presented in **Appendix-8** of this report.

Maintenance of major structures (Length >60m)



Maintenance of minor structures (Length <60m)

	Applying of anti-corrosive paint	Replacement of damaged bearings	Exp. Joint Replacement / Repair	Spalled concrete repair with PMM	Exposed Steel coated with anti-corrosi...	Repair / Replacement of Approach slab	Honeycombing repair with PMM	Crack sealing and Grouting with Epoxy...	Soil filling / Grouting	Providing of New Crash Barriers	Provide new steel cross frames	Rubber sealant Replacement	Repaired with Stone pitching	Provide MS pipes on Crash Barriers	Repair / Replacement of RCC Hand Railing	Repair / Replacement of Steel Hand Railing	Provide PVC pipes for Drainage spouts	Provide Gratings on Drainage spouts
LHS	6	3	4	3	5	3	5	4	2	1	2	6	4	1	1	1	1	4
RHS	6	3	1	2	2	5	5	4	2	0	0	6	5	1	0	2	1	4

Type of repairs at number of locations for Major structures

	Applying of anti-corrosive paint	Replacement of damaged bearings	Exp. Joint Replacement / Repair	Spalled concrete repair with PMM	Exposed Steel coated with anti-corrosi...	Repair / Replacement of Approach slab	Honeycombing repair with PMM	Crack sealing and Grouting with Epoxy...	Soil filling / Grouting	Providing of New Crash Barriers	Repair with Concrete	Repair Bulging Panels Using Soil Nailing	Repair / Replacement of Parapet wall	Rubber sealant Replacement	Repaired with Stone pitching	Repair / Replacement of RCC Hand Railing	Provide PVC pipes for Drainage spouts	Provide Gratings on Drainage spouts

Type of repairs at number of locations for Minor structures

Overall condition of few of the major structures are presented on sample basis of below. However, each and every structure details are presented in **Appendix-8** of this report.

Chainage: 290+650
General Description
LHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 2 x 40 + 1 x 52 m
- Total length of Structure : 132 m
- Total deck width of Structure : 12 m
- Type of Foundation : Not Visible
- Type of Substructure (Abutment & Pier) : Trestle Type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash Barrier & MS Hand Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- ✓ Rubber sealant damaged in Expansion joint on P2. (1 No's)
- ✓ Honeycomb & Reinforcement exposed on pier cap P-2 in Span-3.
- ✓ Corrosion observed on steel girders at some locations in all spans.

Chainage: 289+250
General Description
LHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 6 x 22.5 m
- Total length of Structure : 135 m
- Total deck width of Structure : 11.75 m
- Type of Foundation : Not Visible
- Type of Substructure (Abutment & Pier) : RCC Wall & RCC Circular Type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash Barrier & MS Hand Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- ✓ Rubber sealant damaged in Expansion joint on A1 & P2. (2 No's)
- ✓ Steel Hand railing partially damaged at shoulder side.
- ✓ Approach slab settlement observed at A2 side.
- ✓ MS Pipe railing missing on crash barrier.
- ✓ Honeycomb and Reinforcement exposed on soffit of Cantilever slab near A2 in Span-6.
- ✓ Grating not provided for all drainage spouts.
- ✓ Corrosion observed on steel girders at some locations in all spans.
- ✓ Quadrant pitching not provided at A1 & A2.
- ✓ **The superstructure slided approximately 100mm towards the shoulder side on pier P1 in span S2.**
- ✓ Cracks observed on soffit of deck slab in between girders G1 & G2, G2 & G3, G3 & G4 in span S1.
- ✓ Delamination & Reinforcement exposed on soffit of deck slab at pier P2 in span S2.
- ✓ Cracks and leaching observed on soffit of deck slab in between girders G2 & G3, G3 & G4 in span S3.
- ✓ Cracks observed on Pier cap P4.
- ✓ Crack observed on Pedestal (Pe3) Pier P3 in span S4.
- ✓ Cracks observed on Pier & Pier cap P5.
- ✓ Bearing damage (B1, B2, B4 & B5) observed on Abutment A1 & Pier P1 in span S1.
- ✓ Bearing damage (B1, B2, B4 & B5) observed on Pier P1 & Pier P2 in span S2.
- ✓ Bearing damage (B1, B2, B4 & B5) observed on Pier P2 & Pier P3 in span S3.
- ✓ Bearing damage (B1, B2 & B4) observed on Pier P3 in span S4.
- ✓ Bearing damage (B2, B3 & B4) observed on Pier P4 in span S4.
- ✓ Bearing damage (B1, B2, B4 & B5) observed on Pier P4 & Pier P5 in span S5.
- ✓ Bearing damage (B1, B2, B4 & B5) observed on Pier P5 & Abutment A2 in span S6.
- ✓ Soil erosion observed at A1 & A2 side.
- ✓ Previous repair observed on deck slab in span S3.
- ✓ Missing of steel cross frames in span S1 & S2.

Chainage: 275+790
General Description
LHS MCW (New)

- Type of Structure : MNB
- Span Arrangement : 3 x 6 m
- Total length of Structure : 18 m
- Total deck width of Structure : 12 m
- Type of Foundation : Raft
- Type of Substructure (Abutment & Pier) : RCC Wall
- Type of Superstructure : RCC Box
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash Barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- ✓ Honeycomb observed on deck slab edge at shoulder side & median side.
- ✓ Crash barrier not constructed at shoulder side.

Chainage: 329+600
General Description
RHS MCW (New)

- Type of Structure : Flyover
- Span Arrangement : 1 x 31 m
- Total length of Structure : 31 m
- Total deck width of Structure : 10.6 m
- Type of Foundation : Not Visible
- Type of Substructure (Abutment & Pier) : RCC Circular Type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash Barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- ✓ PVC down take pipes damaged.
- ✓ Corrosion observed on steel girders at some locations.
- ✓ Rubber sealant damaged in Expansion joint on A1. (1 No's)
- ✓ Bearing damage (B1, B2 & B4) observed on Abutment A1.
- ✓ Bearing damage (B1, B2, B3 & B4) observed on Abutment A2.
- ✓ Minor cracks observed on deck slab.

Chainage: 295+375
General Description
RHS MCW (New)

- Type of Structure : VUP
- Span Arrangement : 1 x 30 m
- Total length of Structure : 30 m
- Total deck width of Structure : 11.5 m
- Type of Foundation : Not Visible
- Type of Substructure (Abutment & Pier) : RCC Circular Type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash Barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- ✓ PVC down take pipes damaged.
- ✓ Corrosion stains observed on girders.
- ✓ Approach slab settlement observed at A1 side.
- ✓ Spalling observed on soffit of top slab at A1 shoulder side.
- ✓ Honeycomb observed on dirt wall at A2 side.
- ✓ Expansion joint damaged on A2.
- ✓ Expansion joint rubber sealant damage on A1.
- ✓ Bearing damage (B5) observed on Abutment A1 & A2.

Table 34 Details of Major Structures

Photos of Structures Inspected With MBIU

Observation on Structures

- The Project stretch have 67 no's of major structures, in that 5 ROB's, 7 MJB's, 19 MNB's, 3 Flyover's, 23 VUP's, 9 PUP's & 1 VOP's.
- The Project Road has varieties of super structure types for various structures such as Steel Girder, RCC Girder, Box Girder, PSC Girder, RCC Box & RCC Solid Slab.
- In this Project stretch, there are Pot PTFE (Old-30 No's & New-678No's), Elastomeric (Old-54 No's & New-116No's) & Rocker Roller (Old-8 No's) observed in Girder type Structures.
- Structures are having 136 No's of Expansion joints in that 21 No's on old structures and 115 No's on new structures.
- There are 9 No's of old bridges existing on left side 6 No's & right side 3 No's. (1 ROB's, 4 MJB's, 4 MNB's)
- **MJB at km.289+250 LHS - Superstructure in span-2 slided approximately 100mm towards the shoulder side on pier P1 and all the bearings were damaged. Realignment by lifting of superstructure and bearings replacement is required as an immediate action to safeguard the structure from further damage.**
- During the MBIU surveys, at couple of locations damaged bearings are observed. These need to be replaced.

- Some structures are already repaired and it would be necessary to closely examine these structures for further distress during the maintenance period/Project duration, by way of close inspection and testing.
- Debris observed on Abutment pier cap, Expansion joints are filled with debris, wearing coat, Drainage spouts are clogged at couple of locations
- Structural distress was observed at couple of locations viz Cracks, Honeycombs, spalling of concrete, Reinforcement exposed etc
- Bulging of the RE walls has been observed, and soil nailing has been carried out to address this issue at the ROB (km403+380 RHS), to arrest further bulging external RCC-wall construction is initiated,
- Cracks and leaching were observed on the soffit of the deck and the side walls of box type underpasses at few locations

Photos depicting existing Box Culverts/Slab & Pipe Culverts are presented below:

		
Box Culvert @ 266+620	Box Culvert @ 294+260	Box Culvert @ 320+645
		
Pipe Culvert @ 348+960	Pipe Culvert @ 384+380	Pipe Culvert @ 414+650

4.7 DRAINAGE AND SLOPE PROTECTION

- ✓ Lined Covered drains observed at urban locations and at service road Locations along the corridor.
- ✓ No major damages observed at covered drain locations.

4.8 TRAFFIC SAFETY AND ROAD FURNITURE

- ✓ Metal beam crash barriers provided along the project road appear to be intact over entire length except for few locations where it got damaged.
- ✓ Pedestrian guard rails installed on the median, Separator & appear to be intact over entire length except for few locations where it got damaged. PGR in narrow median observed to be insufficient and hence taken for replacement by MBCB and CCB based on median width in EPC cost.
- ✓ Median Opening locations appear to be in good condition. Few Unauthorized openings were observed along the project stretch require proper closing.
- ✓ Solar blinkers are in Fair condition at median openings in the entire project corridor.
- ✓ Street lightings and High masts are observed at urban locations, Toll Plaza & Junction Locations. At few locations street lightings are got damaged/ not functioning well and those items are addressed in the initial cost.

4.9 ROAD USER FACILITIES

- ✓ The Bus Bay with Shelters and Truck lay byes were provided along the corridor.

CHAPTER 5. REHABILITATION PLANS AND DESIGNS

5.1 DESIGN TRAFFIC LOADING

Design Traffic loading has been estimated by considering the latest traffic supplied by client (given for FY2025) whereas, VDFs as estimated from the latest axle load survey data and min. 5% growth rates for 10 years, 15 years and 20 years design period as below:

Table 35: Traffic Volume (AADT)

Vehicle/Mode	Toll Plaza-1 Km 266+900		Toll Plaza-2 Km 372+160	
	LHS (No.)	RHS (No.)	LHS (No.)	RHS (No.)
BUS	526	526	263	263
2A truck	689	689	537	537
3A truck	427	427	400	400
MAV truck	1116	1116	737	737
LCV	246	246	193	193

The MSA calculated considering the above scenario is as follows.

Table 36: Estimated Design traffic loading

Toll Plaza-1 at Faridpur Km 266+900		
Design Period	LHS	RHS
10 Years	55	62
15 Years	95	107
20 Years	146	165

Toll Plaza-2 Maigalganj Km 372+160		
Design Period	LHS	RHS
10 Years	63	59
15 Years	108	102
20 Years	166	156

The computation of traffic loadings is presented in **Appendix 9** of this Report. Design traffic corresponding to 10 years period has been considered for overlay design.

5.2 PAVEMENT REHABILITATION AND STRENGTHENING

5.2.1 Flexible Pavement Strengthening

For Design the Overlay Thickness the following method as suggested in IRC: 115 has been used

- The existing pavement is considered as a 3-layer system consisting of subgrade, granular and bituminous layer. The remaining life of exiting pavement in terms of Fatigue and Rutting life (MSA) are estimated

- The remaining life is compared with design traffic loading. An overlay with assumed thickness is considered on exiting pavement where required.
- The Total system including the proposed Overlay (Trial thickness) is assumed as a four-layer system and considered the relevant MR values for all the four layers namely New BT layer, existing bituminous surface, total existing Granular layers and Subgrade layers.
- The MR value for the New BT is assumed as 3000 MPA (considering VG40 Bituminous grade) for Main Carriageway and for all the remaining three layers, the MR Values derived and finalized from the FWD Analysis are considered
- Critical Tensile strains and Vertical strains are found out by using the IIT PAVE Software at the bottom of existing bituminous layer and at the top of the subgrade layer respectively.
- The Fatigue and Rutting equations (equation given in the IRC: 115) have been used to estimate the Fatigue and Rutting Life of the Pavement system considering 90% reliability equations.
- The Obtained Fatigue and Rutting Life are compared with the required life for the assumed trial overlay thickness.

Remaining life of the existing pavement from the above analysis is presented in the following tables:

Table 37: Remaining life of the existing pavement on LHS Carriageway

S.No	Side	From	To	Length (Km)	15th Percentile MR values			Average Existing Crust		Total Crust (mm)	Adopted MR for BT (Mpa)	Strains From IITPAVE		Remaining Life as per IRC -115 Equations for 90% Reliability			Remarks
					MR for BT (Mpa)	MR for Granular (Mpa)	MR for Subgrade (Mpa)	BT (mm)	Granular (mm)			Vertical strain at bottom, epZ	Tensile strain at top, epT	Nf-Fatigue life, mSA	Rutting life,mSA	Target MSA

Total length				157.590													

From the above, it is to note that if the target MSA (10yr design MSA) is more than obtained remaining life of the existing pavement, then it is required to provide an overlay to ensure the life after over lay should be more than design MSA. Accordingly, based on this criterion, an overlay is warranted for a length of 36.98 km in LHS and 69.498 km in RHS.

The required overlay sections are analyzed in accordance with IRC:37 guidelines, using assumed overlay thicknesses to determine vertical and horizontal strains. Subsequently, fatigue and rutting life are evaluated in terms of MSAs. Throughout this process, it is ensured that the remaining life (MSA) of the existing pavement always exceeds the calculated 10-year design MSA.

The following tables indicates the proposed overlay thicknesses in LHS and RHS directions respectively.

S.No	Side	From	To	Length (Km)	15th Percentile MR values			Average Existing Crust		VG 40 - 3000 Mpa	Total BT (mm)	Total Crust (mm)	Adopted MR for BT (Mpa)	Strains From IITPAVE		Remaining Life as per IRC - 115 Equations for 90% Reliability

Input data used and the output from the IIT Pave software has been presented as screen shots for ready reference as **Appendix 10** of this Report.

Summary of Overlay thickness from FWD analysis is as follows:

Overlay Thickness (mm)	Length (km)	
	LHS	RHS
50	19.19	28.46
90	6.00	28.80
100	2.61	4.40
105	-	2.51
115	-	3.01
120	2.39	-
140	6.79	-
150	-	2.33

Overall summary of overlay/renewal requirement of project corridor arrived from combining PCI (Pavement Condition Index), Roughness (IRI>2200mm/Km) and FWD analysis is as below

Main Carriageway -LHS					
Recommended Overlay	**No Overlay**	**To be Overlaid**	**DBM Completed**	**BC Completed**	**Total Length (Km)**
Overlay as per FWD survey	10.600	5.800	7.500	13.100	**37.000**
Overlay based on Roughness index(>2200mm/km)	8.500	2.500	7.100	6.700	**24.800**
Overlay based on PCI	7.700	4.700	8.000	7.200	**27.600**
No Overlay	20.800	11.400	11.300	24.690	**68.190**

Main Carriageway -RHS					
Recommended Overlay	**No Overlay**	**To be Overlaid**	**DBM Completed**	**BC Completed**	**Total Length (Km)**
Overlay as per FWD survey	8.800	15.100	28.100	17.590	**69.590**
Overlay based on Roughness index(>2200mm/km)	1.400	9.000	0.200	8.000	**18.600**
Overlay based on PCI	4.000	10.200	0.600	10.400	**25.200**
No Overlay	8.200	11.6	10.000	14.400	**44.200**

5.3 STRUCTURAL REHABILITATION

All the structure found to be in fair condition except minor treatment like repair of stone pitching, cleaning of drainage spouts, cleaning of vegetation etc. may be required. Detailed structural rehabilitation quantities have been worked out based on the prevailing condition of existing structures. This methodology describes in detail the procedure for the execution of each item of rehabilitation work of the Existing Bridges of the project.

The scope of this methodology covers the items mentioned below for rehabilitation work of all the existing Bridges.

- Repair/ Replacement of Existing Bearings
- Repair / Replacement of Existing Expansion Joints
- Repair / Replacement of Existing Wearing Coat
- Profile Correction for Existing Deck Slab by Cement Concrete
- Sealing of Cracks for Bridges by Epoxy Resin
- Replacement of Spalled Concrete of ECW by Epoxy Mortar
- Cement Grouting for Repair of Existing Bridges
- Guniting / Shotcrete for Repair of Existing Bridges
- Providing & Fixing of Drainage Spouts
- Repair of Substructure Component
- Repair / Replacement of Railing & Crash Barrier
- Epoxy Bonding between New and Old Concrete.

5.4 SCHEDULE-B SCOPE

Few major items of Schedule-B are required to be constructed are as below.

Clause	Description	Scope	Remarks
Clause 2.	Grade Separated Structure	Nil	But as per DPR Cost and as per Clause 4.1 the Cost is estimated for VUPs and approaches
Clause 4.1.a(i)	At-grade Intersections: Major Junctions i) New Junctions to be developed	1Number at Km 326.500	New to be developed
Clause 4.1.a(ii)	At-grade Intersections: Major Junctions ii) Existing Major Junction to be retained with Safety Enhancement	1Number at Km 413.820	Safety enhancement of these junctions by providing signage, road marking, blinkers, pedestrian crossing facility etc. as per relevant IRC Codes and Standards need to be provided in accordance with IRC SP: 84 -2019 and as per Annexure I and Annexure II
Clause 4.1.b (i)	Minor Junctions: All junctions below are to be retained with Safety Enhancement i. Junctions with MCW	181 numbers	
Clause 4.1.b (iii)	Iii Minor Junction with Service Road / Slip Road	80 numbers	
Clause 4.2	At-grade Intersections below Grade Separator / Interchanges	At 11 numbers	These shall be provided as given at para-2.9 of this Annex-I of the Schedule B. and

Clause	Description	Scope	Remarks
	a) New Junction to be developed due to New Proposal of Grade Separator (Major)		section-3 of manual and as per Annexure III and IV of Schedule B. But There is no Clause 2.9 in this schedule
Clause 4.2	b) New Junction to be developed due to New Proposal of Grade Separator (Minor)	At 3 numbers	
Clause 4.2	c) Existing Junction to be retained with Safety Enhancement:	At 13 numbers	
Clause 6.1	6.1 Repair and Rehabilitation of Pavement	As per FWD and NSV Report. But as per Clause 61.1. to 6.1.3 the scope is Nil	
Clause 7.1	7 (d) Drainage where Embankment Height is more than 3m (Clause No. 6.4 IRC: SP:84-2019)	New – Nil As there is no modification of main carriageway is envisaged	Existing Drainage chutes, stone pitching and any other measures as provided shall be repaired and restored in working conditions.
Clause 7.1	e) Drainage for Structures (Clause No. 6.8 IRC: SP:84-2019)	Minimum HPVC 200 mm dia. shall be provided for disposal of rainwater with PCC encasing	Apart from this pavement cost and chamber arrayment cost shall be considered
Clause 7.1	f) Drainage for Underpass	A suitable drainage arrangement for draining storm water from Underpass shall be provided	If required, need to consider pumping system
Clause 7.1	g) Drainage arrangements of Retaining Structures	Drainage fixtures and dropdown pipes shall be of rigid, corrosion resistant material not less than 100 mm dia	
Clause 8.3.3	8. Structures: 8.3.3 Culverts on Crossroads:	existing crossroads culvert shall be repair and maintained	
Clause 8.4.7	8.4.7	Refer: Annexure V for Repair & Rehabilitation of Structures	Any other additional Items which are required shall also be executed and NO Change of Scope is admissible for any extra items
Clause 12	12 Project Facilities		
Clause 12.1	12.1 Toll Plaza	TMS System shall be upgraded if required	
Clause 12.2.2	12.2.2 Traffic Signs	Additional signs as per this clause shall be provided	
Clause 12.2.6	Solar Blinkers	Solar Blinkers shall be provided median openings and entry/exit ramps	
Clause 12.2.7	12.2.7 Traffic Impact Attenuators	66 numbers on flyover/grade separated structure at exit from main carriageway	
Clause 12.2.7	12.2.7 Traffic Impact Attenuators	20 numbers Infront of Islands of Toll Plaza	
Clause 12.2.7	12.2.7 Traffic Impact Attenuators	Any other location	
Clause 12.2.8	12.2.8 Transverse Bar Marking	1. Median openings (U-Turn Facilities) 2. Toll Plaza approaches 3. Approaches to At-Grade junctions 4. Exit ramps and downside of the approach of the flyovers	Refer: Annexure VI for Transverse Bar Marking
Clause 12.2.10	12.2.10 Antiglare at Narrow Median Location	Nil In addition to above --- Antiglare is to be provided as per site requirement	
Clause 12.3	12.3 Operation and Maintenance centers	The minimum land for O & M center shall be 2000 sq.m and shall be	

Clause	Description	Scope	Remarks
		acquired by the Concessionaire at his own cost and risk	
Clause 12.4	12.4 Rest Areas / Wayside Amenities	Nil	
Clause 12.5	12.5 Truck Lay Bye	New truck lay byes-------7 numbers Additional Facilities at existing Truc lay byes---4 numbers	At existing---Rest area with toilets, drinking water and Telephone facility to be provided Traffic Signs board / marking / road studs / lighting are to be provided at Truck Laybys as per IRC SP: 84-2019
Clause 12.6	12.6 Bus Bay and Bus Shelter	bays and Bus shelters---11 locations	Existing Bus Shelter is to be repair / rehabilitated
Clause 12.7	12.7 Highway Lighting	Solar lighting at Rest Area, Truck Lay bus, Bus Bays and Shelters etc.	
Clause 12.9	12.9 ATMS	Video Surveillance System—157 Km PTZ Camera ---------- 137 Numbers Video Incident Detection and Enforcement System (VIDES)---34 Nos Vehicle Actuated Speed Display System----4 Numbers VMS Systems Displays (Full Gantry 4 Lane) -----26 Nos VMS Portable type-------Nil Network / Communication Infrastructure----304 km ATMS Control Centre—2 Nos Power Supply for ATMS--2 Nos Provision of Electronic Call Boxes-160	The ATMS system shall provide and maintain as per NHAI / Policy Guidelines / Standard Documents 2023, Policy Circular No. 11.53/2023 dated 10th October 2023, also implement the circular issued from time to time
Clause 12.10	12.10 Highway Patrol	1 per every 50Km	Time being consider 4 number as the project length is more than 150 and less than 200Km
Clause 12.11	12.11 Emergency Medical Services	1 per every 50Km	Time being consider 4 number as the project length is more than 150 and less than 200Km
Clause 12.12	12.12 Cranes	1 per every 50Km	Time being consider 4 number as the project length is more than 150 and less than 200Km

All these items are quantified in BOQ under EPC cost.

CHAPTER 6. OPERATION AND MAINTENANCE

6.1 INTRODUCTION

Looking at the contractual requirements of maintaining project road under specified level of roughness it is felt that roughness is the most important criterion for finalizing the O&M schedule for the project. Accordingly, the methodology adopted by present consultants includes predicting the roughness year by year under the traffic using a well acknowledged HDM-4 model developed for developing countries like India after lot of research by World Bank. The said model is widely prescribed by MORTH and NHAI during the preparation of detailed project reports for several projects in doing economic analysis for the projects. The economic analysis mainly consists of two parts:

1. Predicting the road deterioration and estimating VOC
2. Estimating Benefits

Considering its importance and present use in India, consultants felt prudent to use the first part, i.e estimating road deterioration and predicting roughness in HDM 4 model to finalize the O&M schedule for the project. This approach is more scientific as it does not assume hypothetical deflection values at 10^{th} and 20^{th} year and includes main criterion of maintaining roughness at 2400mm/Km as per Schedule F.

6.2 CA SPECIFICATIONS FOR MAJOR MAINTENANCE

Schedule F prescribe the maintenance standards to be adopted for project. Summary of same is presented below.

- Appliable Manual: Four lane manual IRC SP 84-2019 published by IRC
- Applicable Schedule for O&M: Schedule-F and Manual
- Maximum Roughness Allowed: 2400mm/km
- Frequency of Roughness Test: 2 times per year
- Frequency of FWD Test: once in a year
- Schedule-B, Clause 6.1 minimum overlay thickness of BC on the main carriageway shall be 50mm

6.3 INPUTS FOR M&M SCHEDULE

6.3.1 Project Sections

Considering traffic scenario, project road has been divided into two sections viz.,

- Section-1: Bareilly to Shahjahanpur section- km 262.000 to km 340.800, length 78.80 km
- Section-2: Shahjahanpur to Sitapur section- km 340.800 to km 419.590, length 78.79 km

Each section is further categorized based on the findings from FWD (Falling Weight Deflectometer), Roughness, and PCI (Pavement Condition Index) into two sub-sections as

- Overlay section (with 50mm OL and 90mm OL) and
- No overlay section

Then, taking the consideration of Roughness as a key criterion for major maintenance, further the above sub-sections categorized in to four cases below:

- Case 1: Roughness value <2000 mm/Km
- Case 2: Roughness values >2000<2200 mm/Km
- Case 3: Roughness>2200<2400 mm/Km
- Case 4: Roughness>2400 mm/Km

Direction wise analysis has been done separately for LHS (UP)/RHS (DN) and each direction length has been divided into sections based on above.

6.3.2 Traffic (AADT)

The following traffic data has been used in the analysis is as below:

Vehicle/Mode	Km. 266+900 Faridpur Toll Plaza-1: Secton-1		Km. 372+160 Maigalganj: Toll Plaza-1 Secton-2	
	LHS	RHS	LHS	RHS
CAR	4594	4594	2212	2212
BUS	526	526	263	263
2A truck	689	689	537	537
3A truck	427	427	400	400
MAV truck	1116	1116	737	737
LCV	246	246	193	193

The actual growth rates are considered for further analysis.

6.3.3 Vehicle Damage Factors (VDF)

VDF values as obtained from axle load surveys are used for various sections are as given below:

Section-1(Km. 266+900 Faridpur TP)					Section-2(Km. 372+160 Maigalganj TP)	
S No.	Vehicle Type	LHS	RHS		LHS	RHS
1	2-Axle	1.73	1.66		2.59	2.31
2	3-Axle	3.16	4.15		4.99	5.30
3	LCV	0.84	0.82		1.20	1.30
4	MAV	10.29	11.58		16.89	15.54
5	Bus	0.77	0.76		0.86	1.13

6.3.4 HDM Inputs

FWD, Roughness, Pavement condition values are used as obtained from surveys and investigations for various sections and different cases as below:

6.3.5 Options for MM Schedule

Based on the requirements of CA, various options have been considered to be used as responsive overlays triggered at specified level of roughness of 2400mm/km. MCS as a base option been considered to examine its feasibility for major maintenance.

Following options were considered in the analysis:

- ✓ Base Case: MCS at Roughness of 2400mm/Km with regular maintenance
- ✓ Opt-1: Responsive Mill & Overlay of 40mm BC whenever roughness is >2400mm/KM with regular maintenance
- ✓ Opt-2: Responsive Mill & Overlay of 50mm BC whenever roughness is >2400mm/KM with regular maintenance

6.4 ROUHGNESS PROGRESSION

Roughness progression for each section under each alternative maintenance option has been done using the deterioration models in HDM-4. Following sample graphs represents the roughness progression for each alternative:

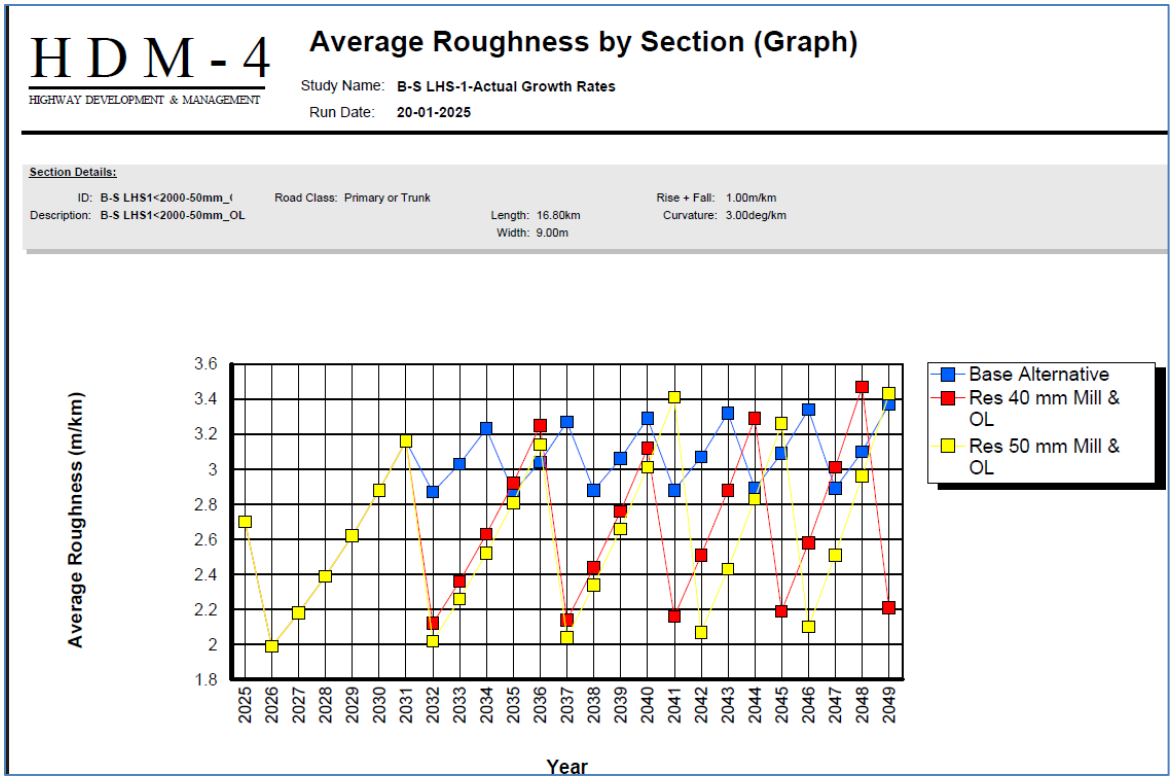

Figure 1: Average Roughness in LHS (UP) Carriageway (Sec-1) 50mm OL<2000

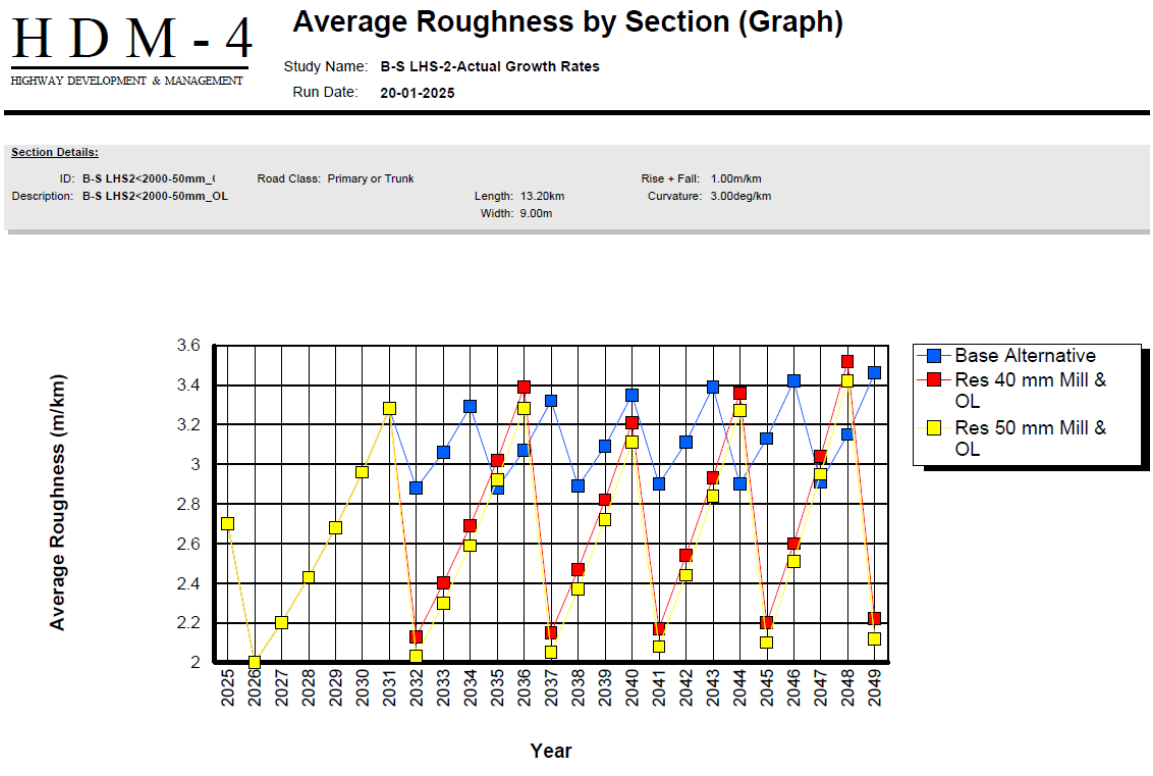

Figure 2: Average Roughness in LHS (UP) Carriageway (Sec-2) 50mm Overlay<2000

H D M - 4 Average Roughness by Section (Graph)

Description: B-S RHS2<2000-50mm_OL Length: 25.59km Curvature: 3.00deg/km
Width: 9.00m

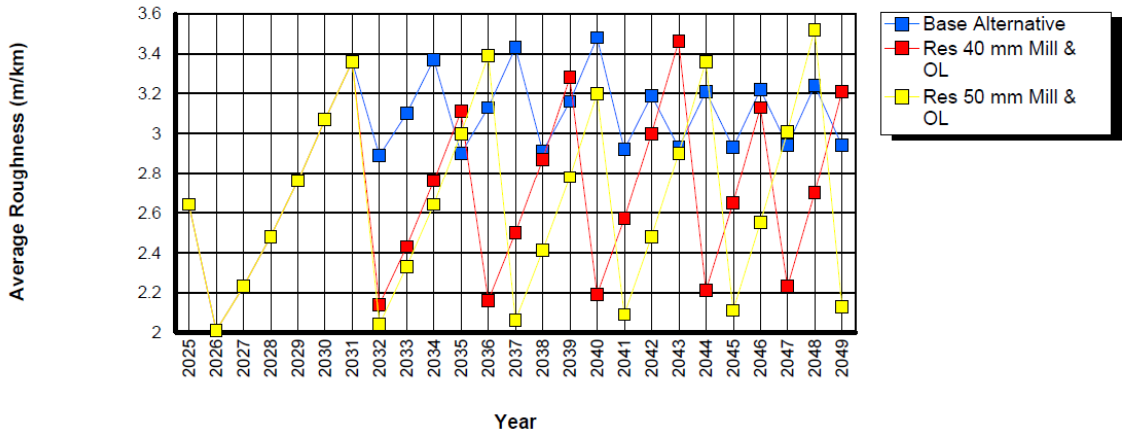

Figure 4: Average Roughness in RHS (DN) Carriageway (Sec-2) 50mm OL<2000

6.5 M&M SCHEDULE

Looking at the present condition, progression of traffic with actual traffic growth rates, it is felt prudent to consider 50mm OL as the preferred option, with certain percentage of additional DBM in required cycles.

Before release of schedules without considering the capacity augmentation, HDM model has been run to understand the requirement of MMR cycle and thus 4 cycles are envisaged after considering the initial overlays. Upon obtaining the schedules, the adopted MM schedule for the project is as below:

Table 39: Adopted MM schedule LHS & RHS

6.6 STRUCTURAL PERIODIC MAINTENANCE STRATEGY

Expansion joints:

- Visual inspection is carried out to check for seal breakages, Armor angle, Weld failures, cracks between deck & Expansion joints concrete and Joints filled with debris. Such joints replaced immediately.
- Joint buried with debris shall be inspected for any distress, if any distress is shown it shall be replays immediately.
- During visual inspection it is seen that some Expansion joints are bad where as some are not showing any defects.
- Due to this it is considered provident to change the Expansion joints which are visibly damaged in initial stage.
- In the absence of records pertaining to Expansion joint replacements it is highly difficult to predict the date of replacement needed for compliance to IRC codal requirements. Balance joints which are not replaced initially will be replaced as on when defects are shown in the joints. This aspect is considered in BOQ.

Bearings:

- In order to identify the bearings requiring immediate replacement, the following strategy is adopted.
- Girder Bridges showing diagonal cracks at support, distress in the Pedestals and any form of distress in support location is regarded as a candidate for replacement. By visual inspection there are only a handful of such situations.
- Wherever pedestals are damaged either by cracking or spalling poisons confinement is proposed by Jacketing/MS plate bonding such procedure is very effective and common.
- All Metallic Bearings need to be taken up for servicing.

Wearing Coat:

It is necessary to replace the wearing coat at every 15years interval, as wearing coat is a very weak component of the bridge structure which is subjected to severe deterioration due to loading, environment etc. As of now, we have considered sealing of cracks by Fog Seal and for which does not show any distress other than cracking by viz. Pot holes, abrading etc. Based on this aspect, this cost has been considered in highway O&M cost.

Periodic Maintenance strategy for Replacement of Bearings & Expansion joint:

Below strategy has been considered for periodic major maintenance of the structures.

S No	Description	Bridge components
1	Old structure	Structures which are already available during 4-laning
2	New Structure	Structures which are constructed during 4-laning

Age	Description	Item	structures-Assumption-MMR				
			% of Replacement of Major components				
			2026	2031	2036	2041	2045
New	Super structure lifting with Pot bearings	Pot	10%	25%	25%	25%	25%
New	Super structure lifting with Elastomeric bearings	Ela	10%	25%	25%	25%	25%

Old	Super structure lifting with Pot bearings	Pot	35%	65%	10%	20%	25%
Old	Super structure lifting with Elastomeric bearings	Ela	35%	65%	10%	20%	25%
Old	Super structure lifting with Rocker bearings	Rocker	35%	65%	10%	10%	10%
New	Pot bearing cost	Pot	10%	25%	25%	25%	25%
New	Elastomeric bearing cost	Ela	10%	25%	25%	25%	25%
New	Rocker bearing cost	0	0%	0%	0%	0%	0%
Old	Pot bearing cost	Pot	35%	65%	10%	20%	25%
Old	Elastomeric bearing cost	Ela	35%	65%	10%	20%	25%
Old	Rocker bearing cost	0	35%	65%	10%	10%	10%
New	Expansion joint Replacement	EJ	13%	31%	31%	31%	31%
Old	Expansion joint Replacement	EJ	44%	81%	13%	24%	29%
New	Others	-	16%	39%	39%	39%	39%
Old	Others	-	55%	102%	16%	30%	36%

Cost Component for various items and activities have been worked out by considering the Best Industry practice and most appropriate methods. Detailed quantities for work items have been estimated based on the details presented in previous chapters for various heads.

The gist of the cost components considered are presented below:

- Immediate Repair's Cost
- Routine Maintenance Cost
- Incident Management Cost
- Periodic Maintenance Cost
- Operations Cost
- Year by Year total O&M Costs

7.1 RATE ANALYSIS

Detailed rate analysis has been carried out based on MORTH guidelines to arrive at the unit rates of various items. Material rates and their leads from the project corridor are considered as per the material investigations done on the project road. Summary of unit rates arrived at are presented in table below:

Table 40: Unit Rates of Basic Material

Sl.no	Description	Units	Source	Basic rate excluding Transportation & GST	Lead in Kms
1	VG-40 (CAPEX)	MT	Mathura	50,602	329
2	Modified Bitumen- VG-40 /CRMB-MMR	MT	Mathura	47,147	329
3	Good earth	Cu.m	BA	104	6
4	40 mm	Cu.m	Crusher	915	200
5	20 mm	Cu.m	Crusher	915	200
6	12 mm	Cu.m	Crusher	815	200
7	6 mm	Cu.m	Crusher	818	200
8	Dust	Cu.m	Crusher	818	200
9	M sand	Cu.m	Crusher	981	200
10	CRMB-55	MT	Mathura	48,752	329
11	CRMB-55-MMR	MT	Mathura	43,877	329
12	SS1	MT	Mathura	50,000	329
13	Steel	MT	Bareilly	50,000	104
14	HTS Strands	MT	Bareilly	75,000	104
15	Cement	MT	Bareilly	7,300	104

Note: For future asphalt pavement rehabilitation works, a normative standardized cost for Bitumen (VG-40 & PMB) has been determined based on historical bitumen rates from August 2020 to December 2024

Table 41: Unit Rates of Major Material excluding GST

Sl.no	Item	Unit	Rate (INR) Excluding GST
1	BC - G1-VG-40-CAPEX	Cum	13,604
2	BC - G1-VG-40/CRMB-MMR	Cum	13,082
3	Tack coat on bituminous surface	Sqm	15
4	DBM G-1-VG-40	Cum	11,479
5	Tack coat on granular	Sqm	17
6	Prime Coat	Sqm	50
7	WMM	Cum	4,260
8	GSB G-2	Cum	4,123
9	CTSB	Cum	4,727
10	CTB	Cum	5,314
11	PQC	Cum	9,526
12	DLC	Cum	5,540
13	SG	Cum	553
14	Road Marking	Sqm	585
15	M15	Cum	8,091
16	M20	Cum	8,849
17	M25	Cum	9,500
18	M30	Cum	9,456
19	M35	Cum	9,728
20	M40	Cum	9,872
21	PSC M45	Cum	11,863
22	HYSD	MT	73,670
23	HT strand	MT	1,54,161

NOTE: 1. Item rates considered for Small projects

2. Labour: Central Minimum Wages as on Oct'2024 for "C Area" Category of construction workers

7.2 INITIAL IMPROVEMENT WORKS (SCHEDULE-B)

Costs associated with initial improvements are estimated based on the detailed asset inventory and condition assessment surveys, Pavement condition and structural condition assessment surveys. Items which are not executed as part of scope or in damaged condition have been considered for immediate costs as a part of 1-year capex. Following items are mainly considered for Initial Improvement costs:

- Scope given in schedule-B
- Scope which is not executed
- Road work items
- Bridge Work Items
- Pavement Rehabilitation works
- Structural Rehabilitation works
- Drainage Works
- Slope Protection works
- Safety Works

On review of the contemporary records and on ground assessment the cost to complete is given below.

Table 42: CAPEX Cost FY26

S. No.	Particulars	Amount Rs
1	Immediate Repair's (Highway)	41,81,07,375
2	Immediate Repair's - Structures	16,83,49,357
3	Schedule-B (Str)	15,31,02,991
4	Schedule-B (Highways and misc)	48,03,74,900
5	TMS	9,54,71,371
6	ATMS	42,28,42,537
7	Revalidation surveys	1,22,28,444
8	Toll plaza renovation cost including replacement of Office Furniture, all building, Canopy, all misc. items etc.	5,00,70,146
	Sub-Total (in Rs.)	1,80,05,47,122
	Total Cost Including GST @ 18% (in Rs.)	2,12,46,45,604
	Total Amount (in Crore Rs.)---- **A**	212.46
	Rigid pavement repair at Toll Plaza Including GST @ 18% (in Rs.Cr)--**B**	1.26
	Service road rehabilitation works Including GST @ 18% (in Rs.Cr)--**C**	18.34
	Total Capex in Crore (A+B+C)	**232.06**

(A) Immediate Repair's (Highway)

S. No	Description	Unit	Quantity	Rate	Amount

b	Contingencies, 5%	2,28,74,995
	TOTAL	**48,03,74,900**

(D) TMS Cost

The TMS cost arrived are based quotes obtained by NHIT, from different vendors such as Comvision, Devaditya and Efkon for the amount Rs 9,54,71,371.

(D) ATMS Cost

ATMS cost computed with reference to MoRTH 2023 circular for installation of TMCS, VIDS, VASDS, VMS system, DTS/OFC etc.

7.3 ROUTINE MAINTENANCE & INCIDENT MANAGEMENT COSTS

Routine maintenance costs include general maintenance costs of road elements, bridge elements and road furniture and appurtenances. This can be mainly divided into two parts as:

- ✓ General Maintenance of Works
- ✓ Repairs to Highway & Bridge Elements

7.3.1 General Routine Maintenance

General Routine Maintenance of Roads generally include following items:

- Cleaning of Project facilities
- Structures cleaning,
- Cleaning of ROW
- Cleaning and Maintenance of Toll Plaza
- Unlined Drain Maintenance
- Lined Drain Maintenance
- Maintenance of Highway Lighting at Toll Plaza and other project locations
- Median Plantation maintenance & Avenue plantation maintenance:
- Maintenance of Road Furniture
- Maintenance of Road Safety Items

The above items are estimated by considering the detailed break-up of following items:

- Manpower including Managers/Labour etc.
- Vehicles for Labour Transport/Water Tankers/Sweeping Machines etc.
- Resources/Equipment's such as grass cutters, tools, jet sprayers, hydraulic trimmers etc.

7.3.2 Repairs to Highway & Bridge Works

Repairs to highway and bridge works have been estimated based on the assumed quantities (Percentage basis) of execution for every year.

These items include the following:

1	Providing treatment for sealing of road surface / isolated cracks at scattered locations
	i) Covered with 6.7 mm size stone chipping @ 0.1 cum/ 10 sqm.
	ii) covered with dry coarse sand passing through 2.36 mm sieve and retained on 180 micron sieve @ 0.03 cum/10 sqm heated to 600 C
	iii) filling discrete cracks with slow curing bitumen emulsion as per Technical Specification Clause 3004.3.3
2	Providing treatment to bleeding bituminous surface at scattered locations
3	Providing localized repair to rutted portion and edge breaking of bituminous surface
4	Providing treatment and repair to pot-holes and patch work
5	Providing and laying dense bituminous macadam using bitumen grade VG 40 complete as per Technical Specification Clause 507
6	Proving and laying bituminous concrete (asphaltic concrete)
	(a) Using bitumen (VG-40) as per IRC: SP: 53
7	Road Roughness survey
8	Turfing on embankment slopes and at all other Project Facilities
9	Providing repair to stone pitching/apron at scattered locations
10	Rain Cuts Maintenance: Restoration of rain cuts soil, moorum, gravel or a mixture of these
11	Providing and laying apron/ stone pitching on slopes of guide bunds/ road embankment / other location
12	Providing and laying stone aggregate filter material (150 mm compacted thickness) underneath pitching
13	Unlined drain
14	Filling in median island with approved materials with all leads and lifts complete as per TS Clause No. 407

15	Replacing damaged / broken railing with new pre-cast / cast-in-situ, concrete railing to match with existing design and pattern.
24	Carrying out repair to road signs including strengthening resetting or otherwise repairing signs and delineators
	a) Road sign board mounted on single post
	b) Road sign board mounted on double post
	c) Overhead/ Gantry Sign boards
	d) Delineator
25	Supplying and fixing at site retro-reflectorized type **sign boards/signs**
	90cm Equilateral triangle
	60cm circular
	90 cm circular
	90cm high octagon
	80cm x 60cm rectangle
	Chevron signs 60cm x 45cm
	Place identification signs (Fig 15.7 of IRC 67)
	Providing and fixing Object Markers
	Providing and fixing of retro-reflectorized Route Marker signs (size 450mm x 600mm)
26	**Hazard Marker Sign :**
	a) size 90 x 30 cm
	b) size 30cm triangular side cluster of red reflectors (screen printed)
27	Cats Eyes/Raised pavement marker (NMC Nails Less)
28	Painting two coats on old surface after minor repairs to give an even and smooth surface and printing letters and figures with synthetic enamel paint
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
29	Providing painting lettering and fixing of distance measurement stones including dismantling of old damaged/ broken ones, confirming to TS Clause 804
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
30	Providing and fixing road delineators conforming to TS Clause No. 805 as directed by the Engineer.
31	Repainting the kerb stones and separation barrier with first quality synthetic enamel paint of approved brand
32	Painting all types of pavement markings including lines, dashes, arrows etc. on roads as per relevant IRC/MOST standards after cleaning the surface complete in all respects as directed by the Engineer.
	a) Hot applied Thermoplastic compound
	(i) Lane / Centre Line / Edge Line
	(ii) Direction Arrows
	(iii) Diagonal Chevrons Markings
33	Supplying and laying cast-in-situ cement concrete kerb without channel section
	a) by Manual/machine including formwork
34	Major repair / replacement of metal beam crash barrier (W profile guard rails)
35	Providing and fixing chain link/ welded mesh fencing / square bars fencing
36	Dismantling the old damaged chain link/welded mesh / square bars fencing and replacing it with new chain link/ welded mesh/square bars fencing
37	Provision of rumble strips
38	Shoulder Maintenance:

39	synthetic enamel paint of approved brand on metal pedestrian guard rail
40	Dismantling of wearing course

B. Structures

1. Wearing coat comprising of 50 mm thick BC.
2. Cleaning and adding rubber sealant near expansion joints.
3. Modular Expansion joints.
4. Replacement of Damaged Concrete Railing all complete as per Technical specifications and as directed by the Engineer
5. Provision of an RCC crash barrier (0.35sqm cross sectional area) constructed with M-40 grade concrete including reinforcement
6. Cleaning of rocker & roller bearing using high pressure water jet, free from rust scales, re-setting & greasing the bearings using graphite grease including cost of materials, labour etc., complete.
7. POT PTF Bearings greasing and maintaining (sand plastering).
8. Elastomeric Bearings and maintaining.
9. Cutting of groove of 15 mm x 15 mm along crack and sealing the same with epoxy putty including cost of material, labour etc.
10. Carrying out 50 to 60 mm thick shortsheeting using a mix proportion of 1:2:2 (cement: sand:6 mm down aggregate) added with Polypropylene fibers at a dosage rate of 125 gms/bag of cement including cost of labour, material, scaffolding, equipment etc complete.
11. Repair of Floor Aprons, pitching and other protection works
12. Cleaning of Drainage Spouts
13. M-25 Concrete

7.3.3 Incident Management Cost

Incident Management & Safety items include the following:

- ✓ ATMS control room operations,
- ✓ Regular patrolling & reaching accident/incident site,
- ✓ providing relief to injured persons including taking them to nearest hospital and attending to the safety requirements at the location (putting cones, safely guide & manage the traffic using signs, safety barricades, etc.),
- ✓ removal of accident /breakdown vehicles, removing of dead animals/birds lying on the highway and loading, unloading, transportation & disposal of surplus material left over by accidental vehicle or otherwise lying on road (on carriageway) and
- ✓ Encroachment prevention & removal with all lead & lifts complete with proper communication equipment,
- ✓ consumables, materials, suitable Towing vehicles, Ambulance, patrolling vehicles and manpower like drivers, helpers, para-medical staff, labour including deployment of crane and all works shall be done as per requirement and as directed by Client representative and as per Relevant Specifications as applicable.

7.4 OPERATIONS COSTS

In addition to the above-mentioned General Routine maintenance, Repair & Rehabilitation cost for Road and structures, Incident management cost the following the Cost towards Operations include:

- Electricity Charges
- Toll Plaza Operation cost
- Insurance Charges
- Road Asset Management System (RAMS), Bridge Management System (BMS) & Surveys
- Other Office Expense (Admin, SPV, IE and Other)

Table 43: O&M Cost in Crores (including GST)

FY	Operation & Maintenance Cost (in INR Cr.)								
	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
2025-2026	8.15	4.87	0.00	7.93	2.87	11.82	5.05	3.21	8.55
2026-2027	8.15	4.87	5.49	7.93	2.87	11.82	5.05	1.94	9.82
2027-2028	8.15	4.87	5.49	7.93	2.87	11.82	5.05	1.94	10.01
2028-2029	8.15	5.59	5.49	7.93	7.85	11.75	5.05	2.13	9.85
2029-2030	8.15	8.17	5.49	7.93	7.85	11.75	5.05	3.05	10.01
2030-2031	8.15	8.17	5.49	7.93	7.85	10.85	5.05	2.47	10.03
2031-2032	8.15	8.17	5.49	7.93	7.85	9.96	5.05	2.47	9.80

2033-2034	8.15	8.17	5.49	7.93	7.85	9.52	5.05	3.05	10.31
2034-2035	8.15	8.17	5.49	7.93	7.85	9.52	5.05	2.47	10.03
2035-2036	8.15	8.17	5.49	7.93	7.85	9.52	5.05	2.47	10.21
2036-2037	8.15	8.17	5.49	7.93	7.85	9.52	5.05	2.47	10.31
2037-2038	4.08	4.14	2.74	4.68	3.91	9.52	5.05	2.19	9.92
2038-2039	4.08	4.14	2.74	4.68	3.91	9.52	5.05	1.61	9.68
2039-2040	4.08	4.14	2.74	4.68	3.91	9.52	6.17	1.61	11.12
2040-2041	4.08	4.14	2.74	4.68	3.91	9.52	6.17	1.61	10.12
2041-2042	4.08	4.14	2.74	4.68	3.91	9.52	6.17	2.19	10.39
2042-2043	4.08	4.14	2.74	4.68	3.91	9.52	6.17	1.61	10.26
2043-2044	4.08	4.14	2.74	4.68	3.91	9.52	6.17	1.61	10.33
2044-2045	9.95	10.02	5.97	7.93	9.58	9.52	6.17	2.85	10.87
Total	**136.34**	**124.51**	**85.50**	**135.85**	**116.21**	**203.50**	**107.75**	**45.49**	**202.75**

Note: 1) The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation.

2) All other remaining costs are based on FY 2025 with GST and without escalation.

3) The amount is Crores inclusive of GST and without escalation

7.5 PERIODIC MAINTENANCE COSTS

Cost towards major maintenance include following:

- ✓ Cost of Periodic maintenance of Pavement based on Finalized MM schedule
- ✓ Cost of Periodic Maintenance of Structures
- ✓ Cost of Periodic replacement of Toll Equipment's & Software

Table 44: Major Maintenance Cost

FY	Major Maintenance Cost (in INR Cr.)			
	Road (MCW, SR, Toll Plaza)	Structure	ATMS	TMS
2025-2026	-	-	-	-
2026-2027	-	-	-	-
2027-2028	4.14	-	-	-
2028-2029	0.02	-	-	-
2029-2030	274.21	-	-	-
2030-2031	92.21	12.22	-	-
2031-2032	4.62	-	19.96	5.63
2032-2033	-	-	-	-

2034-2035	0.02	2.66	-	-
2035-2036	274.21	17.79	-	-
2036-2037	92.21	-	-	-
2037-2038	-	-	-	-
2038-2039	4.62	-	14.93	11.27
2039-2040	1.24	1.89	-	-
2040-2041	-	9.33	-	-
2041-2042	183.23	-	-	-
2042-2043	-	-	-	-
2043-2044	-	2.66	-	-
2044-2045	4.62	23.61	-	-
Total	**940.34**	**70.16**	**34.88**	**16.90**

Note: The amount is Crores inclusive of GST and without escalation, considering FY2025 rates

7.6 CAPACITY AUGMENTATION

The capacity augmentation is envisaged in the year FY2038 & FY2039 with 5-year DLP up to FY2044 for Section-1: Bareilly to Shahjahanpur from km 262.000 to km 340.800.

- The capacity augmentation is envisaged in the year FY2038 & FY2039 for Section-1: Bareilly to Shahjahanpur from km 262.000 to km 340.800.
- The MSA estimated for 10years, LHS: 55MSA and RHS: 62MSA for Toll Plaza-1 at Faridpur Km 266+900 and LHS: 63MSA and RHS: 59MSA for Toll Plaza-2 at Maigalgunj Km 372+160.
- From FWD analysis, strengthening overlay is warranted for a length of 36.9 km in LHS and 69.498 km in RHS. M/s Atcon is doing strengthening work in entire length except 58 km balance length which is under DLP of another contractor.
- From Roughness analysis, Functional overlay, is warranted for a length of 18.800kms in LHS and 14.350 kms in RHS are having roughness values greater than Schedule-F, specified limit of 2400mm/km.
- From NSV pavement condition analysis, an overlay, is warranted for a length of 76.6 kms in LHS and 73.9 kms in RHS for the rating satisfactory. M/s Atcon is doing strengthening work in entire length except 58 km balance length which is under DLP of another contractor.

  The above mentioned FWD, roughness and PCI lengths are superimposed in order to eliminate the overlapped sections and final considerations are as presented below

Recommended Overlay	No Overlay	To be Overlaid	DBM Completed	BC Completed	Total Length (Km)
Main Carriageway -LHS					
Overlay as per FWD survey	10.600	5.800	7.500	13.100	**37.000**
Overlay based on Roughness index(>2200mm/km)	8.500	2.500	7.100	6.700	**24.800**
Overlay based on PCI	7.700	4.700	8.000	7.200	**27.600**
No Overlay	20.800	11.400	11.300	24.690	**68.190**
Main Carriageway -RHS					
Overlay as per FWD survey	8.800	15.100	28.100	17.590	**69.590**
Overlay based on Roughness index(>2200mm/km)	1.400	9.000	0.200	8.000	**18.600**
Overlay based on PCI	4.000	10.200	0.600	10.400	**25.200**
No Overlay	8.200	11.600	10.000	14.400	**44.200**

- Minimum Central Wages for labour is considered for Category “C” as of OCT’2024 with 0% escalation considered.
- Overheads and Contractor’s profits are considered from MORTH Standard data book -2019 for “Small Project” category.

- The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other remaining costs are based on FY 2025 with GST and without escalation

NATIONAL HIGHWAYS INFRA INVESTMENT MANAGERS PRIVATE LIMITED

FINAL REPORT

Tolling, Operation, Maintenance and Transfer of Four lane, Muzaffarnagar-Haridwar section of NH-334 from km 130.560 to km 209.120 in the state of Uttar Pradesh & Uttarakhand

SAMARTH INFRAENGG Technocrats Private Limited

February 2025

WMM	-Wet Mix Macadam
WPI	-Wholesale Price Index

CHAPTER 1. INTRODUCTION

1.1 INTRODUCTION

National Highways Authority of India ("NHAI"/ "Authority") is an autonomous body of the Government of India ("GoI") under the Ministry of Road Transport and Highways ("MoRTH") and was constituted on June 15, 1989 by an Act of Parliament titled - The National Highways Authority of India Act, 1988 ("NHAI Act"). NHAI was operationalized in February 1995 with the appointment of full time Chairman and other Members. The functioning of NHAI is governed by NHAI Act and rules, and regulations framed thereunder.

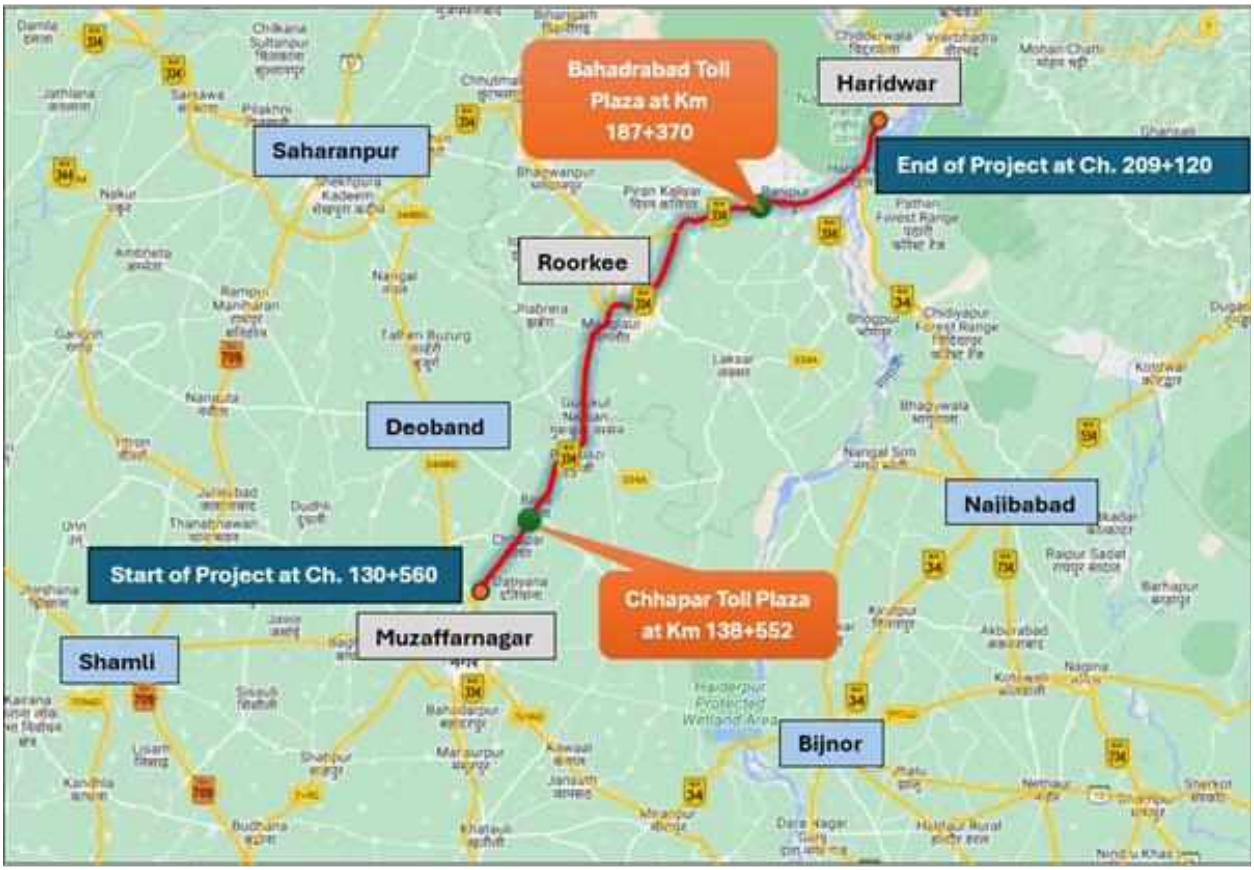
NHAI has set up an Infrastructure Investment Trust Namely **National Highways Infra Trust ("InvIT")** and is acting as its Sponsor to the said InvIT.

National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT. Accordingly, with refence to Letter of Empanelment, (LOE ref: NHIIMPL/I&A/TC/2022/04 dtd 03 Nov 2022) by Investment Manager the following works are awarded to M/s SAMARTH INFRAENGG Technocrats Pvt Ltd vide their letter ref: NHIIMPL/FY2024-25/RFP/Technical Consultant/LOA/04 dated 16.08.2024.

Project	Length (km)	No. of Plazas
Muzaffarnagar–Haridwar (Uttar Pradesh & Uttarakhand) From km 130+560 to Km 209+120	78.560	2 (TP-1, Chhapar TP-2, Bahadrabad)
Bareilly-Sitapur (Uttar Pradesh) From km 262 to km 419.590	157.59	2 (TP-1, Faridpur TP-2, Maigalgunj)

Presently the project stretch, "Muzaffarnagar–Haridwar" is under Operation and Maintenance stage and the fee is being collected from Toll Plazas at km 138+700 near Chhapar village for a length of 35.440 km and at km 187+500 near Bahadrabad village for a length of 43.120 km.

The concession period is 20 years commencing from Appointed Date for TOT Concessionaire to demand and collect appropriate Fee, operate, manage and maintain the Project Highway.



M/s SAMARTH INFRAENGG Technocrats Pvt Ltd has undertaken Technical Due Diligence study for the said project to estimate initial capex including improvements and immediate requirements for repair & rehabilitation of various elements of project highway and also to make an assessment of Major maintenance requirements and Operation & Maintenance costs for entire concession period.

This report highlights the findings of "Technical Due Diligence Services of Four/Six Laning of ***Muzaffarnagar- Haridwar Section*** of NH-334 from km 130+560 to km 209+120 in the state of Uttar Pradesh & Uttarakhand".

1.2 PROJECT AT A GLANCE

Project road is a four-lane divided Project Highway with a Flexible Pavement and starts at km 130+560 of NH- 334 and ends at Km 209+120. The total length of the project highway is 78.560 Km.

National Highway – 334 begins from Bulandshahr in Uttar Pradesh and ends in Haridwar in the state of Uttarakhand. It is a critical supporting route for enhancing regional connectivity, reducing congestion on main highways, and supporting both local and pilgrim traffic. This Highway connects several cities and towns such as Bulandshahr, Hapur, Meerut, Muzaffarnagar, Roorkee & Bahadrabad in the state of Uttar Pradesh and Uttarakhand.

Map Showing the Project Corridor

The start and end of the project chainage system with respect to CA and Site are as presented below.

Table 1: Project Corridor Chainage System

Referencing system	Start Point (km)	End Point (km)	Length (km)
As per CA Chainage	130.560	209.120	78.560
As per Site	130.560	209.120	78.560

Photograph showing the start and end point of the project road are presented below:

	
A view of the Start Point of Project Road at Km 130.560	**A view of the End Point of Project Road at Km 209.120**

1.3 OBJECTIVE AND SCOPE OF SERVICES

The main objective of the study is to evaluate the current status of project corridor including details pertaining to identify requirements of initial repair & rehabilitation and estimate major maintenance needs and operation and maintenance costs over the concession period and provide requisite technical information for processing the acquisition of said project by client. Objective of the study can be broadly defined with following tasks:

A) Review of Project Document

- ✓ Review of DPRs/ draft CA/ Schedules pertaining to the scope of work and understand the Sch-B requirements for improvement works for the assessment of capex and Opex during the concession period.
- ✓ Review of As-built drawings and Designs
- ✓ Collection of relevant records and documents and review of same
- ✓ Review of correspondences with IE, if any, on technical issues.
- ✓ Review of EPC, Operation, Maintenance and Systems Contracts
- ✓ Review of Progress Reports, if any Prepare head of terms (highlight the key commercial, technical terms of the contracts) for the reviewed Contracts - EPC, O&M, Asset Management, Operational Agreements (if any), CAs (key technical items) etc.
- ✓ Review of Asset Management Contracts to understand the maintenance of asset from the Concession agreement perspective
- ✓ Review the technical approvals / consents from IE or another agency required under the CA

B) Field Investigations

- ✓ Undertake detailed reconnaissance to appreciate the project corridor characteristics

- ✓ Undertake field investigations to collect first-hand information on present condition of project road and establish the requirements for rehabilitation and up gradation
- ✓ Carrying out inventory and condition surveys for Project Road;
- ✓ Carrying out Inventory and detailed condition surveys for bridges & cross drainage structures (along with Photographs thereof) including recommendation for either strengthening/rehabilitation or reconstruction; Identify requirements of NDT tests if any (to be executed if required and commissioned by client with separate mutually agreed payments).
- ✓ For Major Structures (length of structure>60m), detailed Visual inspection shall be undertaken with MBIU.
- ✓ Video-graphic survey of the entire Project corridor/s.
- ✓ Axle load survey for 7days in both directions of traffic at toll plaza location (7-day traffic count to be provided by client).
- ✓ Test pits required @ every 5 km interval (staggered) along the Project corridor and carrying out necessary laboratory tests to determine the CBR value of the sub grade materials.
- ✓ Carrying out deflection test by Falling Weight Deflect meter (FWD) for existing pavement as per relevant IRC code at the rate of 5 points in km in each direction making it 10 points for both directions.
- ✓ Carrying out Roughness Survey on each lane of Project Corridors using NSV Surveys
- ✓ Availability of construction materials.
- ✓ Assess drainage adequacy: Review of available hydrological reports and assess the availability and condition of existing road side drainage along the corridors.
- ✓ The outputs of investigations are basically used to identify the strengthening requirements for project sections and also used to form the inputs for deterioration modelling.

C) Validation of Executed Works and Assessment of Improvement Works

- ✓ Validation of executed works with respect to Schedule A of the CA by physical verification at site
- ✓ Assess the present status of the projects with relevant standards and confirm that works are meeting the requirements and have been accepted by the authorities.
- ✓ Understand the scope requirements for Improvement works from the Sch-B of the CA
- ✓ Where project stretch / structures / service roads / ancillary works are pending and if not covered in the Sch-B scope of the CA, then assessment of details relating to land acquisition, approvals, timelines for completion, etc. along with cost forecast
- ✓ Cost estimates for any missing items and all works included in the Sch-B of the CA
- ✓ Make an assessment of any risks associated with already executed works

D) Quality Audit

- ✓ Review quality of construction based on available data, available design and drawings.
- ✓ Review of Quality of materials from Laboratory testing for aggregates & soil
- ✓ Check compaction and quality of subgrade material used vide test pits
- ✓ Visual inspection of bridges for any visible distress and anomalies. Identify requirements of NDT testing based on same.
- ✓ Examine Expansion joints and bridge bearings condition and assess requirements for replacements
- ✓ Shall be examining expansion joints visually to the extent possible. Shall use high binoculars/ pictures from accessible points. Shall review all photographs closely and come to a conclusion on same.
- ✓ Identify any critical issues / red flags in relation to the quality or condition of the projects; Identify any structural integrity issues that require rectification / re-mediation;

E) Rehabilitation Plans & Designs

- ✓ Check the adequacy of designs carried out for execution based on available reports
- ✓ Undertake designs for immediate rehabilitation requirements based on CA specifications using FWD data and condition assessment surveys
- ✓ Assess the requirements of rehabilitation to bridges/CD structures by structure based on visual inspections and compare with Sch-B requirements of the draft CA
- ✓ Assess the requirements including BOQ and cost estimates of repair and replacements for various elements and ancillary works

F) Major Maintenance

- ✓ Review of current maintenance system.
- ✓ Preparation of the maintenance costs to be incurred over the period of the concession keeping in mind the maintenance requirements of the Concession Agreement.
- ✓ Detailed assessment of maintenance cycles for pavements using HDM4 analysis and estimation of maintenance cost for the concession period
- ✓ To understand the current maintenance strategy for each of the project and review the BOQ to be provided by the DPR consultant for adequacy in relation to Major Maintenance work of Highways, structures, Road Furniture and other site-specific requirements as per respective CA
- ✓ Minor maintenance will be included in routine maintenance and estimated year wise based on assumed percentages based on present condition.
- ✓ Identify any impacts on revenue due to Major Maintenance.

- ✓ Maintenance requirements for approaches/OP/Underpass forming part of CA would also be assessed.

G) Cost of Improvement Works and Operations

- ✓ Preparation of O&M cost for the concession period.
- ✓ Assess the adequacy of costs assumed in the vendor model are adequate to meet the major maintenance, stage construction and routine maintenance requirements.
- ✓ Independently develop a bottom-up forecast of Operating expenses for project, with detailed break-up of each type of operating expense, along with underlying assumptions

H) BOQ and Cost Estimates

- ✓ Preparation of BOQ & Cost for Improvement works as per Sch-B of the CA
- ✓ Preparation of BOQ and Costs for Major Maintenance
- ✓ Preparation of BOQ and cost for Routine maintenance and Route Patrolling
- ✓ Preparation of BOQ and Cost for Operations
- ✓ Preparation of year-by-year O&M cost
- ✓ The costs would be provided till the end of the concession period including any expected extension of Concession periods as informed by the Client.
- ✓ Benchmarking of costs against other similar Indian toll roads where available (using available data)
- ✓ Historical trend analysis on the maintenance program based on the existing pavement condition and review of all relevant maintenance plans/ documents of NHAI or its concessionaires or contractors.
- ✓ Review and comment on the current organizational structure from an O&M perspective at each asset. Also suggest an indicative organization structure based on project / CA requirements.

1.4 DATA COLLECTION AND REVIEW

In brief, following were covered

- ✓ Review of Concession Agreement & Schedules,
- ✓ Review of Detailed Project Report prepared by NHAI
- ✓ Review of As-built drawings, Plan and profiles, Structural drawings & Detailed Project Reports and Designs where available
- ✓ Review of O&M costs as presented in DPR reports
- ✓ Review of MPR provided by NHAI
- ✓ Review of Latest NSV and FWD data provided by PIU, NHAI

1.5 KEY PROJECT DETAILS

National Highways Authority of India (NHAI) originally awarded the Project to M/S ERA infra in 2010. The project was intended for completion within a few years but continued to face setbacks due to funding challenges, execution delays, and financial troubles within Era Infra.. As a result, construction lagged well beyond the scheduled deadline, leading NHAI to cancel the contract and seek alternative avenues to complete the project efficiently. Accordingly, Era Infra's contract for the Muzaffarnagar-Haridwar project was terminated in 2018. The delays and incomplete work prompted NHAI to seek a new contractor to complete the project.

Thus, the balance works were awarded in two packages in the year 2019 on item rate contract with following details as highlighted below.

S No.	Description	Package-I	Package-II & III
	Name of Work	Balance works on item rate basis for 4-lane works between Km. 130.560 to Km. 167.200	Balance works on item rate basis for 4-lane works between Pkg-II: Km. 167.200 to Km. 180.300 Pkg-III: Km. 180.300 to Km. 209.120
1.	Employer	National Highways Authority of India	National Highways Authority of India
2.	Independent Engineer	K and J Projects Private Limited	K and J Projects Private Limited
3.	Contractor	M/s RSCPL-SKC-ABIPL J.V. (Km. 130.560 to Km. 167.200)	M/s Sam (India) Built-well Pvt. Ltd. (Km. 167.200 to Km. 209.120)
4.	Contract type	Item Rate	Item Rate
5.	Appointed Date	25.11.2019	25.11.2019
6.	Schedule Completion Date	24.08.2020	24.12.2020
7.	COD	16.06.2021	16.06.2021
8.	DLP Period (3 years)	16.09.2024	16.09.2024
10.	Present Contracting Agency for O&M	Sri Krishna constructions	Kaushal Infra
11.	Present Toll Collection Agency	Jandu Constructions	Jandu Constructions

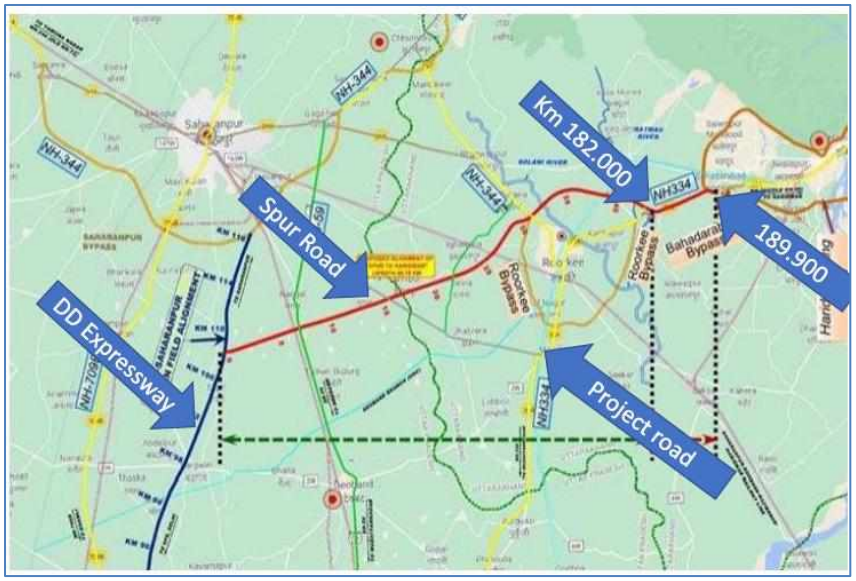
As per schedule-A, Clause-2, the exclusions to the project handover dates are as follow

S No	Description	Handover Date
1	From Km 182+070 to Km 188+900 (Haridwar spur construction in progress) ➢ Awarded to M/s KCPL Pvt. Ltd. under HAM with scheduled completion date on 19 Feb 2025 and O&M period is 15 yrs from COD **Haridwar Bypass:** Interchange at Km 189+300 including construction of Haridwar Bypass	FY 2040 (expected)

	➢ Awarded to M/s IRCON Haridwar Bypass Limited. under HAM with scheduled completion date on 21 Aug 2025	
2	**Elevated Corridor**: from Km 206+220 to Km 209+120 including Ramps ➢ Awarded to M/s SEC Buildtech Pvt Ltd. under EPC and completed on Feb 2024 with DLP period Feb 2034	FY 2034
3	**Based on Prebid replies:** Sch-A, Clause-19 for Additional works to be undertaken by NHAI:, New EPC Works including SR and Flyover will be completed in 2 years and the DLP 5 Years. Will be handover in May 2032 say FY2033	FY 2033
4	**Based on Prebid replies:** Initial overlay sections (to be undertaken by NHAI on EPC basis in FY 2026 with 5 years DLP	FY 2032

Client intimated the Capacity Augmentation period is FY 2035/FY2036 and 5 years DLP upto FY 2041

1.6 O&M REQUIREMENTS



Few important O&M requirements as per schedules/manuals are described as below.

- ✓ Applicable Manual is IRC: SP:84-2019
- ✓ Applicable Schedule for O&M period is Schedule-F.
- ✓ Schedule-F, performance parameters indicate the desirable limit of Roughness values should not exceed 2000 mm/km, whereas its acceptable limits Is 2400 mm/km and needs to be corrected within 180 days. Roughness Surveys shall be carried out Bi-Annually.
- ✓ Schedule-F, performance parameters indicate the FWD survey shall be carried out Annually as per IRC: 115-2014 for flexible pavement and needs to be corrected within 180 days
- ✓ No specific Handing Over (Divestment) requirements are mentioned under CA. It shall be same as Schedule-F.

1.7 KEY OBSERVATIONS

General project Key observations are as presented below.

- Project Road can be divided into 3 sections as:
  - ➢ Muzaffarnagar-Roorkee Bypass Start Km 130.56-Km 167.3
  - ➢ Roorkee Bypass Section till Spur Road KM 167.3-Km 180.4
  - ➢ Spur Road Junction-Haridwar (Km 180.4-209.120)
- Amongst above, 3rd section near Haridwar is more critical as it has more number of structures and continuous developments with slow moving traffic.
- Section 3 has a common length with Spur Road package between Km 182-187 and Haridwar Bypass package between Km 187-189.9. Within this length Toll Plaza falls at Km 187.5.

- 3 major at-grade signalised intersection exist in this section which cause some safety hazards. May require grade separation to avoid safety issues
- 3rd section has Ganga canal running on LHS side for substantial length in the end section. There is not much scope for improvement on LHS side. Predominant length in section 3 runs on elevated level with traffic segregation to local traffic. Poor entry exists cause some safety issues.
- Narrow median exists without any anti-glare screens at some sections.
- Poor Vertical geometry is noticed at new flyovers/ROB at structure location. This may need regrading to correct profile.
- Low height crash barriers were noticed on approaches to Flyovers. This may need Pipe railing to increase the height.
- Safety Hazard noticed at Km 198-199 near exit point due to poor landing/approach start.
- RE wall bulging noticed at Km 199-200 flyover on A1 side. Poor Vertical geometry on flyover structure approach
- Uni directional flyover at 201-202 on RHS carriageway: At-grade Signalised Intersection for LHS Carriageway. Safety hazard
- End Point at Km 209.120 falls on the approach of a new flyover built as a part of next package. Requires confirmation of exact end point.
- Section 2 Roorkee bypass is having good number of structures in terms of underpasses/bridges. Roorkee Bypass has different chainage system on ground. It starts at KM 22(Km 181) and ends at KM 36 (Km 167). Roorkee Bypass Ends at Km 180.4
- Finishing of some structures at approaches appears to be poor with improper line and level (Km 169-170)
- Water Stagnation is noticed between MCW/SR, need median drainage (Km 168-170) RHS
- First section between Km 130-167 is simple 4 lane rural section without much complications.

- Manglour Urban Area (Km 165): Lot of Ribbon Developments without Grade separation. May require a flyover to reduce safety issues
- 200m Service is required at KM 157.8 for continuity of service Roads. Mandauli Urban Area at Km 157. Requires improvement of drainage measures. Narrow Median Without Anti-Glare
- Gurkul Narsan urban area at Km 153-154, local traffic, FOB provided. Requires drainage measures (Rishab Pant Accident at Canal Bridge at Km 154.4)
- Purkazi bypass appears to be most recently constructed in this package with a wide median of 12m and appears to be in fair condition. Purkazi Bypass requires grade separation at both ends (Km 151 & Km 144)
- Drainage issues particularly at curved sections were noticed at start of Purkazi bypass with lot of water stagnation. There is no water outfall nearby and RWH pits were done at this location but not functional.
- Staggered Toll Plaza at Km 138.6: PQC length is more on Exit Side on either direction.
- Chhapar Urban Area at Km 137: Submergence of Service Road observed along with Sewage Water.
- Safety issues related placement of safety barriers (MCB) at approach sections were noticed. MCB is placed much inside the shoulder with kerb outside.
- Median openings required to be provided with proper signage/markings/TBM and standing lanes
- Project Road Structures exhibit several distresses and appears to be rehabilitated in the recent past. Some newly constructed structures also got distress and rehabilitated.
- Pavement exhibits poor to fair condition over the entire length with predominant surface cracking and severe ravelling in Inner lanes OWP. Rutting along wheel path is also observed at distress location. No major undulations/depressions are noticed
- Tilting of wells were noted in couple of major bridges
- RE wall: Soil nailing done at couple of locations
- Deck Slab of bridge at Km 164 is completely damaged
- Narrow median and without Anti-Glare
- Most of the major bridges have been retained on the left side, while new bridges have been constructed on the right side, parallel to the existing ones.
- A New major bridge at 164+100 on the right-hand side is experienced severe cracks & leaching issues on the soffit of the Deck slab in all spans and additionally, evidence of previous repair works is observed on the soffit of the slab. Based on the identified distress, a complete replacement of the deck slab may be required as a remedial measure to ensure continuous and reliable service.
- Although this project stretch lies in Seismic zone –IV, the old bridges at Ch: 164+100, 181+160, 186+000, 193+160, 203+945, 204+300, 204+500 and 205+790 not provided with seismic arrestor's/ stoppers. To enhance the seismic resilience of these structures, it is recommended to implement seismic enhancements, such as the installation of seismic stoppers or dampers, at these specific locations.

- A couple of old bridges, specifically the Major Bridge at Ch: 193+160 on the left-hand side and the Minor Bridge at Ch: 133+340 on the left-hand side, are constructed with brick masonry substructures and have an overall width of 8.5m. These bridges may require reconstruction to accommodate future capacity augmentation.
- Based on the visual inspection of bearings conducted using the MBIU, no major distress was observed, and the bearings appear to be in fair condition. However, the rocker and roller bearings on the older bridges require cleaning and greasing to ensure their proper functioning.
- An old major bridge at 205+790 on the left-hand side has experienced a collapse of the Footpath slab along the entire length on the median side in Span 2. No rectification has been carried out yet.
- All the old major bridges have structural cracks on the girders, spalling, and issues with reinforcement exposure. Since these are all old structures, NDT (non-destructive testing) is required to assess their current condition and propose suitable repair methodologies.
- Some box-type structures in the underpass and minor bridges have structural cracks on the slabs and walls.
- Steel frame strengthening arrangements were observed on the pier cap (P1) on the left side of the flyover at km 185+400. Currently, no significant damage has been observed on the pier cap. Confirmation from the contractor is required to verify the implementation of these arrangements.
- Bulging of the RE walls observed at several locations of the ROB, flyover and underpass.
- Expansion joints and sealants are damaged at several locations.

CHAPTER 2. SURVEYS AND INVESTIGATIONS

2.1 INTRODUCTION

The main objective of undertaking Surveys and Investigations is to appreciate the existing engineering features along the project corridor and to understand the present condition of the various elements of the project road and to prepare required inputs for various rehabilitation and maintenance strategies.

Following Survey and Investigations have been undertaken as a part of study with an objective to understand the present condition of the road and there by access the quality of construction and as well to prepare requisite rehabilitation/corrective designs where necessary.

- Road Inventory Surveys
- Pavement Condition using NSV
- FWD Surveys
- Roughness Surveys using NSV
- Pavement Composition surveys (Test Pits)
- Subgrade Investigations & Laboratory testing
- Material Investigations
- Axle Load Survey
- Structure Inventory and Condition Surveys

These surveys have been performed in the month of August/September 2024.

2.2 ROAD INVENTORY

The project corridor features a 4-lane/6-lane divided carriageway for most of its length. Generally, the carriageway width of flexible pavement is 7.5m/11m wide, including shyness, and is flanked by 1.5m paved shoulders and 1 to 2 meters of earthen shoulders on each side of the median. These widths vary at structure locations and approaches to major junctions. At Toll Plaza location rigid pavement is provided. The 4lane/6-lane lengths as available.

Lane		LHS, km	RHS, km	LHS+RHS, km
2-Lane	Actual Length	53.75	52.16	105.91
	Lane length	107.5	104.32	211.82
3-Lane	Actual Length	24.81	26.4	51.21
	Lane length	74.43	79.2	153.63
Total lane Kms		**181.93**	**183.52**	**365.45**

The median is typically 4.5 meters wide for the majority of the corridor. At median openings, the width reduces to 1 meter to accommodate storage lanes. In built-up sections, 1-to-2-meter median is observed. However, a depressed median is observed on the Purkazi bypass, extending from Km 143+800 to Km 151+000, where the median width is 11 meters.

In general, road embankments heights are in the range of 0.5m-3m. However, embankment heights higher than 3m are observed mainly in the approaches to CD-Structures and Underpass locations.

The project corridor mainly traverses through plain terrain. The land use along the project road is predominantly agricultural and built-up areas. It passes through urban settlements like Chhappar, Manglaur, Roorkee, Bahadrabad.

Typical View of Project Road is shown below:

A view of the Project Road at km 130.560-LHS

A view of the Project Road at km 146.000-RHS

A view of the Project Road at km 197.000-LHS

A view of the Project Road at km 173.530 LHS

The Project Road has both major and minor junctions along its length. Photographs showing the Major Junctions and minor junctions are presented below:

Major Junction at km 143.800 RHS

Minor Junction at km 159.550 LHS

Major Junction at km 191.830 LHS

Minor Junction at km 192.670-RHS

Highway lighting is observed near urban locations and at-grade separators, whereas High-masts are provided at Toll Plazas and Major junctions. Few photos showing High mast and highway lighting are presented below:

A view of High Mast Lighting at km 143.800 RHS

A view of Double arm Lighting at Km 175.000 Median

A view of Double arm Lighting at Km 157.000 Median

A view of Single arm Lighting at Km 155.620-LHS

Project Road consists of Road user facilities like Bus bays with shelters and only Bus shelters. Few photos taken at the Bus Bays and Bus Shelters are presented below:

Bus Bay with Shelter at Km 159.500-RHS

Bus Shelter @ Km 180.700 RHS

Service/slip roads are constructed with flexible pavement and have varying carriageway widths ranging from 3.5 meters to 7 meters. Photos depicting the service road pavement surface type, Condition and the other associated features like drain. Few photos taken at service/slip road locations are presented below.

Service Road 7 m width @ km 166.690 LHS

Service Road 5.0m width @ km 176.900 LHS

Service Road 5 m width @ km 159.150 RHS

Service Road 5 m width @ Km 185.750 RHS

The Project Road has 2 Nos of staggered Toll Plaza at Km 138.700 (Chhapar Toll Plaza) and at Km 187+500 (Bahadrabad Toll Plaza). Rigid pavement is provided at toll plaza location and condition appears to be fair. It has 6+1 lanes on each side of both Toll plazas. In total 12 Nos. of High mast lights are provided at both Toll Plazas.

S No	Toll Plaza Details		
1	Chainage (Km)	**Km 138.700**	**Km 187+500**
2	Toll plaza name	Chhapar Toll Plaza	Bahadrabad Toll Plaza
3	No of lanes	6+1 lanes (staggered lanes)	6+1 lanes (staggered lanes)
4	Canopy	Yes	Yes
5	Admin Building	Yes	Yes
6	Static Weigh Bridges (SWB)	1	1
7	Toilets	1	1
8	High mast lights	6 Nos	6 Nos
9	Toll Booths	14 Nos	14 Nos
10	Ambulance	1 Nos	1 Nos
11	Crane	1 Nos	1 Nos
12	Highway Patrolling Vehicles	1 Nos	1 Nos
13	Fast tag lanes	14 Nos	14 No

S No	Toll Plaza Details		
14	Medical-Aid Post	1	1
15	Total Toll Plaza length (m)	100m Rigid	200m Rigid
16	Toll plaza width (m)	40	40
19	Separator width at Toll booths (m)	1.5	1.5
20	Toll lanes width (m)	3.5	3.5
21	Extra Wide Lane width (m)	4.5	4.5
22	Tunnel	Yes	Yes
23	Weigh in Motion (WIM)	14	14

A view of the Toll Plaza near Km 187.500

A view of the admin building at Km 187.500 RHS

The collected Road Inventory Data is presented in **Appendix 1** of this Report

2.3 PAVEMENT CONDITION SURVEYS

The collected Pavement Condition Data using NSV surveys for main carriageway is presented in **Appendix 2** of this Report.

The photographs showing the pavement condition of the Project Road is presented below.

 **Delamination @ km 151.000 RHS**	 **Fair condition @ Km 154.550 LHS**	 **Crack sealing done @ km 157.300 RHS**
 **SR Damage Km 159.150 RHS-SR**	 **Rutting & Cracking at Km-160.000 RHS**	 **Wheel path cracking @ km 161.500 RHS**
 **Cracks in wheel path @ Km-166.600 RHS**	 **SR shoulder damage @ km 170.150 LHS**	 **Pot hole at SR @ km 175.000 LHS**

 Delamination @ Km 185.100 LHS	 Fair condition @ km 197.000 LHS-SR	 Pot holes @ km 201.080 LHS- SR
 Ravelling @ km 201.080 LHS-SR	 Cracks in wheel path @ km 202.650 LHS- SR	 Ravelling at Km 203.000 LHS

2.4 FALLING WEIGHT DEFLECTOMETER (FWD) SURVEYS

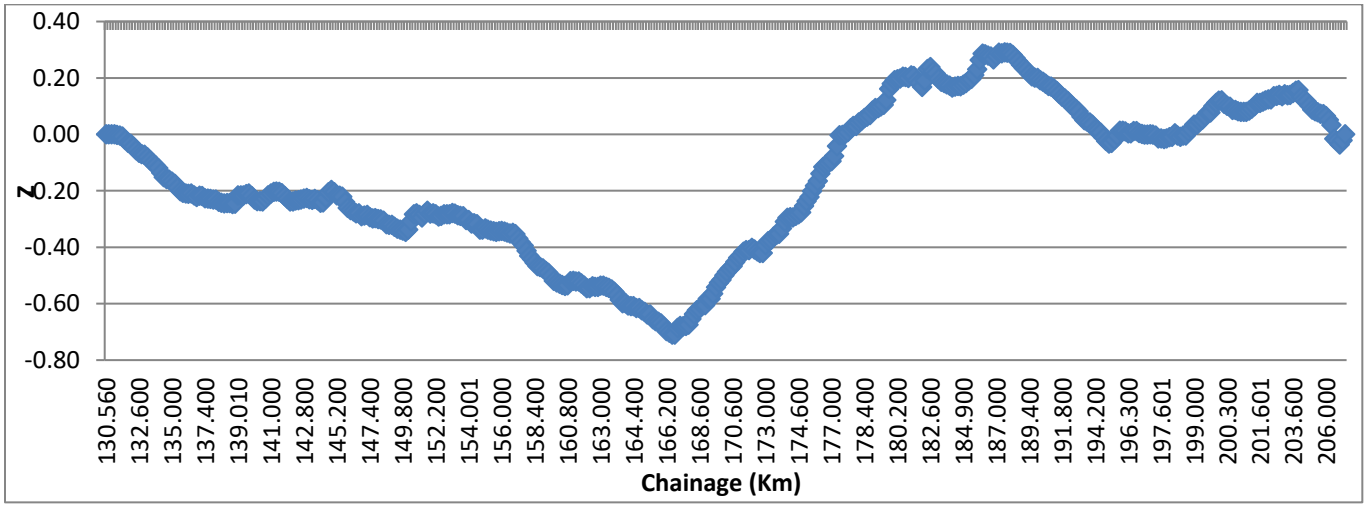
2.4.1 Falling Weight Deflectometer Survey (Flexible Pavement)

In order to evaluate the structural strength of the existing pavement, Falling Weight Deflectometer (FWD) survey has been carried out along the project road in line with IRC: 115-2014.

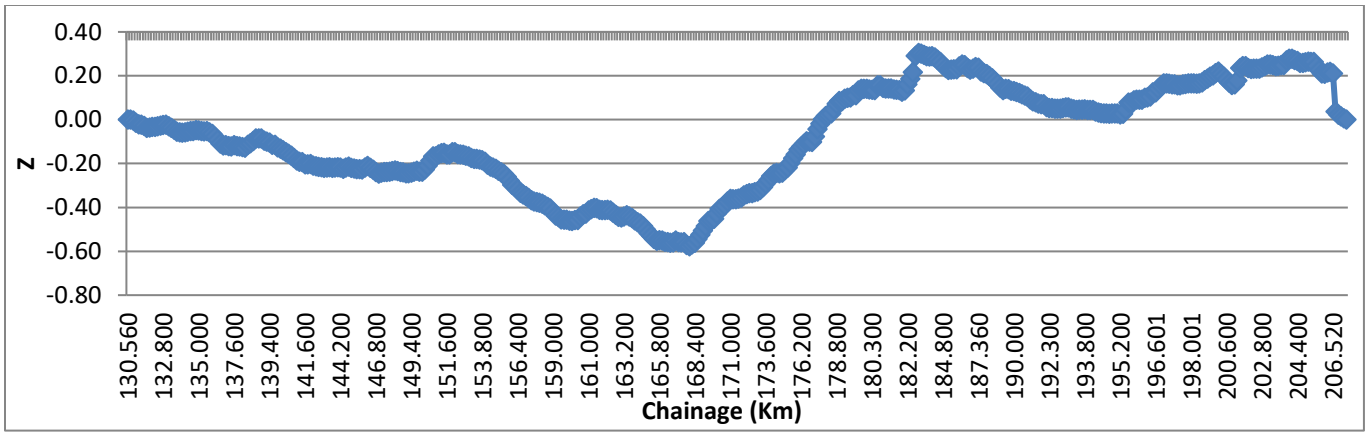
- ✓ Prior to the start the surveys, Load repeatability tests are performed on each day
- ✓ The target Peak Load of 40 KN (+/- 4 KN) is maintained during survey.
- ✓ At Regular intervals of time Pavement temperature is noted.
- ✓ For every 1 Km of stretch 5 test Points (2 pts- Outer, 3 pts-inner) were taken on Main Carriageway in each direction. Additional points also taken on extra-lane locations.
- ✓ Temperature correction equation is applied for back calculated modulus of BT and no seasonal correction factor is applied for the back calculated modulus of granular and Subgrade considering the Winter Season (September Month).

The collected FWD Data and Analysis is presented in **Appendix 3** of this Report.

Few photos taken during the progress of FWD Surveys are presented below:



FWD Survey in progress



Temperature checking

Cumulative Difference Approach (CDA) has been used for the identification of homogeneous sections on the basis of Surface Curvature Index (SCI). SCI is calculated as the difference between D_0 and D_{300}, where D_0 and D_{300} are the peak deflections (mm) measured at the center of loading plate and at a radial distance of 300mm.

The homogenous sections in each direction of traffic (i.e., LHS & RHS) for the project stretch have been identified for Main carriageway is presented in graphical representation of followed by tables.

Delineation of Homogeneous Section – LHS

Delineation of Homogeneous Section - RHS

Based on the above graphs, the flexible pavement section has been sub-divided into homogeneous section for LHS and RHS direction as given below.

Table 2: FWD Data -Homogenous Section of MCW – LHS

S. No	From	To	Length (Km)	Remarks
1	130.560	132.800	2.24

Total Length			78.560	

2.5 ROUGHNESS SURVEYS

The Roughness data has been collected using **Network Survey Vehicle** and analyzed in terms of International Roughness Index (IRI), separately for each lane, for both direction of travel. Pavement

Roughness data collection and computation of IRI for each km length in each direction is presented in **Appendix 4** of this Report.

As per Schedule-F of INVIT, the desirable level of service for Roughness values for bituminous pavement surface is considered to less than 2000 mm/Km and the acceptable limits are less than 2400mm/Km.

Average Roughness Index (RI) values along the corridor were grouped in to four categories, Pie chart showing the range of RI values in each carriageway of the project road have been presented below:

It can be seen from the above pie charts, that about 74% in LHS & 66% in RHS of the length of the Project Road has good riding quality (RI<2000 mm/km) respectively.

2.6 PAVEMENT COMPOSITION SURVEYS (TEST PITS)

The composition of the existing pavement crust has been noted from test pit surveys. A total of 18 Nos. of pits have been dug along the corridor and its pavement composition has been noted.

Results of the test pit survey showing average thickness of pavement layers are presented in the Table below.

Table 4: Pavement Composition of Existing Pavement along Project Road

S No	Test Pit Number	Existing Chainage	Direction	BT (mm)	WMM (mm)	GSB (mm)	Total (mm)
1	MH-TP-1	173+300	LHS	180	250	200	630
2	MH-TP-2	180+750	LHS	250	250	350	850

18	MH-SR-TP-2	170+250	RHS	100	250	300	650

Further, to understand the extent of GSB layer in the median, 4 pits have been dug in the median. The GSB layer thickness found in the median is as shown below.

Table 5: Existing GSB Layer Thickness in Median

S No	Median Pit No	Chainage	Side	Offset from Kerb (m)	GSB Thickness (mm)
1	MH-GSB-1	170+800	Centre	1.5	200
2	MH-GSB-2	190+800	Centre	1.5	100
3	MH-GSB-3	150+100	Centre	1.5	150
4	MH-GSB-4	140+020	Centre	1.5	150

2.7 SUBGRADE INVESTIGATIONS & LABORATORY TESTING

Sub-grade Investigations have been conducted to assess the subgrade soil characteristics along the project road. A total of 18 test pits were carefully dug from the pavement surface down to sub-grade level. Of these, 16 Nos. were on main carriageway, while the remaining 2 were on Service Road. Field density tests were carried out on the sub-grade samples, and a small quantity of each sample was collected in airtight containers to determine the field moisture content. After completing the field density tests, representative bulk samples of sub-grade soil were collected from each test pit in gunny bags for laboratory testing.

The soil samples collected have been tested for the following properties to assess the existing sub-grade soil properties.

- Sieve analysis
- Atterberg limits
- Heavy compaction
- Four (4) days soaked CBR as per IS standards at 97% of MDD as applicable for sub-grade (Heavy Compaction)
- Free swelling index

Few sample photos of the test pit locations where the subgrade samples collected are as presented below.

Soil samples from these borrow sources have been collected in bulk by excavating test pits down up to 1.0m depth from the existing ground surface. The top organic soil layer of approximately 150mm thickness has been removed before sampling. The samples collected from these identified borrow pits/ gravel quarries have been tested for the suitability of utilizing them as embankment fill/ sub-grade. Few sample photos of borrow area locations are as presented below.

2.12 AXLE LOAD SURVEYS

Traffic loading plays a critical role in pavement performance and design due to the strong correlation between vehicle axle loads and road wear. This relationship can vary depending on the road structure and the specific deterioration processes involved, but the "fourth power" law serves as a useful approximation, illustrating how increases in axle load exponentially amplify road damage.

Axle load study has been conducted using portable axle load pads at two locations: near toll plaza at km 138.700 from 22-23 August 2024 and at km 187.500 from 23-24 August 2024. Further, again 7 days axle load survey has been conducted at the same locations from 24.10.2024 to 31.10.2024. The survey has been conducted in both the directions, and data captured on random sampling basis. The collected axle load data and analysis is presented in **Appendix 5** of this Report. The vehicle damage factors have been calculated using the standard axle loadings given in IRC: 37-2018. The adopted standard axle loadings are presented in the following table.

Table 9: Details of Standard Axles Used

Axle Configuration	Standard Axle load (Tonnes)*/ KN	Remarks
Single Wheel, Single Axle	6.60/65	As per IRC 37-2018
Dual Wheel, Single Axle	8.16/80	As per IRC 37-2018
Dual Wheel, Tandem Axle group	15.10/148	As per IRC 37-2018
Dual Wheel, Tridem Axle group	22.90/224	As per IRC 37-2018

Few photographs illustrating the survey locations and axle load measurements are presented below.

Survey conducted @ Km 138.700

Survey conducted @ Km 138.700

Survey conducted @ Km 187.500

Survey conducted @ Km 187.500

The combined 24 hrs axle load data and 7-day axle load data are used to arrive VDF. The Direction wise VDF for each mode of commercial traffic has been estimated. Results of axle load surveys have been presented in the following table.

Table 10: VDF Values Estimated at the Toll Plaza

Vehicle Type	Chhapar Toll Plaza-1 (138+700)		Bahadrabad Toll Plaza-2 (187+500)	
	UP	DN	UP	DN

CHAPTER 3. VALIDATION OF EXECUTED WORKS

3.1 ROAD WORKS

The project road has been closely inspected to verify the executed works on ground. The scope works to be executed by the Concessionaire/Contractor as envisaged in CA is compared with the executed work on the Ground. As a part of the validation, the available as-built drawings, inventory data and Detailed Reports as received from the NHAI were also referred. Each structure has been inspected to note down its structural configuration and condition. The following table highlights the scope comparison of the executed works on ground.

The project corridor appears to have been constructed with the cross-sectional elements matching to those given in the manual at the time of execution. The carriageway width varying from 7.0m to 10.5m plus paved shoulders of 1.5m and a shyness strip of 0.5m has been provided over the entire length except at structures. Earthen shoulders of 0m to 2.0m on either side of carriageway have also been provided.

Table 11: Scope Comparison of Executed works

RCC Cover Drain	15.450	23.870	-	39.320
RCC Open Lined Drain	-	-	5.360	5.360

RE walls, RCC Wall full height and partial walls with soil embankments are found in approaches to the grade separator locations, high embankment locations and at CD-structures locations along the Project Corridor which account for a total length of 35.015 km. The detailed list is presented in **Appendix 6** and its summary is presented below:

Table 14: Summary of Slope Protection along Project Road

S No	Slope Protection Type	LHS	RHS	Total
		Kms	Kms	Kms
1	High Soil Embankment	3.230	6.360	9.590
2	Stone Pitching	3.320	2.270	5.590
3	RCC Wall Full Height	1.540	1.390	2.930
4	RCC Wall + Soil Emb	0.290	0.150	0.440
5	RCC Wall + Stone Pitching	0.000	0.120	0.120
6	RE Wall Full Height (Blocks)	0.440	0.485	0.925
7	RE Wall Full Height (Panels)	7.250	7.760	15.010
8	Gabion Wall	0.120	0.130	0.250
9	Concrete Lining	0.050	0.110	0.160
	Total	**16.240**	**18.775**	**35.015**

A total of 34 median openings were observed on-site, consisting of 16 normal openings and 18 with reserved lanes. Additionally, 10 unauthorized openings were noted. For median openings with a reserved lane provision, the 4.5m median width is reduced to 1.0 meter. Detailed location-wise information is provided in **Appendix 6**, and a summary of the openings is presented below.

Table 15: Summary of Median Openings along Project Road

Median Openings	Total
	Nos
Normal Lane	16
Reserve lane	18
Un-Authorized	10
Total	**44**

The project road has a total of 64 junctions. A comprehensive list of major and minor junctions is provided in **Appendix 6** of this report.

Safety barriers have been installed along the project road at high embankments, sharp curves and approaches of grade-separated and cross-drainage Structures. Details of safety barriers provided along the corridor are as follows:

- Single-Face W-barrier (MBCB): Observed in a length of 82.142 kms. Further details are provided in **Appendix 6** of this report. It is noted that face of crash barrier is much behind the face of kerb especially at Purkazi bypass. These require replacement of MCB as per codal specifications.

- Concrete crash barriers (CCBs) are installed at structure locations, covering a total length of 24.125 km, while New Jersey barriers span approximately 2.220 km. Further details are available in **Appendix 6** of this report.

- Pedestrian Guard Rails (PGR): Observed in a length of 24.290 kms. Further details are provided in **Appendix 6** of this report.

Table 16: Summary of Safety Barriers

Safety Barriers	Length	Missing	Damage
	Kms	m	m
CCB	24.125	272	87
Metal Handrail	-	-	-
New jersey barrier	2.220	-	-
MCB	82.142	395	294
Pedestrian Guard Rails	24.290	290	136
Fencing	-	-	-

Road furniture, including high masts, highway lighting, and signboards, has been installed along the project road. The summary of the lighting and signboards is presented below, with detailed lists provided in **Appendix 6** of this report.

3.2 STRUCTURES

List of all Structures found during the inventory surveys along the corridor are as follows:

Table 21: Summary of Structures

S.No	Type of Str	No.of Str's as per CA	No.of Str's as per Site	Remarks
1	ROB	2	2	-
2	MJB	10	10	✓ Major bridge at Ch: 186+000: Widening proposed in separate schedules of Haridwar spur road section, and construction work is in progress at the site. ✓ Major bridge at Ch: 164+100: Additional new bridge proposed on LHS in clause 19 of Schedule-A
3	MNB	11	11	-
4	Flyover	10	5	✓ Flyover at Ch: 187+900 (Unidirectional, RHS) : indicated as 'under construction' in Clause 8.10 of Schedule-A; however, the span arrangements and other structural details have provided in separate schedules of Haridwar spur road section, and construction work has not yet commenced at the site. ✓ 4 No's of flyovers, located at Ch: 163+000, 165+300, 191+760, and 195+400, are proposed under the additional scope in Clause 19 of Schedule-A. However, construction work has not yet commenced and structural details, apart from span arrangements, have not provided in the CA.
5	Elevated Structure	3	3	✓ Elevated structure at Ch: 182+230: indicated as 'under construction' in Clause 8.11 of Schedule-A. However, the span arrangements and other structural details have provided in separate schedules of Haridwar spur road section. The structure is currently under construction at the site.
6	VUP	4	2	✓ VUP at Ch: 141+398: additionally found at site but not mentioned in CA. This structure location considered in CA summary. ✓ VUP at Ch: 183+100: not mentioned in CA, but it is given in separate schedules of Haridwar spur road section and the same has been considered in CA summary.

S.No	Type of Str	No.of Str's as per CA	No.of Str's as per Site	Remarks
				✓ VUP at Ch: 143+740: proposed under the additional scope in Clause 19 of Schedule-A. However, construction work has not yet commenced, and the structural details have provided in the CA.
7	LVUP	8	8	-
8	PUP	21	21	-
9	VOP	1	1	✓ VOP at Ch: 189+250: indicated as 'under construction' in Clause 8.6 of Schedule-A. Construction work is in progress at the site.
10	FOB	7	5	✓ FOB at Ch: 157+150 & 180+650: proposed under the additional scope in Clause 19 of Schedule-A. However, construction work has not yet commenced.
11	BC	41	52	✓ Box culverts 11 No's: additionally found at site but not given CA.
12	PC	13	38	✓ Pipe culverts 25 No's: additional found at site but not given CA.

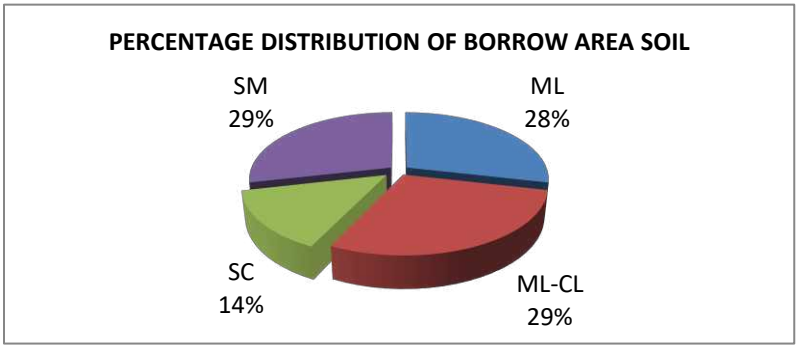
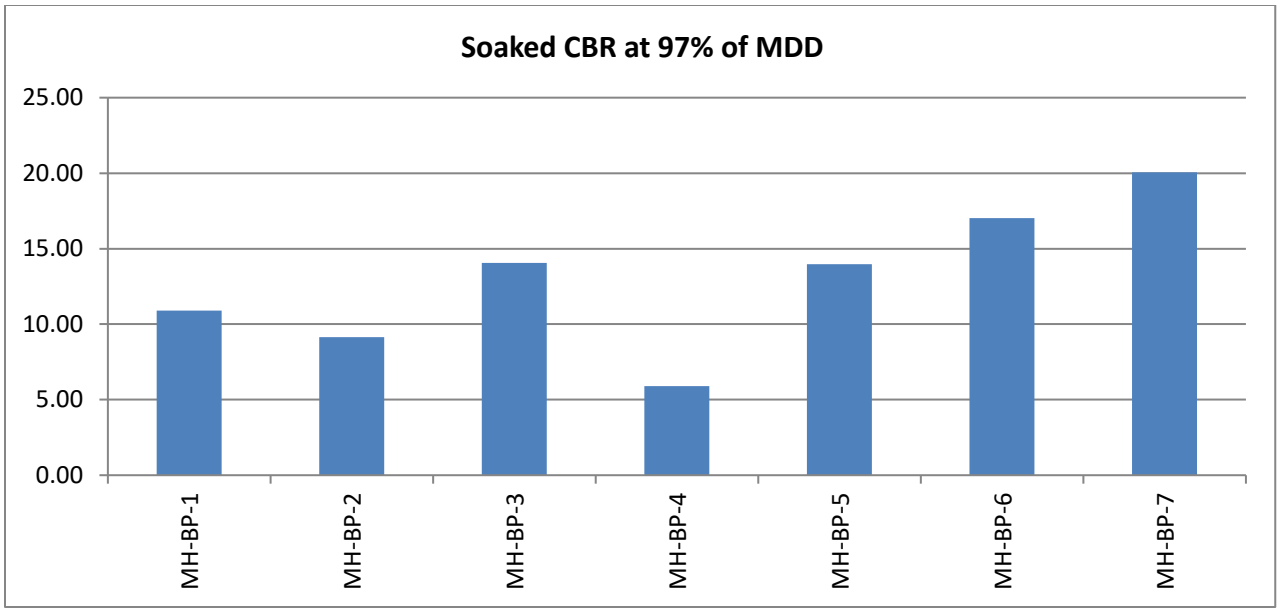
4.1 MATERIAL INVESTIGATION INFERENCES



4.1.1 EMBANKMENT & SUBGRADE



The embankment for project road has been constructed with available soils from nearby areas. The majority of the soil samples appears to be Fine grained type in nature and embankment appears to be in fair condition over the entire length of project. No major settlements or depressions have been noted even at high embankment locations. Out of 7 samples, 2 samples belong to ML type, 2 samples belong to ML-CL type, 2 samples belong to SM type and 1 sample belongs to SC type of soil.

Summary of the test results carried out on these samples are presented in the following tables whilst the complete details are presented as an **Appendix 7** of this report.

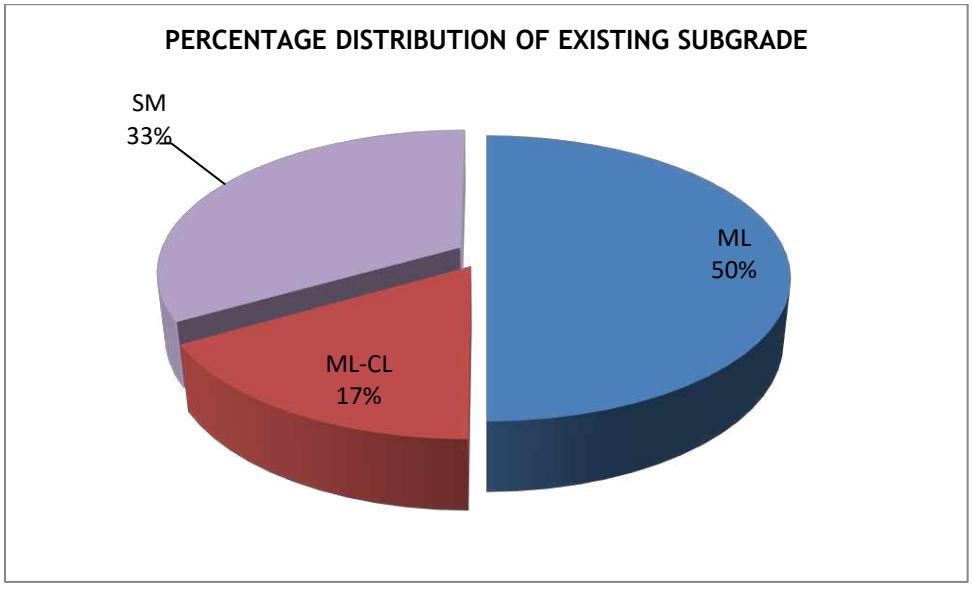
- **SUBGRADE**

The subgrade samples collected from the test pits taken from project road appears to be in fair condition as revealed by test pit investigations. Soil classification has been done according to IS Classification of Soils (ISC) as detailed in IS 1498 - 1978.

Laboratory test results indicate that majority of the Subgrade soil samples collected belongs to Fine Grained Soils. Out of 18 Nos. of samples, 9 No. of samples belongs to ML type, 3 No. of sample belongs to SM type and ML-CL type and 6 No. of samples belongs to SM type of soils.

Pie Chart showing the percentage distribution of soil classification of existing subgrade sample is presented below:



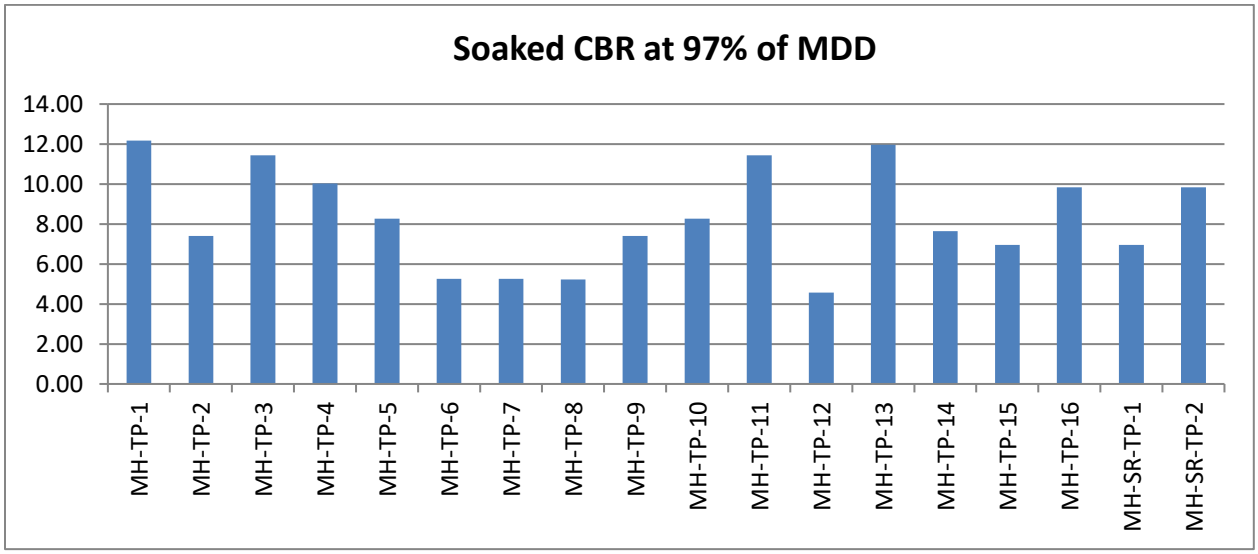


Table 29: Test results of Existing Subgrade Soils

The following observations can be made from the above test results conducted on of existing subgrade samples

- Liquid Limit are in the range of <27%, satisfying LL<50% criteria.
- Plasticity Index are in the range of 15no. of samples are non-plastic and 3 samples having the PI value of 17% to 23%, Satisfying PI<25 criteria.
- Maximum Dry Density for all subgrade samples varies between 1.87 and 2.11 gm/cc. All the samples satisfying MDD criterion (MDD>=1.75 gm/cc).
- OMC for existing subgrade samples varies in between 7.90% to 13.00%.
- Free Swelling Index for existing subgrade samples varies in between 0% to 14%. All samples satisfying the FSI criterion (FSI<=50%)
- CBR Values are varying from 4.57% to 12.17%.

All Subgrade samples are satisfying the MORTH specification criteria.

Material related tests reports are provided in **Appendix-7** of this report.

4.1.2 AGGREGATES

Aggregates collected from the source have been tested for Aggregate Impact Value (AlV), water absorption and specific gravity tests. The Table below represents the test results of the Aggregate and Sand Samples.

Table 30: Test Results of Aggregate Samples Details

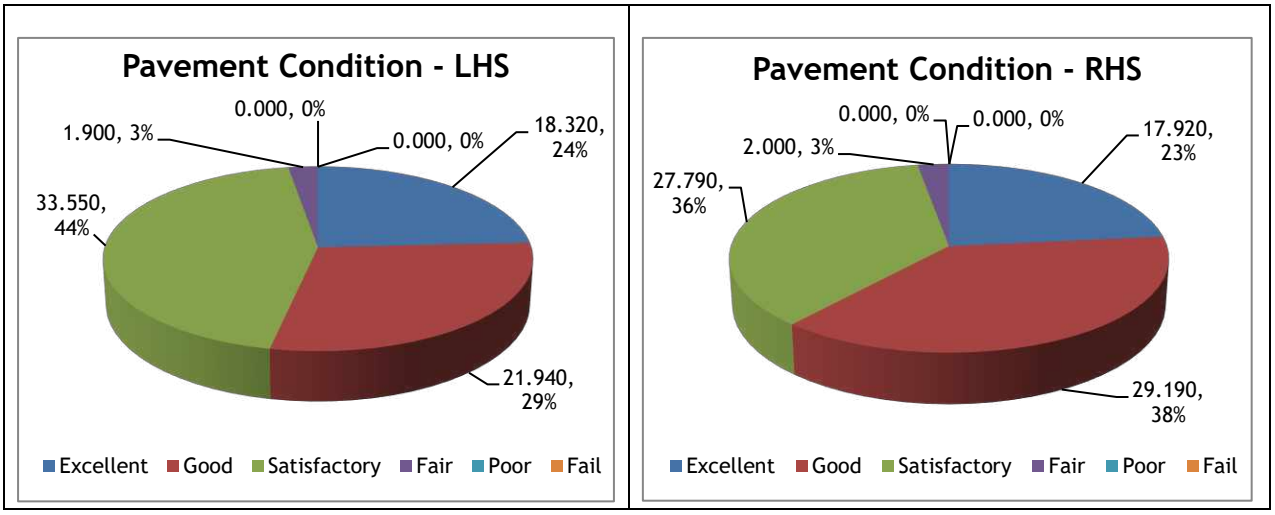
S. No	Sample	Location (km)	Up/Dn	Size of Aggregate	A.I.V (%)	Water Absorption (%)	Specific Gravity	Remark
1	MH-AQ-1	192+700	RHS	20 mm	21	0.82	2.61	
2	MH-AQ-2	192+700	RHS	20 mm	19	1.06	2.63	
3	MH-AQ-3	171+600	RHS	20mm	18	0.55	2.63	
				10mm		0.61	2.63	
4	MH-AQ-4	171+600	RHS	20mm	18	0.64	2.62	
				10mm		0.85	2.61	
5	MH-AQ-5	171+600	RHS	20mm	18	0.53	2.62	
				10mm		0.57	2.63	

Note: The above Aggregate samples are satisfying MoRTH requirements i.e., AIV (max. limit is 24% for BC-layer), Water Absorption (max. limit is 2%).

4.1.3 SAND

The test results of the sand samples are as presented below.

Table 31: Test Results of Sand Samples Details



S No	Sample No	CHAINAGE (KM)	SIDE	10 mm Passing %	4.75 mm Passing %	2.36 mm Passing %	1.18mm Passing %	600mic Passing %	300mic Passing %	150mic Passing %	FM	ZONE

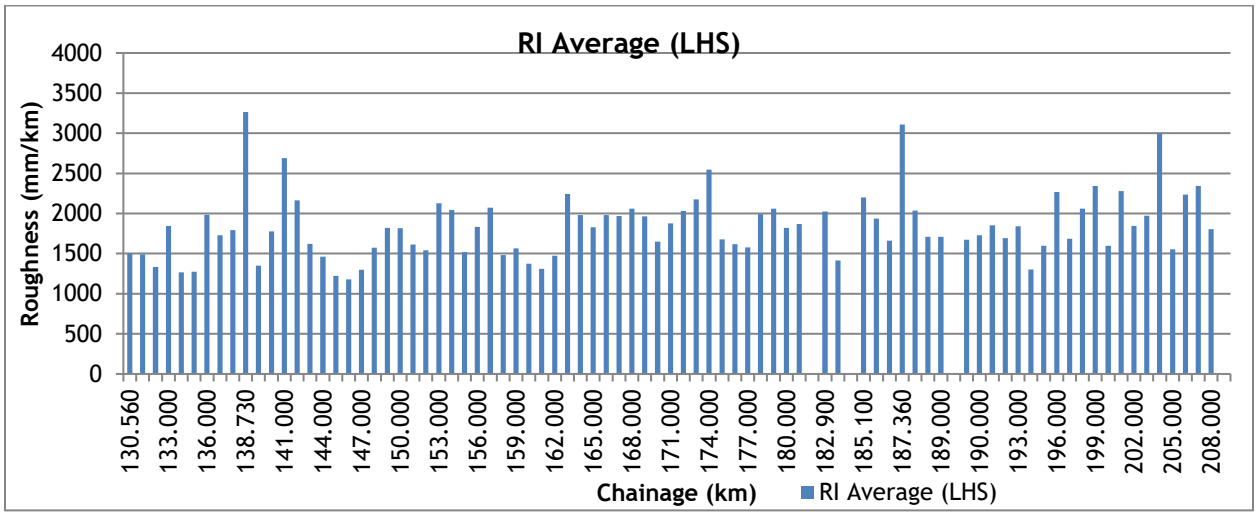
2	MH-SQ-2	171+600	RHS	100	91	86	78	69	34	3	2.40	ZONE-III
3	MH-SQ-3	171+600	RHS	100	90	80	71	58	27	2	2.73	ZONE-II

4.2 PAVEMENT CONDITION

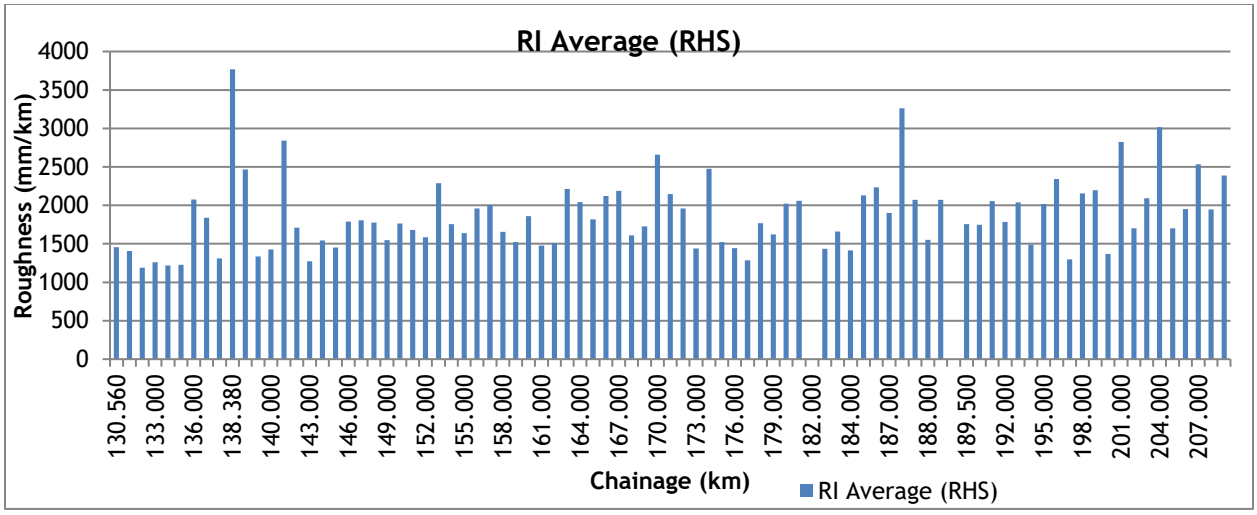
The distresses in bituminous surface have been captured on Main carriageway for each lane separately by NSV survey. Pavement Condition rating (PCI) as per IRC:82-2023 from the data collected for each km length in each direction has been presented in the **Annexure-2** of this report.

The project corridor has been provided with flexible pavement over entire length including service roads. Rigid pavement is only provided at Toll Plaza. The present surface condition appears to be fair to satisfactory. The type of distresses cracking, patching, Raveling, Rutting are observed at isolated locations. Predominant cracking is noted in the inner lane in both carriageways. Ravelling and delamination of surface layer is also seen along the inner lanes of pavement.

The Pavement condition rating (PCI) is presented in Pie-chart from Excellent to Fail are as below:



The tabulated data is as presented below:



Overall PCI		Rating as per IRC 82	Length (km)	Length (km)
>	<=			
90	100	Excellent	18.320	17.920
80	90	Good	21.940	29.190
60	80	Satisfactory	33.550	27.790
40	60	Fair	1.900	2.000
20	40	Poor	0.000	0.000
0	20	Fail	0.000	0.000
No Data (due to diversions/Toll Plaza/Under construction)			2.850	1.660
Total Length			78.560	78.560

From NSV pavement condition (PCI) analysis, an renewal coat (overlay), is warranted for a length of 35.45 kms in LHS and 29.79 kms in RHS for the rating satisfactory to Fail.

4.3 ROUGHNESS

The Roughness represented in Bar charts are as presented below.

Based on the above, considering the Km-stone reference system the summary of direction-wise km lengths having varying roughness values are as presented below.

>=Roughness (mm/km)	<Roughness (mm/km)	LHS (Km)	RHS (Km)
0	2000	56.350	50.780
2000	2200	9.460	15.690
2200	2400	6.900	4.120
2400		3.560	6.900
Under construction (No data)		2.290	1.070
Total Length		**78.560**	**78.560**

It can be noted from the above that, the 3.56 kms in LHS and 6.90 kms in RHS are having roughness values greater than Schedule-F, specified limit of 2400mm/km and thus warrants for functional overlay. Sections between 2200-2400 range may also require a roughness correction course within short period of time. Thus, it is imperative to consider roughness correction layer for such sections also.

4.4 FWD ANALYSIS

4.4.1 FWD ANALYSIS AND ASSESSMENT OF OVERLAY REQUIREMENT

By looking at the age and condition and performance of the pavement following different set of ranges have been used while finalizing the modulus values:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	400-1500 750-3000	100-500	50-75

Range for subgrade is carefully selected after evaluation 4 days soaked CBR of existing subgrade in laboratory. Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35ºC using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). For this FWD results, winter seasonal correction factor is applied for granular and subgrade layer as these tests are performed in winter season (September Month). The design moduli (15^{th} percentile moduli) of in-service layers for each homogenous section are given in table below.

Table 32: Summary of Design Moduli of different layers - LHS CW

S.No	Side	From	To	Length (Km)	15th Percentile MR values		
					MR for BT (Mpa)	MR for Granular (Mpa)	MR for Subgrade (Mpa)

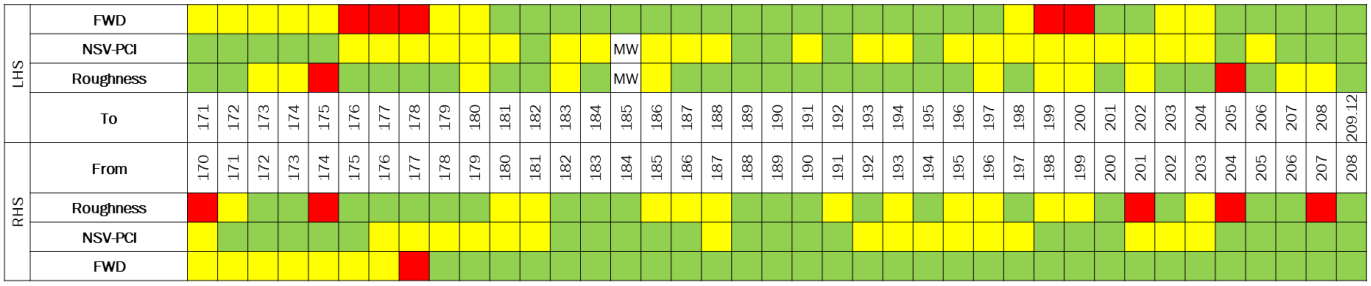
Observations on FWD Results

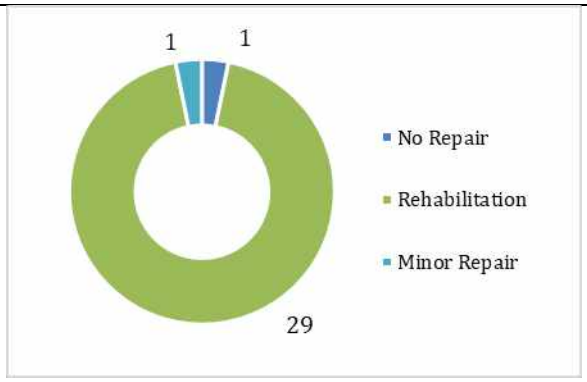


It can be noticed from the above table that the layer moduli for the three layers are varying along the length and direction. The MR value for BT layer is 2984 MPa to 488 MPa in LHS Carriageway & 2747 MPa to 1172 MPa in RHS Carriageway. The MR value for Granular Layers is above 300 for majority of length except for few sections where it is less than 200 varying between 393 MPa to 76 MPa in LHS Carriageway & 393 MPa to 105 MPa in RHS Carriageway. Similarly, the MR value for Subgrade Layer is 64Mpa in both LHS and RHS Carriageways.

4.5 PAVEMENT RATING CHART

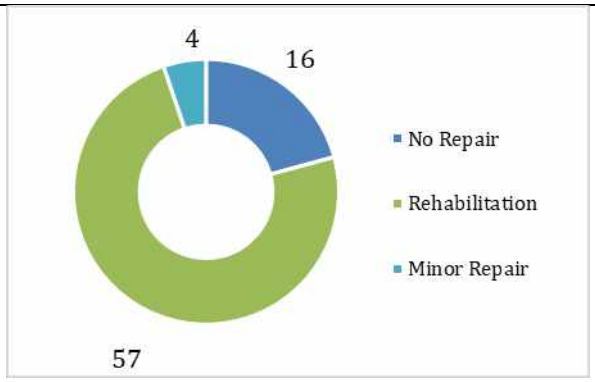
Pavement is rated for Roughness/PCI/FWD as good, fair and poor based on the following criteria along with strip-chart is presented as below:

Condition		FWD	Roughness	PCI
	Poor	OL Thick of 90mm and above	>2400 mm/Km	0 > PCI ≤ 40
	Fair	OL Thick of 50 mm	2000 - 2400 mm/Km	40 > PCI ≤ 80
	Good	No Overlay	≤ 2000 mm/Km	80 > PCI ≤ 100



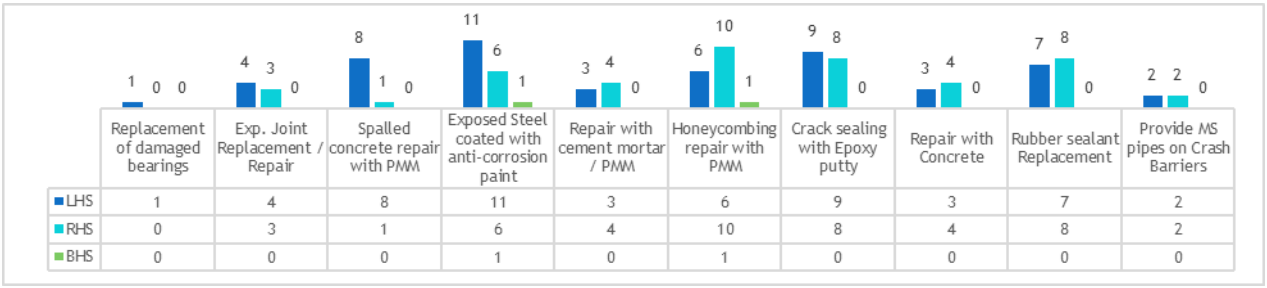
Note: Milling work (MW) under progress at Km. 184.000 to Km. 185.000

4.6 STRUCTURES



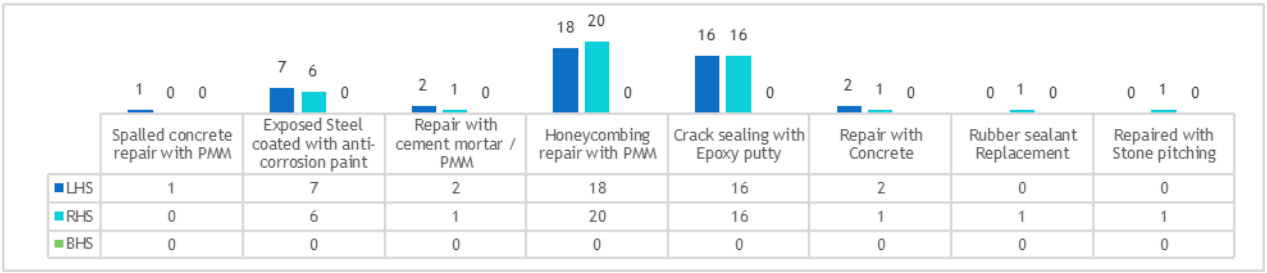
Inventory and asset condition of all the existing structures falling within project road have been verified as per IRC: SP-35 procedures and guidelines with following field surveys

- Inventory of existing highway bridges / structures
- Visual condition survey of existing highway bridges / structures
- MBIU investigation at inaccessible structures



Each and every structure has been verified at site and detailed inventory and condition survey is presented in **Appendix-8** of this report.

Maintenance of major structures (Length >60m)



Maintenance of minor structures (Length <60m)

	Replacement of damaged bearings	Exp. Joint Replacement / Repair	Spalled concrete repair with PMM	Exposed Steel coated with anti-corrosion paint	Repair with cement mortar / PMM	Honeycombing repair with PMM	Crack sealing with Epoxy putty	Repair with Concrete	Rubber sealant Replacement	Provide MS pipes on Crash Barriers
LHS	1	4	8	11	3	6	9	3	7	2
RHS	0	3	1	6	4	10	8	4	8	2
BHS	0	0	0	1	0	1	0	0	0	0

Maintenance of major structures (Length >60m)

	Spalled concrete repair with PMM	Exposed Steel coated with anti-corrosion paint	Repair with cement mortar / PMM	Honeycombing repair with PMM	Crack sealing with Epoxy putty	Repair with Concrete	Rubber sealant Replacement	Repaired with Stone pitching
LHS	1	7	2	18	16	2	0	0
RHS	0	6	1	20	16	1	1	1
BHS	0	0	0	0	0	0	0	0

Maintenance of minor structures (Length <60m)

Overall condition of few of the major structures are presented on sample basis of below. However, each and every structure detail are presented in **Appendix-8** of this report.

Chainage: 172+380
General Description
LHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 1 x 28 m
- Total length of Structure : 28 m
- Total deck width of Structure : 13.5 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Twin circular column type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier cum MS railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Cracks observed on the Abutment A2 column.
> Honeycombing observed on the Dirt wall at A1.
> Wide gap observed between the RE panels behind Abutment A1&A2.
> Vegetation growth observed on the RE wall.
> Settlement of the crash barrier observed at approach slab locations.

Chainage: 196+500
General Description
RHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 1 x 40 m
- Total length of Structure : 40 m
- Total deck width of Structure : 13.5 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Three Circular column type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier cum MS railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Rubber sealant damaged at Expansion Joint-2.
> Honeycombing observed on the soffit of the slab at cantilever portion.
> Reinforcement exposure observed on the soffit of the slab at A2.

Chainage: 164+100
General Description
LHS MCW (Old)

- Type of Structure : MJB
- Span Arrangement : 3 x 26.8 m
- Total length of Structure : 80.4 m
- Total deck width of Structure : 10.5 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Single circular column type
- Type of Superstructure : RCC Girder
- Type of Bearing : Rocker Roller
- Type of Railing / Crash Barrier : MS railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Spalling and Reinforcement exposure observed on the cantilever slab supporting beam in span-1 2 & 3.
> Leaching observed on the soffit of the deck slab in span-1 & 3.
> Cracks and leaching observed on the end cross girders at P2 in span-2.
> Reinforcement exposure observed on the intermediate cross girder in span-2.
> Delamination observed on the end cross girder at A2 in span-3.
> Pedestal damaged at Abutment A1.
> Expansion Joint damaged at EJ-1 & 2.
> Expansion Joint EJ-3 & 4 buried under wearing course.
> Cracks observed on the cantilever supporting stay members in span-1 & 3.

Chainage: 193+160
General Description
RHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 4 x 22.5 + 1 x 24 m
- Total length of Structure : 115 m
- Total deck width of Structure : 13.5 m
- Type of Foundation : Well
- Type of Substructure (Abutment & Pier) : RCC wall type & Single circular column type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier cum MS railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Expansion Joint damaged at EJ-6
> Rubber sealant damaged at Expansion Joint-2 & 3.
> Concrete edge beam damaged at Expansion Joint-2 & 5.
> Honeycombing observed on the Dirt wall at A1.

Chainage: 204+300
General Description
LHS MCW (Old)

- Type of Structure : MJB
- Span Arrangement : 2 x 65 m
- Total length of Structure : 130 m
- Total deck width of Structure : 11 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC wall type
- Type of Superstructure : RCC Girder
- Type of Bearing : Rocker Roller
- Type of Railing / Crash Barrier : MS railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Spalling and Reinforcement exposure observed on the end cross girder at A1.
> Spalling and Reinforcement exposure observed on the end main girders in span-1 and span-2.
> Drainage spouts down take pipes damaged due to corrosion.
> Expansion Joint damaged at EJ-1.
> Rubber sealant damaged at Expansion Joint-2.

Chainage: 133+340
General Description
LHS MCW (Old)

- Type of Structure : MNB
- Span Arrangement : 2 x 7.8 m
- Total length of Structure : 15.6 m
- Total deck width of Structure : 8.5 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Brick masonry wall type
- Type of Superstructure : RCC Slab
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Spalling and Reinforcement exposure on the soffit of the slab in span-1 & 2.
> Concrete portion damage and Reinforcement exposure observed on the face of the slab.
> Pointing damaged on the brick masonry Abutments and Pier.
> Tilting of the brick masonry guide wall observed at A1.
> Brick masonry return wall damaged at Abutment A1.
> Vegetation growth observed on the Abutments and Pier.

Chainage: 167+150
General Description
LHS MCW (New)

- Type of Structure : Flyover
- Span Arrangement : 1 x 30 + 1 x 40 + 1 x 30 m
- Total length of Structure : 100 m
- Total deck width of Structure : 12 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Single circular column type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

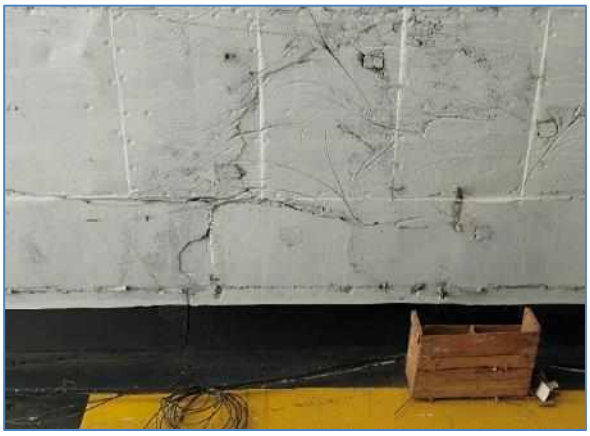
Visual Observations on condition of the structure are as below:
> Rubber sealant damaged at Expansion Joint -1.
> Slight bulging of RE wall observed near Abutment A1.
> Cracks observed on the RE panels (around 10 No's) near coping on A1 side.
> Honeycombing and Reinforcement exposure observed on the soffit of the deck slab in span-2.
> Cracks observed on the Pier P1 cap.
> Settlement of the crash barrier observed at approach slab locations.
> MS Pipe over crash barrier is missing.

Chainage: 207+150 (Part1 out 10 parts)
General Description
BHS MCW (New)

- Type of Structure : Elevated Structure
- Span Arrangement : 18 x 30 m
- Total length of Structure : 540 m
- Total deck width of Structure : 23.75 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Single Rectangular column type
- Type of Superstructure : PSC Girder
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Reinforcement exposure observed on the soffit of the deck slab plank in span-1.
> Honeycombing observed on the intermediate cross girder in span-3.



Chainage: 141+398
General Description
LHS MCW (New)

- Type of Structure : VUP
- Span Arrangement : 1 x 12 m
- Total length of Structure : 12 m
- Total deck width of Structure : 11 m
- Type of Superstructure : RCC Box
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Cracks observed on the soffit of the slab.
> Slight bulging of RE wall observed on A1 &A2 side.

Chainage: 171+450
General Description
LHS MCW (New)

- Type of Structure : VUP
- Span Arrangement : 2 x 10 m
- Total length of Structure : 20 m
- Total deck width of Structure : 12 m
- Type of Superstructure : RCC Box
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Cracks observed on the soffit of the slab in span-1 & span-2.
> Cracks observed on the sidewall A2 & intermediate wall in span-2.
> Reinforcement exposure observed on the intermediate wall in span-2.
> PVC down take pipes not provided for drainage spouts.

Chainage: 141+620
General Description
LHS MCW (New)

- Type of Structure : LVUP
- Span Arrangement : 1 x 7 m
- Total length of Structure : 7 m
- Total deck width of Structure : 12 m
- Type of Superstructure : RCC Box
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Soil nailing done on the RE Wall at A1 & A2.
> Cracks observed on the soffit of the deck slab.

Chainage: 147+120
General Description
LHS MCW (New)

- Type of Structure : PUP
- Span Arrangement : 1 x 7 m
- Total length of Structure : 7 m
- Total deck width of Structure : 11 m
- Type of Superstructure : RCC Box
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Honeycombing observed on the sidewall A1.
> Cracks observed on side walls A1 & A2.

Chainage: 136+950
General Description
BHS MCW (New)

- Type of Structure : FOB
- Span Arrangement : 2 x 20 m
- Total length of Structure : 40 m
- Total deck width of Structure : 3.2 m
- Type of Foundation : Open
- Type of Substructure (Abutment & Pier) : Steel column frame
- Type of Superstructure : Steel Truss
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : MS railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:
> Concrete pedestal damaged.
> Corrosion / Rusting observed on all steel components like Truss, columns, bracings and staircase. Painting needs to be done.

Table 34:Details of ROB's

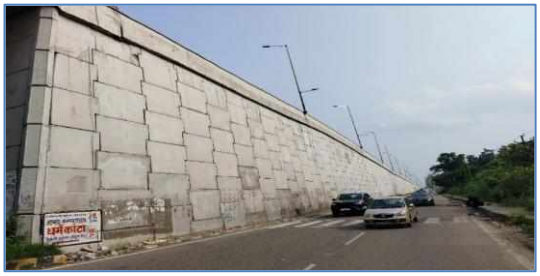
5	203+300	FOB	BHS	MCW	New	2 x 20	1.20	3.20	No	Open	Steel column frame	Steel column frame	Steel Truss



Observations:

- ✓ The site having 66 No's of Major structures which includes 2 ROB's, 10 MJB's, 11 MNB's, 2 Elevated structures, 5 Flyovers, 2 VUP's, 8 LVUP's, 21 PUP's & 5 FOB's. In addition to this 5 No's of Flyovers, 1 VOP, 1 VUP, 1 Elevated structure,2-FOBs additional proposed in Schedule-A and construction of these structures not completed at site.
- ✓ The Project stretch has various super structure types for various structures such as Steel Girder, RCC Girder, Balanced Cantilever, RCC Solid Slab, PSC Girder, RCC Box and Steel Truss.
- ✓ There are Pot PTFE (New-1140No's), Rocker Roller (Old-105 No's), Elastomeric (Old-24 No's) & Metallic (Old-8 No's) Observed in Girder type Structures. In addition to this 800 No's (New) of Pot PTFE Bearings considered for Elevated structure, Flyover, VUP, VOP, MJB and 54 No's (New) of Elastomeric Bearings considered for MJB.
- ✓ Structures are having 218 No's of Expansion joints in that 43 No's on old structures and 175 No's on new structures. In addition to this 124 No's (New) of Expansion joints considered for Elevated structure, Flyover, VUP, VOP and MJB.
- ✓ Most of the major bridges have been retained on the left side, while new bridges have been constructed on the right side, parallel to the existing ones.
- ✓ A New major bridge at 164+100 on the right-hand side is experienced severe cracks & leaching issues on the soffit of the Deck slab in all spans and additionally, evidence of previous repair works is observed on the soffit of the slab. Based on the identified distress, a complete replacement of the deck slab is proposed as a remedial measure to ensure continuous and reliable service.
- ✓ Although this project stretch lies in Seismic zone –IV, the old bridges at Ch: 164+100, 181+160, 186+000, 193+160, 203+945, 204+300, 204+500 and 205+790 not provided with seismic arrestor's/ stopper's. To enhance the seismic resilience of these structures, it is recommended to implement seismic enhancements, such as the installation of seismic stoppers or dampers, at these specific locations.
- ✓ A couple of old bridges, specifically the Major Bridge at Ch: 193+160 on the left-hand side and the Minor Bridge at Ch: 133+340 on the left-hand side, are constructed with brick masonry substructures and have an overall width of 8.5m. These bridges may require reconstruction to accommodate future capacity augmentation.

- ✓ Based on the visual inspection of bearings conducted using the MBIU, no major distress was observed, and the bearings appear to be in fair condition. However, the rocker and roller bearings on the older bridges require cleaning and greasing to ensure their proper functioning.
- ✓ An old major bridge at 205+790 on the left-hand side has experienced a collapse of the Footpath slab along the entire length on the median side in Span 2. No rectification has been carried out yet.
- ✓ All the old major bridges have structural cracks on the girders, spalling, and issues with reinforcement exposure. Since these are all old structures, NDT (non-destructive testing) is required to assess their current condition and propose suitable repair methodologies.
- ✓ Some box-type structures in the underpass and minor bridges have structural cracks on the slabs and walls.
- ✓ Steel frame strengthening arrangements were observed on the pier cap (P1) on the left side of the flyover at km 185+400. Currently, no significant damage has been observed on the pier cap. Confirmation from the contractor is required to verify the implementation of these arrangements.
- ✓ Bulging of the RE walls observed at several locations of the ROB, flyover and underpass.

Flyover @202+500 RHS RE-wall Bulging

Flyover @167+150 LHS RE-wall Bulging

ROB @172+380 LHS RE-wall Bulging

VUP @141+398 LHS RE-wall Bulging

- ✓ Expansion joints and sealants are damaged at several locations.

Photos depicting existing Box Culverts/Slab Culverts are presented below:

Box Culvert at 132+220

Box Culvert at 142+700

Box Culvert at 152+260

Box Culvert at 160+420

Box Culvert at 176+410

Box Culvert at 183+450

Photos depicting existing Pipe Culverts are presented below:

Pipe Culvert at 140+546

Pipe Culvert at 158+334

Pipe Culvert at 168+590

Pipe Culvert at 171+580

Pipe Culvert at 180+510

Pipe Culvert at 190+000

4.7 DRAINAGE AND SLOPE PROTECTION

- ✓ At few locations, Slope protection works are to be done, mainly at 174+500 major bridge.
- ✓ RCC covered drains were observed at urban locations and along service roads.
- ✓ No significant damage was observed at the covered drain locations.

4.8 TRAFFIC SAFETY AND ROAD FURNITURE

- ✓ The metal beam crash barriers along the project road are provided at curve and High embankment locations, appears to be intact except for a few areas where they have experienced damage and poorly placed.
- ✓ The pedestrian guardrails installed on the separator are largely intact along their entire length, with the exception of a few locations where damage has occurred.
- ✓ The median opening locations are in fair to poor condition, and all unauthorized median openings should be closed.
- ✓ Street lighting and high masts are present at urban locations, toll plazas, and junctions.

4.9 ROAD USER FACILITIES

- ✓ The Bus Bay with Shelters and truck lay byes were provided along the corridor.

CHAPTER 5. REHABILITATION PLANS AND DESIGNS

5.1 DESIGN TRAFFIC LOADING

Design Traffic loading has been estimated by considering the latest traffic (given) and VDFs as estimated from the latest axle load survey data and with min. 5% growth rates for 10 years, 15 years and 20 years design period as below:

Table 43: Traffic Volume (AADT)

Vehicle/Mode	Toll Plaza-1 Km 138+700 (Chhapar Toll Plaza)		Toll Plaza-2 Km 187+500 (Bahadrabad Toll Plaza)	
	LHS	RHS	LHS	RHS
BUS	410	410	391	391
2A axle	956	956	912	912
3A axle	218	218	181	181
MAV axle	732	732	349	349
LCV	467	467	367	367

Note: *As Bus data is not available, it is assumed that 30% of 2-axle data is considered for Buses and balance 70% for 2-axle.*

The MSA calculated considering the above scenario is as follows.

Table 44: Estimated Design traffic loading

Description	Section-1 (Chhapar plaza km 138+700)		Section-2 (Bahadrabad 187+500)	
	UP	DN	UP	DN
10th year from Now	52	43	24	21
15th year from Now	90	73	41	36
20th year from Now	138	112	63	55

The computation of traffic loadings is presented in **Appendix 9** of this Report. Design traffic corresponding to 10 years period has been considered for overlay design.

5.2 PAVEMENT REHABILITATION AND STRENGTHENING

5.2.1 Flexible Pavement Strengthening

For Design the Overlay Thickness the following method as suggested in IRC: 115 has been used

- The existing pavement is considered as a 3-layer system consisting of subgrade, granular and bituminous layer. The remaining life of exiting pavement in terms of Fatigue and Rutting life (MSA) are estimated
- The remaining life is compared with design traffic loading. An overlay with assumed thickness is considered on exiting pavement where required.

- The Total system including the proposed Overlay (Trial thickness) is assumed as a four-layer system and considered the relevant MR values for all the four layers namely New BT layer, existing bituminous surface, total existing Granular layers and Subgrade layers.
- The MR value for the New BT is assumed as 3000 MPA (considering VG40 Bituminous grade) for Main Carriageway and for all the remaining three layers, the MR Values derived and finalized from the FWD Analysis are considered
- Critical Tensile strains and Vertical strains are found out by using the IIT PAVE Software at the bottom of existing bituminous layer and at the top of the subgrade layer respectively.
- The Fatigue and Rutting equations (equation given in the IRC: 115) have been used to estimate the Fatigue and Rutting Life of The Pavement system considering 90% reliability equations.
- The Obtained Fatigue and Rutting Life are compared with the required life for the assumed trial overlay thickness.

Remaining life of the existing pavement from the above analysis is presented in the following tables:

Table 45: Remaining life of the existing pavement on LHS Carriageway

S.No	Side	From	To	Length (Km)	15th Percentile MR values			Average Existing Crust		Total Crust (mm)	Adopted MR for BT (Mpa)	Strains From IITPAVE		Remaining Life as per IRC -115 Equations for 90% Reliability

Total length				78.560													

From the above, overlay is warranted when remaining life is lesser than Target Traffic. Accordingly, based on this criterion, an overlay is warranted for a length of 20.37 km in LHS and 15.40 km in RHS.

The overlay required sections are further analyzed as per IRC: 37 guidelines with assumed overlay thicknesses to obtain the strains (vertical and horizontal) and then fatigue and rutting life in terms of MSAs. In this process, it is too been sure that the obtained remaining life (MSA) of the existing pavement should be always more than calculated 10yrs design MSA.

The following tables indicates the proposed overlay thicknesses in LHS and RHS directions respectively.

Table 47: Design of overlay for LHS MCW

S.No	Side	From	To	Length (Km)	15th Percentile MR values			Average Existing Crust		VG40-3000 Mpa	Total BT (mm)	Total Crust (mm)	Adopted MR for BT (Mpa)	Strains From IITPAVE		Remaining Life as per IRC - 115 Equations for 90% Reliability

Input data used and the output from the IIT Pave software has been presented as screen shots for ready reference as **Appendix 10** of this Report.

Summary of Overlay thickness from FWD analysis is as follows:

Overlay Thickness (mm)	Length (km)	
	LHS	RHS
50	13.27	12.10
90	7.10	3.30

Overall summary of overlay/renewal requirement of project corridor arrived from comibining PCI (Pavement Condition Index), Roughness (IRI>2200mm/Km) and FWD analysis is as below:

Recommendation	Length (Km)	
	LHS	RHS
Overlay as per FWD survey	20.37	15.40
Overlay based on Roughness index/PCI	22.61	25.38
Total	42.98	40.78
No overlay	35.65	37.78

5.3 STRUCTURAL REHABILITATION

All the structure found to be in fair condition except minor treatment like repair of stone pitching, cleaning of drainage spouts, cleaning of vegetation etc. may be required. Detailed structural rehabilitation quantities have been worked out based on the prevailing condition of existing structures. This methodology describes in detail the procedure for the execution of each item of rehabilitation work of the Existing Bridges of the project.

The scope of this methodology covers the items mentioned below for rehabilitation work of all the existing Bridges.

- Repair/ Replacement of Existing Bearings
- Repair / Replacement of Existing Expansion Joints
- Repair / Replacement of Existing Wearing Coat
- Profile Correction for Existing Deck Slab by Cement Concrete
- Sealing of Cracks for Bridges by Epoxy Resin
- Replacement of Spalled Concrete of ECW by Epoxy Mortar
- Cement Grouting for Repair of Existing Bridges
- Guniting / Shotcrete for Repair of Existing Bridges
- Providing & Fixing of Drainage Spouts
- Repair of Substructure Component
- Repair / Replacement of Railing & Crash Barrier
- Epoxy Bonding between New and Old Concrete.

5.4 SCHEDULE-B SCOPE

Few major items of Schedule-B are required to be constructed are as below.

Clause	Description	Scope	Remarks
Clause 4.1.a(ii)	**At-grade Intersections:** **Major Junctions** **ii) Existing Major Junction to be retained with Safety Enhancement**	2 Number at Km 200.4 at Km 201.3	Safety enhancement of these junctions by providing signage, road marking, blinkers, pedestrian crossing facility etc. as per relevant IRC Codes and Standards need to be provided in accordance with IRC SP: 84 -2019 and as per **Annexure I and Annexure II**
Clause 4.1.b (i)	**Minor Junctions:** All junctions below are to be retained with Safety Enhancement **i. Junctions with MCW**	84 numbers	
Clause 4.2	**b) Existing Major Junction to be retained with Safety Enhancement:**	At 4 numbers	Safety enhancement of above junctions (existing and New Junction) by providing signage, road marking, blinkers, pedestrian crossing facility etc. as per relevant IRC Codes and Standards need to be provided in accordance with IRC SP: 84 -2019 and as per **Annexure III and IV** of Schedule B.
Clause 4.2	**c) Existing Minor Junction to be retained with Safety Enhancement:**	At 18 numbers	
Clause 6.1	**6.1 Repair and Rehabilitation of Pavement**	As per FWD and NSV Report. But as per Clause 61.1. to 6.1.3 the scope is Nil	But in the DPR Cost, provision of about 85 crores towards overlay of existing CW is provided
Clause 7.1	**7. Roadside Drainage** **(a) RCC Covered Drain** **(b) Unlined Drain** **© Median Drains**	Nil	
Clause 7.1	**7 (d) Drainage where Embankment Height is more than 3m (Clause No. 6.4 IRC: SP:84-2019)**	New -Nil, As there is no modification of main carriageway is envisaged	But Existing Drainage chutes, stone pitching and any other measures as provided shall be repaired and restored in working conditions.
Clause 7.1	**e) Drainage for Structures (Clause No. 6.8 IRC: SP:84-2019)**	Minimum HPVC 200 mm dia. shall be provided for disposal of rainwater with PCC encasing	Apart from this pavement cost and chamber arrayment cost shall be considered
Clause 7.1	**f) Drainage for Underpass**	A suitable drainage arrangement for draining storm water from Underpass shall be provided	If required, need to consider pumping system
Clause 7.1	**g) Drainage arrangements of Retaining Structures**	Drainage fixtures and dropdown pipes shall be of rigid, corrosion resistant material not less than 100 mm dia	
Clause 8.3.3	**8. Structures:** **8.3.3 Culverts on Crossroads:**	**existing crossroads culvert shall be repair and maintained**	
Clause 8.4.9	8.4.9	Refer: **Annexure VI** for Repair & Rehabilitation of Structures	Any other additional Items which are required shall also be executed and NO Change of Scope is admissible for any extra items

Clause	Description	Scope	Remarks
Clause 9.	**9 Repair and Rehabilitation of Embankment/Earthen Shoulders/Paved Shoulders / Stone Pitching**	Nil	Existing stone pitching and other slope protection measures shall be repaired
Clause 12	**12 Project Facilities**		
Clause 13.1	**13.1 Toll Plaza**	TMS System shall be upgraded if required	
Clause 13.2.2	**13.2.2 Traffic Signs**	Additional signs as per this clause shall be provided	
Clause 13.2.5	**13.2.5 Reflective Pavement Markers & Solar Studs**	Nil **Solar studs shall be provided on the structures and its approaches and built-up section. Color of solar studs shall be kept same as per IRC specifications**	
Clause 13.2.6	**Solar Blinkers**	Solar Blinkers shall be provided median openings and entry/exit ramps	
Clause 13.2.7	**13.2.7 Traffic Impact Attenuators**	16 numbers on flyover/grade separated structure at exit from main carriageway	
Clause 13.2.7	**13.2.7 Traffic Impact Attenuators**	12 numbers Infront of Islands of Toll Plaza	
Clause 13.2.7	**13.2.7 Traffic Impact Attenuators**	Any other location	
Clause 13.2.8	**13.2.8 Transverse Bar Marking**	1. Median openings (U-Turn Facilities) 2. Toll Plaza approaches 3. Approaches to At-Grade junctions 4. Exit ramps and downside of the approach of the flyovers 5. approach of narrow bridges	Refer: **Annexure VII** for Transverse Bar Marking
Clause 13.2.10	**13.2.10 Antiglare at Narrow Median Location**	**Nil** **In** addition to above --- Antiglare is to be provided as per site requirement	
Clause 13.3	**13.3 Operation and Maintenance centers**	The minimum land for O & M center shall be 2000 sq.m and shall be acquired by the Concessionaire at his own cost and risk	
Clause 13.4	**13.4 Rest Areas / Wayside Amenities**	**Nil**	
Clause 13.5	**13.5 Truck Lay Bye**	**New truck lay byes----- --Nil**	At existing---Rest area with toilets, drinking water and Telephone facility to be provided

Clause	Description	Scope	Remarks
		Additional Facilities at existing Truc lay byes----5 numbers	Traffic Signs board / marking / road studs / lighting are to be provided at Truck Laybys as per IRC SP: 84-2019
Clause 13.6	**13.6 Bus Bay and Bus Shelter**	bays and Bus shelters---13 locations	Existing Bus Shelter is to be repaired/ rehabilitated
Clause 13.7	**13.7 Highway Lighting**	Solar lighting at Bus Bays and Shelters etc.	
Clause 13.8	**13.8 Landscaping and Median Plantation**	ii. Median Plantation is to be provided throughout the project stretch where not available	The Concessionaire shall carryout its own due diligence of the existing plantation (avenue / median) and shall provide deficient avenue planation / landscaping / median plantation to ensure 100 % saturation of plantation
Clause 13.9	**13.9 ATMS**	**Video Surveillance System—72 Km** **PTZ Camera ----------61 Numbers** **Video Incident Detection and Enforcement System (VIDES)---12 Nos** **Vehicle Actuated Speed Display System----4 Numbers** **VMS Systems Displays (Full Gantry 4 Lane)-----8 Nos** **VMS Portable type-------2 Nos** **Network / Communication Infrastructure----72 km** **ATMS Control Centre—01 Nos** **Provision of Electronic Call Boxes-78**	The ATMS system shall provide and maintain as per NHAI / Policy Guidelines / Standard Documents 2023, Policy Circular No. 11.53/2023 dated 10th October 2023, also implement the circular issued from time to time
Clause 13.10	**13.10 Highway Patrol**	1 per every 50Km	2 number as the project length is more than 50 and less than 100Km
Clause 13.11	**13.11 Emergency Medical Services**	1 per every 50Km	2 number as the project length is more than 50 and less than 100Km
Clause 13.12	**13.12 Cranes**	1 per every 50Km	2 number as the project length is more than 50 and less than 100Km

CHAPTER 6. OPERATION AND MAINTENANCE

6.1 INTRODUCTION

Looking at the contractual requirements of maintaining project road under specified level of roughness it is felt that roughness is the most important criterion for finalizing the O&M schedule for the project. Accordingly, the methodology adopted by present consultants includes predicting the roughness year by year under the traffic using a well acknowledged HDM-4 model developed for developing countries like India after lot of research by World Bank. The said model is widely prescribed by MORTH and NHAI during the preparation of detailed project reports for several projects in doing economic analysis for the projects. The economic analysis mainly consists of two parts:

1. Predicting the road deterioration and estimating VOC
2. Estimating Benefits

Considering its importance and present use in India, consultants felt prudent to use the first part, i.e. estimating road deterioration and predicting roughness in HDM 4 model to finalize the O&M schedule for the project. This approach is more scientific as it does not assume hypothetical deflection values at 10^{th} and 20^{th} year and includes main criterion of maintaining roughness at 2400mm/Km as per Schedule F.

6.2 CA SPECIFICATIONS FOR MAJOR MAINTENANCE

Schedule F prescribe the maintenance standards to be adopted for project. Summary of same is presented below.

- Appliable Manual: Four lane manual IRC SP 84-2019 published by IRC
- Applicable Schedule for O&M: Schedule-F and Manual
- Maximum Roughness Allowed: 2400mm/km
- Frequency of Roughness Test: 2 times per year
- Frequency of FWD Test: once in a year
- Schedule-B, Clause 6.1: minimum overlay thickness of BC on the main carriageway shall be 50mm

6.3 INPUTS FOR M&M SCHEDULE

6.3.1 Project Sections

The project road is divided into two main sections based on traffic characteristics viz.,

- Section-1: Muzaffarnagar to Roorkee section- km130.560 to km 167.300, length 36.74 km
- Section-2: Roorkee to Haridwar section- km167.300 to km 209.120, length 41.82 km

Each section is further categorized based on the findings from FWD (Falling Weight Deflectometer), Roughness, and PCI (Pavement Condition Index) into two sub-sections as

- Overlay Sections (with 50mm OL and 90mm OL) and
- No-Overlay Sections

Then, taking the consideration of Roughness as a key criterion for major maintenance, further the above sub-sections categorized in to four cases below:

- Case 1: Roughness value <2000 mm/Km
- Case 2: Roughness values >2000<2200 mm/Km
- Case 3: Roughness>2200<2400 mm/Km
- Case 4: Roughness>2400 mm/Km

Direction wise analysis has been done separately for LHS (UP)/RHS (DN) and each direction length has been divided into sections based on above.

6.3.2 Traffic (AADT)

The following traffic data has been used in the analysis:

Vehicle/Mode	Toll Plaza-1 Km 138+700 (Chhapar Toll Plaza)		Toll Plaza-2 Km 187+500 (Bahadrabad Toll Plaza)	
	LHS	RHS	LHS	RHS
CAR	8669	8669	7385	7385
BUS	410	410	391	391
2A truck	956	956	912	912
3A truck	218	218	181	181
MAV truck	732	732	349	349
LCV	467	467	367	367

Note: - This traffic has been projected with actual growth rates to run the model

6.3.3 Vehicle Damage Factors (VDF)

The VDFs obtained from axle load analysis are used for various sections are as given below:

Vehicle Type	Chhapar Toll plaza-1 (138+700)		Bahadrabad Toll plaza-2 (187+500)	
	UP	DN	UP	DN
BUS	1.07	1.07	0.82	0.69
2-Axle	2.07	1.94	2.86	2.63
3-Axle	5.04	4.60	5.13	4.62
M Axle	13.84	10.46	6.24	5.31
LCV	1.31	1.38	1.05	0.72

6.3.4 HDM Inputs

FWD, Roughness, Pavement condition values are used as obtained from surveys and investigations for various sections and different cases as below:

Section-1: No Overlay

Section-1 No OL	LHS				RHS			
	<2000	>=2000 and <2200	>=2200 and <2400	>2400	<2000	>=2000 and <2200	>=2200 and <2400	>2400

6.3.5 Options for MM Schedule

Based on the requirements of CA, various options have been considered to be used as responsive overlays triggered at specified level of roughness of 2400mm/km. MCS as a base option been considered to examine its feasibility for major maintenance.

Following options were considered in the analysis:

- ✓ Base Case: MCS at Roughness of 2400mm/Km with regular maintenance
- ✓ Opt-1: Responsive Mill & Overlay of 40mm BC whenever roughness is >2400mm/KM with regular maintenance
- ✓ Opt-2: Responsive Mill & Overlay of 50mm BC whenever roughness is >2400mm/KM with regular maintenance

6.4 ROUHGNESS PROGRESSION

Roughness progression for each section under each alternative maintenance option has been done using the deterioration models in HDM-4. Following sample graphs represents the roughness progression for each alternative:

HDM-4
HIGHWAY DEVELOPMENT & MANAGEMENT

Average Roughness by Section (Graph)

Study Name: Haridwar_LHS1 50-75
Run Date: 13-12-2024

Section Details:

6.5 M&M SCHEDULE

Looking at the present condition, progression of traffic with actual traffic growth rates, it is felt prudent to consider 50mm OL as the preferred option, with certain percentage of additional DBM where required.

Before release of schedules without considering the capacity augmentation, HDM model has been run to understand the requirement of MMR cycle and thus 4 cycles are envisaged after considering the initial overlays.

Upon obtaining the schedules, the adopted MM schedule for the project is as below:

Table 49: Adopted MM schedule LHS & RHS

Section-1: LHS (Obtained Vs Adjusted)

6.6 STRUCTURAL PERIODIC MAINTENANCE STRATEGY

Expansion joints:

- Visual inspection is carried out to check for seal breakages, Armor angle, Weld failures, cracks between deck & Expansion joints concrete and Joints filled with debris. Such joints replaced immediately.
- Joint buried with debris shall be inspected for any distress, if any distress is shown it shall be replays immediately.
- During visual inspection it is seen that some Expansion joints are bad where as some are not showing any defects.
- Due to this it is considered provident to change the Expansion joints which are visibly damaged in initial stage.
- In the absence of records pertaining to Expansion joint replacements it is highly difficult to predict the date of replacement needed for compliance to IRC codal requirements. Balance joints which are not replaced initially will be replaced as on when defects are shown in the joints. This aspect is considered in BOQ.

Bearings:

- In order to identify the bearings requiring immediate replacement, the following strategy is adopted.
- Girder Bridges showing diagonal cracks at support, distress in the Pedestals and any form of distress in support location is regarded as a candidate for replacement. By visual inspection there are only a handful of such situations.
- Wherever pedestals are damaged either by cracking or spalling poisons confinement is proposed by Jacketing/MS plate bonding such procedure is very effective and common.
- All Metallic Bearings need to be taken up for servicing.

Wearing Coat:

It is necessary to replace the wearing coat at every 15years interval, as wearing coat is a very weak component of the bridge structure which is subjected to severe deterioration due to loading, environment etc. As of now, we have considered sealing of cracks by Fog Seal and for which does not show any distress other than cracking by viz. Pot holes, abrading etc. Based on this aspect, this cost has been considered in highway O&M cost.

Periodic Maintenance strategy for Replacement of Bearings & Expansion joint:

Below strategy has been considered for periodic major maintenance of the structures.

S No	Description	Bridge components
1	Old structure	Retained at the time of 4/6 laning
2	New Structure	Constructed during the 4/6 laning

Age	Description	Item	structures-Assumption-MMR	
			% of Replacement of Major components	
			2032	2044
New	Super structure lifting with Pot bearings	Pot	25%	25%
New	Super structure lifting with Elastomeric bearings	Ela	25%	25%
New	Super structure lifting with Rocker bearings	Rocker	0%	0%
Old	Super structure lifting with Pot bearings	Pot	65%	25%
Old	Super structure lifting with Elastomeric bearings	Ela	65%	25%
Old	Super structure lifting with Rocker bearings	Rocker	65%	25%
New	Pot bearing cost	Pot	25%	25%
New	Elastomeric bearing cost	Ela	25%	25%
New	Rocker bearing cost	0	0%	0%
Old	Pot bearing cost	Pot	65%	25%
Old	Elastomeric bearing cost	Ela	65%	25%
Old	Rocker bearing cost	0	65%	25%
New	Expansion joint Replacement	0	31%	31%
Old	Expansion joint Replacement	0	81%	31%
New	Others	0	31%	31%
Old	Others	0	81%	31%

Cost Component for various items and activities have been worked out by considering the Best Industry practice and most appropriate methods. Detailed quantities for work items have been estimated based on the details presented in previous chapters for various heads.

The gist of the cost components considered are presented below:

- Immediate Repair's Cost
- Routine Maintenance Cost
- Incident Management Cost
- Periodic Maintenance Cost
- Operations Cost
- Year by Year total O&M Costs

7.1 RATE ANALYSIS

Detailed rate analysis has been carried out based on MORTH guidelines to arrive at the unit rates of various items. Material rates and their leads from the project corridor are considered as per the material investigations done on the project road. Summary of unit rates arrived at are presented in table below:

Table 50: Unit Rates of Basic Material

S.no	Description	Units	Source	Basic rate excluding Transportation & GST	Lead in Kms
1	VG-40 (CAPEX)	MT	Panipat	50,602	165
2	VG-40 (MMR) *	MT	Panipat	47,147	165
3	Good earth	Cu.m	BA	186	6
4	40 mm	Cu.m	Crusher	1,125	40
5	20 mm	Cu.m	Crusher	1,137	40
6	12 mm	Cu.m	Crusher	1,131	40
7	6 mm	Cu.m	Crusher	1,125	40
8	Dust	Cu.m	Crusher	1,149	40
9	M sand	Cu.m	Crusher	1,379	40
10	CRMB-55	MT	Panipat	48,752	165
11	CRMB-55-MMR	MT	Panipat	47,147	165
12	SS1	MT	Panipat	48,000	165
13	Steel	MT	Haridwar	50,000	61
14	HTS Strands	MT	Haridwar	75,000	61
15	Cement	MT	Haridwar	7,300	61

Note: *For future asphalt pavement rehabilitation works, a normative standardized cost for Bitumen (VG-40 & PMB) has been determined based on historical bitumen rates from August 2020 to December 2024

Table 51: Unit Rates of Major Material excluding GST

S.no	Item	Unit	Rate (INR) Excluding GST
1	BC - G1-VG-40-CAPEX	Cum	12,592
2	BC - G1-VG40/CRMB-MMR	Cum	12,069
3	BC – G2-VG40/CRMB-MMR	Cum	12,417
4	DBM G-2-VG-40- MMR	Cum	9,831
5	Tack coat on bituminous surface	Sqm	14
6	DBM G-1-VG-40	Cum	10,509
7	Tack coat on granular	Sqm	16
8	Prime Coat	Sqm	47
9	WMM	Cum	3,432
10	GSB G-2	Cum	3,333
11	CTSB	Cum	3,929
12	CTB	Cum	4,490
13	PQC	Cum	9,095
14	DLC	Cum	5,149
15	SG	Cum	711
16	Road Marking	Sqm	585
17	HYSD	MT	73,498
18	HT strand	MT	1,53,161

NOTE: 1. Item rates considered for Small projects

2. Labour: Central Minimum Wages as on Oct'2024 for "C Area" Category of construction workers

7.2 INITIAL IMPROVEMENT WORKS

Costs associated with initial improvements are estimated based on the detailed asset inventory and condition assessment surveys, Pavement condition and structural condition assessment surveys. Items which are not executed as part of scope or in damaged condition have been considered for immediate costs as a part of 1-year capex. Following items are mainly considered for Initial Improvement costs:

- Scope given in schedule-B
- Scope which is not executed
- Road work items
- Bridge Work Items
- Pavement Rehabilitation works
- Structural Rehabilitation works
- Drainage Works
- Slope Protection works
- Safety Works

On review of the contemporary records and on ground assessment, the cost to complete is given below.

Table 52: Initial Capex Cost FY26

S. No.	Particulars	Amount Rs
1	Immediate Repair's (Highway)	16,90,64,424
2	Immediate Repair's - Structures	13,98,17,561
3	Schedule-B Scope (Highway&misc)	14,88,92,612
4	TMS	7,42,55,511
5	ATMS	19,91,75,758
6	Revalidation surveys	78,32,400
7	Emergency Repair Cost during Monsoon	5,00,00,000
8	Toll plaza renovation cost including replacement of Office Furniture, all building, Canopy, all misc items etc	5,00,70,146
	Total Cost (in Rs.)	83,91,08,412
	Total Cost Including GST @ 18% (in Rs.)	99,01,47,926
	Total Amount (in Rs. Crore)------ (A)	99.02
9	Rigid pavement repair cost including GST@ 18% in Crore—(B)	0.97
	Total Amount (in Rs. Crore)	**99.99**

Even though overlay requirement is warranted based on FWD/NSV/PCI surveys and the same is not considered in the initial Capex as project is handed over TOT-Concessionaire in FY2032/ FY 2033/ FY2034/ FY2040 (EPC overlaid sections/ Additional works as per Sch-A, Clause-19/ elevated corridor/ spur road).

(A) Immediate Repairs (Highway)

S. No.	Description	Unit	Total Quantity	Rate in Rs	Amount in Rs	Remarks

For the safety improvement works not covered in DPR & Schedule-B (includes median drain, Median Opening improvement, Chutes, median cuts, Vertical improvements, MCB shifting, Bollards, chute confinements handrail on CCB etc)					11,35,64,874	
Immediate Repair's (Highway) in Rs (without GST)					16,90,64,424	

(B) Immediate Repairs (Structures)

S. No.	Description	Unit	Total Quantity	Rate in Rs	Amount in Rs
1	wearing coat comprising of 53 mm thick BC including Water proofing compound	sqm	810	1119	9,06,188
2	Cleaning and adding rubber sealant near expansion joints	Rm	268	451	1,21,100
3	Replacement of Damaged Concrete Railing all complete as per technical specifications and as directed by the Engineer	Rm	25	4546	1,13,656
4	Provision of an RCC crash barrier (0.35sqm cross sectional area) constructed with M-40 grade concrete including reinforcement	cum	59.1	14730	8,70,374
5	Lifting of superstructure by providing necessary hydraulic jacks, mechanical jacks, sleepers, packing etc complete including cost of labour, equipment, tools, consumables etc complete.	Nos	5	129630	6,48,150
6	Elastomeric bearings	Cum	13	1.40	18
7	Cutting of groove of 15 mm x 15 mm along crack and sealing the same with epoxy putty including cost of material , labour etc.	RM	994	1010	10,03,940
8	Carrying out 30 to 50 mm thick shotcreting using a mix proportion of 1:2:2 (cement: sand:6 mm down aggregate) added with Polypropylene fibers at a dosage rate of 125 gms/bag of cement including cost of labour, material, scaffolding, equipment etc complete,	sqm	183	873	1,59,695
9	RCC (Super Structures)	cum	181	1738	3,14,844
10	Approach slab dismantling	cum	241	1738	4,18,631
11	Construction of Approach slab on Both side of approaches including reinforcement	cum	241	20894	50,34,117
12	Providing of New Drainage spouts	No.s	35	4894	1,72,260
13	Weed removal (Vegetation)	Man days	264	2594	6,84,750
14	Anti-corrosion paint for Steel 45 microns primer with Zinc bonding coat	Lit	586	656	3,84,234
15	Micro Concrete	Cum	1.35	75600	1,02,223
16	Concrete	Cum	483	14633	70,61,371

S. No.	Description	Unit	Total Quantity	Rate in Rs	Amount in Rs
17	HYSD Bars	MT	19	96081	18,59,877
18	Epoxy coating / injection inclusive all. Sealing of cracks/porous concrete by injection process through nipples/Grouting complete as per Technical Specification.	Sqm	973	1508	14,66,044
19	Patching of damaged concrete surface with polymer Modified mortar upto maximum thickness of 45mm thickness in layer not exceeding 15mm and curing compounds, available in present formulations, to be applied including bond coat.	sqm	514	2969	15,25,938
20	Sealing of crack / porous concrete with Epoxy Grout by injection through nipples complete as per clause 2803.1.	Kg	20	1508	30,150
21	Providing and laying Plain cement concrete M15 grade, mechanically mixed and compacted, including centering and shuttering all complete.	cum	120	11015	13,26,971
22	Providing and laying Filter material underneath pitching in slopes.	cum	21	4801	98,942
23	Providing and laying Pitching on slopes laid over prepared filter media including boulder apron laid dry in front of toe of embankments.	cum	42	4843	2,05,395
24	Steel pipe	Rm	32	908	29,040
25	Removal of existing asphaltic wearing coat comprising of 50 mm thick asphaltic concert laid over 12 mm thick mastic asphalt including disposal with all lift and lead upto 1000 m		810	254	2,05,538
26	Repair of Drainage spouts including down take pipe & etc	Rm	414	260	1,07,640
27	Replacement of existing damaged Expansion joints by providing and laying of Strip Seal Expansion Joint System, including removal of existing damaged expansion joints by dismantling of deck slab, wearing coat etc. and back filling of the recess up to final finish level with Micro conc, complete as per M.O.R. T&H specification.	Rm	117	26180	30,49,970
28	Structural steel	MT	263	88149	2,31,67,497
29	Sand blasting	Sq.m	50	221	11,063
30	Pointing with cement mortar (1:3) / commercially available material on brick / stone work in substructure as per Technical specifications	Sq.m	138	2816	3,87,516
31	Epoxy paint (4 mic)	Sq.m	1536	1815	27,87,840
32	Guniting spraying a mix or mortar or concrete to a surface of application with the help of a spray gun"	Nos	133	1849	2,45,144
	Total Amount in Rs (A)				5,45,00,115
	RE- wall bulging cost (B)				65,84,463
	As per Schedule B Immediate Str Rehabilitation cost in Rs (C)				7,87,32,983
	Immediate Repair's - Structures, without GST (A)+(B) +(C)				13,98,17,561

(C) Schedule-B scope for Highway and Misc. works

S. No	Description	Amount
1	Road furniture	13,35,70,459
2	Bus-bay	13,00,000
3	Truck parking	59,82,028
4	Toll Plaza	2,00,000
5	Miscellaneous	7,50,000
	Sub-Total	14,18,02,487
	Contingencies, 5%	70,90,124
	TOTAL	14,88,92,612

(C) TMS Cost

The TMS cost arrived are based quotes obtained by NHIT, from different vendors such as Comvision, Devaditya and Efkon for the amount Rs 7,42,55,511.

(D) ATMS Cost

ATMS cost computed with reference to MoRTH 2023 circular for installation of TMCS, VIDS, VASDS, VMS system, DTS/OFC etc.

7.3 ROUTINE MAINTENANCE & INCIDENT MANAGEMENT COSTS

Routine maintenance costs include general maintenance costs of road elements, bridge elements and road furniture and appurtenances. This can be mainly divided into two parts as:

- ✓ General Maintenance of Works
- ✓ Repairs to Highway & Bridge Elements

7.3.1 General Routine Maintenance

General Routine Maintenance of Roads generally include following items:

- Cleaning of Project facilities
- Structures cleaning,
- Cleaning of ROW
- Cleaning and Maintenance of Toll Plaza
- Unlined Drain Maintenance
- Lined Drain Maintenance
- Maintenance of Highway Lighting at Toll Plaza and other project locations
- Median Plantation maintenance & Avenue plantation maintenance:
- Maintenance of Road Furniture
- Maintenance of Road Safety Items

The above items are estimated by considering the detailed break-up of following items:

- Manpower including Managers/Labour etc.
- Vehicles for Labour Transport/Water Tankers/Sweeping Machines etc.
- Resources/Equipment's such as grass cutters, tools, jet sprayers, hydraulic trimmers etc.

7.3.2 Repairs to Highway & Bridge Works

Repairs to highway and bridge works have been estimated based on the assumed quantities (Percentage basis) of execution for every year.

These items include the following:

1	Providing treatment for sealing of road surface / isolated cracks at scattered locations
	i) Covered with 6.7 mm size stone chipping @ 0.1 cum/ 10 sqm.
	ii) covered with dry coarse sand passing through 2.36 mm sieve and retained on 180-micron sieve @ 0.03 cum/10 sqm heated to 600 C
	iii) filling discrete cracks with slow curing bitumen emulsion as per Technical Specification Clause 3004.3.3
2	Providing treatment to bleeding bituminous surface at scattered locations
3	Providing localized repair to rutted portion and edge breaking of bituminous surface
4	Providing treatment and repair to pot-holes and patch work
5	Providing and laying dense bituminous macadam using bitumen grade VG 40 complete as per Technical Specification Clause 507
6	Proving and laying bituminous concrete (asphaltic concrete)
	(a) Using bitumen (VG-40) as per IRC: SP: 53
7	Road Roughness survey
8	Turfing on embankment slopes and at all other Project Facilities
9	Providing repair to stone pitching/apron at scattered locations
10	Rain Cuts Maintenance: Restoration of rain cuts soil, morrum, gravel or a mixture of these
11	Providing and laying apron/ stone pitching on slopes of guide bunds/ road embankment / other location
12	Providing and laying stone aggregate filter material (150 mm compacted thickness) underneath pitching
13	Unlined drain
14	Filling in median island with approved materials with all leads and lifts complete as per TS Clause No. 407
15	Replacing damaged / broken railing with new pre-cast / cast-in-situ, concrete railing to match with existing design and pattern.
24	Carrying out repair to road signs including strengthening resetting or otherwise repairing signs and delineators
	a) Road sign board mounted on single post
	b) Road sign board mounted on double post
	c) Overhead/ Gantry Sign boards
	d) Delineator
25	Supplying and fixing at site retro-reflectorized type **sign boards/signs**
	90cm Equilateral triangle
	60cm circular
	90 cm circular
	90cm high octagon
	80cm x 60cm rectangle
	Chevron signs 60cm x 45cm
	Place identification signs (Fig 15.7 of IRC 67)
	Providing and fixing Object Markers
	Providing and fixing of retro-reflectorized Route Marker signs (size 450mm x 600mm)

26	**Hazard Marker Sign:**
	a) size 90 x 30 cm
	b) size 30cm triangular side cluster of red reflectors (screen printed)
27	Cats Eyes/Raised pavement marker (NMC Nails Less)
28	Painting two coats on old surface after minor repairs to give an even and smooth surface and printing letters and figures with synthetic enamel paint
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
29	Providing painting lettering and fixing of distance measurement stones including dismantling of old damaged/ broken ones, confirming to TS Clause 804
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
30	Providing and fixing road delineators conforming to TS Clause No. 805 as directed by the Engineer.
31	Repainting the kerb stones and separation barrier with first quality synthetic enamel paint of approved brand
32	Painting all types of pavement markings including lines, dashes, arrows etc. on roads as per relevant IRC/MOST standards after cleaning the surface complete in all respects as directed by the Engineer.
	a) Hot applied Thermoplastic compound
	(i) Lane / Centre Line / Edge Line
	(ii) Direction Arrows
	(iii) Diagonal Chevrons Markings
33	Supplying and laying cast-in-situ cement concrete kerb without channel section
	a) by Manual/machine including formwork
34	Major repair / replacement of metal beam crash barrier (W profile guard rails)
35	Providing and fixing chain link/ welded mesh fencing / square bars fencing
36	Dismantling the old damaged chain link/welded mesh / square bars fencing and replacing it with new chain link/ welded mesh/square bars fencing
37	Provision of rumble strips
38	Shoulder Maintenance:
39	synthetic enamel paint of approved brand on metal pedestrian guard rail
40	Dismantling of wearing course

B. Structures

1. Wearing coat comprising of 50 mm thick BC.
2. Cleaning and adding rubber sealant near expansion joints.
3. Modular Expansion joints.
4. Replacement of Damaged Concrete Railing all complete as per technical specifications and as directed by the Engineer
5. Provision of an RCC crash barrier (0.35sqm cross sectional area) constructed with M-40 grade concrete including reinforcement
6. Cleaning of rocker & roller bearing using high pressure water jet, free from rust scales, re-setting & greasing the bearings using graphite grease including cost of materials, labour etc., complete.
7. POT PTF Bearings greasing and maintaining (sand plastering).
8. Elastomeric Bearings and maintaining.

9. Cutting of groove of 15 mm x 15 mm along crack and sealing the same with epoxy putty including cost of material, labour etc.
10. Carrying out 50 to 60 mm thick shortsheeting using a mix proportion of 1:2:2 (cement: sand:6 mm down aggregate) added with Polypropylene fibers at a dosage rate of 125 gms/bag of cement including cost of labour, material, scaffolding, equipment etc. complete.
11. Repair of Floor Aprons, pitching and other protection works
12. Cleaning of Drainage Spouts
13. M-25 Concrete

7.3.3 Incident Management Cost

Incident Management & Safety items include the following:

- ✓ ATMS control room operations,
- ✓ Regular patrolling & reaching accident/incident site,
- ✓ providing relief to injured persons including taking them to nearest hospital and attending to the safety requirements at the location (putting cones, safely guide & manage the traffic using signs, safety barricades, etc.),
- ✓ removal of accident /breakdown vehicles, removing of dead animals/birds lying on the highway and loading, unloading, transportation & disposal of surplus material left over by accidental vehicle or otherwise lying on road (on carriageway) and
- ✓ Encroachment prevention & removal with all lead & lifts complete with proper communication equipment,
- ✓ consumables, materials, suitable Towing vehicles, Ambulance, patrolling vehicles and manpower like drivers, helpers, para-medical staff, labour including deployment of crane and all works shall be done as per requirement and as directed by Client representative and as per Relevant Specifications as applicable.

7.4 OPERATIONS COSTS

In addition to the above-mentioned General Routine maintenance, Repair & Rehabilitation cost for Road and structures, Incident management cost the following the Cost towards Operations include:

- Electricity Charges
- Toll Plaza Operation cost
- Insurance Charges
- Road Asset Management System (RAMS), Bridge Management System (BMS) & Surveys
- Other Office Expense (Admin, SPV, IE and Other)

Table 53: O&M Cost for various Years in Crores (including GST)- FY2026

FY	Operation & Maintenance Cost (in INR Cr.)								
	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
2025-2026	4.18	2.11	0.00	4.26	3.32	11.62	2.98	2.98	4.69
2026-2027	4.18	2.11	2.93	4.26	3.32	11.62	2.98	1.60	5.30
2027-2028	4.18	2.11	2.93	4.26	3.32	11.62	2.98	1.60	5.39
2028-2029	4.18	2.11	2.93	4.26	3.32	11.53	2.98	1.60	5.31
2029-2030	4.18	2.11	2.93	4.26	3.32	11.53	2.98	2.30	5.39
2030-2031	4.18	2.11	2.93	4.26	3.32	10.64	2.98	1.60	5.40
2031-2032	4.18	3.03	2.93	4.26	3.32	9.75	2.98	1.60	5.28
2032-2033	4.18	3.51	2.93	4.26	3.93	9.30	3.37	1.60	5.95
2033-2034	4.18	3.67	2.93	4.26	4.14	9.30	3.37	2.30	5.54
2034-2035	0.60	-	-	-	-	9.30	3.37	0.00	4.39
2035-2036	0.60	-	-	-	-	9.30	3.37	0.00	4.48
2036-2037	0.60	-	-	-	-	9.30	3.88	0.00	4.53
2037-2038	0.60	-	-	-	-	9.30	3.88	0.70	4.61
2038-2039	0.60	-	-	-	-	9.30	3.88	0.00	4.49
2039-2040	0.60	-	-	-	-	9.30	3.88	0.00	5.20
2040-2041	0.60	-	-	-	-	9.30	3.88	0.00	4.70
2041-2042	6.18	5.90	3.17	4.26	6.49	9.30	3.88	2.71	5.84
2042-2043	6.18	5.90	3.17	4.26	6.49	9.30	3.88	2.01	5.77
2043-2044	6.18	5.90	3.17	4.26	6.49	9.30	3.88	2.01	5.80
2044-2045	6.18	5.90	3.17	4.26	6.49	9.30	3.88	2.01	5.80
Total	**66.51**	**46.47**	**36.11**	**55.37**	**57.23**	**199.25**	**69.30**	**26.63**	**103.85**

Note:

1) The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation.

2) All other remaining costs are based on FY 2025 with GST and without escalation.

3) The amount is Crores inclusive of GST and without escalation

7.5 PERIODIC MAINTENANCE COSTS

Cost towards major maintenance include following:

- ✓ Cost of Periodic maintenance of Pavement based on Finalized MM schedule
- ✓ Cost of Periodic Maintenance of Structures
- ✓ Cost of Periodic replacement of Toll Equipment's & Software

Table 54: Major Maintenance Cost

FY	Major Maintenance Cost (in INR Cr.)			
	Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS
2025-2026	-	-	-	-
2026-2027	-	-	-	-
2027-2028	-	-	-	-
2028-2029	0.02	-	-	-
2029-2030	-	-	-	-
2030-2031	-	-	-	-
2031-2032	73.37	20.00	10.65	4.38
2032-2033	69.57	-	-	-
2033-2034	-	-	-	-
2034-2035	-	-	-	-
2035-2036	-	-	-	-
2036-2037	-	-	-	-
2037-2038	-	-	-	-
2038-2039	-	-	-	8.76
2039-2040	-	-	-	-
2040-2041	-	-	-	-
2041-2042	-	-	-	-
2042-2043	113.86	-	-	-
2043-2044	96.02	46.54	11.53	-
2044-2045	2.55	-	-	-
Total	**355.39**	**66.55**	**22.18**	**13.14**

Note: The amount is Crores inclusive of GST and without escalation, considering FY2025 rates

7.6 CAPACITY AUGMENTATION

The capacity augmentation is envisaged for full project length in the year FY2035 &FY 2036 with 5-year DLP up to FY2041.

- The capacity augmentation is envisaged in this project in the year FY2035 &FY 2036 with 5-year DLP up to FY2041.
- The MSA estimated for 10years, LHS: 52MSA and RHS: 43MSA for Toll Plaza-1 at km 138.700 and LHS: 24MSA and RHS: 21MSA for Toll Plaza-2 at km 187.500
- From FWD analysis, strengthening overlay is warranted for a length of 20.37 km in LHS and 15.4 km in RHS.
- FWD, roughness and PCI lengths are superimposed in order to eliminate the overlapped sections and final considerations are as presented below

Recommendation	Length (Km)	
	LHS	RHS
Overlay as per FWD survey	20.37	15.40
Overlay based on Roughness index/PCI	22.61	25.38
Total	42.98	40.78
No overlay	35.65	37.78

- Project road exhibits varying condition of pavement for fair to poor. Majority of inner lanes exhibit higher distress when compared with outer lanes.
- Several locations at-grade junctions/urban sections require improvement of safety measures by providing grade separators/service roads
- A New major bridge at 164+100 on the right-hand side is experienced severe cracks & leaching issues on the soffit of the Deck slab in all spans and additionally, evidence of previous repair works is observed on the soffit of the slab. Based on the identified distress, a complete replacement of the deck slab is proposed as a remedial measure to ensure continuous and reliable service. However, NHAI is going to take reconstruction as per Schedule-A, Clause-19 with an expected date of completion by May 2027.
- Although this project stretch lies in Seismic zone –IV, the old bridges at Ch: 164+100, 181+190, 186+100, 193+250, 203+746, 204+385, 204+590 and 205+880 not provided with seismic arrestor's/ stoppers. To enhance the seismic resilience of these structures, it is recommended to implement seismic enhancements, such as the installation of seismic stoppers or dampers, at these specific locations
- Couple of old bridges, specifically the Major Bridge at Ch: 193+250 on the left-hand side and the Minor Bridge at Ch: 133+300 on the left-hand side, are constructed with brick masonry substructures and have an overall width of 8.5m. These bridges may require reconstruction to accommodate future capacity augmentation.
- Based on the visual inspection of bearings conducted using the MBIU, no major distress was observed, and the bearings appear to be in fair condition. However, the rocker and roller

bearings on the older bridges require cleaning and greasing to ensure their proper functioning.

- All the old major bridges have structural cracks on the girders, spalling, and issues with reinforcement exposure. Since these are all old structures, NDT (non-destructive testing) is required to assess their current condition and propose suitable repair methodologies
- Steel frame strengthening arrangements were observed on the pier cap (P1) on the left side of the flyover at km 185+428. Currently, no significant damage has been observed on the pier cap. Confirmation from the contractor is required to verify the implementation of these arrangements.
- Shifting to Bahadrabad toll plaza at 187.370 is envisaged on account of overlapping of Dehradun-Haridwar spur road construction. However, this Plaza shall be maintained till operation of new Plaza.
- Bulging of the RE walls observed at several locations of the ROB, flyover and underpass.
- Minimum Central Wages for labour is considered for Category “C” as of OCT’2024 with 0% escalation considered.
- Overheads and Contractor’s profits are considered from MORTH Standard data book -2019 for “Small Project” category.
- The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

FINAL TECHNICAL DUE-DILIGENCE REPORT

Technical Consultant Services for National Highways Infra Trust for Raipur to Simga Section of NH-30 (Old NH-200) from Km.0/000 to Km.48/580 in the State of Chhattisgarh

February 2025

Section 1: Executive Summary

1.1 Introduction

1.1.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 14th October 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 1-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	Lane	Length (km)
1	**Raipur – Simga**	**Tarpongi**	**4/6 Lane**	**48.580**
2	Simga - Saragaon - Bilaspur	Bhojpuri	4 Lane	57.400
3	Bilaspur Bypass	Mudipar	4 Lane	20.545
Total				**126.525**

This report pertains to Raipur to Simga Section.

1.1.2 Objectives

The main objective of the present assignment is to

1. review project documents and understanding schedule B and schedule F requirements for improvement works for the assessment of Capex and Opex during the concession period.
2. conduct field investigations to assess the existing asset condition and future deterioration.
3. validate executed works with respect to schedule A and assessment of improvement Works
4. review quality of construction based on available data, design and drawings.
5. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
6. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

1.2 Site Visit

The Technical Consultant visited site from 20th October 2024 to 14th November 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road.

1.2.1 Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Ground Chainage* (Km)			Chainage as per Sch A (4/6 laning)		Lane Config.	Length (km)	Details for 4/6-lane widening		
			From	To	NH	From	To			Contractor	Implementation Mode	Status
1	Raipur – Simga	Tarpongi (32+010) 10 lanes (staggered)	00+000	14+800	NH-30	00+000	14+800	4-Lane	14.8	Punj Lloyd	EPC	1.PCOD - 17-12-2021 2.Maintenance period: 4 yrs from PCOD 3.Contractor is undertaking the remedial measures for the defects. 4.Service road construction under COS was undergoing.
			14+800	48+580		14+800	48+580	6-Lane	33.78			
		(4+800) 16 lanes										

Asset-wise details of Project assets are given below:

Table 1-2: Detail of Assets

S. No.	Description			Raipur – Simga section	
				Schedule-A	At Site
1	Total Project Length (km)			48.580	48.580
2	Service Roads/ Slip Roads (km)			28.230	28.290[1]
3	Pavement (km)	Flexible	LHS		
			RHS		
		Rigid	LHS	48.580	48.580
			RHS	48.580	48.580
4	Bus Shelters (no.)			4	4
	Bus bays with Shelters (no.)			10	10
5	Truck Lay-bays/Parking (no.)			2	2
6	Toll Plaza (no.)			1	1
7	Rest Area (no.)			1	1
8	Major Bridges (no.)			2	2
9	Minor bridges (no.)			8	8
10	ROB's (no.)				
11	Flyover (no.)			2	2
12	VUP's (no.)			10	10
13	PUP/CUP (no.)			1	1
14	Culverts (no.)	Pipe Culvert		81	81
		Box Culvert		31	31

1.3 Surveys and Investigations

1.3.1 Network Survey Vehicle (NSV)

The Network Survey Vehicle, which is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools, is used for automatic data collection pertains to pavement condition and road inventory data. The NSV survey has been carried out along the project corridor from 20/10/2024 to 25/10/2024 for collection of field data pertains to pavement condition and road inventory. Summary of findings of NSV survey is given in preceding sections.

1.3.1.1 Pavement Type

Entire main carriageway and service roads along the project road are consist of rigid pavement. Anandapuram – Anakapalli stretch is having rigid pavement.

[1] Service road length differs by 60m from Sch A as minor variation in end chainage of service road is observed at site. Moreover, in terms of start-end chainages, there are errors in Sch A in sl no 6 and 9, making actual difference as 40m.

1.3.1.2 Pavement Conditions

Km-wise pavement condition is shown below as strip chart:

Raipur - Simga

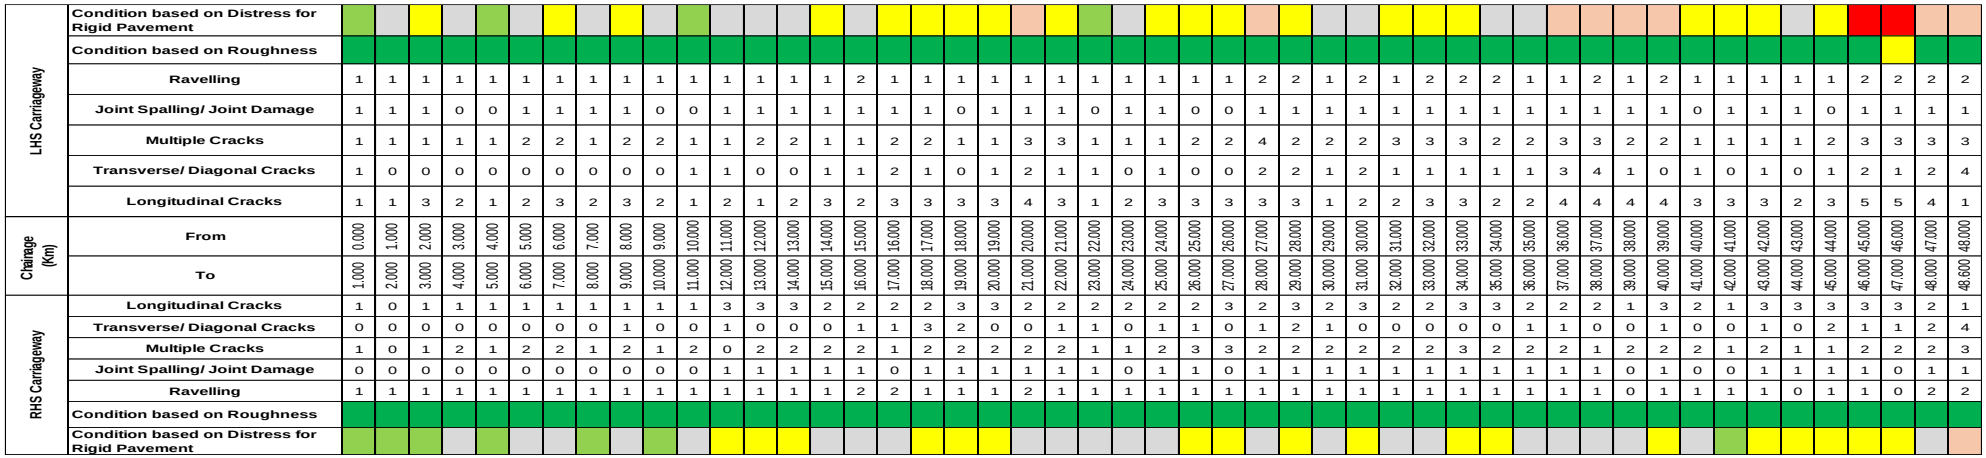

Figure 1-1: Pavement Condition

1.3.1.3 Pavement Roughness

Roughness value measured for each lane of main carriageway using NSV. The summary of direction-wise roughness distribution for each lane in term of percentage length are presented below.

Table 1-3: Raipur Simga Section: Summary of Pavement Roughness

Condition	BI (mm/km)	LHS						RHS					
		Inner		Middle		Outer		Inner		Middle		Outer	
		Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)
Good	<2000	48.600	100.000	34.600	100.000	46.600	95.885	48.600	100.000	34.600	100.000	48.600	100.000
Fair	2000-2400	0.000	0.000	0.000	0.000	2.000	4.115	0.000	0.000	0.000	0.000	0.000	0.000
Poor	>2400	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000
Length (km)		48.600	100.000	34.600	100.000	48.600	100.000	48.600	100.000	34.600	100.000	48.600	100.000

1.3.2 Test Pit Investigations

The designed PQC thickness is 320mm as per the pavement design report. However, thickness available at site is 300mm throughout except at the super elevation locations where thickness is found to be 330mm. The constructed thickness is a departure from design and even not within the construction tolerance limits. Whereas DLC and GSB found to be adequate considering design value of 150mm for DLC and 150mm for GSB and its tolerance limits.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in **Annexure 4.7.** The observations from test results are given below:

As per the pavement design report of 4-lane, the adopted design effective CBR for subgrade is 8%. The CBR values as obtained from test investigation was found to be less than design CBR. However, there no such subgrade failures related distresses found at the site but noted that earthen shoulder throughout the project has got deteriorated.

1.3.3 Axle Load Survey

Axle load survey has been conducted in compliance with IRC 37 2018 for 24 hours in both directions at the existing toll plaza locations. Obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 1-4: Vehicle Damage Factors (VDF)

S. No	Toll plaza	Tarpongi	
	Vehicle Type	LHS	RHS
1	Bus	0.81	0.92
2	LCV	1.03	1.13
3	2-Axle	1.93	2.08
4	3-Axle	3.20	5.24
5	MAV	2.71	14.74

** LHS: Raipur to Bilaspur, RHS: Bilaspur to Raipur*

The higher VDF on RHS side is due to movement of heavily loaded trucks carrying Coal, steel, Construction materials etc whereas, Empty Vehicles of significant proportion in LHS side. Further, 7-day axle load survey has been conducted to validate the above inconstancy and found that VDF values as obtained from these 7-day survey is less than 24 hours' survey and hence adopted the above values in the present due diligence study

1.3.4 Falling Weight Deflectometer

The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table below.

Table 1-5:Summary of Flexural Strength and Elastic Modulus

Pavement layer	Range	Percentage of Project Road	
		LHS	RHS
Raipur Simga Section			
Elastic Modulus of PQC Layer (Mpa)	> 30000	0.00%	16.47%
	30000 - 10000	100.00%	83.53%
Flexural Strength of PQC Layer (Mpa)	> 4.5	0.00%	6.18%
	4.5 - 3.0	89.71%	83.53%
	<3.0	10.29%	10.29%

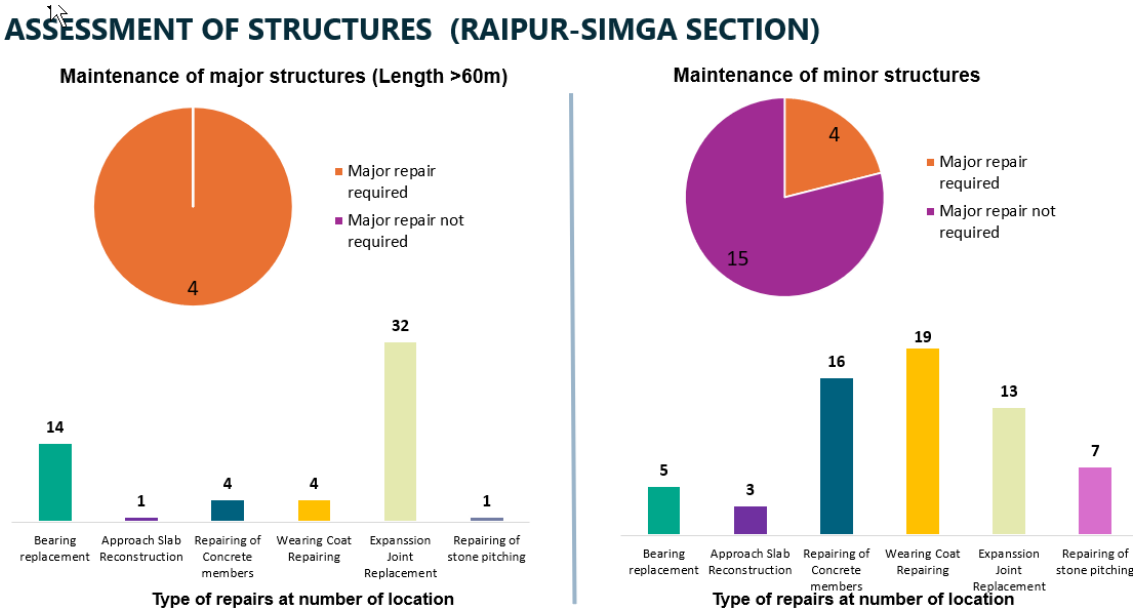

Table 1-6: Summary of Joint Load Transfer Efficiency

Direction	Load Transfer Efficiency (LTE)					
	Transverse Joint			Longitudinal Joint		
	> 90%	90%-50%	< 50%	> 90%	90%-40%	< 40%
Raipur Simga Section						
LHS	54.71%	45.29%	0.00%	56.77%	43.23%	0.00%
RHS	85.29%	14.41%	0.00%	79.42%	20.58%	0.00%

The flexural strength of concrete high for more than 80% of the test locations and even the Load transfer efficiency is high at all the joints tested and hence the joints are in good condition

1.3.5 Structure Inventory and Condition Survey

There are deficiencies noted in the structures and relevant repair-rehabilitation measures are suggested. Requirement of immediate repairs for major structures (length > 60m) and minor structures are presented below.

1.4 Key Technical Issues

1.4.1 Pavement and Road Condition

Longitudinal cracks with low-high severity are there along the project road. RHS carriageway is more distressed compared to LHS due to excessive loading. Some of the cracks are filled with

epoxy mortar and its condition is not satisfactory. There are significant number of pop outs which are repaired with epoxy mortar. It has been observed that repair and rehabilitation works in terms of crack sealing, panel replacement etc. has been done at many locations. Joint separation at the longitudinal joints was found at many of the locations of super elevation, high embankment where joints are widened by more than 30mm.

1.4.2 Structures

A proper gap between decks is not found to allow movement of expansion joints. Due to insufficient gap between decks, crushing and scaling observed in deck slab. These problems are observed at two major bridges at Ch. 14+240 and 27+350 and two flyovers at Ch. 15+400 and Ch. 48+063 in Raipur – Simga section. These are to be rectified by cutting the deck slab for a proper gap before replacing the expansion joints.

Defects at bearings are also found as detailed below:

- MJBR@14+240 (Stretch-1): cracks observed in 1 nr of bearings.
- FO@15+400 (Stretch-1): cracks observed in 2 nr of bearings and Girder not placed properly on one bearing at location.
- MJBR@27+350 (Stretch-1): - cracks observed in 2 nr of bearings.
- MNBR@36+766 (Stretch-1): - cracks observed in 1 nr of bearings. Sliding's moment observed in 2 bearings
- Flyover@48+063 (Stretch-1): - cracks observed in 6 nr of bearings. Sliding's moment observed in 1 bearing

1.5 Capital Expenditure (CapEx) Requirement

1.5.1 Improvement works as per schedule B

Schedule B specifies the requirements of improvement for the concessionaire to be done after the appointment date.

Improvement works Scope specified for each stretch is tabulated below:

Table 1-7: Schedule B Requirements during O&M Handover

S. No.	Description	Unit	Raipur Simga
1	R&R of earthen shoulder covered with granular material.	cum	28518
2	Crack sealing	Km	5.40
3	Panel replacement	Nos	399
4	Approach slabs reconstructed.	Nos	4
5	Bearing replacement	Nos	19
6	Wearing coat replacement	Sqm	5592
7	Strip seal expansion Joint	Lm	612
8	Junction improvement	Nos	23

S. No.	Description	Unit	Raipur Simga
9	Curve improvement.	Nos	50
10	Toll Plaza restoration	Nos	1
11	Truck lay bye	Nos	2
12	Bus lay bye and shelter	Nos	18
13	Landscaping and median plantation	Km	7.3
14	Transverse bar marking:	Nos	75
15	Antiglare	Km	5.93
16	Kerb stones	Km	9.716
17	W beam crash barrier	Lm	2.825

Time to complete above construction works 3/12 months from the Appointed Date.

1.5.2 Immediate Maintenance Requirements

With reference to the clarification of pre-bid queries received from the Authority, the Project is under DLP, prior to the O&M Hand-over date, EPC Contractor will undertake relevant defect rectifications as per the Agreement provisions before handing over the assets to the InvIT concessionaire.

However, toll Plaza renovation cost, revalidation of survey during hand over of O&M and TMS replacement cost has been considered under this head.

1.6 O&M Cost Estimation

1.6.1 Recommended MM Cycles for Pavement

Considering the initial pavement design period and crust, existing flexural strength of PQC and load transfer capacities of existing joints, and in compliance to the provisions of schedule B, the following cycles of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

Table 1-8: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)	
	Periodic Maintenance	ATMS & TMS Replacement
Raipur – Simga	**FY 31 and FY44** **MCW**:2% Panel replacement & 100 % Joint sealant replacement and retexturing **SR:** 100 % Joint sealant replacement and retexturing **Structure:** Replacement of wearing coat & painting **FY-37** **MCW:**2% Panel replacement & 100 % Joint sealant replacement **SR:** 100 % Joint sealant replacement **Structure:** Replacement of wearing coat, bearing, expansion joint & painting	**FY33-** 40% ATMS 50% TMS **FY40-** 60% ATMS 100% TMS

1.6.2 Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of Initial Improvement, MMR and O&M are given below.

Table 1-9 : Operation & Maintenance Cost (Initial Improvement, MMR and O&M) for Raipur- Simga

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW, SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	33.13	-	-	-	-	3.38	2.90	2.03	4.58	0.90	6.70	1.51	1.58	3.23

Total		**33.13**	**185.30**	**14.81**	**13.68**	**9.39**	**63.99**	**45.40**	**36.98**	**91.29**	**15.41**	**115.04**	**32.43**	**22.14**	**74.71**

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

1.7 Conclusion

The project highway has been constructed as per the provisions of the EPC Agreement for 4/6 laning by adopting rigid pavement for both main carriageway and service roads. The traffic volume on the project is considerably high due to presence of large-scale industries within the project influence area. The project requires capacity augmentation when the average daily traffic beyond the Target traffic for any of the homogenous section. As per the latest traffic surveys, analysis and projections, the project section from km 0+000 to 14+800 trigging for capacity augmentation from four to six laning during FY 32 and FY33 with a DLP period of 10 years being the rigid pavement. The 6-lane stretch is available for full O&M by InvIT from FY 44 to till end of the concession. The cost towards the augmentation works to be borne by the Authority. The performance of the pavement is found to be satisfactory under the current traffic loading conditions. However, the longitudinal intersecting cracks generated mostly in the mid slabs to outer side has been observed. The riding quality of the surface appears to be good for the comfort of the road users though the pavement has experiencing surface defects such as cracks of low to high severity. The reasons for adequate performance of the pavement are due to strong and uniform subgrade support as required for transfer of the wheel loads to the foundation. As per the site visit, the process of primary and secondary consolidation of the pavement layers has already been achieved and therefore, the progression of cracks after the consolidation stage is not very significant.

The other significant defect is widening of the longitudinal joints. This widening is conspicuously noticed on high embankments. It does not appear to be critically influenced by the absence or misalignment of tie bars. To arrest this widening, stitching of this joint is being practised with 2-meter-long steel bars. Bars at the end to resemble a staple pin are inserted spanning across the joint in grooves cut for this purpose. Since the widening of joints was noticed in locations where the slab was poorly supported, it is not expected that all joints would widen. The needs to be monitored for taking necessary measures when the joint width will become 30mm, cross-stitching of tie bars shall be done. Further, timely repair and rehabilitation for the identified distress during the concession period is required to maintain the structural adequacy of the PQC layer and improve the overall serviceability of the pavement structure.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report, it is concluded that immediate major repairs are required for few structures in terms of repairs of replacement of bearings, replacement of expansion joints and rectification of settled approach slabs. Authority has clarified that these shall be rectified by them before handing over. It is advised that a thorough check of asset condition should be done by the InvIT Concessionaire before taking over to ensure that all the defects are rectified.

The assessment of estimated cost of such improvement works repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

.

Section 2: Introduction

2.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 14th October 2024 by Egis India and the services commenced immediately thereafter.

Project road is a continuous stretch which is divided in three sections based on the tolling length of each of the three toll plazas in each section. The project stretches detail are listed below.

Table 2-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	Lane	Length (km)
1	**Raipur – Simga**	**Tarpongi**	**4/6 Lane**	**48.580**
2	Simga - Saragaon - Bilaspur	Bhojpuri	4 Lane	57.400
3	Bilaspur Bypass	Mudipar	4 Lane	20.545
Total				126.525

This report pertains to Raipur to Simga Section.

2.2 Objectives

The main objective of the present assignment is to

review project documents and understanding schedule B requirements for improvement works for the assessment of Capex and Opex during the concession period.

1. conduct field investigations to assess the existing asset condition and future deterioration.
2. validate executed works with respect to schedule A and assessment of improvement works
3. review quality of construction based on available data, design and drawings.
4. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
5. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

2.3 Technical Consultant Team

The Technical Consultant commenced its services from 15th October 2024 and the team comprising of Highway, Pavement & Structure Engineers and Experts have conducted site visit from 20th October 2024 to 14th November 2024 to appreciate the project corridor characteristics. This report

highlights the findings from visual assessment, available documents shared with the consultant, discussion with Authority Engineer officials involved with the maintenance and operation of project road at site and other local enquiries. Analysis of data as obtained from various survey and investigations conducted at site are present in this report.

Date-wise various field activities at site are shown below in bar chart form in **Figure 2.1.**

Figure 2-1: Project Activities Schedule

2.4 Disclaimer

The information and documents received from the Client are being reviewed by the Consultant and have been used for preparing this report. Due care has been taken while reproduction of the information where required to avoid typographical or other errors.

2.5 Structure of the Report

The report has been structured into nine sections as follows:

Section 1: Executive Summary
Section 2: Introduction
Section 3: Inventory and Condition Assessment
Section 4: Surveys and Investigations
Section 5: Review of Documents
Section 6: Capital Expenditure (CapEx) Requirement
Section 7: Operation & Maintenance
Section 8: Conclusions

Section 3: Inventory and Condition Assessment

3.1 General

The Technical Consultant visited site from 20th October 2024 to 14th November 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road. This chapter elaborates various findings of these surveys and studies conducted by the Technical Consultant team in different sections.

3.2 Project Corridor

Project road is a continuous stretch which is divided in three sections based on the tolling length of each of the three toll plazas in each section. The project stretches detail are listed below:

Table 3-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	Lane	Length (km)
1	**Raipur – Simga**	**Tarpongi**	**4/6 Lane**	**48.580**
2	Simga - Saragaon - Bilaspur	Bhojpuri	4 Lane	57.400
3	Bilaspur Bypass	Mudipar	4 Lane	20.545
Total				126.525

This report pertains to Raipur to Simga Section.

3.4 Road Inventory and Condition Survey

3.4.1 Road Inventory

The Road Inventory is conducted to assess and list out the existing features of the project corridor and to validate that project road is conforming to the requirements of CA. It covers all the existing physical features such as terrain, land use, carriageway surfacing type, shoulder width, junctions, water bodies, roadside arboriculture, general drainage conditions, etc. It was carried out in accordance with the guidelines given in IRC: SP 19-2001, generally by visual means, and supplemented by simple tape measurement.

The road inventory data collected for the project highway is presented in the **Annexure 3.1.**

[2] Service road length differs by 60m from Sch A as minor variation in end chainage of service road is observed at site. Moreover, in terms of start-end chainages, there are errors in Sch A in sl no 6 and 9, making actual difference as 40m.

3.4.2 Terrain

The project highway falls in plain terrain.

3.4.3 Main Carriageway

Project highway is having 6-lane with paved shoulder configuration except from Raipur Bypass where it is four lane with paved shoulder. The rigid pavement is there in main carriageway and service/slip road in entire project stretch.

The carriageway width is 7.5m (with kerb shyness) with 1.5-2.0m paved shoulder for 4-lane sections and 11.0m (with kerb shyness) with 1.5-2.0m paved shoulder for 6-lane section except at toll plaza, underpasses, bridges and ROBs.

Details are show in **Table 3.4** and **Figure 3.2** below.

Table 3-4: Main Carriageway

S No.	Section	NH Section	Ground Chainage (km)		Length (Km)	Carriageway Width (MCW+PS)

Figure 3-2: Main Carriageway

3.4.4 Service Road/Slip Roads

Total linear length (both side length) of service/slip road along the project road is 58.74 km with 27.37 km falls in Raipur-Simga section. It is noticed that a COS is issued by NHAI to the EPC Contractor for construction of service/slip roads and associated exit-entry ramps for VUPs at km 2+105, 3+605 and 8+068. Total linear length of service road given above includes the length of service road constructed/in progress under COS. It is observed that construction is completed at 8+068 whereas it is at advance stage at other two locations. Rigid pavement is there for the service/slip roads at all the locations.

3.4.5 Towns and Built-Up-Areas

Chainage-wise detail of towns and built-up areas are given below:

Table 3-6: Built Up Areas

S. No.	Chainage (km)		Length (km)	Name of Settlement
	From	To		
Raipur - Simga section				
1	16+100	16+900	0.800	Siltara
2	35+148	35+648	0.500	Saddu
3	38+698	39+298	0.600	Sankara

3.4.6 Major and Minor Junctions

3.4.6.1 Major Junction

There is 1 no. of major junction at Raipur - Simga Section and 1 no. major junction at Bilaspur Bypass Section. Details of the major junction are given in the **Table 3.7** below:

Table 3-7: List of Major Junction

Sr. No.	Chainage (km)	Side	Type of Junction (T, X, Y)	Cross Road Leads To	
				LHS	RHS
Raipur - Simga Section					
1	0+090	-	Roundabout	Durg	Raipur

3.4.6.2 Minor Junction

There are 43 nos. of minor junctions at Raipur-Simga section. Summary of the minor junctions are given in the **Table 3.8** below:

Table 3-8: Summary of Minor Junction

Sr. No.	Type of Junction (T, X, Y)	Raipur - Simga Section	
		LHS	RHS
1	T Junction	16	12
2	Y Junction	6	3
3	X Junction	3	3

3.4.7 Median

Median width is predominantly 4.0m-4.5m (excluding shyness) except at few underpass locations where the width is 1.5m. Details of sections with narrow median width are given in the **Table 3.9** below:

Table 3-9: Details of Narrow Median (Width < 4.5m)

Sr. No.	Chainage (Km)		Length (km)	Median width (m)	Remarks
	From	To			
Raipur-Simga section					
1	10+070	11+000	0.93	1.5	VUP approaches
2	14+810	15+900	1.09	1.5	Flyover approaches
3	17+150	18+380	1.23	1.5	VUP approaches
4	20+900	21+730	0.83	1.5	VUP approaches
5	24+180	25+080	0.9	1.5	VUP approaches
6	38+580	39+530	0.95	1.5	VUP approaches

3.4.8 Earthen / Hard Shoulder

Earthen shoulders are provided on the outer side of the main carriageway. The width of these shoulders is 1.5m to 2.5m.

3.4.9 Drainage

Details of Drainage are given in the **Table 3.10** and shown in **Figure 3.4.**

Table 3-10: Drainage System

Description	Raipur - Simga Section
Covered Lined Drain (km)	2.63
Open Lined Drain (km)	13.4

General observation of drainage conditions during the site reconnaissance are:

- Trapezoidal line drains are provided at most of the sections between main carriageway and service road. Discharge from these drains is either through the culvers or through rain water harvesting system. These trapezoidal drains are normally in good condition.
- Cleaning and maintenance of roadside drainage needs improvement. Slab at cover drain is damaged at few locations. Longitudinal lined drains are observed between main carriageway and service/slip road.
- Provision of chute drain at high embankment location is observed.
- Median cut drains (chute) are provided at super-elevation section to drain out the water from one carriageway to another at curve location.
- No overtopping of road was observed at any location during the survey work. It was further confirmed by the locals also

Cover Drain at Slip Road

Lined drain between Main Carriageway and Slip/Service Road

3.4.10 Road Furniture

3.4.10.1 W-Beam Crash Barrier, Concrete Crash Barrier and Pedestrian Guardrail

W-Beam Crash Barrier

W-Beam crash barrier are observed at bridges approaches, at shoulder side where embankment height above 3m and at median where width is 1.5m for entire project road. Bamboo crash barrier are also observed from km 32+390 to km 32+570 LHS at Raipur – Simga section. Length of W-Beam Crash Barrier are given in the **Table 3.11** and shown in **Figure 3.5.**

Table 3-11: W-Beam Crash Barrier

Description	Raipur - Simga Section
W-Beam Crash Barrier (km)	38.775
Bamboo Crash Barrier (km)	0.180

W-Beam at shoulder Bamboo crash barrier at shoulder

Figure 3-5: W-Beam Crash Barrier/ Bamboo Crash Barrier

Concrete Crash Barrier

Concrete Crash Barrier is provided at approaches of Flyovers and Underpasses almost all through the project road. Length of CC barrier are given in the Table 3.12 and shown in Figure 3.6.

Table 3-12: Concrete Crash Barrier

Description	Raipur - Simga Section
Concrete Crash Barrier (km)	5.55

Figure 3-6: Concrete Crash Barrier

Pedestrian Guardrails

Pedestrian guard rails are provided at the median opening location for all junctions for the entire project road. Length of Pedestrian Guardrails are given in the Table 3.13 and shown in Figure 3.7.

Table 3-13: Pedestrian Guardrails

Description	Raipur - Simga Section
Pedestrian Guardrail (km)	1.34

Figure 3-7: Pedestrian Guardrails

3.4.10.2 Sign Boards and Gantry

There are adequate number of signboards along the project road and most of them are in good condition. There are variable message signs (VMS), overhead and cantilever gantry signs as well. Location of gantry signs are shown in **Table 3.14** and **Figure 3.8** below.

Table 3-14: Variable Message Signs (VMS) / Cantilever & Overhead Gantry

S. No.	Chainage (km)	Side	Type
Raipur - Simga Section			
1	0+410	RHS	Cantilever

Figure 3-8: VMS and Gantry Signboards

3.4.10.3 5 km / Km / Hectometer Stones

5Km, Km & Hectometer stones are observed at shoulder & median. Most of stones are in good condition.

Figure 3-9: Kilometer & Hectometer Stones

3.4.11 Project Facilities

3.4.11.1 Bus Bays and Shelters

Bus bays/shelters are available at main carriageway and service/slip roads. It is observed that shelters are of tin shade, and they are in fair to good condition. Package-wise numbers of these facilities are given in **Table 3.15** and shown in **Figure 3.10** below.

Table 3-15: Bus Bays and Shelters

Description	Unit	Raipur - Simga Section
Bus bay with Shelter	Nos	10
Bus Shelter	Nos	4

Figure 3-10: Bus Bay and Shelters

3.4.11.2 Truck Lay bye

01 no Tuck lay bye (both side) with toilets and 01 Rest Area facilities are available at Raipur-Simga section.

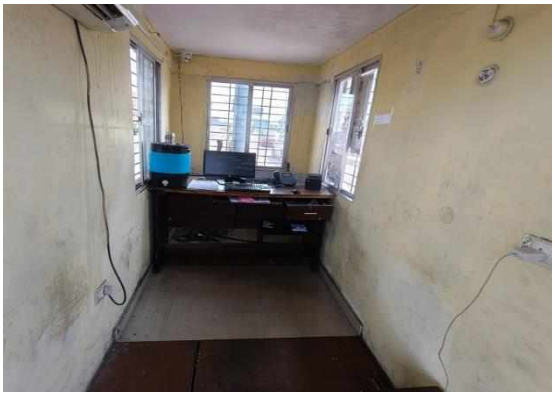
3.5 Toll Plaza

The purpose of the Toll Plaza is to collect toll from road users of the Project highway with transparency in the system. There is one toll plaza at this section. Booths are available for all lanes. Administrative buildings is there at the Toll Plazas.

3.5.1 Tarpongi Toll Plaza (TP-1)



Tarpongi toll Plaza (TP-1) is located at km 32+010 of NH-30, Raipur - Simga stretch which has staggered toll plaza with 10 lanes (9+1 Lanes) in each direction. Canopy is there over all 10 lanes. Booths are available for all lanes.

Figure 3-14: Tarpongi Toll Plaza

Table 3-19: Toll Equipment Status at Tarpongi Toll Plaza

Sr. No.	Particulars	Details
1	Toll Plaza Chainage and name	32+010 (Staggered) & Tarpongi Toll Plaza
2	Road Configuration	4/6 Lane (NH-30)
3	Number of Toll Lanes	10 Lanes (in each direction)
4	No of ETC system	10 Lanes (in each direction)
5	No of Toll Booths	10 Lanes (in each direction)
6	Canopy	Available
7	Admin Building	Available
8	Control Room	Available
9	Server Room	Available
10	Medical Aid Post	Available
11	Traffic Aid Post	Available
12	PTZ camera	Available, but temporarily not in working condition
13	UPS & Battery Room	Available
14	Plaza Manager Room	Available
15	Cash up Room	Available
16	Cashier Room	Available
17	Cash Van Garage	Not Available
18	Availability of Tunnel	Available
19	PRO Office	Available

Figure 3-15: Toll Equipment, Tarpongi Toll Plaza

3.5.2 Toll Plaza Administration Building

The Plaza administration building serves as the support structure for the operation and maintenance of the toll plaza. It is from here that utilities are distributed and controlled, employee amenities are maintained, the toll collection process overseen, revenues are processed & audited. Sale of local passes and recharge is done at Plaza building. Transfer of funds from toll booth to plaza building and from plaza building to bank are being facilitated/managed by administration and financial management functions are also conducted in the building.

Figure 3-16: Toll Plaza Administration Buildings

3.6 Structure Inventory and Condition Survey

This section mainly presents the Site Inventory and Condition Survey of all existing Structures likes Culverts, Minor bridges & Major bridges, Flyovers, VUP, LVUP, PUP, RUB and ROBs along the project roads. The aim of the section is to present the details of existing structures condition of existing structures and functioning of structures. The structure inventory has been done based on visual assessment of each structure. MBIU has been used for visual assessment inspection of major structures having length greater than 60m.

Number of existing structures along the Project roads are given in the following table. Detailed inventory and condition data is presented in **Annexures – 3.2**

Table 3-20: Number of Structures

S. No.	Description		Raipur - Simga Section
1	Major Bridge (no.)		2
2	Minor Bridge (no.)		8
3	ROB/RUB (no.)		-
4	Flyover (no.)		2
5	VUP (no.)		10
6	PUP/CUP (no.)		1
7	Culverts (no.)	Box	31
		Pipe	81

Section 4: Surveys and Investigations

4.1 Visual Condition Assessment

4.1.1 Raipur – Simga Section

i) Observed the longitudinal cracks with low-high severity (predominantly inner lane & Middle lane) along the project road. RHS carriageway is more distressed compared to LHS due to excessive loading.

ii) Some of the cracks are filled with epoxy mortar and its condition is not satisfactory.

iii) As per the IE, about 1489 Concrete Panels have already replaced in the year 2023 and planned for another 1486 panel replacement works during 2024. The Panel replacement works in progress.

iv) Observed significant number of pop outs and repaired it epoxy mortar.

v) Service road construction in progress at 2+600 LHS.

Cracks in Pavement

Service Road Construction

Figure 4-1: Raipur – Simga: Visual Condition

4.2 Network Survey Vehicle (NSV)

The Network Survey Vehicle is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools. The survey vehicle is used for automatic data collection pertains to pavement condition and road inventory data, required for preparation of pavement maintenance and management proposals. It allows all the data to be collected in a single pass consequently minimising the time needed to complete the data collection. The measurement of surface distresses like cracking, ravelling, patching and potholes etc. is done using the calibrated image processing methods. The description of NSV and the methodology adopted is provided in **Annexure-4.1.**

The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. The data has been collected separately for each lane of the Carriageway.

Integrated into the NSV is a Digital Laser Profiler (DLP) consisting of two-point laser (6 devices).

This inertial profiler is capable of measuring:

- Pavement Roughness (one laser in each wheel path and centre)
- Rutting (full transverse pavement measurement)
- Macro texture (outer wheel path and between wheel paths).

4.2.1.1 Determination of Roughness

- The outputs of the lasers and accelerometers located in each wheel path (750 mm either side of the centre line of the vehicle) are sampled every 25 mm of longitudinal travel and used to calculate the longitudinal profile of the road.

- The profile is then passed through the Quarter Car model to calculate the International Roughness Index (IRI) lane roughness as per the methodologies specified in the Austroads Guide to Asset Management, Part 5B - Roughness.

- Post Survey any 'spikes' in the roughness outputs will be excluded that may arise from cattle grids, railway crossings, bridge abutments etc. Automated checks in the data processing software are already incorporated to exclude any contribution to roughness from data collected below the minimum survey speed which is typically set at 10 -30 km/hr (user definable).

- The above-mentioned Roughness Digital Laser Profile System fall under the specification defined in Circular no 11041/218/2007 - admn issued by NHAI for use of Laser Profilometer in NHAI Works.

4.2.1.2 Determination of Rutting

- All data is measured and reported in accord with the recommendations contained within the Austroads Guide to Asset Management, Part 5C – Rutting.

- The DLP measures a 3-metre transverse profile across the lane using a minimum of 11 lasers. A full transverse profile is measured every 50 mm of longitudinal travel, and the processing software allows both lane and wheel path rutting to be measured using the string line and straight edge models.

4.2.1.3 Determination of Texture

- The DLP (Digital Laser Profile) is capable of measuring both flushing and texture via Sensor Measured Texture Depth (SMTD). Texture is measured continuously along the pavement length using a non-contact laser transducer.

- Macro texture can be recorded in many different ways. The most common is by using the Sensor Measured Texture Depth (SMTD). Internationally Mean Profile Depth (MPD) is more common. SMTD is more common as it can be easily correlated to a Sand Patch Texture Dept (SPTD). The DLP is able to record both types of texture to all international and national standards.

4.2.1.4 Criteria for Analysis

From the digital images, a host of information are extracted. This information is linearly (Chainage) and spatially (GPS) referenced. The information extracted is presented in the table below:

Table 4-1: Information extracted from NSV

Coding Parameters	Coding Type
General Features and Utilities	
Land use pattern	Agricultural, Urban, Commercial, Forest, Ruraletc.
Avenue plantation / Roadside arboriculture	Present/Not Present
Electric pole	Present/Not Present
Telephone	Present/Not Present
Wayside amenities, Bus bays, truck lay Bye, etc...	Present/Not Present
Main Carriageway Features	
Pavement type	Bituminous, Concrete
Junction (Major / Minor & X / T/ Y) & type of road crossing / merging	Type and Geolocation
Carriageway width (lane wise)	Width
Paved shoulder (width)	Width
Earthen shoulder (width and physical condition)	Width, Condition-Good, Fair, Poor
Footpath (physical condition)	Present/Not Present, Condition
Drain width (lined & Unlined, along with general condition)	Lined/Unlined, Condition
Median (width)	Width
Kerb Height	Height
Median opening (length)	Length
Road markings (lane wise)	Condition
Presence of Road Studs (Lane wise) - Yes / No	Yes/No
Sign boards identifications (both sides of carriageway) – Type and Physical Condition	Geo Location, Condition
Gantry boards identifications (type of gantry) – Physical Condition	Geo Location, Condition
Kilometre & hectometre stones	Present/Not present
Guard rails – Physical Condition	Geo Location, Condition
Safety barriers – Type and Physical Condition	Geolocation, Type and Condition
Delineators – Physical Condition	Present/Not present
Guard / guideposts – Physical Condition	Yes/No, Condition
Streetlight and High Mast Light	Type and Geo Location
Location of water bodies (lakes and reservoirs), at every occurrence	Type and Geo Location
Location of Structures	Type and Geo Location
Service Road	
Pavement type	Bituminous, Concrete
Carriageway width (lane wise)	Width
Drain width (lined & Unlined, along with general condition)	Lined/Unlined, Condition
Road markings (lane wise)	Condition
Sign boards identifications (both sides of carriageway) – Type and Physical Condition	Geo Location, Condition
Gantry boards identifications (type of gantry) – Physical Condition	Geo Location, Condition
Coding Parameters	**Coding Type**
Location of water bodies (lakes and reservoirs), at every occurrence	Type and Geo Location
Streetlights	Present/Not present

4.2.2 Pavement Roughness

The roughness data was collected at 100m interval using NSV on each lane in-terms of IRI (International Roughness Index) value. In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 “Guidelines on Measuring Road Roughness and Norms” with the following equation;

$BI = 630*(IRI)^{\wedge 1.12}$

Where

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data was collected through Digital Laser Profilers System (DLP) and the same is presented in **Annexure 4.3**. The summary of Roughness values is presented in tables below

Table 4-2: Raipur Simga Section: Summary of Pavement Roughness

Condition	BI (mm/km)	LHS						RHS					
		Inner		Middle		Outer		Inner		Middle		Outer	
		Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)

4.2.3 Test Pit Investigations

Test pit investigations have been carried out at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

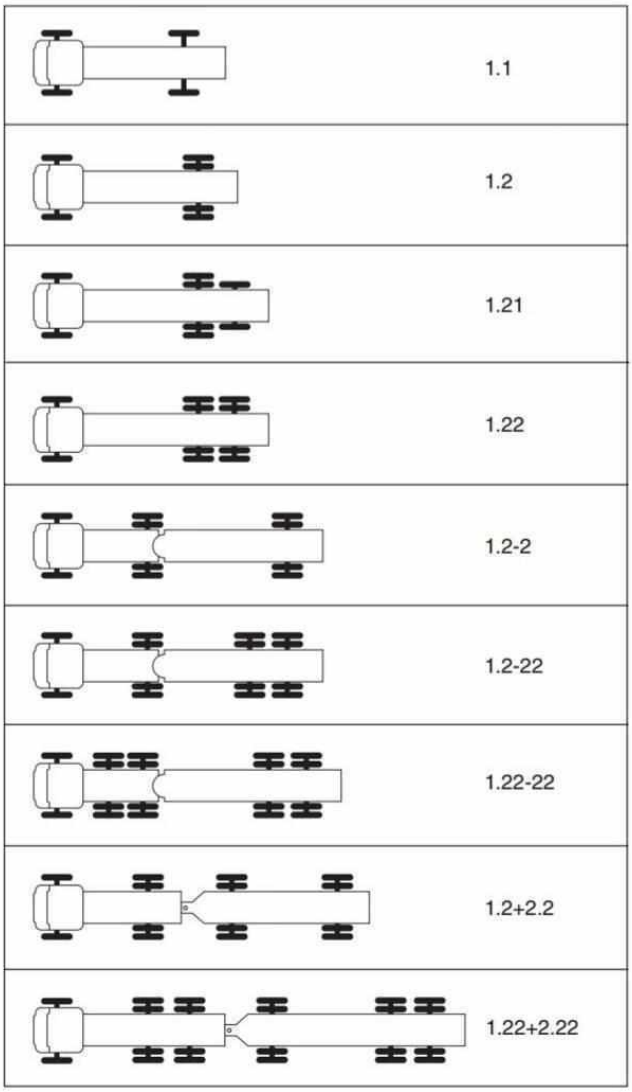
Table 4-3: Summary of Existing Pavement Crust Thickness

S.No	Location (Km.)	Side (LHS/RHS)	Existing Crust details			
			Pavement Quality Concrete (PQC)	Dry Lean Concrete (DLC)	Granular Layer (GSB)	Total Thickness (mm)
Raipur Simga Section						
1	1.700	LHS	300	140	200	640
2	4.750	RHS	330	150	180	660
3	9.600	LHS	300	150	160	610
4	14.600	RHS	330	150	150	630
5	20.150	LHS	300	150	150	600
6	25.350	RHS	330	150	150	630
7	30.000	LHS	300	140	120	560
8	35.000	RHS	330	150	150	630
9	40.000	LHS	300	150	150	600
10	45.500	RHS	300	150	150	600

Figure 4-2: Pavement Composition & Thickness Measurement

Observations and Conclusions:

The designed PQC thickness is 320mm as per the pavement design report. However, thickness available at site is 300mm throughout except at the super elevation locations where thickness is found to be 330mm. The constructed thickness is a departure from design and even not within the construction tolerance limits. Whereas DLC and GSB found to be adequate considering design value of 150mm for DLC and 150mm for GSB and its tolerance limits.



During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in **Annexure 4.7.** The observations from test results are given below:

As per the pavement design report of 4-lane, the adopted design effective CBR for subgrade is 8%. The CBR values as obtained from test investigation was found to be less than design CBR. However, there no such subgrade failures related distresses found at the site but noted that earthen shoulder throughout the project has got deteriorated.

4.3 Axle Load Survey

The axle load survey has been conducted at the Toll Plaza location on the Project Corridor. The axle load measurements were made over a 24-hour period on random sampling basis. The survey has been conducted in both the directions. The axle load pads have been placed on either side of the carriageway in a staggered manner to measure the axles in both the directions. While carrying out axle load survey enough care is taken to ensure that this survey work will not hamper the normal passage of the traffic

The type of vehicle considered for axle load survey along with its axle configurations are presented in below. Few of the survey photographs were shown in Photos as below:

Axle load survey at Tarpongi

Axle load survey at Tarpongi

Figure 4-3: Axle Load Survey

The VDF analysis was carried out in line with section 4.4 of IRC: 37-2018 based on the axle load data. The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC:37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions.

- Single axle with single wheel on either side = {axle load in kN / 65}4
- Single axle with dual wheel on either side = {axle load in kN / 80}4
- Tandem axle with single wheel on either side = {axle load in kN /148}4
- Tridem axle with dual wheel on either side = {axle load in kN /224}4

With the stated above procedure, the Vehicle Damage Factor for each class of commercial vehicle on both the directions were calculated separately for empty and loaded vehicles. The Axle load data format and VDF analysis are presented in **Annexure 4.5** and obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 4-4: Vehicle Damage Factors (VDF)

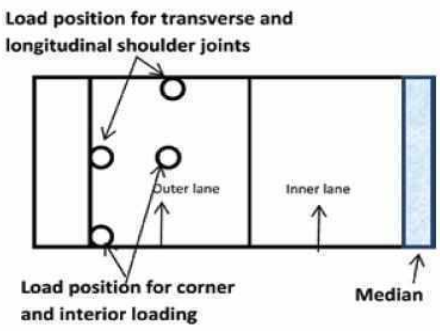
S. No	Toll plaza	Tarpongi	
	Vehicle Type	LHS	RHS
1	Bus	0.81	0.92
2	LCV	1.03	1.13
3	2-Axle	1.93	2.08
4	3-Axle	3.20	5.24
5	MAV	2.71	14.74

The higher VDF on RHS side is due to movement of heavily loaded trucks carrying Coal, steel, Construction materials etc whereas, Empty Vehicles of significant proportion in LHS side. Further, 7-day axle load survey values are lower than one days and hence adopted the above values in the study

4.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique” to determine the remaining life of the pavement structure.

The principle and description of FWD and its methodology is provided in **Annexure 4.6.**



FWD deflection measurement has been carried out for each direction and the measurement has been carried out at a test point along outer wheel path of each direction which is at an offset of 1m from the outer edge of outer lane as specified in section 5.4.5 of IRC: 115-2014. At every measurement location, four drops were made, such that the first drop was the ‘**seating drop’** and with the remaining three drops deflections were recorded. Field survey photographs is shown below.

Figure 4-4: FWD Survey at Project Site

The deflection testing has been carried out on the existing pavement as per IRC Codes at the rate of 5 points per km in each direction as stipulated in TOR of the Consultant.

Adopted deflection measurement scheme is as under.

Adopted Measurement Scheme	Rigid Pavement
(i) measurement along outer wheel paths of outer lanes (3 points) (ii) measurement along the outer wheel path of inner lane (2 points)	

4.4.1 FWD data Analysis for Rigid Pavement

As per IRC: 117-2015, the collected FWD data for the rigid pavement has been analysed to determine the following parameters.

- Modulus of subgrade reaction k (MPa/m)
- Elastic modulus of concrete E_c (MPa)
- Flexural Strength of concrete f_{mr} (MPa)
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of the parameter for PQC and Load Transfer Efficiency is presented in **Annexure 4.7** for both LHS and RHS directions respectively.

From the test results the observations were draw-down. The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table **below**.

Table 4-5:Summary of Flexural Strength and Elastic Modulus

Pavement layer	Range	Percentage of Project Road	
		LHS	RHS
Raipur Simga Section			
Elastic Modulus of PQC Layer (Mpa)	> 30000	0.00%	16.47%
	30000 - 10000	100.00%	83.53%
Flexural Strength of PQC Layer (Mpa)	> 4.5	0.00%	6.18%
	4.5 - 3.0	89.71%	83.53%
	<3.0	10.29%	10.29%

Table 4-6: Summary of Joint Load Transfer Efficiency

Direction	Load Transfer Efficiency (LTE)					
	Transverse Joint			Longitudinal Joint		
	> 90%	90%-50%	< 50%	> 90%	90%-40%	< 40%
Raipur Simga Section						
LHS	54.71%	45.29%	0.00%	56.77%	43.23%	0.00%
RHS	85.29%	14.41%	0.00%	79.42%	20.58%	0.00%

The flexural strength of concrete high for more than 80% of the test locations and even the Load transfer efficiency is high at all the joints tested and hence the joints are in good condition

4.5 Mobile Bridge Inspection Unit (MBIU)

4.5.1 Specification

The Mobile Bridge Inspection Unit (referred as (MBIU) is an electro-mechanically driven articulated structure mounted on a vehicle (a truck) as an aid towards proper inspection of bridges or similar infrastructures by enabling an inspection team of 2-3 persons carrying instruments access to the underside of bridge decks overflowing rivers or gorges. The present version is the truck mounted system. As per TOR condition survey of existing structures greater than 60m shall be carried using MBIU.

The overall objective of the condition survey is to identify the need for structural maintenance, rehabilitation and replacement. Signs of distress such as spalling, scaling, cracking, leaching, excessive deflection, inadequate cover, settlement, exposed reinforcement, corrosion in the reinforcement; shear cracks etc. are identified during this exercise. Special emphasis is given on expansion joints and bearing. Also the condition of the Approaches, water way and bed protection is examined. The survey identify the bridges which are more distressed and require testing for their evaluation and rehabilitation measures. Also bridges which require general measures for rehabilitation. Inspection report is prepared in accordance with IRC: SP-35. The report provides recommendation whether a bridge is acceptable to continue in use, whether it can be repaired and/or modified e.g. widened or a new structure.

The structure inventory and condition assessment are given in **Annexure 3.2.** The following structures have been inspected using MBIU machine.

Table 4-7: List of Inspected Structures using MBIU

Sr. No.	Chainage (Km)	Side		Remark
		LHS	RHS	
Raipur Simga Section				
1	14+240	LHS	RHS	Major Bridge
2	15+400	LHS	RHS	Flyover
3	27+350	LHS	RHS	Major Bridge
4	36+766	LHS	RHS	Minor Bridge
5	48+063	LHS	RHS	Flyover

4.5.2 Working Principle

The work of condition survey requires use of Mobile Bridge Inspection Unit at the various bridge sites on the National Highways to overcome the accessibility problems. MBIU increases the accessibility for inspection of underside of high-level bridge decks and helps in continuous inspection of throughout the span of bridge. It has five folded arms. All of them are electro-mechanically operated.

Once the platform is erected by certified person, Inspection and maintenance experts can inspect underside of bridge, note observations as per IRC SP-35 & IRC SP-52 and take photographs for reference.

4.5.3 Advantages

- A large operating range
- A high level of working comfort
- Maximum operational safety
- The shortest possible setting up and dismantling times
- Full mobility in inspection operation without stabilizer supports
- An optimum weight/performance ratio

Figure 4-5: MBIU Survey

4.6 Drone Videography of Entire Stretch

Videography of entire Project Stretch is captured through Drone cameras flown at about 50m above ground. This shall be useful for observing various features of Project Stretch from bird's eye level.

Figure 4-6: Drone Videography image about 50 m

Section 5: Review of Documents

5.1 General

Technical Consultant (TC), since the start of technical due diligence study, has requested for various documents from the Client. A list of documents required were shared with the Client before TC team started the study which was appended with few more queries after the conclusion of the site visit once the project site is appraised. Most of the queries were also discussed with the Client in many meetings. This section of the report deals with the documents requested by TC and its review along with highlighting major issues found during this review.

5.2 Documents Collected and Reviewed

List of documents requested, received and reviewed are given below:

S. No.	List of Documents	Status of Documents	Remarks on Review
DOCUMENTS RELATED TO CURRENT ACQUISITION			
1.	Concession Agreement	Partially Available	Technical Schedules A, B, C and F are made available to the Consultant. These schedules are modified from the standard provisions given in manual as below: Sch A: Existing features Sch B: Scope of Work including facilities to be provided Sch C: Specifications and Standards Sch F: Maintenance Requirements Table 1 of Sch F provides maintenance criteria for pavements which has performance parameter, desirable and acceptable level of service, frequency of inspection and time limit for rectification/repair. Sch F specifies roughness value as 2200mm/km desirable and 2400 mm/km acceptable for rigid pavement. Sch B states that the concessionaire shall carry out the periodic maintenance in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc. in every sixth year. Further, it was clarified in the pre-bid queries reply that maintenance activities of rigid pavement shall be carried out in accordance with Sch F of the CA. Though draft CA is not available, Consultant has referred the CA of earlier rounds wherever required presuming that there shall not be any change in Contract Conditions.
2.	Detailed Project Report/ Technical Due Diligence Report	Available	Report done by M/s MSV in association with Sri Infotech for NHAI in December – 2024 are made available for Raipur – Simga. This Report is used as reference for inventory & condition of the assets and improvement proposals. cost estimates are provided for engineering and safety improvement for Rs 45.62 Cr including GST which are under the obligation of NHAI. NIL cost is considered for immediate repair under NHIT obligation. The report also provides for the O&M cost during the concession period which is used for comparison and reference purpose.

S. No.	List of Documents	Status of Documents	Remarks on Review
3.	FWD data	Available	Consultant collected the reports of FWD from respective AEs during their site visit and used it as a reference document.
4.	Latest MPRs	Available	Consultant collected recent IE-MPRs from the AEs during the site visit. Reports provide details about the Project Road and key maintenance activities undertaken at the site during that period.
5.	Maintenance History	Not available	There is no maintenance history available for the Project Road.
6.	NSV data	Available	The reports of NSV are available as a reference document for TC.
7.	AADT for each section and Growth rate	Available	AADT along with traffic projections for the project roads have been provided by Client.
8.	Concession Period	Not available	TC has adopted 20 years concession period with reference to the CA of earlier roads.
9.	Projected Escalation factor	Not available	In absence of projected escalation factor, all cost are given at the present rate as per the direction of the Client.

5.3 Key Technical Issues

5.3.1 Pavement and Road Condition

Longitudinal cracks with low-high severity are there along the project road. RHS carriageway is more distressed compared to LHS due to excessive loading. Some of the cracks are filled with epoxy mortar and its condition is not satisfactory. There are significant number of pop outs which are repaired with epoxy mortar. It has been observed that repair and rehabilitation works in terms of crack sealing, panel replacement etc. has been done at many locations. Joint separation at the longitudinal joints was found at many of the locations of super elevation, high embankment where joints are widened by more than 30mm.

Cracks in Rigid Pavement

Repairing work is in progress

Figure 5-1: Pavement Distress

5.3.2 Structures

A proper gap between decks is not found to allow movement of expansion joints. Due to insufficient gap between decks, crushing and scaling observed in deck slab. These problems are observed at two major bridges at Ch. 14+240 and 27+350 and two flyovers at Ch. 15+400 and Ch. 48+063 in Raipur – Simga section. These are to be rectified by cutting the deck slab for a proper gap before replacing the expansion joints.

Figure 5-2:Major Bridge @ 14+240 in Raipur–Simga Section

Figure 5-3: Major Bridge @ 27+350 in Raipur–Simga Section

Defects at bearings are also found as detailed below:

- ✓ MJBR@14+240 (Stretch-1): cracks observed in 1 nr of bearings.
- ✓ FO@15+400 (Stretch-1): cracks observed in 2 nr of bearings and Girder not placed properly on one bearing at location.
- ✓ MJBR@27+350 (Stretch-1): - cracks observed in 2 nr of bearings.
- ✓ MNBR@36+766 (Stretch-1): - cracks observed in 1 nr of bearings. Sliding's moment observed in 2 bearings
- ✓ Flyover@48+063 (Stretch-1): - cracks observed in 6 nr of bearings. Sliding's moment observed in 1 bearing

Figure 5-4: Crack in Bearing

Figure 5-5: Gap in Bearing and Girder

Section 6: Capital Expenditure (CapEx) Requirement

6.1 Schedule B Improvement Work

Schedule B specifies the requirements of improvement work for the concessionaire which are to be done after the appointment date. Major works with relevant references to Sch B used to quantify these construction requirements are listed below:

- R&R of earthen shoulder covered with granular material Ref Cl 3.1 I of Sch B.
- Crack sealing: Ref Cl 3.1 III of Sch B.
- Panel replacement: Ref Cl 3.1 III of Sch B.
- R&R of Structure: Ref Cl 3.2 of Sch B.
- Junction improvement. Ref Cl 3.1 III of Sch B.
- Curve improvement: Ref Cl 6 of Sch B.
- Median opening: Ref Cl 8 of Sch B.
- Toll Plaza restoration: Ref Cl 9.1 of Sch B
- Truck lay bye: Ref Cl 9.1of Sch B
- Bus lay bye and shelter: Ref Cl 9.3 of Sch B
- Landscaping and median plantation: Ref Cl 9.4 of Sch B
- Transverse bar marking: Ref Cl 10.3 of Sch B
- Antiglare: Ref Cl 10.7of Sch B
- Kerb stones: Ref Cl 10.8 of Sch B

Improvement works Scope specified for each stretch is tabulated below:

Table 6-1: Schedule B Requirements during O&M Handover

S. No.	Description	Unit	Raipur Simga
1	R&R of earthen shoulder covered with granular material.	cum	28518
2	Crack sealing	Km	5.40
3	Panel replacement	Nos	399
4	Approach slabs reconstructed.	Nos	4
5	Bearing replacement	Nos	19
6	Wearing coat replacement	Sqm	5592
7	Strip seal expansion Joint	Lm	612
8	Junction improvement	Nos	23
9	Curve improvement.	Nos	50
10	Toll Plaza restoration	Nos	1
11	Truck lay bye	Nos	2
12	Bus lay bye and shelter	Nos	18

S. No.	Description	Unit	Raipur Simga
13	Landscaping and median plantation	Km	7.3
14	Transverse bar marking:	Nos	75
15	Antiglare	Km	5.93
16	Kerb stones	Km	9.716
17	W beam crash barrier	Lm	2.825

Time to complete above improvement works are 3 months/12 months from the Appointed Date based on completion schedule for improvement proposals given in Schedule B.

6.2 Immediate Maintenance Requirements

With reference to the clarification of pre-bid queries received from the Authority, the Project is under DLP, prior to the O&M Hand-over date, EPC Contractor will undertake relevant defect rectifications as per the Agreement provisions before handing over the assets to the InvIT concessionaire.

However, toll plaza renovation cost, revalidation of survey during hand over of O&M and TMS replacement cost has been considered under this head.

6.3 Capital Expenditure (CapEx)

Cost of capital expenditure (CapEx) are presented below.

Table 6-2: Cost of Capital Expenditure (CapEx)

Description	Cost (in INR Crore)
	Raipur Simga
Revalidation of Survey	0.52
Initial Improvement Works (Schedule - B)	26.35
TCMS	6.26
ATMS	-
Total	**33.13**

Section 7: Operation & Maintenance

7.1 General

The O & M requirements for the project facilities are specified in the Concession Agreement (CA) mainly under following Articles/ Schedules:

- Article 15 - Operation and Maintenance
- Article 16 - Monitoring of Operation and Maintenance
- Article 17 – Traffic Regulation
- Article 18 and Schedule H – Safety Requirements
- Schedule F- Maintenance Requirements

7.2 Requirement as per Concession Agreement

Schedule F of the Concession Agreement sets out the Operation and Maintenance requirements for the Project. As per this schedule, scope for Operation and Maintenance includes but not limited to following obligations:

- ✓ **Improvement** – This includes improvement of the existing assets as per requirement of this Agreement and safety audit.
- ✓ **Maintenance of Civil Works and Assets**- this includes maintenance of civil works and all assets as per requirement of this agreement.
- ✓ **Road Maintenance** –This includes routine maintenance, preventive maintenance, periodic maintenance as per IRC:82-2015, Design overlay as per Manual of 4- laning/6-laning, disaster maintenance, exigencies, and inspections.
- ✓ **Traffic Management** – This includes enforcement of regulations together with the relevant authorities. This also includes hazard response, information gathering and dissemination, Road patrols and ATMS surveillance etc.
- ✓ **Safety**– This includes accident prevention, after care, user education, enforcement, data collection and analysis.
- ✓ **Facility Management** – This includes periodic inspections, routine maintenance, Rehabilitation, and expansion planning.
- ✓ **Road property management** –This includes management of access, encroachment, and ribbon development.
- ✓ **General responsibilities** –This includes budgeting, compliance with legal and accounting requirements, and public relations.
- ✓ Maintaining public relations unit to interface with and attend to suggestions from users of the highway, the media, Govt. agencies and other external agencies.

Routine Maintenance: These are maintenance needs required on daily, weekly, monthly and annual basis for the smooth and efficient running of traffic and includes the activities of minor repairs of all project elements, cleaning of road furniture's, replacement of consumables, horticulture

maintenance, keeping the project site /project facilities clean, tidy and orderly condition free of litters and debris, preventing unauthorized entry and exit including any encroachment etc.

Preventive Maintenance: Preventive maintenance shall include the activities related to each element and the system of the Project Highway to ensure that during the Concession Period and at its end is in sound, durable and functional condition. In other words, preventive maintenance are a planned strategy of cost-effective treatments to an existing roadway system and its appurtenances that preserves the system, retards future deterioration, and maintains or improves the functional condition of the system (without significantly increasing the structural capacity).

Periodic Maintenance: These are maintenance needs required on periodic annual basis to improve the riding quality and strength of the project assets.

Factor influencing periodic maintenance: performance parameter for flexible pavement in terms of roughness as given in Schedule F is 2200 mm/km as desirable and 2400 mm/km as acceptable. Clause 3.1 (III) of Schedule B states that periodic maintenance shall be carried out in full length of the project stretch including main carriageway, service/slip road and at facilities etc. either in every six years or in the year in which roughness index exceeds the limit given in schedule F, whichever comes earlier. Further clarity on this requirement is given as Note at the same clause which states "*A Roughness of <2200 mm shall be maintained by the existing EPC Contractor prior to handing over to InvIT Concessionaire. After handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2200mm, however after a functional overlay (Roughness exceeding 2200 mm) or structural overlay (FWD Test) is provided in any particular stretch length then that particular length shall be maintained at a roughness level mentioned in Schedule F after that overlay. For clarification, InVIT concessionaire shall maintain a roughness level (mentioned in Schedule F) in a stretch length where overlay (Structural or Functional) has been provided by InVIT concessionaire*."

7.3 O&M Cost Estimation

7.3.1 Routine maintenance

This is a day-to-day work that is necessary to preserve and keep a pavement as close to as constructed condition and to ensure smooth and functional conditions all the times. The item in this subhead includes maintenance of earthen shoulder, restoration of rain cuts, maintenance of slope protection works, cleaning of road side drains, cleaning of carriageway, maintenance of structures, repairs of road surface such as filling of potholes, repairing of cracks and patch works, carrying out of Road roughness survey, FWD test etc.

7.3.2 Repair/Maintenance

Repair/maintenance covers the minor repair which are required on day-to-day maintenance to maintain the assets in good condition. This is sub-divided in two categories as below:

a) **Preventive Maintenance:** The preventive maintenance is required to be done for further improve or extend the functional life of pavement surface whist in fair to good condition. Any of the treatment under preventive maintenance does not significantly increasing the

structural capacity of pavement rather it decreases rate of surface deterioration, which may result in saving of pavement from leading to poor condition where major maintenance could be inevitable.

Future preventive maintenance on the project road depends largely on routine inspection of the pavement with careful observation of specific distress and to take a decision at that time and suitable type of preventive maintenance treatment and its timing. All the narrow and wide surface cracks must be arrested immediately after identification with recommend preventive type maintenance measure for the in-service flexible pavement.

Based on the condition and distress identification survey as explained above paragraph, preventive maintenance treatments must be taken up immediately to reduce rate of further damage to the surface and for enhance the pavement performance to the condition similar to non-distressed surface condition.

b) **Road Property Maintenance:** The item in this subhead covers the plantation/ maintenance of shrubs, turfing, replacement/ repair of damaged railing, crash barrier, kerbs, road delineators, signage, Road marking and painting etc.

7.3.3 Toll Management System

Cost estimate for Toll Management System was worked out by TC. Same was presented and deliberated during the investor meet, after that it was decided to adopt the rationalised cost finalized by IM.

7.3.4 Corridor Management

Incident Management: The items in this subhead include minimize the effects of incident and restore normal capacity and safety levels to all affected road facilities as efficiently as possible and. repair/ replacement of removing the dead animals & broken-down vehicles etc.

7.4 Major Maintenance

The pavement deteriorates with time caused by traffic movement and weather conditions. The rate of deterioration depends on the original design and pavement type, type of maintenance being done/undertaken and time of application. Therefore, timely and appropriate maintenance using suitable materials is essential to increase the pavement service life to a greater extent. Any delay in maintenance of the pavement substantially increases severity of the distresses, which results into poor condition of pavement and thereby increase in maintenance costs to bring the surface to a good condition.

Schedule F of the Concession Agreement set out the maintenance requirements in the Project. The performance parameters are indicated in schedule F descripting the nature of defect/deficiency along with time limits for repair/rectification for roads and bridges.

Schedule F, Pavement Roughness Value (Functional Overlay): The Periodic maintenance is required to be provided as and when performance parameters in terms of cracking, roughness, surface defects, joint defects etc. exceeded the limits as indicated in the schedule F anytime during the service life of the pavement. As per the provisions of Concession agreement, Surface roughness value is the major governing factor for selection of an appropriate pavement

maintenance treatment required to bring the roughness value below the prescribed limit of 2400mm/km.

7.4.1.1 Review of Pavement Design

The Pavement design for Main Carriageway is rigid type and designed as per IRC:58-2015. Even rigid pavement is adopted for the service roads as well.

Following composition and thickness has been adopted.

Main Carriageway (MCW): Rigid Pavement
PQC: 320mm, DLC: 150mm and GSB: 150mm.
Service Roads (SR): Rigid Pavement
PQC: 260mm, DLC: 150mm and GSB: 150mm.

7.4.1.2 Review of Major Maintenance History

The 4/6 lane construction of project section from Raipur – Simga has been completed in the year 2021. As per the site visit made by the consultant and review of available documents, there is no periodic maintenance works were performed in the project so far after PCOD/COD. However, pavement repairs consist of replacement of PQC slab in full depth, crack sealing, bituminous overlays on the heavily cracked sections has been done. As noted from the site that significant number of panels are replaced to being the cracked surface to a serviceable condition.

7.4.1.3 Immediate Pavement Rehabilitation Measures

After the distress identification using the condition data collected from the NSV survey, the following immediate rehabilitation measures has been suggested to improve the rigid pavement condition to the desired level of serviceability for the present and projected traffic patterns in the project highway.

Distress Rating	Suggested Rehabilitation Measure
0	Nil
1	Crack sealing with epoxy
2	Partial depth repair/Panel replacement
3	Partial depth repair/Panel replacement
4	Panel Replacement
5	Panel Replacement

Further, the suggested repair and rehabilitation measures for each of the distress and its severity as identified for rigid pavement is provided in table below in compliance with requirements of IRC SP 83-2018.

S. No	Distress type	Distress Rating	Treatment
1	Longitudinal Cracks	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Partial depth repair
		4	Partial depth repair
		5	Panel replacement
2	Transverse cracks	0	No action, but need to be monitored

S. No	Distress type	Distress Rating	Treatment
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Panel Replacement
		4	Panel Replacement
		5	Panel Replacement
3	Multiple Cracks	0	No action, but need to be monitored
		1	Seal with epoxy
		2	Seal with epoxy
		3	Full depth repair
		4	
		5	
4	Corner Breaks	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Full depth repair
		4	Full depth repair
		5	Full depth repair with subbase
5	Joint Damage/Spalling	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Repair up to 50mm thickness
		4	Repair up to 50mm thickness
		5	Repair up to 100mm thickness
6	Joint Sealant Defects	0	No action, but need to be monitored
		1	Cleaning
		2	Cleaning
		3	Sealant replacement
		4	Sealant replacement
		5	Sealant replacement
7	Joint Separation	0	No action, but need to be monitored

7.4.1.4 Immediate and Future Major Maintenance Requirement

Major maintenance is required in order to comply with provisions of concession agreement and to maintain performance levels as defined in schedule F throughout the operation and maintenance period.

As per schedule B, the TOT concessionaire shall carryout the periodic maintenance in full length of the project stretch including main carriageway, service roads and facilities in every 6th year or the year in which roughness index exceeds the limits given in schedule F, whichever comes earlier.

Therefore, considering the initial pavement design, pavement distresses, elastic modulus and flexural strength of PQC layer and load transfer efficiency of joints, and in compliance to the provisions of schedule B, the following cycle of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

The project section from km 0+000 to 14+800 trigging for capacity augmentation from four to six laning during FY32 and FY33 with a DLP period of 10 years being the rigid pavement. The 6-lane stretch is available for full O&M by InvIT from FY 44 to till end of the concession. The cost towards the augmentation works to be borne by the Authority.

Table 7-1: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)	
	Periodic Maintenance	ATMS & TMS Replacement
Raipur – Simga	**FY 31 and FY44** **MCW**:2% Panel replacement & 100 % Joint sealant replacement and retexturing **SR:** 100 % Joint sealant replacement and retexturing **Structure:** Replacement of wearing coat & painting **FY-37** **MCW:**2% Panel replacement & 100 % Joint sealant replacement **SR:** 100 % Joint sealant replacement **Structure:** Replacement of wearing coat, bearing, expansion joint & painting	**FY33-** 40% ATMS 50% TMS **FY40-** 60% ATMS 100% TMS

7.4.1.5 Cost of Operation & Maintenance

Cost of Operation & Maintenance per annum are presented below.

Table 7-2: Cost of Operation & Maintenance (per annum)

Description	Cost in Crore INR
	Raipur - Simga
Tolling & TMS Operations (Varies) Min-Max	5.40-6.70
ATMS Operation	1.71-2.12
Incident Management	4.55-4.58
Admin Expenses (Varies) Min-Max	3.23-4.14
Insurance (Varies) Min-Max	1.51-1.69
Power cost excl. Toll Plaza	5.40-6.0
RAMS, BMS & Survey	0.96-1.58

7.4.2 Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of (Initial Improvement, MMR and O&M are given below:

Table 7-3 : Operation & Maintenance Cost (Initial Improvement, MMR and O&M) for Raipur-Simga

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

Section 8: Conclusion

The project highway has been constructed as per the provisions of the EPC Agreement for 4/6 laning by adopting rigid pavement for both main carriageway and service roads. The traffic volume on the project is considerably high due to presence of large-scale industries within the project influence area. The project requires capacity augmentation when the average daily traffic beyond the Target traffic for any of the homogenous section. As per the latest traffic surveys, analysis and projections, the project section from km 0+000 to 14+800 trigging for capacity augmentation from four to six laning during FY 32 and FY33 with a DLP period of 10 years being the rigid pavement. The 6-lane stretch is available for full O&M by InvIT from FY 44 to till end of the concession. The cost towards the augmentation works to be borne by the Authority. The performance of the pavement is found to be satisfactory under the current traffic loading conditions. However, the longitudinal intersecting cracks generated mostly in the mid slabs to outer side has been observed. The riding quality of the surface appears to be good for the comfort of the road users though the pavement has experiencing surface defects such as cracks of low to high severity. The reasons for adequate performance of the pavement are due to strong and uniform subgrade support as required for transfer of the wheel loads to the foundation. As per the site visit, the process of primary and secondary consolidation of the pavement layers has already been achieved and therefore, the progression of cracks after the consolidation stage is not very significant.

The other significant defect is widening of the longitudinal joints. This widening is conspicuously noticed on high embankments. It does not appear to be critically influenced by the absence or misalignment of tie bars. To arrest this widening, stitching of this joint is being practised with 2-meter-long steel bars. Bars at the end to resemble a staple pin are inserted spanning across the joint in grooves cut for this purpose. Since the widening of joints was noticed in locations where the slab was poorly supported, it is not expected that all joints would widen. The needs to be monitored for taking necessary measures when the joint width will become 30mm, cross-stitching of tie bars shall be done. Further, timely repair and rehabilitation for the identified distress during the concession period is required to maintain the structural adequacy of the PQC layer and improve the overall serviceability of the pavement structure.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report, it is concluded that immediate major repairs are required for few structures in terms of repairs of replacement of bearings, replacement of expansion joints and rectification of settled approach slabs. Authority has clarified that these shall be rectified by them before handing over. It is advised that a thorough check of asset condition should be done by the InvIT Concessionaire before taking over to ensure that all the defects are rectified.

The assessment of estimated cost of such improvement works repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

FINAL TECHNICAL DUE-DILIGENCE REPORT

Technical Consultant Services for National Highways Infra Trust for Simga to Bilaspur Section of NH-130 (Old NH-200) & NH-49 from Km.48/580 to Km.126/525 in the State of Chhattisgarh

Section 1: Executive Summary

1.1 Introduction

1.1.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 14th October 2024 by Egis India and the services commenced immediately thereafter.

The project stretches detail as per LoA are listed below.

Table 1-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	Lane	Length (km)
1	Raipur – Simga	Tarpongi	4/6 Lane	48.580
2	**Simga - Saragaon - Bilaspur**	**Bhojpuri**	**4 Lane**	**57.400**
3	**Bilaspur Bypass**	**Mudipar**	**4 Lane**	**20.545**
Total				126.525

This Report pertains to Simga - Saragaon – Bilaspur and Bilaspur Bypass Sections.

1.1.2 Objectives

The main objective of the present assignment is to

1. review project documents and understanding schedule B and schedule F requirements for improvement works for the assessment of Capex and Opex during the concession period.
2. conduct field investigations to assess the existing asset condition and future deterioration.
3. validate executed works with respect to schedule A and assessment of improvement Works
4. review quality of construction based on available data, design and drawings.
5. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
6. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

1.2 Site Visit

The Technical Consultant visited site from 20th October 2024 to 14th November 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road.

1.2.1 Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Ground Chainage* (Km)			Chainage as per Sch A (4/6 laning)		Lane Config.	Length (km)	Details for 4/6-lane widening		
			From	To	NH	From	To			Contractor	Implementation Mode	Status
1	Simga – Saragaon – Bilaspur	Bhojpuri (49+970) 16 lanes	01+030	43+466	NH-130	48+580	91+026	4-Lane	42.436	L&T	EPC	1.PCOD - 28-01-2020 2.Maintenance period: 4 yrs from PCOD 3.Completion Expected: 31-01-2025 (Data Lake)
			43+466	58+430		91+026	105+980		14.964	Dilip Buildcon	EPC	1.Completion Certificate issued on 01-11-2018 2.Maintenance Period of 4 years after completion is over and Contractor is demobilised from the site. 3.As per AE, PBG of the Contractor is not yet released by NHAI.
2	Bilaspur Bypass	Mudipar (4+800) 16 lanes	00+525	21+070	NH-49	105+980	126+525		20.545			

Asset-wise details of Project assets are given below:

Table 1-2: Detail of Assets

S. No.	Description			Simga - Saragaon - Bilaspur Section		Bilaspur Bypass Section	
				Schedule-A	At Site	Schedule-A	At Site
1	Total Project Length (km)			57.400	57.400	20.545	20.545

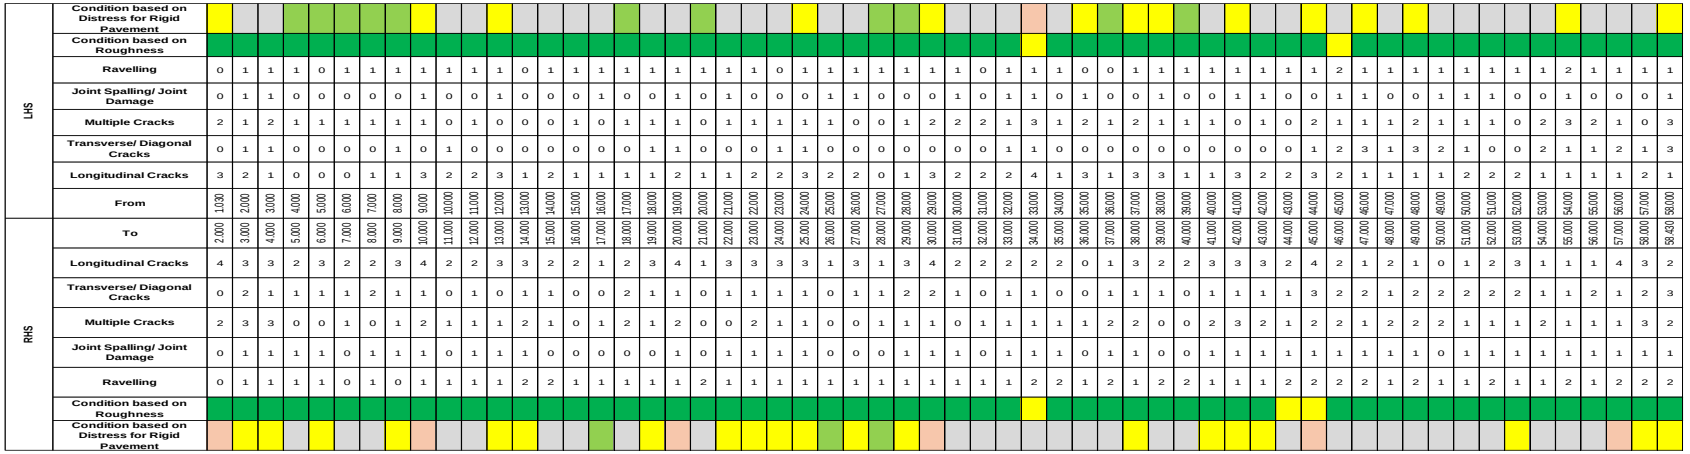
1.3 Surveys and Investigations

1.3.1 Network Survey Vehicle (NSV)

The Network Survey Vehicle, which is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools, is used for automatic data collection pertains to pavement condition and road inventory data. The NSV survey has been carried out along the project corridor from 20/10/2024 to 25/10/2024 for collection of field data pertains to pavement condition and road inventory. Summary of findings of NSV survey is given in preceding sections.

1.3.1.1 Pavement Type

Entire main carriageway and service roads along the project road are consist of rigid pavement.



[1] LHS service road along the ramp entering Bilaspur bypass from Raipur side, i.e. from Ch 106+200 to 106+760, is abundant, after the improvement of Bilaspur junction. This length is not considered in our assessment.

[2] There are few passenger shelters constructed by the local civic body. Consultant has considered all the shelters found adjacent to the project road.

1.3.1.2 Pavement Conditions

Km-wise pavement condition is shown below as strip chart:

Simga – Bilaspur

Bilaspur Bypass

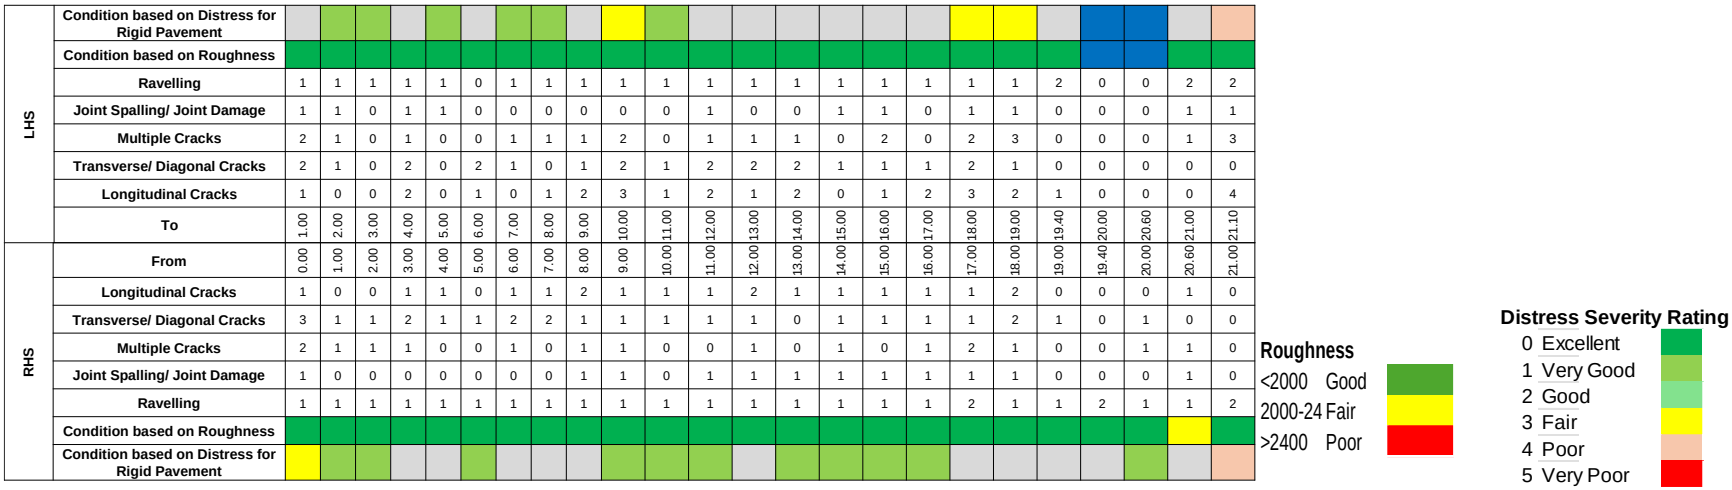


Figure 1-1: Pavement Condition

1.3.1.3 Pavement Roughness

Roughness value measured for each lane of main carriageway using NSV. The summary of direction-wise roughness distribution for each lane in term of percentage length are presented below.

Table 1-3: Simga - Bilaspur Section: Summary of Pavement Roughness

Condition	BI (mm/km)	LHS				RHS			
		Inner		Outer		Inner		Outer	
		Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)
Good	<2000	55.400	96.516	54.400	94.774	51.400	89.547	52.970	92.282
Fair	2000-2400	2.000	3.484	3.000	5.226	5.000	8.711	4.430	7.718
Poor	>2400	0.000	0.000	0.000	0.000	1.000	1.742	0.000	0.000
Length (km)		57.400	100.000	57.400	100.000	57.400	100.000	57.400	100.000

Table 1-4: Bilaspur Bypass Section: Summary of Pavement Roughness

Condition	BI (mm/km)	LHS				RHS			
		Inner		Outer		Inner		Outer	
		Length (km)*	Length (%)	Length (km)*	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)
Good	<2000	19.900	100.000	19.900	100.000	21.100	100.000	20.700	98.104
Fair	2000-2400	0.000	0.000	0.000	0.000	0.000	0.000	0.400	1.896
Poor	>2400	0.000	0.000	0.000	0.000	0.000	0.000	0.000	0.000
Length (km)		19.900	100.000	19.900	100.000	21.100	100.000	21.100	100.000

** 1.2 km on LHS is under construction stretch of Bilaspur – Urga section for Raipur – Dhanbad Economic Corridor*

1.3.2 Test Pit Investigations

- For Simga – Bilaspur section, the designed PQC thickness is 310mm as per the pavement design report. However, thickness available at site is 300mm throughout except at the super elevation locations where thickness is found to be 330mm. The constructed thickness is a departure from design and even not within the construction tolerance limits of +-6mm. Whereas DLC and GSB found to be adequate considering design value of 150mm for DLC and 150mm for GSB and its tolerance limits.

- For Bilaspur Bypass section, the designed PQC thickness is 310mm as per the pavement design report. However, thickness available at site is 300mm throughout the length. The constructed thickness is a departure from design and even not within the construction tolerance limits of +-6mm. Whereas DLC and GSB found to be adequate considering design value of 150mm for DLC and 150mm for GSB and its tolerance limits.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in **Annexure 4.7.** The observations from test results are given below for each of the section:

- Simga Bilaspur; As per the pavement design report of 4-lane, the adopted design effective CBR for subgrade is 5.8%. Most of the test results for CBR are in compliance with design values except few locations. But noted that there is no such subgrade failures related distresses found at the site however it is observed that earthen shoulder throughout the project has got deteriorated.

- Bilaspur Bypass; As per the pavement design report of 4-lane, the adopted design effective CBR for subgrade is 7%. The test results for CBR are non-compliance with design values except one location. But noted that, there is no such subgrade failures related distresses found at the site however it is observed that earthen shoulder throughout the project has got deteriorated.

1.3.3 Axle Load Survey

Axle load survey has been conducted in compliance with IRC 37 2018 for 24 hours in both directions at the existing toll plaza locations. Obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 1-5: Vehicle Damage Factors (VDF)

S. No	Toll plaza	Bhojpuri		Mudhipar	
	Vehicle Type	LHS	RHS	LHS	RHS
1	Bus	0.95	1.13	-	-
2	LCV	1.02	0.70	0.76	0.32
3	2-Axle	2.32	1.22	1.95	1.11
4	3-Axle	2.47	5.03	3.35	7.78
5	MAV	4.20	16.57	3.45	14.05

** LHS: Raipur to Bilaspur, RHS: Bilaspur to Raipur*

The higher VDF on RHS side is due to movement of heavily loaded trucks carrying Coal, steel, Construction materials etc whereas, Empty Vehicles of significant proportion in LHS side. Further,

7-day axle load survey has been conducted to validate the above inconstancy and found that VDF values as obtained from these 7-day survey is less than 24 hours' survey and hence adopted the above values in the present due diligence study

1.3.4 Falling Weight Deflectometer

The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table below.

Table 1-6:Summary of Flexural Strength and Elastic Modulus

Pavement layer	Range	Percentage of Project Road	
		LHS	RHS
Simga Bilaspur Section			
Elastic Modulus of PQC Layer (Mpa)	> 30000	6.96%	6.96%
	30000 - 10000	93.04%	93.04%
Flexural Strength of PQC Layer (Mpa)	> 4.5	1.74%	5.22%
	4.5 - 3.0	91.31%	89.57%
	<3.0	6.96%	5.22%
Bilaspur Bypass Section			
Elastic Modulus of PQC Layer (Mpa)	> 30000	9.73%	14.60%
	30000 - 10000	90.27%	85.40%
Flexural Strength of PQC Layer (Mpa)	> 4.5	0.00%	0.00%
	4.5 - 3.0	100.00%	95.13%
	<3.0	0.00%	4.87%

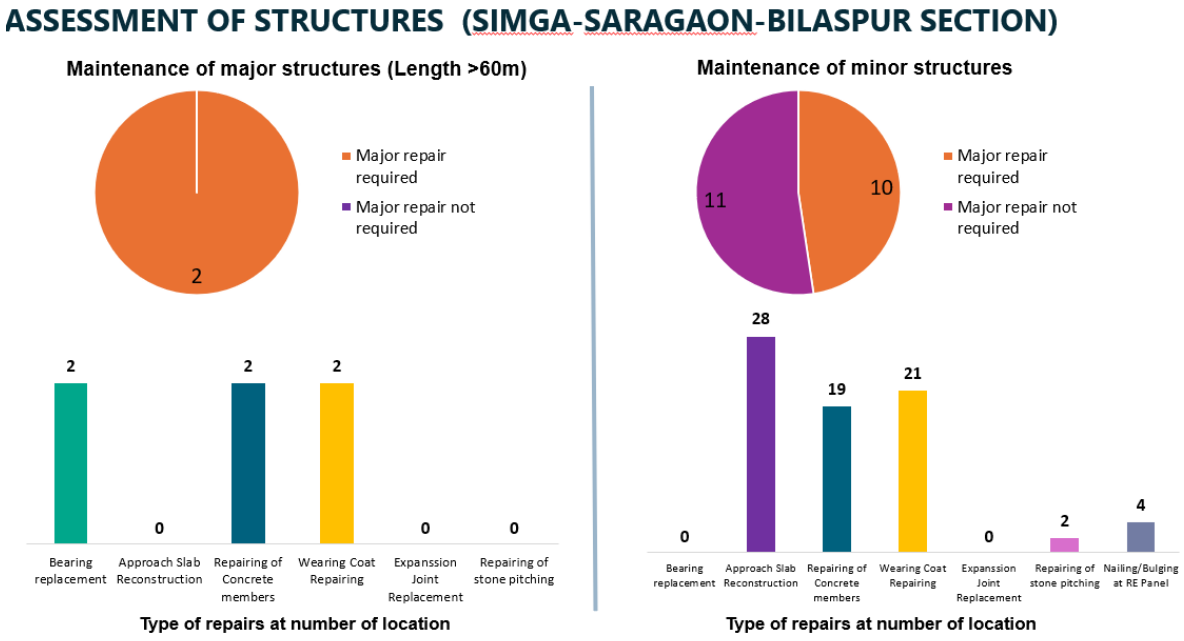

Table 1-7: Summary of Joint Load Transfer Efficiency

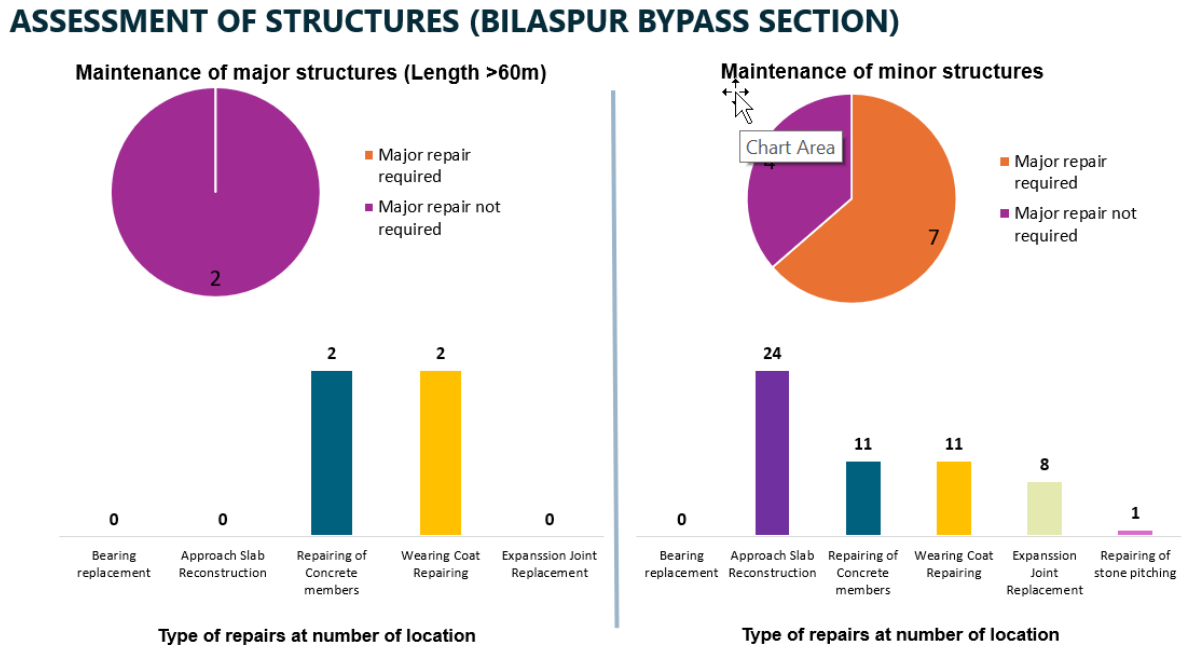

Direction	Load Transfer Efficiency (LTE)					
	Transverse Joint			Longitudinal Joint		
	> 90%	90%-50%	< 50%	> 90%	90%-40%	< 40%
Simga Bilaspur Section						
LHS	68.70%	31.30%	0.00%	62.48%	37.52%	0.00%
RHS	52.16%	47.84%	0.00%	65.58%	34.72%	0.00%
Bilaspur Bypass Section						
LHS	51.33%	48.67%	0.00%	31.52%	68.48%	0.00%
RHS	70.80%	29.20%	0.00%	73.01%	26.99%	0.00%

- Simga Bilaspur; The flexural strength of concrete high for more than 90% of the test locations and even the Load transfer efficiency is high at all the joints tested and hence the joints are in good condition.
- Bilaspur Bypass; The flexural strength of concrete high for more than 95% of the test locations and even the Load transfer efficiency is high at all the joints tested and hence the joints are in good condition.

1.3.5 Structure Inventory and Condition Survey

There are deficiencies noted in the structures and relevant repair-rehabilitation measures are suggested. Requirement of immediate repairs for major structures (length > 60m) and minor structures are presented below.

1.4 Key Technical Issues

1.4.1 Pavement and Road Condition

Longitudinal cracks with low-high severity are there along the project road. RHS carriageway is more distressed compared to LHS due to excessive loading. Some of the cracks are filled with epoxy mortar and its condition is not satisfactory. It has been observed that repair and rehabilitation works in terms of crack sealing, panel replacement etc. has been done at many locations. Joint

separation at the longitudinal joints was found at many of the locations of super elevation, high embankment where joints are widened by more than 30mm.

1.4.2 Reinforced Earth Wall

Bulging of RE wall panels observed at the approaches of structures between Saragon and Bilaspur. Also noted that nailing has been done at these bulged locations of VUP at Ch.-44+280, VUP at Ch.- 48+850, VUP at Ch.-55+050 of Sigma-Saragaon-Bilaspur section and Flyover at 0+750 of Bilaspur Bypass. Though no details available regarding its assessment, rehabilitation design adopted to avoid such bulging's, Consultant found nailing done in considerable number of panels. Approximate assessment in this regard is presented below:

Table 1-8: Nailing Details in RE wall Panel

Type of Structure	Chainage	Nos of Panel
Simga-Saragaon-Bilaspur section		
VUP	44+280	03
VUP	48+850	83
VUP	55+050	52
Bilaspur Bypass section		
Flyover	0+750	02

1.1 Structures

Defects at bearings are also found as detailed below:

- MJBR@20+875 (Stretch-2): - Bearing plate is damaged at one Location. Sliding's moment observed in 1 bearing
- MJBR@47+966 (Stretch-2): - cracks observed in 1 nr of bearings.

1.2 Retaining Walls

- Retaining Wall is damaged on RHS at PUP Ch.44+280 in Saragaon – Bilaspur section
- Cracks are observed at Retaining wall and Toe Wall at few structures and needs immediate repair/rehabilitation.

1.5 Capital Expenditure (CapEx) Requirement

1.5.1 Improvement works as per schedule B

Schedule B specifies the requirements of improvement for the concessionaire to be done after the appointment date.

Improvement works Scope specified for each stretch is tabulated below:

Table 1-9: Schedule B Requirements during O&M Handover

S. No.	Description	Unit	Simga Bilaspur	Bilaspur Bypass
1	R&R of earthen shoulder covered with granular material.	cum	26,208	11,223
2	Crack sealing	Km	5.91	3.65
3	Panel replacement	Nos	485	368
4	Approach slabs reconstructed.	Nos	28	24
5	Bearing replacement	Nos	2	-
6	Wearing coat replacement	Sqm	9541	10569
7	Strip seal expansion Joint	Lm	-	100
8	Toll Plaza restoration	Nos	1	1
9	Truck lay bye	Nos	3	-
10	Bus lay bye and shelter	Nos	27	-
11	Landscaping and median plantation	Km	11	3.3
12	Transverse bar marking:	Nos	75	14
13	Highway Lighting	Nos	120	34
14	ATMS	Km	57.4	22
15	Solar Blinkers	Nos	18	-
16	W beam crash barrier	Lm	3.29	1.87
17	Pedestrian Guard Rail	Lm	460	-
18	RCC crash barrier	Lm	290	920
19	Rainwater harvesting	Nos	116	44

Time to complete above construction works 3/12 months from the Appointed Date.

1.5.2 Immediate Maintenance Requirements

With reference to the clarification of pre-bid queries received from the Authority, prior to the O&M Hand-over to InvIT concessionaire, Authority will undertake relevant defect rectifications through its EPC contractors before handing over the assets in roadworthy condition to the InvIT concessionaire.

However, toll Plaza renovation cost, revalidation of survey during hand over of O&M and TMS replacement cost has been considered under this head.

1.6 O&M Cost Estimation

1.6.1 Recommended MM Cycles for Pavement

Considering the initial pavement design period and crust, existing flexural strength of PQC and load transfer capacities of existing joints, and in compliance to the provisions of schedule B, the following cycles of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

Table 1-10: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)	
	Periodic Maintenance	ATMS & TMS Replacement
Simga – Saragaon - Bilaspur	**FY 31 and FY44** **MCW**:2% Panel replacement & 100 % Joint sealant replacement and retexturing **SR:** 100 % Joint sealant replacement and retexturing **Structure:** Replacement of wearing coat & painting	**FY33-** 50% TMS **FY41-** 100% TMS
Bilaspur Bypass	**FY 31 and FY43** **MCW**:2% Panel replacement & 100 % Joint sealant replacement and retexturing **SR:** 100 % Joint sealant replacement and retexturing **Structure:** Replacement of wearing coat & painting **FY-37** **MCW:**2% Panel replacement & 100 % Joint sealant replacement **SR:** 100 % Joint sealant replacement **Structure:** Replacement of wearing coat, bearing, expansion joint & painting	**FY33-** 40% ATMS 50% TMS **FY40-** 60% ATMS 100% TMS

1.6.2 Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of Initial Improvement, MMR and O&M are given below.

Table 1-11 : Operation & Maintenance Cost (Initial Improvement, MMR and O&M) for Simga – Saragaon – Bilaspur bypass

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW,SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
1	2025-2026	89.32	-	-	-	-	5.03	4.37	-	9.92	1.25	10.65	1.91	2.17	3.81
2	2026-2027	-	-	-	-	-	5.03	4.37	2.95	9.92	1.25	10.65	1.91	1.63	4.47

Total		**89.32**	**240.92**	**11.59**	**5.53**	**15.02**	**61.06**	**51.22**	**28.34**	**138.31**	**13.93**	**183.45**	**45.18**	**17.81**	**94.60**

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

1.7 Conclusion

The project highway has been constructed as per the provisions of the EPC Agreement for 4-laning by adopting rigid pavement for both main carriageway and service roads. The traffic volume on the project is considerably high due to presence of large-scale industries within the project influence area. The project requires capacity augmentation when the average daily traffic beyond the Target traffic for any of the homogenous section. As per the latest traffic surveys, analysis and projections, the project section from km 48+580 to 105+980 trigging for capacity augmentation from four to six laning during FY 32 and FY33 with a DLP period of 10 years being the rigid pavement. The 6-lane stretch is available for full O&M by InvIT from FY 44 to till end of the concession. The cost towards the augmentation works to be borne by the Authority. The performance of the pavement is found to be satisfactory under the current traffic loading conditions. However, the longitudinal intersecting cracks generated mostly in the mid slabs to outer side has been observed. The riding quality of the surface appears to be good for the comfort of the road users though the pavement has experiencing surface defects such as cracks of low to high severity. The reasons for adequate performance of the pavement is due to strong and uniform subgrade support as required for transfer of the wheel loads to the foundation. As per the site visit, the process of primary and secondary consolidation of the pavement layers has already been achieved and therefore, the progression of cracks after the consolidation stage is not very significant.

The other significant defect is widening of the longitudinal joints. This widening is conspicuously noticed on high embankments. It does not appear to be critically influenced by the absence or misalignment of tie bars. To arrest this widening, stitching of this joint is being practised with 2-meter-long steel bars. Bars at the end to resemble a staple pin are inserted spanning across the joint in grooves cut for this purpose. Since the widening of joints was noticed in locations where the slab was poorly supported, it is not expected that all joints would widen. This needs to be monitored for taking necessary measures when the joint width will become 30mm, cross-stitching of tie bars shall be done. Further, timely repair and rehabilitation for the identified distress during the concession period is required to maintain the structural adequacy of the PQC layer and improve the overall serviceability of the pavement structure.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report it is concluded that immediate major repairs are required in few structures in terms of repairs of replacement of bearings, replacement of expansion joints and rectification of settled approach slabs. Significant bulging is noticed in RE wall panels, mainly at the structure approaches from the ground chainage km 43+466 (CA chainage km 91+026) onwards. Authority has clarified that these shall be rectified by them before handing over. It is advised that a thorough check of asset condition should be done by the InvIT Concessionaire before taking over to ensure that all the defects are rectified.

The assessment of estimated cost of such improvement works repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

.

Section 2: Introduction

2.1 Background

NHAI has set up an Infrastructure Investment Trust namely National Highways Infra Trust ("InvIT") and is acting as its Sponsor to the said InvIT. National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT.

NHIIMPL appointed M/s Egis India Consulting Engineers Private Limited, as Technical Consultant to conduct the due diligence on the proposed Assets. The Letter of Empanelment (LOE) was received on 3rd November 2022 and Letter of Award (LoA) for the subject Project was received on 14th October 2024 by Egis India and the services commenced immediately thereafter.

Project road is a continuous stretch which is divided in three sections based on the tolling length of each of the three toll plazas in each section. The project stretches detail are listed below.

Table 2-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	Lane	Length (km)
1	Raipur – Simga	Tarpongi	4/6 Lane	48.580
2	**Simga - Saragaon - Bilaspur**	**Bhojpuri**	**4 Lane**	**57.400**
3	**Bilaspur Bypass**	**Mudipar**	**4 Lane**	**20.545**
Total				126.525

This Report pertains to Simga - Saragaon – Bilaspur and Bilaspur Bypass Sections.

2.2 Objectives

The main objective of the present assignment is to

review project documents and understanding schedule B requirements for improvement works for the assessment of Capex and Opex during the concession period.

1. conduct field investigations to assess the existing asset condition and future deterioration.
2. validate executed works with respect to schedule A and assessment of improvement works
3. review quality of construction based on available data, design and drawings.
4. undertake designs for rehabilitation requirements of different assets based on field investigation data and available documents.
5. assess operation and maintenance cost including major maintenance expected to be incurred during the concession period.

2.3 Technical Consultant Team

The Technical Consultant commenced its services from 15th October 2024 and the team comprising of Highway, Pavement & Structure Engineers and Experts have conducted site visit from 20th October 2024 to 14th November 2024 to appreciate the project corridor characteristics. This report

highlights the findings from visual assessment, available documents shared with the consultant, discussion with Authority Engineer officials involved with the maintenance and operation of project road at site and other local enquiries. Analysis of data as obtained from various survey and investigations conducted at site are present in this report.

Date-wise various field activities at site are shown below in bar chart form in **Figure 2.1.**

2.4 Disclaimer

The information and documents received from the Client are being reviewed by the Consultant and have been used for preparing this report. Due care has been taken while reproduction of the information where required to avoid typographical or other errors.

2.5 Structure of the Report

The report has been structured into nine sections as follows:

Section 1: Executive Summary
Section 2: Introduction
Section 3: Inventory and Condition Assessment
Section 4: Surveys and Investigations
Section 5: Review of Documents
Section 6: Capital Expenditure (CapEx) Requirement
Section 7: Operation & Maintenance
Section 8: Conclusions

Section 3: Inventory and Condition Assessment

3.1 General

The Technical Consultant visited site from 20th October 2024 to 14th November 2024. The important aspects of the project road were noted in the detailed site reconnaissance along with various field investigations. These included general description about the project road, site features, structures, junctions, pavement characteristics, road safety. Field investigation for NSV, FWD test, axle load survey, trail pits, MBIU and drone videography survey were also conducted by Technical Consultant to assess the present condition of the project road. This chapter elaborates various findings of these surveys and studies conducted by the Technical Consultant team in different sections.

3.2 Project Corridor

Project road is a continuous stretch which is divided in three sections based on the tolling length of each of the three toll plazas in each section. The project stretches detail are listed below:

Table 3-1: Detail of Project Stretches

Sr. No.	Stretches	Toll Plaza	Lane	Length (km)
1	Raipur – Simga	Tarpongi	4/6 Lane	48.580
2	**Simga - Saragaon - Bilaspur**	**Bhojpuri**	**4 Lane**	**57.400**
3	**Bilaspur Bypass**	**Mudipar**	**4 Lane**	**20.545**
Total				126.525

This Report pertains to Simga - Saragaon – Bilaspur and Bilaspur Bypass Sections.

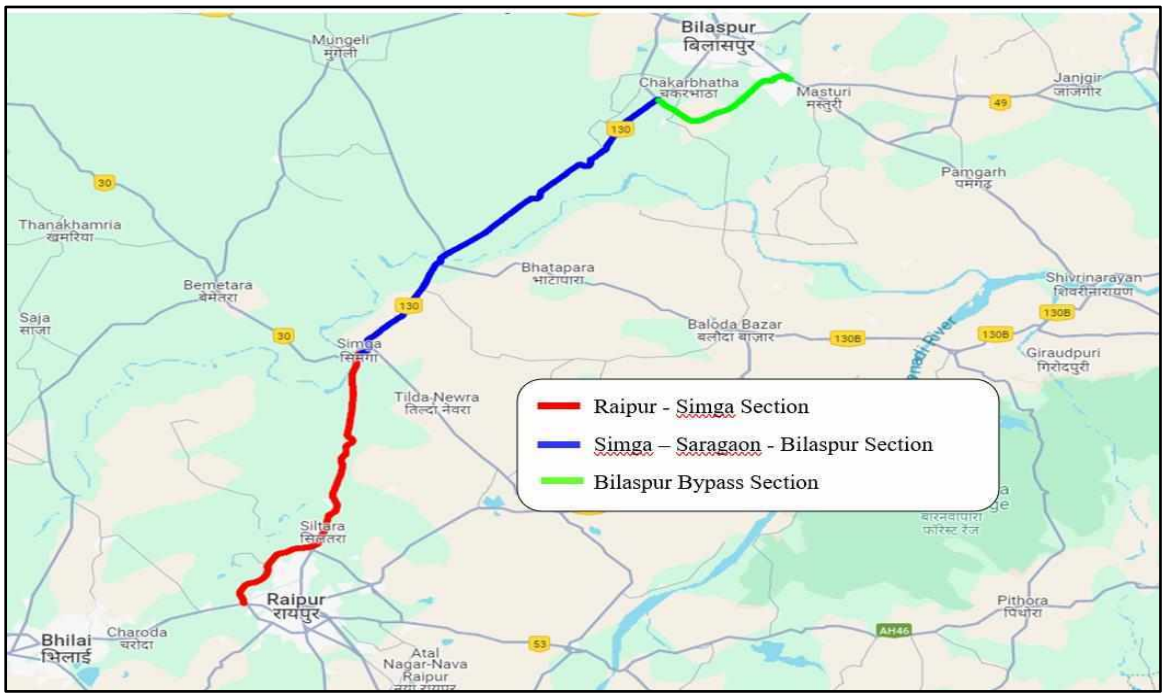

Figure 3-1: Project Location Map

3.3 Project Brief

3.3.1 Salient Features

Table 3-2: Salient Features

Sr. No.	Name of Stretches	Toll Plaza	Ground Chainage* (Km)			Chainage as per Sch A (4/6 laning)		Lane Config.	Length (km)	Details for 4/6-lane widening		
			From	To	NH	From	To			Contractor	Implementation Mode	Status
1	Simga – Saragaon – Bilaspur	Bhojpuri (49+970) 16 lanes	01+030	43+466	NH-130	48+580	91+026	4-Lane	42.436	L&T	EPC	1.PCOD - 28-01-2020 2.Maintenance period: 4 yrs from PCOD 3.Completion Expected: 31-01-2025 (Data Lake)
			43+466	58+430		91+026	105+980		14.964	Dilip Buildcon	EPC	1.Completion Certificate issued on 01-11-2018 2.Maintenance Period of 4 years after completion is over and Contractor is demobilised from the site. 3.As per AE, PBG of the Contractor is not yet released by NHAI.
2	Bilaspur Bypass	Mudipar (4+800) 16 lanes	00+525	21+070	NH-49	105+980	126+525		20.545			

During the inventory survey, Consultant found that Km-stones at site are corresponding to the new NH numbers. All the data in this report is presented in co-relation with ground chainage at the site. Relation between ground chiange and the chainage given in Sch A are also presented in above table for reference.

Details of Assets:

Table below provides the quantum of the assets and compare the same with the Schedule A stipulations:

Table 3-3: Asset Details and Comparison with Sch A

S. No.	Description			Simga - Saragaon - Bilaspur Section		Bilaspur Bypass Section	
				Schedule-A	At Site	Schedule-A	At Site
1	Total Project Length (km)			57.400	57.400	20.545	20.545
2	Service Roads/ Slip Roads (km)			28.940	28.940	2.990	2.430[3]
3	Pavement (km)	Flexible	LHS				
			RHS				
		Rigid	LHS	57.400	57.400	20.545	20.545

		Box Culvert		26	26	11	11

3.4 Road Inventory and Condition Survey

3.4.1 Road Inventory

The Road Inventory is conducted to assess and list out the existing features of the project corridor and to validate that project road is conforming to the requirements of CA. It covers all the existing physical features such as terrain, land use, carriageway surfacing type, shoulder width, junctions, water bodies, roadside arboriculture, general drainage conditions, etc. It was carried out in accordance with the guidelines given in IRC: SP 19-2001, generally by visual means, and supplemented by simple tape measurement.

The road inventory data collected for the project highway is presented in the **Annexure 3.1.**

[3] LHS service road along the ramp entering Bilaspur bypass from Raipur side, i.e. from Ch 106+200 to 106+760, is abundant, after the improvement of Bilaspur junction. This length is not considered in our assessment.

[4] There are few passenger shelters constructed by the local civic body. Consultant has considered all the shelters found adjacent to the project road.

3.4.2 Terrain

The project highway falls in plain terrain.

3.4.3 Main Carriageway

Project highway is having 4-lane with paved shoulder configuration. The rigid pavement is there in main carriageway and service/slip road in entire project stretch.

The carriageway width is 7.5m (with kerb shyness) with 1.5-2.0m paved shoulder except at toll plaza, underpasses, bridges and ROBs.

Details are show in **Table 3.4** and **Figure 3.2** below.

Table 3-4: Main Carriageway

S No.	Section	NH Section	Ground Chainage (km)		Length (Km)	Carriageway Width (MCW+PS)

4 lane Carriageway (Typ)

Figure 3-2: Main Carriageway

3.4.4 Service Road/Slip Roads

Total linear length (both side length) of service/slip road along the project road is 31.37 km with 28.94 km in Simga-Saragaon-Bilaspur section and 2.43 km in Bilaspur bypass. Rigid pavement is there for the service/slip roads at all the locations.

Table 3-5: Service Road

3.4.5 Towns and Built-Up-Areas

Chainage-wise detail of towns and built-up areas are given below:

Table 3-6: Built Up Areas

S. No.	Chainage (km)		Length (km)	Name of Settlement
	From	To		
Simga - Saragaon - Bilaspur section				
1	6+448	7+148	0.700	Bansankara
2	9+248	9+948	0.700	Chanderi
3	11+948	12+348	0.400	Dhamakeda
4	17+248	17+448	0.200	Bisrampura
5	21+846	22+146	0.300	Khapri
6	33+146	33+546	0.400	Narayanpura
7	39+446	40+146	0.700	Kirna
8	48+650	49+050	0.400	Bhojpuri
9	53+250	53+850	0.600	Dhaurabhatha
10	54+750	55+150	0.400	Bilha
11	55+650	56+250	0.600	Hirri

3.4.6 Major and Minor Junctions

3.4.6.1 Major Junction

There is 1 no. major junction at Bilaspur Bypass Section. Details of the major junction are given in the **Table 3.7** below:

Table 3-7: List of Major Junction

Sr. No.	Chainage (km)	Side	Type of Junction (T, X, Y)	Cross Road Leads To	
				LHS	RHS
Bilaspur Bypass Section					
1	20+770	LHS	Y	Dhenka	-

3.4.6.2 Minor Junction

There are 47 nos. and 5 nos. of minor junctions at Simga-Saragaon-Bilaspur section and Bilaspur Bypass section respectively. Summary of the minor junctions are given in the **Table 3.8** below:

Table 3-8: Summary of Minor Junction

Sr. No.	Type of Junction (T, X, Y)	Simga - Saragaon - Bilaspur Section		Bilaspur Bypass Section	
		LHS	RHS	LHS	RHS
1	T Junction	11	9	1	2
2	Y Junction	14	9	0	0
3	X Junction	2	2	1	1

3.4.7 Median

Median width is predominantly 4.0m-4.5m (excluding shyness) except at few underpass locations where the width is 1.5m. Details of sections with narrow median width are given in the **Table 3.9** below:

Table 3-9: Details of Narrow Median (Width < 4.5m)

Sr. No.	Chainage (Km)		Length (km)	Median width (m)	Remarks
	From	To			
Simga-Saragaon-Bilaspur section					
1	1+840	2+650	0.81	1.5	VUP approaches
2	6+180	7+310	1.13	1.5	PUP/CUP approaches
3	8+970	9+970	1	1.5	PUP/CUP approaches
4	11+650	12+640	0.99	1.5	VUP approaches

9	39+320	40+200	0.88	1.5	PUP/CUP approaches
10	48+320	49+370	1.05	1.5	VUP approaches
11	53+210	54+020	0.81	1.5	PUP/CUP approaches
12	54+530	55+510	0.98	1.5	VUP approaches
13	57+950	58+430	0.48	1.5	Flyover approaches
Bilaspur Bypass section					
1	0+525	1+275	750	1.5	Flyover approaches

3.4.8 Earthen / Hard Shoulder

Earthen shoulders are provided on the outer side of the main carriageway. The width of these shoulders is 1.5m to 2.5m.

3.4.9 Drainage

Details of Drainage are given in the **Table 3.10** and shown in **Figure 3.4.**

Table 3-10: Drainage System

Description	Simga - Saragaon - Bilaspur Section	Bilaspur Bypass Section
Covered Lined Drain (km)	23.34	-
Open Lined Drain (km)	14.72	-

General observation of drainage conditions during the site reconnaissance are:

- Trapezoidal line drains are provided at most of the sections between main carriageway and service road. Discharge from these drains are either through the culvers or through rain water harvesting system. These trapezoidal drains are normally in good condition.
- Cleaning and maintenance of roadside drainage needs improvement. Slab at cover drain is damaged at few locations. Longitudinal lined drains are observed between main carriageway and service/slip road.
- Provision of chute drain at high embankment location is observed.
- Median cut drains (chute) are provided at super-elevation section to drain out the water from one carriageway to another at curve location. Longitudinal lined drain at median is observed near Major Bridge location.
- No overtopping of road was observed at any location during the survey work. It was further confirmed by the locals also

Longiditudinal lined drain near RE Panel

Median Cut drain damaged at Median

Figure 3-4: Drainage System

3.4.10 Road Furniture

3.4.10.1 W-Beam Crash Barrier, Concrete Crash Barrier and Pedestrian Guardrail

W-Beam Crash Barrier

W-Beam crash barrier are observed at bridges approaches, at shoulder side where embankment height above 3m and at median where width is 1.5m for entire project road. Section-wise length of W-Beam Crash Barrier are given in the **Table 3.11** and shown in **Figure 3.5.**

Table 3-11: W-Beam Crash Barrier

Description	Simga - Saragaon - Bilaspur Section	Bilaspur Bypass Section
W-Beam Crash Barrier (km)	49.405	11.01
Bamboo Crash Barrier (km)	-	-

W-Beam at shoulder

W-Beam at Median

Figure 3-5: W-Beam Crash Barrier/ Bamboo Crash Barrier

Concrete Crash Barrier

Concrete Crash Barrier is provided at approaches of Flyovers and Underpasses almost all through the project road. Length of CC barrier are given in the Table 3.12 and shown in Figure 3.6.

Table 3-12: Concrete Crash Barrier

Description	Simga - Saragaon - Bilaspur Section	Bilaspur Bypass Section
Concrete Crash Barrier (km)	9.61	4.03

Figure 3-6: Concrete Crash Barrier

Pedestrian Guardrails

Pedestrian guard rails are provided at the median opening location for all junctions for the entire project road. Pedestrian guard rail between the main carriageway and the service road is also observed. Length of Pedestrian Guardrails are given in the Table 3.13 and shown in Figure 3.7.

Table 3-13: Pedestrian Guardrails

Description	Simga - Saragaon - Bilaspur Section	Bilaspur Bypass Section
Pedestrian Guardrail (km)	7.1	0.14

Figure 3-7: Pedestrian Guardrails

3.4.10.2 Sign Boards and Gantry

There are adequate number of signboards along the project road and most of them are in good condition. There are variable message signs (VMS), overhead and cantilever gantry signs as well. Location of gantry signs are shown in **Table 3.14** and **Figure 3.8** below.

Table 3-14: Variable Message Signs (VMS) / Cantilever & Overhead Gantry

S. No.	Chainage (km)	Side	Type

Figure 3-8: VMS and Gantry Signboards

3.4.10.3 5 km / Km / Hectometer Stones

5Km, Km & Hectometer stones are observed at shoulder & median. Most of stones are in good condition.

Figure 3-9: Kilometer & Hectometer Stones

3.4.11 Project Facilities

3.4.11.1 Bus Bays and Shelters

Bus bays/shelters are available at main carriageway and service/slip roads. It is observed that shelters are of tin shade, and they are in fair to good condition. Package-wise numbers of these facilities are given in **Table 3.15** and shown in **Figure 3.10** below.

Table 3-15: Bus Bays and Shelters

3.5 Toll Plaza

The purpose of the Toll Plaza is to collect toll from road users of the Project highway with transparency in the system. There are two toll plazas along the project road. Booths are available for all lanes. Administrative buildings are there at all three Toll Plazas.

3.5.1 Bhojpuri Toll Plaza (TP-2)

Bhojpuri Toll Plaza (TP-2) is located at km 49+970 of NH-130, Simga-Saragaon-Bilaspur stretch which has 16 lanes [2 x (7 + 1 extra wide lane)]. Canopy is there over all 16 lanes. Booths are available for all lanes.

3.5.3 Toll Plaza Administration Building

The Plaza administration building serves as the support structure for the operation and maintenance of the toll plaza. It is from here that utilities are distributed and controlled, employee amenities are maintained, the toll collection process overseen, revenues are processed & audited. Sale of local passes and recharge is done at Plaza building. Transfer of funds from toll booth to plaza building and from plaza building to bank are being facilitated/managed by administration and financial management functions are also conducted in the building.

3.6 Structure Inventory and Condition Survey

This section mainly presents the Site Inventory and Condition Survey of all existing Structures likes Culverts, Minor bridges & Major bridges, Flyovers, VUP, LVUP, PUP, RUB and ROBs along the project roads. The aim of the section is to present the details of existing structures condition of existing structures and functioning of structures. The structure inventory has been done on the basis of visual assessment of each structure. MBIU has been used for visual assessment inspection of major structures having length greater than 60m.

Number of existing structures along the Project roads are given in the following table. Detailed inventory and condition data is presented in **Annexures – 3.2**

Table 3-21: Number of Structures

S. No.	Description		Simga - Saragaon - Bilaspur Section	Bilaspur Bypass Section
1	Major Bridge (no.)		2	-
2	Minor Bridge (no.)		7	4
3	ROB/RUB (no.)		-	1
4	Flyover (no.)		-	1
5	VUP (no.)		8	4
6	PUP/CUP (no.)		6	3
7	Culverts (no.)	Box	26	11
		Pipe	72	28

Section 4: Surveys and Investigations

4.1 Visual Condition Assessment

4.1.1 Simga – Saragaon - Bilaspur Section

i) RE wall at the stretch constructed by L&T, i.e. up to Ch 43+466, is in sound condition whereas bulging and nailing are observed at many locations in the stretch constructed by DBL.

ii) Wide longitudinal cracks with very high severity found along the project road. RHS carriageway is more distressed compared to LHS due to excessive loading. Intersecting cracks with one or more joints has also been observed with poor survivability condition.

iii) These wide cracks are filled with epoxy mortar and its condition is not satisfactory. Some of the cracks are still open.

iv) Joint spalling is also more in the section

v) Few of the wide cracks observed by slot stitching, but its function is not effective.

vi) High severity settlements at the approaches of the structures

vii) There is no maintenance in progress at site during consultant site visit

RE wall in Good Condition @ VUP 2+300

Nailing at Bulging RE Panel at Ch.55+050 VUP

Repairing work is in progress at Main Carriageway RHS at Ch.55+050 VUP approaches

Intersecting Cracks with one or more joints

Figure 4-1: Simga – Saragaon - Bilaspur: Visual Condition

4.1.2 Bilaspur Bypass Section

i) Observed the longitudinal cracks with low to high severity on RHS. Intersecting cracks/multiple cracks along with Shrinkage cracks have been observed.

ii) Few of the distressed sections laid with asphalt overlay

iii) Longitudinal joint has got widened to the extent of 30-40mm in some of the locations, particularly in super elevation sections and bridge approaches

iv) High severity Joint spalling observed at many locations

v) Settlement at the structure approaches causing poor riding quality

vi) No maintenance works in progress at site. Significant drop in asset quality due to lack of timely maintenance

vii) Construction of Bilaspur – Urga section for Raipur – Dhanbad Economic Corridor under HAM is undergoing. This road is taking off from the Project Road at Ch 19+550 and LHS carriageway is dismantled from this point to construct approach road of the Flyover.

Figure 4-2: Bilaspur Bypass: Visual Condition

4.2 Network Survey Vehicle (NSV)

The Network Survey Vehicle is the latest survey technique which utilizes Lasers, Global Positioning System and Video image processing tools. The survey vehicle is used for automatic data collection pertains to pavement condition and road inventory data, required for preparation of pavement maintenance and management proposals. It allows all the data to be collected in a single pass

consequently minimising the time needed to complete the data collection. The measurement of surface distresses like cracking, ravelling, patching and potholes etc. is done using the calibrated image processing methods. The description of NSV and the methodology adopted is provided in **Annexure-4.1.**

The NSV survey has been carried out along the project corridor from 27/07/2024 to 01/08/2024 for collection of field data pertains to pavement condition and road inventory. The data has been collected separately for each lane of the Carriageway.

Integrated into the NSV is a Digital Laser Profiler (DLP) consisting of two-point laser (6 devices). This inertial profiler is capable of measuring:

- Pavement Roughness (one laser in each wheel path and centre)
- Rutting (full transverse pavement measurement)
- Macro texture (outer wheel path and between wheel paths).

4.2.1.1 Determination of Roughness

- The outputs of the lasers and accelerometers located in each wheel path (750 mm either side of the centre line of the vehicle) are sampled every 25 mm of longitudinal travel and used to calculate the longitudinal profile of the road.

- The profile is then passed through the Quarter Car model to calculate the International Roughness Index (IRI) lane roughness as per the methodologies specified in the Austroads Guide to Asset Management, Part 5B - Roughness.

- Post Survey any 'spikes' in the roughness outputs will be excluded that may arise from cattle grids, railway crossings, bridge abutments etc. Automated checks in the data processing software are already incorporated to exclude any contribution to roughness from data collected below the minimum survey speed which is typically set at 10 -30 km/hr (user definable).

- The above-mentioned Roughness Digital Laser Profile System fall under the specification defined in Circular no 11041/218/2007 - admen issued by NHAI for use of Laser Profilometer in NHAI Works.

4.2.1.2 Determination of Rutting

- All data is measured and reported in accord with the recommendations contained within the Austroads Guide to Asset Management, Part 5C – Rutting.

- The DLP measures a 3-metre transverse profile across the lane using a minimum of 11 lasers. A full transverse profile is measured every 50 mm of longitudinal travel, and the processing software allows both lane and wheel path rutting to be measured using the string line and straight edge models.

4.2.1.3 Determination of Texture

- The DLP (Digital Laser Profile) is capable of measuring both flushing and texture via Sensor Measured Texture Depth (SMTD). Texture is measured continuously along the pavement

length using a non-contact laser transducer.

- Macro texture can be recorded in many different ways. The most common is by using the Sensor Measured Texture Depth (SMTD). Internationally Mean Profile Depth (MPD) is more common. SMTD is more common as it can be easily correlated to a Sand Patch Texture Dept (SPTD). The DLP is able to record both types of texture to all international and national standards.

4.2.1.4 Criteria for Analysis

From the digital images, a host of information are extracted. This information is linearly (Chainage) and spatially (GPS) referenced. The information extracted is presented in the table below:

Table 4-1: Information extracted from NSV

Coding Parameters	Coding Type
General Features and Utilities	
Land use pattern	Agricultural, Urban, Commercial, Forest, Ruraletc.
Avenue plantation / Roadside arboriculture	Present/Not Present
Electric pole	Present/Not Present

Streetlights	Present/Not present

4.2.2 Pavement Roughness

The roughness data was collected at 100m interval using NSV on each lane in-terms of IRI (International Roughness Index) value. In Indian context, the IRI values were converted to BI as per IRC: SP:16-2019 “Guidelines on Measuring Road Roughness and Norms” with the following equation;

$BI = 630*(IRI)^{\wedge 1.12}$

Where

BI = Bump Integrator Roughness in mm/km

IRI = International Roughness Index.

Roughness data was collected through Digital Laser Profilers System (DLP) and the same is presented in **Annexure 4.3**. The summary of Roughness values is presented in tables below

Table 4-2: Simga - Bilaspur Section: Summary of Pavement Roughness

Condition	BI (mm/km)	LHS				RHS			
		Inner		Outer		Inner		Outer	
		Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)	Length (km)	Length (%)
Good	<2000	55.400	96.516	54.400	94.774	51.400	89.547	52.970	92.282
Fair	2000-2400	2.000	3.484	3.000	5.226	5.000	8.711	4.430	7.718
Poor	>2400	0.000	0.000	0.000	0.000	1.000	1.742	0.000	0.000
Length (km)		57.400	100.000	57.400	100.000	57.400	100.000	57.400	100.000

** 1.2 km on LHS is under construction stretch of Bilaspur – Urga section for Raipur – Dhanbad Economic Corridor*

4.2.3 Test Pit Investigations

Test pit investigations have been carried out at every 5km in a staggered manner ascertain the existing pavement composition (pavement course, material type, and thickness). The summary of existing pavement crust thickness is presented in table and some of the photographs showing the pavement crust thickness are shown as below.

Table 4-4: Summary of Existing Pavement Crust Thickness

S.No	Location (Km.)	Side (LHS/RHS)	Existing Crust details			
			Pavement Quality Concrete (PQC)	Dry Lean Concrete (DLC)	Granular Layer (GSB)	Total Thickness (mm)
Simga Bilaspur Section						
1	3.200	LHS	300	150	150	600
2	8.000	RHS	300	150	140	590
3	13.000	LHS	300	150	150	600
4	18.000	RHS	300	150	150	600
5	23.000	LHS	300	150	150	600
6	28.300	RHS	300	150	150	600
7	32.500	LHS	300	150	160	610
8	38.000	RHS	300	150	150	600
9	43.000	LHS	300	150	140	590
10	48.000	RHS	300	150	150	600
11	53.000	LHS	300	150	150	600
Bilaspur Bypass Section						
1	4.000	LHS	300	150	150	600
2	9.300	RHS	300	150	150	600
3	15.200	LHS	300	150	150	600
4	20.000	RHS	300	150	150	600

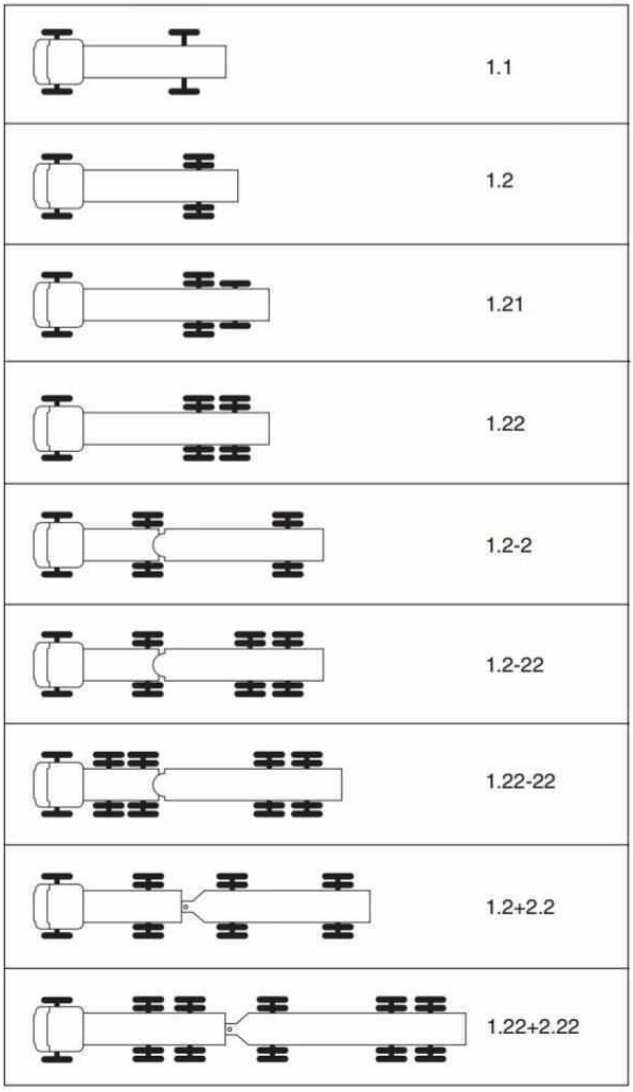
Figure 4-3: Pavement Composition & Thickness Measurement

Observations and Conclusions:

- For Simga – Bilaspur section, the designed PQC thickness is 310mm as per the pavement design report. However, thickness available at site is 300mm throughout except at the super elevation locations where thickness is found to be 330mm. The constructed thickness is a departure from design and even not within the construction tolerance limits of +-6mm. Whereas DLC and GSB found to be adequate considering design value of 150mm for DLC and 150mm for GSB and its tolerance limits.

- For Bilaspur Bypass section, the designed PQC thickness is 310mm as per the pavement design report. However, thickness available at site is 300mm throughout the length. The constructed thickness is a departure from design and even not within the construction tolerance limits of +-6mm. Whereas DLC and GSB found to be adequate considering design value of 150mm for DLC and 150mm for GSB and its tolerance limits.

During the above investigations, the existing subgrade soils samples were collected and tested in the laboratory to understand the properties of these foundation soils. The test results are presented in **Annexure 4.7.** The observations from test results are given below for each of the section:



- Simga Bilaspur; As per the pavement design report of 4-lane, the adopted design effective CBR for subgrade is 5.8%. Most of the test results for CBR are in compliance with design values except few locations. But noted that there is no such subgrade failures related distresses found at the site however it is observed that earthen shoulder throughout the project has got deteriorated.

- Bilaspur Bypass; As per the pavement design report of 4-lane, the adopted design effective CBR for subgrade is 7%. The test results for CBR are non-compliance with design values except one location. But noted that, there is no such subgrade failures related distresses found at the site however it is observed that earthen shoulder throughout the project has got deteriorated.

4.3 Axle Load Survey

The axle load survey has been conducted at the Toll Plaza locations on the Project Corridor. The axle load measurements were made over a 24-hour period on random sampling basis. The survey has been conducted in both the directions. The axle load pads have been placed on either side of the carriageway in a staggered manner to measure the axles in both the directions. While carrying out axle load survey enough care is taken to ensure that this survey work will not hamper the normal passage of the traffic

The type of vehicle considered for axle load survey along with its axle configurations are presented in below. Few of the survey photographs were shown in Photos as below:

Axle load survey at Bhojpuri

Axle load survey at Mudipar

Figure 4-4: Axle Load Survey

The VDF analysis was carried out in line with section 4.4 of IRC: 37-2018 based on the axle load data. The equations for computing equivalency factor for single, tandem and tridem axles given below is used as directed in the IRC:37-2018 for converting different axle load repetitions into equivalent standard axle load repetitions.

- Single axle with single wheel on either side = {axle load in kN / 65}4
- Single axle with dual wheel on either side = {axle load in kN / 80}4
- Tandem axle with single wheel on either side = {axle load in kN /148}4
- Tridem axle with dual wheel on either side = {axle load in kN /224}4

With the stated above procedure, the Vehicle Damage Factor for each class of commercial vehicle on both the directions were calculated separately for empty and loaded vehicles. The Axle load data format and VDF analysis are presented in **Annexure 4.5** and obtained VDF values comparing the values adopted at the time of pavement design during construction summarized in table below.

Table 4-5: Vehicle Damage Factors (VDF)

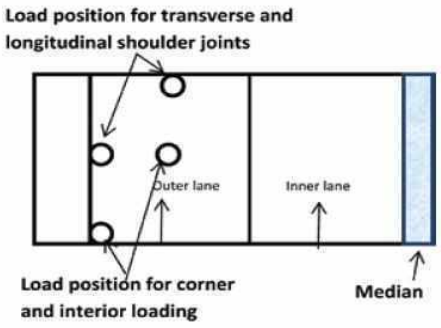
S. No	Toll plaza	Bhojpuri		Mudhipar	
	Vehicle Type	LHS	RHS	LHS	RHS
1	Bus	0.95	1.13	-	-
2	LCV	1.02	0.70	0.76	0.32
3	2-Axle	2.32	1.22	1.95	1.11
4	3-Axle	2.47	5.03	3.35	7.78
5	MAV	4.20	16.57	3.45	14.05

The higher VDF on RHS side is due to movement of heavily loaded trucks carrying Coal, steel, Construction materials etc whereas, Empty Vehicles of significant proportion in LHS side. Further, 7-day axle load survey values are lower than one days and hence adopted the above values in the study.

4.4 Falling Weight Deflectometer (FWD)

The structural evaluation of pavement has been carried out in accordance with IRC: 115-2014, “Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using Falling Weight Deflectometer (FWD) Technique” to determine the remaining life of the pavement structure.

The principle and description of FWD and its methodology is provided in **Annexure 4.6.**



FWD deflection measurement has been carried out for each direction and the measurement has been carried out at a test point along outer wheel path of each direction which is at an offset of 1m from the outer edge of outer lane as specified in section 5.4.5 of IRC: 115-2014. At every measurement location, four drops were made, such that the first drop was the ‘**seating drop’** and with the remaining three drops deflections were recorded. Field survey photographs is shown below.

Figure 4-5: FWD Survey at Project Site

The deflection testing has been carried out on the existing pavement as per IRC Codes at the rate of 5 points per km in each direction as stipulated in TOR of the Consultant.

Adopted deflection measurement scheme is as under.

Adopted Measurement Scheme	Rigid Pavement
(i) measurement along outer wheel paths of outer lanes (3 points) (ii) measurement along the outer wheel path of inner lane (2 points)	

4.4.1 FWD data Analysis for Rigid Pavement

As per IRC: 117-2015, the collected FWD data for the rigid pavement has been analysed to determine the following parameters.

- Modulus of subgrade reaction k (MPa/m)
- Elastic modulus of concrete E_c (MPa)
- Flexural Strength of concrete f_{mr} (MPa)
- Load Transfer Efficiency (LTE) of Joints (%)

The detailed analysis of the parameter for PQC and Load Transfer Efficiency is presented in **Annexure 4.7** for both LHS and RHS directions respectively.

From the test results the observations were draw-down. The range of Elastic Modulus, other PQC parameters and their percentage of length and Load Transfer Efficiency (LTE) is presented in table below.

Table 4-6:Summary of Flexural Strength and Elastic Modulus

Pavement layer	Range	Percentage of Project Road	
		LHS	RHS
Simga Bilaspur Section			
Elastic Modulus of PQC Layer (Mpa)	> 30000	6.96%	6.96%
	30000 - 10000	93.04%	93.04%
Flexural Strength of PQC Layer (Mpa)	> 4.5	1.74%	5.22%
	4.5 - 3.0	91.31%	89.57%
	<3.0	6.96%	5.22%
Bilaspur Bypass Section			
Elastic Modulus of PQC Layer (Mpa)	> 30000	9.73%	14.60%
	30000 - 10000	90.27%	85.40%
Flexural Strength of PQC Layer (Mpa)	> 4.5	0.00%	0.00%
	4.5 - 3.0	100.00%	95.13%
	<3.0	0.00%	4.87%

Table 4-7: Summary of Joint Load Transfer Efficiency

Direction	Load Transfer Efficiency (LTE)					
	Transverse Joint			Longitudinal Joint		
	> 90%	90%-50%	< 50%	> 90%	90%-40%	< 40%
Simga Bilaspur Section						
LHS	68.70%	31.30%	0.00%	62.48%	37.52%	0.00%
RHS	52.16%	47.84%	0.00%	65.58%	34.72%	0.00%
Bilaspur Bypass Section						
LHS	51.33%	48.67%	0.00%	31.52%	68.48%	0.00%
RHS	70.80%	29.20%	0.00%	73.01%	26.99%	0.00%

- Simga Bilaspur; The flexural strength of concrete high for more than 90% of the test locations and even the Load transfer efficiency is high at all the joints tested and hence the joints are in good condition.
- Bilaspur Bypass; The flexural strength of concrete high for more than 95% of the test locations and even the Load transfer efficiency is high at all the joints tested and hence the joints are in good condition.

4.5 Mobile Bridge Inspection Unit (MBIU)

4.5.1 Specification

The Mobile Bridge Inspection Unit (referred as (MBIU) is an electro-mechanically driven articulated structure mounted on a vehicle (a truck) as an aid towards proper inspection of bridges or similar infrastructures by enabling an inspection team of 2-3 persons carrying instruments access to the underside of bridge decks overflowing rivers or gorges. The present version is the truck mounted system. As per TOR condition survey of existing structures greater than 60m shall be carried using MBIU.

The overall objective of the condition survey is to identify the need for structural maintenance, rehabilitation and replacement. Signs of distress such as spalling, scaling, cracking, leaching, excessive deflection, inadequate cover, settlement, exposed reinforcement, corrosion in the reinforcement; shear cracks etc. are identified during this exercise. Special emphasis is given on expansion joints and bearing. Also, the condition of the Approaches, water way and bed protection is examined. The survey identifies the bridges which are more distressed and require testing for their evaluation and rehabilitation measures. Also bridges which require general measures for rehabilitation. Inspection report is prepared in accordance with IRC: SP-35. The report provides recommendation whether a bridge is acceptable to continue in use, whether it can be repaired and/or modified e.g. widened or a new structure.

The structure inventory and condition assessment are given in **Annexure 3.2.** The following structures have been inspected using MBIU machine.

Table 4-8: List of Inspected Structures using MBIU

Sr. No.	Chainage (Km)	Side		Remark
		LHS	RHS	
Simga Bilaspur Section				
1	20+835	LHS	RHS	Major Bridge
2	47+966	LHS	RHS	Major Bridge
Bilaspur Bypass Section				
1	0+750	LHS	RHS	Flyover
2	3+440	LHS	RHS	ROB

4.5.2 Working Principle

The work of condition survey requires use of Mobile Bridge Inspection Unit at the various bridge sites on the National Highways to overcome the accessibility problems. MBIU increases the accessibility for inspection of underside of high-level bridge decks and helps in continuous inspection of throughout the span of bridge. It has five folded arms. All of them are electro-mechanically operated.

Once the platform is erected by certified person, Inspection and maintenance experts can inspect underside of bridge, note observations as per IRC SP-35 & IRC SP-52 and take photographs for reference.

4.5.3 Advantages

- A large operating range
- A high level of working comfort
- Maximum operational safety
- The shortest possible setting up and dismantling times
- Full mobility in inspection operation without stabilizer supports
- An optimum weight/performance ratio

Figure 4-6: MBIU Survey

4.6 Drone Videography of Entire Stretch

Videography of entire Project Stretch is captured through Drone cameras flown at about 50m above ground. This shall be useful for observing various features of Project Stretch from bird's eye level.

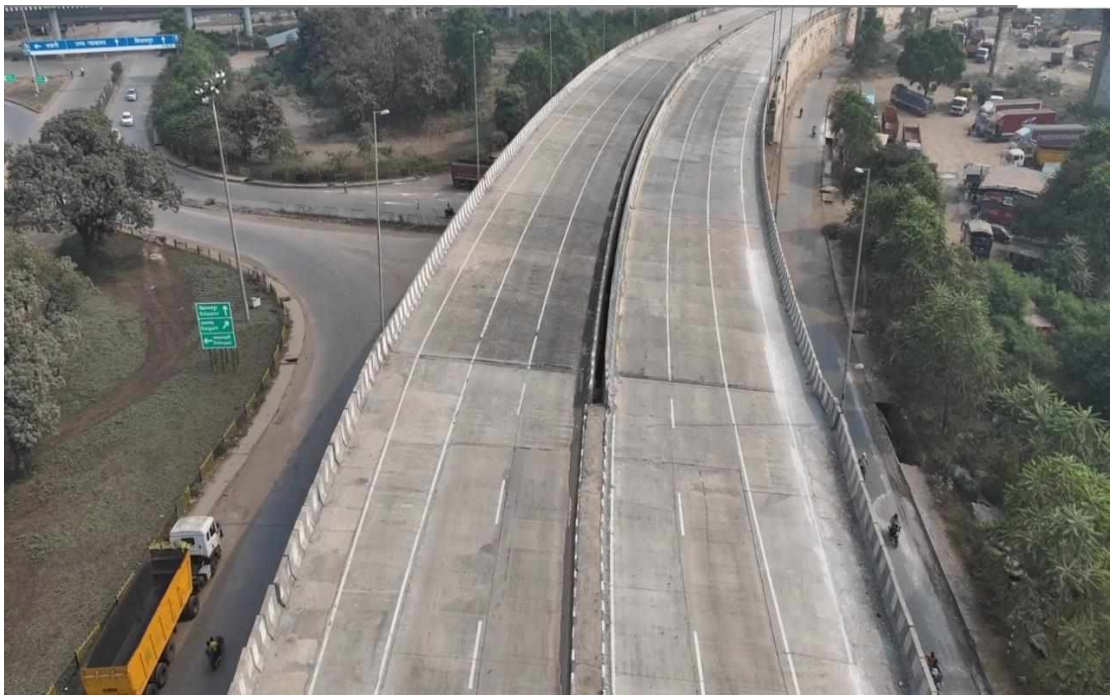


Figure 4-7: Drone Videography image about 40 m

Section 5: Review of Documents

5.1 General

Technical Consultant (TC), since the start of technical due diligence study, has requested for various documents from the Client. A list of documents required were shared with the Client before TC team started the study which was appended with few more queries after the conclusion of the site visit once the project site is appraised. Most of the queries were also discussed with the Client in many meetings. This section of the report deals with the documents requested by TC and its review along with highlighting major issues found during this review.

5.2 Documents Collected and Reviewed

List of documents requested, received and reviewed are given below:

S. No.	List of Documents	Status of Documents	Remarks on Review
DOCUMENTS RELATED TO CURRENT ACQUISITION			
1.	Concession Agreement	Partially Available	Technical Schedules A, B, C and F are made available to the Consultant. These schedules are modified from the standard provisions given in manual as below: Sch A: Existing features Sch B: Scope of Work including facilities to be provided Sch C: Specifications and Standards Sch F: Maintenance Requirements Table 1 of Sch F provides maintenance criteria for pavements which has performance parameter, desirable and acceptable level of service, frequency of inspection and time limit for rectification/repair. Sch F specifies roughness value as 2200mm/km desirable and 2400 mm/km acceptable for rigid pavement. Sch B states that the concessionaire shall carry out the periodic maintenance in full length of the project stretch including main carriageway, service/slip Road, ramps and at facilities etc. in every sixth year. Further, it was clarified in the pre-bid queries reply that maintenance activities of rigid pavement shall be carried out in accordance with Sch F of the CA. Though draft CA is not available, Consultant has referred the CA of earlier rounds wherever required presuming that there shall not be any change in Contract Conditions.
2.	Detailed Project Report/ Technical Due Diligence Report	Available	Report done by M/s MSV in association with Sri Infotech for NHAI in December – 2024 is made available for Simga – Bilaspur sections. This Report is used as reference for inventory & condition of the assets and improvement proposals. Cost estimates are provided for engineering and safety improvement for Rs 60.315 Cr including GST which are under the obligation of NHAI. Cost of Rs 27.74 Crore including GST is considered for immediate repair for rehabilitation of structures, road safety works, lighting, traffic impact attenuators bus shelter refurbishing and ATMS under the obligation of NHIT. The report also provides for the O&M cost during the concession period which is used for comparison and reference purpose.

S. No.	List of Documents	Status of Documents	Remarks on Review
3.	FWD data	Available	Consultant collected the reports of FWD from respective AEs during their site visit and used it as a reference document.
4.	Latest MPRs	Available	Consultant collected recent IE-MPRs from the AEs during the site visit. Reports provide details about the Project Road and key maintenance activities undertaken at the site during that period.
5.	Maintenance History	Not available	There is no maintenance history available for the Project Road.
6.	NSV data	Available	The reports of NSV are available as a reference document for TC.
7.	AADT for each section and Growth rate	Available	AADT along with traffic projections for the project roads have been provided by Client.
8.	Concession Period	Not available	TC has adopted 20 years concession period with reference to the CA of earlier roads.
9.	Projected Escalation factor	Not available	In absence of projected escalation factor, all cost are given at the present rate as per the direction of the Client.

5.3 Key Technical Issues

1.3 Pavement and Road Condition

Longitudinal cracks with low-high severity are there along the project road. RHS carriageway is more distressed compared to LHS due to excessive loading. Some of the cracks are filled with epoxy mortar and its condition is not satisfactory. It has been observed that repair and rehabilitation works in terms of crack sealing, panel replacement etc. has been done at many locations. Joint separation at the longitudinal joints was found at many of the locations of super elevation, high embankment where joints are widened by more than 30mm.

Repairing work is in progress

Cracks in Rigid Pavement

Figure 5-1: Pavement Distress

1.4 Reinforced Earth Wall

Bulging of RE wall panels observed at the approaches of structures between Saragon and Bilaspur. Also noted that nailing has been done at these bulged locations of VUP at Ch.-44+280, VUP at Ch.- 48+850, VUP at Ch.-55+050 of Sigma-Saragaon-Bilaspur section and Flyover at 0+750 of Bilaspur Bypass. Though no details available regarding its assessment, rehabilitation design adopted to avoid such bulging's, Consultant found nailing done in considerable number of panels. Approximate assessment in this regard is presented below:

Table 5-1: Nailing Details in RE wall Panel

Type of Structure	Chainage	Nos of Panel
Simga-Saragaon-Bilaspur section		
VUP	44+280	03
VUP	48+850	83
VUP	55+050	52
Bilaspur Bypass section		
Flyover	0+750	02

Figure 5-2: Bulging of RE wall @ 55+050

Figure 5-3: Nailing in Wing wall @ 44+280

1.1 Structures

Defects at bearings are also found as detailed below:

- ✓ MJBR@20+875 (Stretch-2): - Bearing plate is damaged at one Location. Sliding's moment observed in 1 bearing
- ✓ MJBR@47+966 (Stretch-2): - cracks observed in 1 nr of bearings.

1.2 Retaining Walls

- ✓ Retaining Wall is damaged at PUP Ch.44+280 in Saragaon – Bilaspur section
- ✓ Cracks are observed at Retaining wall and Toe Wall at few structures and needs immediate repair/rehabilitation

Figure 5-4: Damaged Retaining Wall @ 44+280 RHS

Figure 5-5: Cracks in Retaining Wall

Section 6: Capital Expenditure (CapEx) Requirement

6.1 Schedule B Improvement Work

Schedule B specifies the requirements of improvement work for the concessionaire which are to be done after the appointment date. Major works with relevant references to Sch B used to quantify these construction requirements are listed below:

- R&R of earthen shoulder covered with granular material Ref Cl 4.1 I of Sch B.
- Crack sealing: Ref Cl 4.1 III of Sch B.
- Panel replacement: Ref Cl 4.1 III of Sch B.
- R&R of Structure: Ref Cl 4.2 of Sch B.
- Junction improvement. Ref Cl 7.1 III of Sch B.
- Service road improvement Ref Cl 5 of Sch B
- Traffic Impact Attenuators Ref Cl 5 of Sch B
- Curve improvement: Ref Cl 6/ Cl 9 of Sch B.
- Median opening: Ref Cl 8 of Sch B.
- Rainwater Harvesting Ref Cl 11 of Sch B.
- Toll Plaza restoration: Ref Cl 12.1 of Sch B
- Truck lay bye: Ref Cl 9.1of Sch B
- Bus lay bye and shelter: Ref Cl 12.3 of Sch B
- Landscaping and median plantation: Ref Cl Cl 12.4 of Sch B
- Transverse bar marking: Ref Cl Cl 13.3 of Sch B
- Antiglare: Ref Cl Cl 13.6 of Sch B
- Kerb stones: Ref Cl Cl 13.7 of Sch B
- Highway Lighting Ref Cl 12.6 of Sch B
- ATMS Ref Cl 12.11 of Sch B
- Solar Blinkers Ref Cl 13.2 of Sch B

Improvement works Scope specified for each stretch is tabulated below:

Table 6-1: Schedule B Requirements during O&M Handover

S. No.	Description	Unit	Simga Bilaspur	Bilaspur Bypass
1	R&R of earthen shoulder covered with granular material.	cum	26,208	11,223
2	Crack sealing	Km	5.91	3.65
3	Panel replacement	Nos	485	368
4	Approach slabs reconstructed.	Nos	28	24
5	Bearing replacement	Nos	2	-

S. No.	Description	Unit	Simga Bilaspur	Bilaspur Bypass
6	Wearing coat replacement	Sqm	9541	10569
7	Strip seal expansion Joint	Lm	-	100
8	Toll Plaza restoration	Nos	1	1
9	Truck lay bye	Nos	3	-
10	Bus lay bye and shelter	Nos	27	-
11	Landscaping and median plantation	Km	11	3.3
12	Transverse bar marking:	Nos	75	14
13	Highway Lighting	Nos	120	34
14	ATMS	Km	57.4	22
15	Solar Blinkers	Nos	18	-
16	W beam crash barrier	Lm	3.29	1.87
17	Pedestrian Guard Rail	Lm	460	-
18	RCC crash barrier	Lm	290	920
19	Rainwater harvesting	Nos	116	44

Time to complete above improvement works are 3 months/12 months from the Appointed Date based on completion schedule for improvement proposals given in Schedule B.

6.2 Immediate Maintenance Requirements

With reference to the clarification of pre-bid queries received from the Authority, prior to the O&M Hand-over to InvIT concessionaire, Authority will undertake relevant defect rectifications through its EPC contractors before handing over the assets in roadworthy condition to the InvIT concessionaire.

However, toll plaza renovation cost, revalidation of survey during hand over of O&M and TMS replacement cost has been considered under this head.

6.3 Capital Expenditure (CapEx)

Cost of capital expenditure (CapEx) are presented below.

Table 6-2: Cost of Capital Expenditure (CapEx)

Description	Cost (INR)	
	Simga Bilaspur	Bilaspur Bypass
Revalidation of Survey	0.45	0.20
Initial Improvement Works (Schedule - B)	35.42	16.40
TCMS	5.01	5.01
ATMS	21.30	5.53
Total	**62.18**	**27.14**

Section 7: Operation & Maintenance

7.1 General

The O & M requirements for the project facilities are specified in the Concession Agreement (CA) mainly under following Articles/ Schedules:

- Article 15 - Operation and Maintenance
- Article 16 - Monitoring of Operation and Maintenance
- Article 17 – Traffic Regulation
- Article 18 and Schedule H – Safety Requirements
- Schedule F- Maintenance Requirements

7.2 Requirement as per Concession Agreement

Schedule F of the Concession Agreement sets out the Operation and Maintenance requirements for the Project. As per this schedule, scope for Operation and Maintenance includes but not limited to following obligations:

- ✓ **Improvement** – This includes improvement of the existing assets as per requirement of this Agreement and safety audit.
- ✓ **Maintenance of Civil Works and Assets**- this includes maintenance of civil works and all assets as per requirement of this agreement.
- ✓ **Road Maintenance** –This includes routine maintenance, preventive maintenance, periodic maintenance as per IRC:82-2015, Design overlay as per Manual of 4- laning/6-laning, disaster maintenance, exigencies, and inspections.
- ✓ **Traffic Management** – This includes enforcement of regulations together with the relevant authorities. This also includes hazard response, information gathering and dissemination, Road patrols and ATMS surveillance etc.
- ✓ **Safety**– This includes accident prevention, after care, user education, enforcement, data collection and analysis.
- ✓ **Facility Management** – This includes periodic inspections, routine maintenance, Rehabilitation, and expansion planning.
- ✓ **Road property management** –This includes management of access, encroachment, and ribbon development.
- ✓ **General responsibilities** –This includes budgeting, compliance with legal and accounting requirements, and public relations.
- ✓ Maintaining public relations unit to interface with and attend to suggestions from users of the highway, the media, Govt. agencies and other external agencies.

Routine Maintenance: These are maintenance needs required on daily, weekly, monthly and annual basis for the smooth and efficient running of traffic and includes the activities of minor repairs of all project elements, cleaning of road furniture's, replacement of consumables, horticulture

maintenance, keeping the project site /project facilities clean, tidy and orderly condition free of litters and debris, preventing unauthorized entry and exit including any encroachment etc.

Preventive Maintenance: Preventive maintenance shall include the activities related to each element and the system of the Project Highway to ensure that during the Concession Period and at its end is in sound, durable and functional condition. In other words, preventive maintenance are a planned strategy of cost-effective treatments to an existing roadway system and its appurtenances that preserves the system, retards future deterioration, and maintains or improves the functional condition of the system (without significantly increasing the structural capacity).

Periodic Maintenance: These are maintenance needs required on periodic annual basis to improve the riding quality and strength of the project assets.

Factor influencing periodic maintenance: performance parameter for flexible pavement in terms of roughness as given in Schedule F is 2200 mm/km as desirable and 2400 mm/km as acceptable. Clause 3.1 (III) of Schedule B states that periodic maintenance shall be carried out in full length of the project stretch including main carriageway, service/slip road and at facilities etc. either in every six years or in the year in which roughness index exceeds the limit given in schedule F, whichever comes earlier. Further clarity on this requirement is given as Note at the same clause which states "*A Roughness of <2200 mm shall be maintained by the existing EPC Contractor prior to handing over to InvIT Concessionaire. After handover of project stretch to InVIT, the InVIT concessionaire shall maintain the roughness level at <2200mm, however after a functional overlay (Roughness exceeding 2200 mm) or structural overlay (FWD Test) is provided in any particular stretch length then that particular length shall be maintained at a roughness level mentioned in Schedule F after that overlay. For clarification, InVIT concessionaire shall maintain a roughness level (mentioned in Schedule F) in a stretch length where overlay (Structural or Functional) has been provided by InVIT concessionaire*."

7.3 O&M Cost Estimation

7.3.1 Routine maintenance

This is a day-to-day work that is necessary to preserve and keep a pavement as close to as constructed condition and to ensure smooth and functional conditions all the time. The item in this subhead includes maintenance of earthen shoulder, restoration of rain cuts, maintenance of slope protection works, cleaning of road side drains, cleaning of carriageway, maintenance of structures, repairs of road surface such as filling of potholes, repairing of cracks and patch works, carrying out of Road roughness survey, FWD test etc.

7.3.2 Repair/Maintenance

Repair/maintenance covers the minor repair which are required on day-to-day maintenance to maintain the assets in good condition. This is sub-divided in two categories as below:

a) **Preventive Maintenance:** The preventive maintenance is required to be done for further improve or extend the functional life of pavement surface whist in fair to good condition. Any of the treatment under preventive maintenance does not significantly increasing the

structural capacity of pavement rather it decreases rate of surface deterioration, which may result in saving of pavement from leading to poor condition where major maintenance could be inevitable.

Future preventive maintenance on the project road depends largely on routine inspection of the pavement with careful observation of specific distress and to take a decision at that time and suitable type of preventive maintenance treatment and its timing. All the narrow and wide surface cracks must be arrested immediately after identification with recommend preventive type maintenance measure for the in-service flexible pavement.

Based on the condition and distress identification survey as explained above paragraph, preventive maintenance treatments must be taken up immediately to reduce rate of further damage to the surface and for enhance the pavement performance to the condition similar to non-distressed surface condition.

b) **Road Property Maintenance:** The item in this subhead covers the plantation/ maintenance of shrubs, turfing, replacement/ repair of damaged railing, crash barrier, kerbs, road delineators, signage, Road marking and painting etc.

7.3.3 Toll Management System

Cost estimate for Toll Management System was worked out by TC. Same was presented and deliberated during the investor meet, after that it was decided to adopt the rationalised cost finalized by IM.

7.3.4 Corridor Management

Incident Management: The items in this subhead include minimize the effects of incident and restore normal capacity and safety levels to all affected road facilities as efficiently as possible and. repair/ replacement of removing the dead animals & broken-down vehicles etc.

7.4 Major Maintenance

The pavement deteriorates with time caused by traffic movement and weather conditions. The rate of deterioration depends on the original design and pavement type, type of maintenance being done/undertaken and time of application. Therefore, timely and appropriate maintenance using suitable materials is essential to increase the pavement service life to a greater extent. Any delay in maintenance of the pavement substantially increases severity of the distresses, which results into poor condition of pavement and thereby increase in maintenance costs to bring the surface to a good condition.

Schedule F of the Concession Agreement set out the maintenance requirements in the Project. The performance parameters are indicated in schedule F descripting the nature of defect/deficiency along with time limits for repair/rectification for roads and bridges.

Schedule F, Pavement Roughness Value (Functional Overlay): The Periodic maintenance is required to be provided as and when performance parameters in terms of cracking, roughness, surface defects, joint defects etc. exceeded the limits as indicated in the schedule F anytime during the service life of the pavement. As per the provisions of Concession agreement, Surface roughness value is the major governing factor for selection of an appropriate pavement

maintenance treatment required to bring the roughness value below the prescribed limit of 2400mm/km.

7.4.1.1 Review of Pavement Design

The Pavement design for Main Carriageway is rigid type and designed as per IRC:58-2015. Even rigid pavement is adopted for the service roads as well.

Following composition and thickness has been adopted.

Main Carriageway (MCW): Rigid Pavement
PQC: 310mm, DLC: 150mm and GSB: 150mm.
Service Roads (SR): Rigid Pavement
PQC: 260mm, DLC: 150mm and GSB: 150mm.

7.4.1.2 Review of Major Maintenance History

The 4-lane construction of project section from Simga to Saragaon in the year 2020 and 4 laning of Saragaon – Bilaspur & Bilaspur Bypass sections completed in the year 2018. As per the site visit made by the consultant and review of available documents, there is no periodic maintenance works were performed in the project so far after PCOD/COD. However, pavement repairs consist of replacement of PQC slab in full depth, crack sealing, bituminous overlays on the heavily cracked sections have been done. As noted from the site that significant number of panels are replaced to being the cracked surface to a serviceable condition.

7.4.1.3 Immediate Pavement Rehabilitation Measures

After the distress identification using the condition data collected from the NSV survey, the following immediate rehabilitation measures has been suggested to improve the rigid pavement condition to the desired level of serviceability for the present and projected traffic patterns in the project highway.

Distress Rating	Suggested Rehabilitation Measure
0	Nil
1	Crack sealing with epoxy
2	Partial depth repair/Panel replacement
3	Partial depth repair/Panel replacement
4	Panel Replacement
5	Panel Replacement

Further, the suggested repair and rehabilitation measures for each of the distress and its severity as identified for rigid pavement is provided in table below in compliance with requirements of IRC SP 83-2018.

S. No	Distress type	Distress Rating	Treatment
1	Longitudinal Cracks	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Partial depth repair

S. No	Distress type	Distress Rating	Treatment
		4	Partial depth repair
		5	Panel replacement
2	Transverse cracks	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Panel Replacement
		4	Panel Replacement
		5	Panel Replacement
3	Multiple Cracks	0	No action, but need to be monitored
		1	Seal with epoxy
		2	Seal with epoxy
		3	Full depth repair
		4	
		5	
4	Corner Breaks	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Full depth repair
		4	Full depth repair
		5	Full depth repair with subbase
5	Joint Damage/Spalling	0	No action, but need to be monitored
		1	Sealing with epoxy
		2	Sealing with epoxy
		3	Repair up to 50mm thickness
		4	Repair up to 50mm thickness
		5	Repair up to 100mm thickness
6	Joint Sealant Defects	0	No action, but need to be monitored
		1	Cleaning
		2	Cleaning
		3	Sealant replacement
		4	Sealant replacement
		5	Sealant replacement
7	Joint Separation	0	No action, but need to be monitored
		1	No action, but need to be monitored
		2	No action, but need to be monitored
		3	No action, but need to be monitored
		4	No action, but need to be monitored
		5	Fill the joint with M40 concrete
8	Joint Faulting	0	No action
		1	Monitoring
		2	Diamond grinding
		3	Diamond grinding
		4	Panel replacement
		5	Panel replacement
9	Blow ups	0	No action
		1	No action
		2	No action
		3	Full depth repair
		4	Full depth repair
		5	Panel replacement
10	Ravelling	0	No action
		1	Repair with epoxy
		2	Repair with epoxy
		3	Repair with epoxy
		4	Repair with epoxy
		5	Panel replacement

S. No	Distress type	Distress Rating	Treatment
11	Scaling	0	No action
		1	Repair with epoxy
		2	Repair with epoxy
		3	Repair with epoxy
		4	Repair with epoxy
		5	Panel replacement
12	Potholes/Popouts	0	No action
		1	Partial depth repair up to 65mm
		2	Partial depth repair up to 100 mm
		3	Partial depth repair up to 100 mm
		4	Partial depth repair up to 100 mm
		5	Full depth repair

7.4.1.4 Immediate and Future Major Maintenance Requirement

Major maintenance is required to comply with provisions of concession agreement and to maintain performance levels as defined in schedule F throughout the operation and maintenance period.

As per schedule B, the TOT concessionaire shall carryout the periodic maintenance in full length of the project stretch including main carriageway, service roads and facilities in every 6th year or the year in which roughness index exceeds the limits given in schedule F, whichever comes earlier.

Therefore, considering the initial pavement design, pavement distresses, elastic modulus and flexural strength of PQC layer and load transfer efficiency of joints, and in compliance to the provisions of schedule B, the following cycle of Major maintenance is proposed for satisfactory performance of the pavement during operation period for both functionally and structurally.

The project section from km 48+580 to 105+980 trigging for capacity augmentation from four to six laning during FY 32 and FY33 with a DLP period of 10 years being the rigid pavement. The 6-lane stretch is available for full O&M by InvIT from FY 44 to till end of the concession. The cost towards the augmentation works to be borne by the Authority

Table 7-1: Proposed Major Maintenance Cycles for Balance Concession period

Name of Stretch	InvIT Concession (20 years)	
	Periodic Maintenance	ATMS & TMS Replacement
Simga – Saragaon - Bilaspur	**FY 31 and FY44** **MCW**:2% Panel replacement & 100 % Joint sealant replacement and retexturing **SR:** 100 % Joint sealant replacement and retexturing **Structure:** Replacement of wearing coat & painting	**FY33-** 50% TMS **FY41-** 100% TMS
Bilaspur Bypass	**FY 31 and FY43** **MCW**:2% Panel replacement & 100 % Joint sealant replacement and retexturing **SR:** 100 % Joint sealant replacement and retexturing **Structure:** Replacement of wearing coat & painting **FY-37** **MCW:**2% Panel replacement & 100 % Joint sealant replacement **SR:** 100 % Joint sealant replacement **Structure:** Replacement of wearing coat, bearing, expansion joint & painting	**FY33-** 40% ATMS 50% TMS **FY40-** 60% ATMS 100% TMS

7.4.1.5 Cost of Operation & Maintenance

Cost of Operation & Maintenance per annum are presented below.

Table 7-2: Cost of Operation & Maintenance (per annum)

Description	Cost in Crore INR	
	Simga - Bilaspur	Bilashpur Bypass
Tolling & TMS Operations (Varies) Min-Max	4.70-5.84	3.93-4.81
ATMS Operation	2.34-2.54	0.61
Incident Management	5.00	4.91
Admin Expenses (Varies) Min-Max	3.81-5.40	
Insurance (Varies) Min-Max	1.91-2.49	
Power cost excl. Toll Plaza	1.01-1.51	0.24
RAMS, BMS & Survey	1.33-1.86	0.31

7.4.2 Estimate (Initial Improvement, MMR and O&M)

Year-wise estimate of (Initial Improvement, MMR and O&M are given below:

Table 7-3 : Operation & Maintenance Cost (Initial Improvement, MMR and O&M) for Simga – Saragaon – Bilaspur bypass

Sl.No.	FY	Initial Improvement Cost (in INR Cr.)	Major Maintenance Cost (in INR Cr.)				Operation & Maintenance Cost (in INR Cr.)								
			Road (MCW, SR, Toll Plaza)	Structure	ATMS	TMS	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)

Note: The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. All other costs are based on FY 2025 with GST and without escalation.

Section 8: Conclusion

The project highway has been constructed as per the provisions of the EPC Agreement for 4-laning by adopting rigid pavement for both main carriageway and service roads. The traffic volume on the project is considerably high due to presence of large-scale industries within the project influence area. The project requires capacity augmentation when the average daily traffic beyond the Target traffic for any of the homogenous section. As per the latest traffic surveys, analysis and projections, the project section from km 48+580 to 105+980 trigging for capacity augmentation from four to six laning during FY 32 and FY33 with a DLP period of 10 years being the rigid pavement. The 6-lane stretch is available for full O&M by InvIT from FY 44 to till end of the concession. The cost towards the augmentation works to be borne by the Authority. The performance of the pavement is found to be satisfactory under the current traffic loading conditions. However, the longitudinal intersecting cracks generated mostly in the mid slabs to outer side has been observed. The riding quality of the surface appears to be good for the comfort of the road users though the pavement has experiencing surface defects such as cracks of low to high severity. The reasons for adequate performance of the pavement is due to strong and uniform subgrade support as required for transfer of the wheel loads to the foundation. As per the site visit, the process of primary and secondary consolidation of the pavement layers has already been achieved and therefore, the progression of cracks after the consolidation stage is not very significant.

The other significant defect is widening of the longitudinal joints. This widening is conspicuously noticed on high embankments. It does not appear to be critically influenced by the absence or misalignment of tie bars. To arrest this widening, stitching of this joint is being practised with 2-meter-long steel bars. Bars at the end to resemble a staple pin are inserted spanning across the joint in grooves cut for this purpose. Since the widening of joints was noticed in locations where the slab was poorly supported, it is not expected that all joints would widen. This needs to be monitored for taking necessary measures when the joint width will become 30mm, cross-stitching of tie bars shall be done. Further, timely repair and rehabilitation for the identified distress during the concession period is required to maintain the structural adequacy of the PQC layer and improve the overall serviceability of the pavement structure.

Based upon the site visit for assessment of condition of CD structures including MJB, MNBs, ROB, VUPs, Culverts and toll plaza buildings in the project corridor and observations submitted in various chapters of this report it is concluded that immediate major repairs are required in few structures in terms of repairs of replacement of bearings, replacement of expansion joints and rectification of settled approach slabs. Significant bulging is noticed in RE wall panels, mainly at the structure approaches from the ground chainage km 43+466 (CA chainage km 91+026) onwards. Authority has clarified that these shall be rectified by them before handing over. It is advised that a thorough check of asset condition should be done by the InvIT Concessionaire before taking over to ensure that all the defects are rectified.

The assessment of estimated cost of such improvement works repairs along with the anticipated future repair and rehabilitation cost are considered in the cost estimate of this report.

NATIONAL HIGHWAYS INFRA INVESTMENT MANAGERS PRIVATE LIMITED

FINAL REPORT

Tolling, Operation, Maintenance & Transfer of Four/Six Lane Gandhidham (Kadla) – Mundra Port Section of NH-41 from km 0+000 to km 71+400 in the state of Gujarat

SAMARTH INFRAENGG Technocrats Private Limited

February 2024

TDRT	-Transient Dynamic Response test
TMS	-Toll Management System
UPVT	-Ultra Pulse Velocity test
VDF	-Vehicle Damage Factor
VG	-Viscosity Grade
VUP	-Vehicular Underpass
WBM	-Water Bound Macadam
WMM	-Wet Mix Macadam
WPI	-Wholesale Price Index

CHAPTER 1. INTRODUCTION

1.1 INTRODUCTION

National Highways Authority of India ("NHAI"/ "Authority") is an autonomous body of the Government of India ("GoI") under the Ministry of Road Transport and Highways ("MoRTH") and was constituted on June 15, 1989 by an Act of Parliament titled - The National Highways Authority of India Act, 1988 ("NHAI Act"). NHAI was operationalized in February 1995 with the appointment of full time Chairman and other Members. The functioning of NHAI is governed by NHAI Act and rules, and regulations framed thereunder.

NHAI has set up an Infrastructure Investment Trust Namely **National Highways Infra Trust ("InvIT")** and is acting as its Sponsor to the said InvIT.

National Highways Infra Investment Managers Private Limited ("NHIIMPL") has been appointed as the Investment Manager to the InvIT. Accordingly, Investment Manager has awarded the following works to M/s SAMARTH INFRAENGG Technocrats Pvt Ltd vide their letter ref: NHIIMPL/FY2024-25/RFP/Technical Consultant/LOA/02 dated 15.07.2024.

Project	Length (km)	No. of Plazas	Lane km
Gandhidham (Kandla) Mundra Port (Gujarat)	**71.400**	**1**	**285.600**
Gundugolanu-Devarapalli-Kovvuru (Andhra Pradesh)	69.880	1	356.800

Presently the project stretch, "Gandhidham (Kandla) Mundra Port" is under Operation and Maintenance stage and the fee is being collected from Toll Plazas at km 44+630 near Mokha village for a length of 71.400 km.

The concession period is 20 years commencing from Appointed Date for TOT Concessionaire to demand and collect appropriate Fee, operate, manage and maintain the Project Highway.

M/s SAMARTH INFRAENGG Technocrats Pvt Ltd has undertaken Technical Due Diligence study for the said project to estimate initial capex including improvements and immediate requirements for repair & rehabilitation of various elements of project highway and also to make an assessment of Major maintenance requirements and Operation & Maintenance costs for entire concession period.

This report highlights the findings of Technical Due Diligence Services for Tolling, Operation, Maintenance & Transfer of Four/Six Lane Gandhidham (Kadla) – Mundra Port Section of NH-41 (old NH-8A) from km 0+000 to km 71+400 in the state of Gujarat"

1.2 PROJECT AT A GLANCE

National Highway 41 (NH 41) plays a significant role in connecting key ports in Gujarat, particularly Kandla Port. NH 41 directly links Kandla Port to the hinterland, facilitating efficient transportation of goods. For Mundra Port, while NH 41 does not provide a direct connection, the port is accessible

via other major highways. Mundra Port is connected to the National Highway network through State Highways 48 via Anjar and SH-6.

The site of the project highway covers a section of national highway 41. It begins at the kandla interchange, existing km 0+000 of NH-41, and runs up to km 71+400, near moti khakhar village, in the utch district of Gujarat. As part of this highway section, the alignment also incorporates 8.730 km of the Anjar bypass.

Map Showing the Project Corridor

The start and end of the project chainage system with respect to CA and Site are as presented below.

Table 1: Project Corridor Chainage System

Referencing system	Start Point (km)	End Point (km)	Length (km)	Remarks
As per CA Chainage	0.000	71.400	71.400	NH-41
As per Site	0.000	71.400	71.400	NH-41

Photograph showing the start and end point of the project road are presented below:

	
A view of the Start Point of Project Road at km 0.000	**A view of the End Point of Project Road at km 71.400**

1.3 OBJECTIVE AND SCOPE OF SERVICES

The main objective of the study is to evaluate the current status of project corridor including details pertaining to identify requirements of initial repair & rehabilitation and estimate major maintenance needs and operation and maintenance costs over the concession period and provide requisite technical information for processing the acquisition of said project by client. Objective of the study can be broadly defined with following tasks:

A) Review of Project Document

- ✓ Review of DPRs/ draft CA/ Schedules pertaining to the scope of work and understand the Sch-B requirements for improvement works for the assessment of capex and Opex during the concession period.
- ✓ Review of Asbuilt drawings and Designs
- ✓ Collection of relevant records and documents and review of same
- ✓ Review of correspondences with IE, if any, on technical issues.
- ✓ Review of EPC, Operation, Maintenance and Systems Contracts
- ✓ Review of Progress Reports, if any Prepare head of terms (highlight the key commercial, technical terms of the contracts) for the reviewed Contracts - EPC, O&M, Asset Management, Operational Agreements (if any), CAs (key technical items) etc.
- ✓ Review of Asset Management Contracts to understand the maintenance of asset from the Concession agreement perspective
- ✓ Review the technical approvals / consents from IE or another agency required under the CA

B) Field Investigations

- ✓ Undertake detailed reconnaissance to appreciate the project corridor characteristics

- ✓ Undertake field investigations to collect first-hand information on present condition of project road and establish the requirements for rehabilitation and up gradation
- ✓ Carrying out inventory and condition surveys for Project Road;
- ✓ Carrying out Inventory and detailed condition surveys for bridges & cross drainage structures (along with Photographs thereof) including recommendation for either strengthening/rehabilitation or reconstruction; Identify requirements of NDT tests if any (to be executed if required and commissioned by client with separate mutually agreed payments).
- ✓ For Major Structures (length of structure>60m), detailed Visual inspection shall be undertaken with MBIU.
- ✓ Video-graphic survey of the entire Project corridor/s.
- ✓ Axle load survey for 24 Hrs in both directions of traffic at toll plaza location (7-day traffic count to be provided by client).
- ✓ Test pits required @ every 5 km interval (staggered) along the Project corridor and carrying out necessary laboratory tests to determine the CBR value of the sub grade materials.
- ✓ Carrying out deflection test by Falling Weight Deflect meter (FWD) for existing pavement as per relevant IRC code at the rate of 5 points in km in each direction making it 10 points for both directions.
- ✓ Carrying out Roughness Survey on each lane of Project Corridors using NSV.
- ✓ Availability of construction materials.
- ✓ Assess drainage adequacy: Review of available hydrological reports and assess the availability and condition of existing road side drainage along the corridors.
- ✓ The outputs of investigations are basically used to identify the strengthening requirements for project sections and also used to form the inputs for deterioration modelling.

C) Validation of Executed Works and Assessment of Improvement Works

- ✓ Validation of executed works with respect to Schedule A of the CA by physical verification at site
- ✓ Assess the present status of the projects with relevant standards and confirm that works are meeting the requirements and have been accepted by the authorities.
- ✓ Understand the scope requirements for Improvement works from the Sch-B of the CA
- ✓ Where project stretch / structures / service roads / ancillary works are pending and if not covered in the Sch-B scope of the draft CA, then assessment of details relating to land acquisition, approvals, timelines for completion, etc. along with cost forecast
- ✓ Cost estimates for any missing items and all works included in the Sch-B of the draft CA
- ✓ Make an assessment of any risks associated with already executed works

D) Quality Audit

- ✓ Review quality of construction based on available data, available design and drawings.
- ✓ Review of Quality of materials from Laboratory testing for aggregates & soil
- ✓ Check compaction and quality of subgrade material used vide test pits
- ✓ Visual inspection of bridges for any visible distress and anomalies. Identify requirements of NDT testing based on same.
- ✓ Examine Expansion joints and bridge bearings condition and assess requirements for replacements
- ✓ Shall be examining expansion joints visually to the extent possible. Shall use high binoculars/ pictures from accessible points. Shall review all photographs closely and come to a conclusion on same.
- ✓ Identify any critical issues / red flags in relation to the quality or condition of the projects; Identify any structural integrity issues that require rectification / re-mediation;

E) Rehabilitation Plans & Designs

- ✓ Check the adequacy of designs carried out for execution based on available reports
- ✓ Undertake designs for immediate rehabilitation requirements based on CA specifications using FWD data and condition assessment surveys
- ✓ Assess the requirements of rehabilitation to bridges/CD structures by structure based on visual inspections and compare with Sch-B requirements of the draft CA
- ✓ Assess the requirements including BOQ and cost estimates of repair and replacements for various elements and ancillary works

F) Major Maintenance

- ✓ Review of current maintenance system.
- ✓ Preparation of the maintenance costs to be incurred over the period of the concession keeping in mind the maintenance requirements of the Concession Agreement.
- ✓ Detailed assessment of maintenance cycles for pavements using HDM4 analysis and estimation of maintenance cost for the concession period
- ✓ To understand the current maintenance strategy for each of the project and review the BOQ to be provided by the DPR consultant for adequacy in relation to Major Maintenance work of Highways, structures, Road Furniture and other site-specific requirements as per respective CA
- ✓ Minor maintenance will be included in routine maintenance and estimated year wise based on assumed percentages based on present condition.
- ✓ Identify any impacts on revenue due to Major Maintenance.

- ✓ Maintenance requirements for approachesA/OP/Underpass forming part of CA would also be assessed.

G) Cost of Improvement Works and Operations

- ✓ Preparation of O&M cost for the concession period.
- ✓ Assess the adequacy of costs assumed in the vendor model are adequate to meet the major maintenance, stage construction and routine maintenance requirements.
- ✓ Independently develop a bottom-up forecast of Operating expenses for project, with detailed break-up of each type of operating expense, along with underlying assumptions

H) BOQ and Cost Estimates

- ✓ Preparation of BOQ & Cost for Improvement works as per Sch-B of the CA
- ✓ Preparation of BOQ and Costs for Major Maintenance
- ✓ Preparation of BOQ and cost for Routine maintenance and Route Patrolling
- ✓ Preparation of BOQ and Cost for Operations
- ✓ Preparation of year-by-year O&M cost
- ✓ The costs would be provided till the end of the concession period including any expected extension of Concession periods as informed by the Client.
- ✓ Benchmarking of costs against other similar Indian toll roads where available (using available data)
- ✓ Historical trend analysis on the maintenance program based on the existing pavement condition and review of all relevant maintenance plans/ documents of NHAI or its concessionaires or contractors.

Review and comment on the current organizational structure from an O&M perspective at each asset. Also suggest an indicative organization structure based on project / CA requirements:

1.4 DATA COLLECTION AND REVIEW

In brief, following were covered

- ✓ Review of Concession Agreement & Schedules,
- ✓ Review of Detailed Project Report prepared by NHAI
- ✓ Review of As-built drawings, Plan and profiles, Structural drawings & Detailed Project Reports and Designs where available
- ✓ Review of O&M costs as presented in DPR reports
- ✓ Review of MPR provided by NHAI
- ✓ Review of Latest NSV and FWD data provided by PIU, NHAI

1.5 KEY PROJECT DETAILS

Following Table highlights the important timelines of the existing concessionaire contract details of the project corridor at a glance:

S No.	Description	Remarks/Date
1.	Employer	National Highways Authority of India
2.	Independent Engineer	Feedback Infra Pvt Ltd w.e.f 1st March 2019
	Mode	DBFOT basis
3.	Concessionaire	M/s KM Toll Road Pvt Ltd (Terminated)
4.	EPC Contractor	Reliance Infrastructure Ltd
5.	Letter of Award	12.01.2010
6.	Date of Signing the Concession Agreement	10.03.2010
7.	Appointed Date	19.01.2011
8.	COD	07.11.2015
9.	Termination of Concessionaire by Authority	25.07.2019
10	Construction of Left Out Works (Item Rate Basis)	Contractor: M/s Shiva Build Tech and Hardik (JV)
		Commencement: 12/03/2020
		Completed: 15/12/2022
11.	Concession Period	12 years (for 4-lane) & 25 years (for 6-lane)
12.	Total Project Cost (INR-Cr.)	Rs. 953.58 Crore
13.	New Contracting Agency for O&M	M/s Laxmi Builders
13	Toll Collection Agency	A K Construction Company

1.6 O&M REQUIREMENTS

Few important O&M requirements as per schedules/manuals are described as below.

- ✓ Applicable Manual is IRC: SP:84-2019
- ✓ Applicable Schedule for O&M period is Schedule-F.
- ✓ Schedule-F, performance parameters indicate the desirable limit of Roughness values should not exceed 2000 mm/km, whereas its acceptable limits Is 2400 mm/km and needs to be corrected within 180 days. Roughness Surveys shall be carried out Bi-Annually.
- ✓ Schedule-F, performance parameters indicate the desirable limit of Pavement Condition Index (PCI) values should be above 85, whereas its acceptable limits is 70 and needs to be corrected within 180 days. Condition Surveys shall be carried out Bi-Annually.
- ✓ Schedule-F, performance parameters indicate the FWD survey shall be carried out Annually as per IRC: 115-2014 for flexible pavement and needs to be corrected within 180 days

- ✓ No specific Handing Over (Divestment) requirements are mentioned under CA. It shall be same as Schedule-F.

1.7 KEY FINDING

Few Key finding in the project road are as follows.

- DPR preparation works for 6-laning are undertaken by Authority in FY2026. Thus, Capacity augmentation for 6-lane construction works are envisaged in FY 27 & FY28 under HAM mode with 15 year concession period until FY43.
- Poor Pavement Condition: Project road exhibits poor pavement condition for 30% of aggregate length with isolated pot holes on surface. Severe Ravelling & Delamination are main contributors to pot hole formation. These distresses are found at isolated locations along the road.
- No major deformation, depressions and undulations are noticed. Indicates no major issue with inner crust. Majority of distress relates to surface and seems water stagnated locations mostly.
- Raising of LHS carriageway may be required for small length of 600m in Km 22.3-Km 22.9 To avoid ponding. Presently pavement is completely damaged in this location due low level and accumulation of water
- Median Drainage is required to be provided at several curved approaches
- Median drainage is also required at separator between MCW/SR where SR is at higher elevation
- Safety Barriers are also required to be provided at separator where Guard rail is not available
- Crash barriers on approaches to structures seem to be low height. Require to be provided with MS Pipe on top.
- MCB at substantial length damaged and requires replacement.
- Safety at Sharp Entry Exit at few locations, Requirement of improved safety measures
- Slope protection may be required at some sloped embankment approaches. Erosion of Service Road slope is also noticed at some locations. Require immediate repairs.
- Improved Cleaning and Routine Maintenance is required
- Project Road Structures exhibit several distress and appears to be rehabilitated in the recent past. Some newly constructed structures also got distress and rehabilitated.
- Design Loading used in structures may not satisfy Special Vehicle loading conditions as per present standards
- Severe loading conditions are noticed due to heavy vehicle movement on structures (Extra Large Vehicle movement due to port-based traffic)
- Old retained major/minor bridges may require further strengthening which needs to be evaluated with detailed investigations

- A few old Major bridges have Stone masonry substructure i.e. Ch: 27+497 (RHS) & 35+039 (RHS)
- Major rehabilitation in terms of CFRP laminates and warping of girders is observed on New Major bridges @ 35+039 & 42+417
- Similar major rehabilitation is observed at VUP 57+239 on the soffit of slab & inner wall
- Drainage spouts in most of the structure locations are ineffective since the unraised footpath is completely chocked. This is leading to leaching action on few slabs
- Crash Barriers for Unraised Footpaths at Grade Separators are Safety Hazards. Need to be corrected by placing crash barrier at end and removing footpath
- Major bridges at Ch: 58+795 (RHS) & 65+421 (RHS) have been provided with only Hand railing. Might have to replace with crash barrier.
- NDT is under progress and as per the preliminary findings carbonation & poor concrete quality is found on the superstructure of MJB @ 65+421, 58+759, 54+697, 42+417 & VUP @ 57+239.
- Bulging is observed in RE walls is observed at couple of locations

CHAPTER 2.SURVEYS AND INVESTIGATIONS

2.1 INTRODUCTION

The main objective of undertaking Surveys and Investigations is to appreciate the existing engineering features along the project corridor and to understand the present condition of the various elements of the project road and to prepare required inputs for various rehabilitation and maintenance strategies.

Following Survey and Investigations have been undertaken as a part of study with an objective to understand the present condition of the road and there by access the quality of construction and as well to prepare requisite rehabilitation/corrective designs where necessary.

- Road Inventory Surveys
- Pavement Condition using NSV
- FWD Surveys
- Roughness Surveys using NSV
- Pavement Composition surveys (Test Pits)
- Subgrade Investigations & Laboratory testing
- Material Investigations
- Axle Load Survey
- Structure Inventory and Condition Surveys

These surveys are performed in the month July/August,2024.

2.2 ROAD INVENTORY

The project corridor has Flexible pavement, with 7.5m wide carriageway including shyness flanked by 1.5m paved shoulder plus 0 to 2.0 m earthen shoulder on each side expect at Structure Approach locations.

In general, most of the length observed depressed median except approaches locations. in these locations median width is 4.5 to 9.0m.

The project corridor generally runs in plain to rolling terrain. The land use along the project road in the initial 12 km is of built-up sections and balance length is mostly barren and Agricultural. It passes through urban settlements like, Meghpar & Galpadar, Anjar, Khedoi, Samagoga, Maheswari nagar.

In general, road embankments are in the range of 0.5m-3.5m height. Embankment heights higher than 3.5m are observed mainly in the approaches of CD-Structures and Underpass locations.

Typical View of Project Road is shown below:

A view of the Project Road at km 0.500-LHS

A view of the Project Road at km 24.000-LHS

A view of the Project Road at km 34.000-RHS

A view of the Project Road at km 57.100

The Project Road has 81 Nos. of junctions along its length. Photographs showing the Major Junctions and minor junctions are presented below:

Major Junction at km 70.690 LHS

Minor Junction at km 33.900 RHS

Minor Junction at km 50.200 RHS

Minor Junction at km 69.200-LHS

There are 35 Nos. of High masts located near junctions and Toll Plaza locations. Highway lighting for length of 32.300 kms is observed near urban locations. Few photos showing High mast and highway lighting are presented below:

A view of High Mast Lighting at km 4.500 LHS SR

A view of Double arm Lighting at Km 6.000 RHS

A view of Double arm Lighting at Km 7.500-RHS

A view of Double arm Lighting at Km 8.900-LHS

Project Road consists of 24 Nos. of Bus bays with shelters and 01 Nos. of Bus shelter. Few photos taken at the Bus Bays and Bus Shelters are presented below:

Bus Bay with Shelter at km 20.370-LHS

Bus Shelter Damage @ Km 44.000 LHS

The Project Road has 1 No. of Toll Plaza at Km 44+630 (Mokha Toll Plaza). Rigid pavement is provided at toll plaza location and condition appears to be fair. It has 6+1 lanes on each side and in total 4 Nos. of High mast lights are provided on either side of the Toll Plaza.

A view of the Toll Plaza near km 44.630

A view of the admin building at km 44.630

A view of Weigh bridge at km 44.630

Service/slip roads are provided with varying carriageway widths from 3.5m to 9.0m with Flexible pavement for a length of 39.8 km along the Project Corridor. Photos depicting the service road pavement surface type, Condition and the other associated features like drain. Few photos taken at service/slip road locations are presented below.

Service Road 7 m width @ km 2.000 LHS

Service Road 7.0m width @ km 46.350 LHS

Service Road 7.0m width @ km 60.300 RHS

Service Road 7.0m width @ km 69.600 RHS

The collected Road Inventory Data is presented in **Appendix 1** of this Report

2.3 PAVEMENT CONDITION SURVEYS

The collected Pavement Condition Data using NSV surveys for main carriageway is presented in **Appendix 2** of this Report.

The photographs showing the pavement condition of the Project Road is presented below.

 Damaged Road @ km 2.000 LHS	 Rutting & Cracking @ km 2.850 LHS	 Delamination @ Km 5.950 RHS

2.4 FALLING WEIGHT DEFLECTOMETER (FWD) SURVEYS

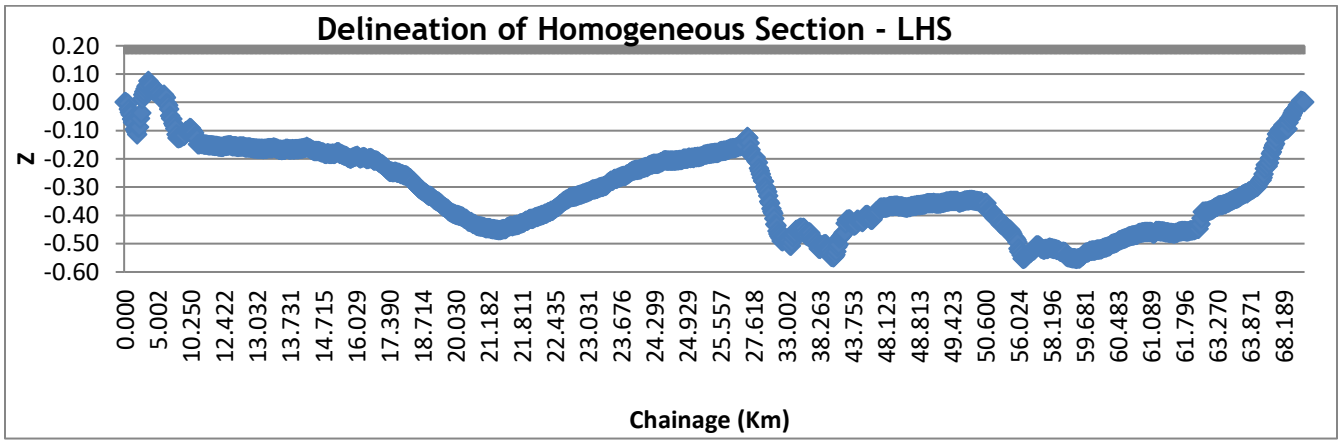
2.4.1 Falling Weight Deflectometer Survey (Flexible Pavement)

In order to evaluate the structural strength of the existing pavement, Falling Weight Deflectometer (FWD) survey has been carried out along the project road in line with IRC: 115-2014.

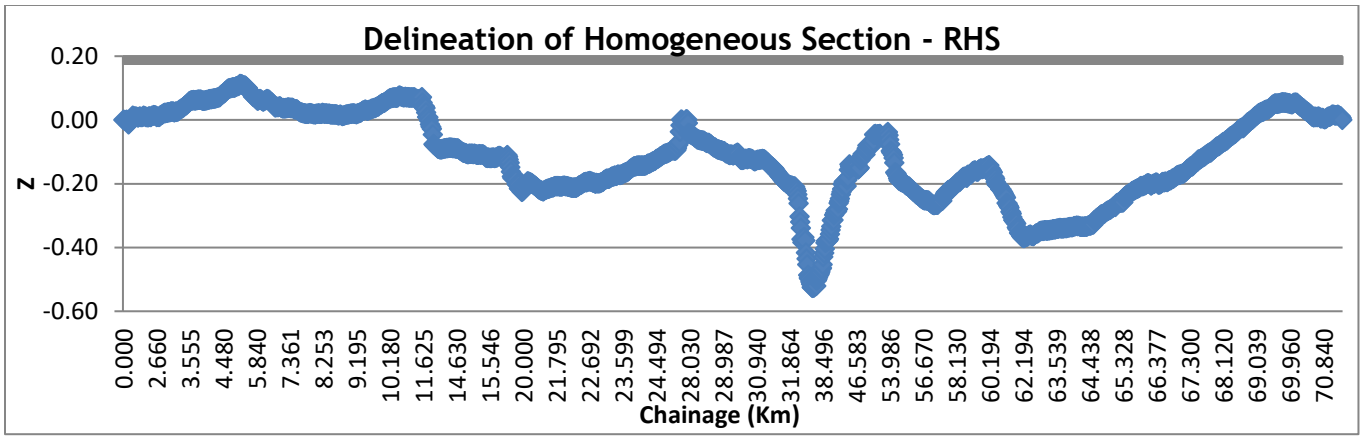
- ✓ Prior to the start the surveys, Load repeatability tests are performed on each day
- ✓ The target Peak Load of 40 KN (+/- 4 KN) is maintained during survey.
- ✓ At Regular intervals of time Pavement temperature is noted.
- ✓ For every 1 Km of stretch 5 test Points (2 pts- Outer, 3 pts-inner) were taken on Main Carriageway in each direction.
- ✓ Temperature correction equation is applied for back calculated modulus of BT and no seasonal correction factor is applied for the back calculated modulus of granular and Subgrade considering the Monsoon Season (July Month, 2024).

The collected FWD Data and Analysis is presented in **Appendix 3** of this Report.

Few photos taken during the progress of FWD Surveys are presented below:



FWD Survey in progress



Temperature checking

Cumulative Difference Approach (CDA) has been used for the identification of homogeneous sections on the basis of Surface Curvature Index (SCI). SCI is calculated as the difference between D_0 and D_{300}, where D_0 and D_{300} are the peak deflections (mm) measured at the center of loading plate and at a radial distance of 300mm

The homogenous sections in each direction of traffic (i.e., LHS & RHS) for the project stretch have been identified for Main carriageway and service Road are presented in graphical representation of followed by tables.

Delineation of Homogeneous Section - LHS

Delineation of Homogeneous Section - RHS

Based on the above graphs, the flexible pavement section has been sub-divided into homogeneous section for LHS and RHS direction as given below.

Table 2: FWD Data - Summary of Homogenous Section of Main Carriageway - LHS

Total Length			71.400	

2.5 ROUGHNESS SURVEYS

The Roughness data has been collected using **Network Survey Vehicle** and analyzed in terms of International Roughness Index (IRI), separately for each lane, for both direction of travel. Pavement Roughness data collection and computation of IRI for each km length in each direction is presented in **Appendix 4** of this Report.

As per Schedule-F of TOT, the desirable level of service for Roughness values for bituminous pavement surface is considered to less than 2000 mm/Km and the acceptable limits are less than 2400mm/Km.

Average Roughness Index (RI) values along the corridor were grouped in to four categories, Pie chart showing the range of RI values in each carriageway of the project road have been presented below:

It can be seen from the above pie charts, that about 59% in LHS & 48% in RHS of the length of the Project Road has good riding quality (RI<2000 mm/km) respectively.

2.6 PAVEMENT COMPOSITION SURVEYS (TEST PITS)

The composition of the existing pavement crust has been noted from test pit surveys. Thus, a total of 25 Nos. of pits have been dug along the corridor and its pavement composition has been noted.

Results of the test pit survey showing average thickness of pavement layers are presented in the Table below.

Table 4: Pavement Composition of Existing Pavement along Project Road

S.No	Test Pit Number	Design Chainage	Direction	BT (mm)	WMM (mm)	PQC (mm)	DLC (mm)	GSB (mm)	OLD BT (mm)	OLD WMM (mm)	OLD GSB (mm)	Total (mm)	Remarks

2.7 SUBGRADE INVESTIGATIONS & LABORATORY TESTING

Sub-grade Investigations have been carried out to examine the subgrade soil characteristics along the project road. A total 25 Nos. of test pits have been carefully dug from the pavement surface up to sub-grade level. Out of 25 Nos., 21 Nos. are done on main carriageway and remaining 03nos are done in Service Road, 01nos are done in Toll Plaza. Field density tests have been conducted for subgrade samples and a small quantity of sample has also been collected in airtight containers for

determining the field moisture content. Upon completion of the field density test, representative sample of sub-grade soil has been collected in bulk, in gunny bags from each test pit for laboratory testing.

The soil samples collected have been tested for the following properties to assess the existing sub-grade soil properties.

- Sieve analysis
- Atterberg limits
- Heavy compaction
- Four (4) days soaked CBR as per IS standards at 97% of MDD as applicable for sub-grade (Heavy Compaction)
- Free swelling index

Few sample photos of the test pit locations where the subgrade samples collected are as presented below.

2.8 BORROW AREAS

Potential borrow area identified at 8 Nos. of locations for the use of embankment/subgrade construction works within economic haulage leads. The sources identified as potential borrow areas along with certain useful information such as distance from the project road, location, village name, etc., have also been presented in this table below.

Table 5: Borrow Area Samples Details

Sl.No	Borrow Area No	Chainage	Side	Offset	Village and contact person	Area	Rate	Remarks	Co-ordinate
1	GM-BP-1	11+300	LHS	3.8 km	Village: Shinay Name: Viren Arvind jani Contact no: 9924464054 Rajeev Sorathia 9825227359	25Acre X1m (Pond)	Rate not told	Govt.Land	23.065319 70.058178
2	GM-BP-2	17+300	RHS	0.85 km	Village: Vidi Name: Vijesh Contact no: 9825596410	10 Acr X 6feet	Rs 120/tonne	Pvt.land	23.085169 69.984264

4	GM-BP-4	38+300	LHS	Road Side	Village: Chharsa Name: Pradeep Contact no: 7990270449	5 Acr X 6feet	Rs 90/tonne	Pvt.land	22.980818 69.838192
5	GM-BP-5	54+800	LHS	1.4 km	Village: Bhorara Name: Shakthi Singh Contact no: 9879471777	25 Acr X 1.5m	Rs 120/tonne	Pvt.land	22.899331 69.716067
6	GM-BP-6	65+100	RHS	0.5 km	Village: Bhujpur Name: Manek Gilva Contact no: 9426454476	15 Acr X 5feet	Rate not told	Govt.Land	22.893256 69.630272
7	GM-BP-7	71+400	RHS	2.1 km	Village: Moti kharar Name: Ratan Contact no: 9979329036	25Acre X1m (Pond)	Rs 130/tonne	Govt.Land	22.896036 69.542989
8	GM-BP-8	43+300	RHS	3.6 km	Village: kudrodi Name: Namori Bhoiya Contact no: 8758924707	30Acre X 1.5 (Pond)	Rate not told	Govt.Land	22.963803 69.795522

Soil samples from these borrow sources have been collected in bulk by excavating test pits down up to 1.0m depth from the existing ground surface. The top organic soil layer of approximately 150mm thickness was removed before sampling. The samples collected from these identified borrow pits/ gravel quarries have been tested for the suitability of utilizing them as embankment fill/ sub-grade. Few sample photos of borrow area locations are as presented below.

2.11 AXLE LOAD SURVEYS

Traffic loading has a significant impact on pavement performance and design. This is because the damage that vehicles create to a road depends very strongly on the axle loads of the vehicles. The exact relationship is influenced by the type of road structure and the way the road deteriorates but a “fourth power” damage law gives a good approximation.

Axle load study has been conducted using portable axle load pads near toll plaza at km 44+630 on date 06.08.2024 to 13.08.2024 for 7-days. The survey has been conducted in both the directions and data captured on random sampling basis. The collected axle load data and analysis is presented in **Appendix 5** of this Report. The vehicle damage factors have been calculated using the standard

axle loadings given in IRC: 37-2018. The standard axle loadings adopted have been presented in the following table.

Table 8: Details of Standard Axles Used

Axle Configuration	Standard Axle load (Tonnes)*/ KN	Remarks
Single Wheel, Single Axle	6.60/65	As per IRC 37-2018
Dual Wheel, Single Axle	8.16/80	As per IRC 37-2018
Dual Wheel, Tandem Axle group	15.10/148	As per IRC 37-2018
Dual Wheel, Tridem Axle group	22.90/224	As per IRC 37-2018

Few photographs illustrating the survey locations and axle load measurements are presented below.

Survey in Progress

Survey in Progress

Direction wise VDF for each mode of commercial traffic has been estimated. Results of axle load surveys have been presented in the following table.

Table 9: VDF Values Estimated at the Toll Plaza

Vehicle Type	Mokha Toll plaza (44+630)	
	UP	DN

LCV	1.23	1.33

CHAPTER 3. VALIDATION OF EXECUTED WORKS

3.1 ROAD WORKS

The project road has been closely inspected to verify the executed works on ground. The scope works to be executed by the Concessionaire/Contractor as envisaged in CA is compared with the executed work on the Ground. As a part of the validation, the available as-built drawings, inventory data and Detailed Reports as received from the NHAI were also referred. Each structure has been inspected to note down its structural configuration and condition. The following table highlights the scope comparison of the executed works on ground.

The project corridor appears to have been constructed with the cross-sectional elements matching to those given in the manual at the time of execution. The carriageway width of 7.0m plus paved shoulders of 1.5m and a shyness of 0.5m has been provided over the entire length except at structures. Earthen shoulders of 0m to 2.0m on either side of carriageway have also been provided.

In the project stretch, the Service/Slip Roads having 3.5m to 9.0m carriageway width with an overall both side length of 39.80 km has been observed. Location wise details of service roads and slip roads presented in **Appendix 6** are listed as below:

Table 11: Summary of Service Roads/Slip Roads along Project Road

Description	LHS			RHS			Total
	Flexible	Rigid	Earthen	Flexible	Rigid	Earthen	
Units	Kms	Kms	Kms	Kms	Kms	Kms	Kms
Service Road	19.6	0	0	20.2	0	0	39.8

RCC Lined Covered drains are provided in a length of 21.060 km at various locations the location and condition of the same are presented in **Appendix 6**. The summary of the same is tabulated below.

Table 12: Summary of Drains

Drains	LHS	RHS	Median	Total
	Kms	Kms	Kms	Kms
RCC Cover Drain	9.810	11.250	0.000	21.060
Total				21.060

High embankment locations are noticed at approaches to the Grade-separators and CD-structures locations accounting for a total length of 30.435 km. The details are presented in **Appendix 6** of this report. The summary of slope protection details are as presented in table below:

Table 13: Summary of Slope Protection

S.No	Slope Protection Type	LHS (Kms)	RHS (Kms)	Total (Kms)
1	High Soil Embankment	6.13	7.355	13.485

	Total	14.925	15.51	**30.435**

A total of 40 median openings were observed on-site, consisting of 28 normal openings and 12 with reserved lanes. Additionally, 34 unauthorized openings were noted. For median openings with a reserved lane provision, the 4.5m median width is reduced to 1.0 meter. Detailed location-wise information is provided in **Appendix 6**, and a summary of the openings is presented below

Table 14: Summary of Median Openings along Project Road

Median Openings	Total
	Nos
With Reserve lane	12
With Normal lane	28
Un-Authorized	34

The project road has a total of 91 junctions. A comprehensive list of major and minor junctions is provided in **Appendix 6** of this report.

Safety barriers have been provided along the project road at high embankments and at sharp curve locations, at approaches of grade separated and cross drainage Structures. Details of safety barriers provided along the corridor include the following.

- Single face w-barrier is observed for a length of 66.145 Kms along the project corridor. Details of Metal Beam Crash Barrier are provided in the **Appendix 6** of this report.
- Concrete crash barrier (CCB) and Concrete Railing are observed at Structure locations along the project corridor. Length of Concrete crash barrier is about 18.134 Kms and Concrete hand railing are about 0.770 kms. Provided in the **Appendix 6** of this report.
- Pedestrian Guard Rails (PGR) are observed for a length of 15.760 Kms In between service road and MCW. Details are presented in the **Appendix -6** of this report.

Table 15: Summary of Safety Barriers

Safety Barriers	Length	Missing	Damage
	Kms	m	m
CCB	18.134	20	108
Metal Handrail	-	-	-
concrete railing	0.770		-

10	65+421	MJB	RHS	MCW	Old	8 x 18.5	12	RCC Girder

In view of the extensive rehabilitation works already done, majority of the structures have various distresses viz. cracks, reinforcement exposed, leaching etc. To assess the condition of the structures, the following Non-destructive tests were conducted on selected major structures.

- Carbonation test
- Half-Cell potential test
- UPV test
- Chemical test (Acid/water soluble chlorides, Sulphates, PH, & Alkalinity)

At distress identified structure locations, NDT tests have been suggested in the structure locations as below.

Table 26: NDT Test Required Structure locations

S.no	Chainage (km)	Type of Structure	Side	Age of Str	Span Arrangement (m)	Type of Superstructure

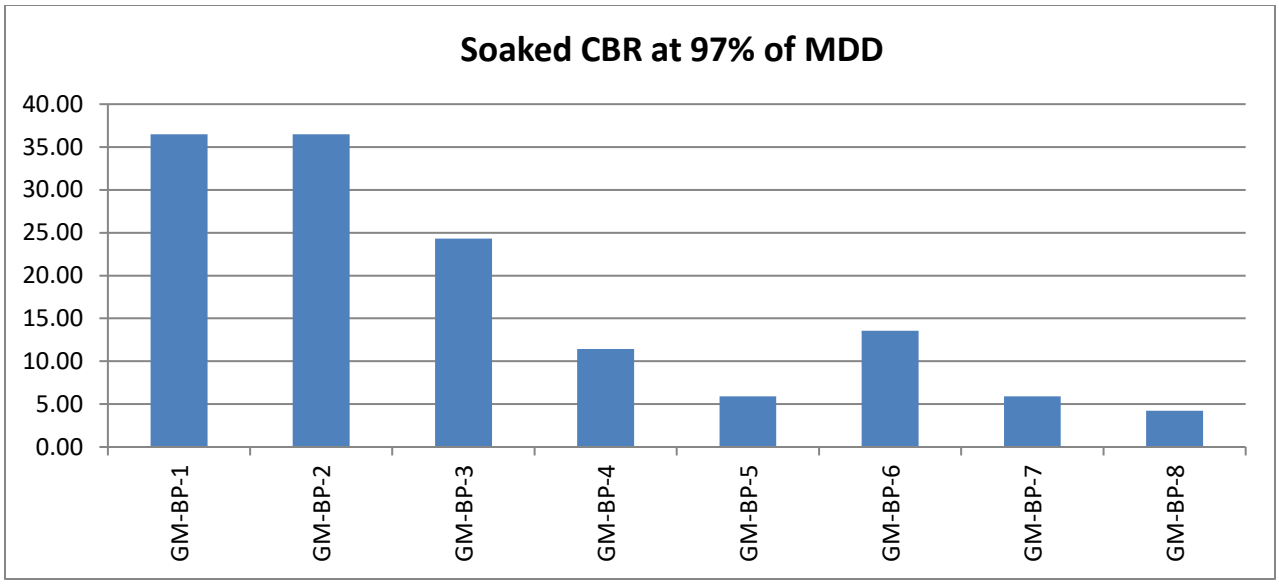
4.1 EMBANKMENT & SUBGRADE



The embankment for project road has been constructed with available soils from nearby areas. The soil appears to be Coarse grained type in nature and embankment appears to be in Fair condition over the entire length of project. No major settlements or depressions have been noted even at high embankment locations. Out of 8 samples 3 samples belongs to SC type of soil, 3 sample belongs to SM type of soil, 1 sample belongs to GM-GC type of soil and 1 sample belongs to CI type of soil.

Summary of the test results carried out on these samples are presented in the following tables whilst the complete details are presented as an **Appendix 7** of this report.

Table 27: Test Results of Borrow area Samples Details

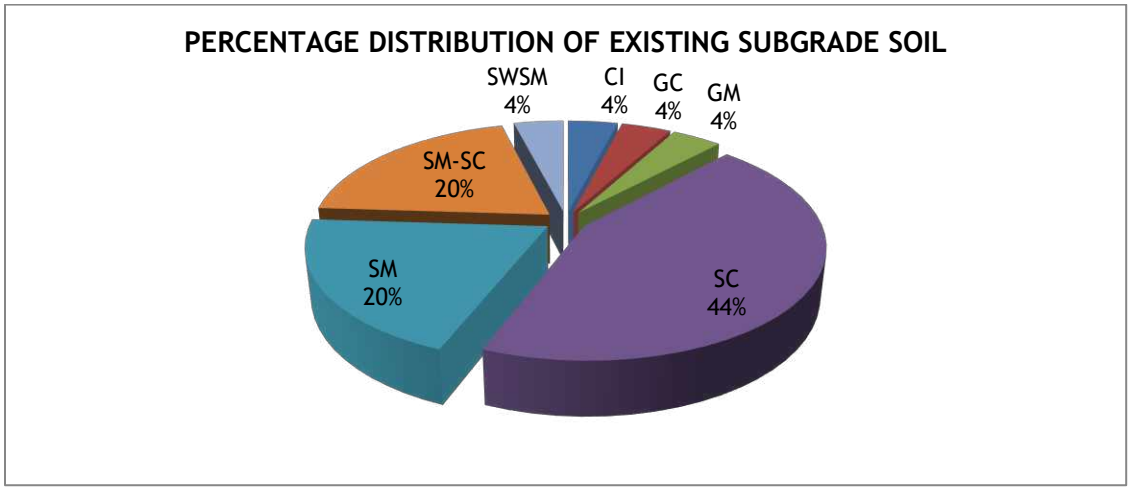
- **SUBGRADE**

The subgrade samples collected from the test pits taken from project road appears to be in fair condition as revealed by test pit investigations. Soil classification has been done according to IS Classification of Soils (ISC) as detailed in IS 1498 - 1978.

Laboratory test results indicate that majority of the Subgrade soil samples collected belongs to Coarse Grained Soil out of 25 Nos. of samples 11 Nos. of samples belongs to SC type of soil, 5 Nos. of sample belongs to SM type of soil and SM-SC type ,1 Nos of samples belongs to SW-SM, CI, GC and GM type.

Pie Chart showing the percentage distribution of soil classification of existing subgrade sample is presented below:



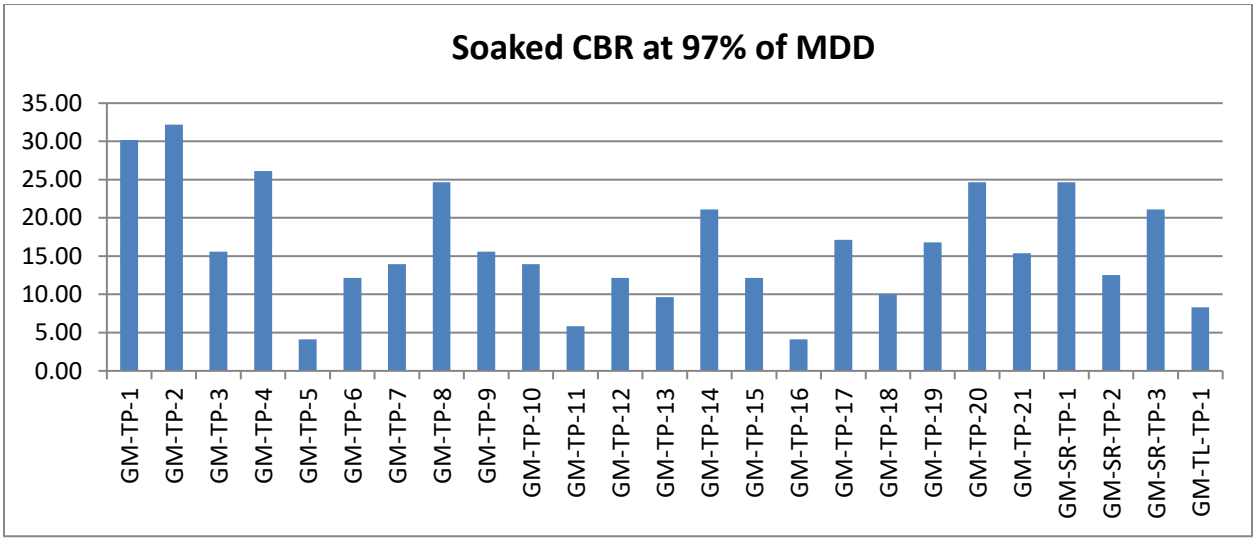


Table 28: Test results of Existing Subgrade Soils

The following observations can be made from the above test results conducted on of existing subgrade samples

- Liquid Limit are in the range of 23% to 50% satisfying LL<50% criteria except 1 sample.
- Plasticity Index are in the range of 4% to 25% satisfying PI<25 criteria except 1 sample.
- Maximum Dry Density for all subgrade samples varies between 1.65 and 2.14 gm/cc. 01 No of samples not satisfying the MDD criterion and remaining 24 Nos of samples satisfying MDD criterion (MDD>=1.75 gm/cc).
- OMC for existing subgrade samples varies in between 7.3% to 18.90%.
- Free Swelling Index for existing subgrade samples varies in between 0% to 45%. All samples satisfying the FSI criterion (FSI<=50%)
- CBR Values are varying from 4.14% to 32.21%.

Majority of Subgrade samples are satisfying the MORTH specification criteria.

Material related tests reports are provided in **Appendix-7** of this report.

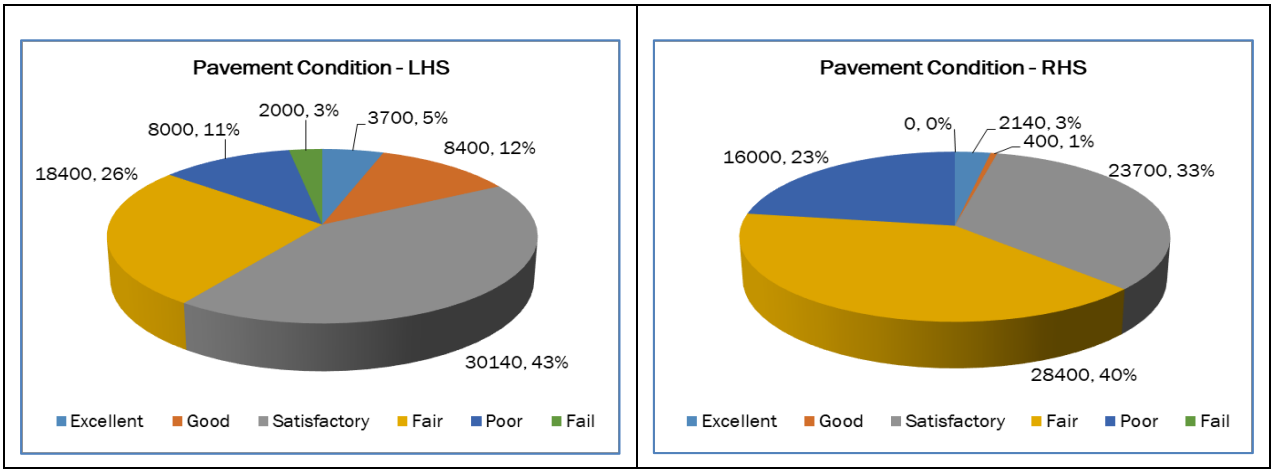
Aggregates to be used for sub-base, base, surface courses and concrete works have been collected from the crushers under operation from the existing quarries. All samples have been tested for Aggregate Impact Value (AlV), water absorption and specific gravity tests. The Tables below represents the test results of the Aggregate and Sand Samples.

Table 29: Test Results of Aggregate Samples Details

S. No	Sample	Location (km)	Up/Dn	A.I. V	Water Absorption (20MM)	Specific Gravity (20MM)
1	GM-AQ-1	15+950	LHS	12	0.15	2.72
					0.34	2.85
2	GM-AQ-2	17+300	RHS	7.00	0.55	2.92
					0.66	2.79
3	GM-AQ-3	65+300	RHS	6.00	1.52	2.85
					1.29	2.87
4	GM-AQ-4	65+300	RHS	8.00	1.69	2.88
					1.28	2.91

Note: All Aggregate samples are satisfying MoRTH requirements i.e., AIV (max. limit is 24% for BC-layer), Water Absorption (max. limit is 2%).

Table 30: Test Results of Sand Samples Details



Sl No	Sample No	CHAINAGE (KM)	SIDE	10 mm Passing %	4.75 mm Passing %	2.36 mm Passing %	1.18mm Passing %	600mm Passing %	300mm Passing %	150mm Passing %	FM	ZONE

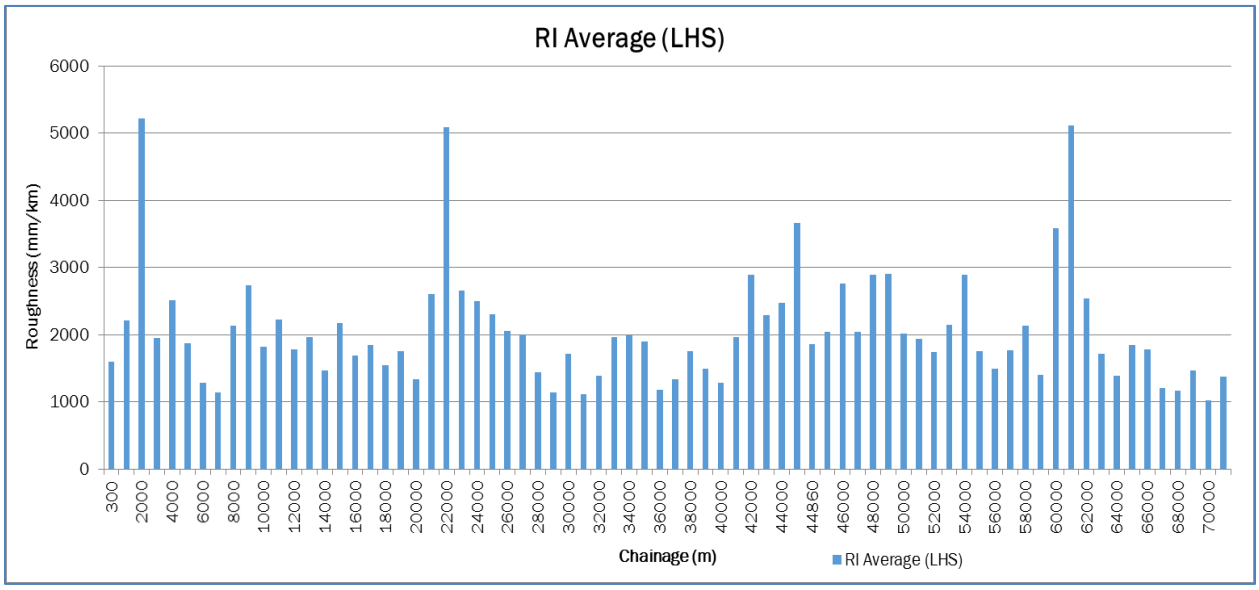
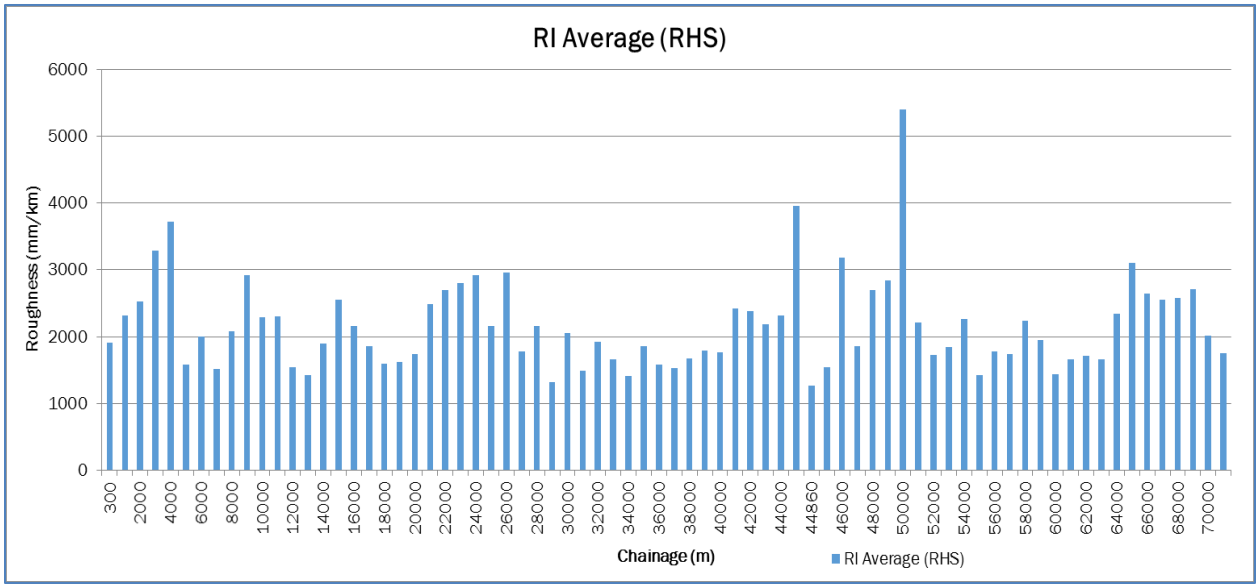
4.2 PAVEMENT CONDITION

The distresses in bituminous surface have been captured on Main carriageway for each lane separately by NSV survey. Pavement Condition rating (PCI) as per IRC:82-2023 from the data collected for each km length in each direction has been presented in the **Annexure-2** of this report.

The project corridor has been provided with flexible pavement over entire length and even on service roads also. Rigid pavement is only provided at Toll Plaza. The present surface condition appears to be fair to Poor and at isolated locations it is poor. The type of distresses observed are cracking, Raveling, Pothole, Rutting and Delamination.



The Pavement condition rating is presented in Pie-chart from Excellent to Fail are as below:



The pavement condition is observed to be poor in a length of about 10km in LHS and 16km RHS. However, the same is not considered for quantification as project stretch is going for 6-lane capacity augmentation by Authority in FY27 and FY28 under HAM mode.

4.3 ROUGHNESS

The Roughness represented in Bar charts are as presented below.

Based on the above, considering the Km-stone reference system the summary of direction-wise km lengths having varying roughness values are as presented below.

>=Roughness (mm/km)	<Roughness (mm/km)	LHS (Km)	RHS (Km)
0	2000	42240	34240
2000	2200	9000	8000
2200	2400	4000	8400
2400		15860	20460

It can be noted from the above that, the roughness values are greater than Schedule-F, specified limit of 2400mm/km for about 15.86 km length in LHS & and 20.46 km length in RHS it requires functional. Sections between 2200-2400 range may also require a roughness correction course within short period of time. Thus, it is imperative to consider roughness correction layer for such sections also. However, the same is not considered for quantification as project stretch is going for 6-lane capacity augmentation by Authority in FY27 and FY28 under HAM mode.

4.4 FWD ANALYSIS

4.4.1 FWD ANALYSIS AND ASSESSMENT OF OVERLAY REQUIREMENT

By looking at the age and condition and performance of the pavement following different set of ranges have been used while finalizing the modulus values:

Layer	Bituminous Layers	Granular Layer Modulus	Subgrade
Modulus Value (MPa)	400-1500 750-3000	100-500	50-100

Bituminous layer Moduli obtained from back calculations shall be corrected for a standard pavement temperature of 35°C using given equations. Whereas, for back calculated moduli values obtained for granular and subgrade layer shall be corrected for seasonal variations (using winter and summer equations). For this FWD results, no seasonal correction factor is applied for granular and subgrade

layer as these tests are performed in Monsoon season (July Month, 2024). The design moduli (15th percentile moduli) of in-service layers for each homogenous section are given in table below.

Table 31: Summary of Design Moduli of different layers – LHS CW

S.No	Side	From	To	Length (Km)	15th Percentile MR values		
					MR for BT (Mpa)	MR for Granular (Mpa)	MR for Subgrade (Mpa)

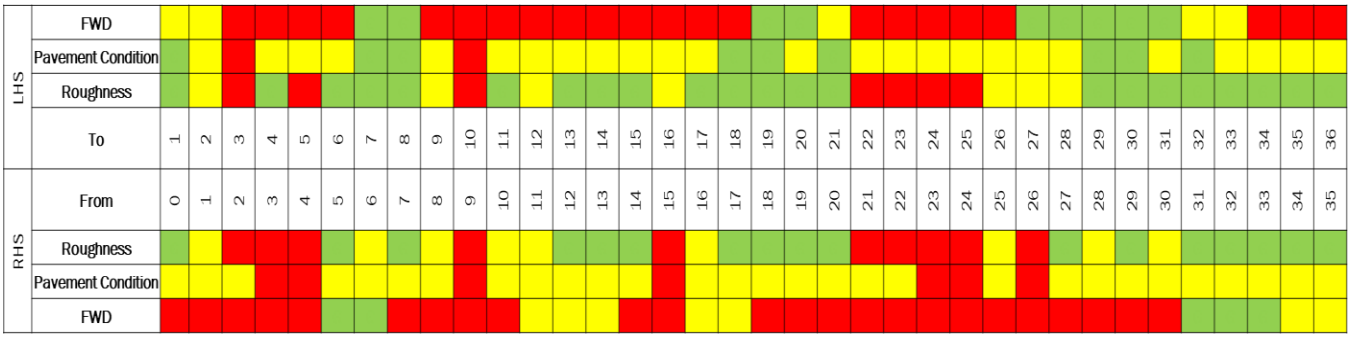
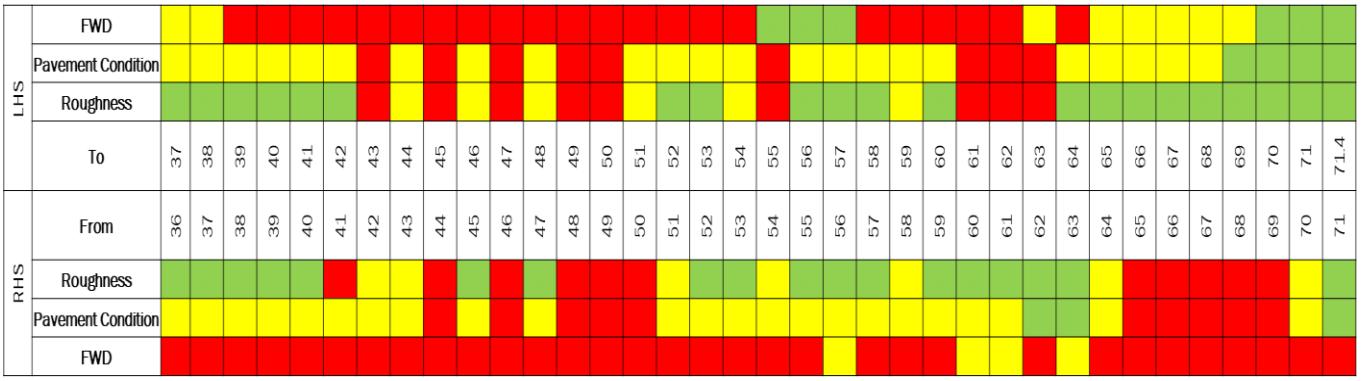
37	RHS	69.42	71.4	1.98	1182	138	100



Observations on FWD Results

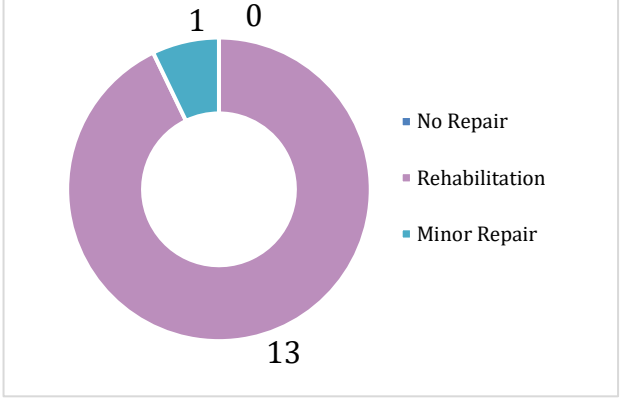


It can be noticed from the above table that the layer moduli for the three layers are varying along the length and direction. The MR value for BT layer is 3093 MPa to 451 MPa in LHS Carriageway & 2670 MPa to 453 MPa in RHS Carriageway. The MR value for Granular Layers is 489 MPa to 100 MPa in LHS Carriageway & 492 MPa to 100 MPa in RHS Carriageway. Similarly, the MR value for Subgrade Layer is 100 MPa to 97 Map in LHS Carriageway and 100 Map to 74 Map in RHS Carriageway.

4.5 PAVEMENT RATING CHART

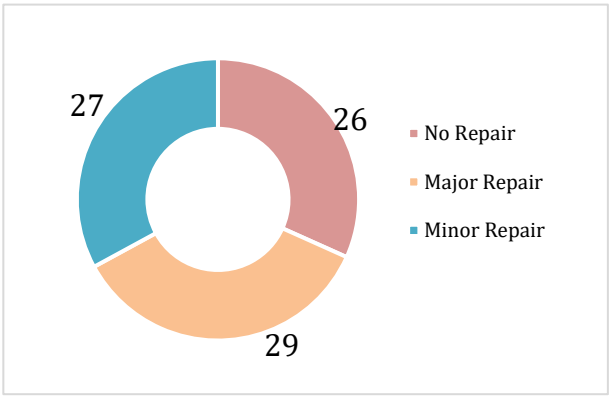
Pavement is rated for Roughness/PCI/FWD as good, fair and poor based on the following criteria along with strip-chart is presented as below:

Condition		FWD	Roughness	Pavement Condition
	Poor	OL Thk of 80mm and above	>2400 mm/Km	PCI ≤ 40
	Fair	OL Thk of 40 mm/50 mm	2000 - 2400 mm/Km	PCI of 40 to 80
	Good	No Overlay	≤ 2000 mm/Km	PCI > 80



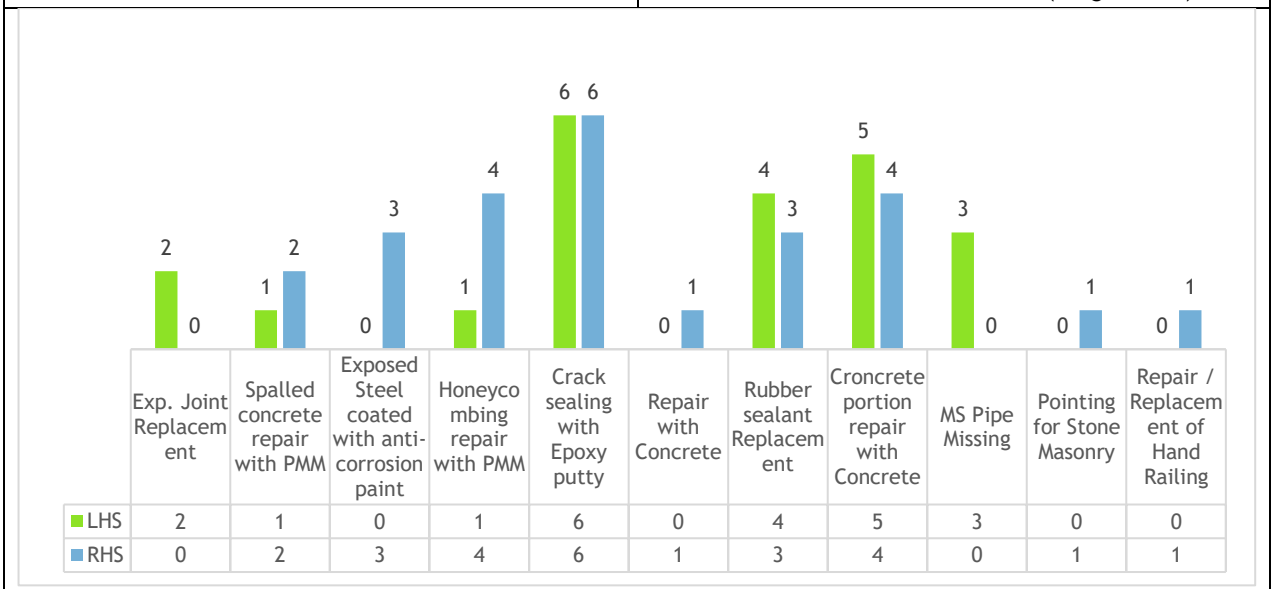
Note: No cost towards rectification of the pavement distresses is considered as project stretch is going for 6-lane capacity augmentation by Authority in FY27 and FY28 under HAM mode

4.6 STRUCTURES



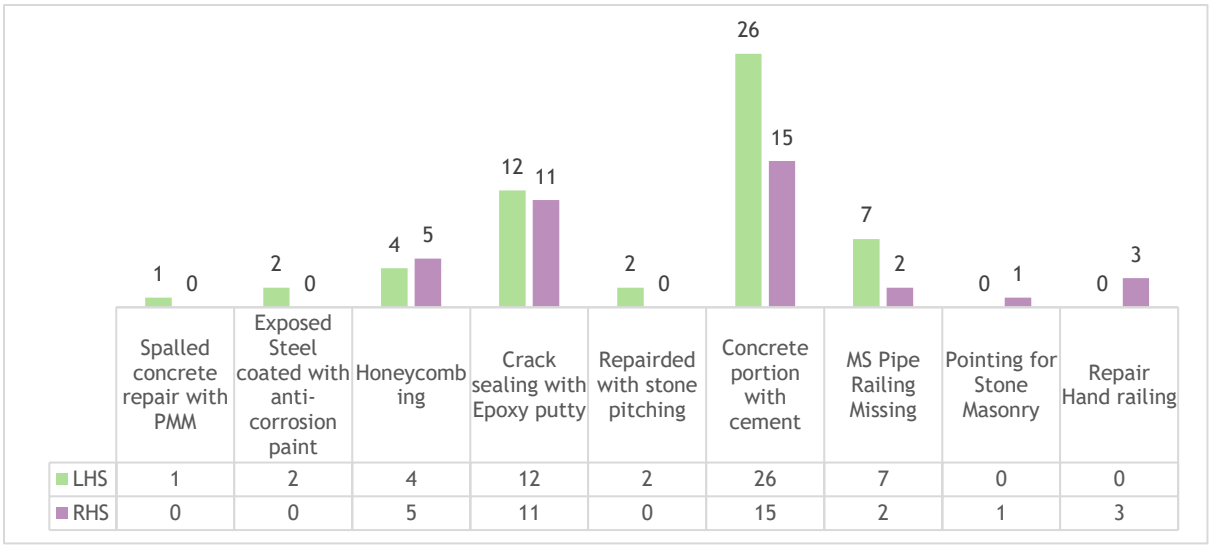
Inventory and asset condition of all the existing structures falling within project road have been verified as per IRC: SP-35 procedures and guidelines with following field surveys

- Inventory of existing highway bridges / structures
- Visual condition survey of existing highway bridges / structures



Each and every structure has been verified at site and detailed inventory and condition survey is presented in **Appendix-8** of this report.

Maintenance of major structures (Length >60m)



Maintenance of minor structures (Length <60m)

	Exp. Joint Replacement	Spalled concrete repair with PMM	Exposed Steel coated with anti-corrosion paint	Honeycombing repair with PMM	Crack sealing with Epoxy putty	Repair with Concrete	Rubber sealant Replacement	Croncrete portion repair with Concrete	MS Pipe Missing	Pointing for Stone Masonry	Repair / Replacement of Hand Railing
LHS	2	1	0	1	6	0	4	5	3	0	0
RHS	0	2	3	4	6	1	3	4	0	1	1

Type of repairs at number of locations Major structures (Length >60m)

	Spalled concrete repair with PMM	Exposed Steel coated with anti-corrosion paint	Honeycombing	Crack sealing with Epoxy putty	Repairded with stone pitching	Concrete portion with cement	MS Pipe Railing Missing	Pointing for Stone Masonry	Repair Hand railing
LHS	1	2	4	12	2	26	7	0	0
RHS	0	0	5	11	0	15	2	1	3

Type of repairs at number of locations -Minor structures (Length <60m)

Overall condition of few of the major structures are presented on sample basis of below. However, each and every structure detail are presented in **Appendix-8** of this report

Chainage: 9+950
General Description
LHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 2 x 19.3 + 1 x 32.3 m
- Total length of Structure : 70.9 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Spalling observed on Pier P2 at left side.
- Vegetation growth observed on RE wall.
- No painting for MS pipe on the stair case at A2.
- Rubber Sealant damaged on expansion joint no.1.
- Potholes are observed on Main carriageway.
- Expansion Joints are filled with debris.

Chainage: 9+950
General Description
RHS MCW (New)

- Type of Structure : ROB
- Span Arrangement : 2 x 19.3 + 1 x 32.3 m
- Total length of Structure : 70.9 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : Steel Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

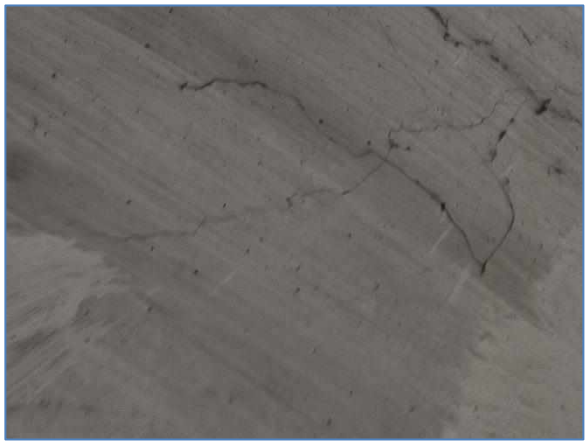
- No painting for MS pipe on the stair case at A1 & A2.
- Crash barrier Concrete portion damaged on Abutment A1.
- Potholes are observed on Main carriageway.
- Expansion Joints are filled with debris.

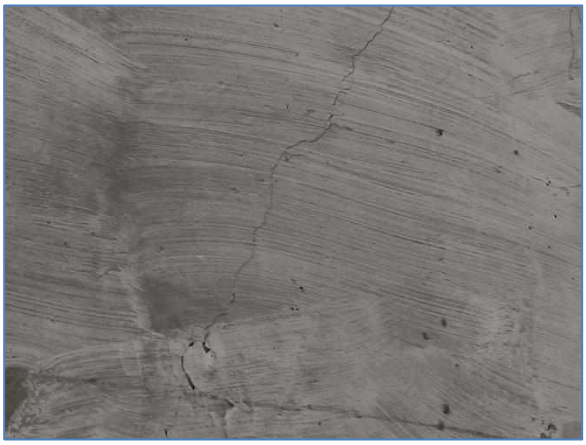
Chainage: 27+497
General Description
LHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 5 x 16 + 1 x 8 m
- Total length of Structure : 88 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : RCC Girder & RCC Slab
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:





- Crash barrier Concrete portion damaged on abutment A1 side.
- MS pipe railing pipes missing on footpath.
- Cracks observed on girder G3 bottom flange in span-1.
- Cracks observed on Girders G1 & G4 web and bottom flange in Span-1.
- Cracks observed on Girders G2, G3 & G4 web in span-3.
- Cracks observed on Girders G1, G2, G3 & G4 web in span-4.
- Cracks observed on Girders G1, G2, G3 & G4 web in span-5
- Cracks observed on Abutment A2.
- Potholes observed on main carriageway.

Chainage: 27+497
General Description
RHS MCW (Old)

- Type of Structure : MJB
- Span Arrangement : 11 x 8 m
- Total length of Structure : 88 m
- Total deck width of Structure : 8.5 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Stone Masonry Wall Type
- Type of Superstructure : RCC Slab
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Cracks observed on Pier Cap P1, P2, P3 & P4.
- Steel exposed on top slab in span-5.
- Pointing missing for the stone masonry piers in Span-4, 5, 6 & 8.
- Shotcrete done for the structures and Grouting also done for the slab.

Chainage: 35+039
General Description
LHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 5 x 16.6 m
- Total length of Structure : 83 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : RCC Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Expansion joints no.5 damaged.
- Expansion Joints are filled with debris.
- Potholes observed on main carriageway.
- Cracks observed on centre of girders web G1, G3 & bottom flange of G4 in span-1.
- Cracks observed on soffit of cantilever slab at median side in span-1.
- Cracks observed on girder G2, G3 & G4 in span-2.
- Cracks observed on soffit of deck slab between G3 & G4 in span-2.
- Cracks observed on girder G3 & G4 bottom flange in span-2.
- Cracks observed on girders G4 bottom flange in span-3.
- Cracks observed on soffit of deck slab in span-4.
- Cracks observed on girder G4 web in span-4.
- Cracks observed on girder G4 web in span-5.
- Honeycomb observed on soffit of girder G4 in span-5.
- Cracks repaired on soffit of deck slab in span all spans.
- CFRP laminates and warping for girders is observed.

Chainage: 35+039
General Description
RHS MCW (Old)

- Type of Structure : MJB
- Span Arrangement : 10 x 8.0 m
- Total length of Structure : 80 m
- Total deck width of Structure : 8.5 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : Stone Masonry Wall Type & RCC Wall type
- Type of Superstructure : RCC Slab
- Type of Bearing : Not Applicable
- Type of Railing / Crash Barrier : Crash barrier
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Crash barrier damaged at median side on span-8 & 9.
- Crash barrier Concrete portion damaged on abutment A1.
- Concrete portion damaged on Pier P1 in Span-1.
- Honeycomb and Steel exposed on Pier cap P2 in Span-2.
- Steel exposed on top slab in span-2, 4 & 5.
- Cracks observed on few Piers of P1, P3, P4, P6, P7, P8 and P9.
- Concrete portion damaged on pier cap-7 in span-8.
- Spalling observed on Soffit of deck slab in Span-8.

Chainage: 42+417
General Description
LHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 5 x 20.0 m
- Total length of Structure : 100 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : RCC Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Crash barrier Concrete portion damaged on Abutment A1 side.
- Rubber Sealant damaged on Ej-1.
- Potholes observed on main carriageway.
- All expansion joints are filled with debris.
- Crack observed on Abutment A1.
- Cracks observed on girders web G1, G2, G3 & G4 in span-1.
- Cracks observed on soffit of deck slab between G2 & G1 in span-1.
- Cracks observed on girder G3 bottom flange in span-2.
- Cracks observed on girder G4 web and bottom flange in span-2.
- Cracks observed on girder G1, G2, G3 & G4 in span-3.
- Cracks observed on soffit of deck slab between G2 & G3 in span-3.
- Cracks observed on soffit of deck slab in span-4.
- Cracks observed on girders G3 & G4 web in span-5.
- CFRP laminates and warping for girders.

Chainage: 42+417
General Description
RHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 5 x 20.0 m
- Total length of Structure : 100 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : RCC Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Crash barrier Concrete portion damaged on Abutment A1.
- Rubber Sealant damaged on EJ-2.
- All expansion joints are filled with debris.
- Potholes observed on main carriageway.
- Cracks observed on Abutment A1.
- Cracks observed on soffit of deck slab between G2, G3 and G3, G4 in span-1.
- Cracks observed on girders G1, G2, G3 & G4 web in span-1.
- Bottom of pier cap P1 Concrete portion damage in span-2.
- Crack observed on pier cap P2 in span-2.
- Cracks observed on soffit of deck slab in span-2.
- Crack observed on girder G4 web in span-2.
- Crack observed on pier cap P2 at median side and middle of pier cap in span-3.
- Cracks observed on soffit of deck slab between G2, G3 and G3, G4 in span-3.
- Cracks observed on girder G1, G2, G3 & G4 web in span-3.
- Cracks observed on bottom flange of girder G3 in span-3.
- Crack observed on cross girder between G2 & G3 in span-3.
- Crack observed on seismic arrester at median side in span-3.
- Crack observed on pier cap P4 in span-4.
- Cracks observed on girders G2, G3, G4 web in span-4.
- Cracks observed on girder G4 bottom flange in span-4.
- Cracks observed on soffit of deck slab between G2 & G3 in span-4.
- Crack observed on pier cap P4 at bridge left side in span-5.
- Crack observed on pier P4 at median side in span-5.
- Cracks observed on soffit of cantilever slab at median side in span-5.
- Cracks observed on girders G2, G3 & G4 web in span-5.

Chainage: 54+697
General Description
LHS MCW (New)

- Type of Structure : MJB
- Span Arrangement : 8 x 21 m
- Total length of Structure : 168 m
- Total deck width of Structure : 14 m
- Type of Foundation : Not visible
- Type of Substructure (Abutment & Pier) : RCC Wall type
- Type of Superstructure : RCC Girder
- Type of Bearing : Pot PTFE
- Type of Railing / Crash Barrier : Crash barrier & MS Railing
- Method of Inspection : Visual

Observations

Visual Observations on condition of the structure are as below:

- Crash barrier Concrete portion damaged on Abutment A1 left side and median side.
- Rubber Sealant damaged on Expansion joint no.2, 3, 7, & 9.
- Expansion joints damaged on Expansion joint no. 5 & 8.
- All expansion joints are clogged with debris.
- Crash barrier Concrete portion damaged on Abutment A2.
- MS pipe railing missing on footpath.
- Cracks observed on abutment A1.
- Cracks observed on girder G1, G2, G3 & G4 web in span-1.
- Cracks observed on soffit of deck slab between G3 & G4 in span-1.
- Cracks observed on soffit of all girders in span-1.
- Cracks observed on girder G1, G2, G3 & G4 web in span-2.
- Cracks observed on soffit of all girders in span-2.
- Cracks observed on girder G1, G3 & G4 web in span-3.
- Cracks observed on girder G1 & G4 web in span-4.
- Cracks observed on soffit of deck slab between G2, G3 & G3, G4 in span-4.
- Cracks observed on girder G2, G3 & G4 web in span-5.
- Cracks observed on soffit of deck slab between G2, G3 & G3, G4 in span-5.
- Cracks observed on girder G2, G3 & G4 web & G3 bottom flange in span-6.
- Cracks observed on soffit of deck slab between G2, G3 & G3, G4 in span-6.
- Cracks observed on girder G3 & G4 web in span-7.
- Cracks observed on girder G3 bottom flange in span-7.
- Cracks observed on girder G3 & G4 web in span-8.
- Cracks observed on Abutment A2.

Chainage: 54+697

❖ **Comments on NDT Tests**

- Carbonation Depth:
  - ✓ The cover is seen to have lost its efficiency in protecting the rebar. An estimate has been attempted to assess the time required for the carbonation to breach the full cover.
  - ✓ This prediction is done by applying FICKS second law.
  - ✓ As an example, the structure in which the carbonation front as progressed to the maximum extent 30mm into the cover, this suggest that, the efficiency of cover, in reducing corrosion of rebar is practically nil. In the case with 30mm carbonation depth, the time period likely during which the carbonation front is likely to reach rebar is 25 years as per FICKS second law of diffusion. It is to be kept in mind that FICKS law gives an over estimate of the time period required for the carbonation front to reach the rebar, hence the life of the cover concrete cannot be more than 25 years. Protective coating may delay the progress of carbonation front. This aspect can be seen to be true, if there is no synergistic attack of chloride and carbonation.

- **Half-Cell potential Test:**
  - ✓ The results of these tests indicate out of 27 test locations,10 locations show Low Corrosion, 6 locations show high corrosion, 9 locations show severe corrosion and another 02 locations shows it is uncertain. The results indicate that reinforcing steel is under active corrosion.

- **Ultrasonic Pulse Velocity Test:**
  - ✓ The concrete quality is suspect as reflected from the abnormally high standard deviation values. It can be said that premature deterioration values. It can be said that premature deterioration of concrete at a rapid rate is most likely.
  - ✓ The large range of UPV values support the above fact.
  - ✓ Characteristic value of concrete quality grading varies poor to excellent. In the large number of observed values, the test observations with value poor or substantially more than the observations indicating the good quality.
  - ✓ Those there is likelihood of fast deterioration of concrete parameters of strength durability and integrity.

Observations:

- ✓ The Project stretch have 45 no's of major structures, in that 1 ROB's, 6 MJB's, 22 MNB's, 13 VUP's, 2 PUP's & 1 CUP's.
- ✓ The Project Road has various types of super structure types for various structures such as Steel Girder, RCC Girder & RCC Slab, RCC Girder, RCC Slab, RCC Box.
- ✓ In this Project stretch, there are Elastomeric (Old-120 No's), Pot PTFE (New-588No's) Bearings observed in Structures.
- ✓ Structures are having 85 No's of expansion joints in that 17 No's on old structure and 68 No's on new structure.
- ✓ There are a total of 9 old bridges, with 9 no's on the right side. (5 MNB's, 4 MJB's)
- ✓ Some structures are already repaired and it would be necessary to closely examine these structures for further distress during the maintenance period/Project duration, by way of close inspection and testing.
- ✓ Debris observed on Abutment & pier cap at couple of locations, Cleaning of expansion joints, drainage spouts need to be done regularly.
- ✓ Keeping in view the Half cell potential; & carbonation test results, applying anti-carbonation paint on the concrete surface to slow down the carbonation progress may be considered.
- ✓ The UPV results indicate poor workmanship / uneven concrete surface. Regular monitoring and maintenance is required in terms of crack sealing, jacketing , etc.

Photos depicting existing Box Culverts/Slab Culverts are presented below:

Box Culvert at Km 10+940

Slab Culvert at Km 29+200

Slab Culvert at Km 34+670

Box Culvert at Km 40+361

Box Culvert at Km 47+090

Box Culvert at Km 69+488

Photos depicting existing Pipe Culverts are presented below:

Pipe Culvert at Km 2+700

Pipe Culvert at Km 18+787

Pipe Culvert at Km 23+706

Pipe Culvert at Km 30+267

Pipe Culvert at Km 36+074

Pipe Culvert at Km 38+814

4.7 DRAINAGE AND SLOPE PROTECTION

- ✓ Lined Covered drains observed at urban locations and at service road Locations along the corridor.
- ✓ No major damages observed at covered drain locations.

4.8 TRAFFIC SAFETY AND ROAD FURNITURE

- ✓ Metal beam crash barriers provided along the project road appear to be intact over entire length except for few locations where it got damaged.
- ✓ Pedestrian guard rails installed on the Separator & appear to be intact over length except for few locations where it got damaged.
- ✓ Median Opening locations appear to be in fair to Poor condition. All unauthorized Median Openings to be Closed.
- ✓ New Solar blinkers to be Provided at median openings in the entire project corridor.
- ✓ Street lightings and High masts are observed at urban locations, Toll Plaza & Junction Locations. At few locations street lightings are got damaged/ not functioning well and those items are addressed in the initial cost.

4.9 ROAD USER FACILITIES

- ✓ The Bus Bay with Shelters and truck lay byes were provided along the corridor.

CHAPTER 5. REHABILITATION PLANS AND DESIGNS

5.1 DESIGN TRAFFIC LOADING

Design Traffic loading has been estimated by considering the latest traffic numbers (FY2025) as supplied by client, VDFs as estimated from the latest axle load survey data and with 5% growth rates for 10 years, 15 years and 20 years design period as below:

Table 40: Traffic Volume (AADT)

Vehicle/Mode	Toll Plaza-1 Km 44+630 (Mokha Toll Plaza)	
	HS-1	HS-2
LCV	120	42
BUS	76	26
2A	404	141
3A	638	223
MAV	10576	3702

Note: The given AADT of 2-axle data is combination of buses and 2-axle trucks, thus, it is considered as 30% for buses and the rest for 2axle trucks.

As there is substantial amount of traffic is deviating from the Project Road from km 56.600 nearer to Mundra. Accordingly, about 35% of the traffic is considered for section-2.

Table 41: Estimated Design traffic loading

Description	Section-1 (Mokha plaza km 44+630)		Section-2 (Mundra 56+600)	
	UP	DN	UP	DN
10th year from Now	265	292	93	102
15th year from Now	455	500	159	175
20th year from Now	697	767	244	268

In view of the higher design traffic loading i.e., 20 years MSA is more than 700 MSA. Thus, it may be required to design Perpetual Pavement for capacity Augmentation it is essential to consider either:

- *Higher Grade Materials like HIPER MIXES for DBM and SMA for Wearing Course*
- *Short Slab Concrete Panels is alternative*
- *Even for Overlay it is recommended to consider HIPER Mix and SMA in place of DBM and BC*

The computation of traffic loadings is presented in **Appendix 9** of this Report. Design traffic corresponding to 10 years period has been considered for overlay design.

5.2 PAVEMENT REHABILITATION AND STRENGTHENING

5.2.1 Flexible Pavement Strengthening

For Design the Overlay Thickness the following method as suggested in IRC: 115 has been used

- The existing pavement is considered as a 3-layer system consisting of subgrade, granular and bituminous layer. The remaining life of exiting pavement in terms of Fatigue and Rutting life (MSA) are estimated
- The remaining life is compared with design traffic loading. An overlay with assumed thickness is considered on exiting pavement where required.
- The Total system including the proposed Overlay (Trial thickness) is assumed as a four-layer system and considered the relevant MR values for all the four layers namely New BT layer, existing bituminous surface, total existing Granular layers and Subgrade layers.
- The MR value for the New BT is assumed as 3000 MPA (considering VG40 Bituminous grade) for Main Carriageway and for all the remaining three layers, the MR Values derived and finalized from the FWD Analysis are considered
- Critical Tensile strains and Vertical strains are found out by using the IIT PAVE Software at the bottom of existing bituminous layer and at the top of the subgrade layer respectively.
- The Fatigue and Rutting equations (equation given in the IRC: 115) have been used to estimate the Fatigue and Rutting Life of The Pavement system.
- The Obtained Fatigue and Rutting Life are compared with the required life for the assumed trial overlay thickness.

Remaining life of the existing pavement from the above analysis is presented in the following tables:

Table 42: Remaining life of the existing pavement on LHS Carriageway

S.No	Side	From	To	Length (Km)	15th Percentile MR values			Average Existing Crust		Total Crust (mm)	Adopted MR for BT (Mpa)	Strains From IITPAVE		Remaining Life as per IRC - 115 Equations for 90% Reliability			Remarks

Total Length				**71.40**													

From the above, overlay is warranted when remaining life is lesser than Target Traffic. Accordingly, based on this criterion, an overlay is warranted for a length of 56.435 km in LHS and 66.184 km in RHS.

The overlay required sections are further analyzed as per IRC: 37 guidelines with assumed overlay thicknesses to obtain the strains (vertical and horizontal) and then fatigue and rutting life in terms of MSAs. In this process, it is to been sure that the obtained remaining life (MSA) of the existing pavement should be always more than calculated 10yrs design MSA.

However, as per schedule-B scope states that "Capacity augmentation, strengthening, and improvement of the entire project highway shall be taken up by NHAI under HAM concession and other modes. Few immediate improvement requirements shall be executed by NHAI and rest of improvement proposals as per standards and specifications will be considered under the scope of HAM concessionaire. For avoidance of doubt, the TOT/INVIT Concessionaire shall be responsible for toll collections and operations (w.e.f. Appointed Date), without attracting any financial/contractual obligation towards NHAI". **In view of the same, the above overlay requirement has not been considered** even though it is worked out as below.

The following tables indicates the proposed overlay thicknesses in LHS and RHS directions respectively.

Table 44: Design of overlay for LHS MCW

Input data used and the output from the IIT Pave software has been presented as screen shots for ready reference as **Appendix 10** of this Report.

5.3 STRUCTURAL REHABILITATION

All the structure found to be in fair condition except minor treatment like repair of stone pitching, cleaning of drainage spouts, cleaning of vegetation etc. may be required. Detailed structural rehabilitation quantities have been worked out based on the prevailing condition of existing structures. This methodology describes in detail the procedure for the execution of each item of rehabilitation work of the Existing Bridges of the project.

The scope of this methodology covers the items mentioned below for rehabilitation work of all the existing Bridges.

- Repair/ Replacement of Existing Bearings
- Repair / Replacement of Existing Expansion Joints
- Repair / Replacement of Existing Wearing Coat
- Profile Correction for Existing Deck Slab by Cement Concrete
- Sealing of Cracks for Bridges by Epoxy Resin
- Replacement of Spalled Concrete of ECW by Epoxy Mortar
- Cement Grouting for Repair of Existing Bridges
- Guniting / Shotcrete for Repair of Existing Bridges
- Providing & Fixing of Drainage Spouts
- Repair of Substructure Component
- Repair / Replacement of Railing & Crash Barrier
- Epoxy Bonding between New and Old Concrete.

CHAPTER 6. OPERATION AND MAINTENANCE

6.1 INTRODUCTION

Looking at the contractual requirements of maintaining project road under specified level of roughness it is felt that roughness is the most important criterion for finalizing the O&M schedule for the project. Accordingly, the methodology adopted by present consultants includes predicting the roughness year by year under the traffic using a well acknowledged HDM-4 model developed for developing countries like India after lot of research by World Bank. The said model is widely prescribed by MORTH and NHAI during the preparation of detailed project reports for several projects in doing economic analysis for the projects. The economic analysis mainly consists of two parts:

1. Predicting the road deterioration and estimating VOC
2. Estimating Benefits

Considering its importance and present use in India, consultants felt prudent to use the first part, i.e estimating road deterioration and predicting roughness in HDM 4 model to finalize the O&M schedule for the project. This approach is more scientific as it does not assume hypothetical deflection values at 10^{th} and 20^{th} year and includes main criterion of maintaining roughness at 2400mm/Km as per Schedule F.

6.2 CA SPECIFICATIONS FOR MAJOR MAINTENANCE

Schedule F prescribe the maintenance standards to be adopted for project. Summary of same is presented below.

- Appliable Manual: Four lane manual IRC SP 84-2019 published by IRC
- Applicable Schedule for O&M: Schedule-F and Manual
- Schedule-F, performance parameters indicate the desirable limit of Roughness values should not exceed 2000 mm/km, whereas its acceptable limits Is 2400 mm/km and needs to be corrected within 180 days. Roughness Surveys shall be carried out Bi-Annually.
- Schedule-F, performance parameters indicate the desirable limit of Pavement Condition Index (PCI) values should be above 85, whereas its acceptable limits is 70 and needs to be corrected within 180 days. Condition Surveys shall be carried out Bi-Annually.
- Schedule-F, performance parameters indicate the FWD survey shall be carried out Annually as per IRC: 115-2014 for flexible pavement and needs to be corrected within 180 days.

6.3 INPUTS FOR M&M SCHEDULE

6.3.1 Project Sections

Considering traffic scenario and structural condition (FWD), project road has been divided into two sections viz.,

Section-1: km0.000 to 56.600 (Kandla-Mundra) with 50mm Overlay
Section-2: km56.600 to 71.400 (Mundra-End of 4 Laning) with 50mm Overlay

Further, taking the consideration of roughness values as a key criterion for major maintenance four cases are as shown below:

- Case 1: Roughness value <2000 mm/Km
- Case 2: Roughness values >2000<2200 mm/Km
- Case 3: Roughness>2200<2400 mm/Km
- Case 4: Roughness>2400 mm/Km

Direction wise analysis has been done separately for LHS (UP)/RHS (DN) and each direction length has been divided into sections based on above.

6.3.2 Traffic (AADT)

The following traffic data has been used in the analysis is as below:

Vehicle/Mode	Toll Plaza-1 Km 44+630 (Mokha Toll Plaza)	
	HS-1	HS-2
LCV	120	42
BUS	76	26
2A	404	141
3A	638	223
MAV	10576	3702

Note: The given AADT of 2-axle data is combination of buses and 2-axle trucks, thus, it is considered as 30% for buses and the rest for 2axle trucks.

6.3.3 Vehicle Damage Factors (VDF)

VDF values as obtained from axle load surveys are used for various sections are as given below:

Vehicle Type	Mokha Toll plaza (44+630)	
	UP	DN
BUS	0.71	0.97
2-Axle	3.25	2.76
3-Axle	8.72	3.57
M Axle	13.24	14.94
LCV	1.23	1.33

6.3.4 HDM Inputs

FWD and Roughness values are used as obtained from surveys and investigations as below:

Section-1: From km 0 to km 56.600

Section-1 50mm OL	LHS				RHS			
	<2000	>=2000 and <2200	>=2200 and <2400	>2400	<2000	>=2000 and <2200	>=2200 and <2400	>2400

Granular Crust, mm	441	400	0	409	446	480	445	431

6.3.5 Options for MM Schedule

Based on the requirements of CA, various options have been considered to be used as responsive overlays triggered at specified level of roughness of 2400mm/km. Micro surfacing has also been considered to examine its feasibility for major maintenance.

Following options were considered in the analysis:

- ✓ Base Case: MCS at Roughness of 2400mm/Km with regular maintenance
- ✓ Opt-1: Responsive Mill & Overlay of 50mm BC whenever roughness is >2400mm/KM with regular maintenance

- ✓ Opt-2: Responsive Mill & Overlay of 100mm BC whenever roughness is >2400mm/KM with regular maintenance

6.4 ROUHGNESS PROGRESSION

Roughness progression for each section under each alternative maintenance option has been done using the deterioration models in HDM-4. Following sample graphs represents the roughness progression for each alternative:

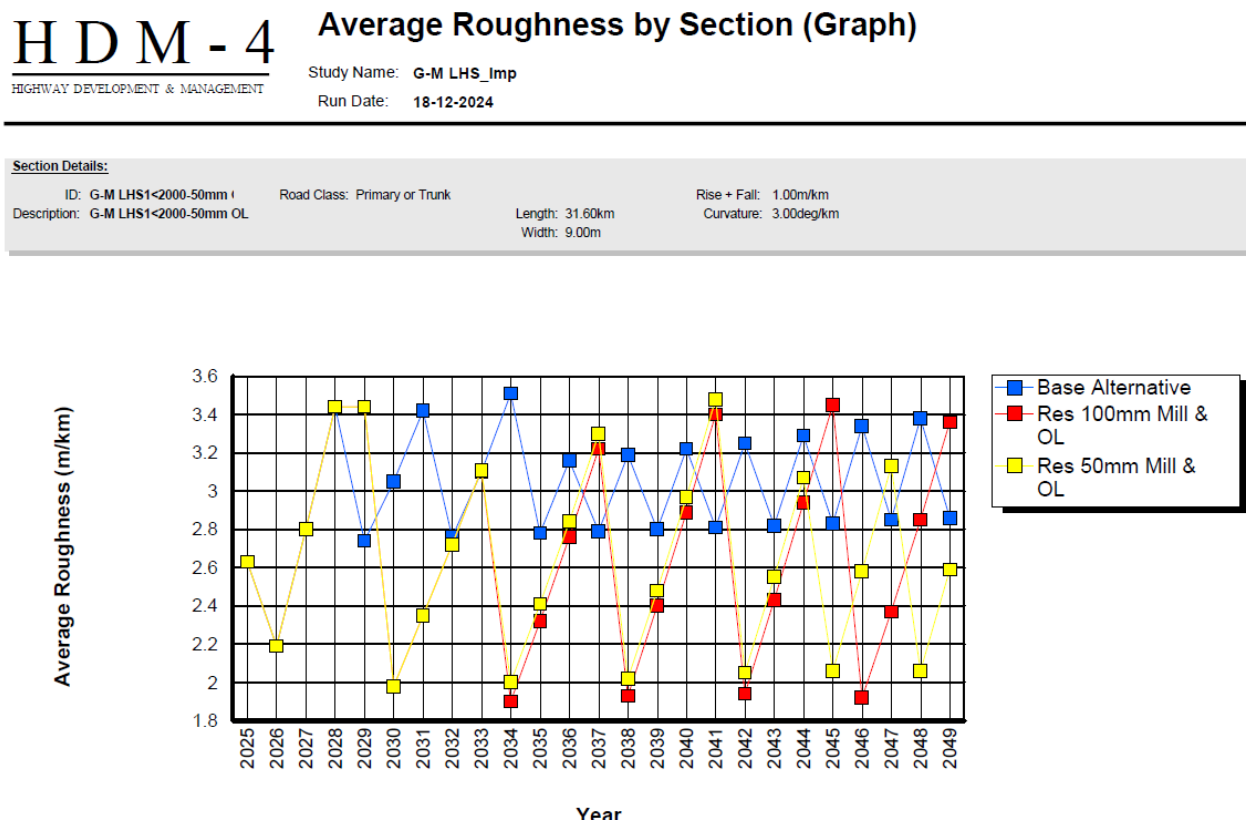

Figure 1: Average Roughness in LHS (UP) Carriageway (Sec-1) 50mm Overlay<2000

HDM-4 Average Roughness by Section (Graph)

Section Details:

ID: G-M RHS2<2000 50mm
Description: G-M RHS2<2000 50mm OL
Road Class: Primary or Trunk
Length: 6.80km
Width: 9.00m
Rise + Fall: 1.00m/km
Curvature: 3.00deg/km

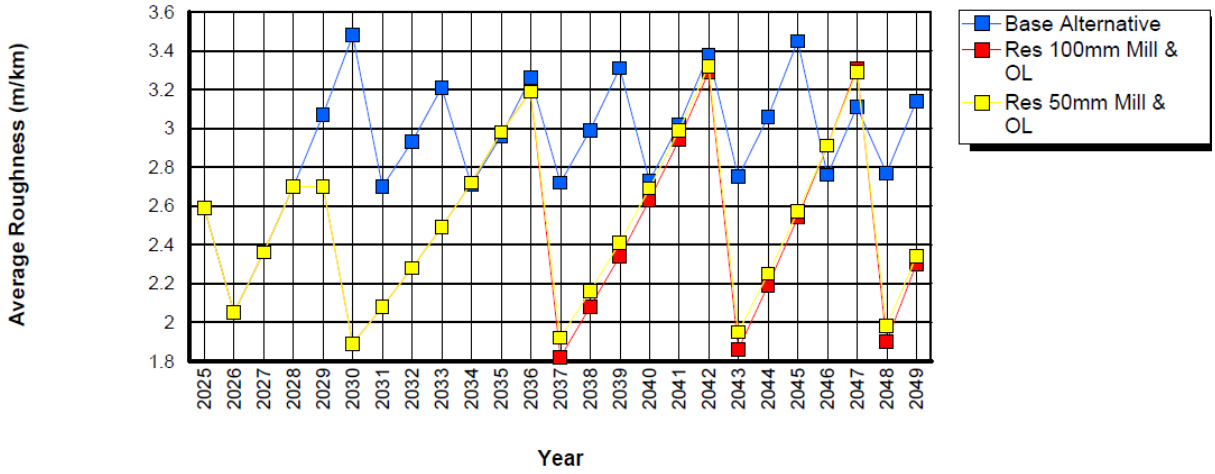

Figure 2: Average Roughness in RHS (DN) Carriageway (Sec-2) 50mm Overlay<2000

6.5 M&M SCHEDULE

Looking at the present condition, progression of traffic, capacity augmentation(6-lane) is envisaged by Authority under HAM mode in FY2027 & 28. it is felt prudent to consider the 50mm OL as the preferred option, with certain percentage of additional DBM. Adopted MM schedule for the project is as below:

2042	1	1	1	1	HAM				
2043					HAM				
2044						50 mm BC in 50% length is considered			
2045						50 mm BC in 50% length is considered			
2046									
2047	1	1	1	1					
2048									

In a nutshell, final recommendations are as summarized below.

Section	Side:	Cycle-1-
Sec-1	LHS	FY44: 50% length with 50mm BC+ 10% DBM FY45: 50% length with 50mm BC+ 10% DBM
Sec-2		FY44: 50% length with 50mm BC FY45: 50% length with 50mm BC
Sec-1	RHS	FY44: 50% length with 50mm BC+ 10% DBM FY45: 50% length with 50mm BC+ 10% DBM
Sec-2		FY44: 50% length with 50mm BC FY45: 50% length with 50mm BC

6.6 STRUCTURAL PERIODIC MAINTENANCE STRATEGY

Expansion joints:

- Visual inspection is carried out to check for seal breakages, Armor angle, Weld failures, cracks between deck & Expansion joints concrete and Joints filled with debris. Such joints replaced immediately.
- Joint buried with debris shall be inspected for any distress, if any distress is shown it shall be replays immediately.
- During visual inspection it is seen that some Expansion joints are bad where as some are not showing any defects.
- Due to this it is considered provident to change the Expansion joints which are visibly damaged in initial stage.
- In the absence of records pertaining to Expansion joint replacements it is highly difficult to predict the date of replacement needed for compliance to IRC codal requirements. Balance joints which are not replaced initially will be replaced as on when defects are shown in the joints. This aspect is considered in BOQ.

Bearings:

- In order to identify the bearings requiring immediate replacement, the following strategy is adopted.
- Girder Bridges showing diagonal cracks at support, distress in the Pedestals and any form of distress in support location is regarded as a candidate for replacement. By visual inspection there are only a handful of such situations.
- Wherever pedestals are damaged either by cracking or spalling poisons confinement is proposed by Jacketing/MS plate bonding such procedure is very effective and common.
- All Metallic Bearings need to be taken up for servicing.

Wearing Coat:

It is necessary to replace the wearing coat at every 15years interval, as wearing coat is a very weak component of the bridge structure which is subjected to severe deterioration due to loading, environment etc. As of now, we have considered sealing of cracks by Fog Seal and for which does not show any distress other than cracking by viz. Pot holes, abrading etc. Based on this aspect, this cost has been considered in highway O&M cost.

Periodic Maintenance strategy for Replacement of Bearings & Expansion joint:

Below strategy has been considered for periodic major maintenance of the structures.

S No	Description	Bridge components
1	Old structure	Retained at the time of 4/6 laning
2	New Structure	Constructed during the 4/6 laning

Age	Description	Item	structures-Assumption-MMR

			% of Replacement of Major components
			2044
New	Super structure lifting with Pot bearings	Pot	40%
New	Super structure lifting with Elastomeric bearings	Ela	54%
New	Super structure lifting with Rocker bearings	Rocker	0%
Old	Super structure lifting with Pot bearings	Pot	50%
Old	Super structure lifting with Elastomeric bearings	Ela	50%
Old	Super structure lifting with Rocker bearings	Rocker	0%
New	Pot bearing cost	Pot	40%
New	Elastomeric bearing cost	Ela	54%
New	Rocker bearing cost	0	0%
Old	Pot bearing cost	Pot	50%
Old	Elastomeric bearing cost	Ela	50%
Old	Rocker bearing cost	0	0%
New	Expansion joint Replacement	0	50%
Old	Expansion joint Replacement	0	63%
New	Others	0	50%
Old	Others	0	63%

Note:

Apart from the above Cost, prior to issuance of schedules the following additional Costs were worked out for Structures MMR Cost.

- Carbonation Depth : Based on the results Anti carbon paint for all structures proposed and which cost approx. 4.44 Cr.
- NDT: Based on the results, strengthening with CFRP laminates and wrapping for super structure are proposed. Which cost appx. 19.71 Cr.

However, all these costs are not considered as the project stretch is going for 6-lane capacity augmentation by Authority in FY27 and FY28 under HAM mode.

Cost Component for various items and activities have been worked out by considering the Best Industry practice and most appropriate methods. Detailed quantities for work items have been estimated based on the details presented in previous chapters for various heads.

The gist of the cost components considered are presented below:

- Immediate Repair's Cost
- Routine Maintenance Cost
- Incident Management Cost
- Periodic Maintenance Cost
- Operations Cost
- Year by Year total O&M Costs

7.1 RATE ANALYSIS

Detailed rate analysis has been carried out based on MORTH guidelines to arrive at the unit rates of various items. Material rates and their leads from the project corridor are considered as per the material investigations done on the project road. Summary of unit rates arrived at are presented in table below:

Table 47: Unit Rates of Basic Material

Sl.no	Description	Units	Source	Basic rate excluding Transportston & GST	Lead in Kms
1	VG-40 (CAPEX)	MT	Vadodara	50,722	519
2	VG-40 (MMR) *	MT	Vadodara	47,147	519
3	Modified-MMR	MT	Vadodara	47,147	519
4	Good earth	Cum	BA	177	6
5	40 mm	Cum	Crusher	615	19
6	20 mm	Cum	Crusher	671	19
7	12 mm	Cum	Crusher	652	19
8	6 mm	Cum	Crusher	436	19
9	Dust	Cum	Crusher	366	19
10	M sand	Cum	Crusher	720	19
11	SS1	MT	Vadodara	50,000	519
12	Steel	MT	Gandhidham	54,000	67
13	HTS Strands	MT	Gandhidham	75,000	62
14	Cement	MT	Gandhidham	7,600	67

Note: *For future asphalt pavement rehabilitation works, a normative standardized cost for Bitumen (VG-40) has been determined based on historical bitumen rates from August 2020 to December 2024

Table 48: Unit Rates of Major Material excluding GST

S.no	Item	Unit	Rate (INR) Excluding GST
1	Embankment - borrow	Cum	686
2	Embankment - Excavation	Cum	126
3	SG	Cum	706
4	GSB G-2	Cum	2365
5	WMM	Cum	2409
6	Prime Coat	Sqm	51
7	Tack coat on granular	Sqm	17
8	DBM G-1-VG-40	Cum	9832
9	Tack coat on bituminous surface	Sqm	16
10	BC - G1-VG40/CRMB-CAPEX	Cum	12,028
11	Road Marking	Sqm	593
12	RE wall	Sqm	3850
13	Select Fill	Cum	776
14	Filter Media	Cum	1245
15	HYSD	MT	79577
16	HT strand	MT	155854
17	CTSB	Cu.m	3132
18	CTB	Cu.m	3521
19	PQC	Cu.m	8588
20	DLC	Cu.m	4484
21	BC - G1-VG40/ CRMB-MMR	Cu.m	11488

Note: Item Rates are considered for Small Projects.

Labour: Central Minimum Wages as on Oct'2024 for "C Area" Category for construction workers.

7.2 Initial improvement works (SCHEDULE-B)

Costs associated with initial improvements are estimated based on the detailed asset inventory and condition assessment surveys, Pavement condition and structural condition assessment surveys. Items which are not executed as part of scope or in damaged condition have been considered for immediate costs as a part of 1-year capex. Following items are mainly considered for Initial Improvement costs:

- Scope given in schedule-B
- Scope which is not executed
- Road work items
- Bridge Work Items
- Pavement Rehabilitation works
- Structural Rehabilitation works
- Drainage Works
- Slope Protection works
- Safety Works

However, considering capacity augmentation following items are worked out as below.

Table 49: CAPEX Cost FY26

S.no	Description	Unit	Amount (Rs.)
1	TMS	LS	4,24,31,721
2	Toll plaza renovation cost including replacement of Office Furniture, all building, Canopy, all misc. items etc.	LS	2,50,35,073
3	Initial Capex for emergency repair works during monsoon	LS	12,70,00,000
Total			19,44,66,794
Total including GST @18%			22,94,70,816
Total EPC Cost including GST in Crores			22.95

Note: The TMS cost arrived are based quotes obtained by NHIT, from different vendors such as Comvision, Devaditya and Efkon.

The cost considered in MMR in the year FY2044 under Flexible Road works.

S.no	Description	Unit	Amount (Rs.)
1	Revalidation surveys	LS	72,46,625
Total including GST @18%			85,51,018
Total EPC Cost including GST in Crores			0.86

7.3 ROUTINE MAINTENANCE & INCIDENT MANAGEMENT COSTS

Routine maintenance costs include general maintenance costs of road elements, bridge elements and road furniture and appurtenances. This can be mainly divided into two parts as:

- ✓ General Maintenance of Works
- ✓ Repairs to Highway & Bridge Elements

7.3.1 General Routine Maintenance

General Routine Maintenance of Roads generally include following items:

- Cleaning of Project facilities
- Structures cleaning,
- Cleaning of ROW
- Cleaning and Maintenance of Toll Plaza
- Unlined Drain Maintenance
- Lined Drain Maintenance
- Maintenance of Highway Lighting at Toll Plaza and other project locations
- Median Plantation maintenance & Avenue plantation maintenance:
- Maintenance of Road Furniture
- Maintenance of Road Safety Items

The above items are estimated by considering the detailed break-up of following items:

- Manpower including Managers/Labour etc.
- Vehicles for Labour Transport/Water Tankers/Sweeping Machines etc.
- Resources/Equipment's such as grass cutters, tools, jet sprayers, hydraulic trimmers etc.

7.3.2 Repairs to Highway & Bridge Works

Repairs to highway and bridge works have been estimated based on the assumed quantities (Percentage basis) of execution for every year.

These items include the following:

1	Providing treatment for sealing of road surface / isolated cracks at scattered locations
	i) Covered with 6.7 mm size stone chipping @ 0.1 cum/ 10 sqm.
	ii) covered with dry coarse sand passing through 2.36 mm sieve and retained on 180 micron sieve @ 0.03 cum/10 sqm heated to 600 C
	iii) filling discrete cracks with slow curing bitumen emulsion as per Technical Specification Clause 3004.3.3
2	Providing treatment to bleeding bituminous surface at scattered locations
3	Providing localized repair to rutted portion and edge breaking of bituminous surface
4	Providing treatment and repair to pot-holes and patch work
5	Providing and laying dense bituminous macadam using bitumen grade VG 40 complete as per Technical Specification Clause 507
6	Proving and laying bituminous concrete (asphaltic concrete)
	(a) Using bitumen (VG-40) as per IRC: SP: 53
7	Road Roughness survey
8	Turfing on embankment slopes and at all other Project Facilities
9	Providing repair to stone pitching/apron at scattered locations
10	Rain Cuts Maintenance: Restoration of rain cuts soil, moorum, gravel or a mixture of these
11	Providing and laying apron/ stone pitching on slopes of guide bunds/ road embankment / other location
12	Providing and laying stone aggregate filter material (150 mm compacted thickness) underneath pitching
13	Unlined drain
14	Filling in median island with approved materials with all leads and lifts complete as per TS Clause No. 407
15	Replacing damaged / broken railing with new pre-cast / cast-in-situ, concrete railing to match with existing design and pattern.
24	Carrying out repair to road signs including strengthening resetting or otherwise repairing signs and delineators
	a) Road sign board mounted on single post
	b) Road sign board mounted on double post
	c) Overhead/ Gantry Sign boards
	d) Delineator
25	Supplying and fixing at site retro-reflectorized type **sign boards/signs**
	90cm Equilateral triangle
	60cm circular
	90 cm circular
	90cm high octagon

	80cm x 60cm rectangle
	Chevron signs 60cm x 45cm
	Place identification signs (Fig 15.7 of IRC 67)
	Providing and fixing Object Markers
	Providing and fixing of retro-reflectorized Route Marker signs (size 450mm x 600mm)
26	**Hazard Marker Sign :**
	a) size 90 x 30 cm
	b) size 30cm triangular side cluster of red reflectors (screen printed)
27	Cats Eyes/Raised pavement marker (NMC Nails Less)
28	Painting two coats on old surface after minor repairs to give an even and smooth surface and printing letters and figures with synthetic enamel paint
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
29	Providing painting lettering and fixing of distance measurement stones including dismantling of old damaged/ broken ones, confirming to TS Clause 804
	a) Hectometer stones
	b) Kilometer Stone
	c) 5 Kilometer stone
	d) Boundary stone
	e) Guard stone
30	Providing and fixing road delineators conforming to TS Clause No. 805 as directed by the Engineer.
31	Repainting the kerb stones and separation barrier with first quality synthetic enamel paint of approved brand
32	Painting all types of pavement markings including lines, dashes, arrows etc. on roads as per relevant IRC/MOST standards after cleaning the surface complete in all respects as directed by the Engineer.
	a) Hot applied Thermoplastic compound
	(i) Lane / Centre Line / Edge Line
	(ii) Direction Arrows
	(iii) Diagonal Chevrons Markings
33	Supplying and laying cast-in-situ cement concrete kerb without channel section
	a) by Manual/machine including formwork
34	Major repair / replacement of metal beam crash barrier (W profile guard rails)
35	Providing and fixing chain link/ welded mesh fencing / square bars fencing
36	Dismantling the old damaged chain link/welded mesh / square bars fencing and replacing it with new chain link/ welded mesh/square bars fencing
37	Provision of rumble strips
38	Shoulder Maintenance:
39	synthetic enamel paint of approved brand on metal pedestrian guard rail
40	Dismantling of wearing course

B. Structures

1. Wearing coat comprising of 50 mm thick BC.
2. Cleaning and adding rubber sealant near expansion joints.
3. Modular Expansion joints.
4. Replacement of Damaged Concrete Railing all complete as per Technical specifications and as directed by the Engineer
5. Provision of an RCC crash barrier (0.35sqm cross sectional area) constructed with M-40 grade concrete including reinforcement
6. Cleaning of rocker & roller bearing using high pressure water jet, free from rust scales, re-setting & greasing the bearings using graphite grease including cost of materials, labour etc., complete.
7. POT PTF Bearings greasing and maintaining (sand plastering).
8. Elastomeric Bearings and maintaining.
9. Cutting of groove of 15 mm x 15 mm along crack and sealing the same with epoxy putty including cost of material, labour etc.
10. Carrying out 50 to 60 mm thick shortsheeting using a mix proportion of 1:2:2 (cement: sand:6 mm down aggregate) added with Polypropylene fibers at a dosage rate of 125 gms/bag of cement including cost of labour, material, scaffolding, equipment etc complete.
11. Repair of Floor Aprons, pitching and other protection works
12. Cleaning of Drainage Spouts
13. M-25 Concrete

7.3.3 Incident Management Cost

Incident Management & Safety items include the following:

- ✓ ATMS control room operations,
- ✓ Regular patrolling & reaching accident/incident site,
- ✓ providing relief to injured persons including taking them to nearest hospital and attending to the safety requirements at the location (putting cones, safely guide & manage the traffic using signs, safety barricades, etc.),
- ✓ removal of accident /breakdown vehicles, removing of dead animals/birds lying on the highway and loading, unloading, transportation & disposal of surplus material left over by accidental vehicle or otherwise lying on road (on carriageway) and
- ✓ Encroachment prevention & removal with all lead & lifts complete with proper communication equipment,
- ✓ consumables, materials, suitable Towing vehicles, Ambulance, patrolling vehicles and manpower like drivers, helpers, para-medical staff, labour including deployment of crane and all works shall be done as per requirement and as directed by Client representative and as per Relevant Specifications as applicable.

7.4 OPERATIONS COSTS

In addition to the above-mentioned General Routine maintenance, Repair & Rehabilitation cost for Road and structures, Incident management cost the following the Cost towards Operations include:

- Electricity Charges
- Toll Plaza Operation cost
- Insurance Charges
- Road Asset Management System (RAMS), Bridge Management System (BMS) & Surveys
- Other Office Expense (Admin, SPV, IE and Other)

Table 50: O&M Cost for various Years in Crores (including GST)

FY	Operation & Maintenance Cost (in INR Cr.)								
	Routine Maintenance	R&R of Road and Structure	ATMS AMC	Incident Management	Electricity of Highway Lighting	Toll Plaza Operation	Insurance	RAMS, BMS & Survey	Other Office Expense (Admin, SPV, IE and Other)
2025-2026	0.60	-	-	-	-	5.78	0.13	-	3.53
2026-2027	0.60	-	-	-	-	5.78	0.13	-	4.13
2027-2028	0.60	-	-	-	-	5.78	0.13	-	4.22
2028-2029	0.60	-	-	-	-	7.15	0.17	-	4.15
2029-2030	0.60	-	-	-	-	7.15	0.17	-	4.22
2030-2031	0.60	-	-	-	-	6.65	0.17	-	4.23
2031-2032	0.60	-	-	-	-	6.15	0.17	-	4.13
2032-2033	0.60	-	-	-	-	5.90	0.17	-	4.74
2033-2034	0.60	-	-	-	-	5.90	0.17	-	4.37
2034-2035	0.60	-	-	-	-	5.90	0.17	-	4.24
2035-2036	0.60	-	-	-	-	5.90	0.17	-	4.32
2036-2037	0.60	-	-	-	-	5.90	0.17	-	4.37
2037-2038	0.60	-	-	-	-	5.90	0.17	-	4.44
2038-2039	0.60	-	-	-	-	5.90	0.17	-	4.33
2039-2040	0.60	-	-	-	-	5.90	0.17	-	4.98
2040-2041	0.60	-	-	-	-	5.90	0.17	-	4.53
2041-2042	0.60	-	-	-	-	5.90	0.17	-	4.66
2042-2043	0.60	-	-	-	-	5.90	0.17	-	4.60
2043-2044	5.43	5.58	2.95	5.01	2.09	5.90	4.11	2.60	5.70
2044-2045	5.43	5.58	2.95	5.01	2.09	5.90	4.11	1.84	5.70
Total	**21.58**	**11.16**	**5.90**	**10.02**	**4.18**	**121.22**	**11.19**	**4.43**	**89.58**

Note:

1) The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation.

2) All other remaining costs are based on FY 2025 with GST and without escalation.

3) The amount is Crores inclusive of GST and without escalation,

7.5 PERIODIC MAINTENANCE COSTS

Cost towards major maintenance include following:

- ✓ Cost of Periodic maintenance of Pavement based on Finalized MM schedule
- ✓ Cost of Periodic Maintenance of Structures
- ✓ Cost of Periodic replacement of Toll Equipment's & Software

Table 51: Major Maintenance Cost

Year	Road (MCW, SR, Toll Plaza)	Structure	ATMS	TMS
2025-2026				
2026-2027	-	-	-	-
2027-2028	-	-	-	-
2028-2029	-	-	-	-
2029-2030	-	-	-	-
2030-2031	-	-	-	-
2031-2032	-	-	-	3.00
2032-2033	-	-	-	-
2033-2034	-	-	-	-
2034-2035	-	-	-	-
2035-2036	-	-	-	-
2036-2037	-	-	-	-
2037-2038	-	-	-	-
2038-2039	-	-	-	6.00
2039-2040	-	-	-	-
2040-2041	-	-	-	-
2041-2042	-	-	-	-
2042-2043	-	-	-	-
2043-2044	79.05	10.58	15.01	-
2044-2045	76.28	-	-	-
Total	**155.33**	**10.58**	**15.01**	**9.00**

Note: The amount is Crores inclusive of GST and without escalation, considering FY2025 rates

7.6 CAPACITY AUGMENTATION

The capacity augmentation is envisaged in FY 2027& FY2028 for the project on HAM mode with concession period of 15 years until FY2043.

- Only one cycle of MMR has been considered in FY2044 and the same is distributed in two years i.e., 50% length in in FY 2044 and 50% length in in FY 2045 with 50mm BC and 50mm DBM in 10% for section-1 and for section-2 no DBM is considered for MCW and for Service Road 30mm BC is considered.
- Even though Structural and Functional Overlay requirement are envisaged based on the performed tests and the same is not considered as the capacity augmentation HAM Concessionaire will maintain until FY2043.
- The 6-lane capacity augmentation is envisaged in FY 2027& FY2028 and works will be executed on HAM basis with 15 years of concession period until FY2043.
- Minimum Central Wages for labour is considered for Category "C" as of OCt'2024 with 0% escalation considered.
- Overheads and Contractor's profits are considered from MORTH Standard data book -2019 for "Small Project" category.
- The costs for Other Office Expense (Admin, SPV, IE, and other) are based on FY 2026 with GST and without escalation. Whereas, all other remaining costs are based on FY 2025 with GST and without escalation. The Cost is given in Crores inclusive of GST and without escalation, considering FY2025

INDEPENDENT AUDITOR'S REVIEW REPORT ON THE UNAUDITED CONSOLIDATED INTERIM FINANCIAL INFORMATION OF THE TRUST FOR THE QUARTER AND NINE MONTH ENDED ON 31ST DECEMBER, 2024 PURSUANT TO THE. REGULATION 23 OF THE SECURITIES AND EXCHANGE BOARD OF INDIA (INFRASTRUCTURE INVESTMENT TRUSTS) REGULATIONS, 2014 AS AMENDED

To,
The Board of Directors
National Highways Infra Investment Managers Private Limited
(Investment Manager of National Highways Infra Trust)
G-5 & 6, Sector-10,
Dwarka, Delhi - 110075

1. We have reviewed the accompanying Statement of Unaudited Consolidated Interim financial Information of National Highways Infra Trust (the 'Trust') and its subsidiaries (together referred to as "the Group") (consisting of Unaudited Consolidated Interim Balance Sheet, Unaudited Consolidated Interim Statement of profit and loss (Including Other Comprehensive Income), Cash Flow Statement and other explanatory notes thereto including Net Distributable Cash Flows (NDCFs) and the additional disclosures as required in chapter 4 of the SEBI Circular No. SEBI/HO/DDHS-PoD-2/P/CIR/2024/44 dated May 15, 2024 ("SEBI Circular" for the quarter and Nine Month ended 31.12.2024 (hereinafter referred to as "the Statement") attached herewith, being prepared by National Highways Infra Investment Managers Private Limited (the 'Investment Manager') pursuant to the requirements of Regulation 23 of the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended, read with the SEBI Circular.

2. The Statement which is the responsibility of the Investment Manager and has been approved by the Board of Directors of the Investment Manager, has been prepared in accordance with the recognition and measurement principles laid down in Indian Accounting Standard 34, "Interim Financial Reporting" prescribed under Section 133 of the Companies Act, 2013 as amended, read with Rule 2(1)(a) of Companies (Indian Accounting Standards) Rules, 2015, as amended, read with the SEBI Circular and other accounting principles generally accepted in India. Our responsibility is to express a conclusion on the Statement based on our review.

3. We conducted our review of the Statement in accordance with the Standard on Review Engagements (SRE) 2410, "Review of Interim Financial Information Performed by the Independent Auditor of the Entity" issued by the Institute of Chartered Accountants of India. This standard requires that we plan and perform the review to obtain moderate assurance as to whether the Statement is free of

material misstatement. A review of interim financial information consists of making inquiries, primarily of Investment manager personnel responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

4. The Statement includes the results of the National Highways Infra Trust and the following subsidiaries:

   a. NHIT Western Projects Private Limited
   b. NHIT Eastern Projects Private Limited

5. Based on our review conducted as above, nothing has come to our attention that causes us to believe that the accompanying Statement, prepared in accordance with the recognition and measurement principles laid down in the applicable Indian Accounting Standards ('Ind AS') specified under section 133 of the Companies Act, 2013, as amended, read with Rule 2(1)(a) of the Companies (Indian Accounting Standards) Rules, 2015, as amended, and other accounting principles generally accepted in India has not disclosed the information required to be disclosed in terms of Regulation 23 of the Securities and Exchange Board of India (Infrastructure Investment Trusts) Regulations, 2014 as amended, read with the SEBI Circular, including the manner in which it is to be disclosed, or that it contains any material misstatement.

Statement of Net Distributable Cash Flow for Nine Month ended December 31, 2024

Additional disclosures as required by paragraph 6 of chapter 4 to the SEBI Master Circular No.SEBI/HO/DDHS-PoD-2/P/CIR/2024/44 dated May 15, 2024

a) Statement of Net Distributable Cash Flows (NDCF) at Trust Level (NHIT)

(All amounts are in ₹ lakh unless otherwise stated)

S.No.	Particulars	Amount
1	**Cashflows from operating activities of the Trust**	(2,967.96)
2	(+) Cash flows received from SPV's / Investment entities which represent distributions of NDCF computed as per relevant framework (Refer Notes Below)	1,61,846.00
3	(+) Treasury income / income from investing activities of the Trust (interest income received from FD, any investment entities as defined in Regulation 18(5), tax refund, any other income in the nature of interest, profit on sale of Mutual funds, investments, assets etc., dividend income etc., excluding any Ind AS adjustments)	1,098.74
4	(+) Proceeds from sale of infrastructure / real estate investments, infrastructure / real estate assets or shares of SPVs/Holdcos or Investment Entity adjusted for the following	-
	• Applicable capital gains and other taxes	-
	• Related debts settled or due to be settled from sale proceeds	-
	• Directly attributable transaction costs	-
	• Proceeds reinvested or planned to be reinvested as per Regulation 18(16)(d) of REIT Regulations or Regulation 18(7) of InvIT Regulations or any other relevant provisions of the REIT/InvIT Regulations	-
5	(+) Proceeds from sale of infrastructure / real estate investments, infrastructure / real estate assets or sale of shares of SPVs/ Hold cos or Investment Entity not distributed pursuant to an earlier plan to re-invest as per Regulation 18(16)(d) of REIT Regulations or Regulation 18(7) of InvIT Regulations or any other relevant provisions of the REIT/InvIT Regulations, if such proceeds are not intended to be invested subsequently	-
6	(-) Finance cost on Borrowings, excluding amortisation of any transaction costs, recognized in Profit and Loss account of the Trust	(72,806.74)
7	(-) Debt repayment at Trust level (to include principal repayments as per scheduled EMI's except if refinanced through new debt including overdraft facilities and to exclude any debt repayments / debt refinanced through new debt in any form or equity raise)	(7,525.29)
8	(-) any reserve required to be created under the terms of, or pursuant to the obligations arising in accordance with, any: (i). loan agreement entered with lenders, or (ii). agreement pursuant to which the Trust operates or owns the infrastructure or real estate asset, or generates revenue or cashflows from such asset (such as, concession agreement, transmission services agreement, power purchase agreement, lease agreement, and any other agreement of a like nature, by whatever name called); or (iii). statutory, judicial, regulatory, or governmental stipulations; or (iv). such mandatory terms or conditions, which if breached (or not complied with) would result in the Trust losing the right to own or operate the relevant infrastructure asset or real estate asset	(5,233.04)
9	(-) any capital expenditure to the extent not funded by debt / equity or from reserves created in the earlier years	-
10	**NDCF at Trust level as on 31st December 2024**	**74,411.72**
11	**NDCF Distributed in June 2024 & September 2024 Quarter**	**47,685.37**
12	**Balance NDCF for December 2024**	**26,726.35**
13	**NDCF Recommended fot the Distribution**	**26,112.79**

Notes:

1 In accordance with the SEBI circular no. SEBI/HO/DDHS-PoD-2/P/CIR/2024/44 dated May 15, 2024, the framework for computation of Net Distributable cash flows ("NDCF") is revised with effect from April 01, 2024. Accordingly, NDCF for the period April 01, 2024 to December 31, 2024 has been calculated and presented in accordance with the revised framework. NDCF for the periods on or before March 31, 2024, has been calculated and presented as per the earlier framework and has been disclosed/reproduced in Annexure 1 to the unaudited consolidated financial information.

2 This NDCF includes cash flows received from SPV after 31st December 2024 but before the date of the Board Meeting of the InvIT i.e. 5th February 2025. Rs. 105.64 Crores received from NWPPL and Rs. 134.33 Crores received from NEPPL.

National Highways Infra Trust New Delhi

A.R. & Co. FRN: 02744C NEW DELHI Chartered Accountants

NATIONAL HIGHWAYS INFRA TRUST

SEBI Registration Number :-IN/InvIT/20-21/0014

Disclosures pursuant to SEBI circulars (SEBI Master Circular No.SEBI/HO/DDHS-PoD-2/P/CIR/2024/44 dated May 15, 2024 issued under the InvIT regulations)

Note : (a) Stamp Duty on Concession agreement on Belgaum Kagal Project - The Group has received notice from Office of Deputy Registrar of Stamps, Government of Karnataka. As per this notice additional stamp duty of Rs 69.90 crore has been imposed on the company for the concession agreement entered into for Belgaum-Kagal road.

Stamp legislation in certain states (including Karnataka) also specifies that copy of the main document in respect of any property, or any business within the state also needs to be stamped with original amount of stamp duty, if the original document has not been stamped with full amount of the stamp duty applicable for place of business .

As regards to the applicability of stamp duty on Concession Agreement, it may please be noted that there is no specific entry in respect of the concession agreement. Such agreements are stamped under the residuary category of the agreements and a nominal amount was paid on such agreements. We are given to understand that the Karnataka State Govt. has given instructions to procure copies of licence Agreement of toll collecting agencies in respect of roads passing through state of Karnataka. We have further been issued a notice for recovery of shortfall in stamp duty.

Various judicial pronouncements by various high courts have divergent views and the issue is debatable and there is no clarity on the same.

The Group is contesting this imposition of deficit stamp duty on concession agreement notice with Government of Karnataka. We are also in receipt of copies of letters sent by NHAI to the Karnataka State Govt clarifying the issue. The Group is in the process of filing injuction with the Dharwad bench of Karnataka High Court.

Stamp Duty on Concession agreement on Hubli Haveri Project - The Group has received notice from Office of Deputy Registrar of Stamps, Government of Karnataka. As per this notice additional stamp duty of Rs 99.35 crore has been imposed on the company for the concession agreement entered into for Hubli-Haveri Project. The Group has contested this levy of stamp duty.

(b) Contingent Assets

Stamp Duty on Concession agreement on Belgaum Kagal Project- In the event of the stamp duty becoming payable, it shall be reimbursed by NHAI as confirmed by them vide letter No. NHAI/F&A/InVIT/2021-22/CLFN_GST&SD(E-106870) dated 28.09.2021. Since no provision has been recognised in the books with respect to stamp duty, the reimbursement has not been recognised as an asset considering the guidance in Ind AS 37.

Further on the same line, in the event if stamp duty becoming payable on Concession agreement on Hubli Haveri Project, the same shall be reimbursed by NHAI. Hence stamp duty has been disclosed as contingent asset.

(c) Corporate Guarantees

31st December 2024	Nil
31st March 2024	Rs 4,37,700.00 Lakh

The Project SPV Company (NWPPL) issued corporate guarantees amounting Rs. 1500 crore on October 21, 2022, to secure obligations in favor of the Debenture Trustee for the benefit of NCD holders. Following approval from the SBI Trustee for the waiver and cancellation of these corporate guarantees, an application was submitted to the stock exchange on September 27, 2024, seeking approval for the waiver and cancellation. The corporate guarantees were officially waived and cancelled, as approved by both BSE and NSE on October 11, 2024. Additionally, the corporate guarantees provided to the banks were released after March 31, 2024.

(d) Damages levied by Authority

Damages has been levied by NHAI for not carrying out items mandated in Schedule B of Concession agreement vide letter no. 21021/InvIT/2024/ABP/3196 dated 25/11/2024.

The same has been contested by the group and request for withdrawal of damages has been submitted to NHAI vide letter no. NHIPPL/OPS/SITE/PIU/AB/24-25/163 dated 27/11/2024. In light of the above same has been disclosed as Contingent liability in Financial statements.

h. Capital Commitments as on 31.12.2024

National Highways Infra Trust New Delhi

A.R. & Co. FRN: 02744C NEW DELHI Chartered Accountants

NATIONAL HIGHWAYS INFRA TRUST

SEBI Registration Number :-IN/InvIT/20-21/0014

Notes to the consolidated financial results for the Quarter and Nine Month ended December 31, 2024

1 The investor can view the result of the National Highway Infra Trust (Trust) on the Trust's website (https://www.nhit.co.in) or on the websites of BSE (www.bseindia.com) or NSE (www.nseindia.com).

2 The consolidated Financial results of National Highways Infra Trust ('Trust') for the quarter and Nine Month ended 31st December, 2024 have been reviewed by the Audit Committee of National Highways Infra Investment Managers Private Limited ('Investment Manager' of Trust) on 12th February, 2025 and thereafter approved by the Board of Directors of the Investment Manager on 12th February, 2025.

3 The Statutory Auditors of the Trust have carried out the Limited Review of Consolidated Financial Results of Trust for the quarter and Nine Month ended 31st December 2024 and have issued an unmodified audit report on these Consolidated Financial Results.

4 The Consolidated Financial results comprise the Consolidated Balance Sheet as at 31st December, 2024, Consolidated Statement of Profit and Loss, Consolidated Statement of Cash Flows and explanatory notes thereto of the National Highways Infra Trust ('the Trust') for the quarter and Nine Month ended 31st December, 2024 ('the Statement'). The Statement has been prepared in accordance with the recognition and measurement principles laid down in Indian Accounting Standards (Ind AS) and/or any addendum thereto as defined in Rule 2 (1) (a) of the Companies (Indian Accounting Standards) Rules, 2015 and other accounting principles generally accepted in India. The Statement has been prepared solely for submissions to be made by the Investment Manager with the Stock Exchanges (both BSE and NSE) and as additional information for stakeholders of the Trust and therefore it may not be suitable for another purpose.

5 The Consolidated Financial Results incorporate the Financial Results of the Trust and its subsidiaries (Project SPV- NWPPL and NEPPL). The Consolidated Financial Results combine the financial statements of the Trust and its subsidiaries on a line-by-line basis by adding together the like items of assets, liabilities, income, and expenses. All intra-group assets, liabilities, income, expenses and unrealised profits/losses on intra-group transactions are eliminated on consolidation unless the transaction provides evidence of an impairment of transferred asset. The carrying amount of the Group's investment in each subsidiary and the Group's portion of equity in each subsidiary are offset with each other in the Consolidated Financial Results.

6 National Highway Infra Trust ("Trust" or "InvIT") is registered as an Irrevocable Trust registered under the provisions of the Indian Trusts Act, 1882 on 19th October, 2020. It was registered under the Securities and Exchange Board of India (Infrastructure Investment Trust) Regulations, 2014 on 28th October, 2020 having registration number IN/InvIT/20-21/0014.

7 The Group has outstanding secured non-convertible debentures (NCDs) amounting to Rs. 1,500 crores for STRPP A, STRPP B, and STRPP C which will mature from 8th anniversary to 13th anniversary, 13th anniversary to 18th anniversary, 18th anniversary to 25th anniversary of allotment respectively. The NCDs are listed on Bombay Stock Exchange (BSE) and National Stock Exchange (NSE). The security cover exceeds 100% of the principal and interest amount of NCD's as at 31st December 2024.

8 **Nature of Security for Non Convertible debentures:**

The debenture holders are secured by :

a) a first ranking pari passu Security Interest over the Trust's immovable assets (if any), both present and future. The Trust does not own any immovable property at the present time. In the event, the Trust acquires any immovable property in future, the Trust shall mortgage said property within 180 (one hundred eighty) days from the date of acquisition of such immovable assets. The Debenture Trustee shall be authorised to do all acts, deeds, and enter into necessary documents, agreement, amendments and/or modifications, as may be required to give effect the same, including carrying out the due diligence as may be required by Debenture Trustee;

b) a first ranking pari passu Security Interest over the Hypothecated Assets (including Receivables), both present and future;

c) a first ranking pari passu Security Interest over Project SPV Pledged Securities; and

d) Negative Lien Undertaking

9 **Subsequent Material Event**

On 30th January 2025, NHIT has done the allotment of 1,01,584 secured, rated, listed, redeemable, non-convertible debentures of face value of INR 200,000/- (Indian Rupees Two Hundred Thousand only) each ("Series I Debentures") (comprising of 2 (two) separately transferable and redeemable principal parts ("STRPP") (being 1,01,584 STRPP A Debenture of face value INR 100,000/- (Indian Rupees One Hundred Thousand only) each ("Series I STRPP A Debentures") and 1,01,584 STRPP B Debenture of face value of INR 100,000/- ("Series I STRPP B Debentures") (Indian Rupees One Hundred Thousand only) each of the National Highways Infra Trust ("Trust") (Series I STRPP A Debentures and Series I STRPP B Debentures.

The Existing debt facility obtained for aquisition of Round 1 Asset have been partly repaid from this issue to the extant of Rs. 999.99 Crore which comprise repayment to SBI Bank of Rs. 543.29 Crore, Axis Bank of Rs. 274.02 Crore and Bank of Maharashtra of Rs. 182.68 Crore.

NATIONAL HIGHWAYS INFRA TRUST
SEBI Registration Number :-IN/InvIT/20-21/0014
Notes to the consolidated financial results for the Quarter and Nine Month ended December 31, 2024

10 The Board of Directors of the Investment Manager has declared distribution for quarter ended December 2024 of Rs.1.99 per unit which comprises of Rs. 1.99 per unit as interest pass through at the Trust level in their meeting held on 5th February, 2025.

11 **Provision for Major Maintenance**

The group has a contractual obligation to maintain the performance standards of the Project Highways in respect of riding quality and allied measures as per the performance parameters stipulated under the respective Concession Agreements. Cost of such obligation is measured at the best estimate of the expenditure required to settle the obligation at the balance sheet date and recognised over the period at the end of which the overlay is estimated to be carried out using Discounted Cash Flows method with the discount rate taken as the risk-free interest rate i.e. the discounting rate used for arriving at the present value for MMR provisions is government bond rate of 30 years for projects acquired in first phase and 20 years for projects acquired in second & third phase. The group has recognised finance cost on major maintenance provision for Nine Month ended December 31, 2024 amounting to Rs 1,322.48 Lakhs (PY Rs 470.79 lakhs). The provision for Major Maintenance Obligation as at December 31, 2024 has been recognised in the financial statements at Rs. 15,775.20 Lakhs (P.Y. Rs. 8,444.05 lakhs).

12 **Initial Improvement Works**

As per the concession agreement between SPVs' and NHAI, the concessionaire is obligated to undertake initial improvement works as specified in Schedule B including certain improvement works required initially and then to extend required repairs maintenance, regular upkeep of the Project Highway. These obligations will require outflow of economic resources and will be fulfilled over the period of time. Therefore, a provision shall be recognised and measured as per Ind AS 37 for contractual obligations toward the Fair Value of future upgrade services and correspondingly the group has capitalized the present value of provision for upgrade services to the intangible asset at the time of acquisition.

Based on the concession agreement, capitalised the initial improvement works amounting to Rs. 34,207.88 lakhs (undiscounted value) on appointed date ie. 01-04-2024.

Further the group has recognised in the statement of Profit & Loss amounting Rs. 3314.19 Lakhs and Rs. 4,247.51 Lakhs on account of amortization of initial improvement work and unwinding of interest on provision of initial improvement respectively.

Actual initial improvement work done during the period ended December 2024 is Rs. 38,886.11 Lakhs.

13 The name of one of the SPV has been changed from National Highways Infra Projects Private Limited to NHIT Western Projects Private Limited w.e.f. 13th May 2024.

14 The Unaudited Consolidated Financial Information relating to the quarter ended December 31, 2024, are the balancing figures between the unaudited figures in respect of the half year ended September 30, 2024, and year-to-date figures up to Nine month ended December 31, 2024, which have been approved by the Board of Directors of Investment Manager and have been subjected to limited review by the Statutory Auditors.

15 As per Ind AS 36 'Impairment of assets', based on management review on expected future cash flows and economic conditions of the assets of the Trust, no indicators of impairment of assets exist as on the reporting date. Hence no provision for impairment has been recognized in the books on the reporting date.

16 The Group has not recognised Deferred Tax Assets on major maintainance obligation and business losses for the period, as carried forward business losses will not be available for utilisation within the time limit allowable as per the Income Tax Act based on the future projections of the profitability of the entity in accordance with provision of Ind AS 12 "Income Taxes".

17 During the Nine Month ended 31st December 2024, the Group has taken a further disbursement of amounting to Rs. 322.02 Crores from the Axis Bank Limited, Rs. 119.86 Crores from the Bank of Maharashtra and Rs. 10.78 Crores from the IDBI Bank in accordance with Facility agreement. The Group has given Rs. 437.66 Crores to Project SPV NWPPL and Rs. 15.00 Crores to Project SPV NEPPL as Loan at the rate of 12.70% p.a. for initial Improvement works.

18 The Group has followed the same accounting policies and methods in these interim financial statements. And these financial statements have been prepared on accrual basis under the historical cost convention as followed in the annual financial statements for financial year ended March 31,2024.

LIMITED REVIEW REPORT

TO THE MEMBERS OF NATIONAL HIGHWAYS AUTHORITY OF INDIA

We have reviewed the accompanying statement of unaudited standalone financial results of National Highways Authority of India for the quarter ended 30th June, 2024. This statement is the responsibility of the Authority's management and has been approved by the Board of the National Highways Authority of India. Our responsibility is to issue a report on these standalone financial statements based on our review. We conducted our review in accordance with the Standard on Review Engagement (SRE) 2400, Engagements to Review Financial Statements issued by Institute of Chartered Accountants of India. This standard requires that we plan and perform the review to obtain moderate assurance as to whether the financial statements are free of material misstatements. A review is limited primarily to inquiries of Authority personnel and analytical procedure applied to financial data and thus provide less assurance than an audit. We have not performed an audit and accordingly, we do not express an audit opinion. As part of our review procedure, we have performed test check of five Project Implementation Units (PIUs). Based on our review conducted as above, nothing other has come to our attention that causes us to believe that the accompanying statement of unaudited standalone financial results read with the notes prepared in accordance with the applicable accounting standards and other recognized accounting practices and policies has not disclosed the information required to be disclosed in terms of Regulation 52 of the Listing Regulations including the manner in which it is to be disclosed, or that it contains any material misstatement.

Notes-

a) NHAI is constituted by an Act of Parliament for development, maintenance & management of National Highways. NHAI is an "Executing Agency" of Government of India and therefore does not have its own income or expenses.

b) As per the provision of Section 23 of National Highways Authority of India, 1988 Accounts of the Authority is prepared on annual basis and audited by C&AG.

c) During the period, there is no change in the accounting policies of the Authority.

d) Capital of the Authority is provided by Government of India and the capital is not divided into shares. Highway projects are shown as Assets held on behalf of Government of India (Completed and Ongoing).

e) The unaudited figures for the previous periods are reported on the basis of the books of accounts and have been recast / regrouped/ rearranged, wherever considered necessary, to make them comparable.

f) Depreciation (except in case of disposal of assets) and provisions (except interest on borrowings) are year end excercise, therefore have not been considered during the quarter.

g) Authority does not have its own source of income; however during the 1st Quarter 2024-25, Authority has generated total income of Rs. 6.37 crores which includes income from sale of tender documents to the tune of Rs.3.42 crore

h) Figures for the quarter ended 30th June, 2024 have been subjected to "Limited Review" by a Chartered Accountant Firm and approved by Board of Authority through circulation.

i) As on 30th June, 2024, no investor complaint is pending. The credit rating of NHAI assigned at the time of issue has not been downgraded. NHAI has not defaulted in payment of interest for non-convertible debt securities and loans etc. Also, the properties charged are adequate in discharging the due repayment to debenture holders i.e. interest and redemption amount.

j) During the quarter NHAI has collected Rs. 2,252.31 crore as toll revenue and deposited Rs. 2,221.37 crore into CFI.

k) As on 31st March, 2024, there was a contingent liability of Rs.1,17,463.56 crore in Arbitration and Rs. 11,864.94 crore in Court Cases. Figures for 30th June, 2024 has not been compiled. l)

Figures for the quarter ended 31st March, 2024 represents the difference between the unaudited figures in respect of the full financial year and the published unaudited figures of nine months ended 31st December, 2023.

m) Figures for the quarter and year ended 31st March, 2024, as reported earlier, have changed due to the finalization of annual financial statements for FY 2023-24 on 25th July, 2024.
